Contributors

Abbott, William E.
B.S., Washington and Jefferson College; M.D. School of Medicine, Western Reserve University. Associate Professor of Surgery, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Gastrointestinal Surgery and Metabolism.*

Austen, George, Jr.
A.B., Princeton University; M.D., Harvard Medical School. Assistant Professor of Urology, School of Medicine, Western Reserve University. Associate Urologist, University Hospitals, Cleveland, Ohio. Special Field: *Urology.*

Bacon, Franklin J.
Ph.G., Ph.D. (Bot.), University of Wisconsin. Professor of Botany and Pharmacognosy and Head of the Biology Department, Western Reserve University, Cleveland, Ohio. Special Field: *Medicinal Plants.*

Badal, Daniel W.
A.B., Adelbert College, and M.D., School of Medicine, Western Reserve University. Assistant Professor of Psychiatry, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Psychiatry and Psychoanalysis.*

Barnes, Allen C.
A.B., Princeton University; M.D., University of Pennsylvania School of Medicine. Professor and Chairman of the Department of Obstetrics and Gynecology, School of Medicine, Western Reserve University. Director, MacDonald House, University Hospitals, Cleveland, Ohio. Special Field: *Obstetrics and Gynecology.*

Beams, A. J.
A.B., Wittenberg College; M.D., School of Medicine, Western Reserve University. Clinical Professor of Medicine, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Gastroenterology.*

Berne, Robert M.
A.B., University of North Carolina; M.D., Harvard Medical School. Associate Professor of Physiology and Instructor in Medicine, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Cardiovascular and Renal Physiology.*

Binkley, George W.
A.B., Hiram College; M.D., School of Medicine, Western Reserve University. Assistant Clinical Professor of Dermatology and Syphilology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Dermatology and Pathology of the Skin.*

Bird, Brian
M.D., University of Manitoba. Associate Professor of Psychiatry, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Psychiatry and Psychoanalysis.*

Bloch, Edward H.
A.B., University of Chicago; M.D., University of Tennessee College of Medicine; Ph.D., University of Chicago. Established Investigator of the American Heart Association. Assistant Professor of Anatomy, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Microcirculatory Physiology and Pathology.*

Bochner, Alfred K.
M.D., University of Toronto. Assistant Professor of Psychiatry, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Psychological Medicine.*

Bond, Douglas D.
A.B., Harvard University; M.D., University of Pennsylvania School of Medicine. Professor of Psychiatry, School of Medicine, Western Reserve University. Physician in Charge, Division of Psychiatry, University Hospitals, Cleveland, Ohio. Special Field: *Psychiatry.*

Bonte, Frederick J.
B.S., Western Reserve University; M.D., School of Medicine, Western Reserve University. Assistant Professor of Radiology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Radiation and Radioactive Isotope Therapy.*

Breed, Robert S.
B.S., Amherst College; M.S., University of Colorado; Ph.D., Harvard University. Emeritus Professor of Bacteriology, Cornell University, Geneva, New York. Special Field: *Bacteriology.*

Broadbent, B. Holly
D.D.S., Western Reserve University. Director of the Bolton Fund and Fellow of Dentofacial Anatomy, School of Medicine, and Professor of Dentofacial Morphology, School of Dentistry, Western Reserve University, Cleveland, Ohio. Special Field: *Orthodontics.*

Bruckner, Robert J.
D.D.S., University of Maryland; M.S., Western Reserve University. Associate Professor of Pathology, School of Dentistry, and Assistant Professor of Histology and Embryology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Oral Pathology.*

Bunts, Alexander Taylor
A.B. Yale University; M.D. Harvard Medical School; Associate Neurosurgeon, Cleveland Clinic, Cleveland, Ohio. Special Field: *Neurologic Surgery*

Chase, Samuel W.
A.B. Bowdoin College; A.M., Ph.D. Harvard University; Professor of Histology and Embryology, School of Dentistry and Associate Professor of Histology and Embryology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Fields: *Histology and Teratology*

Clark, William S.
B.S., University of Dayton (Ohio); M.D. St. Louis University School of Medicine; Assistant Professor of Medicine, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Rheumatic Diseases*

Collins, William F., Jr.
B.S., Yale University; M.D. Yale University School of Medicine; Instructor Neurological Surgery, School of Medicine, Western Reserve University; Attending Neurosurgeon, University Hospitals, Cleveland, Ohio. Special Field: *Neurosurgery*

Cover, Morris S.
V.M.D. University of Pennsylvania School of Veterinary Medicine; M.S. Kansas State College; Ph.D. University of Illinois; Associate Research Professor and Poultry Pathologist, University of Delaware, Newark, Delaware. Special Fields: *Veterinary Pathology*

Dupertuis, C. Wesley
B.S., M.A., Ph.D. Harvard University; Associate Professor of Clinical Anthropology, Western Reserve University, Cleveland, Ohio. Special Field: *Anthropology*

Ecker, Enrique E.
Ph.D. University of Chicago; Professor of Immunology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Immunology and Bacteriology*

Emmons, Chester W.
B.S., Penn College (Iowa); M.S. State University of Iowa; Ph.D. Columbia University; Principal Mycologist, U.S. Public Health Service, Bethesda, Maryland. Special Field: *Mycology*

Faulkner, Robert L.
B.S., Allegheny College; M.D. Johns Hopkins University School of Medicine; Assistant Professor of Gynecology, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Gynecology*

Feil, Harold
A.B., University of Denver; M.D. Ohio Wesleyan University Medical Department; Clinical Professor of Medicine, School of Medicine, Western Reserve University, Cleveland, Ohio. Special Field: *Cardiovascular Diseases and Electrocardiography*

Fortune, George F.

Explanatory Notes

Vocabulary Entries

The word or term to be defined is set in **boldface** type and extends slightly to the left of the definition.

In polysyllabic words, the separation of the syllables is indicated either by a raised dot ( ) or by a primary (′) or secondary (″) accent. Syllabification and pronunciation are not indicated for trade-marks, trade names, proprietaries, or eponymic entries.

Words spelled identically but derived from different roots appear as separate entries.

Definitions

The definitions of a term are numbered when there is more than one distinct meaning or use. The most inclusive definition is presented first, followed by the more restricted meanings.

Definitions restricted to specialized fields are preceded by field labels or glosses, such as *In psychiatry*, *In bacteriology*, *In dentistry*, etc. All definitions following a field label are in use in that field.

Etymology

The etymology appears in square brackets immediately following the vocabulary entry or the phonetic respelling. The root term, its language, and its meaning are given. The languages are indicated by abbreviations, a key to which appears on page xix.

Greek terms are transliterated into the Roman alphabet. A table of transliterations appears on page xix.

When the same root is carried down through an uninterrupted series of entries, its meaning and the abbreviation indicating its language are given only on its first occurrence. If, however, such a series is interrupted at any time by words of a different origin or an eponymic entry, the information about the root is repeated in full when the series is resumed. Derivations have been omitted in entries of a chemical nature as well as in trade names and compound or hyphenated words.

Abbreviations

Abbreviations with medical significance appear in their proper alphabetical sequence in the dictionary.

Abbreviations used in the dictionary—lexicographic and etymologic terms, etc.—are listed and defined on page xix.

Pronunciation

For a detailed explanation of pronunciation, see Notes on Pronunciation beginning on page xxiii. A Key to Pronunciation is printed facing page 1 of the vocabulary.

Chemical and Pharmaceutical Terms

Formulas. Definitions for chemical substances include the chemical formula of the substance when this is known. In an organic compound, this formula is of the type which shows the conventional structural arrangement.

Synonyms. The definition of a medicinal substance includes the synonyms applied to that substance.

Latin Names. Entries for older official drugs—those recognized in *The Pharmacopeia of the United States of America, Fifteenth Revision*, or *The National Formulary, Tenth Edition*—are followed by the Latin name in italics enclosed in parentheses.

Medicinal Plants. The definition for a drug representing a structural part of a plant includes its botanical origin, this being distinguished by the use of italicized type. The definition also includes a statement of the active constituents, if any, of the plant, and their approximate proportions. In the case of official drugs representing parts of plants, the quantitative limits of active constituents, such as alkaloids, are those established by *The Pharmacopeia of the United States of America, Fifteenth Revision*, or *The National Formulary, Tenth Edition*.

Dosage. The limits of dosage of medicinals are indicated in those cases where such limits have been established. The dose statement is given first in the metric system, this being followed by the approximate apothecary system equivalents. Unless otherwise stated, the limits are for a single adult dose. Where the dosage of a drug has not been definitely established, or in cases where there is marked variation in dosage according to different authorities, no statement of limits of dosage has been provided in the definition.

Run-ons

Derivative forms of a vocabulary entry are entered as run-ons following the definition or, when there is more than one definition for the main entry, the definition to which they are most closely related.

In general, the pronunciation of a run-on entry can be inferred from that of the main entry. Syllabification is, therefore, not indicated, but primary accent is used when necessary to show that the position of the main stress in the run-on differs from that of the heading.

Tables and Lists

Lists, statistics, and other material most conveniently handled in tabular form are presented in the Appendix at the back of the book. An index of these and other tables and lists appears on page xv.

Groups or classes of definitions related by a common root term appear under that term: disease, method, operation, stain, etc. The series is slightly indented and each subentry to be defined is set in **boldface**.

Biographic Entries

Proper names, biographic entries, and eponymic terms appear in their proper alphabetical sequence. I those cases in which the eponymic term is fully defined elsewhere under another entry—as disease described more fully in the disease list, for example—the user is directed to the proper entry by a cross-reference.

Names with prefixes have been alphabetized according to the customs of their languages. In general, in American and English names of foreign origin, prefix and name ar treated as unit, while in other languages the article or preposition is often ignored in alphabetizing. Names with two or more parts ha been treated as single units. Biographic entries have been made under pen names when those names are more commonly used in medical literature than the true names. In all cases where confusion seemed possible, cross-references have been inserted.

Cross-references

Whenever it is desirable, the user is directed to additional or fuller information by such cross-reference terms as *see*, *see under*, *syn.* The entry to which the user is directed is italicized. In the case of compound terms, only the word or part of the term under which the information is entered is italicized.

THE EDITORS

Notes on Pronunciation

§1 The principle followed for pronunciation in this dictionary has been to record pronunciation in actual, current use and not to presume to dictate standards of alleged correctness. The objective has been to show what usage is, not what somebody supposes it ought to be. Where more than one pronunciation is given for a word, the intention has been to give the most widely used variant first. Sometimes it has been possible to do this with a high degree of confidence. More often, the division of usage is not clear-cut, or the facts not readily ascertainable, so that the order in which variant pronunciations are given is more likely to be arbitrary than to be of any real significance. In any case, there is no implication of editorial preference intended.

§2 The manner of indicating pronunciation is such that the users of the dictionary can fit medical terminology into their own natural, everyday speech habits. The basis is the syllable. In whatever way a person may pronounce the syllable car, for instance, whether as the word car itself or as a syllable in a longer word like reincarnation, that is the way for him to pronounce it when it appears as one of the syllables in a medical word, such as *cardiogram* or *metacarpal*. The syllables in the phonetic respellings (see §§14-30, below) are to be treated the same way. For example, in the system used here, merry would be respelled (merr'ee) and Mary (mair'ee); similarly ferry (ferr'ee) and fairy (fair'ee). But if you pronounce merry and Mary the same, and likewise ferry and fairy, then you can consider pairs of syllables in the respellings like (merr) and (mair) or (ferr) and (fair) as meaning the same thing and as representing your own sounds in those words.

§3 The respellings for pronunciation are put in parentheses immediately following the entry term whose pronunciation is to be shown, but in the majority of instances no respellings have been needed. The pronunciation is clearly indicated by syllabification of the heading itself and by marking the accents. In all such cases each syllable is simply pronounced according to the most common values of the letters and letter sequences that make it up, with due regard to the preceding and following syllables and to the positions of the accents.

§4 The accent marks used are: a *single accent* (') denoting main stress, that is, the emphasis put on the most heavily pronounced syllable in a word, and a double accent (") for secondary stress, that is, some degree of emphasis as found on syllables more strongly accented than neighboring unstressed syllables, but less prominently than the syllable that carries the main stress: car"di·ol'o·gy, car'di·o·gram, met"a·car'pal, su"per·al"i·men·ta'tion.

§5 In the following paragraphs, lists of illustrative examples are given, showing how the various letters are to be interpreted in different groupings and with varying accentual conditions. Pronunciations according to these examples apply only to headings that have no respelling for pronunciation. It will also be noted that the pronunciation of a given letter often depends on what other letters immediately precede or follow.

§6 The vowels, if immediately followed by an accent, either the primary accent (') or the secondary accent("), have the following values: a as in fla'vor, ca"pa·bil'i·ty, fa'tal, ... 'ba...; ... in ce'dar, he're·, se'ri·ous; i and y as in ti'ger, my'lon, Hi'ram, ty'rant; o as in no'tice, mo"t...ri'...ty, ...t...ry, mo"bi·li·za'tion, ...ory; u as in mu'sic, du'ty, stu'di·o, Lu'cy, ... lu'sion, su"per·vise', ru'mor, fu'ry, tu'lip.

§7 The same pronunciations are found in monosyllable words and accented syllables with final silent e, as in game, a·bate'ment, base'ment, gene, se·rene'ly, sin·cere'ly, nice, po·lite'ness, rhyme, ter..., tire'less, lyre'bird, poke, re·mote'ly, fore'man, cute, huge'ly, in·duce'ment, pur'... ...bute", pro·cure'ment, al·lure'ment, ma·ture'ness.

§8 Otherwise if a vowel is followed immediately by a consonant in the same syllable and that syllable is accented, then the vowel is pronounced as follows: a as in bag, mag..., ...tude, car'..., com·par'i·son; e as in bed, let'ter, mer'it, ...her'...; i ...; ...; sys'tem, spir'it, lyr'ic; o as in cop'per or before a single ... as in bor'...g, before rr as in bor'row; u as in ...rum... ...ber, cur'rent.

§9 If a vowel in an accented syllable is followed by r and the next letter is another consonant, but not r, then the vowel is pronounced as follows: a as in bar'ber; ...i, y and u as in cer'tai..., skir'mish, myr'tle, cur'tain; o can be as in for'tune, bor'der or por'trait.

§10 Unaccented syllables will give little difficulty. Their pronunciation ordinarily will be evident. It should be noted, however, that in the case of medical and other scientific words, much more than in the case of ordinary everyday words, something like a full vowel value is frequently heard in unaccented syllables. Thus the ... in biochemi·cal is more likely to have a clear o sound than is the ... in biographic.

§11 Final syllables, accented or unaccented, follow the customary pronunciation of such syllables, for example ...re·late, cor're·late, ...bro·mate, syn'di·cate, pre·sage, dam'age, py'rone, re·plete', con·fine', de·cide', con·spire', ...o·dyne, re·mote', re·morse', al·lude', ...lure, fail'ure, na'ture, par·tic'u·lar, sa'ber, la'bor, ...le·mur, de·mur', Ai'ken, ba'con, ca·reen', ca·reer', re·la'tion, con·fu'sion, tab...u·lum, for'mi·na ..., con·ta·gion, re·tent'..., ma·lev'o·lent. Some final groups can be pronounced as one syllable or as two, for example -gia in neu·ral'gi·a, -tia in or"tho·don'ti·a, etc.

§12 A combination of two vowels, or of a vowel with y or w, will be understood as having its most common English pronunciation, thus ai and ay as in paid or pair, pray or prayer; au and aw as in fauna, fawn; ea as in clea... or clear; eu as in neuter or neural; ew as in few, new, dew, flew

chew; oo as in boot or boor; oi and oy as in **ureint, annoy; ou** as in **flout** or **flour**

§13 The consonants are to be pronounced with their usual English values, whether singly [illegible] combinations like **sh** or **th**, or in syllable groups like **tion**, as the case may be; before [illegible] or y is like *s* in **Cecil, Cyril, cent, acid, cypress**, otherwise like *k* in **oak, curb, clay**; *g* before *e, i* or *y* as in **ginger, gyrate, germ, agile**, otherwise as in **gargoyle, gun, glue, ligate**; *ch* ordinarily represents the sound in **chin, rich**, but before *l* or *r* it is pronounced like *k*, for example in **chloroform, chronic, achromatic.**

§14 When the pronunciation of a word is not apparent from its spelling, syllabification, and accentuation, in accordance with the examples given above, then [illegible] respelling for pronunciation is put in parentheses immediately after the vocabulary entry. These phonetic transcriptions are also based on the syllable as [illegible] unit and on ordinary values of letters. The syllables are designed for easy recognition. Often, in fact, [illegible] syllable is respelled, not arbitrarily but in the form of some well-known English monosyllable, such as *buy*, *seal*, *cue*, *juice*, *view*. And syllables with [illegible] final silent [illegible] are used [illegible] great deal, whether they represent actual English words or not: *sale, tale, dace, dece, mate, nate, dyne, hyne, styne, style.*

§15 There are some convenient combinations of letters that are used in the respellings more extensively than they actually occur in the writing of English syllables. Thus *igh*, representing long *i* in such words as *high, thigh, sigh, sight, flight*, is used for the same sound in other syllables, for example: *kigh, thrigh, zemgh*, similarly *ye* as found in *dye, lye, rye*, is also used for this sound elsewhere, for example *pye, tye, skye, kwye*. On th[illegible] same principle, *ew*, as in *few, pew, dew, mew, flew, shew*, is extended to other syllables, such as *bew, thew, tew, lew*.

§16 The following points are to be particularly noted

§17 In the phonetic respellings, as in the entry headings themselves, [illegible] single accent (′) marks the most strongly stressed syllable and double accent marks (″) are used for the secondary accents

§18 An [illegible] always represents th[illegible] sound in **dose** and **loose**, never the sound in **rose**, **cheese**, and **lose**. Similarly *f* always stands for the sound in **leaf**, never as in **of**. At the end of [illegible] syllable, again on the principle of clarity and ready recognition, *ss* is sometimes used for *s*, and *ff* for *f*

§19 A *g* in the respellings always stands for the hard *g* [illegible] sound, as in **gun** and **get**, never f[illegible] the sound in **gem**, **gym**, **ma″ti·um** (jim nay′ si·um) and **reg″i·men ta″tion** (red[illegible]·men tay′ shun). T[illegible] avoid possible ambiguity in certain syllables, *gh* is sometimes used instead of *g* for the hard *g* [illegible] sound, for example, **gel′ding** (gheld′ing). An *ng* stands for the simple *ng* sound in **sing·er**. When used in combination with *g* or *k*, it is so transcribed **fin·ger** (fing′gur), **link′age** (ling′kidj)

§20 A *sh* is as in **church**; *th* always as in **thin** and **both**. For the sound in **then** and **writhe** the symbol *th* is used, so the syllable respelled *thee* as in **ap·a·thy** (ap′uh thee) or **the·ol′o·gy** (thee·ol′o·jee) is not the same as the English word **thee**, which would have to be respelled (thee)

§21 For the sound of [illegible] in **pleasure** and **usual**, *z* in **azure**, the symbol *zh* is used: **meas·ure** (mezh′ur), **vi′sion** (vizh′un), **clo·sure** (klo′zhur)

§22 Unless followed by [illegible] consonant in the same syllable, *ar* is to be pronounced as in **parish**, **charity**, **marathon**, **farinaceous**, and **tariff** but, with [illegible] following consonant, as in **hard** and **garter**; and *ah* is used for the [illegible] in **fa′ther** (fah thur), **psalm**, and **balmy**; also **tar** (tahr) and **quar′an·tine** (kwahr′un teen)

§23 The combinations *err* and *irr* are used as in **error**, **terror**, **merrily** and **irrigate**, **chrrupt** **mirror**, respectively and *err* as in **borrow**, **horrible**, **tomorrow**

§24 The *oo* in **boot** is represented by *ōō* **ru″mi·na tion** (rōō mi nay′shun) but for the sound in **foot** *ŏŏ* is used **sug′ar** (shŏŏg ur) while *oo* without any mark is used before [illegible] as in **poor** **Eu′rope** (yoor up) and is also used in unaccented syllables unless the sound is clearly *ōō* **ma·nip·u·late** (ma nip yoo·late) but **a′gue** (ayg yōō) **val·u·ate** (l·val yōō·ate″)

§25 In many unaccented syllables the somewhat obscure sound of [illegible] in **about**, **sofa**, **Manila**, **logarithm**, **organize**, **pentagon**, is represented in the respellings by *uh* or before consonants, just by [illegible]: **pri″va·teer′** (pry vuh-teer′) **Tex′as** (teck sus)

§26 This sound is, of course, also commonly heard for the [illegible] of **rough**, **system**, **category**, the *i* of **directory**, **dilapidated**, **manifest**, and the [illegible] of **molasses**, **hypocrite**, **hammock**. A great many speakers of English do, however, use a vowel like the *i* of **bit** in many or most unaccented syllables spelled with [illegible] *i*, or *y*; and [illegible] fairly clear even though unstressed, [illegible] is not uncommon in syllables spelled with *e*, especially in scientific and other technical words. Therefore, the respellings for pronunciation in this dictionary regularly show *i* and *e*, and sometimes *a*, where sounds ordinarily represented by these letters can occur as well as the more obscure vowel here represented by *uh* or *u*. This does not mean that the Editors recommend such pronunciations, but merely that they recognize their occurrence, as no better and no worse than pronunciations of the *uh* variety

§27 Similarly, in the first syllable of [illegible] word, again especially [illegible] scientific word, an [illegible] is often not pronounced *uh*, as in **about**, but may have some [illegible] ther [illegible] sound such as the *a* in **cat** or the *a* in **gardenia**. This is reflected in the respellings by the use of [illegible] instead of *uh* in initial syllables. Thus **fa ri na** would be transcribed (f[illegible] ree uh) rather than (fuh-ree nuh), it being understood that the latter is implied as one of the commonly heard variants.

§28 When *a* [illegible]ppears as the first letter in certain classes of words, it may often have the sound of *ay* in **pay**, and this is generally shown in the dictionary: **A·che′ri·on** (a ker ee on, [illegible]y·ker′ ee·on) **a·dip·sa** (ay·dip suh, [illegible] dip suh)

§29 In general, where there are variant pronunciations the variations are shown by additional respellings of those portions of [illegible] word affected by the variations in question. Thus **hel″e·rith rine** (hel[illegible] rith reen, [illegible] rin, hel-err′ith-) indicates four different pronunciations in current use for this word: *hel″i·rith′reen, hel″i·rith′rin, hel-err′ith·reen, hel-err′ith·rin*, as well as variants with *hel″uh* instead of *hel″i*, and *-err′uth* instead of *-err′ith* (see §26, above)

§30 An indication like *-shuh, -see·uh*, or *-shuh, -see·uh*, for an ending is meant to cover [illegible] whole gradation of possibilities between the two extremes; for example **am·ne si a** (am nee shuh, -see uh) is intended to include such intermediate forms as *am nee′shee·uh, am nee′yuh*, etc.

§31 Inasmuch as the termination **-ide**, common in chemical words, can be pronounced *-id* as well as *-ide*, this general rule is taken for granted and no respellings are inserted merely to show this [illegible]ariation. The variants are shown, however, when [illegible] word that has the **-ide** ending is respelled for some other reason. Similarly the chemical

ending -el can be pronounced -ela, -el or -eel; also, -yl is -il or -eel, and names of enzymes in -ase are pronounced -ace or -aze.

§32 Names of diseases ending in -itis are always shown only with the -eye'tis pronunciation, which is used much more widely than -ee'tis. In every case, the latter is to be understood as also occurring and in no way less correct than the other.

§33 Very often the pronunciation of the beginning of a word is apparent from that of neighboring entries in the dictionary and, if the rest of the word is clear, no respelling is needed. Thus, the first syllable of cy·tot·ro·phy is seen to be *sigh-* and not *si-* from the respelling of cy·tot·ro·pism (sigh-tot'ro-piz·um); the pronunciation of mi·o·sis is clear from that of mi·o·sis (migh-o'sis), etc.

§34 Many long compounds are not respelled, especially when there are variant pronunciations for each of several elements in the compound. And often, when a compound is respelled, a relatively uncommon variant pronunciation may be omitted. Such variants can be found under the individual elements themselves.

§35 Foreign words and phrases, and words recently taken into English from foreign languages, are pronounced in a great variety of ways, ranging from the original, native pronunciation to complete Anglicization. In this dictionary a compromise Anglicization is frequently indicated in the respelling of such expressions.

§36 The pronunciation of Latin is usually given in the traditional Anglicization, but exceptions are made in cases where a given term is most commonly pronounced in some other way. And it is to be understood that other pronunciations of Latin—in particular the Roman pronunciation as taught in schools—are also used for Latin medical terms.

JOHN KEPKE

Key to Pronunciation

(*Also see Notes on Pronunciation, page xxiii*)

A single accent (′) marks the strongest accent, the most heavily stressed syllable in a word. A double accent (″) marks syllables with secondary stress, lighter accent than the primary.

When there is no respelling for pronunciation, the spelling of the entry itself gives the pronunciation. A vowel has its long sound if it is followed immediately by an accent mark. Consonants are pronounced according to the usual rules. For example, **c** followed by **e**, **i** or **y** is pronounced as in **cent, de cide cy′press;** otherwise as in **cab, cob, cub, clay screw; ch** followed by **l** or **r** as in **chlo re-form, chron′le;** otherwise as in **chin, rich, church; g** followed by **e**, **i**, or **y** as in **gin ger gy′rate, ag′ile, a gil′i ty;** otherwise as in **gag, gar′goyle, gum, glee gray lig′nite.**

When the ordinary rules do not apply respellings are given in parentheses immediately after the boldface entries, using the common values of letters, like **ew** in **pew**, **ay** in **pay** etc., and observing the conventions shown in the following table.

In the Respellings

ah **calm, fa′ther** (fah′thur) **Ja va** (jah′vah) **Na ga** (nah′gah)

ahr **hard farm, smart, Dart′mouth** (dahrt′muth) **Scars dale** (skahrs′dale)

ar **par′ish tar′iff, mar′a thon, phar″yn geo t my** (far″in jeck′to-mee)

err **mer′ry ter′ror dic′tion ar″y** (dick′shuh-nerr″ee) **pal″ to pter′y goid** (pal″uh to-terr′i-goyd)

ew **few pew Bu-chan n** (bew-kan′un) **mu″co hem or rhag′ic** (mew ko-hem o radj′ick)
    dew new du plic′i ty (dew plis′i-tee) **tu″me fa cient** (tew mi fay′shunt)

i **bit, fas′ci nate ag″i ta′tion** (adj″i tay′shun) **my″co tog′e-nous** (migh ci todj′ nus)

igh **high, sigh, flight, chi″ro prac′tor** (kigh ro prack′tur) **chei″ma pho′bi a** (kigh muh fo′bee uh)

ye **dye, rye, lye, ty phoi′dal** (tye-foy′dul) **pi lo sis** (pye lo′sis)

irr **ir ri gate, mir′ror con spir′a-cy** (kon-spirr′uh-see) **myr″in gec′to-my** (mirr″in-jeck′to-mee)

orr **bor′row hor′rid, Hor ace** (horr′is) **cor′o-nar″y** (korr′o-nerr ee)

ōō **boot** (bōōt) **Hoo ver** (hōō′vur) **u″ku le′le** (yōō″kuh-lay′lee) **u ni tar″y** (yōō′ni terr″ee)

ŏŏ **foot** (fŏŏt) **Hook′er** (hŏŏk′ur) **pul′ley** (pŏŏl′ee) **kous′so** (kŏŏs′)

oo **poor, doc″u men ta tion** (dock yoo-men-tay′shun) **pleu ra** (ploor′ee) **kie sel guhr″** (kee′zul-goor″) **fas-cic u lus** (f sick′yoo lus)

uh **so fa** (so′fuh) **con tra vene** (kon truh-veen′) **plas′ma-cyte** (plaz′muh sight) **hap a-lo nych′i** (hap uh-lo-nick′ee uh)

g **gag, gig ugly gre ga ri ous, ex haus′tion** (eg-zaws′chun)

ng **sing′er link ng** (hng′kuh) **con cha** (kong′kuh)
    sense crease con tri′vance (kon try′vuns) **oc-cip′i tal** (ock-sip′i tul)

th **thick, thin, path**

th **then** (then) **thee** (thee) **weath er** (weth′ur)

zh **meas ure** (mezh′ur) **con fu′sion** (kon few′zhun) **in-ci sion** (in sizh′un)

Syllables respelled as common words (e g., *buy seal, vine*) are pronounced like those words **vu″ rom′e-ter** (view i rom′ tur)

A

A 1. *In chemistry*, symbol for argon. 2. *In radiology*, symbol for area of heart shadow. 3. *In physics*, abbreviation for angstrom unit.

A. Abbreviation for total accommodation, anode.

Å Abbreviation for angstrom unit.

A Symbol for absorbance.

a. Accommodation, ampere, anode, anterior, aqua, arteria.

Symbol for absorptivity.

a-, an- [Greek alpha privative]. A prefix equivalent to un- or in- and signifying absence, *lack, -less, not*.

A.A. Abbreviation for achievement age.

ā, āā [G. ana, of each]. Symbol denoting the same quantity of each ingredient in a prescription.

āāā. Amalgam.

aaa dis-ease A endemic hematuria of ancient Egypt, or hookworm disease described in the Ebers Papyrus. Obs.

A. A. A. S. American Association for the Advancement of Science.

Ab Chemical symbol for alabamine.

ab-, a- [L., from]. A prefix meaning *from* or *away*, or signifying separation or departure.

Abadie, Jean Marie Charles [*French ophthalmologist*, 1842-1932]. Described spasm of the levator palpebrae muscle, a sign significant of exophthalmic goiter; called *Abadie's sign*.

ab-a"li en-a'tion [L. *abalienare*, to separate, transfer]. *In psychiatry*, mental deterioration or derangement; insanity. Obs.

a-ban don-ment. *In medical jurisprudence*, the withdrawal of a physician from the care of a patient, without reasonable notice of such withdrawal or without discharge from the case by the patient.

ab-ap'i-cal [L. *ab*, from; *apex*, apex]. Away from or opposite the apex.

a-bap-tis'ton [G. *abaptiston*, from *a-*, not; *baptein*, immersed]. A conical trephine which cannot slip through the opening and injure the brain.

a-bar"og no sis [a-; G. *baros*, weight; *gnōsis*, knowledge]. Loss or lack of the ability to estimate weight; baragnosis.

ab ar-tic'u-lar [L. *ab*, from; *articulus*, joint]. Not connected with or situated near a joint.

a ba si a (a bay zheh, -see-uh) [G. *a-*, not; *basis*, step]. Motor incoordination in walking. See *astasia*. —**aba'sic, abat'ic,** *adj.*

a.-astasia. See *astasia-abasia*.

ataxic a. Awkwardness and uncertainty displayed in locomotion.

choreic a. Inability to walk due to choreic spasm of muscles in the lower extremities.

paralytic a. Total inability of the legs to support the body in walking or standing, due to organic paralysis.

paroxysmal trepidant a. A form of astasia-abasia in which the legs become spastic when the patient attempts to walk.

trembling a. Incapacity to walk because of exaggerated trembling of the legs.

abasin. A brand of acetylcarbromal.

a-bate'ment [OF. *abatre*, from *a*, to; *batre*, to beat]. Lessening or moderation of the pain or untoward symptoms of a disease. —**abated** *adj.*, **abate,** *v.t., v.i.*

a-bat toir' (ah bah-twahr') [F.]. 1. The slaughter of animals; specifically the slaughter of diseased animals to prevent the infection of others. 2. Art of cutting up metal preparatory to an operation.

a-bat toir' (ah bah twahr') [F.]. Slaughterhouse or establishment for the killing and dressing of animals.

ab-ax'i al [L. *ab*, from; *axis*, axle]. Not situated in the line of the axis.

Abbas, Haly See *Haly Abbas*.

Abbe, Ernst [*German mathematician and physicist*, 1840-1905]. Celebrated for his introduction of the oil immersion lens (1878) and for his invention of a system of lenses, or condenser, attached to the microscope for concentrating light upon an object (1886), called *Abbe condenser*.

Abbe, Robert [*American surgeon*, 1851-1928]. Pioneer abdominal surgeon, remembered for his work in intestinal anastomosis and for the development of the catgut ring. The technic of the so-called string operation for the relief of esophageal stricture is credited to his genius.

ab"bo-cil'lin. A trade-mark for certain preparations containing penicillin G.

Abbott, Edville Gerhardt [*American orthopedist*, 1871-1938]. Introduced Abbott's method for the treatment of scoliosis, a series of plaster jackets and bandages applied to achieve gradual overcorrection.

Abbott, William Osler [*American physician*, 1902-43]. Known for his development of two tubes: one evolved in cooperation with Rawson, is a double-barreled gastroenterostomy tube; the other, on which he worked with T. Grier Miller, is an intestinal drainage tube called the *Miller-Abbott tube*.

Abbott's staining method. See under *stain*.

Abbotts, William [*English physician*, 1831-ca. 1900]. Originator of a paste made of arsenic trioxide, morphine, and creosote, used to devitalize the nerve of a tooth.

abbo-vac. A trade-mark for a blood-collecting unit, the container of which is evacuated.

abbr., abbrev Abbreviation.

Abderhalden, Emil [*Swiss pathologist and physiological chemist in Germany*, 1877-1950]. Investigator of amino acids and proteins. Contributed to our knowledge of intracellular metabolism. See also Abderhalden test.

ab-do men, ab'do men [L., belly]. The large, inferior cavity of the trunk, extending from the brim of the pelvis to the diaphragm. It is bounded in front and at the sides by the lower ribs and abdominal muscles, and behind by the vertebral column, the psoas, and the quadratus lumborum muscles. It is artificially divided into nine regions by two lines, the upper parallel with the cartilages of the ninth ribs, the lower with the iliac crests, and by two lines drawn vertically upward from the center of the inguinal ligament. These lines are situated differently by different writers. The regions thus formed are: above, the right hypochondriac, the epigastric, and the left hypochondriac; in the middle, the right lumbar, the umbilical, and the left lumbar; and below, the right inguinal, the hypogastric, and the left inguinal. See Plates 8, 14. —**abdom'inal** *adj.*

a. obstipum. An abdominal deformity resulting from congenitally short recti muscles.

accordion a. A swelling of the abdomen attended with flattening of the arch of the dia-

phragm and increased respiration. It is not due to the presence of gas or t tumor and disappears under anesthesia; nervous pseudotympany

acute a. An acute pathologic condition within the belly requiring prompt surgical intervention.

carinate a. A keel-shaped belly prominent in the middle and receding t the sides, with sharply convex contour

navicular a. Boat-shaped bdomen. See scaphoid a.

pendulous a. A relaxed condition of the abdominal wall in which the anterior abdominal wall hangs down over the pubis.

scaphoid a. A belly characterized by sunken walls, presenting concavity; seen in starvation and acute meningitis Also called *navicular a.*

ab dom'i no- [*abdomen*]. A combining form signifying *relating to the abdomen.*

ab-dom"i no-an te ri-or [*abdomen*, L. *anterior* foremost]. I obstetrics, designating fetal position in which the belly is forward.

ab-d om"i no-cen te sis [*abdomen*, G. *kentesis*, pricki g]. Paracentesis of the bdominal cavity

ab-dom"i no-hys"ter ec to-my See *hysterectomy.*

ab-dom"i no-hys ter-ot o-my [*abdomen*; G *hystera*, womb; *tomē*, a cutting]. Hysterotomy through an bdominal incision.

ab dom"i no-per"i ne al [*abdomen*, G *perineos*, space between the anus and the scrotum]. Relating to the abdominal and perineal regions.

ab-dom"i no pos te ri or [*abdomen*; L. *posterior* posterior]. *In obstetrics*, designating fetal position in which the belly is toward the mother back.

ab-dom"i nos co-py [*abdomen*, G *skopein*, to examine]. Diagnostic examination of the abdomen externally by the generally practiced physical methods, and I ternally by endoscopic methods.

ab dom'i nous [*abdomen*] H ving large abdomen.

ab-dom"i no u ter-ot o-my See *abdominohysterotomy*

ab-dom"i no ves'i-cal [*abdomen*, L. *vesica*, bladder]. Relating to the abdomen and the urinary bladder

ab-du'cens (ab dew sens) [L. *abducere*, to lead way]. The sixth cranial nerve whose fibers arise from the nucleus in the dorsal portion of the pons near the internal genu of the facial nerve and run long course t supply the external rectus muscle which rotates the eyeball outward.

ab-du cent [*abducere*] Abducting.

ab duct' [L. *abductum*, from *abducere*]. T draw way from the median line.

ab duc'tion [L. *abductio*, from *abducere*]. Withdrawal of part from the axis of the body or of an extremity *In ophthalmology* turning f the eyes outward from the central position by the external rectus muscles. In refraction, the turning of the eyes outward beyond parallelism under the artificial stimulus of base in prisms and expressed in terms of prism diopters, the measurement being the strongest prism power with which the eyes can maintain single vision at infinity

total a. The expression in prism diopters of the capacity for turning the eyes outward from the extreme point of inward or positive convergence to the extreme point of outward or negative convergence beyond parallelism. It is measured from convergence near point. A test of, and an exercise stimulus for relaxation of the internal recti and convergence.

ab-duc'tor [*abducere*]. A muscle which, on contraction, draws part way from the axis of the body or of an extremity See Table of Muscles in the Appendix.

a. accessorius digiti quinti. A rare variant of the opponens digiti qui ti (pedis) inserted int the base of the proximal phalanx of the little toe.

a. caudae. A muscle found in tailed animals, corresponding t the coccygeus muscle in man.

a. digiti minimi. The BR term for *abductor digiti quinti.*

a. digiti quinti. That of the little finger or toe.

a. hallucis. That of the great toe.

a. hallucis longus. A rare muscle of the anterior region of the leg inserted into the base of the first metatarsal

a. indicis. The first dorsal interosseous muscle of the hand variant term.

a. ossis metatarsi quinti. A variant slip of the *abductor digiti quinti* (pedis) muscle inserted into the tuberosity of the fifth metatarsal.

a. pollicis. One of the two abductor muscles of the thumb known as *abductor pollicis brevis* and *abductor pollicis longus.*

Abel John Jacob [*American pharmacologist*, 1857–1938]. Studied and named epinephrine. With Rowntree, discovered that phenolsulfonphthalein is excreted by the kidney (1909)

ab em"bry-on'ic [L. *ab* from; G *embryon*, embryo]. Away from or opposite the embryo.

ab en ter'ic [*ab*; G *enteron*, intestine]. Affecting or involving organs and structures outside the intestine said of pathologic conditions which are usually intestinal, as benteri typhoid.

Abercrombie John [*Scottish physician*, 1780–1844]. His name is associated with amyloid degeneration, called *Abercrombie degeneration.*

Abernethy John [*English surgeon*, 1764–1831]. The first to ligate the external iliac artery for aneurysm (1796) the operation bore his name for many years.

ab-er rant [L. *aberrare*, t wander from]. Varying or deviating from the normal in form, structure, or course especially anatomic organs, as aberrant ducts of the testis

ab er ra tion [L. *aberratio*, from berrare]. 1 A wandering from the correct, the normal, the standard. 2 Slight mental disorder 3. *I biology* an bnormal part or individual; sport. 4. *In optics*, any imperfection in the refraction or the focalization of lens. —**aber rant**, *adj*

chromatic a. Unequal refraction of different parts of the spectrum prod cing indistinct images surrounded by halo of colors.

chromosomal aberrations. Changes in the structure of chromosomes following their breakage and rearrangement

dioptric a. See spherical a.

distantial a. Indistinct vision due to distance.

lateral a. Deviation of ray in any direction from the axis, measured in the focal plane perpendicularly to the axis.

longitudinal a. Deviation of ray from the focus, measured along the axis bove or below the focal plane.

mental a. A deviation from normal mental function

Newtonian a. See chromatic a.

spherical a. Unequal refraction of monochromatic light in different parts of spherical lens, producing faulty images which show lack of sharpness or of flatness, or distortion. Also called *monochromatic a.*

ab er rom e-ter [*aberrare*; G *metron*, a measure]. An instrument for measuring aberration.

a bey'ance (bay uns) [OF *abeance*, expectation, from *a*, to *baer* to gape] 1 A cessation of activity or function. 2. A state of suspended animation.

ab'i-ent [L. *abire*, to go way]. Tending way from the source of stimulus, as opposed to *adient*

A'bi·es (ay'bee-eez, ab'ee-eez) [L., the silver fir]. A genus of evergreen trees belonging to the family Pinaceae; fir.

A. alba (A. pectinata) European silver fir. Yields Strasbourg turpentine.

A. balsamea. Balsam fir. Yields the oleoresin, fir balsam or Canada balsam, consisting chiefly of abietene resin, and a bitter principle. It is used as a microscopical mounting medium.

ab"i·et'ic [abies]. Pertaining to the genus *Abies*, as abietic acid, which is present in the resin of *Abies* and other coniferous plants.

ab"i·et'ic ac'id, ab"i·e·tin'ic ac'id. $C_{19}H_{29}COOH$. An acid from the resin of various species of pine. The anhydride of the acid, or an isomeric form or modification of the anhydride, appears to be the chief constituent of rosin.

a·bi'o- [G. *abios*, from *a-*, not; *bios*, life]. A combining form meaning *without life*.

a·bi"o·gen'e·sis (a-buy-o-jen'i-sis), **a"bi·og'e·ny** (a-buy-odj'i-nee) [abios; G. *genesis*, production]. Theory of the production of living from nonliving matter; spontaneous generation. —**abiogenet'ic, abiog'enous,** *adj.*; **abiog'enist,** *n.*

a·bi"o·log'ic (a-buy-o-lodj'ick), **a·bi"o·log'i·cal** [abios; G. *logos*, word]. Not pertaining to biology. —**abiol'ogy,** *n.*

a"bi·on'er·gy. See *abiotrophy*.

a"bi·o'sis [abios; G. -*ōsis*, condition]. 1. Absence of life. 2. Nonviability. —**abiot'ic,** *adj.*

a"bi·ot're·phy [abios; G. *trophē*, nourishment]. A genetically determined defect of the germinal layers, which may remain latent or which may become apparent and give rise to disordered functioning, as in Huntington chorea. A controversial term. Also called *abionergy*. —**abiotroph'ic,** *adj.*

ab·ir'ri·tant [L. ab, from; *irritare*, to irritate]. 1. Tending to *diminish irritation*; soothing. 2. Relating to diminished sensitiveness. —**abirritative,** *adj.*; **abirritate,** *v.t.*

ab·ir'ri·tant. A remedy or agent that allays irritation.

ab·ir"ri·ta'tion [ab; *irritare*]. Diminished tissue irritability; atony or asthenia.

ab"lac·ta'tion [L. *ablactare*, from *ab*, *lactare*, to give suck]. 1. The weaning of an infant. 2. The end of the period of mammary secretion.

a·blast'in [G. *a-*, not; *blastos*, shoot, offspring]. An antibodylike substance, appearing in the blood of rats infected with trypanosomes, which inhibits reproduction of this organism.

ab·la'ti·o (ab-lay'shee-o) [L., a taking away]. Detachment; removal; ablation.

a. placentae. Premature separation of the placenta. Also called *abruptio placentae*.

a. retinae. Detachment of a nonpathologic retina.

ab·la'tion [*ablatio*]. Removal of a part, as a tumor, by amputation, excision, etc. —**ablate,** *v.t.*

ab"le·pha'ri·a. See *ablephary*.

a·bleph'a·ron. See *ablephary*.

a·bleph'a·ry [G. *ablepharos*, from *a-*, not; *blepharon*, eyelid]. A congenital defect marked by partial or total absence of the eyelids or palpebral fissure. —**ablepharous,** *adj.*; **ablepharus,** *n.*

a·blep'si·a, a·blep'sy [G., blindness, from *a-*, not; *blepsis*, to see]. Loss or absence of vision.

ab'lu·ent [L. *abluere*, to wash away]. Detergent; cleansing.

ab'lu·ent. A cleansing or washing agent, as soap.

ab·lu'tion [*ablueere*]. The act of washing or cleansing the body. Syn., *lavation*.

ab·mor'tal [L. ab, from; *mortalis*, subject to death]. Flowing away from the dead or dying toward the living tissue; applied to electric currents generated in an injured organ, as a muscle.

ab·nerv'al [ab; L. *nervus*, nerve]. Away from a nerve; denoting the direction of an electric current passing through muscle fibers away from the point of entrance of the nerve, as opposed to adnerval.

ab·neu'ral [ab; G. *neuron*, nerve]. 1. Remote from the spinal or dorsal aspect; ventral. 2. Abnerval.

ab·nor'mal [ab; L. *norma*, rule, from *norma*, rule]. 1. Not normal. 2. Deviating in form, structure, or position; not conforming with the nature or general rule. —**abnormity, abnormal'ity, abnormalism,** *n.*

ab"o·ma·si'tis [ab; L. *omasum*, paunch; -*itis*, inflammation]. Inflammation of the abomasum.

ab"o·ma'sum, ab"o·ma'sus [ab; *omasum*]. The true digestive stomach of ruminants, and their fourth stomach, rennet.

ab·o'ral [ab; L. *os*, mouth]. [illegible] situated or directed away from the mouth.

ab·o'ral [ab; os]. Opposite to, or remote from, the mouth.

a·bort' [L. *abortus*, from *aboriri*, from [illegible]] born]. 1. Miscarry; bring forth [illegible] 2. Prevent complete [illegible] disease in the bod[y]. 3. Check [illegible] mal growth and development [illegible]

a·bor'ti·cide [abortus; L. *caedere*, to kill]. 1. Killing of an unborn fetus. 2. The agent which destroys the fetus and produces abortion.

a·bor'ti·ent. Causing [illegible]

a·bor"ti·fa'cient ([illegible]), ([illegible] bor-shent) [abortus; L. *facere*, to make] [illegible] or agent inducing expulsion of the [illegible] —**abor'tifacient,** *adj.*

a·bor'tin [abortus]. [illegible] *Brucella abortus*, made like tuberculin [illegible] used for the diagnosis of [illegible] questionable usefulness in [illegible]

a·bor'tion [L. *abortio*, from *aboriri*] [illegible] of the product of [illegible] viable. When this occurs [illegible] months, it is termed [illegible] viability [illegible] premature delivery [illegible] from the period of [illegible] ture delivery. 2. A [illegible] —**abortionist,** *n.*

accidental a. An [illegible] tion of pregnancy.

artificial a. Intentional [illegible] of pregnancy by [illegible]

complete a. One in which [illegible] conception are [illegible]

criminal a. Intentional [illegible] pregnancy while [illegible] the mother [illegible]

habitual a. [illegible] successive pregnancies [illegible]

incomplete a. [illegible] of conception [illegible] of the product [illegible] maining within the uterus.

induced a. See artificial [a.]

inevitable a. One [illegible] where termination of [illegible] pregnancy no longer can be prevented.

infectious a. An [illegible] which occurs [illegible] The specific [illegible] *Brucella abortus* [illegible] cattle, *Salmonella* [illegible] *Salmonella* [illegible] for sheep.

justifiable a. See therapeutic a.

missed a. A [illegible] in which the fetus [illegible] died but the products of conception are not expelled within two weeks.

partial a. Premature expulsion of one [illegible] the process of multiple gestation.

psychiatric a. A therapeutic [illegible]

the aggravation or inception of mental disease during pregnancy

septic a. An abortion resulting in infection of the endometrium.

spontaneous a. Unexpected premature expulsion of the product of conception when no abortifacient agent has been employed.

therapeutic a. Termination of pregnancy which is a hazard to the life of the mother.

threatened a. Occurrence of signs and symptoms of impending loss of the embryo. It may be prevented by treatment or may go on to inevitable abortion.

tubal a. Escape of the product of conception through the abdominal opening of the oviduct into the peritoneal cavity.

a·bor'tive [L. *abortivus*, from *abortus*]. 1. Prematurely born; undeveloped; immature; rudimentary. 2. Coming to an untimely end. 3. Checking the full development of a disease or cutting short its duration. Syn., *abortifacient*, *abortient*.

a·bor'tus [L.]. Aborted fetus; abortion.

a·bou'li·a (a·boo'lee·uh). See *abulia*.

a·bou"lo·ma'ni·a (a·boo"lo·may'nee·uh). See *abulomania*.

a·bra'chi·a (a·bray'kee·uh). Armlessness.

a·bra'chi·o·ceph'a·lus (a·bray"kee·o·sef'uh·lus) [G. *a-*, not; L. *brachium*, arm; G. *kephalē*, head]. Headless and armless monster. —**abrachiocepha'lia**, *n.*

a·bra'chi·us (a·bray'kee·us) [*a-*; *brachium*]. An armless monster.

ab·ra·dant. See *abrasive*.

Abrami, Pierre [French physician, 1879–1945]. Known for his description, with Widal, of acquired hemolytic jaundice (1907).

ab·ra'sion [L. *abrasum*, from *abradere*, to rub off]. 1. A spot denuded of skin, mucous membrane, or superficial epithelium by rubbing or scraping, as a corneal abrasion; an excoriation or attrition. 2. In *dentistry*, the mechanical wearing down of the teeth, as from chewing or by instruments (dental abrasion). —**abrade'**

ab·ra'sive [*abradere*]. Agent which scrapes or rubs off the external layers of a part. —**ab·ra'sive**, *adj.*

ab·ra'sor (a·bray'zor) [L. *abrasum*, from *abradere*]. A surgeon's rasp or xyster; any file or instrument used in the surgical or dental abrasion of a surface; rasp used in pharmacy.

a·bras'tol. See *asaprol*.

ab"re·ac'tion [L. *ab*, away; *re-*, again; *actus*, from *agere*, to do]. In *psychoanalysis*, the mental process by which repressed emotionally charged material is freed, and forgotten memories are brought to consciousness and relived with appropriate emotional release after insight is obtained; catharsis. It also occurs in hypnosis and narcoanalysis.

motor a. Motor or muscular expression of an unconscious impulse.

Abrikosov, Aleksei Ivanovich [Russian pathologist, 1875–]. Described granular-cell myoblastoma, called *Abrikosov's tumor*. Also spelled *Abrikossoff*.

a'brin [G. *habros*, graceful]. A phytotoxin obtained from *Abrus precatorius*. It has been employed in treating corneal opacities and trachomatous pannus.

L-a'brine. $C_{12}H_{14}N_2O_2$. N-methyltryptophan, an amino acid derivative extracted from *Abrus precatorius*; not to be confused with abrin.

a·bro'si·a (a·bro'shuh, ·see·uh) [G. *abrōsia*, fasting, from *a-*, not; *brōsis*, eating]. Abstinence from food; fasting.

ab·rup'ti·o (ab·rup'tee·o) [L., from *ab*, from; *ruptio*, breaking]. Abruption; tearing away.

a. placentae. Premature separation of the placenta. Also called *ablatio placentae*.

A'brus [G. *habros*, graceful]. A genus of tropical vines; rosary-pea. The seeds of **A. precatorius**, jequirity, are the source of the phytotoxin abrin.

ab'scess, ab·ses'sus [L. *abscessus*, a going away, departure]. Localized collection of pus in any part of the body. According to location, abscesses are named *dorsal*, *mammary*, *rectal*, etc. See also *microabscess*.

acute a. One resulting from an acute inflammation of the part in which it is formed.

alveolar a. One associated with the alveolar process and usually originating at the apex of a tooth as a *periapical* abscess or along a lateral surface of the root of a tooth as a *lateral alveolar abscess*. The former is usually the result of pulpal disease, the latter of periodontal disease.

amebic a. A variety found in the liver and lung containing amebas. It is a complication or sequel of amebic dysentery.

anorectal a. An abscess of the perirectal adipose tissue near the anus; also called *ischiorectal a.*, *perirectal a.*

apical a. One occurring at the end of the root of a tooth.

appendiceal a. Pus formation about the vermiform process, secondary to acute suppurative inflammation of the appendix.

arthrifluent a. A wandering abscess having its origin in a diseased joint.

atheromatous a. A focus of softening, the result of degeneration and necrosis, in the wall of a vessel, the seat of simple intimal arteriosclerosis. Not a true abscess. Also called *atheroabscess*.

Bezold's a. See Friedrich *Bezold*.

blind a. One which does not point on a surface, as a dental granuloma.

Brodie's a. A localized infection of the bone occurring in chronic osteomyelitis. Most often seen in the tibia of young adults.

canalicular a. A mammary abscess that communicates with a milk duct.

caseous a. One in which the pus has a cheesy appearance, usually tuberculous.

cheesy a. See *caseous a.*

chronic a. One of slow development, generally about a bone or joint, or in a lymph node, usually tuberculous and containing cheesy material.

circumtonsillar a. Quinsy. Syn., *peritonsillar a.*

cold a. A slow-growing abscess attended by little or no inflammation. A tuberculous abscess. See *chronic a.*

Darier's a. See Pautrier's *microabscess*.

embolic a. One formed at the seat of a septic embolus.

epidural a. A localized suppuration and granulation outside the dura mater but within the cranium or spinal canal; also called *extradural a.*, *pachymeningitis externa*.

fecal a. One containing feces and communicating with the lumen of the large intestine.

fixation a. One produced by the subcutaneous injection of a chemical irritant.

follicular a. One arising in a lymph nodule.

gravitation a. One in which pus formed in one part of the body tends to migrate, usually to portions deeper or lower down, in the direction gravity would take it.

helminthic a. One initiated by a worm, such as filaria.

hematic a. One due to an extravasated blood clot.

hemorrhagic a. One containing blood.

hypostatic a. See wandering a.
idiopathic a. One not attributable to any disease.
iliac a. A wandering abscess of the iliac region.
ischiorectal a. See anorectal a.
lacunar a. One involving a lacuna, usually of the urethra.
lumbar a. A wandering abscess of the lumbar region.
lymphatic a. The suppuration of a lymph node.
mammary a. One involving the essential breast tissue.
marginal a. One situated near the margin of an orifice, specifically near the anal orifice.
metastatic a. One secondary to pyemia and acute or subacute bacterial endocarditis, but not occurring through septicemia. It is usually of embolic origin and generally located in the lungs or liver.
miliary a. A minute embolic abscess.
milk a. A mammary abscess occurring during lactation.
myocardial a. An abscess in the muscle of the heart.
ossifluent a. One arising from diseased bone.
otic cerebral a. An abscess of the brain following purulent disease of the inner ear.
palmar a. One in the palm of the hand, usually beneath the palmar fascia.
parametritic a. One occurring frequently between the folds of the broad ligaments of the uterus or in the neighboring cellular tissue.
paranephric a. See perinephric a.
pelvic a. One involving structures within the pelvis.
perianal a. One adjacent to the walls of the anal canal.
periapical a. An abscess originating at the apex of a tooth; a type of alveolar abscess.
pericemental a. One on the lateral surface of a tooth, unrelated to apical or gingival abscess.
perimetritic a. Pus within the peritoneum originating from inflammation of the peritoneal covering of the uterus.
perinephric a. One originating in the region immediately surrounding the kidney.
periodontal a. A lateral alveolar abscess.
periproctitic a. One involving the loose areolar tissue surrounding the lower rectum.
perirectal a. See anorectal a.
peritonsillar a. One forming in acute tonsillitis around one or both tonsils; quinsy. Also called *retrotonsillar a.*
perityphlitic a. One involving the tissues surrounding the cecum and appendix.
phlegmonous a. An acute abscess in connective tissue, especially the subcutaneous.
pilonidal a. One in the sacrococcygeal area within, or resulting from, a pilonidal cyst or sinus.
postfascial a. See subfascial.
postmammary a. See submammary a.
prelacrimal a. One from caries of the lacrimal or ethmoid bone, producing a swelling at the inner canthus just below the upper margin of the orbit.
primary a. One originating at the seat of a pyogenic infection.
psoas a. A cold abscess arising from diseased lumbar or lower thoracic vertebrae, the pus gravitating through the sheath of the psoas and pointing finally in the femoral triangle.
pyemic a. One occurring as a complication of pyemia.
residual a. One forming in or about the residue of a former infection.
retromammary a. See submammary a.
retrotonsillar a. See peritonsillar a.
retrovesical a. One situated behind the urinary bladder in the male or between the urinary bladder and the uterus in the female.
scrofulous a. A chronic abscess from infected bone or lymph nodes. Obs.
secondary a. An embolic abscess.
septicemic a. One resulting from septic infection or accompanying septicemia.
shirtstud a. One near the surface communicating by means of a sinus with a deeper abscess.
spermatic a. One involving the seminiferous tubules.
spirillar a. One containing spirilla from the saliva.
stitch a. One formed about a stitch or suture.
subareolar a. One beneath the pigmented epithelium of the nipple, sometimes draining through the nipple.
subdiaphragmatic a. One situated below the diaphragm and above the dome of the liver.
subfascial a. One beneath a fascia; postfascial abscess.
submammary a. One lying between the mammary gland and the chest wall. Syn., *postmammary*, *retromammary a.*
subpectoral a. One beneath the chest muscles.
subperitoneal a. One arising between the parietal peritoneum and the abdominal wall. Also called *preperitoneal a.*
subphrenic a. One located beneath the diaphragm.
suburethral a. One located beneath the urethra; in the female it may protrude from the introitus as a bulge in the anterior vaginal wall.
sudoriparous a. One due to inflammation of obstructed sweat glands.
supralevator a. One located between the levator muscles and the reflection of the peritoneum.
sympathetic a. A secondary or metastatic abscess at a distance from the part in which the exciting cause has acted, as a bubo.
thecal a. One in the sheath of a tendon.
Tornwaldt's a. One located in the pharyngeal tonsil or surrounding structures and caused by an infection of the pharyngeal bursa. See also Gustav Ludwig *Tornwaldt*.
tropical a. Amebic abscess (usually of the liver) found in conjunction with amebic dysentery.
tuberculous a. See chronic a.
tympanitic a. One containing gas. Also called *abscessus flatuosus*, *gas a.*
urinary a. One resulting from extravasation of urine.
urinous a. One containing urine mingled with the pus.
verminous a. One containing worms from the intestine.
wandering a. One in which the pus has traveled along the connective-tissue planes and points at some locality distant from its origin. Syn., *hypostatic a.* Also called *abscessus per decubitum*.
worm a. See verminous a.

ab·scis·sa (ab-sis′uh) [L. *abscissum*, from *abscindere*, to cut off]. 1. The horizontal of the two coordinates used in plotting the interrelationship of two sets of data. The vertical line is called the ordinate. 2. *In optics*, the point where a ray of light crosses the principal axis.

ab·scis′sion (ab-sizh′un, ab-sish′un) [L. *abscisio*, from *abscindere*]. Removal of a part by cutting.

ab·scon·si·o (ab-skon′see-o, -shee-o) [L. *abscondere*, to hide]. A cavity, depression, or recess—either normal or pathologic; especially one in bone which conceals the head of a contiguous bone. *Obs.*

ab′sence [L. *absentia*, absence]. 1. *In psychiatry*,

difference to one's environment. 2. Temporary loss of consciousness, as in epilepsy, melancholia, and individuals with central lesions. 3. Fleeting loss of consciousness occurring in hysterical attacks or at the climax of completed or very intense sexual gratification (Freud).

ab-sen-tee'ism [L. *absens*, from *abesse*, to be absent]. The practice of industrial workers of absenting themselves from their jobs for minor illness or injury or for personal reasons; the time lost from such practices.

abs. feb. *Absente febre*; in the absence of fever.

Ab-eid'l a. See *Macer*.

ab'sinthe, ab-sinth [L. *absinthium*, from G. *apsinthion*, wormwood]. A green, French liqueur; an alcoholic solution of absinthium, anise, and marjoram oils, and other aromatics. Its manufacture and use have been prohibited in France since 1915.

ab-sin'thic ac'id. An acid from wormwood oil. It may be identical with succinic acid.

ab-sin'thin. A bitter crystalline glycoside $C_{30}H_{40}O_6$, obtained from wormwood. See *absinthium*.

ab'sinth-ism [*absinthium*]. A morbid state resulting from the habitual and excessive use of absinthe; characterized by neuritis, hyperesthesia, and hallucinations. Acute or chronic excess may cause convulsions, acute mania, or general paralysis.

ab-sin'thi-um [L.]. Common wormwood, the leaves and tops of *Artemisia absinthium*. Absinthium contains a volatile oil and an intensely bitter principle, absinthin; it has been used as an aromatic bitter, diaphoretic, anthelmintic, and flavoring agent.

ab-sin'thol. $C_{10}H_{16}O$. Principal constituent of wormwood oil; it is isomeric with ordinary camphor.

ab'so-lute [L. *absolutus*, from *absolvere*, to set free]. 1. Simple, pure; free from admixture. 2. Unlimited and unqualified. 3. Complete, entire, real. 4. In *physics*, derived from basic data, not arbitrary.

ab'so-lute al'co-hol. See under *alcohol*.

ab'so-lute cell in'crease. A rise in the number of leukocytes of a particular type. The absolute number of the cells of a given variety equals the total white-cell count multiplied by the percentage of cells of that variety.

ab-sorb' [L. *absorbere*, to suck up]. 1. In *physiology*, suck up, take in, imbibe, as fluids or gases, through osmosis and capillarity. 2. Infiltrate into the skin, as ultraviolet rays. 3. Incorporate into the body via the blood and lymph. 4. Stop radiant heat rays.

ab-sor'bance. In applied spectroscopy, the negative logarithm, to the base 10, of transmittance. The term *optical density*, sometimes used to express the absorbance of solutions, is recommended to be abandoned. Symbol, *A*. Sometimes written *absorbency*.

ab-sor"be-fa'cient (ab-sor"bi-fay'shunt) [*absorbere*; L. *facere*, to make]. Any agent which promotes absorption. —**ab-sor"be-fa'cient**, *adj.*

ab-sorb'ent [*absorbere*]. Anything capable of absorbing or soaking up fluids, gases, or light waves. 2. A drug, application, or dressing which promotes absorption of diseased tissues. —**ab-sorb'ent, absorp'tive**, *adj.*

ab-sorp"ti-om'e-ter (ab-sorp"shee-om'e-tur) [*absorbere*; G. *metron*, a measure]. 1. An instrument which determines the solubility of a gas, or the amount absorbed. 2. An apparatus which measures the thickness of a layer of fluid between two parallel sheets of plate glass in apparent apposition. When used with a spectrophotometer it is a hematoscope.

ab-sorp'tion [L. *absorptio*, from *absorbere*]. 1. In *physiology*, sucking up, taking in, and assimilation of certain gases, fluids, and suitable matter by the skin, mucous membranes, lacteals, lymphatics, and blood vessels. 2. In *physics*, taking up of a specific gas by a given solid. 3. Extinction of white light or any of its component rays by black or colored objects. 4. In *physiological chemistry*, neutralization of an acid. 5. In *psychology*, inattention to all but a single thought or activity. 6. In *radiology*, reduction in intensity of a beam of radiation as it passes through matter: (a) particulate radiation loses energy through collisions with electrons or atomic nuclei, and (b) photons lose energy by transferring it to electrons by scattering or photoelectric processes.

a. band. A region of the absorption spectrum in which the absorptivity passes through a maximum or inflection.

bone a. See *osteoclasis*, 2.

cutaneous a. Absorption through the skin.

disjunctive a. Separation of a slough or necrotic part by the absorption of a thin layer of the healthy tissue immediately adjacent to and surrounding it.

external a. Taking up of foods, medicaments, and other matter by the skin and mucous membranes.

internal a. Normal digestive assimilation of foods, water, etc. Also called *molecular*, *nutritive*, and *organic a.*

interstitial a. Taking up of metabolites by the absorbent system.

pathologic a. Absorption by the blood of any morbid product or excretion, as pus or bile. Also called *excrementitial a.*, *absorptio morbosa*.

self-a. In *radiobiology*, the absorption of radiation by the material from which the radiation is originating.

ab-sorp-tiv'i-ty. In applied spectroscopy, the ratio of the absorbance to the product of concentration and length of optical path. It is the absorbance per unit concentration and thickness. Symbol, *a*.

ab'sti-nence [L. *abstinentia*, from *abstinere*, to keep away]. Voluntary self-denial of or forbearance from indulgence of appetites, especially from food, alcoholic drink, or sex relations.

ab-strac'tion [L. *abstractio*, from *abstrahere*, to draw away]. 1. Removal or separation of one or more ingredients from a compound, as an abstract from a crude drug. 2. Bloodletting. 3. Absorption of the mind, absent-mindedness, inattention to ideas. 4. In *psychology*, isolation of a meaning or characteristic from a totality which is unique and inaccessible to comparison; may be performed by thinking, feeling, sensation, or intuition.

Abt's method. See Farmer and Abt's method.

ab-ter'mi-nal [L. *ab*, from; *terminalis*, from *terminus*, end]. From the tendinous end toward the center of the muscle, noting the direction of an electric current in muscle.

a-bu'li-a (a-byoo'lee-uh, a-boo') **a-bou'li-a** (a-boo'lee-uh), **ab"u-le'ia** (ab-yoo-lee'yuh) [G. *a-*, not; *boulē*, will]. Loss or defect of the ability to make decisions, seen in an extreme form in the simple type of schizophrenic reaction. —**abu'lic**, *adj.*

a-bu"lo-ma'ni-a (a-byoo"lo-may'nee-uh, a-boo"lo-), **a-bou"lo-ma'ni-a** (a-boo"lo-may'nee-uh) [*a-*, *boulē*; G. *mania*, madness]. Abulia. *Obs.*

Abū-l-Qāsim. See *Albucasis*.

Abumeron. See *Avenzoar*.

a-buse' [L. *abusus*, using up]. 1. Wrong use, misuse, or particularly excessive use. 2. Rape.

a-but'ment, a-but'tal [OF. *abouter*, to fix the

[illegible] A tooth used to support or stabilize prosthetic appliance. —abut, *A.*

AC Anodal closure

A. C. Abbreviation for air conduction, anodal closure.

A.C., ac, a.c., a-c Abbreviations for alternating current.

Ac Chemical symbol for actinium; acetyl.

a. c. *Ante cibum*, before meals.

A-ca·cia (a-kay'shuh) [G. *akakia*, acacia tree]. A large genus of woody plants of the Mimosaceae, found in warm regions, many being native t Africa and Australia.

A. senegal. The most important of several African species yielding gum arabic.

a·ca·cia [*akakia*]. The dried gummy exud tion from the stems and branches of *Acacia senegal* (Linné) Willdenow or of some ther African species of *Acacia*, occurring in translucent or somewhat opaque, white to yellowish-white spheroidal tears; it is almost completely soluble in water. It consists of calcium, magnesium, and potassium salts of the polysaccharide arabic acid (also know as arabin). In the form of acacia muci ge and acac syrup, it is used as demulcent; it has also been used, by intravenous injection, in treating shock and edema. The mucilage and syrup are valuable vehicles. Syn., *gum arabic*.

a·cal"ci·co·sis [G a-, not L. *calx*, lime; G. *-osis*, condition]. The condition resulting from diet continuously low in calcium.

cal·cu'li·a, ac·al·cu'li·a [a-, L. *calculare*, to compute]. An phasi marked by the inability to work even the simplest mathematical problems: also called *arithmetic disability*.

-camp·si [a-; G *kampsis*, to bend]. Inflexibility or rigidity of joint or limb an ankylosis.

acanth-. See *acantho-*.

[illegible] (a-can thes thee zhuh, -zee-uh) [G *akantha*, thorn; *aisthēsis*, sensation]. A sensation as of pricking with needles.

-can thi·on [G *akanthion*, little thorn]. A craniometri point named and located by von Török at the tip of the anterior nasal spine also spelled *akanthion*. —a *can'thi·al*, adj

a·can'tho-, acanth- [G *akantha*, thorn]. A combining form meaning *thorn*, *thorny spine* ping.

can"tho·a·mel"o·blas t ma. An ameloblastoma in which the cells are of the squamous or prickle-cell type. The basal-cell layer resembles the ameloblasts.

A·can"tho·ceph a la [*akantha*, G. *kephalē*, head]. The proboscidal roundworms; common parasites of birds and fishes, found less frequently in other vertebrates.

a·can"tho·ceph"a·li -sis [*akantha*, *kephalē*; NL. *-iasis*, condition]. Infestation by *Acanthocephala*.

A·can tho chei"lo·ne ma (kigh lo-nee muh) [*akantha*; G *cheilos*, lip *nēma*, thread] A genus of filarial orms.

A. perstans. A species found extensively in tropical regions, with man the definitive host.

-can"tho·chei"lo·ne·mi sis (kigh"lo-ni migh uh-sis) [*akantha*; *cheilos*; *nēma*; NL. *-iasis*, condition]. Infestation by the *Acanthocheilonema perstans*; characterized by fever malaise, edema, and headache.

-can'thoid [*akantha*; G *eidos*, form]. Resembling spine, spinous.

a·can"tho·ker" to·der ma a [*akantha*; G *keras*, horn; *derma*, skin]. Thickening of the horny layer of the skin of the hands or feet.

ac"an thol'y·sis [*akantha*; G *lysis*, loosing] Any skin disease in which there is an atrophy of the prickle-cell layer

a. bullosa. A congenital or neonatal skin disease with bullae and vesicles. See *epidermolysis bullosa*.

ac an tho ma [*akantha*; G *-ōma*, tumor]. A highly differentiated form of epidermoid carcinoma, rich in keratinized epithelium and epithelial pearls.

a. adenoides cysticum. See *trichoepithelioma*.

-can tho·pel'vis [*akantha*, L. *pelvis* basin] A rachitic pelvis having sharp, prominent pubic crest. Also called *acanthopelys pelvis spinosa*.

A·can tho·phi [*akantha*; G *ophis*, serpent]. A genus of snakes of the Elapidae

A. antarcticus. The death adder of Australia and New Guinea which possesses neurotoxic venom.

ac an tho sis [*akantha*, G *-osis*, condition]. A thickening of the germinative layer of the epidermis seen in many k diseases nd caused by hyper plasia of the cells. —**acanthot'ic**, *adj*

a. nigricans. A generalized pigmentation of the skin accompanied by papillary and verrucous growths, in bout half of the cases with adenocarcinoma of internal organs; in the benign type, onset occurs at birth, early childhood, or puberty

juvenile a. One characterized by obesity hypogenitalism, and metabolic disorders. The neck, throat, axillae epigastrium, pubis, back, interscapular and sacral regions are affected, and the gray-brown lesions are hyperkeratotic, rugose, and are not shed. Also called *papular papillomatosis*.

a·can thro·cyte [*akantha*; *erythrocyte*]. A genetically malformed erythrocyte haracterized in wet preparations by several irregularly spaced, large, coarse spiculated cytoplasmic projections, giving the cells thorny or star-shaped ppearance and exhibiting marked increase in mechanical fragility

a·can"thro·cy t sis. An association of the predominating presence in blood of acanthrocytes, the celiac syndrome in early childhood, and diff se taxic neuropathy with or without retinitis pigmentosa considered to be hereditary on the basis of consanguinity of the parents.

a·can'thu lus [*akantha*]. An instrument for removing thorns from wounds.

a·cap ni [G a- not, without *kapnos*, smoke]. The complete bsence of CO commonly used incorrectly for *hypocapnia*. —**a cap ni al**, *adj*.

a cap su lar [a-; L. *capsula*, small box]. *In biology* without capsule.

a car'di·a [G. *akardios*, from a- *kardia*, heart]. Congenital absence of the heart. —**acardiac**, *adj* n.

car-di' -cus (ay car-dye ah-kus, car) [a-; G ; *kardiakos*, belonging to the heart]. Omphalosite completely lacking a heart.

a. acephalus. An omphalosite without head.

a. amorphus. A shapeless omphalosite with only rudiments of organs. Also called *a. anceps*.

-car"di he mi a, a·car"di·o hae mi [G *akardios*, from a- *kardia*, heart; *haima*, blood]. Lack of blood in the heart.

-car"di o·ner'vi [*akardios*; L. *nervus*, nerve]. A deficiency or absence of nervous stimulation to the heart.

car"di o·tro phi a [*akardios*; G *trophē*, nourishment]. Atrophy of the heart.

-car di us [*akardios*]. Monster lacking heart, occurring as parasitic twin. —**acardius**, *adj*

ac" ri'a sis [G. *akari*, mite from a- not; *keirein*, to cut; NL. *-iasis*, condition]. Infestation with acarids or mites and the resulting diseased condition. Also called *acarinosis*.

ac'i·cide [*akari*, L. *caedere*, to kill]. Agent that destroys acarids.

ac rid [*akari*]. A tick or mite. —**aca rian, acar'idan, acarid'ia** *adj* n.

Ac" ri'na [*akari*]. An order of Arachnida comprising the ticks and mites. Many species are

important vectors of bacterial, protozoan, rickettsial, and spirochetal diseases. In addition, severe reactions may result from their bites.

a·car'i·no'sis. See *acariasis*.

a·car'i·tis. See *acariasis*.

ac·a·ro- [*akari*]. A combining form denoting *mites* or *tick*.

ac"a·ro·der"ma·ti'tis [*akari*; G. *derma*, skin; -*itis*, inflammation]. Dermatitis caused by acarids. **a. urticarioides.** An urticarial and pruritic dermatitis due to infestation by the acarine mite *Pediculoides ventricosus*, whose normal hosts are insect larvae. It is seen in man exposed to grain or straw. Also called *grain itch*.

ac'a·roid [*akari*; G. *eidos*, form]. Mitelike.

ac"a·ro·pho'bi·a [*akari*; G. *phobos*, fear]. Morbid fear of mites or of certain small animals or inanimate things, as worms or pins.

ac·a·ro·tox'ic [*akari*; G. *toxikon*, poison]. Poisonous, or destructive, to acarids.

a·car'pi·a [G. *akarpia*, unfruitfulness]. Sterility; barrenness, unfruitfulness.

a·car'pous [G. *akarpos*, without fruit]. 1. Having no elevations; not nodular. 2. Producing no fruit; sterile, barren.

Ac·a·rus [G. *akari*, mite]. A genus of mites.

A. folliculorum. Synonym for *Demodex folliculorum*.

A. scabiei. Synonym for *Sarcoptes scabiei*.

a·car·y·ote [G. *a-*, not; *karyon*, nucleus]. Nonnucleated. See *akaryote*.

a·cat·a·lep'si·a, a·cat'a·lep"sy [a-; G. *katalambanein*, to comprehend]. 1. Mental impairment; dementia. *Obs.* 2. Uncertainty in diagnosis. *Obs.* —**acatalep'tic**, *adj.*, *n.*

a·cat·a·ma·the'si·a (a·cat"a·math·ee'zhuh, -zee·uh) [a-; G. *katamathēsis*, thorough knowledge]. 1. An inability to understand conversation. 2. A morbid blunting or deterioration of the senses, as in mental deafness and blindness.

a·cat"a·pha'si·a (ay·kat"uh·fay'zhuh, -zee·uh) [a-; G. *kataphasis*, affirmation]. Syntactic aphasia characterized by an inability to construct sentences properly.

ac"a·tap'o·sis [a-; G. *kataposis*, swallowing down]. A difficulty in swallowing; dysphagia.

a·cat·a·sta'si·a (ack·uh·tas·tay'zhuh, -zee·uh, -shuh, -see·uh) [G. *akatastasia*, instability from a-; *katastasis*, standing firm]. Irregularity; nonconformation to type; variation from the normal. —**acatastat'ic**, *adj.*

ac"a·thar'si·a [a-; G. *katharsis*, a holding back]. Failure or inability to retain bodily secretions and excretions. —**acathec'tic**, *adj.*

ac·a·thex'is [a-; *kathexis*]. In *psychiatry*, lack of affect toward some thing or idea which unconsciously is very important to the individual.

ac·a·thi'si·a. See *akathisia*.

a·cau'dal (ay·kaw'dul, kaw'dul), **a·cau'date** [a-; L. *cauda*, tail]. Tailless.

ACC Anodal closure contraction.

Acc. Accommodation.

ac·cel'er·ans (ack·sel'ur·anz) [L. *accelerans*, to hasten]. Old term for accelerator nerve. See under *nerve*.

ac·cel'er·ant. See *accelerator*.

ac·cel"er·a'tion (ack·sel·ur·ay'shun) [L. *acceleratio*, from *accelerare*]. 1. Quickening, as of the pulse or the respiration. 2. Change of velocity (*linear acceleration*) or of direction of movement (*centrifugal acceleration*); important in aviation medicine. See *blackout*, G 2.

ac·cel'er·a·tor, ac·cel'er·ant [*accelerare*]. 1. That which hastens. 2. Any agent or part which quickens the speed of a function. 3. A catalyst. —**accel'erate**, *v.*

electrostatic a. Any device making use of electrostatic forces to establish a large potential difference that can be used to accelerate positive or negative charges; condenser-rectifier circuits or a Van de Graaff generator can accomplish this.

particle a. Any device for accelerating ionic or nuclear particles, such as the cyclotron, etc.

ac·cel·er·a"tor u·ri'nae (yoo·rye'nee). Old term for the bulbocavernosus muscle. See Table of Muscles in the Appendix.

ac·cel'er·in. A factor in plasma or serum which accelerates the conversion of prothrombin to thrombin by thromboplastin; it is present as precursor *proaccelerin*. Syn., *factor VI*, *serum accelerator globulin*, *labile factor*.

ac·cel"er·om'e·ter [*accelerare*; G. *metron*, a measure]. An instrument for measuring acceleration in gravity units.

ac·cen'tu·a·tor (ack·sen·chōō·ay"tur, ack·sent'yōō-) [L. *accentus*, accentuation]. A chemical substance which intensifies the action of a tissue stain.

ac·cep'tor (ack·sep'tur, -tor) [L. *acceptor*, to accept]. A substance which accepts or combines with a product of a chemical reaction; applied especially to those substances which increase the rate of reaction by acting as intermediaries in transferring another substance, such as hydrogen, from a reactant to the final product. See *hydrogen acceptor*.

ac"ces·so'ri·us [L. *accessum*, from *accedere*, to be added]. Accessory; supernumerary; assisting.

ac·ces·so'ri·us. Any muscle which contributes to or reinforces the function of another.

a. ad flexorem digitorum profundum. An occasional additional slip of the flexor digitorum profundus muscle, originating from the coronoid process of the ulna and usually associated with the tendons for middle and index fingers.

a. of gluteus minimus. An occasional slip of muscle lying under the gluteus minimus and inserted into the capsule of the hip joint.

a. muscle (*a*) Old name for quadratus plantae muscle. (*b*) Old name for iliocostalis dorsi muscle.

a. pterygoid. An occasional slip of muscle extending from the body of the sphenoid to the lateral pterygoid plate.

accessorone. Trade-mark for a preparation containing vitamins A and D, red bone marrow extract, iron and ammonium citrates, malt and yeast extracts.

ac·ces'so·ry (ack·ses'o·ree) [*accessum*]. Auxiliary; assisting; applied to a lesser organ or part which supplements a similar organ or part.

ac'ci·dent [L. *accidere*, to occur]. 1. In *legal medicine*, an event occurring to an individual without his expectation, and without the possibility of his preventing it at the moment of its occurrence. 2. An intercurrent or complicating symptom or event, not to be looked for in the regular progression of an attack of disease.

cerebral a. A sudden, unexpected event of an injurious nature that occurs within the cerebrum, as cerebral hemorrhage or apoplexy.

cerebrovascular a. cerebral vascular a. See *apoplexy*, 1.

serum a. A serious allergic reaction which immediately follows the introduction of a foreign serum into a hypersensitive individual. Dyspnea and flushing occur, soon followed by shock and occasionally by fatal termination.

ac"ci·den'tal·ism [*accidere*]. A system of medicine based on symptoms only, disregarding etiology or pathology.

ac·ci·dent-prone. In *psychosomatic medicine*, of, pertaining to, or describing a person or group of persons who may have a low incidence of somatic illnesses but an unusually high incidence rate of

accidents. The accident are considered t be subconsciously caused by emotional or personality conflicts, and may represent unconscious hostility or desire for punishment.

ac·cip'i·ter (ack-sip'i·tur) [L., hawk]. A facial bandage with tails radiating lik the cl ws of hawk

ac·cli"ma·ti za'tion ac cli ma'tion [F acclimater from à, t ; climat, climate]. Process of adjusting t strange or foreign climat soil, water etc., applied to plants, animals, and people —accli'mate, ac climate accli'matize *t.*, *v.t.*

ac"co·lé (ack lay') A form of the malaria parasite, *Plasmodium falciparum*, in which it ppears as thin strip of cytoplasm adhering t the surface of the erythrocyt

ac·com mo·da'tion [L. accommodare t adapt]. Adaptation or adjustment of an organ, part, or organism, especially that of the eye It includes the changes in the ciliary muscle and the lens in bringing light rays from various distances to focus upon the retina. Abbreviated, a., Acc. —**accommodative**, *adj*

absolute a. Accommodation of each eye considered individually

a. phosphene. Peripheral light-streak seen in the dark after accommodation.

a. reflex. Changes which occur when the vision is focused from distant to near object namely contraction of the pupil, convergence of the eyes, and increased refraction by the lens.

binocular a. Simultaneous accommodation of the two eyes.

Helmholtz's theory of a. The i creased convexity of the lens is prod ced by relaxation of the suspensory ligament, thus removing the influence which tends to flatten the lens and permitting the latter by its elasticity to become more convex.

histologic a. Microscopic changes in the form, structure, and function of cells and tissues after adapting t new conditions.

negative a. Lessening of the accommodation for distant vision.

obstetric a. Fetal conformation to the cavity of the uterus, particularly during the last third of pregnancy

positive a. Adjustment required for near vision.

region of a. Span of clear vision through which the eye can focus (that is, from its far point t its near point)

relative a. Extent of accommodation possible for any particular degree of convergence.

spasm of a. Excessive or persistent contraction of the ciliary muscle, following the ttempt to overcome error of refraction. It stimulates my pia.

Tscherning's theory of a. By the contraction of the anterior part of both the radiating and circular fibers of the ciliary muscle, the ciliary processes are drawn backward and the suspensory ligament pulled backward and outward; pressure of the anterior portion of the muscle causes increased convexity of the lens.

ac·com'plish ment quo'tient. See *achievement q.* under *quotient*.

ac·couche'ment (kōōsh mahng, uh kōōsh ment. *See* Notes § 35) [F.]. Childbirth; parturition.

a. forcé. Rapid delivery by manual dilation of the cervix followed by version or pplication of forceps and immediate extraction.

ac"cou·cheur' (ack ōō shur') [F.]. Obstetrician; professionally trained person attending women in childbirth.

ac cou·cheuse' (ack"ōō-shus') [F.]. A female obstetrician; midwife.

ac"cre·men ti'tion (ack ri-men tish un) [L. accrescere, to grow; *incrementum*, growth]. Increase and growth haracterized by the addition of lik tissue by: simple fission, cellular division, and budding or gemmation. — **accrementitial**, *adj*

accretin Trade-mark for an anterior pituitary growth hormone preparation; administered intramuscularly

ac·cre ti cor di's (a kree hee-o kor dis) A serious form of adherent pericarditis with fibrous ba ds extendi g from the mediastinal urface of th parietal pericardi m t the pleura, di phragm and chest wall.

ac cre'tion [L. accrescere to grow] 1 Growth characterized by addition to the periphery as in crystalline and certain organic compounds. 2. Adherence of part normally separat 3. A growi g together adhesion. 4 An accumulation of foreign matter as bout tooth (tartar) or within any ca ity —accret *adj* (accretive *adj*

a. lines. Linear markings showi g the addition of successive layers f enamel, seen in microscopi section of tooth incremental lines.

ac·cu mu l ter [L., from *ad*, to *cumulare* to heap] 1 A device which stores lectricity as storage battery or cell. 2. Condenser

A.C.D solution. Abbreviation for anticoagulant acid citrate dextrose solution used to prevent coagulation of blood in preparation of plasma or whole blood for indirect transfusions.

-a ce·ae (-ay'see ee) [L., suffi meaning *of th nature of*]. *I botany* a suffi used in combination with the name of one of the principal genera to form the names of families of plants.

-ce'li a. See *acelia*.

A. C. E. mi ture. Inhalation nesthetic composed of mixture of alcohol, chloroform, and ether now rarely used.

a mes the si·a. See *acresthesia*.

ac naph thene (ass naf'theen) 1,8-Ethylenenaphthalene; $C_{12}H_{10}$ tricyclic solid hydrocarbon occurring in coal tar used as an insecticide and fungicide dye intermediate and in the manu fact re of plastics.

a ce·nes the si·a a ce·nes the 1·a (y sehnes thee zhuh, -see h, sen ess) [G a- Not *koinos*, common; *aisthēsis*, feeli g]. Loss of body sense or well-being: bsence of visceral sense said to occur in melancholia and hypochondriasis. See *cenesthesia*.

-cen'tric (a-sen trick) [a-; G *kentron*, center]. 1 Not central; peripheral; eccentric. 2. N t arising centrally as from nerve center

ac e·pha'li a (ass f y'lee h) See *acephaly*.

a ceph Ilam. See *acephaly*.

-ceph" lo bra hi (-sef"uh-lo-bray'kee-uh) [a-; G. *kephalē* head; L. *brachium* arm]. Congenital absence of the head and arms.

-ceph lo bra chi us [a-; *kephalē*, *brachium*]. A monster exhibiting cephalobrachia.

-ceph lo-car'di a [a- *kephalē*; G *kardia*, heart]. Congenital absence of the head and heart.

a-ceph lo-car'di us [a-; *kephalē*, *kardia*]. A monster with neither head nor heart.

a-ceph lo-chei'rus. See *acephalochirus*.

ceph lo-chi'ri a [a- *kephalē*; G *cheir* hand]. Congenital absence of the head nd hands.

ceph l hi rus, a ceph l ch i us (a sef"uh-lo-kigh rus) [a-; *kephalē*; *cheir*]. A monster with neither head nor hands.

a-ceph' lo-cyst" (-sef' h lo sist) [a-; *kephalē*; G. *kystis*, bladder]. A sterile hydatid, without scolices or brood capsules, found in the human liver and other organs, representing berrant development of the larval stage of *Echinococcus granulosus*.

-ceph" lo-cys'tis pla na. Various concretions found in the tendon sheaths and muscles.

ceph"a lo gas'ter [a-; kephalē; G. gastēr, belly]. A parasitic monster with neither head, thorax, nor belly. It consists of pelvis and legs.

a-ceph a lo gas-te ri a [a-; kephalē; gastēr]. Congenital absence of the head and the upper part of the abdomen.

a ceph"a lo po di a [a-; kephalē; G. pous, foot]. Congenital absence of head and feet.

a ceph a lo po di us [a-; kephalē; pous]. A monster with neither head nor feet.

a ceph" lo-ra chus. See acephalorrhachus.

a ceph a lor rha chi a (a sef"uh lo-ray'kee-uh) [a-; kephalē; G. rhachis, spine]. Congenital absence of head and vertebral column.

a-ceph"a lor'rha chus, a ceph a lo ra chus (-ray'kus) [a-; kephalē; rhachis]. Monster with neither head nor vertebral column. —**acephalorrhachic** n.

a-ceph"a lo-sto mi a [a-; kephalē; G. stoma, mouth]. A condition marked by congenital absence of head, with mouthlike aperture present at the upper part of the neck or breast.

-ceph a-los to-mus [a-; kephalē; stoma]. A monster exhibiting acephalostomia.

a-ceph a lo-tho-ra ci a [a-; kephalē; G. thōrax, thorax]. Congenital absence of the head and thorax.

a-ceph a lo tho rax, a ceph"a lo tho rus [a-; kephalē; thōrax]. A monster with neither head nor thorax.

a-ceph'a lus [G. akephalos, from a-; kephalē]. Any one of a group of omphalositic monsters characterized by absence of the head. —**acephalous,** *adj.*

a-ceph a ly [a-; kephalē]. Absence of the head.

ac er ate (ass'ur-ayt) [L. acer, sharp]. Sharp-pointed, acicular.

Acerbi, Francesco Enrico [Italian pathologist, 1785–1827]. Precursor of the modern bacteriologist. He held the belief that the cause of contagious disease is a specific, organized substance capable of reproduction.

a-cer'bi ty [L. acerbitas, sharpness, sourness]. Acidity combined with astringency.

-cer"bo pho'bi a (a-sur"bo-) **-cer" pho'bi-a** (-serr"o-) [L. acerbus, sour; G. phobos, fear]. Morbid fear of sourness.

ac'er-dol (ass'ur-dole, -dol, -dawl) $Ca(MnO_4)_2·4H_2O$. Calcium permanganate used to disinfect water.

a-cer'ic [L. acer, maple tree]. Pertaining to, or derived from, the maple, as aceric acid.

a cer o pho'bi a. See acerbophobia.

a cer'vu line (-sur'view-line, -leen) [L. acervulus, little heap]. Aggregated or aggregated, as certain mucous glands.

a-cer'vu lus [L.]. Old term for brain sand.

a ces'cent (-sess'ent) [L. acescere, to turn sour]. Acid or tart, acidulous. —**acescence,** n.

a-ces o-dyne [G. akesodynos, from akeisthai, to cure; odynē, pain]. A pain-relieving agent; an anodyne. —**acesod'ynous,** *adj.*

a ces to ma [akeisthai; G. -ōma, tumor]. Granulation tissue which later becomes organized into scar tissue.

acet-. See aceto-.

ac e-tab"u lec to my (ass"i-tab"yoo-leck'to-mee) [L. acetabulum, cup-shaped vessel, orig. vessel for vinegar, acetum; G. ektomē, excision]. Excision of the acetabulum.

ac"e-tab u lo-plas"ty [acetabulum; G. plassein, to form]. Any plastic operation on the acetabulum, especially an operation aimed at restoring or enlarging the acetabular cavity.

ac"e tab u lum [L.] 1. Cup-shaped depression on the outer aspect of the hipbone for the reception of the head of the femur. 2. The sucking cup of flukes. —**acetabular** *adj.*

ac'e tal (ass'i-tal) 1. $C_6H_{14}O_2$; ethidene diethylate, a colorless liquid with an ethereal odor produced by the reaction of alcohol with acetaldehyde. It is moderately soluble in water and has been used as a soporific in human and veterinary medicine. 2. Generic name for products of the interaction of aldehydes and alcohol.

ac"et-al'de hyde (ass it-al'di hyde, -eet al'di hyde) CH_3CHO. A clear colorless liquid with characteristic pungent odor. It results from the oxidation of ethyl alcohol or reduction of acetic acid; when taken internally it causes narcosis and other noxious effects. Also called *acetic aldehyde, ethanal.*

ac"et-am'ide (ass"i-tam'ide, -id, a-seet uh mide, -mid) CH_3CONH_2. A white, crystalline solid produced by distilling ammonium acetate or by heating ethyl acetate with strong aqueous ammonia. It combines with both acids and bases to form unstable compounds.

ac"et-a mi"no-flu o-rene (ass"it-ah-mee no-floo reen, ass"it-am'i-no) $C_6H_4CH_2C_6H_3NH.CO.CH_3$. A compound said to produce cancer when administered orally.

p-a-cet"a mi"no phe nol. $OH.C_6H_4.NHCH_3CO$ occurring in crystals and practically insoluble in water; used in medicine as an analgesic and antipyretic. Also called *p-acetylaminophenol, N-acetyl-p-aminophenol, p-hydroxyacetanilid.*

ac"et an'i lid (ass"i tan'i lid) (*acetanilidum*) $C_6H_5NH.CO.CH_3$. Monoacetylaniline, occurring as colorless, shiny crystals, but more often as white scales or a white, crystalline powder. It is odorless, stable in air and soluble in boiling water and alcohol; used in neuralgia and rheumatism; an analgesic and antipyretic. Dose, 0.13–0.65 Gm. (2–10 gr.) Prolonged use may lead to toxic symptoms. Syn., *antifebrin.*

ac tan'nin. See *acetyl tannin, acetyltannic acid.*

ac"et-ar'sol. The British Pharmacopoeia name for acetarsone.

ac"et-ar'sone (ass"i-tahr sohn) (*acetarsonum*) $CH_3CO.NH.C_6H_3(OH)AsO(OH)_2$. 3-Acetylamino-4-hydroxyphenylarsonic acid, a white or yellowish powder slightly soluble in water; used in treatment of amebiasis, also in prophylaxis and treatment in certain cases of syphilis. Dose, 0.25 Gm. (4 gr.) two or three times daily for seven days. Syn., *acetarsol.* See *spirocid, stovarsol.*

ac e-tate. Any salt of acetic acid.

active a. Acetyl coenzyme A.

a-cet"a-zole-am'ide. Generic name for 2-acetylamino-1,3,4-thiadiazole-5-sulfonamide, a renal carbonic anhydrase inhibitor supplied under the trade-mark *diamox.*

a-cet -di-a-mer-sul fon a mides. Generic name for a sulfonamide mixture containing equal weights of sulfacetamide, sulfadiazine, and sulfamerazine, to which there may or may not be added a suitable compatible agent to increase the pH of the urine.

a-ce'tic ac'id (a-see tick) (*acidum aceticum*). An aqueous solution containing 36–37% CH_3COOH. It is occasionally used, when diluted, as an astringent and styptic.

diluted a. a. (*acidum aceticum dilutum*). An aqueous solution containing 5.7–6.3% (w/v) CH_3COOH. Dose, 2–4 cc. (30–60 minims).

glacial a. a. (*acidum aceticum glaciale*). A colorless liquid containing not less than 99.4% CH_3COOH; formerly used as a caustic for removing warts and corns.

a ce'tic ac'id am'ide. Acetamide.

a ce tic al'de hyde. Acetaldehyde.

a-ce'tic an hy'dride. $(CH_3CO)_2O$. The anhydride

of acetic acid; colorless, mobile liquid having the odor of acetic acid.

a·ce'tic e'ther Eth l acet te

a·ce'tic fer"men ta tion. A y process of fermentation resulting in the formation of acetic acid.

acetidine. Trade-mark for combination of cetyl-salicylic acid, acetophenetidin, and caffeine.

a·cet"i·fi·ca'tion [L. *acetum*, vinegar from *acere*, to be sour; *facere* to make]. The production of vinegar by acetic fermentation. —**acet'ify** *v.*

as"e·tim e·ter (ass"I tim ter) **ac** tem e·ter [*acetum*; G. *metron*, measure]. A device for determining the amount of acetic acid present in vinegar or other solutions. —**acetimet ric, aceto-met'ric,** *adj.*; **acetimetry** acetometry *n.*

ac'e·tin (ass"I tin) An ester formed by glycerin with one, two, or three molecules of acetic acid.

ac e·to- (ass"I to- see'to-) **acet** [*acet* m]. A combining form denoting connection *with*, or *derivation from, acetic acid* or *acetyl.*

ac"e·to·a ce'tic ac'id (ass i to- see'tik, -see to-see'tick) CH_3COCH_2COOH. A monobasic ketone acid eliminated in the urine. It is believed to be normal product of fat metabolism and is found especially when fatty acids are incompletely oxidized, as in diabetes. Syn., *diacetic acid, beta-ketobutyric acid.*

ac"e·to -ce tic es"ter $CH_3COCH_2COOC_2H_5$ Ethyl acetoacetate; colorless liquid of characteristic odor; used in the synthesis of ma y important medicinals. Also called *ethyl diacetat*

A·ce"to·bac'ter [L., *acetum*, vinegar; G *baktron*, little staff]. A genus of aerobic bacteria with high oxidative powers, oxidizing various organic compounds to organic acids and other oxid tion products, such as ethyl alcohol to acetic acid. The cells may be ellipsoidal to long and rod-shaped, and may occur singly in pairs, or in long or short chains. They are widely distributed in nature, especially where alcoholic fermentation is taking place, and are important to man in the production of wine, beer nd vinegar *Acetobacter aceti* is the principal and typical species.

A. aceti. Aerobic rods with marked oxidative powers causing the rapid oxidation of such substrates as glucose and ethyl alcohol. They oxidize acetic acid to carbon dioxide and water and are found in vinegar souring fruits, vegetables, and beverages.

a·cet' **in.** Acetylmethylcarbinol.

ac'e·tol (ass'I tole, -tol, -tawl) See *acetyl carbinol.*

ac e·tol'y·sis [*acetum*; G. *lysis*, loosing]. The breakdown of an organic compound by acetic anhydride or acetic acid. An acetyl radical may be attached to one of the breakdown products as part of the reaction.

-cet **mel.** See *arymel.*

ac"e·to·me·naph'thone. Menadiol diacetate or 2-methyl-1,4-naphthohydroquinone diacetate; white, crystalline powder almost insol ble in water used orally for its vitamin-K effect.

ac" **to·mer cu'tol** (ass e·to-mer-cak tawl, see to-) Generic name assigned to 2-acetoxymercuri-4-(1,1,3,3-tetramethylbutyl)phenol, an organo-mercurial topical antiseptic supplied in tincture form under the trade-marked name merbak.

ac" **tom'** **ter** See *acetimeter*

ac e·to·mor'phine (ass" to-) Heroin.

ac"e·to·nae mi·a. See *acetonemia.*

ac" **ton asth ma** (ass"I tone-az muh, -ass muh) [*acetum*; G *asthma*, panting]. Dyspnea associated with acetonuria, sometimes called uremic asthma. It is marked by restlessness, headache, nausea, vomiting, and transient blindness.

ac'e·tone (ass' tone) (*acetonum*) CH_3COCH_3 Dimethylketone, propanone. A colorless, inflammable liquid, miscible with w ter alcoh l, nd ether and having sweetish, ethereal odor and burni g taste. Normally it occurs in the blood and urine in mi te quantities which m y become greatly increased in diabetics.

a. bodies. See *ketone bodies* under *body*

a. bromoform. Brometone

a. chloroform. Chlorobutanol.

ac e·to·ne mi a, ac **to-nae mi** (ass to-nee mee uh) [*acet* m, G *haima*, blood]. The presence of large amounts of acetone bodies i the blood. —**acet ne mic,** *adj*

c **to·ni'tril** (ass"I-to nigh'trile -tril, -see to-) CH_3CN Methyl cyanide. A colorless liquid, ha ing an agreeable odor miscible with water and alcohol. Also called *carbamine*

ac e·t **num.** See *acetone.*

ac e·to·nu'ri·a (ass"I to-new ree-uh) [*acetum*; G *ouron*, urine]. Abnormal increase i the amount of acetone bodies i the urine, found during fevers, diabeti acidosis, malignancy and intestinal disorders.

a·cet **nyl.** CH_3COCH_2— A univalent radical representi g acetone less one tom of hydrogen

acetophen. Trade name of preparation containing acetylsalicylic acid, acetophenetidin, caffeine, phenobarbital, and hyoscyamus extract used as an analgesic and sedative.

ac et·o·phe·net'i din (ass"I to fi-net"I din, see to-) (*et phenetidi* m) $C_2H_5OC_6H_4NH$ $COCH_3$ Parethoxyacetanilid. Occurs as white crystals or as fine, whit crystalline powder; 1 Gm. dissolves i 1300 cc of water and in 15 cc of alcohol. Used as antip}reti and analgesic. Dose 0.26–1.0 Gm. (4 15 gr) Syn., *phenacetin.*

ac"e·to·phe·none' (ass"I to-fi-nohn, -fee nohn, see t) $CH_3COC_6H_5$ Phenylmeth lketone. A liquid coal-tar derivative with the odor of bitter almond, which has been used as an antiseptic and hypnotic also called *hypnone.*

a·cet **·sal.** See *acetylsalicylic acid.*

ac **tous** (ass i-tus, see tus) [*acetum*]. Pertaining to, resembling, forming, or containing, vinegar or acetic acid.

ac et ox'ime (ass et-oak seem, -sim) $(CH_3)_2C$ NOH; th crystalline xime resulting from the interaction of acetone and hydroxylamine.

ac"et-par" **-phe·net'I dine** (ass t-par uh fi net deen, -din) See *acetophenetidin.*

cet ri zo'ic ac'id. The official generic name for 3-acetylamino-2,4,6-triiodobenzoic acid $C_9H_6I_3$-NO_3 the sodium salt of which, sodium acetrizoate, marketed under the trade-marked nam urokon *sodium*, is employed as contrast medium. Acetrizoic acid occurs as white powder slightly soluble in water

a·ce t m [L.]. 1. Vinegar; an impure dilute acetic acid produced by acetou fermentation of fruit juices, as in wine or cider. 2. *I* pharmacy solution of the active principles of certain drugs in dilute acetic acid. See *vinegar* —**acetic,** *adj*

a. acerrimum. Concentrated acetic acid.

a. Saturni. Lead subacetate solution.

ac **tyl** (ass'I til, -teel, -see'til) C_2H_3O The univalent radical CH_3CO— The aldehyde m y be regarded as the hydride, and acetic acid as the hydroxide of acetyl.

a. benzene. See *acetophenone.*

a. carbinol. $CH_3CO.CH_2OH$. Hydroxyacetone. A colorless oil possessing weak, peculiar boils at 145° 150° C. Also called *pyroracemic alcohol, oxyacetone, methyl ketol, acetol.*

a. coenzyme A. A compound of acetic acid and coenzyme A combined by thioester linkage Syn. *active acetate.* Abbreviated *a. Co A*

a. number The number of milligrams of potassium

num hydroxid required to combine with the acetic acid liberated by the saponification of 1 Gm. of acetylated fat.

a. peroxide. $(C_2H_3O)_2O_2$. A heavy unstable liquid, insoluble in water but sol ble in alcohol and ether It is powerful oxidizing agent, decomposes in sunlight, and explodes when heated.

a. tannin. A grayish yellow powder slightly hygroscopic, odorless, and tasteless. It is soluble in alcohol slightly soluble in hot water and ether and insoluble in cold w ter and acts as an astringent. Used internally for treating chronic diarrhea, and externally for chronic pharyngitis. Syn., *acetannin, acetyltannic acid, tannigen.*

ac tyl a ce tic ac'id (*ass e-til-a-see tik*) *Acetoacetic acid.*

a tyl ami no hy dr y phen yl ar son'ic acid. Acetarsone.

acetylarsan. A proprietary arsenical for treating syphilis, said to contain diethylamine oxyacetylaminophenylarsonate.

a cet y la tion. See *acylation*.

ac"e-tyl-be ta-meth yl-cho'line. A holine compound characterized by sufficient stability in the body and effectiveness, even when administered orally to produce increased gastrointestinal tone and motion, and vascular dilation. It is used, in the form of water-soluble salts, for treating tachycardia, peripheral vascular diseases, abdominal distention, etc.

a bromide $(CH_3)_3N(B\ )CH_2.CH(CH_3)\ O\ OOCH_3$. Less hygroscopic than the chloride, this form is preferred for use in tablets. Dose, 0.2–0.6 Gm. (3–10 gr) See *mecholyl bromide*.

a. chloride. $(CH_3)_3N(Cl)CH\ CH(CH_3)\ O.-COCH_3$. The preferred form for administration subcutaneously or by iontophoresis. *Dose* (subcutaneously) 0.01–0.04 Gm. (1/6–2/3 gr) Syn., *methacholine chloride. See mecholyl chloride.*

ac"e-tyl-car'bro mal. The acetyl derivative of carbromal white, crystalline powder slightly soluble in water Used as sedative. Dose, 0.25–0 5 Gm. (4–8 gr) See *abasin*.

ac"e-tyl-cho'line (*ass" -til ko'leen, -lin, kol'een, -in, see til*) Acetylethanol-trimethylammonium hydroxide, $(CH_3)_3N(OH)CH\ OH\ O\ CO.\ CH_3$. First synthesized by Baeyer in 186? this base has been identified in certain ergot extracts; it lowers blood pressure, increases peristalsis, and commonly is regarded as the substance released from nerves to activate the muscles (Dale) The compound is liberated from parasympathetic postganglionic and all preganglionic nerve terminals, and t synapses in the central nervous system.

a. bromide. The salt formed by addition of HBr to acetylcholine.

a. chloride. The salt formed by addition of HCl to acetylcholine and the form in which the latter substance is most frequently employed. Occurs as white, odorless, hygroscopi crystalline powder; very solubl in water and in alcohol. Dose, 0.05–0.2 Gm. (1 3 gr) subcutaneously or intramuscularly

a. esterase. See *under esterase*.

a-cet y lene. C_2H A colorless gas with characteristic, unpleasant odor; burns with luminous, smoky flame. It is produced by the otion of water on calcium carbide. Syn., *ethine, ethyne.*

a. dichloride. CHCl·CHCl an ethereal liquid employed as solvent for fats and other organic substances. Syn *sym.-dichloroethylene.*

a. tetrachloride. $CHCl_2.CHCl_2$ an ethereal liquid, nonflammable, employed as solvent for fats and other organic substances, and in the manufacture of paint and varnish removers, insecticides, etc. Syn., *sym.-tetrachloroethane.*

a-cet'y lide (-set'i lyde, -lid) A derivative of acetylene formed by replacing its hydrogen atoms by metal, as cuprous acetylide C_2Cu_2.

a-cet y li za'tion a-cet"y la tion. Chemical introduction of an acetyl radical (CH_3CO—) into the molecular structure of an organic compound, usually by reaction with acetic acid.

ac tyl meth"yl car'bi nol. $CH_3.CHOH\ CO\ CH_3$; 3-hydroxy-2-butanone: a product of bacterial fermentation in foodstuffs.

ac e tyl mor'phine (*ass"i-til-mor'feen, -mor'fin, mor-feen a-see til*) Monoacetyl morphine. An analgesic said to be four times as effective as morphine sulfate in the control of cutaneous and *ischemic pain.*

ac"e-tyl phe"nyl hy'dra zine (*ass"i til fee nil-high'druh-zeen, -zin*) $C_6H_5(NH)\ C_2H_3O$. A powerful but dangerous antipyretic, causing destruction of red blood cells. Has been suggested for use in polycythemia.

ac e tyl sal"i cyl ic a 'id. $C_6H_4.O(CH_3CO)\ COOH$. A white, crystalline powder hydrolyzing in moist air to acetic and salicylic acids 1 Gm. dissolves in 300 cc. of water and in 5 cc. of alcohol. Used internally as antirheumatic, analgesic, and antipyretic; locally in acute pharyngitis and tonsillitis. Dose, 0.3–1.0 Gm. (5–15 gr.) A common allergen. Syn., *aspirin.*

ac"e-tyl sal'ol. Phenyl acetylsalicylate.

ac"e-tyl sul fon' mide (*ass"i-til sul-fon uh-mide, mid, l anh sul l nam'ide, -id*) A *sulfonamide* in which the hydrogen atom of the NH group, attached directly to the benzene ring, i replaced by an acetyl group conjugation which occurs in the liver of man and other species, except the canine. The resulting acetyl compounds are therapeutically ineffective and are sometimes less soluble than the parent sulfonamides. Harmful effects may be produced in the renal tubules and urinary tract by the precipitation of these compounds. This can be prevented if urine is kept alkaline, excepting with acetylsulfapyridine and acetylsulfathiazole.

ac tyl tan nic ac'id (*ass"i til-tan'ik, -see til*) An acetylated tanni acid; yellowish or grayish powder only slightly soluble in water In the *lower intestine it is gradually hydrolyzed with* liberation of tannic acid which acts as an astringent. Used in the treatment of diarrhea. Dose, 0.3–1.0 Gm. (5–15 gr) Syn., *diacetyltannin. See tannigen.*

ach la si-a (*ack"uh-lay'zhuh, -zee-uh*) [G a-, not; *chalasis*, relaxation]. Inability to relax, said of hollow muscular organ.

a. f the cardia. *Dilatation of the esophagus, due* to spasmodic constriction of the lower portion cardiospasm.

a. of the esophagus. See *megaesophagus*.

sphincteral a. Failure to relax on the part of one or more sphincter muscles.

Achard, Emile Charles [*French physician*, 1860–1944]. Known with Bensaude for their description of paratyphoid fever and isolation of the *Bacillus paratyphosus B* (1896) now classified as *Salmonella paratyphi B* Described, with Thiers, syndrome of diabetes associated with female hirsutism, called *Achard-Thiers syndrome* Developed, with Castaigne, methylene blue test known as the *Achard-Castaigne method* for renal permeability See methylene blue *test*.

ache [AS. *acan*, to ache]. A constant or *fixed pain*, dull to severe in character —ache v.i.

a-chei'li (*a-kigh'lee-uh*) [G. a- not; *cheilos*, lip]. A condition marked by congenital bsence of the lips.

a-chei'lus, a-chi'lus (a-kigh'lus) [a-, cheilos]. A monster exhibiting acheilia. —acheilous, adj

a-chei'ri a, a-chi'ri a (kigh ree uh) [G. acheir from a-, cheir hand]. 1. Congenital absence of the hands. 2. Loss of sensation in, together with the loss of the sense of possession of one or both hands—a hysterical symptom. 3. Inabil ty t determine from which side timul is pplied. See dyschiria. —acheirous, adj

chei'rus (kigh rus) [acheir]. An individual without hands.

a-chieve ment age. See under age

a-chieve ment quo tient. See under quotient.

Ach'il le (ack'i lee uh) [L., from G. Achilles, who is said to have used the plant]. A genus of herbs of the Carduaceae; the milfoil or yarrow. A composite-flowered herb, A. millefoli um, containing bitter aromatic, astringent principle achillein, and volatile oil, has been used as stimulant and tonic.

ach'il le'in (ack'i-lee'i) $C_{20}H_{38}N_2O_{15}$ A glycoside obtained from Achillea millefol um. Occurs as brownish red, amorphous mass with strongly bitter taste soluble i water less soluble i alcohol, insoluble i ether

A-chil'les [Greek legendary hero]. According t Homer' Iliad, Achilles was vulnerable only in one heel. His name designates the tendon of the gastrocnemius and soleus muscles (also called tendo calcaneus [BNA]) and i pplied to certai elements of the heel. The Achilles jerk or reflex i the ankle clonus reflex. See Achilles tendon reflex

Achillini, Alessandro [Italian anatomist 1463–1512]. Said to have been the first to recognize the function of the first pair of cranial nerves, and t have discovered the fourth cranial nerve and the malleus and incus of the middle ear

chil'lo bur-si'tis (a-kill bur-sigh tis) [Achilles; LL. bursa, bag; G. -itis, inflammation]. Inflammation of the Achilles bursa.

a-chil'lo-dyn'i (a kill o-di ee uh) [Achilles; G odynē, pai]. Pain in the Achilles tendon or bursa; achillobursitis.

ach'il-lor'rha phy (ack'il or uh-fee) [Achilles; G. rhaphē, seam]. Any suturing operation on the Achilles tendon.

ach'il lot' my (ack'i lot o-mee) -chil'lo tenot'o-my (a-kill o-ti-not o-mee) [Achilles; G tomē, cutting]. Surgical section of the Achilles tendon.

chi'lus, See acheilus.

ACH in'dex. An index of nutrition based on measurements of arm girth, chest depth, and hip width.

a-chi'ri-a. See acheiria.

a"chlor hy'dri-a (ay"klor high dree-uh, ack"lor-) [G. a- not, chlōros, green; hydrios, from hydōr water]. The absence of free hydrochloric acid in the stomach, even after the administration of histamine.

a-chlo rides. Salts which are not hlorides; specifically salts other than chlorides occurring in the urine.

a"chlor-op si (y"klor-op see-uh ack lor-) a-chlo"ro-blep'si-a [a-; chlōros; G opsis, blepsis, vision]. Green blindness.

ach"lu-o-pho'bi (ack"lōō-o-fo'bee-uh) [G. achlus, darkness; phobos, fear]. Morbid fear of darkness.

a cho'li (ay ko'lee-uh, a-ko) [G a- not cholē, bile]. 1. Absence or suppression of biliary secretion. 2. Any condition bstructing the escape of the bile into the small intestine. 3. A mild temperament. —achol'ic, ach'olous, adj

pigmentary a. A deficiency of bile marked by clay-colored feces but no jaundice.

ach"o-lu'ri-a (ack" lew ree uh) [a-; cholē; G. ouron, urine]. The absence of bile pigments in the urine —acholuric, adj

a chon dr pla si a (y kon dro-pl y' hah -zee uh, kon dro) a chon dro plas ty]a G chondros, cartilage; pl sein, t form]. A condition of abnormal osteogenesis resulting in the typical congenital dwarf The pathologic process begins early in intrauteri li as disordered chondrification and ossification of the ends of the long bones the membrane bones develop normally Syn., chondrodystrophia fetalis. —achondroplas tic, a j

a chor (y'kor ack or) [G achōr dandruff]. 1. A papular or pustular eruption of the hairy parts. 2. A eczematoid eruption affecting the face and scalp of infants with many scales and scabs, as milk crust. 3. An acumin te pustule 4. Barber itch; tinea barbae.

A chor da'ta (y"kor-day'tuh, ack or-day tuh) [G a- not; chordē chord]. Animals without notochord invertebrates. —achor dal adj.; achor dat n., adj

ach re sis (ack or-ee sis, y"kor-) [a- G. chōrēsis, from chōrein, t mak room]. Permanent diminution in the vol me of y hollow organ, as th stomach or urinary bladder

A-ch ri on (kor ee-on, y kor ee-on) [G dim. of achōr dandruff]. A former name for genus of dermatophytes.

A. gallinae. Old synonym for Trichophyton megni i.

A. gypseum. Synonym for Microsporum gypseum.

A. quinckea m. Old synonym for Trichophyton mentagrophytes.

A. schoenl ini. Old synonym for Trichophyton schoenleini.

hro e-cy the'mi (a-kree o-sigh thee mee-uh) [G. achroia absence of color; kytos, cell; haima, blood]. Paleness of the red blood cells due to deficiency of hemoglobi anemia.

a-chro -cyt (ay-kro sheight, kro) [achroia, kytos]. A colorless cell, or lymphocyte

a-chro"o-cy to sis (y-kro h sigh t sis, kro) a-chro o-cy t sis [achroos, kytos; G -osis, increase]. An increase i the umber of colorless or lymphocyti cells i the blood; lymphocythemia.

a hro o cy the mi a (a kr y o-sigh thee mee-uh) [achroia, kytos; G haima, blood]. 1 Achroocythemia. 2. The general condition associated with this anemia.

a hr ma-cyt (y kro m h sight kro) a-chro-mat' -cyte" [G. a- not chrōma, color kytos, cell]. A decolorized erythrocyte ghost or shadow corpuscle due to loss of hemoglobin. Also called Ponfick' shadow Bizzozero blood platelet Hayem corpuscle

a chro-ma si-a (ay-kro may zhuh, -zee-uh, -zhuh, -see-uh) [a-; chrōma]. 1 Loss or absence of normal skin pigmentation, as in albinism, leukoderma, vitiligo. 2. Pallor of cachexia. 3. Failure of cells or tissues to stain normally

achromat See achromato-.

chro-mate (ay"kro-mate) [a-; chrōma]. A totally colorblind person.

a" hro-mat'ic (ay"kro-mat'ick) [a- chrōma]. 1 Without color 2. Containing achromatin. 3. Not decomposing light into its constituent colors. 4. Staining with difficulty said of cells or tissues.

a chro ma tin (ay kro m h-tin kr) [chrōma]. The faintly staini g substance of the cell ucleus exclusive of th hyaloplasm essentially the linin network which supports the chromatin granules. —achromatin'ic, adj

a-chro ma-tism [a-; chrōma]. 1. Absence of chromatic berration. 2. Absence of color

a-chro ma-to- (ay-kro'muh-to- kro muh-to-)

achromat [a- chrōma]. A combining form denoting *achromatic, colorless.*

a-chro"ma tol'y sis [a- chrōma; G. *lysis*, solution]. Dissolution of the achromatin of cell; plasmolysis.

a chro ma to phil" [a-; chrōma, G. *philein*, to love]. A microorganism or histologic element which does not stain readily —**achromatophil, achromatophil'ic,** *adj* **achromatophil'ia,** *n.*

a-chro"ma top si [a- chrōma, G. *opsis*, vision]. Total colorblindness.

a-chro ma to si [a-; chrōma, G. -*ōsis*, condition]. Any condition characterized by deficiency of natural pigment, as albinism, leukoderma, vitiligo.

a hro ma tous (y kro muh tus, kr)

a-chro mic [a- chrōma]. Deficient in color unpigmented.

a-chro"ma-tu'ri [a-; chrōma; G. *ouron*, urine]. A very pale or waterlike urine.

a chro'mi-a (ay kro mee-uh, kro) **a-chro ma** [a- chrōma]. Absence of color pallor; achromatosis. —**achromic, achromous,** *adj*

a. cutis. Leukoderma; vitiligo.

a. parasitica. A type of dermatophytosis (pityriasis versicolor) in which fungi disturb the process of skin pigmentation.

congenital a. Albinism.

a chro mic. See *achromatous.*

A-chro mo-bac te"ri-a'ce-ae [a- chrōma; G. *baktērion*, dim. of *baktron*, staff]. A family of bacteria of the order Eubacteriales.

a-chro mo der'mi-a, a chro"mo der'ma [a- chrōma; G *derma*, skin]. A deficiency or lack of pigment in the skin; leukoderma.

a hro mo tri h i a (y kro mo-tri k'ee-uh, a-kro") [a-, chrōma; G *thrix*, hair]. Absence of pigment from the hai

achromycin. Trade-mark for the crystalline antibiotic substance *tetracycline* prepared by catalytic hydrogenation of chlortetracycline but also b-tainable by *fermentation.* The antibiotic is commonly vailable as the hydrochloride salt.

a chro n y chous. See *acronychous.*

ach"ro a- my'loid (ack ro-o-am'l loyd) [G. a-chroos, colorless, *amylon*, starch; *eidos*, form]. Recently deposited amyloid which does not form blue color with iodine.

a-chro o-cy to sis. See *achroacytosis*

a"chro-o-dex'trin. A reducing dextrin formed by the ction of the diastati ferment of saliva or of acid upon starch. It is modification of dextrin and may be precipitated by alcohol; it is not converted into sugar by ptyalin, nor colored by iodine.

Achucárro, Nicolás [*Spanish histologist*, 1881 1918]. Remembered for his method of preparing histologi sections of connective tissue by impregnation with silver tannate. See under *stain.*

a-chyl"a na mi a, a-chyl"a nae mi-a (a kigh lah-nee'mee uh) See achlorhydric *anemia.*

a-chy'li a (kigh'lee uh) [a- *chylos*]. Absence of chyle. —**achylous,** *adj*

a. gastrica. Absence of gastric secretion of enzymes (rennin, pepsin) and of hydrochloric acid, even after stimulation with histamine frequently associated with atrophic gastritis.

a. pancreatica. An bsence of pancreatic juice resulting in f tty stools, intestinal indigestion, and malnutrition.

ach"y lo sis (ack lo sis) See *achylia.*

a-chy'mi (-kigh mee-uh) [a- G *chymos*, juice]. Deficient formation of chyme Also called *achymosis.* —**achymous,** *adj.*

a-cic'u lar (a-sick'yoo lar) [L. *acus*, needle]. Needle-like shaped like needle.

ac'id [L. *acidus*, from *acere*, to be sour]. 1 A substance having sour taste. 2. A substance containing hydrogen replaceable by metals to form salts, and capable of dissociating in aqueous solution to form hydrogen ions (Arrhenius) 3. A substance, ionl or molecular capable of yielding a proton to another substance (Brönsted and Lowry) This definition has the dvantage over Arrhenius in that it is applicable also to nonaqueous mediums. 4. A substance, ionic or molecular capable of accepting share in an electron pair made vailable by base, to form coordinate covalent bond between the two substances (G N Lewis) This definition has the advantage over those of Arrhenius and of Brönsted and Lowry in being pplicable also to substances which do not contain proton (hydrogen ion)

a. stain. See under *stain.*

alcohol a. Any substance containing both an alcohol (—CH_2OH, =CHOH, or ≡COH) group and carboxyl (—COOH) group.

aldehyde a. Any substance containing both an aldehyde (—CHO) group and carboxyl (—COOH) group.

aldonic a. Any of group of monobasic sugar acids, having the general formula CH_2OH (CHOH) COOH, obtained when th aldehyde group of an aldose is oxidized to carboxyl, without oxidizing the primary alcohol group.

aliphatic a. An acid derived from open chain organic compounds.

amino a. See *amino acid.*

aromatic a. Any acid derived from benzene or other carbon ring compound. Many such acids are found in balsams and resins and other odoriferous substances.

carboxylic a. A substance containing the —COOH group.

fatty a. An acid derived from the saturated series of open chain hydrocarbons. See Table of Normal Values of Blood Constituents in the Appendix.

inorganic a. Any acid, except H_2CO_3 which does not contain carbon.

ketone a. Any substance containing both ketone (=CO) group and a carboxyl (—COOH) group. Also called *keto acid.*

mineral a. An inorganic acid.

organic a. Any acid containing the carboxyl group —COOH.

ac'id al-bu'min. A protein which has been acted upon or dissolved by the stronger acids, and which gives an acid reaction.

ac'id al'co-hol. Alcohol containing various percentages of alcohol. In histological techniques, a common mixture is one-tenth per cent of hydrochloric acid in 95% alcohol.

ac"id am"in u'ri a (ass"id am"i-new'ree-uh) [*acidus*; ammonia -*ine*; G *ouron*, urine]. Presence of an excess of amino acids in the urine.

ac"i de mi a, ac"i dae'mi a (ass"i-dee mee uh) [*acidus*; G *haima*, blood]. A condition of decreased alkalinity of the blood, demonstrated by lowered pH. See *acidosis.*

ac'id-fast" Denoting certain bacteria which are not decolorized by mineral acids after staining with aniline dyes, as the bacilli of tuberculosis, leprosy and smegma.

ac'id-form"ing. 1 Designating nonmetallic elements or oxides which are acidic in water 2. *I nutrition*, designating those foods which yield an acid ash or residue when metabolized. Syn., *acidogenic.*

ac'id fuch'sin (fōōk sin, fōōk sin) (C.C.) See under *stain.*

a-cid"i fi-ca'tion [*acidus*; L. *facere*, to make]. Con-

version into an acid; process of becoming acid; addition of acid. —acid'ifiable, adj. acid'ify
ac"i·dim'e·ter (ass"i·dim'i·tur) ac·i·dom'e·ter [acidus; G. metron, measure]. An instrument for determining the degree of acidity of a liquid or the strength of an acid. —acidimet'ric, acid·imet'ric, adj. acidimetry, acidometry
ac'id in·tox"i·ca'tion. A toxic condition of the body resulting from an excess of acid accumulated from within or introduced from without.
ac'id·ism [acidus]. Acid intoxication.
a·cid'i·ty [acidus]. 1. Quality of being acid; sourness of acid. 2. Acid content of any substance.
a. of the stomach. Sourness of the stomach due to oversecretion of acid or to fermentation of food. Associated with heartburn, acid eructations, and epigastric pain and distress.
ac'id num'ber. The number of milligrams of potassium hydroxide required to neutralize the free fatty acid in 1 Gm. of fat, or to neutralize naturally occurring acids in 1 Gm. of other substances. See a resin.
acid'·cyte [acidus; G. kytos, cell]. An acidophilic leukocyte; an eosinophil.
ac"i·do·cy"to·pe'ni·a (ass"i·do·sigh"to·pee'nee·uh) [acidus; kytos; G. penia, poverty]. Marked decrease in the number of circulating eosinophils. Also called acidopenia.
ac"i·do·cy·to'sis (ass"i·do·sigh·to'sis) [acidus; kytos; G. -osis, increase]. Morbid increase in the number of circulating eosinophils.
Acidogen. COOH.CH CH CH(NH$_2$) COOH HCl. Trade-mark for glutamic acid hydrochloride. The preparation liberates hydrochloric acid in the stomach.
ac"i·do·gen'ic (ass"i·do·jen'ick) [acidus; G. genesthai, from gennaein, to be produced]. Forming acids, especially as acid urine.
Acidol. Trade-mark for betaine hydrochloride $(CH_3)_3N.CH_2COOH$. Administered as a source of hydrochloric acid.
Acidolate. A proprietary skin detergent prepared from sulfated vegetable oils, liquid petrolatum and water.
ac"i·dom'e·ter (ass"i·dom'i·tur). See acidimeter.
ac"i·do·pe'ni·a. Acidocytopenia.
ac'id·o·phil' (a·sid'·il, ass'·i·do·fil) [acidus; G. philein, to love]. 1. A cell, element, or substance having an affinity for acid stains. 2. One of a group of acid-staining cells found in the anterior pituitary body. 3. The alpha cells found in the adenohypophysis. Syn., eosinophil, oxyphil. —acidophil'ic, acidoph'ilous, adj.
ac'id'o·phil'i a. See eosinophilia.
ac"i·doph'i·lism (as·i·dof'i·liz·m) [acidus; philein]. A condition of overabundance or overactivity of the acidophilic cells of the adenohypophysis.
ac"i·do·re·sist'ant (ass"i·do·ri·zis'tunt) ac'id re·sist'ant [acidus; L. resistere, to resist]. Not readily decolorized by acids, applied to certain microorganisms. See acid-fast. —acidoresistance, acid-resistance, n.
Acidoride. A trade-mark for glutamic acid hydrochloride.
ac"i·do'sis (ass"i·do'sis) [acidus; G. -osis, condition]. Reduction of the alkali reserve; acidemia; due to an excess of acid metabolites which are incompletely oxidized or poorly eliminated. When toxic symptoms develop, the condition is called acid intoxication. —acidot'ic, adj.
carbon-dioxide a. The result of CO_2 retention, as in drowning. Also called gaseous a.
compensated a. A condition of reduced blood bicarbonate with the H_2CO_3 to $NaHCO_3$ ratio unchanged because of the blood buffers. In compensated CO_2 acidosis, the blood bicarbonate may be increased, but pH is normal.
diabetic a. That occurring in diabetes mellitus due to [illegible] in the urine in combination with ketone acids and as a result of polyuria. It may become extremely severe, characterized by air hunger and [illegible] ally coma.
g[illegible] seous a. Carbon-dioxide acidosis.
idiopathic hyperchloremic a. Acidosis resulting from defective renal tubular mechanisms for acidifying the urine. Glomerular function is [illegible] normal or relatively less impaired than tubular function, so that azotemia generally does not appear. [illegible] tered phosphorus is normal, but tubular resorption fails and hypophosphatemia follows. Skeletal demineralization and nephrocalcinosis [illegible] ppear.
metabolic a. A condition characterized by decreased pH and bicarbonate content of the body fluids, caused either by the accumulation of [illegible] acids stronger than carbonic or by abnormal losses of fixed base from the body as in diarrhea or renal disease.
renal tubular a. A condition resulting from defect of the distal tubules of the kidney, characterized by inability to acidify urine. This may result in renal [illegible] ets and dwarfism in children, and in osteomalacia (Milkman syndrome) in adults; also described as hyperchloremic acidosis with nephrocalcinosis.
respiratory a. Acidosis resulting from an increase of the carbonic acid of blood relative to the bicarbonate fraction with resultant decrease of pH; this occurs whenever elimination of carbon dioxide is impaired, as in respiratory obstruction or paralysis.
uncompensated a. A condition of reduced blood bicarbonate in which there is a change in the blood pH. In uncompensated CO_2 acidosis, the blood bicarbonate may be normal.
ac"i·des'te·o·phyte [G. akis, point; osteon, bone; phyton, plant]. A sharp-pointed bony projection or outgrowth; an osseous spicule.
ac'id proof'. See acid-fast.
ac'id·re·sist'ant. See acidoresistant.
ac'id tide. The temporary increase in the acidity of urine and body fluids which follows the alkaline tide.
a·cid'u·late [L. acidulus, dim. of acidus, from acere, to be sour]. Render sour or acid in reaction; pour acid into acidify. —acid'ulant, adj. n.; acidulated, acidulous, adj.
Acidulin. Trade-mark for glutamic acid hydrochloride.
ac"i·du'ric (ass"i·dew'rick) [acidus; L. durare, to endure]. Referring to bacteria which can grow in an acid medium but which grow better in an alkaline medium.
ac'id·yl. The radical of an organic acid, particularly from hydrocarbons of the formula C_nH_{2n+2}.
a·cid'y·l·[illegible]ted. Combined with the residue of an organic acid (acidyl).
ac"i·[illegible]sis. See acinus.
Aciform. A proprietary arthritis remedy reported to contain formic acid, iodine, sulfur, and terpene hydroalcoholic medium.
Aci-Jel. Trade name of a vaginal jelly containing acetic acid, ricinoleic acid, oxyquinoline sulfate and glycerin in a vegetable gum base for use in vaginal infections causing leukorrhea.
ac"i·nes'i·a (ass"i·nee'zhuh, ·nee'zee·uh, ·see'uh) See akinesia.
ac'i·ni (ass'i·nigh). Plural of acinus.
ac"i·no·tu'bu·lar [L. acinus, grape; tubulus, dim. of tuber, pipe]. Consisting of tubular acini.
ac'i·nus (ass'i·nus) (pl. acini) [L.]. A saccular ter-

minal division of a compound gland having a narrow lumen, as contrasted with an alveolus. Several acini combine to form a lobule. —**acinal, acinar, acinic, acinous,** *adj.*

acitrin. Trade-mark of the ethyl ester of cinchophen; $C_6H_5.C_9H_5N.CO.OC_2H_5$, used in gout.

ack'ee. Fruit of the tree *Blighia sapida*, native to Jamaica.

a. poisoning. An acute, sometimes fatal, poisoning, caused by eating the unripe fruit of the akee tree. Characterized by vomiting and collapse.

a·cla·di·o·sis (a·clay·dee·o·sis, a·clad·ee·) [*Acladium*, G. -*osis*, condition]. An ulcerative dermatomycosis occurring on the palms of the hands and soles of the feet; due to the fungus *Acladium castellanii*, characterized by sharply defined round or oval ulcers with granulating centers. —**acladiot'ic,** *adj.*

A·cla·di·um. A genus of conidiospore fungi found in Ceylon, the Malay States, and Macedonia.

A. castellanii. The species which causes acladiosis.

ac'la·sis, a·cla'si·a (ack'lay·sis, ·see·ah, ·shuh, ·see·uh) [G. a-, not; klasis, a breaking]. Morbid continuity of structure, as in chondrodystrophia; especially diaphysial aclasis, marked by imperfect bone formation in cartilage and abnormal cartilaginous growths near the epiphyses, causing multiple exostoses.

a·clas'tic [G. aklastos, from a-; klan, to break]. Not refracting.

a·cleis"to·car'di·a (ay·kly·sto·car·dee·uh, ·kly·sto·) [a-; G. kleiein, to close; kardia, heart]. A condition in which the foramen ovale of the heart fails to close.

aclor. Trade-mark for glutamic acid hydrochloride.

ac·mas'tic [G. akmastikos, from akmē, point]. Designating a disease with a period of progressive symptoms (*epacmastic*) followed by a period of abatement (*paracmastic*).

ac·me (ack'mee) [*akmē*]. 1. Highest point. 2. Crisis or critical stage of a disease.

ac'ne (ack'nee) [NL., perhaps from G. achnē, chaff]. A chronic inflammatory condition of the pilosebaceous structures commonly involving the face, back, and chest. The lesions are papular, pustular, or nodular; they affect persons between the age of puberty and 30 years of age, generally are worse in winter, and often are associated with menstrual and gastrointestinal disorders. The primary lesion is the comedo, or blackhead, later developing into a pink, acuminate papule, a pustule, or nodule. Syn., *a. vulgaris*. Also called *adolescent a., a. juvenilis*.

a. agminata. A facial eruption of small, dusky reddish papules which develop into pustules and leave scars when healed. Also called *acnitis*.

a. albida. See milium.

a. artificialis. A type of acneform eruption which disappears when its cause is removed.

a. atrophica. See a. varioliformis.

a. cachecticorum. An acneform eruption seen in debilitated persons after long wasting diseases, such as tuberculosis. The lesions occur on the trunk and legs, appearing as flat, dull-red papules and pustules varying in size from that of a pinhead to that of a lentil.

a. conglomerata. A pustular acneform eruption often seen after administering any of the halogens or their salts and among industrial workers exposed to hydrochloric acid, tar, tar vapor, oil, wax, or paraffin. The skin is pigmented with many comedos. The pustules form thick clusters and are covered with crusts and scabs involving, in addition to the usual sites, the extensor surfaces of the arms and legs, the scalp, the inner thighs, and the genitalia. Syn., *bromine a., chlorine a., iodine a., tar a., a. medicamentosa, a. picealis.*

a. conglobata. A severe chronic inflammation of the pilosebaceous structures of the face, chest, and back with many lesions on the lower back, buttocks, and thighs, occurring in men long after puberty. There are common acne lesions, double comedones, cysts, fluctuant plaques and sinuses; resulting scars are often keloidal.

a. contagiosa. An infectious pustular eruption of horses, said to differ from horsepox.

a. decalvans. A purulent inflammation of the hair follicles of the scalp causing destruction of the hair with irregular patches of baldness and scarring or atrophy of the skin. Syn., *folliculitis decalvans.*

a. erythematosa. See a. rosacea.

a. frontalis. See a. varioliformis.

a. hordeolaris, a. hordeolaris. A nodular eruption in which the lesions are hard, tough, and arranged in rows.

a. hypertrophica. A stage in the development of acne rosacea in which there is a permanent, intensely red, noninflammatory nodular thickening of the sides of the nose and the lips. Syn., *rhinophyma.*

a. indurata. Acne vulgaris in which the lesions are hard and livid due to perifollicular infiltration, and are very resistant to treatment.

a. keloid. Acneform eruption with minute red papules that suppurate and heal by hypertrophic granulations. See *folliculitis keloidalis.*

a. keratosa. A rare acne with horny plugs taking the place of the comedos causing inflammation. Also called *lichen spinulosus.*

a. medicamentosa. That which results from medication with certain drugs, as the iodides and bromides. See a. conglomerata.

a. miliaris. See milium.

a. necrotica. See a. varioliformis.

a. neonatorum. Acne vulgaris in newborn infants, considered to be due to placental transfer of hormones.

a. of the cornea. See a. keratosa.

a. pancreatica. Small cysts in the pancreas due to obstruction of the smaller ducts.

a. papulosa. A papular form commonly seen on the foreheads of young adults.

a. picealis. See tar a.

a. punctata. A superficial papular eruption with pointed lesions marked by slight inflammation about the comedos.

a. pustulosa. A variety of acne vulgaris with predominance of small abscesses.

a. rodens. See a. varioliformis.

a. rosacea. A chronic hyperemic skin affection of the nose, forehead, and cheeks, marked by hypertrophy, erythema and flushing, and telangiectasis. Also called *rosacea, telangiectasis faciei, whisky nose.*

a. scrofulosorum. A variety of acne cachecticorum affecting tuberculous children.

a. sebacea. Syn., *seborrhea.*

a. simplex. Acne vulgaris.

a. sycosiformis. See sycosis.

a. tarsi. An inflammatory affection of the large sebaceous glands of the eyelids (tarsal glands).

a. tropica. A severe form having all the symptoms of acne conglobata, but induced by tropical climate and improving in a cooler climate.

a. urticata. An eruption of the face and scalp characterized by small wheals and vesicles associated with itching and burning.

a. varioliformis. An uncommon skin affection, usually found on the forehead, that sometimes extends beyond the hairline onto the scalp. The

lesions are pustular, covered with hard crusts and scabs. These fall off, leaving small craterlike ulcers that heal as scarred pits.

a. vermiculata. See *folliculitis ulerythematosa reticulata.*

a. vulgaris. The common type of acne occurring in sexually maturing and mature individuals, and related to disturbances in hormonal balance.

adolescent a. Acneform eruptions which occur in young adolescents.

bromine a. The acneform eruption which frequently exists in bromine poisoning. See a. coagminata. Also called *bromine eruptions.*

chlorine a. A pustular acne following the administration of chlorine compounds. See a. coagminata.

congestive a. See a. rosacea.

cystic a. That distinguished by cyst formation, each enclosing hard, inspissated sebum.

halogen a. See a. coagminata.

iodine a. A skin eruption often following administration of iodine and related compounds. See a. coagminata.

tar a. An acneform pustular eruption usually involving the extensor surfaces of the legs of industrial workers exposed to tar, tar vapor and related compounds. See chlorine a., a. coagminata.

varicose a. That associated with dilated superficial capillaries.

ac'ne form, ac ne'i form [acne; L. *forma*, form]. Resembling acne.

ac-ne mal [G. a-, not; *knēmē*, leg]. 1. Atrophy of the calves of the legs. 2. Congenital absence of the legs. —acnemous, *adj.*

ac ni'tis. Acne agminata.

Acnomel. Trade-mark for a preparation for the treatment of acne, containing resorcinol and sulfur in a base including bentonite, propylene glycol, alcohol, and titanium dioxide.

ac" ro'ma (ack"o-mee'nuh, -ms nuh) ac"o-num. See *aconum.*

a-coe'li-a, a-ce'li-a (a see'lee uh) [a-; G. *koilia*, cavity of the body]. Absence of a body cavity or coelom. —acoelious, acoelomate, acoelomata, acoelous, *adj.*

ac o-ine (ack o-een, in) ac o-in. Hydrochloride of dipara-anisylmonoparaphenetylguanidine, a white powder used in infiltration anesthesia by Schleich's method in 1:1000 solution with 0.8% sodium chloride; also in 1% aqueous solution in ophthalmology.

Ac"o-kan ther [G. *akē*, point; *anthēros*, blooming]. A genus of apocynaceous herbs native to Africa. Juices from the leaves and stems of several species furnish the natives with arrow poison, since they contain a principle, acokantherin, similar to or identical with ouabain.

ac"o-kan'ther in. $C_{30}H_{46}O_{12}$. The poisonous glycoside of *Acokanthera*, similar to digitalis and ouabain in its action.

acolaria. Trade name for vitamin A capsules.

ac"o-las'i a (ack" lay'zhuh, see uh) [G. *akolasia*, intemperance]. Unrestrained self-indulgence, lust; intemperance. Obs. —acolas'tic, *adj.*

acolite. A proprietary casting material used in dentistry.

a-co'lous (ay-ko'lus, a ko'lus) [G. a-, not; *kōlon*, limb]. Having no limbs.

a-co mi-a [a-; G. *komē*, hair]. Baldness. A deficiency of hair from any cause. Syn. alopecia. —acomous, *adj.*

acon. Trade-mark for a water-dispersible preparation of vitamin A.

a-con' tive [a-; L. *conatus*, from *conari*, to try]. Having no wish or desire to act. See *conation.*

ac' nine (ack o-neen, -nin) C H O_3N. A alkaloid obtained from aconitine; much less toxic.

a-con'i tase. The enzyme that catalyzes the breakdown of citric acid to cis-aconitic and l-isocitric acid.

ac'o-nit [G. *akoniton*, leopard's bane] (aconitum). A very poisonous drug obtained from the root of *Aconitum napellus.* It has a bitter pungent taste and leaves a sensation of numbness and tingling on the lips and tongue. Physiologically it is a cardiac, respiratory, and circulatory depressant and produces sensory paralysis. The principal alkaloid is aconitine. It acts as a diaphoretic, antipyretic, and diuretic.

ac" nit'ic ac'id. COOH CH_2C(COOH)-CH CO-OH. 1,2,3-propenetricarboxylic acid, representing citric acid minus a molecule of water. It occurs in two modifications, *cis*- and *trans*-. *Cis*-aconitic acid is believed to be an intermediate product in Krebs cycle, explaining aerobic oxidation of carbohydrates. Aconitic acid, presumably of *trans*-configuration, occurs in a number of plants, including species of *Aconitum*, beets, and sugar cane.

a-con'i tin. See *aconitine.*

a-con'i tine (-kon i teen, tin) a-con'i tin (aconitina). C H $O_{11}N$. An extremely poisonous alkaloid derived from *Aconitum napellus* and other species. It occurs as white flat crystals of slightly bitter taste. Dose 0.0002 Gm. (1/3 gr.)

a. hydrobromide. $C_{34}H_{47}O_{11}N \cdot HBr$. From crystalline aconitine, occurring as small white crystals soluble in water and alcohol. Dose the same as the crystalline alkaloid.

a. hydrochloride. $C_{34}H_{47}O_{11}N \cdot HCl$. A white, crystalline powder from crystalline aconitine, soluble in water and alcohol. Dose about the same as the alkaloid.

a. nitrate. $C_{34}H_{47}O_{11}N \cdot HNO_3$. Fine white prisms or rhombic crystals, highly poisonous, used in neuralgia and neuritis. Dose about the same as the alkaloid. Syn. *Duquesnel*.

amorphous a. A mixture of several bases found in the bulbs of *Aconitum napellus.* Its principal constituents are aconitine and picraconitine. It is 15 or 20 times less poisonous than pure crystallized aconitine.

British a. A yellowish white crystalline alkaloid prepared by Morson from *Aconitum ferox.* Also called *English aconitine, pseudaconitine, Morson's napelline* or *pure aconitine, Hubschmann's pseudaconitine, Flückiger's napelline.*

Duquesnel's a. See a. nitrate.

Ac"o-ni'tum [*akoniton*]. A genus of poisonous ranunculaceous plants, whose species are the source of aconite.

a-con"u-re-sis [G. *akōn*, involuntary; *ourēsis*, urination]. Involuntary passage of urine.

a-co-pro si (ay"ko pro zee uh, ack) [G. a-, not; *kopros*, from *kopros*, excrement]. Marked deficiency or absence of feces in the intestine. —acoprous, *adj.*

ac"o-re a [a-; G. *korē*, pupil]. Absence of the pupil.

a-co ri [a-; G. *koros*, satiety]. 1. A form of hunger due to the absence of the feeling of satiety following a meal; to be differentiated from bulimia. 2. Greedy or insatiable appetite because the patient never feels full; a constant desire for food although the appetite may not be large.

ac'o-rin. A bitter, nonnitrogenous substance, probably $C_{36}H_{60}O_6$; found in the root of *Acorus calamus*, or sweet flag.

a-cor'mus [a-; G. *kormos*, trunk]. An acardiac monster lacking a trunk.

Ac' rus [G. *akoros*, yellow flag]. A genus of aroid plants.

A. calamus. A species from which calamus is obtained.

Acosta, José de [*Spanish missionary and author* ca.1539–1600]. A Jesuit father who first described the syndrome of mountain sickness (1590) called *Acosta's disease.*

a-cos'tate [G *a-* not L. *costatus,* from *costa,* rib]. Without ribs.

acou- (kōō-) **acouo-** [G *akouein,* to hear] A combining form denoting *relation to hearing*

a-cou"es-the si-a. See *acouesthesia.*

cou"es the si a (kōō es-thee shuh, -zee-uh) [*akouein,* G *aisthēsis,* sensation]. The hearing sense usually very acute sense of hearing.

ac ou la'li-on (ack"ōō lay'lee-on) [*akouein,* G. *lalia,* speech]. An instrument used in teaching speech to deaf-mutes.

-cou'me-ter (kōō mi tur) **ac"ou om e-ter ac"ou tom'e-ter** [*akouein,* G *metron,* measure]. Instrument for measuring the acuteness of hearing. —**acoumet'ric, acoumeomet'ric,** *adj.;* **acou'metry** *n.*

ac"ou-oph'o-ny (ack"ōō off'o-nee) **cou"o-pho ni a** (kōō"o-f nee-uh) [*akouein,* G *phōnē,* sound]. Auscultatory percussion.

-a cou'si (-a kōō shuh, -see-uh, -shuh, -see-uh) **-a cou'sis** [G *akousis,* hearing]. A combining form denoting *hearing*

-cous'ma (kōōs muh, kōōs muh, kous muh) [G *akousma,* thing heard] *I psychopathology* simple auditory hallucination, as of buzzing or ringing. A borderline condition between illusion and true hallucinosis.

us mat g no sis (kōōs m t ag sis kōōs") [*akousma;* G *a-* not; *gnōsis,* recognition] Inability to recognize sounds or understand spoken words mind deafness.

-cous"mat m ne si a (kōōs mat-am ee shuh, -zee-uh) [*akousma,* G *amnēsia,* from *a-;* *mnēsis,* pertaining to memory]. Inability to remember sounds.

a-cous'tic [*akoustikos*]. Pertaining to sound or *hearing*

acoustic (eighth cranial) nerve. A composite sensory nerve having two roots and two branches *cochlear* (for hearing) and *vestibular* (for movement and position of head in space)

a cous"ti-co-pho'bi-a (kōōs"ti ko-) [G *akoustikos,* from *akouein,* to hear; *phobos,* fear]. Morbid fear of sounds.

a cous'tics (kōōs ticks) [*akoustikos*]. 1 *In physics,* the science of sound. 2 *In psychology* that branch dealing with hearing.

ac ou tom' ter See *acoumeter*

ac quired' [L. *acquirere,* to acquire]. 1 *In psychology,* gained from experience or learning, as an acquired idea; in contradistinction to innate. 2. *I biology* developed as result of environment, or of use or disuse, as an acquired characteristic; in contradistinction to an inherited characteristic.

ac-quired' a tel ec'ta-sis. See under *atelectasis*

ac ral [G *akron,* extremity] Relating to or affecting, the limbs or extremities

a-cra ni-a (ay-kray'nee-uh, kray) [G *a-* not; *kranion,* skull]. Partial or complete absence of the cranium at birth. —**acranial** *adj;* **acranius,** *n.*

-cra si (kray shuh, -see uh) [G from *a-* *kratos,* power]. Intemperance; lack of self-control.

-cra ti-a (kray'shee-uh) [*a-* *kratos*]. Impotence, loss of power

a-crat"u re sis [*a-;* *kratos;* G *ourēsis,* urination]. Inability to micturate due to atony of the bladder

ac re mo ni-o sis [*Acremonium,* G *-ōsis,* condition] A fungus infection caused by *Acremonium potroni* characterized by f ver and gummalike swellings.

ac"ren ceph'a lon. Th portion of the central nervous system of vertebrates whose development is induced by the roof of the stomodeum; the prosencephalon; no sulcus limitans occurs. Also see *chordencephalon.*

ac"ri bom' ter [G *akribēs,* exact; *metron,* measure]. A device for measuring minute objects.

ac rid [L. *acer* sharp]. Pungent; irritating.

ac'ri dine (ack'ri-deen, -din) $CH_4(C_6H_4)_2N$ A solid hydrocarbon btained from coal tar It is employed in the synthesis of various dyes, certain of which (acriflavine, diflavine, proflavine) are used as antiseptics.

ac"ri-fla vine (ack"ri flay veen, -vin, flav'een, -in) (*acriflavina*) A mixture of 3,6-diamino-10-methylacridinium chloride and 3,6-diaminoacridine deep orange, granular powder freely sol ble in water It is used chiefly as local antiseptic, but has been administered intravenously in treating various infections. Also called *a. base, neutral a.* See *trypaflavin.*

a. hydrochloride A mixture of th hydrochlorides of 3,6-diamino-10-methylacridinium chloride and 3,6-diaminoacridine; strong reddish brown powder freely soluble in water It is used for the same purposes as acriflavine, but is more irritant because of its acid reaction. Also called *acid a.*

ac'ri nyl sul"fo-cy' nate. An acrid and vesicating substance found in white mustard.

a crit'i cal (y krit'i kul, krit) [G *a-* not *krisis,* crisis]. 1. W thout crisis; not relating to crisis; applied to diseases which resolve by lysis. 2. Indeterminate, as regards prognosis.

a-crit" -chro ma-sy [G *akritos,* from *a-;* *kritos,* distinguished; *chrōma,* color]. Colorblindness; chromatopsia.

ac'ro- acr- [G *akron,* extremity]. A combining form meaning *pertaining to extremes* or *to the extremities.*

ac ro-aes the'si-a. See *acroesthesia.*

ac"ro ag no'sis [*akron,* G *a-* not; *gnōsis,* knowledge]. Absence of sense perception in limb.

ac ro n es the i a, a ro n aes th si (ack ro an es-thee shuh, -zee-uh) [*akron,* G *anaisthēsia,* lack of sensation]. Anesthesia of the extremities.

ac"ro-ar thri'tis [*akron;* G *arthron,* joint, *-itis,* inflammation]. Arthritis of the extremities.

ac"ro as phyx'i-a [*akron,* G *asphyxia,* from *a-* *sphyxis,* pulse] Early symptom of Raynaud' syndrome characterized by coldness and pallor alternating with heat and redness of the hands and feet.

ac"ro-a tax'i [*akron,* G *ataxia,* disorder]. Incoordination of the muscles of the fingers and toes, as opposed to *proximoataxia,* incoordination of the proximal portions of the extremities.

ac'ro blast [*akron,* G *blastos,* germ]. Golgi remnant part of the Golgi material in the spermatid forms the acrosome of the spermatozoon, part becomes the acroblast.

ac"ro-ce-pha'li-a. See *acrocephaly*

ac"ro-ceph-a-lop gus. Synonym for *craniopagus parietalis.*

ac"ro-ceph"a-lo-syn dac tyl'i-a, ac"ro-ceph"a-lo-syn-dac'ty ly [*akron,* G *kephalē* head *syn,* together *daktylos,* digit] Congenital malformation consisting of pointed top of the head and syndactyly of the hands and feet. Also called *acrosphenosyndactylia, Apert' syndrome, acrocephalosyndactylism.*

ac"ro-ceph'a-ly ac"ro-ce pha'li a [*akron,* *kephalē*]. Deformity of the head, in which the top is more or less pointed. See *oxycephaly* —**acrocephal'ic, acrocephalous,** *adj.*

ac″ro-chor-do′ma. See *chordoma*.

ac″ro-chor′don (ack″ro-kor′don) [G. *akrochordōn*, wart with a thin neck, from *akros*; *chordē*, cord]. Pedunculated wart. Syn., *molluscum fibrosum*.

ac″ro-ci-ne′sis (ack″ro-si-nee′sis) [*akros*; G. *kinēsis*, movement]. Markedly excessive motion, as in certain cases of hysteria. —**acrocinet′ic**, *adj.*

ac″ro-con-trac′ture [*akros*; L. *contractura*, contracting]. Contracture of the joints of the hands or feet.

ac″ro-cy″a-no′sis [*akros*; G. *kyanos*, blue; *-ōsis*, condition]. Blueness of the extremities due to vasomotor disturbance. In chronic progressive acrocyanosis there is hypertrophy of the soft tissues of the hands and feet, associated with cyanosis or intense redness.

ac″ro-der″ma-ti′tis [*akros*; G. *derma*, skin; *-itis*, inflammation]. Inflammation of the skin of an extremity.

a. atrophicans chronica. An atrophic dermatitis which begins as an inflammation and is followed by atrophy; it is progressive, but usually limited to the extremities; its cause is unknown.

a. continua (*of Hallopeau*). A chronic relapsing vesicopustular dermatosis, of uncertain cause, primarily of the extremities, chiefly the hands, with secondary eruptions of erythematous and desquamating types; also called *a. perstans*.

a. enteropathica. A rare, chronic, relapsing vesiculobullous dermatitis associated with mucous-membrane lesions, diarrhea, and alopecia, appearing in infants during the first year of life.

a. hiemalis. A skin affection seen in cold weather consisting of indolent and indurated papulopustules over the fingers and about the knuckles; probably a tuberculid.

a. pustulosa. See *pustulosis palmaris et plantaris*.

a. vesiculosa tropica. A rare dermatitis of the fingers, marked by atrophy of the skin and an eruption of small vesicles; the fingers may show a tapering shape.

ac″ro-dig″i-to-lin′ (ack″ro-didj″i-toh-lin, -didj″i-tay′lin). A digitalis substance which does not possess the general characteristics of a glycoside.

ac″ro-dol″i-cho-me′li-a (ack″ro-dol″i-ko-mee′lee-uh) [*akros*; G. *dolichos*, long; *melos*, limb]. Condition in which the hands and feet grow disproportionately long or large.

ac′ro-dont [*akros*; G. *odous*, tooth]. 1. Denoting teeth which is ankylosed by its root to a bony eminence, and not inserted in a socket or alveolus. 2. Having teeth of this kind.

ac″ro-dyn′i-a, ac″ro-dyn′ia. See *erythredema polyneuropathy*.

ac″ro-e-de′ma [*akros*; G. *oidēma*, swelling]. 1. Swelling of the extremities, sometimes accompanied by erythredema polyneuropathy; seen particularly in neuropathic individuals. 2. Permanent posttraumatic swelling of a hand or foot.

ac″ro-es-the′si-a, ac″ro-aes-the′si-a (ack″ro-es-thee′zhuh, -zee-uh) [*akros*; G. *aisthēsis*, sensation]. 1. Exaggerated sensitiveness or sensibility. 2. Pain in one or more of the extremities.

ac″ro-ger′i-a (ack″ro-jerr′ee-uh, -jeer′ee-uh) [*akros*; G. *gerōn*, old man]. Premature aging of the skin of the hands and feet, marked by looseness and wrinkling.

ac″rog-no′sis [*akros*; G. *gnōsis*, knowledge]. Cenesthesia of the extremities and of their parts.

ac″ro-hy″per-hi-dro′sis (ack″ro-high″pur-hi-dro′sis, -high″pur-high-dro′sis) [*akros*; G. *hyper*, over; *hidrōsis*, sweating]. Increased perspiration of the hands and feet.

ac″ro-hy″po-ther′my [*akros*; G. *hypo*, under; *thermē*, heat]. Abnormal coldness of the extremities.

ac″ro-ker″a-to-sis ver-ru″ci-for′mis. Form of epithelial nevus; discrete verrucous lesions occurring chiefly on the dorsum of the hands and feet; the palms, wrists, and knees also may be involved.

a-cro′le-in. $CH_2{:}CH{\cdot}CHO$. Acrylic aldehyde. A colorless, mobile liquid with a pungent odor resulting from the decomposition of glycerin. Syn., *allyl aldehyde*.

ac″ro-mac′ri-a [*akros*; G. *makros*, long]. Spider fingers. See *arachnodactyly*.

ac″ro-ma′ni-a [*akros*; G. *mania*, madness]. A violent form of mania. *Obs.*

ac″ro-mas-ti′tis [*akros*; G. *mastos*, breast; *-itis*, inflammation]. Inflammation of the nipple.

ac″ro-meg′a-loid′ism [*akros*; G. *megas*, great; *eidos*, form]. State or condition of the body in which the form resembles that of an acromegalic, but is not caused by hyperpituitarism.

ac″ro-meg′a-ly, ac″ro-me-ga′li-a [*akros*, *megas*]. Chronic condition resulting from hyperfunction and hyperplasia of the eosinophilic cells of the adenohypophysis. The characteristic features are increase in size of the viscera (splanchnomegaly), the soft parts, and the bones, especially the short and flat bones (acromegaly) without increase in height, the hands, feet, and face showing most change; metabolic disturbances, chief of which is a change in sugar tolerance; secondary changes in the function of other endocrine organs and so-called neighborhood symptoms such as bitemporal hemianopsia. *Acromegaloid*, *formes frustes*, *transient acromegaly*, and *fugitive acromegaly* are terms which have been used to designate incomplete, arrested, or rapidly changing types of the disease. See *gigantism*. Also called *Marie's syndrome*. —**acromegal′ic**, *adj.*, *n.*

ac″ro-mel-al′gi-a [*akros*; G. *melos*, limb; *algos*, pain]. A peripheral vascular disease. See *erythromelalgia*.

ac″ro-met″a-gen′e-sis [*akros*; G. *meta*, beyond; *genesis*, origin]. Undue growth of the extremities.

ac″ro-mi-cri-a [*akros*; G. *mikros*, small]. Underdevelopment of the extremities and of the skull as contrasted with visceral development.

a. congenita. A term introduced by Benda for mongolism.

a-cro″mi-o-cla-vic′u-lar [*akros*; G. *ōmos*, shoulder; L. *clavicula*, dim. of *clavis*, key]. Pertaining to the acromion and the clavicle; applied to the articulation between these two bones and the ligaments joining them. See Table of Joints and Ligaments in the Appendix.

a-cro″mi-o-cor′a-coid [*akros*; *ōmos*; G. *korakoeidēs*, like a raven]. Pertaining to the acromion and the coracoid process. Also *coracoacromial*.

a-cro″mi-o-hu′mer-al [*akros*, *ōmos*; L. *humerus*, upper bone of the arm]. Relating to the acromion and the humerus.

a-cro′mi-on [*akros*, *ōmos*]. The flat, somewhat triangular bony process formed by the lateral extension of the scapular spine, and situated just above the glenoid cavity. It articulates with the clavicle, and serves as a point of attachment for some of the fibers of the deltoid and trapezius muscles. See Plate 1. —**acromial**, *adj.*

a-cro″mi-o-tho-rac′ic (a-kro″mee-o-thor-ass′ick) [*akros*; *ōmos*; G. *thōrax*, chest]. Relating to the shoulder and thorax; designating a branch of the axillary artery.

a-crom′pha-lus [*akros*; G. *omphalos*, navel]. 1. The center of the umbilicus, where the cord attaches. 2. Unusual prominence of the navel, often the first sign of an umbilical hernia. 3. Remains of the umbilical cord attached to the child.

ac″ro-my″o-to′ni-a (ack″ro-migh″o-to′nee-uh, ack″ro-mee″o-) ac″ro-my-ot′o-nus (ack″ro-migh-ot′o-

nus, -my-ot o-nus) [akros, G myo, muscle; tonos, tension]. Tonic muscular spasm of the extremities, usually causing deformity of the hands or feet.

ac"ro-nar-cot'ic [L. acer, sharp; G narkē, numbness]. An agent which combines local irritant effect, by acting directly on the peripheral nerves, with general benumbing effect, by affecting the brain and vital centers in the cord. —**ac"ro-nar-cot'ic,** *adj*

ac"ro neu rop a thy [G akros, extremity; neuron, nerve; pathos, disease]. The simultaneous degeneration of the peripheral nerves in their most distal parts, usually symmetrical. Most common causes: alcohol, arsenic, lead or mercury poisoning, or deficiency disease such as beriberi. Syn., *polyneuropathy, polyneuritis.*

ac ro-neu ro'sis [akros; neuron; G. -ōsis, condition]. Any neurosis manifesting itself in the extremities, usually vasomotor in nature or due to deficiency disease.

a-cron y-cheus, a chron y-cheus (kron'i-kus) [G acronychos, with nails, from akros; onyx, nail]. Having claws, nails, or hoofs.

ac'ro-nyx [akros; onyx]. Ingrowing of nail.

ac're-os"te-ol'y-sis. Myelodysplasia with osseous lesions.

ac ro-pach y (ack'ro-pack"ee) [akros; G pachys, thick]. Old term for secondary hypertrophic osteoarthropathy.

ac"ro pa h"y der'ma (ack ro-pack"i-dur'muh) [akros; pachys; G. derma, skin]. Old term for pachyacria.

ac"ro-pa ral'y sis [akros, G paralysis, from para, beside; lysis, to loosen]. Paralysis of the extremities.

ac"ro-par"es the si ac ro par"aes the si-a (par"ess-thee zhuh, -zee-uh) [akros, G paraisthēsis, misperception]. A vasomotor neurosis, seen chiefly in middle-aged women, characterized by tingling or crawling sensations in the hands, hyperesthesia and hyperalgesia of the fingers, coldness, and pallor or cyanosis of the hands.

ac"ro pa thol' gy [akros, G pathos, disease; logos, word]. The pathology of the extremities, especially the morbid changes occurring in orthopedic diseases.

-crop a thy [akros; pathos]. Any disease of the extremities.

a-crop e-tal [akros, L. petere, to seek]. Tending upward to summit, pplied to an inflorescence and certain infections.

ac"ro-pho'bi [akros, G phobos, fear]. Morbid dread of being at great height.

ac"ro pig men ta'tion. Increased melanin pigmentation of the distal parts of the extremities. See *acropigmentatio reticularis.*

ac"ro pig men ta ti-o re tic u lar'is. A genodermatosis characterized by small evenly brown-pigmented, rough-surfaced, slightly depressed macules located on the extensors of the distal parts of the extremities.

ac"ro-pos thi'tis [akros, G posthē, foreskin; -itis, inflammation]. Inflammation of the prepuce. See *posthitis.*

ac"ro-scle"ro der'ma (ack ro skleer"o-dur muh, -sklerr o-dur'muh). See *sclerodactylia.*

ac"ro-scle ro sis [akros, G sklērōsis, hardening]. Scleroderma affecting the hands and extending to the upper extremities and the face, seen usually as sequel of Raynaud' syndrome.

ac'rose. A saccharine substance resulting from the polymerization or other reaction of such substances as glycerin, glycollic aldehyde, etc. the chief constituent is L-fructose frequently designated α-acrose.

ac ro-some [akros; G sōma, body]. A crescent-shaped body molded to the nucleus, forming the anterior part of the sperm head; the apical body.

ac"ro sphe"no-syn dac tyl'i a. See *acrocephalosyndactylia.*

ac"ros te al'gi a [akros, G osteon, bone; algos, pain]. Pain in one or more of the bones of an extremity.

ac ro-ter'ic [G akrōtērion, extremity]. Relating to the periphery or most distal parts, as the tips of the toes, fingers, nose, etc. —**acrot ria,** *n.*

Ac"ro the ci um flos cu lo sum. Synonym for *Epidermophyton floccosum.*

a crot'ic [G a-, not; krotos, striking]. Exhibiting any defective beating of the pulse, distinguished by absent or barely perceptible pulse.

a crot'ic [G akros, extremity]. Relating to the glands of the skin affecting the surface or periphery.

ac'ro-tism [G a-, not; krotos, striking]. Absence or imperceptibility of the pulse.

ac ro-tro pho neu ro sis [G akros, extremity; trophē, nourishment; neuron, nerve; -ōsis, condition]. A trophic disturbance of the extremities caused by nerve lesion.

acryl'ic ac'id. $CH_2:CH.COOH$. A liquid acid resulting from oxidation of acrolein.

a-cryl'ic al de hyde. See *acrolein.*

a-cryl'ics. A group of thermoplastic substances prepared by reaction and polymerization of sodium cyanide, acetone, methyl alcohol, and acid; methyl methacrylates. They resemble clear glass, but are lighter in weight and permit the passage of ultraviolet rays; used in making dental prostheses and temporary artificial eyes. Lucite and plexiglas are commercial forms.

ac'ry lo-, acryl- [L. acer, sharp; G hylē, wood, material]. A combining form denoting *relationship to acrylic acid* or *acrylics.*

ac"ry lo ni trile (ack ri lo nigh trill, nigh-treel" -nigh tryle, nigh trill, -nigh'treel). A colorless liquid, $H_2C:CH.CN$, used in the manufacture of synthetic rubber. Its toxic action has been said to be due to the formation of hydrocyanic acid. An increase in serum thiocyanates is observed in workers exposed to it. Syn., *vinyl cyanide.*

ACS Antireticular cytotoxic serum; specific cytotoxic antiserum produced by the intravenous injection of an antigen prepared from human or heterologous animal spleen and bone marrow. Minute doses are said to have stimulating effect, and large doses depressing effect, on the reticuloendothelial system. This is the basis for its use in the treatment of such unrelated conditions as wounds, fractures, arthritis, ozena, and even cancer.

act [L. actus, from agere, to do]. 1. Any deed, action, or performance. 2. Fulfillment of purpose or function.

compulsive a. Any conscious deed or act of an individual performed on irresistible impulse, usually the result of an obsession.

reflex a. Any action innervated through reflex arc.

sexual a. Coitus; cohabitation; sexual intercourse.

actamer Trade-mark for the bacteriostatic agent bithionol.

ACTH The adrenocorticotropic hormone from the anterior pituitary; it stimulates the adrenal cortex to secrete its entire spectrum of hormones. Syn., *corticotropin.* See *acthar.*

acthar Trade-mark for preparation of corticotropin.

ac"ti di'one. Antibiotic substance produced by *Streptomyces griseus,* highly active against yeasts but relatively innocuous to other microorganisms.

ac'tin. Protein constituent of the muscle fibril,

occurring side by side with myosin as actomyosin. It can undergo a reversible transformation between a globular or monomeric (G-actin) and a fibrous or polymeric (F-actin) state.

actin-. See *actino-*.

ac·tin'ic [G. *aktis*, ray]. Pertaining to, or designating, the rays of the spectrum which produce chemical change.

ac'tin·ide. Any of the group of related chemical elements starting with actinium and including thorium, palladium, uranium, neptunium, plutonium, americium, curium, berkelium, and californium.

ac·tin'i·form [*aktis*; L. *forma*, form]. Exhibiting radiate form or structure, such as the ray fungus or sea anemone.

ac·tin"i·o·he'ma·tin (ack·tin·ee·o·hee'muh·tin, ·hem'uh·tin) [*aktis*; G. *haima*, blood]. A red, respiratory pigment found in various sea anemones.

ac'tin·ism [*aktis*]. 1. Property of producing chemical changes possessed by spectral rays, especially those from beyond the violet end of the visible spectrum. 2. The science which treats of the chemical changes produced by radiation.

ac·tin'i·um [*aktis*]. Ac = 227. A radioactive element found in uranium ores, as pitchblende. Half-life 20 years.

a. X. The disintegration product of radioactinium.

ac"ti·no-, actin- [*aktis*]. A combining form meaning ray, rays, or *radiated structure*.

ac"ti·no·bac"il·lo'sis (ack"ti·no·bas"i·lo'sis) [*aktis*; L. *bacillus*, little stick; G. *-osis*, disease]. An actinomycosislike disease of bovines and other domestic animals caused by the *Actinobacillus lignieresi*, characterized by the formation of nodules, radiate bodies in the affected tissues.

Ac"ti·no·ba·cil'lus [*aktis*; *bacillus*]. A genus of the family Parvobacteriaceae; small, Gram-negative bacteria which attack the soft tissues of cattle and swine, causing a disease resembling actinomycosis. Important species of the group are *A. actinoides*, *A. actinomycetemcomitans*, *A. lignieresi*.

ac"ti·no·chem'is·try [*aktis*; G. *chēmeia*, alchemy]. Branch of chemistry concerned with the reactions produced by light.

ac"ti·no·der"ma·ti'tis. See *dermatitis actinica*.

ac·tin'o·gen [*aktis*; G. *gennaein*, from *gignesthai*, to be produced]. Any substance producing radiation. —**actinogen'ic**, *adj.*; **actinogen'esis**, **actinogen'ics**, *n.*

ac·tin'o·graph [*aktis*; G. *graphein*, to write]. 1. An instrument which records variations in the actinic strength of the sun's rays, hence permits the determination of proper time of exposure of photographic plate; an exposure meter. 2. A roentgenogram. *Obs.*

ac·tin'o·lite. See *actinolyte*.

ac"ti·nol'o·gy [*aktis*; G. *logos*, word]. 1. The homology existing between the successive segments, regions, or parts of radially symmetrical organs or organisms. 2. Study of the chemical action of light.

ac·tin'o·lyte, ac·tin'o·lite [*aktis*; G. *lytos*, from *lyein*, to loose]. 1. An apparatus designed for use in actinotherapy. 2. A device which generates ultraviolet rays. 3. Any substance which undergoes rather marked change when exposed to light.

ac"ti·nom'e·ter [*aktis*; G. *metron*, measure]. 1. An apparatus for determining the intensity of chemical rays. 2. A device which determines the degree of penetration of such rays. —**actinometry**, *n.*

ac"ti·no·my·ce'ti·al (ack"ti·no·migh·see'shee·ul) [*aktis*; G. *mykēs*, fungus]. 1. Relating to the mycelium of *Actinomyces*. 2. Actinomycotic.

Ac"ti·no·my'ces (ack"ti·no·migh'seez) [*aktis*; *mykēs*]. A genus of anaerobic vegetable parasites belonging to the family Actinomycetaceae. In tissue they resemble rosettes of fine filaments, each clubbed at the distal end, surrounding a central group of coccuslike spores. Also called *ray fungus*, *asteroid bodies*. See also *Discomyces*. —**actinomyce'tic, actinomyce'tous**, *adj.*

A. antibioticus. A species of fungi living in the soil and possessing antibacterial properties.

A. asteroides. Synonym for *Nocardia asteroides*.

A. bovis. The organism which produces actinomycosis in man and lumpy jaw in cattle, the majority of cases being reported in the United States. See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

A. hominis. The organism thought by some to be the cause of actinomycosis in man, believed by others to be a contaminant.

A. keratolyticus. The organism which causes cracked heels in India.

A. madurae. Synonym for *Nocardia madurae*.

A. minutissimus. Synonym for *Nocardia minutissima*.

A. mycetoma. See *mycetoma*.

A. necrophorus. A species found in lung and liver abscesses and in chronic ulcerative colitis in man; produces necrobacillosis in domestic animals.

A. somaliensis. Synonym for *Nocardia somaliensis*.

A. venezuelae. The organism which elaborates biosynthetic chloramphenicol.

Ac"ti·no·my"ce·ta'ce·ae (·migh·see·tay'see·ee) [*aktis*; *mykēs*]. A family of the order Actinomycetales.

Ac"ti·no·my"ce·ta'les (·migh·see·tay'leez) [*aktis*; *mykēs*]. Any of an order of fungi belonging to the class Schizomycetes, consisting of moldlike, rod-shaped, filamentous, or clubbed forms, many showing considerable branching. The order contains three families: Actinomycetaceae, Mycobacteriaceae, and Streptomycetaceae.

ac"ti·no·my'cetin (ack·ti·no·migh·see'tin, ·migh'si·tin) [*aktis*; *mykēs*]. An antibacterial substance synthesized by several strains of *Actinomyces*, and effective against certain Gram-negative and Gram-positive organisms.

actinomycin. An antibiotic substance elaborated by *Streptomyces antibioticus* and other *Streptomyces* species, originally described as consisting of actinomycin A and actinomycin B. But the latter has been found to be an inactive oil contaminated with the antibiotic. It contains nitrogen, occurs as red platelets, and is active against a number of bacteria and fungi.

ac"ti·no·my·co'ma (ack"ti·no·migh·ko'muh) [*aktis*; *mykēs*; G. *-ōma*, tumor]. A tumor produced by the *Actinomyces*.

ac"ti·no·my·co'sis (·migh·ko'sis) [*aktis*; *mykēs*; G. *-ōsis*, condition]. A parasitic, infectious, inoculable disease affecting cattle, hogs, and sometimes communicated to man; caused by *Actinomyces bovis* an anaerobe, and species of *Nocardia*, which are aerobes. The jaw is commonly involved (cervicofacial form) although other organs and systems may be infected (abdominal and thoracic or mediastinal forms). The disease is characterized by the formation of slow-growing granulomatous tumors which usually suppurate, discharging through multiple draining sinuses a thick oily pus containing yellowish granules, and by constitutional symptoms of sepsis. Also called *lumpy jaw*, *clyers*, *wooden tongue*. —**actinomycot'ic**, *adj.*

ac"ti·no·my'co·tin [*aktis*; *mykēs*]. An extract of cultures of *Actinomyces*, prepared like tuberculin and used in cases of actinomycosis.

ac'ti non [aktis]. An = 219. Actinium emanation, an isotope of radon. Half-life 3.9 seconds.

ac"ti no neu ri'tis [aktis; G. neuron, nerve; -itis, inflammation]. Neuritis from exposure to x-rays or radium.

ac ti no phy to sis (ack ti-no-figh-to sis) [aktis; G. phyton, plant; -osis, condition]. A disease, usually caused by Staphylococcus aureus, characterized by granulomatous abscesses with granules simulating those of actinomycosis or streptothricosis. Syn., botryomycosis.

ac"tin rho dine. An antibiotic substance, possibly $C_{18}H_{14}O_{8}$, produced by a species of Actinomyces; it inhibits Staphylococcus aureus.

ac"tin-o-ru'bin. An antibiotic substance produced by a species of Actinomyces and named from its characteristic red mycelium; the substance is active against various organisms but is relatively toxic.

ac"ti nos'co-py [aktis; G. skopein, to examine]. Examination of the body by x-rays. Syn., skiascopy, radioscopy, fluoroscopy, roentgenoscopy.

ac"ti no-ther a py [aktis; G. therapeia, therapy]. Therapeutic use of chemical rays or radiant energy including sunlight, ultraviolet light, x-rays, and emanations of radium or other radioactive matter. Syn., radiotherapy. —actinotherapeu tic, adj.

ac tion [L. actio, from agere, to do or to perform]. 1. Performance of a function or movement. 2. Application or wielding of a force—physical, chemical, or mental. 3. In pathology, production of a morbid process. Syn., activity.

a. of arrest. Inhibition.

a. time. The duration of stimulation of the retina required to produce a visual sensation of maximum strength.

alternation. The temporary negative variation of the electric current in a tetanized muscle after stimulation ceases.

antagonistic a. (a) Counteraction; opposition. (b) The effect of an opposing agent or principle. See antagonism.

ball-valve a. The alternate blocking and opening of a narrow passage by a floating object acting as a valve, as a gallstone in the common bile duct.

buffer a. That exhibited by certain chemical substances which, when added to a fluid, tend to maintain its reaction (pH) within narrow limits.

calorigenic a. (a) Specific dynamic action. (b) The total heat liberated by a food or food constituent when metabolized by the body.

capillary a. Capillary attraction; capillarity.

chemical a. The molecular change produced in any substance through the action of heat, light, electricity, or another chemical.

contact a. Catalysis.

cumulative a. Sudden and marked action of a drug after administration of a number of ineffectual or slightly effective doses.

electrocapillary a. The electric phenomena resulting from the chemical reaction between dissimilar fluids connected by a capillary medium.

hydrotropic a. Action which confers water solubility on substances ordinarily not soluble in water, such as that of bile salts on fatty acids.

oligodynamic a. Toxicity of heavy metals in very dilute solution for Algae and other microorganisms.

opsonic a. The effect produced upon susceptible microorganisms and other cells by opsonins, which renders them vulnerable to phagocytes.

radiobiological a. The action of radiation on living things.

reflex a. A response of some peripheral organ to stimulation of the sensory branch of a reflex arc; the action occurring immediately without the aid of the will or without even entering consciousness. Also called automatic a.

specific a. The action of certain remedial agents which possess exclusive curative powers for a particular disease, symptom, or microorganism, as arsphenamine for syphilis, quinine for malaria, or biologicals like antimeningococcic and antipneumococcic serums.

specific dynamic a. The stimulating effect upon the metabolism produced by the ingestion of food, especially proteins, causing the metabolic rate to rise above basal levels.

synergistic a. See synergy.

thermogenic a. The action of various drugs and foods in raising the body temperature.

trigger a. A sudden stimulus which initiates a physiologic or pathologic process having nothing in common with the action that started it.

vital a. Physiologic activity or functions which are necessary for maintaining life, as the action of the heart, lungs, and vital centers of the brain and cord.

ac tion po-ten tial. See under potential.

ac"ti thi-az'ic ac'id. $C_{10}H_{17}NO_{3}S$; an antibiotic substance, (−)-2-(5-carboxypentyl)-4-thiazolidone, isolated from a species of Streptomyces and also synthesized. It is effective in vitro against Mycobacterium tuberculosis.

ac"ti va tion [L. activus, active]. 1. The process of activating or rendering active. 2. Stimulation of general cellular activity by the use of nonspecific therapy; plasma activation. 3. Stimulation of the ovum by the sperm or other agents causing cell division. 4. In chemistry, the transformation of any substance into a more reactive form, including the renewal of activity of a catalyst. —ac tivate, v.

a. analysis. See under analysis.

ac ti-va tor [activus]. 1. An agent which is necessary to activate another substance, as a coenzyme to an enzyme; applied to biochemical reactions. An enzyme activator is called coenzyme or kinase. 2. Internal secretion of the pancreas. 3. Substance which stimulates the development of an embryonic structure. Also called inductor or organizer. 4. Apparatus which charges water with radium emanations. 5. A catalyst.

ac'tive [activus]. 1. Energetic, decisive, as active treatment. 2. Due to an intrinsic as distinguished from a passive force, as active hyperemia. 3. In optics, possessing the ability to rotate the plane of a polarized light beam. 4. In psychoanalysis, pertaining to masculine qualities. 5. In biochemistry, referring or pertaining to a presumed derivative of a substance regarded as the participating form in biological reactions in which the parent compound itself does not exhibit full activity.

ac tive cen ter, ac tive site. 1. That part of the enzyme to which the substrate or necessary cofactor is linked in normal enzymatic function. 2. That part of an antibody to which the antigen or hapten is linked in a normal antigen-antibody reaction.

activin. Trade-mark for an injectable solution containing casein in combination with sodium iodohydroxyquinoline sulfonate; used in nonspecific protein therapy.

ac-tiv'i ty [activus]. Capacity for acting; sensibility; vitality; potency; energy.

optical a. The ability of a substance to rotate the plane of vibration of polarized light. It is characteristic of compounds having an asymmetric atom, usually of carbon.

specific a. In radiobiology, the number of disintegrations per unit time per unit mass of radioactive substance.

actol. Trade name for silver lactate.

ac″to-my′o-sin. A protein complex consisting of myosin and actin, forming the major constituent of the muscle fibril and, presumably, of the contractile mechanism. Actomyosin is soluble in concentrated salt solutions (e.g., 0.6 M KCl) in which state, as evidenced by high viscosity, turbidity, and flow birefringence, it consists of large molecular swarms. Adenosinetriphosphate (ATP) affects these physical properties and is able to cause contraction of actomyosin fibers in suitable electrolyte medium.

actoplex. Trade-mark for a preparation containing purified activated ergosterol (vitamin D) and bile salts; used when high dosage of the vitamin is required.

ac′tu-al [L. *actualis*, active, from *agere*, to do]. Real, existent, effective, not potential, as actual cautery.

ac′u- [L. *acus*, needle]. A combining form meaning needle.

a-cu″es-the′si-a. Acoustic sensibility; hearing.

-cu′i-ty [L. *acuere*, to sharpen]. 1. Sharpness; clearness; keenness; distinctness, as of vision. 2. In *optics*, sharpness and clarity, as of a visual image when the lens is in focus.

auditory a. The degree of acuteness or clearness of hearing.

darkness a. Acuity of vision in comparative darkness.

displacement threshold a. Minimal displacement of a line necessary to produce doubling.

minimal separable a. Minimal angle of separation between two points to produce doubling. At the fovea, the measurements are from 50 to 64 seconds of arc.

minimal visual a. Smallest image to which the brain responds, threshold illumination being present.

vernier a. The ability of the eye to perceive a break in contour; the alignment discrimination of the eye, accurate on an average to a few seconds of arc (2.0–2.5), or less than the diameter of a single foveal cone.

visual a. Extent of visual perception, dependent upon the clarity of the retinal focus, integrity of the nervous elements, and cerebral interpretation of the stimulus. It is tested usually with Snellen's letters at 20 feet.

a-cu′le-ate [L. *aculeus*, sting, prickle]. 1. In *botany*, armed with prickles, as the rose or other briar. 2. In *zoology*, having a sting.

a-cu′me ter (a-cue-mi-tur, ak″oo-). See *acoumeter*.

a-cu′mi-nate [L. *acuminatus*, from *acuminare*, to make pointed]. Sharp-pointed; conical; tapering to a point.

ac′u-pres″sure [L. *acus*, needle; *pressura*, pressure]. An operation to stop hemorrhage by compressing the artery with a needle inserted into the tissues upon either side.

ac′u-punc″ture [*acus*; L. *punctura*, a pricking]. Puncture of the tissues with long fine needles used for centuries for relief of neuralgic pain or the release of fluid.

a cus [L.]. A surgical needle.

ac u-sec′tor [*acus*; L. *sector*, cutter]. An electric needle, operating on a high-frequency current, which cuts tissues like a scalpel. —**acusec′tion,** *n*.

-a-cu′si-a (-a-cue-shuh, -see-uh, -shuh, -see-uh, -a-koo′-). See *-acusis*.

a-cus ti-cus (a-kus′ti-kus) [G. *akoustikos*, from *akouein*, to hear]. The auditory or eighth cranial nerve.

a-cute′ [L. *acutus*, sharp]. 1. Sharp; severe. 2. Having a rapid onset, a short course, and pronounced symptoms; not chronic.

a-cute ness [*acutus*]. 1. The quality of being acute, rapid, or sharp. 2. In *ophthalmology*, acuity; keenness of vision.

a-cu″ti-cos tal [*acutus*; L. *costa*, rib]. Having projecting ribs.

a-cu ti- [*acutus*]. A combining form meaning acute.

a-cy a-no blep si a (ay-sigh uh-no-blep see-uh, a-sigh). See *acyanopsia*.

a-cy″a-nop′si-a [G. *a-*, not; *kyanos*, blue; *opsis*, sight]. Inability to see blue colors. Also called *acyanoblepsia, acyablepsia*.

-cy″a-not′ic [*a-*; *kyanos*; G. *-osis*, condition]. Without cyanosis, as an acyanotic congenital cardiovascular defect.

a-cy′cli-a (a-sigh′klee-uh, -sigh , a-sick′lee uh, -sick′) [*a-*; G. *kyklios*, from *kyklein*, to revolve]. State of arrested circulation of body fluids.

a cy clic (a-sigh click, -sigh click, ay-sick′lick, a-sick′lick) [*a-*; G. *kyklikos*, from *kyklos*]. 1. Not occurring in cycles; not characterized by a self-limited course; nonintermittent. See *cyclic*. 2. In *chemistry*, denoting organic compounds with an open-chain structure; aliphatic. 3. In *botany*, not whorled.

ac″y-e sis, ac″i-e′sis (ass ee-ee sis, ass eye-ee sis) [*a-*; G. *kyesis*, pregnancy]. 1. Sterility of the female. 2. Nonpregnancy. 3. Incapacity for natural delivery. —**acyet′ic,** *adj*.

ac yl (ass il, ass eel). An organic radical derived by removal of a hydroxyl group (OH) from an organic acid; thus, R.CO is derived from R.CO OH.

ac yl a′tion (a sil ay shun). Introduction of an acyl radical into a compound.

a-cys′ti-a (ay sis tee uh, -sis) [*a-*; G. *kystis*, bladder]. Absence of the urinary bladder.

A d. Abbreviation for *anisotropic disk*.

a.d. *Auris dextra*, right ear.

ad- [L.]. A prefix signifying *to, toward, near, addition to*, and *more intense*.

-ad [G. *-as, -ados*, fem. suffix]. 1. A suffix used to form *collective numerals*. 2. In *chemistry*, a suffix used to form the names of *elements, atoms*, or *radicals*. 3. In *botany*, a suffix used to form the names of *individual members of groups*.

-ad [L. *ad*, to, toward]. In *anatomy* and *zoology*, an adverbial suffix indicating *direction toward*.

A. D. A. American Dental Association. American Dietetic Association.

a dac′ry-a (ay-dack′ree-uh, a-dack) [G. *a-*, not; *dakryon*, tear]. Absence or deficiency of tears.

a dac tyl′i-a (ay-dack-til′ee-uh, a-dack) [*a-*; G. *daktylos*, finger]. Congenital absence of fingers or toes, or both. —**adac′tylous,** *adj*., **adac tylism,** **adac tylus,** *n*.; **adac′tyl,** *adj*., *n*.

adaptol. Trade-mark for a vitamin A and D concentrate of fish-liver oils.

Adair-Dighton syndrome. See under *syndrome*.

adalin. Trade-mark for a brand of carbromal.

ad″a-man′tine (ad″uh-man teen, -tyne) [G. *adamas*, adamant]. Pertaining to dental enamel; very hard.

ad″a-man″ti-no-car ci-no ma [*adamas*; G. *karkinos*, crab; *-oma*, tumor]. A malignant ameloblastoma.

ad″a-man ti no ma, ad″a man t noma. See *ameloblastoma*.

ad″a-man′to-blast. See *ameloblast*.

ad″a-man″to-blas-to ma. See *ameloblastoma*.

Adami, John George [*English pathologist in Canada*, 1862–1926]. Remembered for his studies concerning cardiac overstrain and heredity and for his advancement of a theory of immunity similar to Ehrlich's side-chain theory.

Adamkiewicz, Albert [*Austrian pathologist*, 1850–1921]. Known for his description of the crescent-shaped cells found beneath the neurilemma of

medullated nerve fibers, and for his protein reaction using sulfuric and glacial acetic acids.

Adams, James Alexander [*Scottish surgeon*, 1857–1930]. Devised an operation similar to the Alexander operation for retroversion of the uterus (1882).

Adams, Robert [*Irish physician*, 1791–1875]. Gave classic description of heart block (1826). The characteristic syndrome of syncope and heart block, with or without convulsive seizures, is known as *Stokes-Adams syndrome, Spens syndrome.*

Adams, William [*English surgeon*, 1820–1900]. Remembered for his subtrochanteric osteotomy for correction of deformity due to bony ankylosis of the hip (1871). This operation, as performed by Adams, followed the principle set forth by Barton (1826) and later became standardized under Gant technique.

Adam's apple. Common term for the laryngeal prominence. Also called *pomum Adami.*

ad'am-site (ad'um-zite, -sight). A poison gas used in chemical warfare: diphenylaminechloroarsine.

adanon hydrochloride. A trade-marked name for methadon hydrochloride.

Ad"an-so'ni [after Michel *Adanson*, French naturalist, 1727–1806]. A genus of trees of the Bombacaceae.

A. digitata. The baobab of Africa and India, whose dried leaves are used by the natives as an antipyretic.

ad"ap-ta'tion [L. *adaptare*, to adjust]. 1. *In biology*, any change in structure, form, or habits of an organism to suit a new environment. 2. *In ophthalmology*, normal ability of the eye to adjust to varying intensities of light. See *biophotometer.* 3. Immunization. 4. In reflex action, decline in the frequency of impulses when the sensory nerve is stimulated repeatedly. 5. *In dentistry*, proper fitting of a denture or accurate adjustment of bands to teeth; close approximation of filling material to the walls of a tooth cavity. 6. *In psychiatry*, those changes experienced by an individual which lead to adjustment.

catalyzed a. *In psychoanalysis*, the best response to stress which the therapist can elicit from the patient.

dark a. Adjustment of the iris and retina for night vision. In a clinical test for the determination of vitamin-A sufficiency, the eye is exposed to a standard light and its adjustment to darkness is measured.

a-dap-ta'tion dl-sease'. According to Selye, a biochemical or metabolic disorder due to physical or emotional stress, with reversibility which may be effected spontaneously, therapeutically or accidentally.

a-dapt'er, a-dap'tor [*adaptare*]. 1. A device which permits the fitting of one part of an instrument or apparatus to another, as a glass or rubber tube or a metal collar. 2. An apparatus which converts the electric current to the form required in the various types of electrotherapy or for a particular electric appliance.

ad"ap-tom'e-ter [*adaptare*; G. *metron*, a measure]. An instrument for measuring the time taken for retinal adaptation or for regeneration of the rhodopsin (visual purple); used to determine the minimum light threshold and to diagnose night blindness.

Aero Medical Laboratory radium-plaque a. One consisting of a radium plaque of constant brightness in the scotopic range; the test object is a Landolt ring, the effective size of which is varied by changing the testing distance.

ad"at'o-me [L. *ad*, to; G. *atomos*, indivisible]. An atom held on a surface by adsorption.

ad ax'i al [*ad*; L. *axis*, axis]. On the side of, or directed toward, the axis.

ADC Anodal duration contraction.

add. Abbreviation for *adde* or *addatur* in prescription writing, meaning *add*, or *let there be added.*

ad'de [Imperative sing. of L. *addere*, to add]. Add: direction used in prescription writing.

ad de-liq. *Ad deliquium (animi)* to the point of fainting.

ad"de-pha'gi-a. See *adephagia.*

ad'der [AS. *naedre*]. The common name of several genera of snakes, especially the *Vipera berus* of Britain and Europe, or of species of other genera of terrestrial snakes.

death a. See *Acanthophis antarcticus.*

puff a. See *Bitis lachesis.*

ad'dict [L. *addictum*, from *addicere*, to devote]. One who is habituated to some practice, especially the alcohol or drug habit. A **drug addict** is one who uses habitually a narcotic drug for the comfort such indulgence affords, and who has no illness or other legitimate reasons for such practice. —**addict'**, *v.t., i.*; **addic'tion**, *n.*

ad'di-ment [L. *addere*, to add]. Complement. —**ad-dimen'tary**, *adj.*

Addis method. See under *method.*

Addis and Shevky's test. See under *test.*

ad'dis-in. A substance in the gastric juice which stimulates the hematopoietic functions of the bone marrow. An extract of the gastric mucosa of swine is used in treating pernicious anemia. Also called *hormerin.*

Addison, Christopher [*English anatomist*, 1869–]. Described a series of planes, known as *Addison planes*, which are used as landmarks in the topographic anatomy of the abdomen and thorax.

Addison, Thomas [*English physician, diagnostician, and teacher*, 1793–1860]. Described pernicious anemia (called *Addison anemia*) and studied diseases of the ductless glands, particularly the adrenals. Adrenal cortical hypofunction is also known as *Addison disease, adrenal insufficiency.*

Ad'di-son-ism [after Thomas *Addison*]. A syndrome sometimes present in pulmonary tuberculosis, consisting of dark pigmentation of the skin, loss of weight and strength; somewhat resembles true Addison disease.

ad-di'tion [L. *additio*, from *addere*, to add]. *In chemistry*, a reaction in which two elements or compounds unite without the loss or substitution of any atoms, or any loss of valence, as $H_2O + CO_2 = H_2CO_3$, $HCl + NH_3 = NH_4Cl$. Also called *a. reaction.*

ad-du'cent [L. *adducere*, to lead to]. Adducting.

ad-duct' [L. *adductum*, from *adducere*]. 1. Draw toward the median line of the body. 2. *In optics*, turn the eyes inward from the central position.

ad-duc'tion [*adductum*]. 1. Any movement whereby one part is brought toward another or toward the median line of the body. 2. *In ophthalmology*, turning of the eyes inward from the central position, through contraction of the medial rectus muscles. This action may be voluntary but usually is subconscious, following the stimulus of accommodation. The power of adduction, provoked by fixation of the gaze upon an object placed at the near point, is called **convergence-stimulus adduction.**

ad-duc'tor [*adductum*]. Any muscle which draws a part toward the median line of the body. See Table of Muscles in the Appendix.

a. brevis. The short adductor of the femur.

a. digiti secundi. A rare variant slip of muscle associated with the adductor hallucis and in-

serted into the lateral side of base of proximal phalanx of second toe.
a. hallucis. The adductor of the great toe.
a. hallucis transversus. Old name for the transverse head of the adductor of the great toe.
a. longus. The long adductor of the femur
a. magnus. The largest adductor of the femur
a. minimus. A variable portion of the adductor magnus muscle of the thigh.
a. pollicis. That of the thumb.
a. pollicis obliquus. The oblique or carpal head of the adductor pollicis muscle.
a. pollicis transversus. Old name for transverse or metacarpal head of the adductor pollicis muscle.

A de cid"u a'ta [G a- not; L. deciduus, falling off]. A division of mammals including those not having deciduate placenta.

-de"lo-mor'phous, de"lo mor'phi (a del"o-ad'rio) [a- G. dēlos, visible morphē, form]. Not clearly defined; applied to certain cells in the gastric glands.

-del'pho-site [G. adelphos, brother sitos, food]. An cardiac monster Syn., acardius, acardiacus, amphisoite.

a-del'pho tax"is, a-del'pho-tax"y [adelphos; G taxis, arrangement]. The tendency of motile cells to arrange themselves into definite positions.

-a-del'phous [adelphos]. Suffix used by I. Geoffroy St. Hilaire to signify inferior duplicity in conjoined twins.

ad'en- See adeno-.

ad"en al'gi-a [G adēn, gland algos, pain]. Pain due to an inflamed gland.

ad"e-nase. A deaminizing enzyme which converts adenine to hypoxanthine. It is secreted by the liver pancreas, and spleen.

ad"en-as-the'ni [adēn, G asthenia, want of strength]. Functional deficiency of gland.

ad"en-drit'ic, a-den dric [G a- not; dendron, tree]. Lacking dendrites, applied to certain spinal ganglion cells.

ad"en-ec'to-my [G adēn, gland ektomē, excision]. The excision of gland.

ad"en-ec-to pi-a [adēn, G. ektopos, way from a place] Occurrence of gland in an abnormal place

A den fe ver Dengue.

a-de ni a [adēn]. A chronic affection of the lymph nodes characterized by marked hypertrophy but no leukocytosis.

angibromic a. Any affection of the lymphatic tissue of the digestive tract.

leukemic a. Enlargement of lymph nodes associated ith leukemia.

simple a. Lymphocmatosis without leukocytosis. Hodgkin disease.

aden"i form [adēn, -form]. Glandlike shaped like gland.

ad' nine (ad'i-neen, -nin) $C_5H_5N_5$ 6-Aminopurine; the simplest member of the uric acid group of leucomaines. It occurs with other purine bases as nonpoisonous decomposition product of nucleins, and is found in animal and vegetable tissues rich in ucleated cells, as the liver pancreas, kidneys, and spleen, and in the urine of leukemic patients.

a. hypoxanthine. $C_5H_5N_5 + C_5H_4N_4O$. A compound of adenine and hypoxanthine, belonging to the leucomaines.

a. sulfate, $(C_5H_5N_5)_2H_2SO_4$ A compound used in the nucleotide treatment of acute agranulocytosis, and in pneumonia.

ad"e-ni'tis [adēn, G -itis, inflammation]. Inflammation of gland or lymph node.

acute salivary a. An infectious disease epidemic about N ples, Italy affecting the parotid and other salivary glands and causing splenomegaly and pain in the axillary lymph nodes.

cervical a. One of number of various inflammatory conditions, acute and chronic, which affect the lymph nodes of the neck, especially in children. It is often secondary to acute infections of the mouth, throat, and ears to lice infestation of the scalp; and is associated with contagious diseases, such as rubella, measles, scarlet f ver etc. In chronic tuberculosis, leukemias, and syphilis, it occurs as part of generalized lymph-node involvement.

infectious a. See infectious mononucleosis.

lacrimal a. Dacryoadenitis.

paratracheal a. Inflammation of the paratracheal lymph nodes: common complication of tuberculosis.

phlegmonous a. Inflammation of gland and the adjacent connective tissue.

primitive syphilitic a. Enlarged lymph nodes associated with primary lesion, which follow slow indolent course of s months or more.

tropical a. Climatic bubo; venereal lymphogranuloma.

universal a. Widespread induration of the lymph nodes, associated with primary syphilis.

venereal a. Venereal lymphogranuloma.

A-de'ni-um. A genus of the Apocynaceae, the various species of which have provided arrow poisons for the African natives. Glycosides have been obtained which have digitalislike action on the heart but cause tetanic convulsions.

ad"e-no-, ad"en- [adēn]. A combining form denoting gland, glandular or relation to glands.

d"e-no-ac"an tho ma [adēn, G akantha, prickle; -oma, tumor]. An adenocarcinoma, usually of low malignancy in which much of the cylindrical epithelium of the acinic spaces is replaced by squamous epithelium frequent in the uterus.

d" -no-a me"lo-blas to ma. An ameloblastoma in which the epithelium exhibits glandular structure and arrangement.

ad" no-an"gi-o-sar-co'ma. A malignant mesenchymoma.

ad"e-no-can'tboid. Adenoacanthoma.

ad" no-car"ci no ma. One originating in glandular or ductal epithelium and tending to produce acinar structures. Differentiation of the adenocarcinomas depends on the degree of resemblance which the cinic structures bear to the gland the completely undifferentiated form is the carcinoma simplex, and the most highly differentiated tumor is sometimes named malignant adenoma.

a. of lung. A form of bronchogenic carcinoma.

a. of testis. See embryonal carcinoma of testis.

alveolar a. of thyroid. See follicular a. of thyroid.

acanoid a. See comedo-carcinoma.

cystic mucoid a. See pseudomucinous cystadenocarcinoma.

feminizing a. A malignant feminizing tumor

follicular a. of thyroid. A glandular carcinoma showing follicles and invasion grossly as well as microscopically also called alveolar a. of thyroid.

mucoid a. See pseudomucinous cystadenocarcinoma.

papillary a. See papilliferous carcinoma.

papillary a. of thyroid. A glandular carcinoma of the thyroid, often cystic, which produces papillae and shows gross and microscopic evidence of invasion also called papillary cystadenocarcinoma of thyroid.

virilizing a. A malignant masculinizing tumor of an ovary

ad" no-cele [adēn; G kēlē, tumor]. A cystic tumor containing adenomatous tissue. See adenoma.

ad″e-no-cel″lu-li′tis [aden-; L. *cellula*, dim. of *cella*, cavity; G. *-itis*, inflammation]. Inflammation of a gland and the surrounding cellular tissue.

ad″e-no-chon-dro′ma (ad″i-no-kon-dro′muh) [aden-; G. *chondros*, cartilage; *-oma*, tumor]. A tumor consisting of both glandular and cartilaginous tissue. Also see *mixed tumor of salivary gland type*.

ad″e-no-cys-to′ma (ad″i-no-sis-to′muh). See *cystadenoma*.

papillary a. of thyroid. See papillary *adenoma* of thyroid.

teratoid a. See *mesonephroma*.

ad″e-no-cys″to-sar-co′ma. See *cystadenosarcoma*. Also see *cystosarcoma phylloides*.

ad″e-no-fi-bro′ma (-figh-bro′muh) [aden-; L. *fibra*, fiber; G. *-oma*, tumor]. Combination of adenoma and fibroma frequently occurring in the uterus. See also *fibroadenoma*.

pseudomucinous a. See pseudomucinous *cystadenoma*.

ad″e-no-fi-bro′sis (-figh-bro′sis) [aden-; *fibra*; G. *-osis*, condition]. Fibroid degeneration of a gland, particularly the replacement fibrosis following inflammation. See *fibrosis*.

endometrioid a. See *adenomyosis*. Obs.

ad″e-no-gen′e-sis [aden-; G. *genesis*, production]. Development of a gland.

ad″e-nog′e-nous (ad″i-noj′i-nus) **ad″e-no-gen′ic** [aden-; G. *genesthai*, from *gignesthai*, to be produced]. Originating from a gland.

ad″e-no-hy″per-sthe′ni-a [aden-; G. *hyper*, over; *sthenos*, strength]. Excessive activity of the glands.

a. gastrica. A condition in which the secretion of gastric juice is greatly increased or excessively acid.

ad″e-no-hy-poph′y-sis (ad″i-no-high-pof′i-sis) [aden-; G. *hypophysis*, from *hypo*, under; *physis*, growth]. The glandular part of the pituitary gland, developing from somatic ectoderm of the posterior nasopharynx (Rathke's pouch). It has three subdivisions: anteriorly the *pars distalis* (*pars anterior, anterior lobe of the hypophysis*, 1); medially the *pars intermedia* (*intermediate lobe of the hypophysis*); and superiorly the *pars tuberalis*. Formerly called *pars buccalis*, *pars glandularis*. See also *neurohypophysis*.

ad′e-noid [aden-; G. *eidos*, form]. 1. A structure consisting of reticular connective tissue supporting masses of small lymphocytes, as found in lymph nodes, spleen, red bone marrow, and other lymphoid organs. *Rare.* 2. *Hypertrophied lymphoid tissue often present in the nasopharynx*; occurs especially in children. Also called *pharyngeal tonsil*. See Plate 12. —**ad″e-noi′dal**, *adj.*

ad″e-noid-ec′to-my [aden-; *eidos*; G. *ektomē*, excision]. The surgical removal of adenoids.

ad″e-noid′es per″i-to-ni′tis. See *adenomyosis*.

ad′e-noid-ism [aden-; *eidos*]. Series of changes in respiration, facial contour, and tooth arrangement resulting from the presence of adenoids.

ad″e-noid-i′tis [aden-; *eidos*; G. *-itis*, inflammation]. Inflammation of adenoids.

ad′e-noids. See *adenoid* 2.

ad″e-no-lei″o-my″o-fi-bro′ma, **ad″e-no-li″o-my″o-fi-bro′ma** (ad″i-no-lye″o-my″o-figh-bro′muh) [aden-; G. *leios*, smooth; *mys*, muscle; L. *fibra*, fiber; G. *-oma*, tumor]. A leiomyofibroma containing glandular tissue.

ad″e-no-li-po′ma [aden-; G. *lipos*, fat; *-oma*]. A combination of adenoma and lipoma.

ad″e-no-li-po-ma-to′sis [aden-; *lipos*; *-oma*; G. *-osis*, condition]. Diffuse symmetrical lipomatosis; the fatty masses are large, disfiguring, and not encapsulated. More common in men than in women.

ad″e-no-leu″ka-di′tis (-leu″kuh-dye′tis, -leu-kuh-dye′tis) [aden-; G. *leukades*, whites of the eyes; *-itis*, inflammation]. 1. Ophthalmia neonatorum. 2. Inflammation of the glands and conjunctiva of the eyes.

ad″e-no-lym-phi′tis [aden-; L. *lympha*, water; *-itis*]. Lymphadenitis.

ad″e-no-lym′pho-cele (ad″i-no-lim′fo-seel) [aden-; *lympha*; G. *kēlē*, tumor]. Widening of the lymphatics and cystic dilatation of the lymph nodes, from obstruction.

ad″e-no-lym-pho′ma [aden-; *lympha*; G. *-oma*, tumor]. Adenoma of a lymph node. See *lymphadenoma*.

ad″e-no′ma [aden-; *-oma*]. A benign tumor of glandular origin which in its growth more or less reduplicates acini, tubules, or both.

acidophilic a. 1. An eosinophilic adenoma of the pituitary gland. 2. A sweat-gland tumor.

a. of bronchus. A slowly growing, at first circumscribed but later sometimes invasive or slowly metastasizing, polypoid or sessile, epithelial neoplasm involving the subepithelial tissues, usually of proximal bronchi. *Two forms occur*: (a) the **carcinoid** form, made up of uniformly small cells with finely granular acidophilic cytoplasm and nuclei finely stippled with chromatin. The cells are situated about delicate sinusoidal vessels. Argentaffin granules are rare. An infrequent variant of this form, seen in older individuals, is a tumor consisting partially or wholly of oncocytes. (b) the **cylindroid** form, made up of basophilic staining epithelial cells arranged in branching cylinders or tubules. Also called *adenocystic* or *adenoid basal-cell carcinoma*, *adenomatoid tumor*, *bronchial adenoma*, *mixed tumor*, *mucoepidermoid tumor*, *reserve-cell tumor*, *acinar adenoma* (all of bronchus), *benign glandular* (*bronchiogenic*) *tumor*.

a. destruens. A destructive, invasive form, really adenocarcinoma.

a. malignum. See malignant *a.*

a. pseudosarcomatodes. See *cystosarcoma phylloides*.

a. rete ovarii. See adrenocorticoid *a.* of the ovary.

a. sebaceum. Localized hyperplasia of sebaceous glands forming distinct papules, usually seen on the skin of the nose and cheeks, and frequently associated with tuberous sclerosis; also called *Pringle's tumor*.

a. substantiae corticalis suprarenalis. Cortical *a.*

a. sudoriparum. One derived from and reproducing tissue of sweat glands. Syn., *hidradenoma*.

a. testiculi ovarii. See adrenocorticoid *a.* of the ovary.

a. tubulare ovarii, **a. tubulare ovarii testiculare.** See adrenocorticoid *a.* of the ovary.

adrenal a. See cortical *a.*, *pheochromocytoma*.

adrenocorticoid a. of the ovary. One of a rare group of closely related masculinizing tumors of the ovary, clinically characterized by production of defeminization or virilism, and composed of cells resembling those of the adrenal cortex. Special stains, in many instances, disclose fat and glycogen droplets and sometimes fuchsinophilic granules, but histologic appearance varies from tumor to tumor and even within the same neoplasm. *Malignant transformation is rare.* This classification includes lesions formerly designated as *a. rete ovarii*, *a. testiculi ovarii*, *a. tubulare ovarii*, *a. tubulare ovarii testiculare*, *testicular* (*tubular*) *a. of ovary*, *tubular a.*, *tubular a. of ovary*, *Wolffian tubular hamartoma of ovary*, *masculinoma*, *masculinovoblastoma*, *struma androblastoma of ovary*, *suprarenalis aberrata of ovary*, *adrenal clear cell tumor of ovary*, *adrenocortical tumor of ovary*.

androgenic hilar-cell tumor or *hilus-cell tumor Grawitz tumor of ovary hypernephroid tumor sympathetropic-cell tumor virilizing lipoid-cell tumor.*
basophilic a. Adenoma of the pituitary gland made up of basophilic cells.
chromophobe a. Adenoma of the pituitary gland made up of chromophobe cells, neither basophilic nor acidophilic.
colloid a. of thyroid. An encapsulated adenoma containing excessive colloid within greatly distended follicles, which may vary markedly in size also called *macrofollicular a.*
cortical a. A benign encapsulated neoplasm composed principally of cells resembling those of the adrenal cortex, but with little or no tendency to form acini also called *adenoma cubicularis corticalis suprarenalis, adrenal hypernephroma, functioning cortical tumor granular cell tumor of adrenal cortex.*
cystic a. One in which the acini are enlarged or distended to form cysts.
embryonal a. of thyroid. A poorly differentiated follicular adenoma characterized by columnlike arrangement of small, closely packed thyroid cells. Follicles are either absent or small, and rarely contain colloid. Also called *trabecular a.*
eosinophilic a. 1. Adenoma of the pituitary gland, characterized by multiplication of eosinophils or acidophilic cells. In early life, often accompanied by gigantism; in later life, by acromegaly 2. A sweat-gland tumor
feminizing a. See feminizing *tumor*
fetal a. of thyroid. A follicular adenoma of the thyroid made up of numerous small follicles of primitive or fetal type, containing little or no colloid also called *microfollicular a.*
follicular a. of thyroid. A benign epithelial neoplasm with cells and gross patterns similar to those seen in normal or embryonic thyroid glands. Follicles are usually present.
Hürthle cell a. See Hürthle cell tumor
islet a. See islet-cell tumor
Langerhansian a. See islet-cell tumor
macrofollicular a. See colloid a. of thyroid.
malignant a. A well-differentiated adenocarcinoma; also called *a. malignum.*
malignant a. of thyroid. See follicular carcinoma of thyroid.
medullary a. of the adrenal. See pheochromocytoma.
microfollicular a. See fetal a. of thyroid.
papillary a. One which grows from a surface in papillary form. Also see serous *cystadenoma.*
papillary a. of thyroid. A tumor of the thyroid which produces papillae and has tendency to form cysts; also called *adenocystoma* or *cystadenoma of thyroid.*
papilliferous a. One in which papillary projections grow into the acini.
pleomorphic (salivary) a. See mixed *tumor* of salivary gland type.
pseudomucinous (solid) a. See pseudomucinous cystadenoma.
pseudomucinous tubular a. See pseudomucinous cystadenoma.
pseudosolid a. f the ovary See pseudomucinous cystadenoma.
simple a. of thyroid. Encapsulated adenoma made up of well-differentiated thyroid tissue with follicles and colloid content comparable to that of normal gland.
testicular a. See androblastoma.
testicular (tubular) a. of the ovary See adrenocorticoid a. of the ovary
thyroid a. A benign tumor arising from glandular epithelium which can be differentiated into follicular and papillary types.
trabecular a. See embryonal a. of thyroid.
tubular a. One in which the spaces are elongated in the form of tubules.
tubular a. of the ovary See adrenocorticoid a. of the ovary
W lflen a. See adrenocorticoid a. of the ovary
ad"e-no-ma la'ci-a [*aden-*; G. *malakia*, softness]. Abnormal softening of gland.
ad"e-no ma-tome [*aden-*; G. *-ōma*, tumor; *tomos*, cutting]. Cutting forceps or scissors for use in the removal of adenomatous growths; surgical instrument for excising adenoids.
ad"e-no-ma to sis [*aden-*; *-oma*; G. *-ōsis*, condition]. Condition characterized by multiple over growths of glandular tissue.
cancerous pulmonary a. A more malignant form of bronchiolar carcinoma.
fibrosing a. Adenosis of the breast.
polypoid a. See acquired multiple *polyposis*.
pulmonary a. A relatively benign, slowly progressive form of bronchiolar carcinoma.
ad"e-nom' tous, ad"e-nom a tous [*aden-*, *-oma*]. Pertaining to an adenoma; characteristic of glandular hyperplasia.
ad"e-no-mere [*aden-*; G. *meros*, part]. That portion of developing gland which will be responsible for its functioning.
ad"e-no-my"o-hy per pla'si a. See isthmic nodular *salpingitis.*
ad"e-no-my-o ma (ad"i no-migh-o mah) [*aden-*; G. *mys*, muscle; *-ōma*, tumor]. Tumor which occurs in the uterus, adnexa, parametrial structures, and rectum; composed of leiomyoma in which adenomatous acini are incorporated.
ad"e-no-my"o-me tri'tis [*aden-*, *myo-*; G. *mētra*, womb *-itis*, inflammation]. Inflammatory thickening of the uterine wall, resembling an adenomyoma.
ad" no-my"o-sar-co'ma [*aden-*, *myo-*; G *sarkōma*, fleshy excrescence; *-ōma*, tumor]. Malignant tumor composed of muscular and glandular elements.
embryonal a. A malignant mesenchymoma.
ad"e-no-my-o'sis (ad"i-no-migh-o'sis) [*aden-*, *myo-*; G *-ōsis*, condition]. The invasion of the uterine musculature by endometrial tissue through direct extension from the mucosa of the uterus formerly called *endometrioid adenofibrosis.* Syn., *internal endometriosis.* See also *endometriosis.*
a. of fallopian tube. See isthmic nodular *salpingitis.*
ad"e-no-myx" -chon"dro-sar-co ma. See mixed *tumor* of salivary gland type.
ad"e-no-myx-o ma [*aden-*, G. *myxa*, mucus; *-ōma*, tumor]. A growth having the characters of glandular and mucoid tissues.
ad"e-no-myx"o-sar-co ma [*aden-*, *myxo-*; G *sarkōma*, fleshy excrescence]. A rare type of rapidly growing, malignant, mixed tumor arising from glandular and mucoid tissue, the latter undergoing sarcomatous change.
ad"e-non cus [*aden-*; G *onkos*, mass]. An enlargement or tumor of gland. *Obs.*
ad"e-nop'a thy [*aden-*, G *pathos*, disease] Any glandular disease, especially the swelling and enlargement of lymph nodes.
ad"e-no-phar"yn-gi'tis [*aden-*, G *pharynx*, pharynx; *-itis*, inflammation]. Inflammation of the tonsils and pharynx.
ad"e-no-phleg'mon [*aden-*, G *phlegmonē*, inflammation]. Suppurative inflammation of gland.
ad" no-sal"pin-gi'tis. See isthmic nodular *salpingitis.*
ad"e-no-sar-co ma [*aden-*; G *sarkōma*, fleshy ex-

sarcoma]. A tumor with the characters of adenoma and sarcoma combined.

a. of kidney See Wilms' tumor.

ad"e·no·sar"co·rhab·do·my·o·ma (-sahr"ko-rab·do-migh-o'muh) [aden-; G. sarx, flesh; rhabdos, rod; mys, muscle; -ōma, tumor]. A tumor composed of the elements of sarcoma, adenoma, and rhabdomyoma.

ad"e·no·scle·ro·sis [aden-; G. sklērōsis, hardening]. A hardening of a gland, with or without swelling.

ad'e·nose (ad'i-nose, -noze) [aden-; L. -osus, suffix meaning fullness]. Glandular; abounding in glands; glandlike.

a·den'o·sine (a-den'o-seen, -sin, ad"i-no-seen, -sin) $C_{10}H_{13}N_5O_4$. A mononucleoside composed of adenine and D-ribose produced by the hydrolysis of adenosinemonophosphate.

a·den"o·sine di·phos'phate (dye-fos'fate). A compound of one molecule each of adenine and D-ribose and two molecules of phosphoric acid. It is an intermediate compound in the production of energy for muscular and perhaps other types of cellular work. Abbreviated ADP. Syn., *adenosinediphosphoric acid*. See *adenosinetriphosphate*.

adenosinediphosphoric acid. Adenosinediphosphate.

a·den"o·sine mon"o·phos·phate. A compound of one molecule each of adenine, D-ribose, and phosphoric acid. It occurs in muscle and other tissues, as well as in yeast; that from the former source is adenosine-5-phosphate, while that from the latter is adenosine-3-phosphate. The acid is an intermediate product in the release of energy for muscular and perhaps other types of cellular work. Abbreviated AMP. Syn., *adenosinemonophosphoric acid, adenylic acid*.

a·den"o·sine·mon"o·phos·phor'ic ac'id. Adenosinemonophosphate.

a·den"o·sine·tri·phos'pha·tase (-try-fos'fuh-tace, -taze). An enzyme catalyzing the hydrolysis of adenosinetriphosphate. Several different enzymes exist, one of them related to myosin. The decomposition of adenosinetriphosphate is believed to provide the energy for cellular activities such as muscular contraction. Abbreviated ATPase. Syn., *adenylpyrophosphatase*.

a·den"o·sine tri·phos'phate. A compound of one molecule each of adenine and D-ribose with three molecules of phosphoric acid. Hydrolysis of it to similar compounds containing one or two molecules of phosphoric acid is accompanied by release of energy for muscular and perhaps other types of cellular work. Abbreviated ATP. Syn., *adenosinetriphosphoric acid, adenylpyrophosphoric acid*. Also called *adenylpyrophosphate*. See *adenosinetriphosphatase*.

a·den"o·sine·tri"phos·phor'ic ac'id. Adenosinetriphosphate.

ad"e·no'sis [aden-; G. -ōsis, condition]. 1. Any glandular disease, especially one involving the lymph nodes. 2. Nonneoplastic proliferation of glandular elements.

a. of the breast. A condition affecting women, commonly between the ages of 35 and 45, who usually are nulliparous and give a history of menstrual irregularity, characterized by the presence in one or both breasts of multiple small hard nodules distributed mostly about the periphery of the upper or outer hemisphere, which on histologic examination show an increase in fibrous tissue, little or no fat, dilatation of ducts, and foci of epithelial proliferation. Incidence of carcinoma following this condition is greatly increased. Also called *adenocystic disease, microcystic disease*. Syn., *fibrosing adenomatosis, fibrocystic a., sclerosing a., a. sclerosans mammae, Schimmelbusch's disease*.

ad"e·no·tome [aden-; G. tomos, cutting]. 1. An instrument for incising a gland. 2. An instrument for removing adenoids.

ad"e·not'o·my [aden-; G. tomē, a cutting]. Dissection, incision, or surgical removal of a gland.

A·den ul'cer. See tropical ulcer.

ad'e·nyl. $C_5H_4N_5$—. The radical present in adenine.

ad"e·nyl'ic ac'id. Adenosinemonophosphate.

ad"e·nyl·py"ro·phos'pha·tase (ad"i-nil-py"ro-fos'fuh-tace, -taze). Adenosinetriphosphatase.

ad"e·nyl·py"ro·phos'phate. Adenosinetriphosphate.

ad"e·nyl·py"ro·phos·phor'ic ac'id. Adenosinetriphosphate.

ad"e·pha'gi·a, ad"de·pha'gi·a [G. Adēn, to one's fill; phagein, to eat]. Old term for bulimia.

ad'eps [L., lard]. 1. Lard; the purified omental fat of the hog. It contains 38% stearin and margarin, and 62% olein; used in ointments. 2. Animal fat.

a. anserinus. Goose grease.

a. benzoinatus. Benzoinated lard containing 1% benzoin.

a. ex felle. Oxgall grease.

a. lanae. Wool fat; the purified, anhydrous, fatty substance from sheep's wool; anhydrous lanolin.

a. lanae hydrosus. Hydrous wool fat containing 25-30% water; lanolin.

a. ovillus. Mutton suet or tallow.

a. praeparatus. Purified hog fat.

a. suillus. Hog lard.

a·der'mi·a [G. a-, not; derma, skin]. Absence or defect of the skin.

a·der'min. Old term for pyridoxine.

a·der"mo·gen'e·sis [a-; derma; G. genesis, production]. 1. Deficient cutaneous development. 2. Imperfect healing of a skin defect.

a·der"mo·tro'phi·a [a-; derma; G. trophē, nourishment]. Atrophy of the skin.

Ad·hat'o·da [Tamil]. A genus of plants of the family Acanthaceae. The fruit, leaves, and root of the East Indian plant, A. vasica, or Malabar nut tree, are used in India as an expectorant and antispasmodic.

ad·he'sion [L. adhaesio, from adhaerere, to stick to]. 1. In physics, molecular force exerted between two surfaces in contact. 2. Abnormal union of an organ or part to another. 3. In dentistry, force which holds an upper denture in place without the aid of vacuum cups. —**adher'ent**, adj.; **adher'ence**, n.; **adhere'**, v.

amniotic a. Attachment of the amnion to various portions of the germinal disk or embryo by means of fibrous bands.

fibrinous a. Loose attachment of adjacent serous membranes due to the presence of fibrinous exudate.

fibrous a. Firm attachment of adjacent serous membranes by bands or masses of fibrous connective tissue due to organization and cicatrization of exudates, resulting from infection or partial destruction of the surfaces.

ad·he"si·ot'o·my (ad-hee"see-ot'o-mee) [adhesio; G. tomē, cutting]. Surgical cutting or division of adhesions.

ad·he'sive [L. adhaesum, from adhaerere]. 1. Sticky; tenacious; tending to cling or stick. 2. Resulting in or attended with adhesion.

ad·he'sive. A plaster or emplastrum.

a·di"ac·tin'ic [G. a-, not; dia, through; aktis, ray]. Impervious to, or not penetrated by, actinic rays.

a·di·ad"o·cho·ki·ne'sis (a-dee-ad"o-ko-ki-nee'sis), **a"di·ad"o·ko·ci·ne'sis** (a-dee-ad"o-ko-si-nee'sis), **a·di·ad"o·ko·ki·ne'sis** [a-; G. diadochos, suc-

ceeding; *kinēsis*, motion]. 1. Inability to perform rapidly alternating movements, such as pronation and supination—seen in cerebellar disease. 2. Incessant movement. Also spelled *adiadokokinesis*, *adiadokokinesia*.

Ad"i-an'tum [a-; G. *diantos*, from *diainein*, to wet]. A genus of ferns, commonly called maidenhair. The North American species, **A. capillus-veneris** and **A. pedatum**, formerly were used as remedies for coughs.

-di"a-pho-ret'ic. [a-; G. *diaphorētikos*, promoting perspiration, from *dia*, through, *pherein*, to carry]. Reducing, checking, or preventing perspiration; anhidrotic. —**adiaphore'sis**, *n.*

a-di"a-pho-ret'ic. Any agent or drug which reduces, checks, or prevents perspiration.

di-as'to-le (ay"dye-ass'to-lee, ad-eye-) [a-; G. *diastolē*, drawing apart]. Absence or imperceptibility of diastole.

di-a-ther'mic (ad-ee-uh-thur'mick, ay"dye-uh-, ad"eye-uh-) [a-; G. *dia*, through; *thermē*, heat]. Impervious to radiant heat. —**adiathermance**, **adiathermancy**, *n.*

a"di-a-thet'ic, a"di-a-thes'ic [a-; G. *diathetikos*, from *diatithenai*, to arrange]. Without relation to any diathesis or constitutional tendency; applied to symptoms or disease.

-dic"i-ty *I* chemistry valence.

Adie, William John (1886–1935). Australian physician who described in detail syndrome of tonic pupils and absent tendon reflexes, called *Adie's syndrome*.

ad"i-ent [L. *adire*, to approach]. Tending toward or approaching the source of stimulus, as opposed to *abient*.

adiphenine. See *trasentine*.

a-dip'ic [L. *adeps*, lard]. Of, or belonging to, fat.

a-dip'ic ac'id. COOH(CH$_2$)$_4$COOH. dibasic acid, occurring as colorless or yellowish needles, obtained by oxidation of various fats, as with nitric acid. Syn., *hexanedioic acid*.

ad"i-po-, adip- [*adeps*]. A combining form denoting *fat*, *fats*, *fatty tissue*.

ad"i-po-cele" (ad"i-po-seel") [*adeps*; G. *kēlē*, tumor]. A true hernia with hernial sac, containing only fatty tissue. Also called *lipocele*.

ad"i-po-cel'lu-lar [*adeps*; L. *cellula*, dim. of *cella*, cavity]. Made up of fat and connective tissue.

ad"i-po-cere (ad"i-po-seer") [*adeps*; L. *cera*, wax]. A waxlike substance which occurs during the decomposition of dead animal tissues (corpses) at suitable temperatures, in the presence of moisture, and in the absence of air as under earth or water. It consists chiefly of fatty acids and their salts. —**adipocer'atous**, *adj.*

ad"i-po-fi-bro'ma (ad"i-po-figh-bro'muh) [*adeps*; L. *fibra*, fiber; G. *-ōma*, tumor]. Lipofibroma.

ad"i-pol'y-sis [*adeps*; G. *lysis*, loosing]. Cleavage or hydrolysis of fats during digestion, by fat-splitting enzymes. —**adipolyt'ic**, *adj.*

ad"i-po'ma [*adeps*; G. *-ōma*, tumor]. Lipoma.

ad"i-po-ne-cro'sis ne"o-na-to'rum. Necrosis of fatty tissue. A self-limiting, localized process, occurring usually in large, well-nourished infants born after difficult labor, characterized by bluish red lesions, becoming manifest 2 to 20 days after birth as deep subcutaneous indurations, and disappearing completely within four months.

ad"i-po-pex'is, ad"i-po-pex'i-a [*adeps*; G. *pēxis*, fixation]. Fixation of fats; storage of fats. —**adipopec'tic**, **adipopexic**, *adj.*

ad"i-po-so-dys-tro'phi-a gen"i-ta'lis. See adiposogenital *dystrophy*.

ad"i-pose [*adeps*]. Fatty; fatlike, fat.

ad"i-po'sis [*adeps*; G. *-ōsis*, condition]. 1. Corpulence; obesity. 2. Excessive accumulation of fat in the body, local or general; fatty infiltration. Syn., *adiposity*.

a. dolorosa. A disease marked by deposition of symmetrical masses of fat in various parts accompanied by more or less pain. It affects women oftener than men and may cause death from pulmonary complications. Also called *Dercum's disease*.

a. hepatica. Old term for fatty degeneration or infiltration of the liver.

a. orchalis. See adiposogenital *dystrophy*.

a. tuberosa simplex. Disease resembling adiposis dolorosa but marked by small nodular fatty tumors, painful or tender to the touch, and found mostly on the abdomen and extremities. Also called *Anders' disease*.

ad"i-po'sis cer"e-bra'lis. Disturbances of fat deposition due to intracranial lesions or associated with deficient function of the hypophysis.

ad"i-po-si'tis [*adeps*; G. *-itis*, inflammation]. Inflammation of the subcutaneous fatty tissue.

ad"i-pos'i-ty. See *adiposis*.

ad"i-po-so-gen"i-tal [*adeps*; L. *genitalis*, genital]. Pertaining to superficial fat of the body and the external genitalia, as adiposogenital dystrophy.

ad"i-po-su'ri-a [*adeps*; G. *ouron*, urine]. Presence of fat in the urine; lipuria.

dip-sa (ay-dip'suh, -dip'suh) [G. *adipsos*, from *a-*, not, *dipsa*, thirst]. 1. Remedies to allay thirst. 2. Foods which do not produce thirst.

dip-si (ay-dip'see-uh, -dip) **a-dip-sy** [*adipsos*]. Absence of thirst; avoidance of drinking.

ad"i-tus [L., entrance]. *I* anatomy an entrance.

a. ad antrum. Outer side of the attic, opening upward, backward, and outward into the mastoid antrum. It gives lodgment to the head of the malleus and the greater part of the incus.

ad-just'ed death rate. Standardized death rate.

ad-just'ment [F. *ajuster*, from *à*, to, *juste*, from L. *justus*, right]. 1. Mechanism of microscope which brings the objective into focus. 2. Chiropractic treatment aimed at reduction of subluxated vertebrae. 3. *In biology*, changes undergone by plant or animal better to adapt it to the environment. 4. *In psychology*, the establishment of relationship between the individual and his environment.

absolute a. Accommodation of each eye, considered alone. Also called *absolute accommodation*.

mental a. *In psychology* an adjustment involving an individual' attitudes, traits, or feelings. Also called *intrapsychic a.*

social a. *In psychiatry* adaptation of an individual to society and to his social environment.

ad-jus'tor [*ajuster*]. The central neuron, or neurons, of reflex are in the nervous system.

ad"ju-vant [L. *adjuvare*, to assist]. A material administered with and enhancing the action of drug or antigenic substance.

a. elixir. See *glycyrrhiza elixir*.

Adler, Alfred (1870–1937). Austrian psychiatrist; founder of the school of individual psychology. See under *psychology*.

ad lib. *Ad libitum*, at pleasure; the amount desired.

ad-me"di-al, ad-me'di-an [L. *ad*, near; *medius*, middle]. Located near or approaching the median plane or central axis.

a"mi-nic'u-lum [L., support, from *ad*, to, *manus*, hand]. 1. A supporting structure; adjuvant; auxiliary. 2. A triangular fibrous expansion which extends from the superior pubic ligament to the posterior surface of the linea alba. Also called *a. lineae albae*.

ad-mis'sion rate. Number of admissions to hospital per thousand of population; often refers to military population.

ad na sal (ad-nay'sul, ăd nay'sul) [*ad*; L. *nasus*, nose]. Pertaining to the nose; situated near the nose; toward the nose.

ad'nate [L. *adnatus*, connected by birth]. Congenitally attached or united.

ad nau'se am (ad naw'shee-um, -see um) [L.]. To the point of producing nausea.

adnephrin. Trade-mark for an encapsulated bronchial antispasmodic and sedative containing phenobarbital, aminophylline, and neo-synephrine hydrochloride.

ad-ner'val, ad neu'ral [L. *ad*, near; *nervus*, nerve]. 1. Near or toward a nerve. 2. Denoting an electric current which passes through the muscle fibers toward the entrance point of the nerve.

ad nex'a [L. *adnexum*, from *adnectere*, to tie to]. Accessory parts or appendages of an organ. Also called *annexa*. —**adnexal**, *adj.*

a. oculi. Appendages of the eye, as the lids and the lacrimal apparatus.

a. uteri. The uterine tubes and the ovaries.

fetal a. The extraembryonic membranes.

ad"nex i'tis [*adnexum*; G. *-itis*, inflammation]. Inflammation of the adnexa uteri. Also called *annexitis*.

ad nex"o-gen'e-sis [*adnexum*; G. *genesis*, production]. The forming of the extraembryonic membranes of the embryo.

ad"o-don'ti a [L. *ad*, prefix meaning *addition*; G. *odous*, tooth]. An excessive number of teeth.

ad"o les'cence [L. *adolescere*, to grow]. The youth period, extending from puberty to maturity. —**adolescent**, *adj.*, *n.*

ad"o les cent mam"ma-pla si a. Enlargement of the male breasts during adolescence, caused by the action of androgen without the presence of inhibin. Later inhibin is produced, and the breasts return to normal size.

adoleum. Trade name for a mixture of refined fish-liver oils of high vitamin-A and D potency.

a-don'i-din. A mixture of glycosides and adonic acid derived from *Adonis vernalis*, a plant indigenous in Europe and Asia. It has been recommended in cardiac dropsy.

a-do'nin. A glycoside from *Adonis amurensis*. It is a powerful heart stimulant.

A do'nis, A don'is [a handsome youth in Greek mythology]. A genus of European herbs belonging to the order Ranunculaceae.

A. aestivalis. A plant much used in Italy as a cardiac tonic.

A. vernalis. A species used as a cardiac stimulant and diuretic. Dose, 0.06–0.3 Gm. (1–5 gr.)

ad-o'ral [L. *ad*, near; *os*, mouth]. Situated near the mouth; toward the mouth.

ad-or'bit al [*ad*; L. *orbita*, track]. Situated near the orbit, toward the orbit.

ADP Adenosinediphosphate.

ad re nal [*ad*; L. *renalis*, of the kidneys]. The adrenal gland. —**ad-re'nal**, *adj.*

ad re'nal cor'tex. Cortical substance of the adrenal gland.

ad-re nal cor'tex in-jec'tion. The U.S.P. designation of a sterile solution in water for injection containing a mixture of the endocrine principles derived from the cortex of adrenal glands of healthy domestic animals used for food by man; each milliliter is required to have biological activity equivalent to that of 100 micrograms of U.S.P. hydrocortisone acetate reference standard, and a suitable antibacterial agent is required.

ad-re'nal cor'ti cal ex'tract. An extract of the cortex of adrenal glands obtained from slaughtered domesticated animals, containing the cortical steroids (corticosterone, dehydrocorticosterone, desoxycorticosterone, etc.) essential for the maintenance of life in adrenalectomized animals. Only traces of epinephrine are present.

ad-re'nal cor'ti cal hy"po-func'tion. A progressively fatal disease due to a deficiency of the adrenal cortex, usually from tuberculous infection, characterized by anemia, marked weakness and prostration, low blood pressure, feeble heart action, frequent dizziness, and fainting. There are also gastrointestinal disorders, nervous irritability, psychic changes, and often bronzing of the skin and pigmentation of the mucous membranes. Death occurs in two to three years. Also called *Addison's disease*, *asthenia pigmentosa*, *melanoma suprarenale*, *bronzed skin*.

ad re"nal-ec to my. Surgical removal of an adrenal gland.

bilateral a. The surgical removal of both adrenal glands.

adrenalin. Trade-mark for epinephrine.

adrenalin chloride. Trade-mark for epinephrine hydrochloride.

ad-ren'al-ine. The official British Pharmacopoeia name for epinephrine. See also *adrenalin*.

ad-ren"al in-e mi a, ad-ren"al in he'mi a [*ad*; *renalis*; G. *haima*, blood]. Presence of epinephrine in the blood.

ad ren"al in u'ri a [*ad*; *renalis*; G. *ouron*, urine]. Presence of epinephrine in the urine.

ad-re nal ism [*ad*; *renalis*]. A condition due to dysfunction of the adrenal gland. See *hyperadrenalism*. Also called *suprarenalism*.

ad re"na-li'tis, ad re-ni'tis [*ad*; *renalis*; G. *-itis*, inflammation]. Inflammation of the adrenal glands.

ad-ren"al-og'ra-phy. See *adrenogram*.

ad'ren-arch"e. The time in the development of a child at which an increased output of adrenocortical hormones occurs, manifested by the appearance of pubic and axillary hair and increase in urinary steroid excretion. It usually occurs about the eighth or ninth year of life.

ad"ren er'gic [*ad*; L. *renes*, kidneys; G. *ergon*, work]. Of, pertaining to, or designating the type of chemical activity characteristic of epinephrine and epinephrinelike substances; term introduced by H. H. Dale (1934). See *adrenergic nerves*.

ad"re-ner'gic block'ing a gent. See under *agent*.

adrenine, adrenin. Trade name for epinephrine.

ad re-ni tis. See *adrenalitis*.

ad-ren' -chrome, ad ren o-chrome. $C_9H_9O_3N$. A quinone-type oxidation product of epinephrine. It occurs as a brick-red substance which has the power of converting hemoglobin into methemoglobin.

ad-ren"o-cor"ti co-mi met'ic. Pertaining to an activity or effect similar to that of an adrenal cortical steroid.

ad ren"o-cor"ti co-tro phic. See *adrenocorticotropic*.

ad ren" -cor"ti-co tro pic [*ad*; *renes*; L. *cortex*, bark; G. *tropikos*, from *tropein*, to turn]. Exhibiting a hormonal influence on the adrenal cortex; formerly spelled *adrenocorticotrophic*.

ad ren"o-cor"ti-co-tro pin [*ad*; *renes*; *cortex*; *tropikos*]. The adenohypophyseal hormone which stimulates the adrenal cortex; also called *adrenotropin*, *corticotropin*. See *ACTH*.

adreno-cortin. Trade-mark for an injectable extract of adrenal glands containing cortical steroids but substantially free of epinephrine.

ad re"no-gen'i tal [*ad*; *renes*; L. *genitalis*, genital]. Pertaining to the adrenal glands and the gonads.

ad re no-gram [*ad*; *renes*; G. *gramma*, writing]. A roentgenogram of the adrenal glands made after perirenal insufflation; used for adrenal examination.

ad·re"no·lyt'ic. Term formerly used to describe any adrenergic blocking agent.

ad·ren"o·pause [*ad*, *ren*; G. *pausis*, stopping]. The hypothetical age of reduction of production of certain adrenocortical hormones, occurring in old age.

ad"ren·os'te·rone (ad"ren·os'ti·rohn, ad"ri·nos·). $C_{19}H_{24}O_3$; 4-androstene-3,11,17-trione, steroid hormone with androgenic properties; obtained from the adrenal cortex. See Table of Hormones in the Appendix. —**ad"ren·os'teroid**, *adj.*

ad·re"no·tox'in (ad·ree"no·tock·sin, ad·ren"o-) [*ad*; *ren*; G. *toxikon*, poison]. 1. An antibody produced when adrenal tissue is introduced into an animal. 2. Anything that is toxic to the adrenals.

ad·ren"o·trope [*ad*, *ren*; G. *tropos*, turn]. A person with the adrenal type of endocrine diathesis.

ad·ren"o·tro'phic. See *adrenotropic*.

ad·ren"o·tro'pic [*ad*, *ren*; G. *trophos*, from *trepein*, to turn]. Of, pertaining to, or denoting adrenocorticotropin; formerly spelled *adrenotrophic*. See Table of Hormones in the Appendix.

ad·ren"o·tro·pin, ad·ren"o·troph'in. See *adrenocorticotropin*.

ad"re·not'ro·pism (ad"ree·not'ro·piz·um, ad·ren"o·tro'piz·um) [*ad*, *ren*; G. *tropos*, turn]. Dominance of the adrenal in the endocrine functions.

adrephine. Trade-mark for adrenalin-ephedrine compounds.

Adrian, Edgar Douglas (1889–). English neurophysiologist, known for his investigations of the sense organs by electrical methods, and his writings on the nervous basis for sensation and perception; Nobel prize winner in physiology and medicine, with Charles Sherrington, for discoveries regarding the function of the neuron (1932).

adrin. Trade-mark for an injectable preparation of epinephrine hydrochloride.

adrocaine. Trade-mark for adrenalin-procaine compounds, used to produce local anesthesia and to inhibit hemorrhage.

a·dro·mi·a [G. *a*-, not; *dromos*, running]. Complete failure of impulse conduction in muscle or nerve.

ad·ru'a (ad·roo'uh). See *Sutsedge*.

Adson, Alfred Washington [*American surgeon*, 1887–1951]. Associated with many procedures in surgery of the brain and spinal cord, especially with operations for the removal of the cervicothoracic ganglions and for the relief of trigeminal neuralgia, credited with the development of scalenotomy to relieve symptoms due to cervical ribs, and with being pioneer in the surgical treatment of protruded intervertebral disks.

ad·sor'bate [L. *ad*, to; *sorbere*, to suck]. Any substance which is adsorbed.

ad·sorb·ent [*ad*; *sorbere*]. Any substance which produces adsorption, as activated charcoal, silica gel. See *adsorption*.

adsorl. Trade-mark for a water-dispersible solution of vitamins A and D.

ad·sorp'tion [*ad*; *sorbere*]. 1. The power possessed by certain substances (*adsorbents*) of taking up fluids, apart from capillary attraction. 2. The process whereby solid (*adsorbent*) attracts and concentrates upon its surface, in a thin layer molecules of a gas, liquid, or dissolved substance (*adsorbate*) by adhesion. —**adsorptive**, *adj.*; **adsorb'** *v.*, *v.t.*

ad·ster'nal [*ad*; G. *sternon*, breast]. Situated near the sternum; toward the sternum.

ad·ter'mi·nal [*ad*; L. *terminus*, end]. Moving toward the insertion of a muscle; said of electric currents in muscular fiber.

ad·tor'sion [*ad*, L. *torsio*, from *torquere*, to twist]. Convergent squint. Also called *conclination*.

a·dult [L. *adultus*, from *adolescere*, to grow]. Mature; having attained full size and strength of full legal age.

ad'ult. A person of mature age.

a·dul'ter·ant [L. *adulterare*, to pollute]. Any substance that adulterates.

a·dul"ter·a'tion [*adulterare*]. Admixture or substitution of inferior impure, inert, or cheaper ingredients for gain, deception, or concealment. —**adul'terate**, *v.t.*

ad·vance·ment [OF *avancer* from L. *ab*, away; *ante*, before]. 1. A tenotomy followed by reattachment of the tendon at a more advanced point. 2. *In ophthalmology*, operative correction of strabismus. The muscle tendon opposite to the direction of the squint is removed at its insertion and sutured to the sclera anterior to the original attachment. A modification in which the shortened muscle, rather than its tendon, is attached anterior to the stump, is called Lancaster' advancement.

ad"ven·ti'ti·a (ad"ven·tish'ee·uh) [L. *adventicius*, foreign]. The external covering of an organ derived from adjacent connective tissue, as the external coat of blood vessel or other organ. See Plate 6.

ad"ven·ti'tious (ad·ven·tish'us) [*adventicius*]. 1. Accidental, foreign, acquired, as opposed to natural or hereditary. 2. Occurring in unusual or abnormal places. 3. Pertaining to the adventitia.

ad"y·na'mi·a (ad"i·nay'mee·uh, ·nam'ee·uh, ay·di·) ·dyn·a·my [G. *a*-, not; *dynamis*, power]. Loss of vital strength or muscular power; weakness; debility; asthenia. —**adynam'ic**, *adj.*

ae-. For words beginning with ae- not found here, see words beginning e-.

Aeby, Christoph Theodor [*Swiss anatomist*, 1835–85]. *Aeby plane* is craniometric plane passing through the nasion and basion perpendicular to the median plane.

A·e'des (ay·ee'deez) [G. *aēdēs*, from *a*- not; *hēdys*, pleasant]. A genus of mosquitoes, belonging to the family Culicidae, having worth temperate distribution. Many species are noxious and troublesome biters. In North America, the species **A. vexans** is found near fresh water; **A. aldrichi**, **A. dorsalis**, **A. sollicitans**, **A. squamiger** and **A. taeniorhynchus** are found near salt marshes. **A. aegypti** is the principal vector of yellow fever and dengue. It has urban breeding habits.

ae"doe·o·ceph'a·lus (ee·dee·o·sef'uh·lus, ed·ee·o-) [G. *aidoia*, genitals; *kephalē*, head]. See *edocephalus*.

ae"lu·rop'si·a (ee"lew·rop'see·uh, el"yoo·) [G. *ailouros*, cat; *opsis*, vision]. Obliquity of the eye or of the palpebral fissure.

ae'quum (ee'kwum) [L., equal]. Amount of food necessary to maintain weight with normal physical activity. It varies with the individual' size and the nature of his activity.

a'er·ate [G. *aēr*, air]. Charge with air or gas oxygenate, carbonate, etc.; arterialize. —**aerated**, *adj.*; **aerator**, *n.*

a"er·a'tion [*aēr*]. 1. Exposure to air. 2. Saturation of fluid with air or gas, as carbon dioxide. 3. Conversion of venous to arterial blood.

a·er·e·mi·a. See *caisson disease*.

a·er·en·do·car'di·a [*aēr*; G. *endon*, within; *kardia*, heart]. Presence of air within the heart.

a·er·en"ter·ec·ta'si·a (ay"ur·en·ter·ek·tay'zhuh, ·see·uh, ·shuh, ·see·uh) [*aēr*; G. *enteron*, intestine; *ektasis*, extension]. Excessive amount of air or gas in the intestines; tympanites; meteorism.

a·e·ri·al (ay-eer'ee-ul, air'ee-ul) [G. *aerios*, from *aēr*]. Pertaining to the air, as aerial conduction, hearing through air vibrations.

a·er·if'er·ous [*aēr*; L. *ferre*, to bear]. Conveying air, as the trachea and its branches.

a·er·i·form" (ay'ur-i-form, ay-eer', ay-air') [*aēr*; L. *forma*, form]. Airlike; gaseous.

a'er·o- (ay'ur-o-, air'o-), **aer-** [*aēr*]. A combining form denoting *air*, *aerial*, or *gas*, *gases*.

a·er·o·an·a·er·o·bic (ay"ur-o-an-ay"ur-o'bick, -ob'ick) [*aēr*; G. *a-*, not; *aēr*; *bios*, life]. Of or pertaining to organisms which are both aerobic and anaerobic.

A"er·o·bac'ter [*aēr*; G. *baktron*, little staff]. A genus of nonpathogenic, Gram-negative, saprophytic bacteria of the Enterobacteriaceae.

A. aerogenes. A species of coliform bacteria widely distributed in nature, which closely resembles the *Escherichia coli*; a lactose-fermenter. Also called *Bacterium aerogenes*, *Bacterium lactis aerogenes*.

aer·obe [*aēr*; G. *bios*, life]. A microorganism which requires air or free oxygen for the maintenance of life. Also called *aerobion*.

facultative aerobes. Organisms normally or usually anaerobic but which, under certain circumstances, acquire aerobic power.

obligate aerobes. Organisms dependent upon free oxygen at all times; never anaerobic.

a·er·o'bic (ay"ur-o'bick, -ob'ick), **a"er·o'bi·an** [*aēr*; *bios*]. 1. Requiring air or free oxygen in order to live. 2. Relating to or produced by aerobes.

a·er·o·bi·ol'o·gy. The study of air-borne substances such as pollens, molds, dust, and bacteria.

a"er·o·bi'o·scope [*aēr*; *bios*; G. *skopein*, to examine]. Apparatus for collecting and filtering bacteria from the air to determine the bacterial content.

a·er·o·bi·o·sis (ay"ur-o-buy-o'sis) [*aēr*; *bios*; G. *-ōsis*, condition]. Life that requires the presence of air or free oxygen. —**aerobiot'ic**, *adj.*

a'er·o·cele (ay'ur-o-seel") [*aēr*; G. *kēlē*, tumor]. A tumor caused by the escape of air into an adventitious pouch usually connected with the trachea or larynx, hence its size may vary with respiration. Also called *tracheocele*, *laryngocele*, *pneumatocele*.

epidural a. An intracranial extradural accumulation of air or gas, usually resulting from a fracture of the skull.

a·er·o·col·pos [*aēr*; G. *kolpos*, vagina]. Distention of the vagina with air or gas.

a·er·o·cys·tos'co·py [*aēr*; G. *kystis*, bladder; *skopein*, to examine]. Examination of the interior of the urinary bladder with a cystoscope, the bladder being distended with air. —**aerocys'toscope**.

aer·o·don·tal'gi·a. See *barodontalgia*.

aer·o·don'ti·a [*aēr*; *odous*]. Aviation dentistry.

aer·o·duc'tor [*aēr*; L. *ducere*, to lead]. Apparatus to prevent asphyxia of the fetus when the aftercoming head is retained.

a·er·o·dy·nam'ics (ay"ur-o-dye-nam'icks, -di-nam'icks, air"o-) [*aēr*; G. *dynamis*, power]. The branch of physics that deals with gases in motion.

a·er·o·em"bo·lism [*aēr*; L. *embolismus*, from G. *en*, in; *ballein*, to throw]. A condition caused by an abrupt drop from normal to low atmospheric pressure; occurs in aviators in rapid ascents to high altitudes; marked by the formation of nitrogen bubbles in the blood and body tissues. Symptoms include severe pain in the joints and chest, itching of the skin, pulmonary edema, urticaria, paralysis, convulsions, and sometimes coma. Symptoms may be relieved by descent to lower altitude. Syn., *aeroemphysema*, *chokes*, *decompression sickness*, *dysbarism*. Also see *caisson disease*.

a·er·o·em"phy·se'ma (-em-fi-see'muh, -zee'muh, -em-figh-). Aeroembolism.

a·er·o·gen" [*aēr*; G. *gennethai*, from *gignesthai*, to be produced]. Any gas-producing microorganism.

a·er·o·gen'e·sis [*aēr*; G. *genesis*, production]. Gas formation. —**aerogenic**, **aerog'enous**, *adj.*

a·er·o·gram" [*aēr*; G. *gramma*, letter]. An x-ray film of an organ inflated with air.

a·er·og'ra·phy [*aēr*; G. *graphein*, to write]. Description of air and its qualities.

a·er·o·hy·drop'a·thy (high-drop'uth-ee) [*aēr*; G. *hydōr*, water; *pathos*, disease]. Use of air and water in the treatment of disease. Also called *aerohydrotherapy*.

a"er·o·i"on·i·za'tion [*aēr*; G. *ion*, from *ienai*, to go]. The process of electrically charging particles, such as oil drops, suspended in the air. Inhalation of air with such charges is recommended for treatment of respiratory diseases.

a"er·o·i"on·o·ther'a·py [*aēr*; *ion*; G. *therapeia*, treatment]. Inhalation of electric charges in the treatment of disease.

aerolin. Trade-mark for a preparation containing clopane hydrochloride, ephedrine hydrochloride, atropine sulfate, and procaine hydrochloride used for inhalation therapy in bronchial asthma.

a·er·o·mam·mog'ra·phy [*aēr*; G. *mammē*, breast; *graphein*, to write]. X-ray examination of the breast after injecting the retromammary space with carbon dioxide or air.

A·er·o Med'i·cal Lab'o·ra·to·ry. A laboratory in the Air Force where flight surgeons, physiologists, and aeronautical engineers work upon problems associated with aviation, as anoxia, aeroembolism, etc.

a"er·o·med'i·cine. Aviation medicine.

a·er·om'e·ter [*aēr*; G. *metron*, a measure]. Instrument for determining the density of gases.

a"er·o·neu·ro'sis [*aēr*; G. *neuron*, nerve; *-ōsis*, condition]. A form of psychoneurosis found in aviators, characterized by anxiety, restlessness, and various physical manifestations.

a"er·op'a·thy [*aēr*; G. *pathos*, disease]. Any pathologic condition brought about by changes in atmospheric pressure, as caisson disease or aeroembolism.

a·er·o·pause. That region of the atmosphere where its various functions (e.g., supplying breathing air and climate, filtrating cosmic factors, offering mechanical support) for man and aircraft begin to cease and conditions equivalent to outer space are gradually approached.

a·er·o·per"i·to·ne'um, **a·er·o·per·i·to·ni'a** [*aēr*; G. *peritonaion*, from *peri*, around, *teinein*, to stretch]. Air or gas in the peritoneal cavity.

a·er·o·pha'gi·a, **a·er·oph'a·gy** [*aēr*; G. *phagein*, to eat]. Imbibing and swallowing of air followed by noisy eructations, especially in hysterical patients. Aspiration of air by the rectum is called *rectal aerophagia*.

aer·o·phil" [*aēr*; G. *philein*, to love]. 1. Loving the open air. 2. Aerobic.

a"er·o·pho'bi·a [*aēr*; G. *phobos*, fear]. Morbid fear of drafts or of fresh air.

a·er·o·phore [*aēr*; G. *phoros*, bearing, from *pherein*, to bear]. 1. Device for inflating the lungs with air in the case of a stillborn child or in any case of asphyxia. 2. Apparatus which purifies air for rebreathing, used by firemen and others.

a·er·o·phyte" [*aēr*; G. *phyton*, plant]. A plant living on other plants but deriving its moisture from the air, as an orchid; an epiphyte.

a"er·o·pi·e"so·ther'a·py (pye-ee"zo-therr'uh-pee) [*aēr*; G. *piesis*, to press; *therapeia*, therapy]. Use of compressed or rarefied air in the treatment of disease.

a″er-o-ple-thys′mo-graph [aer-; G. plēthysmos, enlargement; graphein, to write]. Apparatus for registering graphically the amount of air respired.

a″er-o-pleu′ra (ay″ur-o-ploor′uh) [aer-; G. pleura, side]. Air or gas in the pleural cavity; pneumothorax.

a″er-o-scope″ [aer-; G. skopein, to examine]. Instrument for the examination of air dust and for estimating the purity of the air.

a″er-os′co-py [aer-; skopein]. Investigation of atmospheric conditions.

a″er-o-si-al-oph′a-gy [aer-; G. sialon, saliva; phagein, to eat]. The habit of constantly swallowing, and so taking air and saliva into the stomach.

a″er-o-si″nus-i′tis (ay″ur-o-sigh″nuh-sigh′tis, -sin-yoo-sigh′tis, -sigh-new-sigh′tis) [aer-; L. sinus, hollow; G. -itis, inflammation]. An acute or chronic inflammation of one or more of the nasal accessory sinuses; caused by a difference in barometric pressure between the gas inside the sinus and that of the surrounding atmosphere. Also called barosinusitis.

a″er-o′sis [aer-; G. -ōsis, condition]. Formation of gas in any of the body tissues.

a′er-o-sol″ [aer-; hydrosol, confused with Ger. sole, salt water]. 1. Atomized particles suspended in the air. 2. Any solution or compressed gas containing an agent for the treatment of the air to remove or destroy insects or microorganisms. 3. In chemistry, a colloid in which gas is the dispersion medium.

aerosol OT dry. Trade-mark for dioctyl sodium sulfosuccinate.

a″er-o-spo″rin [aer-; G. spora, seed]. Trade-mark for a brand of polymyxin B sulfate administered internally and topically in the treatment of various systemic, meningeal, urinary and topical infections.

a″er-o-stat′ics [aer-; G. statikos, bringing to a standstill]. The branch of physics that treats of the properties of gases at rest, or in equilibrium.

a″er-o-tax′is [aer-; G. taxis, order]. Tendency of living organisms, especially aerobes and anaerobes, to be attracted or repelled by oxygen or air.

a″er-o-ther″a-peu′tics, a″er-o-ther′a-py [aer-; G. therapeuein, to treat medically]. A mode of treating disease by varying the pressure or the composition of the air breathed.

a″er-o-ther″mo-ther′a-py [aer-; G. thermē, heat; therapeia, therapy]. Treatment with hot air.

a″er-o-ti′tis me′di-a. Extrusion of blood serum and cells into the middle ear due to an uncompensated low pressure in this cavity during descent from an air flight. Syn., aviator's ear, otitic barotrauma, barotitis media.

a″er-o-to-nom′e-ter [aer-; G. tonos, tension; metron, measure]. Instrument for determining the tension of gases in the blood. —aerotonometry, n.

a″er-ot′ro-pism [aer-; G. tropos, from trepein, to turn]. The inherent tendency of an organism to be attracted to a supply of air, as various bacteria and protozoa collect about an air bubble. —aerotrop′ic, adj.

a″er-o-tym″pa-nal [aer-; G. tympanon, drum]. Pertaining to the air in the tympanum, especially in regard to forcing air through the auditory tube, as in politzerization.

a″er-o-u-re″thro-scope [aer-; G. ourēthra, urethra; skopein, to examine]. A modified endoscope which permits viewing the urethra after it is inflated with air. —aerourethroscopy, n.

ae-ru′go (ee-rōō′go) [L., rust]. 1. Rust of a metal. 2. Copper rust; verdigris.

aes (eez) [L.]. Copper or brass. See copper.

Aesculapius. Latin name of the Greek physician Asklepios.

aes-the′si-o-. See esthesio-.

aes′ti-val. See estival.

aes′tus (es′tus) [L.]. Heat; especially a flushing, or sudden glow of heat.

a. volaticus. Wildfire rash; strophulus; especially a temporary rash in infants.

aet. Aetatis, aetate; of age, at the age of.

ae′ther. See ether.

Ae-thu′sa (eeth-yōō′suh, -zuh) [G. aithousa, fem. pres. part. of aithein, to burn]. A genus of the Umbelliferae. The fruit of A. cynapium, or fool's-parsley, yields a volatile alkaloid, cynapine, related to coniine.

ae″ti-o-por′phy-rin. Etioporphyrin.

Aetius of Amida [Byzantine medical writer and compiler 502–75]. Author of a compendium containing writings of many authors, including his own description of an original treatment of aneurysm of the brachial artery by ligation. His treatise on diseases of the eye was all-inclusive for the time.

afaxin. A trade-mark for oleovitamin A.

a-fe′brile (ay-fee′bril, -fee′, ay-feb′ril, -feb′) [G. a-, not; L. febris, fever]. Without fever.

afenil. Trade name for calcium chloride-urea, $CaCl_2 \cdot 4(NH_2)_2CO$; white crystals used intravenously in calcium therapy.

a-fe′tal (ay-fee′tul, -fee′tul) [a-; L. fetus, an offspring]. Without a fetus.

af′fect [L. affectus, from afficere, to affect]. In psychology, feeling; emotion as it influences a mental state or idea (Freud); the feeling element in emotion; mood. —affec′tive, adj.

af-fect″a-bil′i-ty [affectus]. Capacity for responding to stimulation.

af″fec-ta′tion [L. affectare, to strive after]. Artificiality of manner or behavior.

af-fec′tion [L. affectio, from afficere, to affect]. 1. Any pathologic state or condition. 2. In psychology, the emotional factor in consciousness. —affective, adj.

af″fec-tiv′i-ty [affectus]. 1. Susceptibility to emotional stimuli. 2. In psychology, that part of consciousness comprising affection and affect.

af-fec″to-mo′tor [affectus; L. motor, from movere, to move]. Exhibiting emotional tension and muscular activity.

af-fekt-ep-i-lep′sie [Ger.]. A psychogenic convulsion which occurs in functional neuroses and obsessive states.

af′fer-ent [L. afferre, to carry to]. Carrying toward; centripetal.

af-fil″i-a′tion [L. ad, to; filius, son]. In legal medicine, imputing or fixing the paternity of a child in order to provide for its maintenance.

af-fin′al, af′fi-nal [L. affinis, adjoining]. 1. Connected through marriage. 2. Having the same origin.

af′fi-nin. An insecticidal amide isolated from the roots of Erigeron affinis.

af-fin′i-ty [affinis]. 1. Inherent attraction and relationship. 2. In biology, the relationship between members of species or more specialized groups, which depends upon their mutual resemblance in structure and form, indicating a similarity of origin.

chemical a. The force of attraction between atoms which causes them to enter into and maintain certain combinations.

genetic a. Relationship by direct descent.

morbid a. The tendency for certain affections to exist simultaneously with, or as sequels of, particular diseases.

vital a. The selective action or chemotaxis ex-

hibited by the several tissues of an organism for their particular pabulum.

af″fir·ma′tion [L. *affirmare*, to affirm]. During hypnosuggestion, the stage in which the subject acquires a positive reactive tendency; facilitation of positive reaction tendency.

af′flux, af·flux′ion [L. *affluxum*, from *affluere*, to flow toward]. Flow of blood or other fluid to a part. Syn., *congestion*. —**af′fluent,** *adj.*; **af′fluence,** *n.*

af·fu′sion [L. *affusum*, from *affundere*, to pour upon]. Pouring of water upon a part or upon the body, as in fever, to reduce temperature and calm nervous symptoms. The method of treating fevers by pouring cold water over the patient is called **cold affusion.**

a·fi″brin·o·gen·e′mi·a, a·fi″brin·o·gen·ae′mi·a [a-; L. *fibra*, fiber; G. *gignesthai*, to produce; *haima*, blood]. Complete absence of fibrinogen in the blood. See *fibrinogenopenia*.

a·fe′tal (ay·fee′tul, a·fee′tul). See *fetal*.

af′ri·dol. Sodium hydroxymercuri-o-toluate; an antiseptic used in soap.

af′ten·min. An infusion of herbs with formaldehyde and glycerin; used in veterinary medicine.

aft′er·birth″ [AS. *aefter*; M.E. *burth*]. The placenta and membranes; normally expelled from the uterus following birth of the child.

aft′er·brain. See *hindbrain, metencephalon*.

aft′er-care [*after*; AS. *caru*]. Care or nursing of convalescents, especially the postoperative treatment of surgical patients. Syn., *aftertreatment*.

aft′er-cat″a·ract [*after*; G. *katarraktēs*, waterfall]. 1. A portion of lens substance or of lens capsule retained after the extraction of an extracapsular cataract. 2. Any membrane in the area of the pupil following removal or absorption of the lens. Syn., *secondary cataract*.

aft′er-cur″rent [*after*; L. *currere*, to run]. An electric current induced in a muscle or nerve following the cessation of a stimulating current through these organs.

aft′er-damp [*after*; MLG. *damp*, vapor]. A poisonous mixture of gases, containing principally carbon dioxide and nitrogen, found in coal mines after an explosion of inflammable gases.

aft″er·dis·charge [*after*; OF. *descharg(i)er*]. A discharge of impulses by nerve elements which continues for a short period after reflex stimulation ceases because of the discharge of the central excitatory state.

aft′er·ef·fect [*after*; L. *effectus*, from *efficere*, to bring about]. A delayed response to a stimulus or agent, appearing only after the subsidence of the primary response.

aft′er·gild″ing [*after*; AS. *gyldan*]. Application of gold salts to histologic preparations of nerve tissue after fixation and hardening.

aft′er·hear″ing [*after*; AS. *hieran*]. A sensation of hearing a sound after the stimulus which produces it has ceased; may be a symptom of some neuroses.

aft′er-im″age [*after*; L. *imago*, image]. A retinal impression continued after the stimulus of the light or image has ceased to act. A **positive afterimage** is a simple prolongation of the sensation; a **negative afterimage** is the appearance of the image in complementary colors. Syn., *accidental image*.

aft′er·im·pres″sion [*after*; L. *impressio*, from *imprimere*, to press into]. An aftersensation.

aft′er·pains″ [*after*; G. *poinē*, penalty]. Pains from uterine contractions following delivery.

aft′er·per·cep″tion [*after*; L. *perceptio*, from *percipere*, to perceive]. Perception of a sensation after the stimulus has passed away.

aft″er·po·ten′tial. See under action *potential*.

aft′er·sen·sa″tion [*after*; ML. *sensatio*, from L. *sensus*, sense]. A sensation lasting longer than the stimulus producing it.

aft′er·sound″. See *afterhearing*.

aft′er·stain [*after*; OF. *desteindre*, to take away color]. A counterstain.

aft′er·taste″ [*after*; OF. *taster*, to feel]. A gustatory sensation continuing for some time after the stimulus has been removed.

aft′er·treat·ment. See *aftercare*.

aft′er·vi″sion [*after*; L. *visio*, from *videre*, to see]. Perception of an afterimage.

a·func′tion (ay·funk′shun, a·funk′shun) [G. *a-*, not; L. *functio*, performing]. Loss or lack of function. —**afunctional,** *adj.*

Ag Chemical symbol for *argentum*, silver.

AGA *In embryology*, abbreviation for accelerated growth area.

a·ga·lac′ti·a, a·ga·lax′i·a, a·ga·lax′y [a-; G. *gala*, milk]. Nonsecretion or imperfect secretion of milk after childbirth. Also called *agalactosis*. —**agalactous,** *adj.*

a. contagiosa. An epidemic, contagious disease of sheep and goats, marked by drying-up of the milk due to inflammation of the udders. The eyes and joints are also affected.

ag″a·lor·rhe′a, ag″a·lor·rhoe′a [a-; *gala*; G. *rhoia*, flow]. A cessation of the flow of milk.

a·gam′e·te [a-; G. *gametēs*, husband]. Any protozoan which reproduces asexually.

a·gam′ic, ag′a·mous [a-; G. *gamos*, marriage]. *In biology*, asexual; reproducing without union of sexual cells.

a·gam″ma·glob″u·lin·e′mi·a. Near or complete absence of gamma-globulin in human serum with relatively normal serum total proteins. Thought to be congenital and sex-linked, affecting males only; the condition is characterized by a failure to produce antibodies and may be treated by specific replacement therapy.

ag·am·o·cy·tog′e·ny (ag·am·o·sigh·tog′e·nee, ag·uh·mo·) [a-; *gamos*; G. *kytos*, cell; *genē*, offspring]. Agamogenesis.

Ag″a·mo·fi·la′ri·a [a-; *gamos*; L. *filum*, thread]. A genus of little-known filarial worms of man.

a·gam″o·gen′e·sis [a-; *gamos*; G. *genesis*, production]. 1. Asexual reproduction. 2. Parthenogenesis. Syn., *agamogony*, *agamocytogeny*. —**agamogenet′ic,** *adj.*

ag″a·mog′o·ny [a-; *gamos*; G. *gonē*, offspring]. Agamogenesis.

a·gam′o·spore [a-; *gamos*; G. *spora*, offspring]. *In biology*, an asexually produced spore.

ag′a·mous. See *agamic*.

a′gar (ay′gahr, ag′ahr, ah′gahr) [Malay]. 1. A seaweed of the genus *Gelidium*, especially *G. cartilagineum*. 2. Any of various culture mediums containing agar-agar. Special agar mediums, as blood agar, may be made for fastidious organisms.

a. hanging block. *In bacteriology*, a small block of nutrient agar cut from a poured plate and placed on a cover glass, the surface next to the glass first having been touched with a loop from a young fluid culture or with a dilution from the same. It is examined upside down, the same as a hanging-drop culture.

a. plaque. A plug of agar previously inoculated with an antibiotic producer, removed under sterile conditions, after incubation, and placed on an agar plate seeded with the test organisms, in order to measure the zone of inhibition which develops around the agar plug after further incubation.

a. spot. A drop of seeded nutrient agar in a sterile petri dish, used for the quantitative determination of antibiotic activity by subculturing to which suc-

cessive increments of antibiotics have been added.

a.-streak plate. A petri dish containing agar for a technique of antibiotic assay in which a series of solutions containing various concentrations of an antibiotic are incorporated in the nutrient agar and the test organisms are subsequently streaked on the surface of the agar.

a.-streak slant. A hardened, slanted agar in a test tube, for a technique of antibiotic assay in which a series of antibiotic concentrations are incorporated in the test medium, followed by the streaking of the test organisms on the agar surface.

a. wells. The holes made in seeded agar into which antibiotics may be introduced to determine the extent of the inhibition (of microorganisms) which results from the diffusion of the antibiotic from the well into the surrounding agar in the course of subsequent incubation.

cornmeal a. A medium for the culture of yeasts, which encourages the production of *mycelium* and *chlamydospores*.

desoxycholate-citrate a. A medium for the culture of organisms of the enteric, *Salmonella*, and dysentery groups.

malt a. A medium for the culture of fungi.

penicillin-streptomycin blood a. A bacteria-inhibiting medium for the culture of fungi.

Simmons's citrate a. A medium for the culture and identification of *Salmonella*.

a'gar-a gar [Malay]. 1. A dried mucilaginous extract obtained from certain species of seaweeds, especially agar; used in bacteriology to solidify culture mediums. Used as laxative because of its marked increase in bulk when moist. 2. See agar.

a-gar'ic (a-gar'ick, ag'ur-ick) [G. *agarikon*, tree-fungus]. Touchwood; spunk; tinder; the product of different basidia fungi, mostly *Polyporus*.

fly a. Poisonous mushroom which contains the alkaloid muscarine. Also called *Amanita muscaria*.

larch a. *Polyporus officinalis*; has been used as an anhidrotic. Syn., *white a.*

surgeons' a. *Agaricus chirurgorum*, *Boletus chirurgorum*; a parasitic fungus formerly used for moxa. It forms spunk when soaked in a solution of potassium nitrate.

white a. See larch a.

a-gar'ic ac'id (a-gar'ick). See *agaricin*, 1.

a-gar'i-cin. 1. $C_{16}H_{30}OH(COOH)_3 \cdot 1\frac{1}{2}H_2O$. A white, crystalline substance; the active principle of larch agaric. It has proved useful in the night sweats of pulmonary tuberculosis and in arresting perspiration in phthisis. Syn., *agaric acid*. 2. An impure alcoholic extract of larch agaric, *Polyporus officinalis*; used as an anhidrotic.

A gar'i-cus [G. *agarikon*, tree-fungus]. A large genus of fungi.

A. campestris. The common, nonpoisonous or edible mushroom.

A. muscarius. Fly agaric.

a-gar'y thrine (a-gar'i threen, -thrin, ag"ur-ith rin). A yellow alkaloid extracted by ether from *Agaricus ruber*.

a gas'tric (ay gas'trick, -gas') [G. *a-*, not; *gaster*, stomach]. Without an alimentary canal, as the tapeworms. —**agastria**, *n.*

a-gas"tro-neu'ri-a [*a-*; *gaster*; G. *neuron*, nerve]. Lowered or deficient nervous tone of the stomach.

A ga ve (a-gay'vee) [G. *agauos*, noble]. A large genus of the Amaryllidaceae, native North American plants.

A. americana. American aloe; the leaves of this plant; has been used as diuretic, antisyphilitic, and antiscorbutic.

Ag"chy los'to ma (ag"ki los'to-muh). See *Ancylostoma*.

age [OF. *aage*, from L. *aetas*]. 1. The time elapsed from birth to the present in a living individual. 2. A particular period of life distinguished by development, equilibrium, or involution, especially old age. 3. *In psychology*, a measure of development expressed in terms of the age of an average individual of an equivalent development.

achievement a. Educational accomplishment expressed as equivalent to the age in years of the average child showing similar attainments; determined by tests. Also see accomplishment *quotient*.

a. critique. The menopause.

a. de retour. Old age, simple senile deterioration.

a. of consent. *In legal medicine*, the age at which a minor is considered capable of legally assenting to marriage or to sexual intercourse, varying from 13 years upward according to statute.

anatomic a. Age as judged by body development.

Binet a. Mental age as estimated by Binet tests.

bone a. Age as judged roentgenologically from bone development, when compared with the normal ossification for that chronologic age.

climacteric a. (a) Puberty. (b) The time of the cessation of the catamenia.

mental a. The score obtained on an intelligence test. An adult whose score is the equivalent of that of a normal child of 12 has a mental age of 12.

physiologic a. Age as judged by the functional development.

age. 1. To grow old. 2. To age artificially, as wine.

a gen'e-sis, ag"e-ne si-a [G. *a-*, not; *genesis*, production]. 1. Incomplete and imperfect development, aplasia. 2. Impotence; barrenness. —**agenet'ic**, *adj.*

ovarian a. Failure of development of the ovaries. See also Turner's *syndrome*.

a gen"i o-ce-pha'li-a, a gen"i o-ceph a ly [*a-*; G. *geneion*, chin; *kephalē*, head]. A minor degree of otocephalus, described by Blanc, with the brain, cranial vault, and sense organs intact. —**ageniocephalous**, *n.*

a-gen'i tal ism [*a-*; L. *genitalis*, genital]. Symptom complex found in persons who lack testes or ovaries.

a-gen"e-so mi-a [*a-*; G. *gennesthai*, from *gignesthai*, to be produced; *soma*, body]. Defective development of the genitals.

a gen"e-so mus [*a-*; *gennesthai*, *soma*]. Fetal monster with extrusion of the lower abdominal viscera because of a deficiency of the abdominal wall (celosoma); the genitalia are lacking or rudimentary.

a'gent [L. *agens*, from *agere*, to do, to act]. A substance or force which, by its action, effects changes.

adrenergic blocking a. Any agent which blocks the action of epinephrine or epinephrinelike substances, i.e. which blocks the impulse of postganglionic sympathetic nerves; also called *adrenolytic* or *sympatholytic agent*.

biological a. A virus; any of certain classifications of microorganisms and toxic substances derived from living organisms used to produce death or disease in man, animals, and growing plants.

chemical a. *In military medicine*, a solid, liquid, or gas which through its chemical properties produces lethal, injurious, or irritant effects; a screening or colored smoke, or an incendiary agent. War gases, smokes, and incendiaries are the three main groups.

chemical warfare a. Any agent used in chemical warfare, especially toxic gas. See war gas.

clearing a. *In microscopy*, a substance used to render tissues transparent for mounting.

dealcoholization a. A liquid used for getting

rid of the alcohol in preserved specimens; also one that facilitates the penetration of paraffin in microtomy.

radiomimetic a. Any agent, such as nitrogen mustards, urethane, benzol and hydrogen peroxide, capable of duplicating many of the radiation-induced effects in tissue.

wetting a. A substance which causes a liquid to spread more readily upon a solid surface, chiefly through reduction of surface tension. Wetting agents are either ionic or non-ionic, the former being further classified as cationic or anionic, depending on whether the characteristic activity is inherent in the cation or anion.

a·ge·ra·si·a (ay″jah-ray′see-uh, -zee-uh, adj″uh-) [G *agērasia*, eternal youth, from *a-*, not; *gēras*, old age]. Vigorous, healthy old age.

a·geu′si·a (ag-yoo′see-uh, jew′see-uh, -shuh) **a·geus′ti·a** (ag-yoos′tee-uh, -jus′tee-uh) [*a-*; G *geusis*, sense of taste]. Loss or impairment of the sense of taste. When due to cortical lesion, it is called **central ageusia**; when due to disorder of the nerve endings, **peripheral ageusia**; when due to a lesion in the nerve between its origin and distribution, **conduction ageusia**.

ag′ger (ag′ur, adj′ur) [L., mound]. *In anatomy*, a projection, eminence, or mound.

a. nasi. An oblique ridge on the inner surface of the nasal process of the maxilla; the anterior *part of the ethmoidal crest*.

ag·glom′er·ate [L. *agglomerare*, to wind on a ball]. Grouped or clustered. Syn., *aggregate*, *aggregate*. —**agglomera′tion**, *n.*

ag·glu″ti·na′tion [L. *agglutinare*, to glue]. A joining together; an aggregation of suspended particles. —**agglu′tinable, agglu′tinative,** *adj.*

cold a. Phenomenon caused by presence of cold *agglutinin*.

specific a. Reaction between the suspension of an antigen (bacteria or cells) and its specific antiserum, leading to the clumping of the suspended elements. Used in the diagnosis of certain diseases, as the Widal test for typhoid.

ag·glu′ti·nin [*agglutinare*]. An antibody occurring in a normal or immune serum which, when added to a suspension of its homologous, particulate antigen, causes the antigen elements to adhere to one another, forming clumps.

anti-Rh a. An antibody not found normally in man, but only as the result of sensitization. See *Rh sensitization*, *blood groups*.

chief a. An agglutinating antibody in the blood of an individual immunized against a specific disease or microorganism. It is active at higher dilutions than are the group or partial agglutinins. Syn., *major a.* See also *antibody*.

cold a. A nonspecific panagglutinin found in normal human sera which produces maximum clumping of erythrocytes at 4° C and none at 37° C. These hemagglutinins increase in titer in one-third to one-half of patients with primary atypical pneumonia, and are found in high titer in some patients with acquired hemolytic anemia. Syn., *cold hemagglutinin*.

flagellar a. See H a.

group a. One which acts as a specific toward one species and which will agglutinate other related species. Syn., *minor a.*, *partial a.*

H a. One which is specific for the flagella of an organism only. Also called *flagellar a.*

major a. See chief a.

minor a. An agglutinin acting on other related organisms to the one utilized for immunization, but in lower dilution. Also called *group*.

O a. One specific for the body of a microorganism. Also called *somatic a.*

partial a. See group a.

somatic a. See O a.

ag″glu·tin·o·gen (ag″lew-tin-o-jen, -glew′tin-o-jen) [*agglutinare*; G *genesthai*, from *gignesthai*, to be produced]. An antigen which, when injected into the animal body, stimulates the formation of a specific agglutinin. This, in turn, has the capacity to agglutinate the antigen.

ag·glu′ti·noid [*agglutinare*; G *eidos*, form]. 1. An agglutinin which has lost its zymophore group through the action of heat, age, acids, etc., but still possesses its haptophore group. 2. An agglutinin which, as the result of certain chemical or physical treatment, has lost the ability to clump its homologous antigen but retains the capacity to combine with it. 3. *In hematology*, incomplete antibodies.

ag·glu′ti·no·phore [*agglutinare*; G *phorein*, to bear]. Factor present in an agglutinin, which causes clumping; the zymophore of an agglutinin.

ag″glu·tin·o·scope (ag″lew-tin′o-scope, glew′tin-o-scope″) [*agglutinare*; G *skopein*, to examine]. Instrument used to observe the process of agglutination in a test tube and to facilitate the reading of the result.

ag′gre·gate [L. *aggregare*, to add to]. The mass formed by certain antibodies and their homologous antigens in clump. —**aggregate,** *adj.*, *v.*

ag″gre·ga′tion [*aggregare*]. Agmination; massing *together of materials*; congeries or collection of particles, parts, or bodies, usually of a similar nature.

ag·gres′sin [L. *aggressus*, from *aggredi*, to attack]. A soluble substance of bacterial origin which promotes infection by combining with specific antibodies which uncombined would enhance phagocytosis and destruction of the bacteria.

ag·gres′sion [L. *aggressio*, from *aggredi*]. *In psychiatry*, an act or attitude of hostility, commonly arising out of frustration or feelings of inferiority.

ag′i·tat″ed de·pres′sion. A type of manic-depressive or involutional psychosis, characterized by marked restlessness, continual activity, despondency, and anxiety.

ag″i·ta′tion [L. *agitatio*, the state of being in motion, from *agitare*]. 1. Fatiguing restlessness with violent motion. 2. Mental disturbance. 3. Stirring or shaking a mixture, as in pharmacy.

agi·ta′tor cau′dae. An occasional additional slip of the gluteus maximus muscle arising from the coccyx.

ag″i·to·graph′i·a (adj″i-to-graf′ee-uh) [*agitare*; G *graphein*, to write]. A condition characterized by excessive speed in writing, with unconscious omissions of words, syllables, or letters.

ag″i·to·la′li·a (adj″i-to-lay′lee-uh). See *agitophasia*.

ag″i·to·pha′si·a (adj″i-to-fay′zhuh, -zee-uh) [*agitare*; G *phasis*, speech]. A condition marked by *excessive rapidity of speech, with sounds or syllables* unconsciously slurred, omitted, or distorted. Syn., *agitolalia*.

Ag·kis′tro·don (ag-kis′tro-don) [NL, G *agkistron*, fishhook; *odōn*, tooth]. A genus of Crotalidae, the pit vipers.

A. acutus. A well-known species found in China.

A. bilineatus. A well-known species found in Mexico.

A. halys. A common eastern European species.

A. mokasen. The copperhead found in the eastern half of the United States. Attains a length of about three feet. Its bite is common, but seldom fatal except in children.

A. piscivorus. The water moccasin or cottonmouth found in swamps in the southeastern United States.

A. rhodesiense. A species commonly found in Siam.

a·glan·du·lar [G. *a-*, not; L. *glandulae*, glands]. Having no glands; without glands, as the brain.

a·glau·cop·si·a, a·glau·kop'si·a (ay·glaw·cop'see·uh, ·glaw·) [a-; G. *glaukos*, bluish green; *opsis*, vision]. Green blindness. See *colorblindness*.

ag'li·a [G. *aglia*, incorrect form for *aiglia*, speck in the eye]. A speck or spot upon the cornea or the sclera.

a"glo·mer'u·lar (ay·glo·merr'yoo·lur, ag"lo·, ·ah·glo·) [G. *a-*, not; L. *glomerulus*, dim. of *glomus*, ball]. Without glomeruli, as aglomerular kidney.

a·glos'si·a (ay·glos'ee·uh, ·glos·) [a-; G. *glōssa*, tongue]. 1. Congenital absence of the tongue. 2. Loss of the ability to speak; mutism.

aglos"so·sto'mi·a [a-; *glōssa*; G. *stoma*, mouth]. A condition in a monster in which the tongue is lacking and the mouth is imperforate.

-glos'sus (ay·glos'us, ·glos·us) [a-; *glōssa*]. A person without a tongue.

a·glu'cone (ay·gloo'cone, ·gloo·cone) 1. An older term for the nonsugar portion of a glycoside, now called aglycone. 2. The nonsugar portion of a glucoside.

ag"lu·ti'tion (ag"loo·tish'un) [a-; L. *glutire*, to swallow]. Difficulty in swallowing; inability to swallow; dysphagia.

a·gly·ce·mi·a. See *aglycemia*.

a·gly·ce'mi·a (ay·glye·see'mee·uh, ·glye·) [a-; G. *glykys*, sweet; *haima*, blood]. Having no sugar in the blood. —**aglycemic,** *a*.

a·gly'cone (ay·gly'cone, ·gly·cone) [a-; *glykys*]. The nonsugar portion of a glycoside. Also called *genin*.

a·gly"co·su'ri·a (ay·gly"ko·soo'ree·uh, ·gly"ko·) [a-; *glykys*; G. *ouron*, urine]. Free from glycosuria; exhibiting no urinary sugar. —**aglycosuric,** *a*.

Ag'ly·pha [G. *aglyphos*, unhewn]. A subdivision of the Colubridae family of snakes, distinguished from venomous varieties by the absence of enlarged, front fangs.

ag'ma·tine (ag'muh·teen, ·tin) $C_5H_{14}N_4$. Aminobutyl guanidine, an amine isolated from ergot and from herring spawn.

ag'mi·nate, ag'mi·nat"ed [L. *agmen*, crowd, band]. Gathered into clumps or clusters; aggregate, as agminated lymph nodules of the intestine.

ag·na'thi·a [G. *a-*, not; *gnathos*, jaw]. Absence or deficient development of the jaws. —**ag'nathous,** *adj.*; **ag'nathus, ag'nathy,** *n*.

ag·na"tho·ceph'a·lus [a-; *gnathos*; G. *kephalē*, head]. Type of otocephalus in which the eyes are situated low on the face with approximation or fusion of the zygomas. —**agnathocephal'ia, agnathocephaly,** *n*.

ag·na'thus (ag·nath'us, ag·nay'thus) [a-; *gnathos*]. An individual exhibiting agnathia.

ag·no'si·a, ag·no'se [G. *agnōsia*, want of perception]. A condition in which the patient does not recognize things or persons.

Agnew, Cornelius Rea [*American ophthalmologist*, 1830–88]. Inverted surgical instruments and devised operative procedures, such as canthoplasty for the correction of strabismus and for chalazion.

Agnew, David Hayes [*American surgeon*, 1818–92]. Devised an amputation, a method of operating for inguinal hernia, operations for the relief of salivary fistula and for webbed fingers, and a special splint for fracture of the patella.

ag·nos·e·a. See *agnosia*.

ag"no·gen'ic [G. *agnoeō*, unknowing, unknown; *-genēs* from *gignesthai*, to become, be born]. Of unknown etiology. Syn., *cryptogenic, idiopathic*.

ag·no'si·a [G. *a-*, not; *gnōsis*, a recognizing]. Total or partial loss of the perceptive faculty by which persons and things are recognized. It is commonly classified as **auditory agnosia, optic agnosia, tactile agnosia,** etc., according to the sense or senses affected.

ag·nos'ter·ol [L. *agnus*, lamb; G. *stereos*, hard; *-ol*, from L. *oleum*, oil]. $C_{30}H_{49}OH$. A complex terpene alcohol found in wool fat. Formerly considered to be a sterol but now shown not to possess the structure characteristic of this group of compounds. See also *isocholesterol*.

ag"om·phi'a·sis, ag"om·pho'sis [G. *a-*, not; *gomphios*, tooth; NL. *-iasis*, condition]. 1. Looseness of the teeth. 2. Absence of teeth. —**agomphious,** *adj*.

a·gon'ad·ism. Absence of the ovaries or testes, or *their functions, and the resulting physiologic* changes. It may be congenital or acquired. See *eunuchoidism*.

ag'o·nal [G. *agōn*, struggle]. Struggling; relating to the death struggle or to agony.

a·go'ni·a [G. *agōnia*, struggle]. Distress of mind; extreme anguish.

a·go'ni·a [G. *agonos*, barren]. Sterility; barrenness; impotence.

ag"o·ni'din [NL., Sp., and Pg. from *agonia*, wavy algae, from L. *agere*, to set in motion]. Plumierin. The active principle in the bark of *Plumeria rucuba* or pagoda tree. Formerly used as antiperiodic.

ag'o·nist [G. *agōnistēs*, combatant, from *agōn*, struggle]. A contracting muscle engaged in the movement of a part and opposed by an antagonistic muscle. Thus, when flexing the elbow the biceps is the *agonist* and the triceps is the *antagonist*. Also called *protagonist*.

ag'o·ny [*agōn*]. 1. Violent pain; extreme anguish. 2. The death struggle.

agoral. Trade-mark for certain emulsions containing mineral oil and agar gel, formerly spelled *agarol*.

ag"o·ra·pho'bi·a [G. *agora*, market place, assembly; *phobos*, fear]. Morbid fear of open places or spaces, as opposed to claustrophobia.

-ag'ra [G. *agra*, catching]. A combining form denoting *gout, gouty affection,* or *seizure of pain*.

a·gram·ma·pha'si·a. Agrammatism.

a·gram'ma·tism [a-; G. *gramma*, letter]. A type of aphasia in which the patient is unable to frame grammatical or intelligible sentences, although able to utter words. Also called *jargon aphasia*. Syn., *agrammaphasia, paraphasia*.

Agramonte y Simoni, Aristide [*Cuban parasitologist*, 1869–1931]. Member with Reed, Carroll, and Lazear of the U. S. Army Yellow Fever Commission which proved that yellow fever is transmitted to man by mosquitoes (1900–01).

a·gran"u·lo·cyte" (ay·gran'yoo·lo·sight, ·gran·) [a-; L. *granulum*, small grain; G. *kytos*, cell]. A nongranular leukocyte. —**agranulocyt'ic,** *adj*.

a·gran"u·lo·cy·the'mi·a. Agranulocytosis.

a·gran"u·lo·cy·to'sis (ay·gran'yoo·lo·sigh·to'sis, ·gran·yoo·lo·) [a-; *granulum*; G. *kytos*, cell; *-ōsis*, condition]. An acute febrile disease, affecting females oftener than males, frequently caused by coal-tar drugs and some of the sulfonamides. It is characterized by prostration, high fever, ulcerative lesions of the mucous membranes in the mouth, throat, and other areas, and a marked reduction in the number of the granular leukocytes. Before the introduction of pentanucleotide treatment, the mortality rate was very high. Also called *agranulocythemia, agranulocytic angina, agranulosis, granulocytic hypoplasia, granulocytopenia, granulopenia, hypogranulocytosis,* and *idiopathic, malignant,* or *pernicious leukopenia*.

a·gran″u·lo·plas′tic [a-; *granulum*; G. *plassein*, to form]. 1. Not forming granular cells. 2. Forming nongranular cells only.

a·gran″u·lo·sis. Agranulocytosis.

a·graph′i·a (ay-graf′ee-uh, a-graf′) [a-; G. *graphein*, to write]. Loss of ability to write; a form of aphasia.

absolute a. Inability to write even unconnected letters. Also called *atactic a.*, *literal a.*

acoustic a. Inability to write from dictation.

amnemonic a. Inability to write connected sentences, although letters and words can be written.

cerebral a. Incapacity to express thought in writing. Also called *mental a.*

congenital a. Developmental a.

developmental a. Marked deficiency in learning to write, not based on any obvious skeletal or neuromuscular defect, and out of line with the individual's mental age, accomplishment quotient in other subjects, and general manual dexterity. Syn. *congenital a.*

motor a. Loss of ability to write because of ataxia.

musical a. Loss of ability to write musical notes.

optic a. Inability to copy.

verbal a. Inability to write words, although single letters can be written.

ag′ri·mo·ny [L. *agrimonia*, for *argemonia*, from G. *argemōnē*, a kind of poppy]. Specifically the root of *Agrimonia eupatoria*, a mild astringent.

ag′ri·us, (-grī us) [G. *agrios*, wild]. Having a red or angry look, as in certain dermatoses.

Ag″ro·bac·te′ri·um [L. *ager*, soil; G. *baktērion*, little staff]. Name proposed by Conn for a genus of bacteria of the Rhizobiaceae, including *Alcaligenes fecalis*, *Bacterium radiobacter*, and the bacterium of hairy root disease.

ag″ro·ma′ni·a [ager; G. *mania*, madness]. A morbid desire to live in the open country or in isolation.

a·gryp′ni·a (ay-grip′nee-uh, a-grip′) [G. sleeplessness]. Sleeplessness; insomnia. *Obs.*

a. excitata. That associated with mental excitement and disinterest in surroundings.

a. pertaesa. That due to physical disorder.

a. senilis. That appearing with old age.

ag″ryp·not′ic [agrypnia]. Inducing, relating to, or characterized by insomnia.

a·gua·miel′ (ah″gwahm-yell′, ag″wah-mee-el′) [Sp. *agua*, water; *miel*, honey]. The sap of *Agave atrovirens* and *A. mexicana*, from which pulque, the fermented drink, is made. It is said to have diuretic, laxative, galactagogue, and nutrient properties.

a′gue (ay′gew) [F. *aigu*, sharp, from L. *acutus*]. 1. Old term for an attack of malaria. 2. A recurrent chill. 3. Neuralgia, as face ague, the douloureux.

a. cake. The enlarged spleen of chronic malaria.

brass founders′ a. Severe chills which follow the inhalation of fumes of finely divided metal, especially fumes of cadmium, lead, manganese, mercury, magnesium, and zinc (brass). Syn., *metal fume fever*, *zinc chills*.

coexisting a. Chills associated with other diseases.

dumb a. Subacute malaria without definite chills, and only slight periodicity.

agurin. A brand of theobromine and sodium acetate.

a″gyi·o·pho′bi·a (adj ee-o-fo′bee-uh) [G. *agyia*, street; *phobos*, fear]. Morbid fear of streets, as fear of crossing the street.

a·gy′ri·a (ay-jy′ree-uh, a-jy′) [G. a-, not; *gyros*, ring, circle]. Congenital absence of cerebral convolutions.

ah Abbreviation for hypermetropic astigmatism.

a·hyp′ni·a (ay-hip′nee-uh, a-hip′), **a·hyp·no′sis** (ay-hip-no′sis, a-hip-) [a-; G. *hypnos*, sleep]. Pathologic insomnia; extreme wakefulness. Also called *agrypnia*.

aich″mo·pho′bi·a (ayk-mo-fo′bee-uh, ike-mo-) [G. *aichmē*, point of a spear; *phobos*, fear]. Morbid dread of sharp or pointed objects, or of being touched by them or by a finger.

aid man. An enlisted man of the U. S. Army Medical Service, attached to a company, battery, troop, and other units, who gives emergency medical treatment to casualties.

ai·doi·o- (ay-doy′o-, eye-doy′o-). For words beginning *aidoio-* not found here, see words beginning *edeo-*.

Ai·lan′thus (ay-lanth′us) [*ailanto*, tree of heaven, name of the tree in the Moluccas]. A genus of trees of the order Simarubaceae.

ail′ing [AS. *eglan*, to trouble, pain]. Indisposed; in ill health; not well.

ail′ment [*eglan*]. A disease; sickness; complaint.

ai·lu″ro·pho′bi·a (ay-lew-ro-fo′bee-uh, eye-lew-ro-) [G. *ailouros*, cat; *phobos*, fear]. A morbid fear of cats.

ain′hum (ayn′hum, in-yoom. *See* Notes § 35) [Yoruba *ayun*]. A tropical disease peculiar to male Negroes, in which a toe is slowly and spontaneously amputated by a fibrous ring. Etiology unknown. Syn., *dactylolysis spontanea*.

air [G. *aēr*, air]. Atmospheric air is a simple nonchemical mixture of gases 78.03 parts by volume or 75.51 parts by weight of nitrogen, 20.96 parts by volume or 23.15 parts by weight of oxygen, and 0.03 part by volume of carbon dioxide. Air also contains small amounts of ammonia, nitrates, organic matter, and the rare gases argon, neon, krypton, and xenon. By virtue of its oxygen content it is able to sustain respiration. The density of air at 32° F and 14.7 pounds pressure is 0.081 pound per cubic foot. The pressure of air at sea level is 14.7 pounds per square inch. Syn., *atmosphere*.

alkaline a. Free or volatile ammonia.

alveolar a. That contained in the air sacs and pulmonary alveoli.

complement [complementary]. The amount that can still be inhaled after a normal inspiration. See also inspiratory reserve volume.

expired a. That which is exhaled from the lungs by expiration.

functional residual a. See functional residual capacity.

inspired a. That which is taken in by inspiration.

liquid a. That which has been liquefied by subjecting it to great pressure; extreme cold is produced by its evaporation.

minimal a. The small amount left in an excised or collapsed lung.

reserve a. Expiratory reserve volume.

residual a. Residual volume.

stationary a. That remaining in the lungs during normal respiration.

supplemental a. Expiratory reserve volume.

tidal a. Tidal volume.

air con·di′tion·ing. The modification of the air—by the control of its temperature and humidity, the removal of particulate water, and the sterilization of pathogenic organisms—for better health, bodily comfort, and industrial needs.

air my·e·log′ra·phy. Radiographic examination of the spinal cord after injecting air into the subarachnoid space.

airol. A trade-mark for a brand of suppositories containing bismuth oxyiodide-subgallate, formula approximately $C_6H_2(OH)_3CO.O.Bi(OH)I$.

air pi'lots' dis·ease' Acute emotional shock; aeroneurosis.

air'sick"ness [G. *aēr* air AS. *seoc*]. A form of motion sickness occurring in airplane flights, principally as result of acceleration; characterized by vertigo, nausea, headache, mental depression and anxiety pallor cold sweats, tremor and vomiting feeling of nervous and muscular tenseness is followed by muscular weakness, faintness, and prostration. Airsickness is the same as seasickness and car sickness in etiology and symptoms, but should not be confused with altitude sickness.

air'way" [*aer*; AS. *weg*] 1 *In anesthesia*, any of several devices used to maintain clear and unobstructed respiratory passage during general anesthesia. 2. A respiratory passage.

endobronchial a. One extending down to one of the bronchi.

endotracheal a. One extending into the trachea.

nasal a. One through the nose.

oral a. One through the mouth.

pharyngeal a. One extending down into the pharynx.

Aitken, John A. [*Scottish surgeon*, d. 1790]. Described bilateral pelviotomy for dystocia.

Aitken, William [*Scottish physician*, 1825–92]. Introduced pill of iron, quinine, strychnine, and arsenic, called *Aitken pill*.

a·ja'cine (·jay seen, ·sin, adj uh·seen, ·sin) $C_{34}H_{48}NO$ An alkaloid from larkspur *Delphinium ajacis*.

ja' ·nine (jack' neen, ·nin) $C_{17}H_{26}NO_4$. An alkaloid from larkspur *Delphinium ajacis*.

aj·mal'i·cine. An alkaloid from *Rauwolfia serpentina*.

l'ma·line. An alkaloid, sometimes called rauwolfine, isolated from *Rauwolfia serpentina*.

aj·mal'i·nine. An alkaloid from *Rauwolfia serpentina*.

ak-. For words beginning with *ak-* not found here, see words beginning ac-.

a"ka·mu'shi (ah"kah·moo shee, ·mew shee, ack" uh·) [Jap. *aka*, red; *mushi*, bug or insect]. Tsutsugamushi disease.

a·kan"thes·the'si a, a·kan"thees the si a. See acanthesthesia.

kar'y·o·cyte [G. *a*-, not; *karyon*, kernel *kytos*, cell]. An erythrocyte; erythroplastid.

a·kar'y·ote [a-; *karyon*]. A nonnucleated cell. Also akaryota. —**a·kar'y·ote** *adj*

ak" thi'si·a, ac"a·thi'si·a [a- G *kathisis*, sitting down]. 1. A condition seen in parkinsonism because of the severe muscular rigidity the patient is compelled to change position at frequent intervals or to rise and pace the floor. 2. *In psychiatry*, inability to sit down; intense anxiety about sitting.

ker" to sis (a ker uh to sis) [G a- not *keras*, horn, -*osis*, condition]. A deficiency or absence of horny tissue, as of the nails.

Åkerlund, Åke Olof [*Swedish roentgenologist*, 1887]. His name is associated with deformity or irregularity of the duodenal cap, observed in roentgenograms of ulcers called *Åkerlund deformity*

a·kin"es·the·si a. See *akinesthesia*.

ak"i·ne si·a (ack"i·nee'shuh, ·see·uh) **ak"i ne sis, ac"i·ne'si·a** [G., from a- *kinēsis*, motion]. Loss of or impaired motor function; immobility from any cause.

a. algera. A form of hysteria characterized by painfulness associated with any kind of movements.

a. amnestica. Immobility from disease of the muscles.

a. iridis. Rigidity or immobility of the iris.

cerebral a. Loss of motion associated with cerebral lesion.

crossed a. A motor paralysis on the side opposite that in which the lesion exists.

reflex a. Impairment or loss of reflex action.

spinal a. Motor impairment due to lesion of the cord.

a·kin"es the'si a, a kin"es the'si a (ay·kin es·thee zhuh, ·see uh, kin) **a ki nes'thi·a** (y·ki nees thee·uh, ki) [a- *kinēsis*; G *aisthēsis*, sensation]. Loss of muscular sense or sense of movement.

ak"i net'ic, ak"i ne sic [a-; G *kinētikos*, relating to motion]. 1. Relating to or affected with akinesia. 2. Amitotic.

A'kis spi no sa. A beetle belonging to the family Tenebrionidae. Serves as an intermediate host for the cysticercoid of *Hymenolepis diminuta*.

ak'o·uum (ack'o·as·um) See *acouasm*.

Al Chemical symbol for aluminum.

al-. A combining form from *all*.

al- [Ar]. A combining form from the Arabic definite article *the*.

al- [L.]. A form of *ad-* assimilated in Latin before *l*

-al [aldehyde]. *In chemistry* suffix indicating *the presence of the aldehyde group*.

-al [L. -*alis*, suffix forming adjectives from nouns]. An adjective suffix denoting *belonging to*, *of* or *pertaining to having the character of appropriate to*

a'la (pl. *alae*) [L., wing]. 1. A wing. 2. Any winglike process. —**alar al'iform, alate,** *adj*

a. auris. Pinna of the ear

a. cinerea. A triangular eminence on the floor of the fourth ventricle of the brain, overlying the dorsal nucleus of the vagus nerve.

alae laterales. ( ) Great wings of the sphenoid bone. (b) Winglike processes on each side of the frontal bone.

a. ethmoidalis. Alar process of the ethmoid

a. lobuli centralis [BNA]. Lateral part of the median cerebellar lobe.

a. magna. Great wing of the sphenoid.

a. nasi. Lower portion of the side of the nose; wing of the nose.

a. of the sacrum. Flat, triangular surface of bone extending outward from the base of the sacrum.

a. of the vomer Either of the two lateral expansions of the superior border of the vomer

a. parva. Small wing of the sphenoid.

al" bam'ine (al"ah·bam een, ·in) [after *Alabama*] A rare element found in monazite sand; now called *astatine*.

al'a·bas"ter [G *alabastros*, from *alabastos*, box for holding perfumes, often made of alabaster]. 1 Hydrous calcium sulfate. 2. Calcium carbonate. —**al" bas'trine,** *adj*

al" bas'trine (al"ah·bas trin) [*alabastros*]. Naphthalene.

a'lae (ay'lee) Plural of ala.

la'li [G a- not *lalia*, talk]. 1. Impairment or loss of speech due to any organic defect or paralysis. 2. Aphasia due to psychic disorder —**alal'ic,** *adj*

mental a. Speech impairment caused by stammering, especially in children. Also called *relative a.*

al·amphylline. Trade-mark for tablet preparation containing aminophylline, aluminum hydroxide, and magnesium trisilicate, characterized by reduced tendency of the aminophylline to produce nausea, and thus allowing increased oral dosage of the same.

lan gine (·lan'jeen, ·jin, al'un jeen, ·jin) An alkaloid obtained from *Alangium salvifolium*. It is parasympathetic stimulant and has been employed as febrifuge and emetic.

al'a nine (al'uh-neen, -nin) $CH_3CH(NH_2)COOH$; alpha-aminopropionic acid or 2-aminopropanoic acid. The L-form is a constituent of many proteins. It is classified as a nonessential amino acid. It is also called *alpha-alanine* (not to be confused with *beta-alanine*, $CH_2NH_2.CH_2COOH$, or 3-aminopropanoic acid); *lactamic acid*, *lactamine*.

Alanson, Edward [*English surgeon*, 1747–1823]. Remembered for his development of a method of amputation in which a division of the skin and muscles is made in the form of a hollow cone.

a lan'tic [Ger. *alant*, elecampane]. Pertaining to or derived from elecampane.

a lan'tol (a-lan'tole, -tol, -tawl, al'un-tole, -tol, -tawl). $C_{10}H_{16}O$. An aromatic liquid obtained from elecampane; formerly used like creosote in pulmonary tuberculosis.

a-lan"to-lac tone. $C_{15}H_{20}O_2$. One of the crystalline principles found in alant camphor obtained by steam distillation of inula; said to have anthelmintic action.

al'a nyl. The univalent radical, $CH_3CH(NH_2)CO—$, of the amino acid alanine.

al"a nyl gly-cine (al uh nil-glye-seen, -glye seen, -sin). A dipeptide formed by the combination of two amino acids, alanine and glycine.

a larm re-ac tion. See under *reaction*.

a-las'trim [Pg., from *alastrar*, to spread, cover]. Mild smallpox.

a la'tus [L.]. An individual in whom there is a marked backward projection of the scapulas.

al'ba [L. *albus*, white]. The white fibrous tissue of the brain; the white matter as opposed to the gray.

reticular a. The reticulated layer of alba on the anterior half of the uncinate gyrus. *O.T.*

Albarran y Dominguez, Joaquin [*Cuban surgeon and urologist in France*, 1860–1912]. Associated with inventions of special cystoscopes, with operations for the removal of the median lobe of the prostate, and with a test of renal function (1905) known as the *polyuria test*. See subcervical *gland*.

al-bas pi-din [*albus*; G. *aspidion*, little shield]. An anthelmintic substance extracted from aspidium (male fern).

Albee, Fred Houdlett [*American surgeon*, 1876–1945]. Noted for his application of mechanical methods to bone operations; for his method of stabilizing tuberculous or fractured spines by the insertion of a tibial graft into the split spinous processes of the vertebrae (spinal fusion); for his bundle-of-reeds technic in which parallel strips of bone are taken from the tibia and used as a bone graft; and for his fracture table, which has had wide use in orthopedic surgery. See also Albee's *saw*.

Albers-Schönberg, Heinrich Ernst [*German surgeon*, 1865–1921]. His name is associated with osteopetrosis, called *Albers-Schönberg disease* (1903). Also remembered for his invention of the compression diaphragm, which intensifies the action of roentgen rays (1903).

Albert, Eduard [*Austrian surgeon*, 1841–1900]. Remembered for his description of painful heel (achillodynia), once known as *Albert's disease*, *Swediaur's disease*. His original work (1882) on arthrodesis of the joints for the partial relief of disability in flaccid paralyses paved the way for the modern operations of joint fusion.

Albert's stain. See under *stain*.

al bes'cent [L. *albescere*, to become white]. Whitish.

al"bi-cans (al'bi-kanz) (pl. *albicantia*) [L. *albicare*, to make white]. White; whitish.

al"bi-cans. One of the corpora albicantia of the ovary.

albicol. Trade name of a preparation of colloidal aluminum silicate, betanaphthyl benzoate, bismuth subsalicylate, and aromatics; used as a gastric antacid, astringent, and protective.

al"bi-du'ri a, al"bi nu'ri a [L. *albidus*, white; G. *ouron*, urine]. 1. Passage of very pale, almost colorless urine, of low specific gravity. 2. Chyluria.

al"bi fac'tion [L. *albus*, white; *facere*, to make]. Act or process of blanching or rendering white.

Albini, Giuseppe [*Italian physiologist*, 1827–1911]. His name is associated with small nodules found on the free edge of the atrioventricular valves in infants.

al'bi nism, al"bi nis'mus (al'bin-izm, al"bi-niz mus), **al bi'no-ism** [*albus*]. Congenital absence of pigment from the skin, hair, choroid coat, and iris. It may be localized, in **partial albinism**, or generalized, in **total albinism**. The latter form is associated with astigmatism, nystagmus, and photophobia. Also called *leukoderma*, *achromodermia*, *congenital achroma*, *achromatosis*.

al bi no (al buy no, al bee no) [Pg., from *albus*]. A person affected with albinism. **—albinot'ic**, *adj.*

al-bi'no-ism. See *albinism*.

al"bi nu'ri a. See *albiduria*.

al'bo-, alb- [*albus*]. A combining form meaning *white*, *whitish*.

al"bo-ci ne re-ous [*albus*; L. *cinereus*, ash-colored]. Having both white and gray matter.

albolene. Trade-mark for a brand of liquid petrolatum and certain products containing the same.

Albright, Fuller [*American physician*, 1900–]. His name is associated with the syndrome of polyostotic fibrous dysplasia (usually asymmetrical and segmental), pigmentation (often segmental) and precocious puberty in females; also called *osteitis fibrosa disseminata*, *Albright-McCune-Sternberg syndrome*. See *fibrous dysplasia*.

Albucasis (**Abū-L-Qāsim, Alsaharavius**) [*Arabian surgical writer in Cordoba*, 936–ca. 1013]. The greatest exponent of the Arabian school. Author of *al Tasrif*, a treatise on medicine and surgery, the medical portion of which contains the earliest description of hemophilia. For a time in the Middle Ages, the surgical portion was the leading textbook on surgery.

albucid. $NH_2C_6H_4SO_2.NH.CH_3CO$. Trade name for sulfacetimide. Para-aminobenzenesulfonacetamide, a sulfonamide employed in the treatment of meningitis, gonorrhea, and other urinary infections.

al"bu gin [L. *albugo*, from *albus*]. A layer of white fibrous tissue investing an organ or part.

a. oculi. Sclerotic coat of the eye.

a. ovarii. Tunica albuginea of the ovary.

a. testis. Tunica albuginea of the testis.

al"bu gin -eous [*albugo*]. 1. Whitish. 2. Belonging to a tunica albuginea.

al"bu gi ni'tis [*albugo*; G. *-itis*, inflammation]. Inflammation of a tunica albuginea.

al-bu'go [L.]. A white spot upon the cornea; corneal opacity.

al-bu'men [L.]. 1. Egg white, consisting chiefly of albumin. 2. The stored food matter in a vegetable seed. 3. Albumin.

al bu'min [L. *albus*, white]. One of a group of protein substances, the chief constituents of animal tissues. They are soluble in water, coagulable by heat, and composed of carbon, hydrogen, nitrogen, oxygen, and sulfur. Some varieties are named after their sources or characteristic reactions: *acid a.*, *alkali a.*, *muscle a.*, *ovum a.*, *serum a.*, *vegetable a.* See American Classification of Proteins in the Appendix. **—albuminous**, *adj.*

acid a. That changed by the action of acid.

a. tannate. An astringent used in diarrhea.
blood a. See serum a.
circulating a. That found in the fluids of the body.
derived a. A modified albumin resulting from the action of certain reagents upon native albumin.
egg a. The form found in egg white.
imperfect a. One which fails to give all the ordinary reactions.
lactalbumin. The albumin found in milk.
muscle a. A variety found in muscle.
native a. Any albumin occurring normally in the tissues.
organic a. That forming an integral part of the tissue.
serum a. The chief protein of blood plasma and other serous fluids. See Table of Normal Values of Blood Constituents in the Appendix.
urinary a. Serum albumin, globulin, and other proteins occurring in the urine to produce albuminuria.
vegetable a. That found in plant or vegetable matter.

al-bu'mi-nate. Any compound of albumin with an acid or base; a product of the hydrolysis of albumin or globulin. These compounds are soluble in dilute acids or bases, and are insoluble in dilute salt solutions, water, and alcohol.

al-bu"mi-nif'er-ous. Containing or yielding albumin.

al-bu"mi-nim'e-ter, al-bu"mi-nom'e-ter. An instrument for the quantitative estimation of albumin in a fluid, as in urine. —**albuminimetry, albuminometry,** *n.*

al-bu"mi-nog'e-nous (al-bew"mi-nodj'i-nus). Producing albumin.

al-bu'mi-noid, al'bu-moid, al-bu'moid. Resembling albumin; applied to certain compounds having many of the characteristics of albumin.

al-bu'mi-noid. Any scleroprotein, a simple protein characterized by being insoluble in neutral solvents, such as collagen, elastin, keratin, etc. See American Classification of Proteins in the Appendix. Also spelled *albuminoid*.

al-bu"mi-nol'y-sin. A lysin which decomposes proteins. Also called *proteolysin*. —**albuminolysis,** *n.*

al-bu"mi-nom'e-ter. See *albuminimeter*.

al-bu'mi-nose (al-bew'mi-noce, -noze). A product of the digestion of fibrin or of any albuminoid in very dilute hydrochloric acid; acid albumin.

al-bu"mi-nu-ret'ic, al-bu-mi-nu'ric [L. *albus*, white; G. *ouron*, urine]. A drug which causes albuminuria. —**albuminuretic,** *adj.*

al-bu"mi-nu'ri-a [*albus*; *ouron*]. The presence in the urine of serum albumin, globulin, and other proteins which may result from disease of the kidneys or from the admixture of blood or pus with the urine; proteinuria. —**albuminuric,** *adj.*

accidental a. See false a.
adventitious a. See pseudoalbuminuria under albuminuria.
a. acetonica. That due to asphyxia. Also called *asasremia a.*
a. of adolescence. See cyclic a.
alimentary a. That following the ingestion of a heavy protein meal.
cardiac a. That due to chronic valvular disease.
colliquative a. A form seen in convalescence from severe fevers.
consumptive a. See colliquative a.
cyclic a. The albuminuria of adolescence, in which a small quantity of albumin appears in the urine at stated times of the day. Also called *physiologic a.*, *simple a.*, *functional a.*
dietetic a. That due to the ingestion of certain forms of food.
emulsion a. That in which the urine has a milky turbidity which does not clear on heating, filtration, or acidification.
exudative a. An albuminuria partially due to the filtration of albumin through the membranes of the kidney and also to the presence in the urine of products of inflammation, as in cases of nephritis.
false a. A mixture of albumin with the urine during its transit through the urinary passages, where it may be derived from blood, pus, or special secretions that contain albumin.
febrile a. That due to fever or associated with acute infectious diseases, slight changes occurring in the glomeruli without organic lesion.
functional a. See cyclic a.
globular a. That due to destruction of blood cells or dependent upon the presence of blood in the urine.
hematogenous a. That occurring in diseases which cause some change in the quality and quantity of the normal protein of the blood.
hypostatic a. That which is present when the patient lies flat on his back, but which disappears when he is erect.
intermittent a. Cyclic albuminuria.
intrinsic a. See true a.
march a. That following prolonged walking or running, as in soldiers or marathon runners.
nephrogenous a. That due to renal disease.
neurotic a. That which is present in epilepsy, exophthalmic goiter, apoplexy, neurasthenia, injuries to the brain, and various psychoses.
orthostatic a. A form dependent upon an upright posture.
paroxysmal a. Cyclic albuminuria.
partial a. A form in which it is assumed that only certain tubules are affected. Also called *a. partialis*.
pathologic a. That which results from a diseased condition, such as that due to degenerative change in the kidneys or to an acute febrile disease.
physiologic a. Albumin in normal urine, without appreciable coexisting renal lesion or diseased condition.
pseudoalbuminuria. That dependent upon the presence of such fluids as blood, pus, lymph, spermatic fluid, or the contents of an abscess cavity in the urine. Syn., *adventitious a.*
residual a. A form in which a small amount of albumin may persist after nephritis.
true a. That due to the excretion of some albuminous constituents of the blood with the water and salts of the urine. Syn., *intrinsic a.*

al-bu"mi-nu'ric. See *albuminuretic*.

al'bu-moid, al-bu'moid. See *albuminoid*.

al-bu'mo-scope. See *horismascope*.

al'bu-mose (al'bew-moce, al'bew-moze). An albuminous substance, among the first of the decomposition products of proteolysis, not coagulated by heat.

al"bu-mo-su'ri-a [*albumin*; G. *ouron*, urine]. The presence of Bence-Jones protein in the urine. Formerly called *Bence-Jones albumose*.

al"bu-tan'nin. Albumin tannate, a yellowish white powder, almost insoluble in water; used in treating diarrhea. See *tannalbin*.

Al"ca-lig'e-nes fe-ca'lis (al"kuh-lidj'i-neez fi-kal'iss). A species of bacteria found in feces and water which resembles the typhoid bacillus. Conn has proposed a new genus, *Agrobacterium*, to include this organism.

al-cap to-nu'ri-a. See *alkaptonuria*.

al'che-my [ML. *alchimia*, from Ar *al-kīmiyā* perhaps from G *chymos*, juice]. The chemical science of the Middle Ages, which attempted to transmute base metals into gold and to find a remedy for all diseases.

Alcock's canal. See under *canal*.

al'co-gel. An alcoholic, colloidal suspension with the dispersion medium a gel.

al'co-hol [ML., from Ar *al-kuhl*, fine powder for painting the eyelids]. 1 A derivative of an aliphatic hydrocarbon which contains a hydroxyl (OH) group. Alcohols are classified on the basis of the number of hydroxyl groups present in the molecule, i.e., monohydric (monatomic), dihydric (diatomic), trihydric (triatomic); or on the basis of the presence of a —CH_2OH (primary alcohol), =CHOH (secondary alcohol), or ≡COH (tertiary alcohol) group. 2. Ethyl alcohol, C_2H_5OH (*alcohol*). A liquid containing not less than 92.3% by weight, corresponding to 94.9% by volume, at 15.56° C of C_2H_5OH. It may be obtained by distillation of fermented grain, starchy substances, or saccharine liquids. It is also prepared by synthesis. It is inflammable, colorless, and possesses a pungent odor and a burning taste. The effects of its ingestion are well known, but are generally misinterpreted, since the initial euphoria, increased pulse rate, and sense of warmth give rise to the belief in its value as a stimulant. Larger doses cause increasing exaltation and excitement with muscular incoordination, and, depending on the individual, eventually lead to sleep, stupor, or active delirium. All these manifestations are due to its action as a central nervous system depressant. *In medicine*, it is used internally for its fuel value in the debilitated, and for its cutaneous vasodilative and euphoric effect. On the skin it is antiseptic and astringent. In 70% solution it is used as an antiseptic for instruments. It exists in wine, whisky, brandy, gin, rum, beer, etc. See *alcoholism*.

absolute a. (*alcohol dehydratum*) Ethyl alcohol deprived of most of its water.

aliphatic a. One derived from a hydrocarbon of the aliphatic or open-chain type.

amino a. See *amino alcohol*.

aromatic a. One obtained from a hydrocarbon of the aromatic series.

batyl a. $CH_2OH.CHOH.CH_2O(CH_2)_{17}CH_3$; 3-(octadecyloxy)-1,2-propanediol; mono-octadecyl ether of glycerin, a solid substance occurring in shark-liver oil.

fatty a. One obtained from a hydrocarbon of the fatty series.

grain a. Alcohol prepared by distillation of fermented grain. See *alcohol*, def. 2.

rubbing a. Any of a variety of preparations used as a rubefacient and containing specially denatured ethyl alcohol, or isopropyl alcohol. It is poisonous.

wood a. See *methyl alcohol*.

al'co-hol ase (al'ko-haul-ace, -aze, al'ko-hol-) See alcohol *dehydrogenase*.

al'co hol ate. 1 A derivative of an alcohol in which the hydroxyl hydrogen is replaced by a base. 2. A preparation made with alcohol.

al"co-hol' ture. An alcoholic tincture.

al'co hol de"hy dra'tum (dee"high dray tum) Dehydrated alcohol; absolute alcohol.

al co hol de- dor 'tum. Ethyl alcohol from which odorous and coloring matters have been removed by filtration through charcoal.

al"co-hol'ic [*al-kuhl*]. Pertaining to, containing, or producing alcohol.

Al"co-hol'ics A non y mous. A fellowship of persons formerly addicted to alcohol who have banded together to cure others of alcoholism.

al'co-hol ism [*al-kuhl*] 1 Alcohol poisoning. 2. Morbid results of excessive or prolonged use of alcoholic liquors. —**al"co hol'ic,** *n.*

acute a. Inebriety; drunkenness. Also called *ebrietas*.

chronic a. A state produced by repeated and long-continued excesses of alcoholic indulgence, and associated with severe disturbances of the digestive and nervous systems. Syn., *dipsorrhexia, dipsomania, temulence*.

al"co hol-om e-ter [*al-kuhl*, G *metron*, a measure]. A hydrometer or other instrument for determining the amount of alcohol in a liquid. —**alcoholometry** *n.*

al"co-hol"o phil'i a [*al-kuhl*, G *philein*, to love]. An appetite for strong alcoholic drink, a craving for intoxicants. *Rare.*

al"co-hol u'ri a [*al-kuhl*, G *ouron*, urine]. Presence of alcohol in voided urine.

al"co-hol'y-sis. Any interaction of alcohol with another substance in which the alcohol also undergoes chemical change.

alcometer Trade name for the apparatus devised by Greenberg and Keator for use in their breath alcohol method of determining the concentration of alcohol in the blood. See breath alcohol *method*.

al'co-sol (al'ko-sol, -sawl, -sole) A colloidal solution in which alcohol is the dispersion medium.

Aldarsone. A proprietary arsenical consisting chiefly of sodium 3-amino-4-hydroxyphenylarsonate-N-methanal sulfoxylate, used by insufflation or in the form of a suppository in the treatment of *Trichomonas vaginalis* vaginitis, and by intravenous injection for central nervous system syphilis. It contains 17.0–18.5% of pentavalent arsenic. Dose, 0.25 Gm. (4 gr.) increased to 1 Gm. (15 gr.) intravenously once a week. See *phenarsone sulfoxylate*.

al'de-hyde [abbr from alcohol *dehydrogenatum*, alcohol deprived of hydrogen]. A class of organic compounds intermediate between alcohols and acids, derived from their corresponding primary alcohols by oxidation and removal of two atoms of hydrogen, and converted into acids by the addition of an atom of oxygen. They contain the group —CHO

aliphatic a. One derived from a hydrocarbon of the aliphatic or open-chain type.

thioaldehyde. An aldehyde in which the oxygen of the —CHO radical is replaced by sulfur

Alder Kurt (1907–) German chemist who shared the Nobel prize in chemistry in 1950 with Otto Diels for the development of the Diels-Alder reaction. See Otto *Diels*

Alderotti, Taddeo (Thaddeus of Florence Florentinus) [*Italian physician and teacher* 1223–1303]. Introduced a new form of medical literature, the so-called *consilia*, or collections of clinical records.

aldinamide. Trade-mark for a brand of pyrazinamide, an antituberculosis drug having the composition of pyrazine-carboxylic acid amide.

al"do bi-on'ic ac'id (al do-buy-on'ick) $C_{12}H_{20}O_{11}$ An acid produced by the hydrolysis of gum arabic and other gums, as well as of the specific carbohydrate of Type 3 pneumococcus. Its components are D-glucuronic acid and D-galactose.

al"do-hex'ose. A hexose that contains an aldehyde group; examples are glucose, galactose, and mannose.

al'dol (al'dole, -dol, -dawl) 1 $CH_3CH(OH)CH_2CHO$. Beta-hydroxybutyric aldehyde, a condensation product of acetaldehyde. 2. One of a class

of condensation products formed from an aldehyde.

al'dol·ase. An enzyme occurring in muscle and capable of splitting fructose-1,6-diphosphate into dihydroxyacetone phosphate and phosphoglyceraldehyde. Syn., *zymohexase*.

al·don'ic ac'id. See under *acid*.

al"do·pen'tose. A pentose containing an aldehyde group; examples are arabinose, ribose, and xylose.

Alder' test. See von Aldor's *test*.

al'dose (al'dose, al dose) Any carbohydrate containing the aldehyde group —CHO

al'do·side. A glycoside resulting from the condensation of an aldose and compound containing hydroxyl group.

al·dos'ter·one. 11β-21 Dihydroxy-3,20-diketo-4-pregnene-18-al, potent adrenocortical hormone which, in very small amounts, maintains the life of adrenalectomized animals. It is isolated from adrenal venous blood and also from the amorphous residue of adrenal extracts after separation of other crystalline hormones. It is very potent regulator of the metabolism of sodium and potassium, many times more active than desoxycorticosterone in its effect on electrolyte metabolism, less effective in regulating carbohydrate metabolism. Formerly known as *electrocortin*.

al"do·tet'rose. A tetrose, such as threose, containing an aldehyde group.

al·dox'ime (al doks im, -docks eem) 1. The product derived from an aldehyde when the oxygen of the —CHO group is replaced by —NOH, forming the —CHNOH group. 2. Acetaldoxime, CH_3CHNOH.

Aldrich's test. See Hanch and Aldrich *test*.

al'drin. Common name for an insecticide containing not less than 95% of 1,2,3,4,10,10-hexachloro-1 4 4 ,5,8,8a-hexahydro-1,4,5,8-dimethanonaphthalene the crystals are soluble in most organic solvents but insoluble in water It is readily absorbed through the skin and is toxic.

a·lec'i·thal (a les'i·thal) [G a- not; *lekithos*, yolk] Having little or no yolk, as the eggs of placental mammals.

lem'bic [Ar. *al-anbiq*, the still, from G *ambix*, cup of still] A vessel that was formerly used for distillation.

A·lep po boil. See *oriental sore*.

A·lep po but'ton. See *oriental sore*.

aler·dex. Trade-mark for protein-free carbohydrate mixture used in modifying milk formulas for infant feeding.

al" trin. A concentrate of *Aletris farinosa*.

al'e·tris [G female slave who grinds corn]. 1. Star grass; unicorn root starwort colic root. 2. The dried rhizome and roots of *Aletris farinosa*. It is tonic, diuretic, and anthelmintic. Formerly popular remedy in colic, dropsy and chronic rheumatism.

al'eu·drin (al yoo·drin, al·yōō drin) Dichloroisopropyl carbamate, $C_4H_7O_2NCl_2$, white crystalline substance, used as hypnotic and sedative. It is sparingly soluble in water but dissolves readily in alcohol, chloroform, ether and fatty oils.

al"eu ke mi a. See aleukemic *leukemia*.

al·eu'ki·a he"mor·rhag'i·ca. See primary refractory *anemia*.

leu'ro·nat. A vegetable protein used as substitute for flour in diabetes.

a·leu'rone (a lew rohn) [G. *aleuron*, wheat-meal]. Small protein particles found in the endosperm of ripe seeds and in special layer in grain of wheat.

Alexander William [*English surgeon*, 1844-1919]. Noted for his operation for displacement of the uterus by extraperitoneal shortening of the uterine round ligaments.

Alexander of Tralles [*Byzantine physician and writer* 525-605]. Author of highly original treatise on intestinal worms and their eradication. Has been referred to as the first parasitologist.

Alexander's test. See *Hemophilus influenzae* antibody *test*.

a·lex'i [G a- not *lexis*, word]. Word blindness; form of aphasia in which the patient is unable to recognize or comprehend written or printed words. Also called *optic a.*, *sensory a.*, *visual aphasia*.

congenital a. Developmental *a*.

cortical a. A variety of sensory aphasia produced by lesions of the left angular gyrus.

developmental a. Marked deficiency in learning to read, not based on obvious visual disturbance and out of line with the individual's mental age and accomplishment quotients in other subjects. Syn. *congenital a*.

motor a. That in which written or printed words are understood, but cannot be read aloud.

musical a. Loss of ability to read music.

lex'in [G *alexein*, to ward off]. Complement.

lex"i phar mac [*alexein*, G. *pharmakon*, drug]. A defensive remedy against poison, venom, or infection.

-ley'dig ism (a·lye dig·izm) Absence of interstitial-cell function usually synonymous with *hypoleydigism*.

Al'gae (al jee) [L.] Group name for one of the major divisions of primitive plants, the Thallophyta, including numerous marine plants, such as the seaweeds, rockweeds, etc., fresh-water pond scums, the stoneworts, and others. Because the algae can synthesize food they are separated from the fungi which are saprophytic or parasitic.

al"ga re'ha, al"gar re'ha. See *mongrels*.

al"ge·don'ic [G *algos*, pain *hēdonē*, pleasure]. Pertaining to pain associated with pleasure. —**algedonics**, n.

al ge si (al jee see·uh, -see·uh) [G *algēsis*, sense of pain]. 1. Sensitivity t pain. 2. Hyperesthesia. Syn., *algesthesia*. —**algesic**, *adj*.

al"ge·sim'e·ter [*algēsis*; G *metron*, measure]. Instrument for determining the acuteness of the sense of pain. —**algesimetry** n.

al"ges the si·a. Algesia.

l get'ic [G *algos*, pain]. Pertaining to or producing pain.

-al gi a [*algos*]. A suffix denoting *pain*.

al'gid [L. *algidus*, cold]. 1. Cold or chilly 2. Denoting pernicious type of malaria in which the patient is in shock. —**algid'ity** n.

al'gin. See *alginic acid*.

al'gin ate. A salt of alginic acid extracted from marine kelp, believed to be polymer of D-mannuronic acid. Certain such salts form viscous sols in water and may then react with calcium compounds to form rigid insol ble gel. It is an essential component of hydrocolloid impression material.

al gin'ic ac'id. A gelatinous polysaccharide derived from marine algae of the *Fucus* type It appears to consist entirely of D-mannuronic acid residues. The sodium salt produces with water *transparent mucilage, for which reason it is used* as suspending agent in pharmacy

al"gi·o mo'tor [G. *algos*, pain; L. *motor* from *movere* to move]. Causing movements ttended with pain.

al"gi·o·mus'cu·lar [*algos*; L. *musculus*, muscle]. Causing pain in the muscles.

alglyn. A trade-mark for the gastric antacid substance dihydroxyaluminum minoacetate

al'go-, al'gi-o-, alg- [*algos*]. A combining form signifying *pain*, or *of* or *pertaining to pain*.

algodin. Trade name of an injectable solution of iodine, sodium iodide, and sodium chloride used in hay fever catarrhal acute otitis media, sinusitis, and rhinitis.

al"go-gen'e-sis, al"go-ge-ne'si-a [*algos*, G *genesis*, production]. The source or origin of pain.

al"go-gen'ic [*algos*; G *gennaein*, from *gignesthai*, to be produced]. Causing pain

al"go-gen'ic [L. *algidus*, cold; G *gennaein*] Lowering the body temperature.

al"go-lag'ni-a [G *algos*, pain; *lagneia*, coition]. A sexual perversion in which the experiencing or infliction of pain heightens sexual gratification, or gives sexual pleasure without intercourse. —**al"golagnist**, *n*.

active a. Sadism.

passive a. Masochism.

al gom e ter [*algos*; G *metron*, a measure]. An instrument for recording the amount of pain suffered by patient.

al"go-pho'bi-a [*algos*; G *phobos*, fear]. Unreasonable or morbid dread of pain.

al'gor [L.]. A sense of chilliness or coldness.

a. mortis. Chill of death.

al"go-spasm [G. *algos*, pain; *spasmos*, *spasm*]. Painful spasm or cramp. —**algospas'tic**, *adj*

Alhazen (Ibn al-Haitham) [*Arabian physicist and optician*, ca. 965-1039]. Important figure in the history of optics. He maintained that the visual rays pass from the object to the eye, and not vice versa.

Alibert, Jean Louis Marc [*French dermatologist*, 1768-1837]. Classified skin diseases. His name has been given to mycosis fungoides (1806) keloid (1810) sycosis vulgaris (1825) and oriental sore (1829)

al'i ble [L. *alibilis*, nutritive]. Nutritive absorbable and assimilable, as food.

al'i bour wa'ter (al'i-boor) A lotion containing copper sulfate 10, zinc sulfate 35, camphor 1 alcohol 9 saffron tincture 1 and distilled water to 1000. Used (well diluted) as wet dressing in eczema.

al"i-cy'clic (al"i-sigh click, -sick'lick) [G *aleipher* fat; *kyklos*, circle]. Having the properties of both aliphatic (open-chain) and cyclic (closed-chain) compounds.

alidase. Trade-mark for hyaluronidase.

a"lien-a tion (ay"lyen-ay'shun, ay"lee en al"yen-) [L. *alienatio*, alienation]. *In psychiatry* mental derangement insanity

a'lien-ist (ay'lyuh nist, ay'lee uh-nist) [L. *alienus*, of another foreign, strange] 1. A psychiatrist physician who is expert in the diagnosis and treatment of mental disorders. 2. *I legal medicine* medical expert testifying in an insanity hearing. —**alienism**, *n*.

Ali ibn al Abbas. See *Haly Abbas*.

Ali ibn Isa. See *Jesu Haly*.

al'i ment [L. *alimentum*, from *alere*, to nourish]. Any food or nutritive substance.

al"i men'ta-ry [L. *alimentarius*, from *alere*]. 1 Nourishing, nutritious. 2. Of or relating to food and nutrition. 3. Pertaining to or caused by diet.

al"i men ta'tion [*alere*]. Act of nourishing with food; feeding.

artificial a. See artificial *feeding*

forced a. See *forced feeding*.

parenteral a. Feeding other than via the alimentary tract, such as subcutaneously or intravenously

rectal a. The nourishing of patient by the administration of small quantities of food through the rectum.

voluntary a. Nourishment of those who are willing to be fed, but are incapacitated.

al"i men"to ther'a py [*alere*; G. *therapeia*, treatment]. The treatment of disease by systematic feeding dietary treatment.

al"i na sal (al nay'sul, -nay'zul) [L. *ala*, wing; *nasus*, nose]. Pertaining to the wing of the nose.

al"i phat'ic [G *aleipher fat*]. 1 Pertaining to fat. 2. Belonging to the open-chain series of organic compounds.

al"i quot. 1. A number which will divide larger number without remainder 2. *In quantitative chemistry* definite known fraction of larger sample, used to facilitate volumetric analysis.

al"i-sphe'noid [L. *ala*, wing; G *sphenoeides*, wedge-shaped]. 1. Pertaining to the greater wing of the sphenoid bone. 2. The bone that in adult life forms the main portion of the greater wing of the sphenoid.

a liz'a-rin. $C_6H_4(CO)_2C_6H_2(OH)_2$ 1,2-Dihydroxyanthraquinone. The reddish coloring matter of *Rubia tinctorum*, dyers madder. Prepared synthetically from anthracene, it is brownish yellow powder or orange-red crystals, insoluble in cold water soluble in alcohol or ether. Used in dyeing and in the manufacture of dyestuff ; also as pH indicator

a. blue. $C_6H_4(CO)_2C_6H_4N(OH)_2$. Dihydroxyanthraquinone-quinoline. Dark blue, lustrous crystals used as dye and pH indicator *Syn.*, *anthracene blue*.

a. carmine See *a. red S*.

a. red S. (C.C.) An acid aniline dye, sodium alizarin sulfonate; an ingredient in some mitochondrial staining methods and used as stain for bone. Also called *alizarin red, water soluble; alizarin carmine*

a. yellow Sodium p-nitraniline salicylate, used as pH indicator

a. yellow C. See *gallacetophenone*.

a. yellow GG $O_2N.C_6H_4.N:N.C_6H_3(OH)COONa$, sodium m-nitrobenzene-azosalicylate. A yellow powder used as pH indicator Also called *salicyl yellow*

a. yellow R. The p-derivative corresponding to a. yellow GG used as pH indicator

alkagel. Trade-mark for aluminum hydroxide supplied in tablet form.

al"ka-les'cence (al"kuh-les' see-uh) See *alkalemia*.

al"ka-le'mi a [Ar *al-qili*, ashes of saltwort; G *haima*, blood]. Increase of the hydrogen-ion concentration in the blood Increased alkalinity of the blood.

al"ka les'cent (al"kuh-less unt) Somewhat alkaline. —**alkalescence**, *n*.

al'ka-li (al'kuh-lye) (pl. alkalies, alkalis) [Ar *al-qili*] 1 Essentially hydroxide of an alkali metal 2. A class of compounds which react with acids to form salts, turn red litmus blue, saponify fats, and form soluble carbonates. 3. The term is sometimes applied also to carbonates of alkali metals.

a. albuminate. A compound of albumin and an alkali metal. A soluble powder used as culture medium.

a reserve. See under *reserve*.

caustic a. Commonly the hydroxide of potassium or sodium.

fixed a. Any metallic hydroxide.

volatile a. Ammonium hydroxide also ammonium carbonate.

al'ka-li blue. Sodium triphenylrosaniline sulfonate; dye.

al"ka lim e-ter [*al-qili*, G. *metron*, measure]. A instrument for estimating the alkali in substance. —**alkalimet'ric**, *adj*. **alkalimetry** *n*.

al'ka-line (al'kuh-lyne, -lin) [*alkali*]. 1. Containing more hydroxyl than hydrogen ions. 2. Having the qualities of, or pertaining to, an alkali.

al'ka line-earth met'als. The divalent elements, calcium, strontium, and barium. Some include magnesium in the group.

al'ka-line earths. The oxides of calcium, strontium, and barium. Some also include magnesium oxide.

al'ka line tide. The temporary decrease in acidity of urine and body fluids after eating, attributed by some to the withdrawal of acid from the blood for gastric digestion.

al"ka-lin'i ty [*alkali*]. Quality of being alkaline.

al'ka li ize, al'ka lize [*alkali*]. Render alkaline. —**alkalinization, alkalization,** *n.*

al"ka-li-nu'ri-a [*alkali*; G. *ouron*, urine]. Alkalinity of the urine.

al"ka-li pe'ni-a (al"kuh-lye-pee'nee uh) [*alkali*; G *penia*, poverty]. A condition in which the body alkali is under normal levels.

al"ka-li ther'a py (al"kuh-lye-) **al"ka-lo ther'a-py** [*alkali*; G. *therapeia*, treatment]. 1. Use of alkalis in treating disease. 2. Administration of large doses of alkaline medicaments, as in peptic ulcer.

al'ka lize. See *alkalinize*.

al'ka-loid. A term applied to naturally occurring, basic, organic, nitrogenous compounds, usually of plant origin. Most plant alkaloids are found in phanerogams, rarely in cryptogams. They occur generally as salts of organic acids, sometimes as free bases, esters, amides, or in glycosidic combination. Alkaloids are usually colorless, crystalline compounds containing carbon, hydrogen, oxygen, and nitrogen. A few are liquids and, as a rule, contain no oxygen; some are colored. Most are insoluble in water, soluble in organic solvents, and react with acids to form salts which are soluble in water and insoluble in organic solvents. Many alkaloids are medicinally valuable. —**alkaloi'dal,** *adj.*

animal a. See *ptomaine* and *leucomaine*.

cadaveric a. See *ptomaine*.

putrefactive a. See *ptomaine*.

al"ka lo'sis [*alkali*; G *-osis*, condition]. A condition in which the bicarbonate content of the blood is relatively high and there is a tendency toward alkalemia. It may be the result of the ingestion of large amounts of sodium bicarbonate, persistent vomiting with the loss of hydrochloric acid, or forced breathing with the reduction of carbon dioxide from blood. (The last is also called *respiratory*, *acapnial*, or *gaseous alkalosis*.) It is marked by slow pulse, vertigo, and jerky muscular action.

altitude a. A type of respiratory alkalosis resulting from hyperventilation during accommodation to increased altitude.

compensated a. Increased blood bicarbonate without a change of the $H_2CO_3:NaHCO_3$ ratio, and hence no change in pH.

metabolic a. A condition characterized by an increased pH and bicarbonate concentration in the body fluids, caused either by the accumulation of alkaline salts or by the loss of fixed acid from the body, as in the excessive ingestion of alkali or loss of chloride by vomiting. Hyperfunction of the adrenals is often accompanied by metabolic alkalosis.

respiratory a. Alkalosis resulting from a decrease of the carbonic acid fraction of blood relative to the bicarbonate fraction with resultant increase in pH; this occurs in excessive elimination of carbon dioxide, as in hyperventilation.

uncompensated a. Increased blood bicarbonate with a change in the ratio $H_2CO_3:NaHCO_3$, and hence an upward shift of the pH.

al"ka lo-ther'a py. Alkalitherapy.

alkamald. Trade name for tablets containing sulfanilamide and sodium bicarbonate.

alk a mine. An amino alcohol.

al'kane. Any member of the paraffin series of hydrocarbons. See *paraffin*.

al'ka net [Sp., dim. of *alcana*, henna, from Ar. *al-hinna*]. The root of the herb, *Alkanna tinctoria*, yielding a red dye used in staining wood and to give a red color to various pharmaceutical preparations.

al kan nin, al kan'in [*alcana*]. Alkanna-red, a valuable coloring matter obtained from alkanet.

al'ka-nol (al'ka nol, al-ka nol). An alcohol derived from any alkane.

al"ka nol' amine. An amino alcohol.

al kap'ton, al kap tone [*alkali*; G. *haptein*, to possess]. A yellowish, resinous, nitrogenous substance occasionally found in urine. It is identified as homogentisic acid.

al kap"to nu ri-a [*alkali*; *haptein*; G. *ouron*, urine]. The presence of alkapton (homogentisic acid) in the urine. A hereditary defect of metabolism characterized by the incomplete oxidation of phenylalanine and tyrosine, resulting in the excretion of homogentisic acid in the urine, which may turn dark. In time, ochronosis may develop.

al"ka ver'vi. Generic name for a fraction of the alkaloids of veratrum viride obtained by a process involving selective extraction of the crude drug and selective precipitation of the extract; supplied under the trade-mark *veriloid*.

al"ke ken gi (al"kee ken jee) [Ar. *al-kakanj*; Per. *kakanj*, a resin]. The *Physalis alkekengi*, the winter cherry or strawberry tomato, whose leaves have been used as diuretic.

al'kene. Any member of the series of unsaturated aliphatic hydrocarbons (ethylene series) having one double bond and represented by the general formula, C_nH_{2n}.

al ke nol (al-ke nol). An alcohol derived from any alkene.

al ker mes (al kur meez, al"kur-meez). See *kermes*.

alk-ox'ide. Any of a class of salts produced when the hydrogen atom of the hydroxyl group of an aliphatic alcohol is replaced by a metal; specific salts are named for the particular alcohol involved, as sodium methoxide for CH_3ONa. Syn., *alcoholate* (definition 1).

alk ox y. Of or pertaining to alkoxyl.

alk ox'y-. In chemistry, a combining form for *alkoxyl*.

alk-ox yl. Any of a class of univalent radicals representing an aliphatic alcohol from which the hydrogen atom of the hydroxyl group is omitted; specific radicals are named for the particular alcohol involved, as methoxyl for $CH_3O—$. Syn., *alkoxy*.

al'kyl. Any one of the univalent saturated hydrocarbon radicals of the general formula C_nH_{2n+1}, as methyl (CH_3), ethyl (C_2H_5), propyl (C_3H_7).

al"kyl-a mines (al"kil-uh-meen, al"kil-am'in). A substance having the constitution of ammonia in which an alkyl replaces hydrogen; one, two, or three hydrogen atoms of the ammonia molecule may be replaced, yielding *primary* or *monoalkyl amines*, *secondary* or *dialkylamines*, and *tertiary* or *trialkylamines*, respectively.

al'kyl ate. A compound derived from a monohydric alcohol by replacement of the hydroxyl hydrogen by a metal.

al"kyl a tion. The replacement of a hydrogen atom in a cyclic compound by an alkyl radical, as by the introduction of a side chain into an aromatic compound.

al"kyl-ol' amine (al"kill ol'a-meen). An aliphatic

compound which contains both a hydroxyl and an amino group.

al kyl' gen. Any one of the alkyl halides.

al'kyne (al'kyne) Any member of the series of unsaturated aliphatic hydrocarbons having triple bond and represented by the general formula, C_nH_{2n-2}. Acetylene is the first hydrocarbon of the series, hence sometimes called acetylene series.

al ky'nol. An alcohol derived from any alkyne.

al"la-ches the si-a, al"la-chaes-the si a (al uh-kess thee zhuh) **al"lo-ches the'si a, al"lo-chaes-the si a** [G *allachē*, elsewhere; *aisthēsis*, feeling]. A tactile sensation experienced remote from the point of stimulation. Syn., *allesthesia*.

al"les the'si a (al ess-thee zhuh, -zee-uh) See *allochesthesia*.

allansol. Trade name for a saturated solution of allantoin.

al lan'to-, allant [G *allas*, sausage]. A combining form usually meaning *allantois* or *allantoid* (see under *allantois*)

al lan"to-cho ri-on (a lan to-kor ee-on) [*allas*; G. *chorion*, membrane]. The allantois and chorion fused together and thus forming single structure; chorion supplied by allantois blood vessels. Syn., *chorion allantoideum*.

al lan"to-en ter'ic [*allas*; G. *enteron*, intestine] Pertaining to the allantois and to the enteron.

al lan"to gen e-sis [*allas*; G *genesis*, production]. The development of the allantois.

Al"lan-toi'de-a [*allas*; G. *eidos*, form]. Amniota. —**allantoidean, allantoidian,** *adj*

al lan-toi"de-an gi-op'a-gous [*allas*; *eidos*; G. *angeion*, vessel; *pagos*, that which is fixed]. Denoting the parasitic individual in cases of unequal monochorionic twins, the lesser of which is placental parasite (omphalosite) dependent for its existence on the circulation of the larger (autosite) See *acardiacus*. Syn., *omphaloangiopagous*.

al lan'to in. $NH_2CO.NH.\overline{CHCO.NH.CO\,NH}$. A crystallizable substance found in allantois fluid, fetal urine, amniotic fluid, and some plants. It is produced by the oxidation of uric acid; used as local pplication to wounds, ulcers, osteomyelitis, etc., to accelerate cell proliferation.

al lan'tois (a lan toyss, lan'to-iss) [*allas*; *eidos*]. An extraembryonic membrane arising as an outgrowth of the cloaca in amniotes. It functions as an organ of respiration and excretion in birds and reptiles and plays an important part in the development of the placenta in most mammals, its blood vessels forming the important pathways for the circulation of the blood between fetus and placenta. —**allanto'ic, llantoid** *adj*

allantomide. A proprietary combination of allantoin and sulfanilamide used as cell proliferant and bacteriostati agent.

allanturea. Trade-mark for an ointment of allantoin, urea, chlorobutanol, and benzocaine.

al-las"so-ther'a py [G *allassein*, to change; *therapeia*, treatment]. Treatment which requires changing the general biologic conditions of the individual.

allatrem. Trade-mark for an expectorant preparation containing chloroform, potassium citrate, potassium guaiacolsulfonate, ipecac fluidextract, and dilute phosphoric acid.

al lax'is [G., from *allassein*]. M tamorphosis transformation.

al"le-gor"i-za tion [G. *allēgorein*, to speak allegorically]. In *psychiatry* the formation of apparently meaningless new words or sentences, frequently demonstrated in the schizophrenic reactions, especially the hebephrenic type; neologisms.

al lele' al-lel' [G *allēlōn*, of one another]. One of a pair or any one of a series, of genes having the same locus on homologous chromosomes. —**allelic,** *adj*

al le'lo- (a-lee'lo- a-lel'o-) [*allēlōn*]. A combining form denoting *of one another* reciprocally

al lel"o-cat a-lyt'ic [*allēlōn*, G *katalytikos*, from *katalysis*, to dissolve]. 1. Denoting two substances, each decomposing in the presence of the other; mutually catalyti or destructive. 2. Promoting reproduction; when two or more unicellular organisms are placed in drop of culture medium, reproduction proceeds more rapidly than when one organism is present. —**allelocatal'ysis,** *n.*

al le'lo-morph (a-lee'lo-morf a-lel'o-) [*allēlōn*; G *morphē*, form]. 1 One of pair of sharply contrasted Mendelian characteristics. Also, the genes in identical loci of homologous chromosomes, upon which the characteristics depend. 2. I chemistry one of two or more isomorphic substances which contain the same atoms and of the same valences but differing in the manner of their linkage. 3. I chemistry, the first of mixture of isomers in solution to separate or crystallize. —**allelomor'phic,** *adj.*, **allelomor phism,** *n.*

al lel" tax'is (a lel o-tack'sis, lee'lo-) **al lel'o-tax"y** [*allēlōn*, G. *taxis*, arrangement]. The development of an organ or part from several different embryonic structures.

Allen, Edgar [*American anatomist*, 1892-1943]. Known for his work with Doisy in isolating the active principle from ovarian hormones (1923)

Allen Frederick Madison (1879-) American physician who discovered the nature of hydropic degeneration of the pancreatic islands (1912) He introduced caloric restriction in diabetic treatment (1914) salt-free diet for hypertension (1920) surgical refrigeration (1937) saline infusions and reduced temperature for shock (1939)

Allen, Willard Myron [*American physician*, 1904-]. With Corner discovered progesterone, the hormone of the corpus luteum (1929)

al'lene. The gaseous hydrocarbon $CH_2{:}C{:}CH_2$. Syn., *propadiene*.

Allen's test. See under *test*.

al len'the-sis [G *allos*, other; *enthesis*, putting in]. I troduction of foreign substances into the body

al'ler gen [*allos*; G *ergon*, work *gennethai*, from *gignesthai*, to be produced]. Any agent capable of producing a state or manifestation of allergy The commonest allergens are drugs, pollens, fungi, animal hair and foods. The drugs most frequently causing allergy are aspirin, aminopyrine, quinine, morphine, barbiturates, sedormid, sulfanilamide, dinitrophenol, arsphenamine, phenolphthalein. The pollens most frequently causing allergy are ragweed, sagebrush, goosefoot, pigweed, amaranth, grass, and some trees and shrubs The most frequent fungi allergens are *Alternaria*, *Hormodendrum*, *Helminthosporium*, *Aspergillus*, *Penicillium*, *Chaetomium*, *Phoma*, ergot, yeasts, torulae, *Cephalosporium*, *Trichoderma*, *Candida*, *Botrytis*, *Fusarium*, smuts, rusts, *Mucor* *Rhizopus*, *Trichophyton*, *Candida albicans*, and mushrooms. Horse dander the hair of cats, dogs, cows, rabbits, sheep, goats, and guinea pigs, and feathers are common allergens. The foods most frequently causing allergy are egg, wheat, milk, peas, beans, uts, fish, onion, white potato, chocolate, and fruits, as berries and cantaloupe. —**allergen'ic,** *adj* **allergenic'ity** *n.*

epidermal a. The dander of animal hairs or feathers which causes allergic reactions.

al'ler-gid. A cutaneous eruption caused by an allergen. Also see *bacterid*.

nodular dermal a. The allergid, possibly bacterid, characterized by nodules, purpuric macules, and erythematopapules. Syn., *Gougerot's trisymptomatic disease.*

al'ler·gin [*allos*; *ergon*]. The antibody which is produced by certain allergen, and which is specific to it. *Rare.*

al'ler·gist [*allos*; *ergon*]. One skilled in the diagnosis and treatment of allergic diseases.

al"ler·gi·za'tion [*allos*; *ergon*]. Sensitization: the introduction of foreign substances into an organism.

al"ler·go·der'mi·a [*allos*; *ergon*; G. *derma*, skin]. An allergic skin affection.

al"ler·go·sis [*allos*; *ergon*; G. *-osis*, condition]. Any allergic disease.

al'ler·gy [*allos*; *ergon*]. Altered reaction capacity to specific substances (which causes no symptoms of hypersensitivity in the nonsensitive. In the strict sense, this is an antigen-antibody mechanism, although the antibody is not always demonstrable. The allergens (antigens) may be proteins, carbohydrates, lipids, and haptens. There are four types of allergic diseases: ( ) Anaphylaxis, response induced by previous sensitization, usually refers to the state of hypersensitivity which occurs in experimental animals. (b) Atopic diseases, which depend upon an inherited constitutional capacity: include hay fever, vasomotor rhinitis, asthma, urticaria, infantile-type eczema, drug sensitivities, and other rare expressions. (c) Serum sickness. (d) Contact dermatitis. 2. Acquired sensitivities to drugs and biologicals (may be true anaphylaxis). —aller'gic, *adj.*

bacterial a. A hypersensitivity to bacteria or parts or products thereof; allergic exposure is characterized by either immediate (anaphylaxis) or delayed (tuberculin-type reaction) allergy.

cardiovascular a. Allergic reactions in which the cardiovascular system, or parts thereof, act as the shock organ.

cerebral a. Symptoms of bizarre and unusual cerebral disturbances occurring in allergic persons.

delayed a. See delayed *hypersensitivity*.

entomogenous a. Allergic reaction to insects and their products.

extrinsic a. An allergic reaction caused by an allergen that originates outside the body.

familial nonreaginic a. A hypersensitivity to foods occurring upon hereditary basis: no antibody is demonstrable either by skin testing or the Prausnitz-Küstner reaction. Symptoms of allergic exposure are asthma, urticaria, anginal pain, fatigue, petit mal.

immediate a. See immediate *hypersensitivity*.

infectious a. Delayed hypersensitivity in which the antigen is part or product of an infecting microorganism, including bacteria, spirochetes, fungi, protozoa, rickettsiae, or viruses.

intrinsic a. An allergic reaction in which the allergen may possibly originate within the body.

physical a. The response of some individuals to various physical factors, as cold, heat, sunlight, or mechanical irritation, manifested by urticaria, edema, and varying systemic reactions.

Al"les·che'ri·a (al"es-keer'ee-uh). A genus of fungi of the class Ascomycetes.

A. boydii. The species regarded as one of the causes of mycetoma; it produces white or yellowish white granules.

al"les·the'si·a, al"laes·the'si·a. See *allochesthesia*.

al'le·thrin. A coined generic name for the liquid insecticidal chemical representing *dl*-2-allyl-4-hydroxy-3-methyl-2-cyclopenten-1-one esterified with mixture of cis- and trans-*dl*-chrysanthemum monocarboxylic acid: the chemical is an allyl homolog of cinerin I, which is an active insecticidal constituent of pyrethrum flowers.

al'li·cin [L. *allium*, garlic]. The antibacterial principle obtained from common garlic (*Allium sativum*). It contains about 40% sulfur.

al"li·ga'tion [L. *alligatio*, binding to]. In pharmacy, the formula for solving problems concerning the mixing of solutions of different percentages; the rule of mixtures. If two substances when mixed retain the specific values of property, the value for the mixture can be calculated from the equation, $\frac{aA + bB}{\ \ + b}$ where and b are the proportions and A and B equal the respective values for the property.

al'li·ga"tor for'ceps. In surgery, toothed instrument, one jaw of which operates with double lever.

allimin. A proprietary tablet of garlic and parsley used as vasodilator.

Allingham, Herbert William [English surgeon, 1862–1904]. Introduced his operation for inguinal colostomy just above the inguinal ligament, called *Allingham operation.*

Allingham, William [English surgeon, 1830–1908]. Introduced radical operation, called *Allingham operation*, which illustrates type of rectal extirpation for cancer: making an oval incision around the bowel into both ischiorectal fossae, he isolated the bowel above the tumor and removed it in toto with scissors or cautery. Described anal fissure, called *Allingham painful ulcer.*

Allis, Oscar Huntington [American surgeon, 1836–1921]. Invented an inhalation device for administration of anesthetics by the drop method, and surgical forceps with fine, blunt, interlocking teeth which are adapted especially to securing and holding intestine, stomach wall, and hollow viscera at the incised edges during surgical operations. Described sign indicative of fracture of the femur. See Allis' *sign.*

allisatin. Trade name for tablet containing the active principles of fresh garlic (*Allium sativum*) used as sedative-antispasmodic in intestinal disorders.

al·lit"er·a'tion [L. *ad*, to; *littera*, letter]. A form of dysphrasia in which the patient chooses words with the same consonant sounds.

Al'li·um [L. garlic]. A genus of bulbous plants of the Liliaceae family, species of which include garlic, onion, leek, and chives.

al'li·um. Any plant, bulb, or flower of the genus *Allium*, specifically the bulb of garlic (*Allium sativum*) used medicinally as hypotensive, pectoral, antiseptic, anthelmintic, and rubefacient.

al'lo-, all- [G. *allos*, other]. 1. A combining form denoting *differentiation from the normal*, *extraneousness*, or *reversal*. 2. In *chemistry*, combining form denoting an *isomer*, *close relative*, or *variety of compound*, or denoting the *more stable of two isomers*.

al"lo·chaes·the'si·a. See *allochesthesia*.

al"lo·chei'ri·a (al"o-kigh'ree-uh) [*allos*; G. *cheir*, hand]. A form of allachesthesia occurring rarely in tabes dorsalis: if one extremity is pricked, the sensation is felt in the opposite.

al"lo·ches·the'si·a. See *allachesthesia*.

al"lo·che'zi·a (al"o-kee'zee-uh), **al"lo·che'ti·a** (al"o-kee'shee-uh, -kee'tee-uh) [*allos*; G. *chezein*, to ease oneself]. 1. The passage of feces from the body through an abnormal opening. 2. The passing of nonfecal matter from the bowels.

al"lo·cho·les'ter·ol (al"o-ko-les'tur-ole, -ol, -awl) [*allos*; G. *cholē*, bile; *stereos*, stiff]. A sterol found in wool fat.

allochrysine. Trade-mark for solution of gol

sodium thiopropanolsulfonate used by intramuscular injection in phthisis.

al"lo·cor'tex [*allos*; L. *cortex*, bark]. Those areas or portions of the cerebral cortex where lamination is absent or incomplete, as the olfactory cortex, representing less developed or more primitive areas. Syn., *heterogenetic cortex*, *heterotypical cortex*.

al"lo·e·o'sis (al ee-o sis) [G *alloiōsis*, alteration]. Change alterative effect recovery from illness. —**alloeot'ic**, *adj* *n*.

al"lo·er·o·tism, **al"lo·e·rot'i·cism** [G. *allos*, other; *erōs*, love]. Sexual excitement that is induced by and directed to another not oneself opposed to autoerotism.

al·lom'e·try [*allos*; G *metron*, measure]. 1. The quantitative relation between part and the whole or another part, as the organism increases in size. Syn., *heterauxesis*. 2. The quantitative relation between the size of part and the whole or another part, in a series of related organisms that differ in size. Syn., *allomorphosis*.

al"lo·mor'phism [*allos*; G *morphē*, form]. The property possessed by certain substances of assuming different form whil remaining unchanged in constitution. —**allomorphic**, **allomorphous**, *adj*

al"lo·mor'pho·sis (al"o-mor'fo-sis, -mor-fo sis) [*allos*; G *morphōsis*, shaping]. A type of allometry which deals with the relation of part to the whole, or to another part, in series of organisms that differ in size and in genetic constitution; as the relation of j w length to skull length of the adult in series of breeds of dogs. Also see *heterauxesis*.

allonal. Trade-mark for tablet containing allyl isopropyl barbituric acid and acetophenetidin.

al"lo·path, **al·lop thist** [*allos*; G *pathos*, disease]. An incorrect designation for regular medical practitioner

al·lop·a·thy [*allos*; *pathos*]. System of medical treatment using remedies that produce effects upon the body differing from those produced by disease the opposite of the homeopathic system. It has been pplied erroneously to the so-called regular medical profession. —**allopath'ic**, *adj*

al·loph sia [*allos*; G *phasis*, speech]. Incoherency of speech delirium. *Obs.*

al"lo·plasm [*allos*; G. *plasma*, from *plassein*, to form]. *In biology*, supposedly less fundamental form of protoplasm from which nonindependent flagella and various cytoplasmic fibrils are formed. —**alloplasmat'ic**, *adj*

al"lo·plast [*allos*; G. *plastos*, from *plassein*]. *In biology* plastic compound of two or more tissues, as opposed to homoplast.

al"lo·plas"ty [*allos*; *plastos*] 1 A plastic operation in which material from outside the human body is utilized, such as ivory animal bone, gold, silver plastics, etc. Distinguished from autoplasty and heteroplasty 2. *I* *psychoanalysis*, the process whereby the libido of the growing individual directs its energies way from self and toward other individuals and objects. —**al·lo·plas'tic**, *adj*

al"lo·pol'y·ploid [*allos*; G *polys*, many; *-ploos*, -fold *eidos*, form]. A hybrid with more than two complete sets of chromosomes derived from different species.

al"lo·preg nane. $C_{21}H_{36}$; 17-ethylandrostane saturated, solid, steroid hydrocarbon, the parent substance of adrenal cortical and certain other hormones. Syn., *5-α-pregnane*.

al"lo·psy·che (al" sigh'kee) [*allos*; G *psychē*, soul]. The mind or psyche of another

al"lo·psy'chic (al o-sigh'kick) [*allos*; *psychē*]. Pertaining to mental processes in their relation to the outside world, as opposed to autopsychic.

β-o-al"lo·py'ran ose, Allose.

al"lo·rhyth'mia (al rith mee-uh, -rith mee uh) [*allos*; G *rhythmos* rhythm]. An irregularity of the pulse which is repeated continuously —**allorhythmic**, *adj*

all"-or-noth'ing. Occurring either completely or not at all, as the response of single nerve or muscle unit to stimulus.

al'lose. $C_6H_{12}O_6$ an aldohexose sugar stereoisomeric with D-glucose, prepared by synthesis It is more exactly denoted as D-*allose*, or *β-D-allopyranose*.

al"lo·some [*allos*; G *sōma* body]. 1. Originally any chromosome distinguished from ordinary chromosomes (autosomes) by certain peculiarities of form, size, and behavior but now the term is usually used as synonymous with sex chromosome an accessory chromosome. Syn., *heterochromosome*. 2. A cytoplasmic inclusion introduced from without.

paired a. One of pair of similar allosomes, diplosome.

unpaired a. A monosome; an accessory chromosome.

al"lo·ste a to des (al o-stee uh-to deez) [*allos*; G *steatōdēs*, like tallow]. A perversion or disturbance of the sebaceous secretion.

al"lo·syn ap'sis [*allos*; G *synapsis*, contact]. A form of synapsis in hybrids, characterized by pairing between the chromosomes of both species.

al"lo·therm [*allos*; G *thermē*, heat]. An organism whose temperature is directly dependent pon that of its environment.

al·lot"ri·o·don ti a [G. *allotrios*, belonging to another *odōn*, tooth]. 1 Transplanting of teeth. 2. Occurrence of teeth in abnormal places, as in teratomas.

al·lot"ri·o·geu'si·a (a-lot ree o-gew see-uh, -jew see-uh) [*allotrios*; G. *geusis*, t taste] 1 Perversion of taste sense. 2. Abnormal appetite.

al·lo·tri'o·lith (al o-try lith, -lot ree-o lith) [*allotrios*; G. *lithos*, stone]. A stone or calculus found in an unusual location.

al·lot ri·oph' gy, **al·lot"ri·o·pha gi a** [*allotrios*; G. *phagein*, to eat]. 1 Depraved or unnatural appetite. 2 Eating of unusual or injurious substances. See *pica*.

al·lot ri u'ri a [*allotrios*; G *ouron*, urine]. Abnormality of the urine.

al"lo·trope [G *allos*, other; *tropos*, turn]. One of the forms in which an element capable of assuming different forms may appear

al"lo·troph'ic [*allos*, G *trophē*, nourishment]. Altered or modified by digestion so as to become innutritious.

al"lo·trop'ic [*allos*, G *tropos*, turn] 1. Pertaining to, or exhibiting, allotropy 2. *I* *psychiatry*, denoting personality which is concerned about others not egocentric.

al·lot'ro·py (lot ro pee, al' tro pee) **al·lot ro·pism** [*allos*; *tropos*] 1 Occurrence of an element in two or more distinct forms with differences in physical properties, as carbon, phosphorus, and sulfur 2. Appearance in an unusual or abnormal form. 3. An attraction or tropism between different cells or structures, as between sperms and ova. 4. Adolf Meyer s term for allopsyche.

al"lo·tryl'ic [G *allotrios*, strange; *hylē*, matter]. Caused by strange or foreign principle or material entheta.

allox- [G *allas*, sausage *oxys*, sharp]. A combining form for *alloxan*.

al"lox an (al ock-san lock sun) $C_4H_2N_2O$

Mesoxalyl urea. A crystalline substance produced by the oxidation of uric acid. It has been found in the intestinal mucus during diarrhea and is used for the production of experimental diabetes through selective necrosis of the islets of Langerhans.

al"lox-an' di"a be tes. Severe hyperglycemia, following the experimental administration of alloxan. In animals, the symptoms and the degeneration of pancreatic islets are similar to those seen in human diabetes mellitus.

al"lox-an'ic ac'id. $NH_2CO.NHCO.COOH$. A crystalline acid obtained by treating alloxan with alkali.

al"lox-an tin. $C_8H_4O_8N_4.2H_2O$. A substance obtained by the reduction of alloxan. Syn., *uroxin.*

al-lox' zine (-lock suh-zeen). 1. $C_{10}H_6N_4O_2$. The three-ring heterocyclic compound pyrimido[4,5-b]-quinoxaline-2,4(1H,3H)-dione. 2. A term loosely applied to derivatives of (1) and, sometimes, to isoalloxazine and its derivatives.

al"lox u'ri a [*allox*; *ouy*; G *ouron*, urine]. Old term used to designate the presence of purines in the urine. —**allox'ur** alloxuric, *adj.*

al lox"y pro-te'ic ac'id (lock see-pro-tee'ick) An acid, containing nitrogen and sulfur said to be sometimes found in urine.

al'loy [F *aloyer* to mix metals, from L. *alligare*, to bind]. The product of the fusion of two or more metals —**al loy'** v.

all'spice [AS. *all*, L. *species*, sort]. 1. The fruit of *Pimenta officinalis*. 2. Any of several other aromatic shrubs, such as the **Carolina allspice**, the leaves of which have the properties of an aromatic stimulant. It contains two toxic alkaloids.

al'lyl [L. *allium*, garlic; G *hylē*, matter]. The univalent radical —CH OH:CH or C_3H_5—

a. alcohol. C_3H_5OH. A colorless, inflammable liquid, with pungent odor boiling at 97° C.

a. aldehyde. See *acrolein.*

a. isothiocyanate. C_3H_5NCS. Volatile oil of mustard, colorless or pale yellow liquid, soluble in alcohol. Also called *a. mustard oil*, *a. isosulfocyanate.*

a. sulfide. $(C_3H_5)_2S$. A liquid of garliclike odor possibly present in garlic formerly used in cholera and tuberculosis

a. thiourea. See *thiosinamine.*

a. tribromide. $C_3H_5Br_3$. 1,2,3-Tribromopropane, colorless liquid, has been used as an antispasmodic. Dose, 0.3–0.6 cc. (5–10 min.)

al"lyl-a mine (al"il-uh meen al il-am'in, a-lil' ih-meen, min) $CH_2:CH.CH_2NH_2$ 2-Propenylamine. A yellowish, caustic liquid.

al"lyl bar"bi tur'ic ac'id. The official generic name of 5-allyl-5-isobutylbarbituric acid, marketed under the trade-marked name *sandoptal.*

al'lyl-ene. $HC\equiv CCH_3$; gaseous hydrocarbon of the alkyne series. Syn., *methylacetylene*, *propyne.*

al"lyl-i"so pro pyl bar"bi tur'ic ac'id. $(CH_3)_2$-CH (CH OHCH) C CO NH CO NH CO; white, crystalline powder very slightly soluble in water; it is sedative and hypnotic, characterized by intermediate duration of action. Syn., *aprobarbital.* See *alurate.*

N-al"lyl nor mor'phine A derivative of morphine in which the methyl group attached to the nitrogen atom in the latter has been replaced by an allyl group; occurs as crystalline compound, sparingly soluble in water It antagonizes most of the actions of morphine, and is used as an antidote in the treatment of acute narcotic poisoning.

almag. Trade-mark for preparation containing aluminum hydroxide powder and magnesium trisilicate.

al"ma gu'cin. Generic name applied to antacid mixtures of gastric mucin, dried aluminum hydroxide gel, and magnesium trisilicate. See *mucotin.*

alminate. A trade-mark for dihydroxyaluminum aminoacetate.

al'mond (ah mund, am und, al mund) [OF from G *amygdalē*, almond]. The seed of *Prunus amygdalus*, small tree widely cultivated in warm temperate regions of the world.

bitter a. oil (*oleum amygdalae amarae*) The volatile oil obtained from dried ripe kernels of *Prunus amygdalus* or from other kernels containing amygdalin by maceration with water and subsequent distillation with steam. It contains not less than 80% of benzaldehyde and from 2–4% of hydrogen cyanide. It acts physiologically like hydrocyanic acid externally it is used, mixed with water in pruritus senilis and other forms of itching.

expressed a. oil (*oleum amygdalae expressum*) The fixed oil expressed from the kernels of several varieties of *Prunus amygdalus* employed as an emollient, demulcent, and nutrient. Syn., *sweet a. oil.*

al mond-eyed" Having eyes of elliptical form and slanting eyelids, as various Mongolian peoples.

a-lo chi a (lo'kee-uh) [G *a-* not *lochia*, discharge after childbirth]. Absence of the lochia.

Al o-e (al o-ee, al') [G *aloē*, the aloe]. A genus of liliaceous plants.

A. americana. See *Agave.*

A. barbadensis. See *A. vera.*

A. vera. A tropical plant, the milk or sap of which is used as dressing for -ray or radium dermatitis, especially where ulceration occurs. Has been used in ointments or by direct application of inner surface of the leaf Syn., *A. barbadensis.*

al'oe (al'o, al' ee) [*aloē*]. The dried juice of the leaves of *Aloe Perryi*, *A. barbadensis*, *A. ferox*, and hybrids of this species with *A africana* and *A spicata*. Its purgative properties are due to three pentosides (barbaloin, iso-barbaloin, and beta-barbaloin) and to resin. It is cathartic and tonic, particularly useful in chronic constipation, and has been used in amenorrhea. Local application of the leaves is of benefit in the treatment of -ray burns. Dose, 0.13–0.65 Gm. (2–10 gr.) Syn., *aloes.* —**al"o-et'ic**, *adj.*

a. and mastic pills (*pilulae aloes et masticis*) 0 13 Gm (2 gr.) aloe and 0 04 Gm. (⅔ gr.) mastic per pill. Syn., *Lady Webster dinner pills.*

a. and myrrh tincture (*tinctura aloes et myrrhae*) 10% each of aloe, myrrh, and glycyrrhiza.

caballine a. An inferior aloe. Syn., *fetid a.*, *horse a.*

Cape a. From *A. ferox* and hybrids of this species with *A. africana* and *A spicata.*

Curaçao a. From *A barbadensis.*

fetid a. An inferior aloe.

hepatic a. An inferior liver-colored aloe.

horse a. An inferior aloe.

Socotrine a. From *A. Perryi.*

West Indian a. From *A. barbadensis.* Syn., *Curaçao a.*

Zanzibar a. A hepatic variety of Socotrine aloe made by slow evaporation of the juice.

al"oe-em o-din. $C_{15}H_{10}O_5$; 1,8-dihydroxy-3-hydroxymethylanthraquinone, occurring in the free state and as glycoside in various species of aloe, also in rhubarb and in senna. It is an irritant cathartic.

al'oes (al'oze) See *aloe.*

al"o- t'ic [*aloē*]. A medication containing aloe.

al"o-e tin [*aloē*]. 1. Aloe resin. 2. A yellow crystalline principle obtainable from aloes.

a-lo gi [G *a-* not; *logos*, word]. 1 Motor or expressive aphasia. 2. Stupid or senseless behavior

al'o-in [G. *aloē*, the aloe] (*aloinum*) A mixture of active principles, chiefly barbaloin and iso-barbaloin, obtained from aloe. It is a yellow microcrystalline powder with an intensely bitter taste. Used as laxative and purgative. Dose, 10–60 mg. (⅙–1 gr.) Syn., *barbaloin*.

alosulin. Trade-mark for a gastric antacid and adsorbent containing kaolin, aluminum hydroxide, calcium carbonate, bismuth subnitrate, sodium chloride, acacia, aromatics, and dextrose.

al"o-pe'ci-a (al o-pee'shee-uh, -see uh) [G. *alōpekia*, disease like mange in foxes, from *alōpēx*, fox]. Loss of hair; baldness. The loss may be partial or total, congenital, premature, or senile. Alopecia may complicate various systemic affections. Syn., *calvities, baldness*. Also called *defluvium capillorum*. —**alopecic**, *adj*

a. areata. Loss of hair in circumscribed patches with little or no inflammation. The scalp and beard areas are usually involved. Syn., *a. circumscripta*. Also called *area Celsi*.

a. cachectica. Baldness due to general malnutrition.

a. cicatrisata. Circular and irregular patches of alopecia due to atrophy of the skin, causing permanent baldness. Syn., *pseudopelade*.

a. circumscripta. See *a. areata*.

a. congenitalis. An unusual form appearing congenitally due to partial or complete absence of hair follicles.

a. furfuracea. See *a. seborrheica*.

a. neuritica. Baldness of trophoneurotic origin.

a. pityrodes. See *a. seborrheica*.

a. prematura. Baldness which occurs any time after puberty and resembles the senile type. The hair gradually thins and falls out, often beginning at the temples. Also called *presenile a*.

a. prematura symptomatica. Loss of hair in the course of some diseases, or following prolonged, debilitating fevers, or with changes in endocrine secretion. When baldness follows acute illnesses, it is usually temporary.

a. seborrheica. Baldness associated with seborrheal dermatitis. Scaliness and varying degrees of inflammation are present. Itching is often associated, and the hair is dry and lusterless. This condition is quite common. Syn., *a. pityrodes, pityriasis simplex*. Also called *seborrhea capillitii*.

a. senilis. That which occurs in old age and is preceded by gradual thinning of the hair.

a. syphilitica. In this form, the hair presents a moth-eaten appearance prior to falling out.

a. unguualis, a. ungulum. Shedding of the nails. Syn., *onychoptosis, defluvium unguium*.

a. universalis. Loss of hair from all parts of the body. Also called *a. totalis*.

traumatic marginal a. Partial alopecia involving the marginal area of the scalp above and anterior to the ears, caused by continued traction on the hair from braiding or hair straightening procedures. Prognosis is good if the cause is eliminated early.

alopectose. A proprietary adsorbent and antacid tablet containing kaolin, aluminum hydroxide, pectin, and betalactose.

alophen. Trade-mark for a laxative preparation containing aloin, belladonna extract, ipecac and phenolphthalein.

al'pha [G.]. 1. The first letter of the Greek alphabet (A, α). 2. *In chemistry*, it is often combined with the name of a compound to indicate the first of a series, as of isomers or otherwise related substances. 3. In other sciences, it is often employed to differentiate between the members of various groups or series. For many terms so designated, see under the specific noun.

al"pha-hy poph'a min (-high pof'uh meen, -min) The oxytocin obtained from the posterior portion of the pituitary gland.

al"pha-i o-dine. Thyroxin.

alphalin. A trade-mark for preparations containing vitamin A.

al"pha-lo'be-line (-lo'bi leen, lin, -lo-bee'leen, -lin) An alkaloid from lobelia used in asphyxia.

al"pha naph'thol. An isomer of betanaphthol; used as a local antiseptic, occasionally as an intestinal antiseptic.

a. salicylate. A white, crystalline powder used as an antiseptic and antirheumatic. Also called *alphol, alphanaphthyl salicylate*.

al"pha-naph thyl thi"o u re a. ANTU

al"pha pro dine hy"dro-chlo ride Generic name for *dl*-alpha 1,3-dimethyl-4-phenyl-4-propionoxypiperidine hydrochloride, a synthetic narcotic used to relieve pain. Syn., *prisilidene hydrochloride*. See *nisentil hydrochloride*.

al"pha to-coph er-ol. See under *tocopherol*.

al"pho-der'mi [G. *alphos*, dull-white leprosy; *derma*, skin] Achromatosis; any disease marked by lack of pigmentation.

al phos, al phus (*alphos*). 1 Psoriasis. 2. Leprosy. *Obs*

al pho sis [*alphos*; G. -*ōsis*, condition] Albinism; leukoderma.

al'pha zone. Succinyl peroxide, (HOOC.CH₂CH₂CO)₂O₂. A white crystalline powder derived from hydrogen peroxide by action of succinic acid. It is used as a germicide in dilute aqueous solutions.

al'phus. See *alphos*.

alphyllin. Trade-mark for a preparation containing allylphenylbarbituric acid and aminophylline.

Alpine, Prospero (Alpinus) [*Italian physician, botanist, and writer* 1553–1617]. Supported the theory of contagion in typhus and left an important work on Egyptian medicine (1591). Also wrote a classic pamphlet on prognosis of disease (1601).

alrac. Trade-mark for a preparation containing dihydroxyaluminum aminoacetate and magnesium trisilicate.

Alsaharavius. See *Albucasis*.

alsol. A brand of aluminum acetotartrate.

Al-sto ni a [NL., after Charles *Alston*, Scottish physician, 1683–1760]. A genus of apocynaceous trees and shrubs.

A. constricta. The quinine alstonia of Australia yields the alkaloid *alstonine*. The bark is tonic, antiperiodic, and antipyretic, and has been used in intermittent fever.

A. scholaris. The devil's-tree of eastern Asia and the Philippines. It furnishes dita bark. It is tonic, astringent, antiperiodic, and anthelmintic.

al sto nine. $C_{21}H_{20}N_2O_4$; an alkaloid from *Alstonia constricta*.

al'ter ant (awl'tur unt) Alterative.

al"ter a'tion cav-i taire Intercellular edema of epidermal cells, resulting in the formation of multilocular bullae.

al'ter a tive (awl'tur-uh tiv) [ML. *alterativus*, from L. *alter*, other (of two)]. Any medicine that alters the processes of nutrition, restoring, in some unknown way, the normal functions of an organ or of the system. Arsenic, iodine, the iodides, mercury and gold formerly were classed as alteratives, but the term has little if any application now. *Obs*.

al'ter a tive. Changing; alterant; reestablishing healthy nutritive processes. *Obs*.

al"ter-e go-ism (al turee go-iz-um, -eg iz-um) [*alter*; L. *ego*, I]. An altruistic feeling for only those who are in the same situation as oneself.

Al"ter na ri [L. *alternare*, to alternate]. A genus

of atmospheric fungi of the Dematiaceae family clinically significant as the cause of atopy

al″ter nar′ic ac′id. An antibiotic substance derived from the fungus *Alternaria solani*. It has negligible antibacterial activity but is inhibitory to some fungi.

al″ter-nate case meth′od. See under *method*.

al″ter nate paired case meth′od. See *method*.

al″ter nat″ing [*alternare*]. Occurring turn and turn about, or alternately.

al″ter na′tion [*alternare*]. 1. The act of alternating or of performing alternately. 2. *In neurology*, the phenomenon whereby only every other impulse is carried over the eighth cranial (auditory) nerve when the exciting impulse is from 900 to 1800 cycles. Because of the refractory period of nerve impulses, the maximum frequency that can be carried by a nerve is about 900 per second. —al′ternate *adj* n., —al″ter-nate″, *v.*

al″ter na′tion of gen″er-a′tions. *In biology*, the succession of asexual and sexual individuals in a life history such as the alternation of polyp and medusa in the life cycle of many coelenterates. Syn., metagenesis.

al″ter-na″tor [*alternare*]. An apparatus for converting direct current into alternating current.

Althausen test. See galactose tolerance *test*.

Althausen-Mancke's test. See under *test*.

al-thae′ [L. *althaea*] (*althaea*). Marshmallow root. The peeled root of *Althaea officinalis*, a plant of the mallow family. It consists chiefly of starch and gum with some pectin and sugar and contains up to 2% of asparagin. Used in the form of a decoction as a demulcent; also as a pill excipient.

a. syrup (*syrupus althaeae*). Represents 5% althea; used as a vehicle.

alt. hor. Abbreviation for L. *alternis horis*, every other hour.

al″ti-tude sick′ness. A symptom complex resulting from anoxia during airplane flights at high altitudes, due to lowered partial pressure of oxygen in the inspired air. **Acute altitude sickness** may occur as the result of a single flight; it is marked by symptoms of acute anoxia, as headache, increased lung ventilation, general bodily distress, mental anxiety, lassitude, sleepiness, fatigue, depression, or euphoria. **Chronic altitude sickness** results from repeated flights at high altitudes; it is characterized by headache, mental and physical fatigue, increased appetite, irritability, nervousness, insomnia, poor mental concentration, *lack of volition, disregard for danger in the air*, and is accompanied by some nausea, anorexia, indigestion, and vertigo.

Altmann, Richard [German histologist, 1852–1900]. *Altmann theory* states that the fundamental units of protoplasm are granular particles. See Altmann stain for mitochondria, formerly called *Altmann granules*. His method for tissue fixation was later modified by Gersh. See Altmann-Gersh method.

al″tri-gen′der-ism [L. *alter*, the other (of two); *genus*, race]. The nonsexual, nonamorous activities between members of opposite sexes.

altrisil. Trade-mark for a gastric antacid and adsorbent containing magnesium trisilicate, aluminum hydroxide, and pectin.

al′trose. $C_6H_{12}O_6$; an aldohexose sugar stereoisomeric with D-glucose, prepared by synthesis; more exactly denoted as D-altrose or D-altropyranose.

al-u-creme. A trade-mark for a flavored suspension of aluminum hydroxide.

aludrine hydrochloride. A trade name for isopropylarterenol hydrochloride, a sympathomimetic amine salt employed in the treatment of asthma.

aludrox. A trade-mark for preparations containing aluminum hydroxide gel and magnesium hydroxide.

alugel. Trade-mark for tablets containing dried aluminum hydroxide gel.

alulotion. Trade-mark for an adsorbent and protective lotion containing ammoniated mercury, kaolin, and aluminum hydroxide gel.

al′um. 1. Any one of a class of double salts of general formula $M_2SO_4.M_2'''(SO_4)_3.24H_2O$ or $M'M'''(SO_4)_2.12H_2O$ in which M is a univalent metal or group, and M‴ is a trivalent metal. 2. The official alum (*alumen*) which may be ammonium alum, $AlNH_4(SO_4)_2.12H_2O$ or potassium alum, $AlK(SO_4)_2.12H_2O$. Both forms occur as colorless, odorless crystals or as powder soluble in water, insoluble in alcohol. It is astringent and emetic. Dose as astringent, 0.3–1.0 Gm. (5–15 gr.); as emetic, 4 Gm. (60 gr.)

a. hematoxylin. A purple stain for tissues obtained from an alcoholic solution of hematoxylin by adding an aqueous solution of potassium alum.

a. whey. A preparation obtained by boiling 2 dr. of alum in a pint of milk and straining; formerly used as an astringent and internal hemostatic in wineglassful doses.

ammonioferric a. $FeNH_4(SO_4)_2.12H_2O$. It is astringent and styptic. Dose, 0.3–0.6 Gm. (5–10 gr.) Also called *ferric ammonium sulfate, ferric a., iron a.*

ammonium a. See alum, 2.

burnt a. See exsiccated *a*.

dried a. See exsiccated *a*.

exsiccated a. Official alum (see *alum*, 2) which has been deprived of most of its water of crystallization. It is more powerful and irritant than the hydrated salt. Occasionally applied to exuberant granulations. Syn., *burnt a., dried a.*

potassium a. One containing potassium, particularly ordinary alum or aluminum and potassium sulfate. Also called *potash a.*

sodium a. One containing the double sulfate of sodium and aluminum.

a-lu′mi-na. Aluminum oxide Al_2O_3, occurring naturally in many minerals, or prepared artificially.

al″u-min′i um. See *aluminum*.

a-lu′mi num, al″u min′i-um [L. *alumen*, alum]. Al = 26.98. Valence, 3. A silver-white, light, ductile metal occurring abundantly in nature chiefly in combination with silica and metallic oxides. *It is soluble in acids and alkalis and*, on exposure to air, takes on a coating of oxide. Because of its lightness (sp. gr. 2.7) and relative stability it is used extensively for manufacturing and construction purposes. It readily forms alloys, some of which are of great importance, as *duralumin* and magnalium. Powdered aluminum is variously used as a protective in treating ulcers, fissures, etc., and has been used in treating silicosis. See *thermite*.

a. acetate solution (*liquor alumini acetatis*). A solution prepared by the reaction of lead acetate with aluminum sulfate; an astringent and antiseptic used after dilution with from 10 to 40 parts of water as a gargle or a local application for ulcerative conditions. Also called *Burow's solution*. Also see a. subacetate solution.

a. acetoglycerate. A glycerite of aluminum acetate used as an antiseptic astringent in the nose and throat.

a. acetotartrate. Colorless crystals or white powder used as an antiseptic astringent in 1–3% solution.

a. ammonium sulfate. See alum.

a. betanaphthol disulfonate. See *alumnol*.

a. chloride (*aluminii chloridum*). A white or yellow-white deliquescent, crystalline powder with a sweetish, astringent taste; easily soluble in water. An astringent and antiseptic, especially in hyperhidrosis, applied as a 25% solution.

a. chloride solution (*liquor aluminii chloridi*). A 25% solution.

a. citrate. A white, crystalline powder sparingly soluble in cold water. A 6% solution has been recommended as the approximate equivalent of the aluminum acetate solution.

a. formate. Used in 1–3% solution as an antiseptic wash for suppurating cavities or as a vaginal douche. See *ormicet*.

a. hydroxide. $Al(OH)_3$; a white, bulky amorphous powder insoluble in water; a protective and astringent dusting powder or ointment ingredient.

a. hydroxide gel (*gelatum aluminii hydroxidi*). A white, viscous suspension of aluminum hydroxide equivalent to 4% of Al_2O_3; used as gastric antacid, especially in the treatment of peptic ulcers. It is advantageous in that it does not produce reactive secretion of acid in the stomach. Dose, 4–12 cc. (1–3 fluidrachms). See *amphojel*, *creamalin*, *fluagel*, *hydrogel*, *lostalamine*.

a. oleate. A yellowish, viscid mass, used in ointments for skin diseases.

a. oxide. Al_2O_3; a white, amorphous powder insoluble in water and, if it has been ignited, in acids. It is used for absorbing gases, water vapor and in chromatographic analyses. Hydrated aluminum oxide, known as *aluminum hydroxide*, is employed as a *gastric antacid*.

a. paste. A paste containing 10% of powdered aluminum, 5% liquid petrolatum, and 85% zinc oxide ointment; used locally as a protective, especially around intestinal fistulas to protect surrounding skin against digestive action of intestinal fluids.

a. phenolsulfonate. $Al(C_6H_4OH.SO_3)_3$. White or reddish white powder; used as an antiseptic astringent. Syn., *a. sulfocarbolate*.

a. phosphate. $AlPO_4$. A white powder insoluble in water; used in the manufacture of dental and other cements and in ceramics.

a. phosphate gel (*gelatum aluminii phosphatis*). A white, viscous suspension containing 4.2% of $AlPO_4$; used like aluminum hydroxide gel, but does not interfere with phosphate absorption. See *phosphaljel*.

a. potassium sulfate. See *alum*.

a. salicylate. A white or pink powder used as an antiseptic insufflation in nasal catarrh and ozena.

a. silicate. Approximately $Al_2O_3.3SiO_2$. White powder or lumps; used for preparing dental cements, in ceramics, etc.

a. silicofluoride. A white, insoluble powder used occasionally as an insecticide and in the glass industry. Also called *a. fluorosilicate*.

a. subacetate. See basic *a. acetate*.

a. subacetate solution (*liquor aluminii subacetatis*). A clear, colorless, or faintly yellow liquid with an acetous odor; used, after dilution with 20 to 40 parts of water, as an astringent and antiseptic wash, especially as a gargle.

a. sulfate (*aluminii sulfas*). $Al_2(SO_4)_3.18H_2O$. A white, crystalline, odorless powder freely soluble in water; used in 5% solution as an astringent and antiseptic.

a. sulfocarbolate. See *a.* phenolsulfonate.

a. tannate. A brownish yellow powder insoluble in water; used as an astringent dusting powder or in insufflation.

a. tannotartrate. A yellow-white powder soluble in water; used as an astringent in rhinology and laryngology.

a. zinc sulfate. $Al_2Zn(SO_4)_4.24H_2O$. White crystals, soluble in water; used as caustic.

basic a. acetate. Approximately $Al_2O(CH_3COO)_4.4H_2O$. White powder incompletely soluble in water, soluble in mineral acids and the alkalis. Used as desiccant and deodorant dusting powder; a mordant in dyeing; in fireproofing and waterproofing fabrics. Syn., *a. subacetate*, *protacetate*. Also called *lenicet*.

dried a. hydroxide gel (*gelatum aluminii hydroxidi siccum*). A white, odorless, tasteless, amorphous powder yielding on ignition not less than 50% of Al_2O_3. Used as antacid. Dose, 0.3–1.0 Gm. (5–15 gr.)

soluble a. silicate. A mixture of aluminum and sodium silicates used in hyperchlorhydria. See *ludosan*.

alumnol. Brand of aluminum betanaphthol disulfonate, $Al_2[C_{10}H_5OH(SO_3)_2]_3$; used as an astringent and antiseptic in 0.5–5.0% solution.

alupec. Trade-mark for gastric antacid preparations containing aluminum hydroxide gel, pectin, and magnesium carbonate.

alurate. Trade-mark for 5-allyl-5-isopropylbarbituric acid, officially designated *aprobarbital*. The substance is a white, crystalline powder very slightly soluble in water; it is used as a long-acting sedative and hypnotic. Dose 65–130 mg. (1–2 gr.)

sodium a. Trade-marked name for the sodium derivative of 5-allyl-5-isopropylbarbituric acid, which substance is soluble in water.

a·lu'sia [G. *alyein*, to be at a loss, to wander]. Hallucination; morbid state of mind.

alutabs. Trade-mark for an effervescent tablet which hydrates in water to form an aluminum hydroxide gel used as a gastric antacid.

Alvarez, Walter Clement [American physician, 1884–]. Author of numerous significant contributions to the study of diseases of the gastrointestinal system and to the physiology of the digestive tract; pioneer in calling attention to the importance of the nervous system in producing these diseases, and in psychosomatic medicine.

al've·at·ed [L. *alveatus*, hollowed out like a trough]. Honeycombed; channeled; vaulted.

al've·lin. An antibiotic substance derived from *Bacillus alvei*. It is active against many bacteria but also produces hemolysis of red blood cells.

alveol-. See *alveolo-*.

al"ve·o·la'bi·al. See *alveolabial*.

al·ve'o·lar [L. *alveolus*, dim. of *alveus*, trough]. Pertaining to an alveolus.

al·ve'o·late [*alveolus*]. Pitted like a honeycomb.

al"ve·o·lec'to·my [*alveolus*; G. *ektomē*, excision]. Surgical removal of part of the alveolar process of the upper or lower jaw.

al·ve'o·li. Plural of alveolus.

al"ve·o·lin'gual, al·ve"o·lo·lin'gual [L. *alveus*, trough; *lingua*, tongue]. Pertaining to the lingual aspects of the alveolar processes.

al"ve·o·li'tis [L. *alveolus*, dim. of *alveus*; G. *-itis*, inflammation]. Inflammation of a dental alveolus; especially the inflamed condition following the removal of a tooth. A frequent complication of tooth extraction. See dry *socket*.

al·ve'o·lo-, alveol- [*alveolus*]. A combining form denoting *alveolus*, *alveolar*.

al·ve"o·lo·cla'si·a (al·vee"o·lo·clay'zhuh, ·see·uh, al"vee·o·lo·) [*alveolus*; G. *klasis*, breaking]. In dentistry, a nonspecific breaking-down of the alveolar process, causing loosening of the teeth. Also see *periodontosis*, *pyorrhea*.

al·ve"o·lo·con·dyl'e·an [*alveolus*; G. *kondylos*, knuckle of a joint]. In craniometry, pertaining to

the anterior portion of the maxillary alveolus and the occipital condyles.

al ve"o-lo-den'tal [alveolus; L. dens tooth]. Pertaining to the teeth and their sockets.

al ve"o-lo-la'bi-al, al"ve-o la'bi al [alveolus; L. labia, lip]. Pertaining to the alveolar processes and the lips, or to the labial aspect of the alveolar process.

al-ve"o lo-li gual. See alveolingual.

al-ve'o-lon [alveolus]. That point at which straight line tangent to the posterior surfaces of the maxillary alveolar processes intersects the midline of the hard palate, or the median palatine suture. There will be found many specimens in which the line just defined will fall posterior to the tip of the posterior nasal spine. In these cases, the midline of the hard palate is to be prolonged till it intersects the line tangent to th posterior surfaces of the maxillary alveolar processes.

al ve-ol o-plas"ty In dentistry surgical alteration of the shape or size of the alveolar ridge to aid in the construction of prosthetic ppliances.

al-ve o lo-sub na sal (-sub nay'zul) [alveolus; L. sub, under; nasus, nose]. Pertaining to the alveolar portion of the maxilla that lies below the anterior bony perture of the nose.

al"ve-o lot'o-my [alveolus; G tomē, cutting]. Incision into dental alveolus.

al-ve'o-lus (pl. alveoli) [L.]. 1 Bony socket of tooth; also called phatne. 2. An air cell of the lung. 3. A cavity depression, pit, cell, or recess. 4. A terminal acinus of racemose gland.
pulmonary a. See alveolus, 2.

al"ve-ol'y-sis [L. alveus trough G lysis loosing]. Periodontosis.

alvesco. Trade-mark for an effervescent alkalizing agent containing sodium bicarbonate, calcium lactophosphate, potassium bicarbonate, anhydrous magnesium sulfate, and sodium chloride.

al've-us [L.]. 1. A trough, tube, or canal applied to ducts and vessels of the body 2. A cavity or excavation. See alveus.
a. hippocampi. A bundle of nerve fibers in the cerebral hemisphere investing the convexity of the hippocampus.

al'vi. Plural of alvus.

al-vi'no-lith, l'vi no lith [L. alvus, the bowels; G. lithos, stone]. An intestinal concretion, usually formed from calcareous salts and debris.

al'vus (pl. and gen. alvi) [L.] The abdomen or its contained viscera. —**alvine,** adj.

a-lym'phia (ay-lim fee uh, lm) [G a- ot L. lympha, water]. Absence or deficiency of lymph.

a-lym"pho-cy to sis (y lim f sigh to sis, lm) [a- lympha; G kytos, cell; -osis, co dition]. A very marked decrease or absence of lymphocytes in the blood.

alypin hydrochloride. Trade-mark for brand of the hydrochloride of benzoyl 1,3-tetramethyldiamino-2-ethyl-isopropyl alcohol; $C_6H_5OOOC-(C_2H_5)(CH_2N(CH_3)_2)_2$ HCl white crystalline, soluble powder used as local anesthetic in strengths of 2–5%. See amydricaine hydrochloride.

alysine. Trade-mark of an antipyretic and analgesic powder containing natural sodium salicylate, natural magnesium salicylate, natural calcium salicylate sodium bicarbonate, calcium carbonate, and magnesium carbonate.

a-lys'mus [G. alysmos, disquiet]. The natural anxiety and restlessness which accompanies any physical disease. Also called alysis.

al"ys-o -sis [G. alys, boredom; -osis, condition]. Boredom.

a-lys'sous, lys sus [G alyssos, Galen's madwort]. Curing or preventing rabies.

Alzheimer, Alois [German physician, 1864–1915] Described presenile dementia associated with cortical cerebral sclerosis (1907) called Alzheimer's disease. See presenile sclerosis

alzinox. A trade-mark for preparations containing the gastric antacid substance, dihydroxyaluminum aminoacetate.

Am Chemical symbol for americium.

A. M A. American Medical Association.

am' -dou (am uh doo) [F amadouer to coax]. German tinder or touchwood; spunk used as hemostatic. See agaric.

amal-e si (migh-o sis, y"migh-) See amelosis.

amal'gam [G malagma, emollient, from malassein, to soften]. 1. An alloy of mercury with any other metal. 2. Any soft alloy Symbol ℔℔℔.
a. carrier An instrument designed for carrying and introducing amalgam into the cavity of tooth.
a. plugger See a. carrier
dental a. Compounds of basal alloy of silver and tin with mercury used for filling teeth. Gold, platinum, copper zinc, or bismuth is frequently added as third metal to the basal alloy

a mal gam ate [malagma]. 1 Unite metal in an alloy with mercury 2. Unite two dissimilar substances. 3. Cover the zinc elements of galvanic battery with mercury
amal"gam-a'tion [malagma]. 1. Formation of an amalgam. 2. Formation of an alloy of mercury with another metal.
a. process. A method of extracting certain metals, especially gold and silver from ores by alloying them with mercury
amam din m n din. A globulin contained in certain fruit kernels, such as sweet almonds and peach seeds.

Am" ni'ta [G amanitai, kind of fungus]. A genus of mushrooms belonging to the Agaricaceae.
A. muscaria. Fly agaric.
A. phalloides. A very poisonous species; the source of amanita toxin and amanita hemolysin.
aman'i tin, a-man'i-tine [amanita]. 1 A principle identical with choline, btained from fly agaric. 2. A poisonous glycoside obtainable from various species of poisonous mushrooms.

a ma'ra [L. amarus, bitter]. Drug used for its bitter taste, chiefly to increase appetite; bitters.

am a ranth [G amarantos, from a- not; marainein, t wither]. 1 Any plant f the genus Amaranthus. An important cause of hay fever in the states west of Missouri and Iowa. 2. (amaranthum) $C_{10}H_4(SO_3ONa)$.N.N C $_{10}H_4(SO_3ONa)$ OH A dark, red-brown powder used as color for foods, drugs, and cosmetics, and in dyeing. Also called F.D and C Red No. 2.
a. solution (liquor amaranthi) A 1% aqueous solution of amaranth, 2

am rine (am uh-reen, -rin) **am rin.** Triphenyl dihydroglyoxaline

$$C_6H_5CH.N\text{-}C(C_6H_5)NH.CH.C_6H_5$$

A white, lustrous, crystalline powder which occurs in bitter almond oil and can be prepared synthetically

am roid [L. amarus, bitter; G eidos, form]. Any distinctly bitter vegetable extractive of definite chemical composition other than an alkaloid or glycoside. The names of specific amaroids end in -in or -inum. Also called bitter principle.

am a-se sis [G a- not mastis, chewing]. Inability to hew

a-mas'ti-a, ma zi [a-; G. mastos breast]. Congenital absence of the mammae

am″a-tho-pho′bi-a [G. *amathos*, dust; *phobos*, fear]. A morbid fear of dust.

am′a-tive-ness [L. *amare*, to love]. The sexual passion; disposition to love. Syn., *eroticism*. —**amative**, **amatory**, *adj.*

am′a-tol (am′uh-tole, -tol, -tawl). An explosive mixture of trinitrotoluene and ammonium nitrate.

am″au-ro′sis [G., a darkening]. Partial or total blindness from any cause. —**am″au-rot′ic**, *adj.*

a. fugax. Temporary blindness resulting from sudden acceleration, as in aerial flight. Syn., *blackout*.

a. partialis fugax. Partial blindness associated with headache, vertigo, and scotomas. It is *usually sudden and transitory*.

congenital a. Condition of total blindness existing at birth when no change can be seen in the eye to account for it.

toxic a. Blindness which follows the introduction of various poisons and toxic products into the body, as ethyl and methyl alcohol, tobacco, lead, arsenic, quinine, etc., and the metabolites of uremia and diabetes.

uremic a. A toxic a.

am″au-rot′ic [*amaurosis*]. One suffering from amaurosis.

a. cat's-eye. A light reflex through the pupil in suppurative choroiditis or intraocular neoplasm.

a. familial idiocy. (a) A familial disease occurring almost exclusively in Jewish children, and manifesting symptoms in the fourth month of life; characterized by flaccid muscles, convulsions, decerebrate rigidity, and blindness marked by the appearance of a cherry-red spot at the macula lutea; associated with optic atrophy. Also called *cerebromacular degeneration*, *Tay-Sachs disease*. (b) *A late infantile type in which the symptoms first* appear at the age of three or four years. The patient may live about four years. (c) A juvenile type beginning between seven and twelve years, running a longer course, and associated with macular changes occurring in Gentiles; also called *Batten-Mayou's disease*.

am″ax-o-pho′bi-a (am″uk-so-fo′bee-uh, a-mack″so-) [G. *amaxa*, wagon; *phobos*, fear]. Morbid dread of being in, or riding upon, any vehicle.

Ambard, Léon [*French pharmacologist*, 1876–]. *Associated with a coefficient for estimating renal* activity, the formula showing the relations between the amount of urea in the blood and that excreted by the kidneys.

$$K = \frac{Ur}{\sqrt{D \times \frac{70}{P} \times \frac{\sqrt{C}}{25}}}$$

Ur = grams of urea in a liter of blood; D = grams of urea excreted in 24 hours; C = grams of urea in the urine; P = weight of the patient in kilograms. An increase above normal (0.06–0.08) equals renal insufficiency. The formula is seldom used today. He is also known for his laws: (a) the output of urea varies directly with the square of the concentration of the blood urea when the urinary urea concentration is constant; (b) when the blood urea concentration is constant, the output of urea varies inversely as the square root of its urinary concentration.

am′ber [OF. *ambre*, from Ar. *anbar*]. *A fossil resin found in alluvial soils and lignite beds in various* parts of the world, and especially along the southern shores of the Baltic Sea. It is an amorphous solid, insoluble in water and incompletely soluble in any solvent, and assumes a negative charge through *friction*.

a. oil (*oleum succini*). A product of the dry distillation of amber, formerly used as rubefacient and, internally, in amenorrhea, hysteria, and whooping cough.

am′ber-gris (am′bur-greece, -gris) [*ambre*; F. *gris*, gray]. An intestinal concretion of the sperm whale, *Physeter macrocephalus*, found floating on the sea, particularly in the southern hemisphere. It is usually gray in color with brown, white, or yellow streaks. It is used in perfumes, particularly as a fixative for floral odors, and has been used as a cordial and antispasmodic in adynamic fevers and various nervous diseases. See *ambrein*.

amberlite. Trade-mark applied to a group of ion-exchange resins of the cation-exchange type and anion-exchange type; certain of the purified resins are used medicinally. See *carbacrylic resin* and *polyamine-methylene resin*.

am′bi- [L. *ambo*, both]. A combining form meaning *both*.

am′bi-, amb- [L. *ambi-*, around]. A prefix meaning *about*, *around*.

am″bi-dex′trous [L. *ambo*, both; *dexter*, right]. Able to use both hands equally well. —**ambidexter**, **ambidexter′ity**, **ambidextrism**, **ambidextral′ity**, *n.*

am″bi-lat′er-al [*ambo*; L. *latus*, side]. Relating to or affecting both sides.

am″bi-le′vous [*ambo*; L. *laevus*, left]. Clumsy in the use of both hands. Syn., *ambisinister*.

ambinon. A proprietary extract of the anterior pituitary gland.

am″bi-oc-u-lar′i-ty [*ambo*; L. *oculus*, eye]. Ability to use both eyes equally well.

am″bi-o′pi-a [*ambo*; G. *ōps*, eye]. Diplopia.

am″bi-sex′u-al, am″bo-sex′u-al [*ambo*; L. *sexus*, sex]. 1. Denoting feelings and behavior which are neither strictly masculine nor feminine, but common to both sexes. 2. Designating organs, or tracts, and substances which evoke activity common to both sexes, as opposed to *bisexual* or *hermaphroditic*. 3. Denoting an individual in whom exist undifferentiated primordia of both sexes. Should both sets develop, hermaphroditism would result. —**ambisexual′ity**, **ambosexual′ity**, *n.*

am″bi-sin′is-ter [*ambo*; L. *sinister*, left]. Ambilevous.

am″bi-tend′en-cy [*ambo*; L. *tendere*, to direct one's course]. A trend in instinctual human behavior which arouses a countertrend.

am-biv′a-lence, am″bi-va′lence, am-biv′a-len-cy [*ambo*; L. *valere*, to be powerful]. *In psychiatry*, the coexistence, conscious or unconscious, of the feelings or attitudes of love and hate toward the same person or object. —**ambivalent**, *adj.*

am′bi-vert [*ambo*; L. *vertere*, to turn]. Both introvert and extrovert; or intermediate between the two. —**ambiver′sion**, *n.*

am′bi-vert. A personality type intermediate between extrovert and introvert.

am′bly- [G. *amblys*, dulled]. A combining form meaning *obtuse* or *dulled*, *faint*.

am″bly-a-cou′si-a (am″blee-a-koo′zhuh, -see-uh, -zhuh, -see-uh) [*amblys*; G. *akousis*, to hear]. Dullness of hearing.

am″bly-chro-ma′si-a (am″bli-kro-may′zhuh, -see-uh) [*amblys*; G. *chrōma*, color]. *In bacteriology*, deficiency in nuclear chromatin which causes the cell to stain faintly. —**amblychromat′ic**, *adj.*

Am″bly-om′ma [*amblys*; G. *omma*, eye]. A genus of hard-bodied ticks of the Ixodidae. Several species act as vectors of rickettsial diseases of man and of heartwater fever of ruminants.

am′bly-ope [*amblys*; G. *ōps*, eye]. A person with amblyopia.

am″bly-o′pi-a [*amblys*; *ōps*]. Dimness of vision, especially that not due to refractive errors or

organic disease of the eye. It may be congenital or acquired. —**amblyop'ic**, *adj*

a. albinismus. That associated with albinism.

a. ex anopsia. That from disuse or from nonuse.

color a. Partial colorblindness.

crossed a., a. cruciata. That occurring through lesion of the brain. See *hemianopsia*.

hysterical a. A unilateral or bilateral disturbance of vision involving great variations in the extent of the visual fields, and, occasionally inversion of the color fields, seen in hysteria.

toxic a. A chronic optic neuritis due to poisons, usually alcohol and tobacco.

uremic a. Loss of vision without disease of the retina, sometimes accompanying an attack of uremia, and presumably due to central suppression by edema of the occipital cortex.

am"bly·o·pi·at'rics [*amblys*; *ōps*, G. *iatrikos*, pertaining to medicine]. The therapeutics of amblyopia. See *orthoptics*.

am'bly·o·scope" [*amblys*; *ōps*; G. *skopein*, to examine]. A device which presents a separate image of an artificial target to each eye used in diagnosis and in some aspects of the treatment of disturbances of binocular vision.

am"bo·cep·toid [L. *ambo* both; *capere*, to take; G. *eidos*, form]. A degenerated amboceptor which has lost its binding group (haptophore) for the cell, or for the complement. *Obs.*

am'bo·cep"tor [*ambo*; *capere*]. According to the Ehrlich theory an antibody present in the blood of immunized animals which contains two specialized elements: a cytophile group that unites with a cellular antigen, and a complementophile group that joins with the complement. Syn., *sensitizer*.

a. unit. The smallest quantity of amboceptor in the presence of which a given quantity of red blood cells will be dissolved by an excess of complement.

ambodryl hydrochloride. Trade-marked name for the antihistaminic substance bromodiphenhydramine hydrochloride or bromazine hydrochloride.

am'bon. Old term for labrum glenoidale.

am"bo·sex'u·al. See *ambisexual*.

am"bo·tox'oid [*ambo*; G. *toxikon*, poison; *eidos*, form]. An immunization agent prepared by reinoculating bacterial toxin with pooled cultures of the bacteria and their bacteriophage, then detoxicating the mixture with formalin and merthiolate. Used especially as a staphylococcus preparation.

Am·boy'na but'ton. See *yaws*.

am'bre·in, am'bra·in. A crystalline, fatty substance, probably a polymer of cholesterol, obtained from ambergris.

Am·bro'si·a (am·bro'zhah, ·zee·uh) [G. food of the gods]. A genus of composite-flowered herbs. The common ragweed of North America, or *A. artemisiaefolia*, is used by the eclectics as stimulant, tonic, antiperiodic, and astringent; properties of *A. trifida* are similar. The pollen of these two species is generally regarded as a frequent cause of hay fever.

am'bu·lance [L. *ambulare*, to go about, walk]. 1. In foreign countries, the staff and equipment of an army medical unit in the field. 2. In the United States, a vehicle for the transportation of the sick or wounded.

air a. See *a. plane*.

a. basic relay post. *In U. S. Army medicine*, the relay post farthest to the rear in an ambulance shuttle where the bulk of unemployed ambulances are dispersed awaiting use.

a. company. Field unit in the U. S. Army Medical Department made up of staff and equipment for the evacuation of the sick and wounded.

a. control post. *In U. S. Army medicine*, the point at a road junction at which a soldier is stationed to direct ambulances along the proper route.

a. insert. *In U. S. Army medicine* a special frame installed in a motor vehicle to support loaded stretchers; it converts a regular truck into a field ambulance.

a. loading post. *In U. S. Army medicine*, a point on the ambulance shuttle, normally the point farthest forward, where one or more ambulances are stationed to receive patients for transportation. It is usually located at the collecting station. An advanced ambulance loading post is a point forward of the collecting station at which casualties are loaded for evacuation to the rear.

a. plane. An airplane designed for the evacuation of troop casualties. Syn., *air a.*

a. relay post. *In U. S. Army medicine*, a point on the ambulance shuttle where one or more ambulances are stationed ready to advance to replace one which has left the post forward.

hi-lift a. An ambulance body on a truck chassis with a controlled hydraulic, built-in lift mechanism. It can be loaded at the hospital, driven to the plane, and the body of the ambulance elevated to the door of the plane.

veterinary a. One designed to transport sick or injured animals, especially horses.

am'bu·lance chas·er. An unethical lawyer who endeavors to exploit injury cases.

am'bu·la·to"ry, am'bu·lant [*ambulare*]. Walking or able to walk; designating a patient not confined to bed, but requiring medical care.

am·bus'tion [L. *ambustio*, a burn]. A burn or scald.

amdelate. Trade-mark for preparations of ammonium mandelate.

a·me'ba, a·moe'ba (pl. *amebas*, *amoebae*) [G. *amoibē*, change]. A colorless, jellylike, unicellular organism found in sea and fresh waters. It constantly undergoes change in form, progressing by means of pseudopodia, reproducing by simple fission, obtaining nourishment by engulfing tiny neighboring particles. —**amebic, amoebic**, *adj*

am"e·bi'a·sis [*amoibē*; NL. *-iasis*, condition]. Infection with *Endamoeba histolytica*.

a. cutis. Ulceration of the skin due to amebas, especially in association with visceral amebiasis.

intestinal a. See *amebic colitis*.

a·me'bi·cide, a·moe'bi·cide [*amoibē*; L. *caedere*, to kill]. An agent fatal to amebas, usually applied to one fatal to *Endamoeba histolytica*. —**amebicid'al**, *adj*

a·me'bid [*amoibē*]. An allergic, cutaneous reaction due to infection with *Endamoeba histolytica*.

a·me'bo·cyte, a·moe'bo·cyte [*amoibē*; G. *kytos*, cell]. 1. Old terminology for leukocyte. 2. A cell found in the coelomic fluid of echinoderms or among the tissues of various invertebrates. 3. Any ameboid cell.

a·me'boid [*amoibē*; G. *eidos*, form]. Resembling an ameba in form or in movement, as the leukocytes.

a·me'boid·ism [*amoibē*]. Movements in certain body cells, notably of the central nervous system, which resemble the movements of an ameba. —**ameboid**, *adj*

am·e·bo'ma. See *amebic granuloma*.

a·me'bu·la, a·moe'bu·la [*amoibē*; L. *-ula*, diminutive suffix]. A merozoite having the power of ameboid movement.

am"e·bu'ri·a, am"oe·bu'ri·a [*amoibē*; G. *ouron*, urine]. Presence of amebas in the urine.

a·mei·o'sis, a·mei·o'sis (a-migh-o'sis, ay"migh-) [G. *a*-, not; *meiōsis*, diminution]. Aberrant miosis, forming diploid spores or gametes.

a·mel'e·ia [G. *ameleia*, indifference]. Morbid apathy; indifference.

a·mel"i·fi·ca'tion [OF. *amel*, enamel]. The formation of dental enamel.

a·mel'o·blast (a·mel'o·blast, am'e·lo-, am'i·lo-) [*amel*; G. *blastos*, germ]. An enamel cell; one of the columnar cells of the enamel organ which helps in forming dental enamel. Syn., *adamantoblast*, *ganoblast*.

a·mel"o·blas·to'ma. A tumor derived from epithelium associated with the enamel organ and composed of islands of cells whose basal layers resemble the ameloblast. It may be solid, monocystic, or polycystic. No enamel is formed. The tumor is usually found in the mandible, and rarely in the tibia and pituitary gland. Also called *adamantinoma*, *adamantoma*.

am"el·o·blas"to·sar·co'ma. A malignant tumor derived from epithelial and mesenchymal odontogenic tissues.

am"e·lo·gen'e·sis [*amel*; G. *genesis*, production]. Histogenesis of the dental enamel.

a·me'lus [G. *a-*, not; *melos*, limb]. An individual with congenital absence of all extremities. —**ame'lia**, *n.*

a·me'ni·a. Amenorrhea.

a·men"o·ma'ni·a, a·men"o·ma'ni·a [L. *amoenus*, pleasant; G. *mania*, madness]. A mild form of mania in which the symptoms are manifested in gaiety, fondness of dress, exaggeration of social condition and the like; cheerful or joyous delirium; morbid elevation of the spirits; manic phase of manic-depressive psychosis.

a·men"or·rhe'a, a·men"or·rhoe'a [G. *a-*, not; *mēn*, month; *rhoia*, flow]. Absence of menstruation. Syn., *amenia*. —**amenorrheal, amenorrhoeal**, *adj.*

emotional a. That which results from sympathetic vasomotor disturbances caused by fright, emotional causes, or hysteria.

endocrinopathic a. An abnormal amenorrhea due to unphysiologic function or dysfunction of one or more of the endocrine glands. It does not include such cessation of function as normal menopause or lactation amenorrhea.

functional a. A type lacking definite or known organic, endocrine, or nutritional causes, which often results from psychologic disturbance.

hypothalamic a. Emotional a.

lactation a. Postpartum amenorrhea due to lactation and nursing. It is probably the result of pituitary inhibition of the ovaries and indirectly or directly related to the lactogenic hormone.

pathologic a. That due to pathologic conditions, such as hysterectomy, oophorectomy, absence of or damage to endometrium, ovarian failure, debility, or sympathetic vasomotor disturbances.

premenopausal a. A prolongation of the later menstrual intervals for weeks or months which may occur for a considerable time prior to the menopausal cessation of menstrual flow.

primary a. Term applied to those cases in which menstruation has not appeared at the proper time. Also called *radical a.*, *primitive a.*

secondary a. That which occurs after menstruation has been established.

a·ment, am'ent [L. *amens*, out of one's senses, from *a*, from; *mens*, mind]. A person suffering from amentia; an idiot.

diplegic a. An individual with congenital spastic diplegia and amentia or failure of brain to develop.

a·men'ti·a (a·men'shee·uh, -shuh) [L., madness]. Subnormal mental development; especially congenital intellectual incapacity. Contrasted with dementia; term proposed by the Viennese school for temporary mental disorder; acute hallucinatory confusion; not generally accepted in U.S.A.

nevoid a. That associated with a face or scalp nevus, calcification of parts of the brain, glaucoma, epilepsy, and defects of the pyramidal tracts. Also called *encephalotrigeminal angiomatosis*, *Sturge-Weber-Dimitri disease* or *syndrome*, *Kalischer disease*.

phenylpyruvic a. See phenylpyruvic *oligophrenia*.

American National Red Cross. A quasi-governmental agency and member of the Red Cross Society whose principal services are to the armed forces in peace and war, to the civilian population in disaster, and community services such as the teaching of first aid, life saving, maintenance of blood banks, and many volunteer services.

American Type Culture Collection. A quasi-official organization supported by the Society of American Bacteriologists, by groups from industry, and the United States Public Health Service, as a repository for standard bacterial cultures. Abbreviated ATCC.

am·er·i'ci·um (am·ur·ish'ee·um) [named after the *Americas*]. Chemical element No. 95, symbol Am, produced artificially.

a·mer'is·tic [G. *a-*, not; *meros*, portion]. Not segmented. —**amerism**, *n.*

amesec. Trade-mark for a bronchial antispasmodic and sedative preparation containing aminophylline, ephedrine hydrochloride, and amytal.

a·me"si·al'i·ty (ay·mee"zee·al'i·tee) [*a-*; G. *mesos*, middle]. Shifting of a part, as the pelvis, to one side of the long axis of the body.

a·me·tab'o·lous [*a-*; G. *metabolē*, change]. Referring to a mode of insect development in which the insect resembles the adult when it hatches from the egg, as in the silverfish and the springtail.

amethocaine hydrochloride. British Pharmacopoeia name for tetracaine hydrochloride.

amethone. Trade-mark for 3-(beta-diethylaminoethyl)-3-phenyl-2-benzofuranone hydrochloride. The drug has antispasmodic action on smooth muscle, especially of the kidney vessels, ureter and urinary bladder.

amethopterin. Trade-mark for 4-amino-methylpteroylglutamic acid or 4-amino-methylfolic acid, a folic acid antagonist useful in treating certain types of leukemia.

a·me'tri·a, a·met'ri·a [*a-*; G. *mētra*, womb]. Congenital absence of the uterus. —**ametrous**, *adj.*

a·me"tro·he'mi·a, a·me"tro·hae'mi·a (ay·mee"tro-, a·met"ro-) [*a-*; *mētra*; G. *haima*, blood]. Deficiency in uterine blood supply.

am"e·tro'pi·a [*a-*; G. *metron*, measure; *ōps*, eye]. Imperfect refractive ability due to defects of the media or the structures of the eye, which cause images to fail to focus directly upon the retina. See *myopia*, *hypermetropia*, *astigmatism*, *presbyopia*, *aphakia*. —**ametrop'ic**, *adj.*; **am'etrope**, *n.*

amfetin. Trade-mark for a solution of a purified fraction of bovine amniotic fluid; the product is a tissue stimulant administered by peritoneal cavity instillation during abdominal operations.

am"i·an"thi·nop'sy [*a-*; G. *ianthinos*, violet colored; *opsis*, sight]. Violet blindness; inability to distinguish violet rays.

am"i·an'thoid [G. *amiantos*, asbestos]. Resembling asbestos; asbestoslike; said of certain fibers seen in degeneration of hyalin cartilage and called *amianthoid degeneration*.

am"i·an·tho'sis [*amiantos*; G. *-ōsis*, condition]. Asbestosis.

a"mi·ce'tin. An antibiotic substance isolated from cultures of a species of *Streptomyces* found in soil. It is markedly inhibitory to *Mycobacterium tuber-*

caleis var *Amoenis, Proteus vulgaris, Escherichia coli*, and *Micrococcus pyogenes* var *aureus*.

Amici, Giovanni Battista [*Italian astronomer and physicist*, 1784–1863] Said to have been the first to construct microscope with an achromatic lens (1817 18) Credited with the invention of an immersion objective (1850) Also remembered for his contribution to our knowledge of muscle.

ami-cro'bic (ay"migh kro'bick, krob'ick, migh-am) [G a- not *mikros*, small *bios*, life]. Pertaining to the absence of microorganisms.

ami'cron, ami'crons (ay-migh'kron, krone, ay-miek ron, -rone, -migh miek') [a- *mikros*]. A colloid particle, measuring about 10^{-7} cm. or less than 5 mμ in diameter so small as to be just barely visible through the ultramicroscope.

a-mi"cro-scop'ic [a- *mikros*; G *skopein*, to examine]. Too small to be observed by the ultramicroscope.

a-mic'u lum [L., mantle or cloak thrown around the body]. A dense plexus of fibers around the dentate nucleus of the cerebellum formed by fibers from the Purkinje cells of the cerebellar cortex.

ami'dase. Any enzyme catalyzing the hydrolysis of nonpeptide C=N linkages, generally with elimination of ammonia. Syn., *desamidase*. See Table of Enzymes in the Appendix.

am'ide. 1 Any organic compound containing the univalent radical, —CO.NH Amides are derived from acids by replacing the —OH group of the —COOH group by $-NH_2$, or by the replacement of hydrogen of ammonia by an acyl group, R.CO— where R indicates any organic radical, forming $R.CO.NH_2$. 2. A compound formed by the replacement of hydrogen of ammonia by a metal, such as sodamide, $NaNH_2$ Syn., *ammono base*.

am'i din. The part of starch that is soluble in water soluble starch.

am'i dine (am'i-deen, -din) Any compound containing the univalent radical $-C(NH_2):NH$ any amide in which the oxygen is replaced by the bivalent imide group, =NH.

a-mi'do- (a mee'do- am'i-do-) **amid-** (*amide*) A prefix denoting *compound containing the —CO.NH radical*. Also see *amino-*.

mi"do-az" tol'u-ene (mee do am"i-do-) See *aminoazotoluene*.

-mi"do-ben zene, mi"do ben'zol (mee do-am"i-do-) See *aniline*.

am'i-dol. Diaminophenol hydrochloride, $C_6H_3(OH)(NH_2.HCl)_2$ Colorless or grayish white crystals, freely soluble in water Used as photographic developer and in dyeing fur and hair May be irritating

mi done hy"dro-chlo'ride. Methadone hydrochloride.

amidophen. Trade-mark for an antipyretic and analgesic preparation containing aminopyrine, acetophenetidin, caffeine, and hyoscyamus extract.

-mi"do py'rine (mee"do pye reen, -rin, am i do-) Aminopyrine.

**am"i-dox'ime ** ra"i-dox'im (am"i dock seem, sim) A mp und co taining th gr p $-C(NH_2):N.OH$ it is an amidine in which the hydrogen of the imide group has been replaced by an —OH; as ethenyl- or acetamidoxime, $CH_3C(NH_2):N.OH$. Syn., *aramidine*.

amigen. Trade-mark for certain preparations of protein hydrolysate.

a-mim'i a [G. a- not; *mimos*, mimic]. 1 Loss of the ability to communicate by gestures or signs. It may be an amnesic aminia when the meanings of the signs are not remembered, or an ataxic amimia when gestures cannot be made because of muscular defects. 2. *In neurology*, paralysis of the facial muscles, affecting chiefly the angles of the mouth, apparent when the patient attempts an emotional grimace, as in paralysis agitans.

am'in. Amine.

a mi"na cri **n.** Aminoacridine.

am"i na tion. The process of introducing an amino group into molecule; also, the formation of an amine.

a mine (meen am een am in) **am'in.** Any member of the group of compounds formed by replacing one or more of the hydrogens of ammonia by one or more organic radicals, such as R.NH R.NH.R and R.N(R')R where R, R and R may or may not represent the same radical. The amines are classified as *primary secondary* and *tertiary* depending on whether one, two, or three hydrogens are replaced.

quaternary a. A compound derived from ammonium hydroxide by replacement of the four hydrogens of the —NH group by radicals; tetraalkyl ammonium bases.

tertiary a. An amine of the type R_3N or $R(R'')NR'''$

aminet. Trade-mark for suppository containing aminophylline and pentobarbital sodium.

a mi'no- (mee no- am i-no-) [from *amine*]. *In chemistry*, prefix meaning *pertaining to* or *containing the group NH united to a radical other than an acid radical*.

a mi"no-a-ce'tic ac'id (*acidum aminoaceticum*) $H_2N.CH_2.COOH$. White, odorless, crystalline powder with sweetish taste 1 Gm. dissolves in about 3 cc. of water it is slightly soluble in alcohol. It is constituent of many proteins from which it may be obtained by hydrolysis. It is also prepared synthetically Used in muscular dystrophy and myasthenia gravis. Dose, 4–8 Gm. (60–120 gr.) t.i.d. Syn., *glycocoll, glycine*.

mi"no-ac"e-to-phe-none (a-mee no am i-to-fi-nohn -fee nohn, am"i no-) (para-) $NH_2C_6H_4COCH_3$. A yellow crystalline compound used in colorimetric assay of thiamine hydrochloride.

mi no ac'id (a-mee no, am no) Any one of large group of organic compounds with the basic formula $NH_2-R-COOH$, R representing any aliphatic radical. These compounds are amphoteric in reaction and represent th end products of protein hydrolysis. From amino acids, the body resynthesizes its proteins. Ten of them are considered essential to lif arginine, histidine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, and valine. See T ble of Normal Values of Blood Constituents in the Appendix.

D-a mi no ac'id ox'i-dase. A flavoprotein enzyme present in animal tissues, responsible for oxidative deamination of the D- or unnatural form of amino acids but not acting upon the or natural form.

L-a mi'no ac'id ox'i-dase. A flavoprotein enzyme present in animal tissues, responsible for oxidative deamination of the L- or natural form of amino acids but not acting upon the D- or unnatural form.

mi no-a"cid u'ri-a. The presence of amino acids in the urine, especially in excess amounts.

mi"no-ac ri dine (mee no-ack'ri-deen, -din, am no-) An amino derivative of acridine of the several possible isomers the 9-aminoacridine (or 5-aminoacridine in the British numbering system) possesses useful bacteriostatic and bactericidal powers. The hydrochloride, $C_{13}H_{10}N_2.HCl.H_2O$ yellow crystalline powder soluble in 300 parts of water is the form in which the compound is used. Syn., *aminacrine*.

α-a mi no a dip'ic ac'id. COOH.CH(NH_2).(CH_2)$_3$ COOH; dibasic amino acid produced in the metabolism of lysine by liver homogenates, and also isolated from *Cholera vibrio*.

a mi no al co hol. Any of a group of compounds containing both an alcoholic hydroxyl group and an amino group. Syn., *alkamine*, *alkanolamine*.

amino-an-fol. Trade-mark for 4-aminopteroylaspartic acid, a folic acid antagonist useful in treating certain types of leukemia.

a mi'no az"o-tol'u-ene (a-mee no- am'i-no-) (ortho-) $CH_3C_6H_4N{:}NC_6H_3(NH_2)CH_3$. Golden leaflets or plates once used in ointment or as dusting powder to stimulate granulation in wounds. It may cause systemic poisoning.

a-mi"no az"o-tol'u-ol. Aminoazotoluene.

a mi"no ben zene (a mee no-ben zeen, -ben-zeen am"i-no) See *aniline*.

p-a mi"no-ben"zene ar son'ic ac'id. Arsanilic acid.

a mi"no ben"zene-sul fon a mide. See *sulfanilamide*.

4-a mi"no-ben zo'ic ac'id. Para-aminobenzoic acid.

4-a mi"no ben"zo-yl gly'cine. p-Aminohippuric acid.

α-a mi"no-bu tyr'ic ac'id. $CH_3CH_2CH(NH_2)$-COOH; the L-stereoisomer is a dextrorotatory crystalline substance, isolated from certain proteins. Syn., *α-aminobutanoic acid*.

2-a mi"no bu tyr'ic acid. α-Aminobutyric acid.

aminocaine. Trade-mark for p-amino-benzoyl-diethylamino-ethanolphenyl carboxylate, used as local anesthetic in 1-2% solution.

α-a mi"no-ca pro'ic ac'id. Norleucine.

2-a mi"no-a-glu cose. Glucosamine.

2-a mi"no-eth"ane-sul fon'ic ac'id. Taurine.

2-a mi"no-eth anol. Cholamine.

a mi"no-flu rene (mee no- am"i-no) Fluorenamine.

4-a mi"no-fo'lic ac id. See *aminopterin*.

a mi"no-glu cose. 2-Amino-D-glucose. See *glucosamine*.

α-a-mi"no-glu tar'ic ac'id. Glutamic acid.

2-a-mi"no-hep tane. A chemical name for the sympathomimetic agent known by the generic name *tuaminoheptane*, and supplied under the trade-marked name *tuamine*. Syn., *1-methylhexylamine*.

2-a mi"no hex"a-no'ic ac'id. Norleucine.

p-a mi"no-hip pu'ric ac'id. $NH_2C_6H_4CONH$ CH_2COOH A white, crystalline substance, sparingly soluble in water employed in kidney function tests. Syn., *p-aminobenzoylglycine*.

α-a mi"no-hy"dro-cin nam'ic ac'id. Phenylalanine.

2-a mi"no-3-hy drox"y bu"ta no'ic ac'id. Threonine.

α-a mi"no-β-hy-drox"y bu tyr'ic ac'id (al fuh-a-mee no-b y t h-high drock si-bew-tirr ick, -am i-no-) Threonine.

2-a mi"no-3-hy-drox"y pro pa no'ic ac'id. Serine.

α-a mi"no-β-hy-drox"y pro pi-on'ic ac'id. Serine.

aminoids. A proprietary nutrient containing amino acids, dipeptides, carbohydrates, inorganic salts.

α-a mi"no-3-in"dole-pro"pi-on'ic ac'id. L-Tryptophan.

α-a mi"no-i"so-ca pro'ic ac'id. Leucine.

α-a-mi"no-i"so-va ler'ic ac'id. Valine.

a mi"no-lip'id (-mee no-lip id, am i-no-) A fatty acid ester of an alcohol containing nitrogen in the amino form.

2-a mi"no-3-mer cap"to pro-pa n 'ic ac'id. Cysteine.

a mi"no-meth"an ami'dine (-am'i-deen, -din) Guanidine.

2-a mi"no-3-meth yl bu"ta no'ic ac'id. Valine.

4-a mi"no-meth"yl pter" yl glu-tam'ic ac'id. See *amethopterin*.

aminonat. Trade-mark for a protein hydrolysate prepared from lactalbumin.

a mi"no-pent' mide. Generic name for the anticholinergic substance α,α-diphenyl-γ-dimethylaminovaleramide. See *centrine*.

a mi"no pep ti dase. An enzyme occurring in intestinal mucosa, yeast, and certain bacteria. Catalyzes polypeptides at the end having a free amino group, producing an amino acid and a smaller peptide which may undergo further hydrolysis under the influence of the enzyme.

a mi"no-pep'te-drate. Generic name for an enzymatic digest of extracted liver and beef muscle, wheat gluten, soya, yeast, casein, and lactalbumin with dextrose, maltose, and sucrose, containing amino acids and polypeptides equivalent to 45% proteins and 40% carbohydrates. See *aminoreds*.

α-a-mi"no-β-phen yl pro"pi on'ic ac'id. Phenylalanine.

a mi"no-pher'ase. Transaminase; occasional usage.

a mi"no-phyl'line (-fil een, fil'in) ($C_7H_8N_4O_2$)$_2$ $C_2H_4(NH_2)_2.2H_2O$; A salt of theophylline and ethylenediamine, occuring as white or slightly yellowish granules or powder soluble in water. It has the action and uses of theophylline, modifying blood flow relaxing bronchial and other smooth musculature, and producing diuresis. Dose, orally 100–200 mg. (1½–3 gr); rectally 500 mg (7½ gr); intravenously 500 mg (7½ gr) Syn., *theophylline ethylenediamine*.

a-mi"no-pol'y pep'ti dase. A proteolytic enzyme occurring in yeast, intestinal mucosa, kidney spleen, and liver. Its action is the cleavage of polypeptides which contain either a free amino group or a basic nitrogen atom carrying at least one hydrogen atom.

2-a mi"no-pro"pa-no'ic ac'id. Alanine.

α-a mi"no pro"pi on'ic ac'id. Alanine.

a mi"no-pro'te-ase. An enzyme which will hydrolyze a protein and unite with the free amino group of its substrate.

aminopterin. Trade-mark for 4-aminopteroylglutamic acid or 4-aminofolic acid; a folic acid antagonist useful in treating certain types of leukemia.

4-a mi"no pter" yl as-par tic ac'id. See *amino-an-fol*.

4-a mi"no-pter" yl glu tam'ic ac'id. See *aminopterin*.

mi"no pu rine (mee no-pew reen, -rin, am i-no-) A purine in which one or more hydrogens are replaced by amino groups, as *adenine*, *guanine*.

a mi"no-py'rine (a-mee no pye reen, rin, am"i-no-) (*amidopyrine*) Dimethylaminophenyl-dimethyl pyrazolone; $C_{13}H_{17}N_3O$ An antipyretic and analgesic used in neuralgia, neuritis, migraine, and colds. Its continued use may lead to agranulocytosis. *A common allergen.* Dose, 0.13–0.3 Gm. (2–5 gr) Syn., *amidopyrine*. See *pyramidon*.

mi"no-quin naph'tho-ate. Pamaquine naphthoate.

aminosol. Trade-mark for a partial acid hydrolysate of blood fibrin, consisting of a mixture of approximately two-thirds free amino acids and one-third small peptides used to maintain positive nitrogen balance in patients unable to ingest or digest food.

a mi"no-sal"i-cyl'ic ac'id. The U.S.P official name for para-aminosalicylic acid.

aminosol. Trade-mark for certain preparations of protein hydrolysate prepared from modified fibrin.

a-mi″no-suc″cin-am′ic ac′id (a-mee no-suck sin am′ick, am″i no-) Asparagin.

a-mi′no su′gar Any of class of sugars in which one or more hydroxyl groups have been replaced by amino groups, as, for example, glucosamine and galactosamine.

a-mi″no-u′ri-a (-mee no-eue ree uh, am -no-) am″i nu′ri-a [ammoniac -ine; G ouron, urine]. The presence of amines in the urine.

-mi″no-tol′u-ene. See *toluidine*.

a-a-mi″no-va-ler′ic ac′id. Norvaline; also written *a-amino-n-valeric acid*.

am″i-nu′ri a. See *aminouria*.

amiodoxyl benzoate. A brand of ammonium orthoiodoxybenzoate, $C_6H_4(IO_2)COONH$ used as antiarthritic.

a-mi-o sis (a-migh-o sis, y migh) See *amiosis*.

am″i-thi′o-zone. Generic name for the tuberculostatic agent p-formylacetanilid thiosemicarbazone or p-acetylaminobenzaldehyde thiosemicarbazone $CH_3CO.NH.C_6H_4.CH:N.NH.CS(NH_2)$; pale yellow crystalline substance, insoluble in water; supplied under various trade-marked names, including *conteben*, *myvizone*, *panrone*, *tibione*. Syn., *thiacetazone*.

a″mi-to′sis [G a- not, mitos, thread; -osis, condition]. Reproduction by direct nuclear cleavage or simple fission. —**a-mi-tot′ic**, *adj*

Amman, Jan Conrad [*Dutch educator and scientist*, 1669–1724]. Remembered for his work in the education of deaf-mutes (1692–1700)

am me″ter [André Marie Ampère, French physicist, 1775–1836 G. metron, measure]. A type of galvanometer in which the electric current is measured directly in amperes.

am′mi-din. $C_{13}H_{10}O_4$; hydroxy-furocoumarin ether from *Ammi majus* which, like ammoidin but to lesser degree, induces normal pigmentation in patients with leukoderma areas. The substance is identical with *imperatorin*.

am mine. A complex compound characterized by containing ammonia molecules linked to metal (not to be confused with *amine*, which is substituted ammonia)

am′mism [G. ammos, sand]. Ammotherapy psammism; treatment of disease with sand baths.

ammivin. A trade-mark for pure crystalline khellin.

am″mo-, ammo- [ammos]. A combining form meaning *sand*.

am-moi′din. $C_{12}H_8O_4$ the methyl ether of 8-hydroxy-4′,5′,6,7-furocoumarin, obtained from the fruits of the herb *Ammi majus*; when given internally or applied externally followed by exposure to sunlight, it induces normal pigmentation in patients with leukodermic areas. The substance is identical with *xanthotoxin*.

Ammon, Friedrich August von [German ophthalmologist and surgeon, 1799–1861]. Known for his many ophthalmic operations and for his anatomic observations. Described the posterior scleral protuberance, the pyriform scleral fissure of early fetal life, etc. His atlas of diseases of the eye is considered the most complete summary written before the introduction of the ophthalmoscope.

am′mo-nate. A compound containing ammonia of crystallization, analogous to one containing water of crystallization.

am″mo-na′tion. A process of combining compound with ammonia. —**am mo-nate**, *v.*

Am mon′ horn. Old term for hippocampus.

am-mo ni-a [sal ammoniac, named from Temple of Jupiter Ammon]. A colorless, pungent gas, NH_3 very soluble in water a portion combining with it to form ammonium hydroxide. The ammonia of commerce is produced synthetically from nitrogen and hydrogen or obtained by the destructive distillation of nitrogenous organic matter It is used as detergent, saponifying agent, in refrigeration, and for other industrial applications. See also *ammonium*. —**ammoniated, ammoni′a-cal**, *adj*

a. liniment (*linimentum ammoniae*) A rubefacient prepared from diluted solution of ammonia, oleic acid, and sesame oil. Syn., *hartshorn liniment*. Also called *volatile liniment*.

a. water (*aqua ammoniae*) See diluted a. solution.

aromatic a. spirit (*spiritus ammoniae aromaticus*) A flavored, hydroalcoholic solution of ammonia and ammonium carbonate having an aromatic, pungent odor Dose, 2–4 cc. (30–60 min.) well diluted.

diluted a. solution (*liquor ammoniae dilutus*) A 10% solution of ammonia in water; used as local irritant, stimulant, and antacid. Dose 0.6–2.0 cc. (10–30 min.) greatly diluted.

strong a. solution (*liquor ammoniae fortis*) A 28% solution of ammonia in water

stronger a. water (*aqua ammoniae fortior*) See strong a. solution.

am mo ni ac. A gum resin from a Persian umbelliferous plant, *Dorema ammoniacum*, which has been employed in chronic bronchitis as stimulating expectorant and counterirritant

African a. A gum resin derived from *Ferula communis* var *brevifolia*, used chiefly as incense.

a. emulsion (*emulsum ammoniaci*) A 4% emulsion in water Dose, 15–30 cc. (½–1 fluidounce)

a. mixture (*mistura ammoniaci*) A 3% emulsion in water flavored with tolu balsam syrup.

am mo ni-e mi am mo″ni ee′mi a [sal ammoniac; G haima, blood]. The presence in the blood of ammonia compounds believed to be the result of urea decomposition. The condition is attended by subnormal temperature, digestive disorders, weakened pulse, and coma.

am-mon″i fi-ca′tion (a-mon″i-fi-kay shun, mo) Production of ammonia by bacterial action.

am mo′ni um. The univalent radical, NH_4 It exists only in combination.

acid a. carbonate. Ammonium bicarbonate.

a. acetate solution (*liquor ammonii acetatis*) Mindererus spirit, dilute acetic acid neutralized with ammonium carbonate. Dose, 4–30 cc. (1 dr 1 oz.) Used as diaphoretic.

a. alum. See alum (definition 3)

a. arsenate. $(NH_4)_2HAsO_4$ It has been used as an alterative in skin diseases.

a. benzoate. $C_6H_5COONH_4$ Stimulant and diuretic. Dose, 0.3–1.0 Gm. (5–15 gr.)

a. bicarbonate. NH_4HCO_3, occurring in white crystals as fine white crystalline powder or in colorless crystalline lumps, freely soluble in water; used like ammonium carbonate, and in the same dosage. Syn., *acid ammonium carbonate*.

a. bifluoride. $NH_4F.HF$ occurring as crystals, freely soluble in water: it etches glass in the solid state. Solutions are germicidal and have been used for this effect in pyorrhea alveolaris.

a. bitartrate. $NH_4HC_4H_4O_6$ A white crystalline, acid powder An ingredient of baking powder

a. bromide (*ammonii bromidum*) NH_4Br Used as sedative and somnifacient. Dose 0.6–2.0 Gm. (10–30 gr.)

a. carbamate. $NH_2COO.NH_4$ A white, crystalline, volatile powder

a. carbonate (*ammonii carbonas*) A compound of ammonium acid carbonate (NH_4HCO_3) and

ammonium carbamate (NH COO.NH₄) in varying proportions. It is stimulant expectorant and reflex stimulant. Dose, 0.3–0.6 Gm. (5–10 gr.)

a. chloride (*ammonii chloridum*) NH_4Cl. When used as saline expectorant, the dose is 0.3–0.6 Gm. (5–10 gr.); and for the acidification of urine, the dose is 1–4 Gm. (15–60 gr.) per day.

a. hydroxide. NH_4OH weakly-ionizing base formed to some extent when ammonia (NH_3) is dissolved in water. Th term is frequently pplied, not entirely correctly to aqueous solutions of ammonia.

a. hypophosphite (*ammonii hypophosphis*) NH_4PH_2O It has been used in treating bronchitis and laryngitis. Dose, 0.13–0.3 Gm. (2–5 gr.) 3 times daily.

a. ichthosulfonate. Ichthammol.

a. iodide (*ammonii iodidum*) NH_4I. It has been used in treating asthma and in chronic bronchitis when exudate is fibrinous. Dose, 0.13–0.6 Gm. (2–10 gr.)

a. mandelate. $C_6H_5CH(OH)COONH$ A white deliquescent powder soluble in water. Used as urinary antiseptic. Dose, 3–4 Gm. (45–60 gr.) Syn. mandamon.

a. muriate. Ammonium chloride.

a. nitrate. NH_4NO Used in preparing nitrous oxide.

a. oxalate. (NH)₂C₂O₄.H₂O occurring in colorless crystals or white granules, soluble in water. It is of importance as an analytical reagent.

a. persulfate. $(NH_4)_2S_2O$ Colorless crystals, soluble in water. It is disinfectant and deodorizer. Application, 0.5–2.0% solution.

a. phosphate, dibasic. (NH) HPO_4, occurring in crystals, freely soluble in water; it gradually loses ammonia on exposure to air; has been used medicinally. Also called *secondary ammonium phosphate, diammonium hydrogen phosphate.*

a. phosphate, monobasic. (NH)H₂PO occurring in crystals, freely soluble in water per manent in air; has been used medicinally. Also called *primary ammonium phosphate, ammonium biphosphate, ammonium dihydrogen phosphate.*

a. picrate. A yellow salt which, like other picrates, is explosive and should be handled with care.

a. salicylate (*ammonii salicylas*) C₆H OH. COONH An antirheumatic and antipyretic. Dose, 0.13–1.3 Gm. (2–20 gr.)

a. sulfate. $(NH_4)_2SO$ Used as protein precipitant.

a. urate. $NH_4C_5H_3N_4O_3$, occurring as crystalline powder almost insoluble in water. An occasional constituent of urine. It has been used in the local treatment of eczema.

a. valerate. Has been used as sedative in hysteria. Dose, 0.06–0.3 Gm. (1–5 gr.)

am·mo ni u'ri [*sal ammoniac*; G. *ouron*, urine]. Presence of an excess of ammonia in the urine.

am mo no bass. An inorganic amide obtained by replacing hydrogen of ammonia with metal, as $NANH_2$, sodium amide.

am mo nol'y sis. Any interaction of ammonia with another substance in which the ammonia also undergoes chemical change.

am"mon o tel'ic [*ammono-* combining form from ammonia; G. *telikos*, from *telos*, end, or purpose]. Having ammonia as the principal compound of its nitrogenous waste; said of aquatic invertebrates and tadpoles.

am mo ther py [G. *ammos*, sand; *therapeia*, treatment]. The use of sand baths in the treatment of disease.

am"ne mon'ic (am nee mon'ick) [G. *a-* not; *mnēmonikos*, relating to memory]. Relating to impairment of the memory.

am ne si a (am nee zhuh, -zee uh) [G. forgetfulness]. Loss of memory, especially of the ideas represented by words. —**amnesic, amnes'tic,** *adj.*

anterograde a. Loss of memory for the period immediately following trauma, shock, or confused state.

auditory a. Word deafness. Inability to recognize the spoken word.

lacunar a. Loss of memory for only certain isolated events, not complete memory loss.

retroanterograde a. A perversion of memory in which recent events are referred to the past, and conversely.

retrograde a. Loss of memory for events occurring before the onset of th current disease.

tactile a. Inability to recognize objects by the sense of touch; astereognosis.

visual a. Word blindness. Inability to recognize the written or printed word, or objects previously seen.

amnestrogen. Trade-mark for preparation of conjugated (water-soluble) estrogenic substances derived from gravid mares urine.

am ni·a. Plural of amnion.

am ni·o- [G. *amnion*, membrane around the fetus, dim. of *amnos*, lamb]. A combining form denoting *amnion, amniotic.*

am"ni·o ho ri al (am nee-o-kor ee-ul) [*amnion*, G. *chorion*, chorion]. Pertaining to both amnion and chorion.

am ni·o·em"bry·on'ic [*amnion*; G. *embryon*, embryo]. Pertaining to the embryo and the amnion.

am"ni·o·gen e·sis [*amnion*, G. *genesis*, production]. The development or formation of the amnion.

am"ni og'ra phy [*amnion*, G. *graphein*, to write]. Radiography of the fetus by injection of solution of strontium iodide through the abdominal wall and into the amniotic sac; usually used as diagnostic aid in suspected placenta previa.

am ni·on (pl. *amnia*) [G.] The innermost of the fetal membranes forming fluid-filled sac for the protection of the embryo. Its thin, translucent wall is composed of an inner layer of ectoderm and an outer layer of mesoderm continuous with the embryonic somatopleure at the umbilicus. After the second month of development, it obliterates the extraembryonic coelom, forms sheath about the umbilical cord, and fuses loosely with the chorionic mesoderm. —**am ion'ic, amniot'ic,** *adj.*

false a. A temporary cavity in the trophoblastic knob, resembling the early true amnion. Syn., *false amniotic cavity, ectoplacental cavity.*

true a. The inner amniotic folds of vian, reptilian, and certain mammalian embryos, the amnion proper.

am"ni or rhe a, am"ni·or rhex [*amnion*, G. *rhoia*, flow]. The premature escape or discharge of the liquor amnii.

Am"ni·o ta [*amnion*]. Group of animals with an amnion and allantois, comprising mammals, birds, and reptiles. Syn., *Allantoidea.* —**am niote,** *adj.* **n.**

amniotin. Trade-mark for an estrogenic preparation derived from gravid mares urine, containing *estrone as the principal active constituent.*

am ni·o·ti'tis [*amnion*; G. *-itis*, inflammation]. Inflammation of the amnion.

am ni·o tome [*amnion*, G. *tomos*, cutting]. An instrument for puncturing the fetal membranes.

am"ni·ot'o·my Rupture of the fetal membranes by surgical procedure.

am" bar'bi tal. The official generic name of 5-ethyl-5-isoamylbarbituric acid, introduced under the trade-marked name *amytal.* Amobarbital so-

dium is the official generic name of the water soluble sodium derivative of amobarbital.

am o-di' -quin. Generic name for the antimalarial drug 4-(7-chloro-4-quinolylamino)-α-diethylamino-o-cresol, the dihydrochloride of which is supplied under the trade-marked name *camoquin hydrochloride*.

amodrine. Trade-mark for bronchial antispasmodic and sedative containing aminophylline, racephedrine hydrochloride, and phenobarbital.

A moe'ba. See *Endamoeba*.

a-moe'ba. See ameba.

a-mok' amuck' [Malay amog, furious]. I state of murderous frenzy Certain Orientals, mostly Malays, attack with knives and kill while in this state of wild fury

A mo mum [G amomon, Indian spice plant]. A genus of plants of the Zingiberaceae.

A. cardamomum. Source of the cardamom.

A. granum paradisi. Source of the grains of paradise; possessing diuretic properties.

a'mor [L]. Love, especially physical attraction and union.

a. insanus. Erotomania.

a. lesbicus. Lesbianism; sapphism.

a. sui. Love of self vanity

a-mo-ral'i [G a- not L moralis, moral]. Moral imbecility Obs.

a mor'phia. See amorphous.

-mor'phi -ism [a- G. Morpheus god of dreams]. State resulting when morphine is withdrawn from an addict.

a mor phous, amor'phic [a-; G. morphē form]. 1. Formless, shapeless. 2. In biology without visible differentiation in structure. 3. I chemistry, not crystalline. —amorphism, amorphia, n.

-mor phus [a-; morphē]. An acardiac monster without head or extremities; similar parasitic monster which is but shapeless mass, sometimes called *amorphus globulus*. See *anideus*

amosyn. Trade-mark for preparation of conjugated or free estrogens derived from gravid mares' urine.

a-mo'ti-o ret'i nae (a mo tee ret nee) [L]. Detachment of the retina.

AMP Adenosinemonophosphate.

amp. Ampere amperage.

am-per'age (am peer id) am pi-rid), am-pair'id]) [after André Marie Ampère, French physicist, 1775-1836]. The number of amperes passing in given electric circuit. Abbreviated, amp.

am pere (am peer am peer') [Ampère]. A unit of current electricity; one-tenth of the unit of current of the centimeter-gram-second system of electromagnetic units; the current produced by one volt through resistance of one ohm. The international ampere is the value of steady current depositing 0 001118 Gm. of silver per second from solution of silver nitrate. Abbreviated, a., amp.

am pere-me ter See ammeter

amphedroxyn hydrochloride. A trade-marked name for methamphetamine *hydrochloride*.

am"pher-ot' -ky am-phit ky [irreg from G amphoteros, both of two; tokos, offspring]. Production of both sexes in single parthenogenetic brood. —amopherot'okous, amphit okal, adj

am phet' amine (am fet uh-meen, -min) Racemic 1-phenyl-2-aminopropane, $C_6H_5CH_2CH(NH_2)CH_3$ colorless, volatile, mobile liquid. Inhalation of its vapors causes shrinking of the nasal mucosa in head colds, sinusitis, and hay fever Also see benzedrine

a. phosphate. $C_9H_{13}N.H_3PO_4$ white, crystalline powder freely soluble in water used as central stimulant. Syn., *racemic amphetamine phosphate dl-monobasic amphetamine phosphate*.

a. sulfate $(C_9H_{13}N)_2.H_2SO_4$ white, crystalline powder freely soluble in water; used as central stimulant. Syn., *racemic amphetamine sulfate*.

dextro-a. The dextrorotatory form of amphetamine phosphate and sulf te, salts of which are used; more powerful cerebral stimulant than the levo form. See *dexedrine*.

dibasic a. phosphate. $(C_9H_{13}N)_2H_3PO_4$; white, crystalline powder soluble in water used as central stimulant. Syn., *racemic dibasic amphetamine phosphate, dl-dibasic amphetamine phosphate*.

am phi-, mph- [G on both sides]. A prefix signifying *both, of both kinds, on both sides, about, around*.

am phi ar thro sis [amphi; G. arthron, joint]. An articulation of contiguous bony surfaces which are connected by either fibrocartilage, as the vertebrae, or an interosseous ligament, as the tibiofibular junction. They permit only slight motion. —am phi-ar throt'ic, adj

am phi as"ter [amphi, aster star]. The achromatic figure in mitosis, consisting of two asters connected by spindle formerly called *diaster*

Am-phib'i [G amphibios, from amphi, bios, life]. A class of vertebrates which includes the salamanders and newts, frogs and toads, the tropical Apoda, and certain extinct orders distinguished by scaleless skin, paired limbs with toes, gills in t least larval stages, lungs in most orders, and three-chambered heart.

am phib'i-ous [amphi, bios]. Capable of living both on land and in water

am phi blas tic [amphi, G blastos, germ] I biology designating the complete but unequal segmentation of telolecithal eggs.

am phi blas'tu la [amphi, dim. from blastos] 1. A ciliated larval stage of many sponges. 2. A blastula produced by amphiblastic or unequal cleavage, as in amphibia.

am phi bles tro des (am fi bles tro'deez) [G amphiblestron, fishnet eidos, form]. The retina. Obs.

am phi chro'ic [G amphi, on both sides; chroia color]. Having the power to turn blue litmus paper red and red litmus paper blue. Obs.

am"phi coe'lous (am fi see'lus) [amphi, G koilos, hollow]. Biconcave; pplied to the centrum of the vertebra of certain fishes.

m"phi cra ni [amphi, G kranion, skull]. Headache affecting both sides of the head, as opposed to *hemicrania*.

am phi-cre a tine (am fi kree uh-teen, -tin) [amphi, G kreas, flesh]. One of the tissue leucomaines of the creatine type.

am"phi-cre-at'i nine (kree-at'i neen, nin) [amphi, kreas]. One of the tissue leucomaines of the creatinine type.

m phi-cyte [amphi, G kytos, cell]. A satellite cell.

m"phi des mic, m"phi-des mous [amphi, G desmos, bond]. Furnished with double ligament.

am phi di"ar thro sis [amphi, G diarthrosis, articulation]. A mixed articulation such as that of the lower jaw which partakes of the nature of both amphiarthrosis and diarthrosis.

m phi-er' tism [amphi, G eros love]. A condition in which an individual can conceive of himself as being either male or female or both at the same time.

am phi gas'tru la [amphi, dim. from G gastr stomach]. A gastrula having blastomeres of different size in the two hemispheres as a result of total unequal cleavage.

am phi gen -sis [amphi, G. genesis, production]. The capacity of predominantly homosexual person to carry on normal sexual relations with t opposite sex. —amphigenet'ic, adj

am phig'o ny [amphi, G. gonē, offspring]. Sexual reproduction.

am"phi kar'y·on [amphi, G. karyon, kernel]. A diploid nucleus.

am"phi mix'is [amphi, G. mixis, a mingling]. 1. *In genetics*, interbreeding. 2. *In psychoanalysis*, urethral and anal erotism combined.

am"phi mor u la [amphi, dim. from G. moron, mulberry]. A morula resulting from unequal segmentation, the cells of the hemispheres being unlike in size. Syn., *unequal morula*.

am"phi·ox'us [G. amphi, both; oxys, sharp]. A lancelet (genus *Amphioxus*) primitive marine chordate belonging to the subphylum Cephalochorda, regarded by many as connecting link between the invertebrates and vertebrates.

Am phi·sto ma ta [amphi, G. stoma, mouth]. A suborder of trematode worms, distinguished by a prominent posterior ventral sucking disk.

am phi tene [amphi, G. tainia, filament]. The stage of mitosis in which the homologous chromosomes are in the process of conjugation. Syn., *synaptene, zygotene*.

am'phi the"a ter am phi the"a tre [G. amphitheatron, amphitheater]. A room with seats arranged in tiers; used for students or others to attend surgical operations, lectures, demonstrations, etc.

am phit'o ny See *amphotony*.

am phit'ri·chous (am fit ri kus) **am phit ri·chate** (am fit ri kit, kate, am fi·try'kate) [amphi, G. thrix, hair]. Having flagella at both ends.

am'pho- [G both]. A combining form meaning *both*.

ampbocillin. Trade-mark for package containing a vial of penicillin and bottle of amphojel used, after mixing, as oral penicillin therapy

am"pho-di plo pi·a, am phot er·o·di plo pi a [amphi; G diplous, double; ōps, eye] Double vision affecting each of the eyes.

amphojel. Trade-mark for suspension of aluminum hydroxide used in gastric hyperacidity

am pho·lyte [G amphoteros, both; lytos, soluble]. An amphoteric electrolyte.

amphoreate. Trade-mark for ampuls of methenamine, partly combined with camphoric acid, administered intravenously as urinary antiseptic.

am phor'ic [G amphoreus, jar with narrow neck]. Resembling the sound produced by blowing across the mouth of large, narrow-mouthed jar or bottle.

am phor'ic breath'ing. See amphoric *respiration*.

am"pho ril'o·quy [amphoreus; L. loqui, to speak]. The production of hollow blowing sounds in speaking.

am"pho·roph'o·ny [amphoreus; G phōnē, voice]. An amphoric resonance of the voice.

am pho·ter'ic. Having both acid and basic properties; capable of behaving either as weak acid or as weak base as aluminum hydroxide, $Al(OH)_3 \rightleftharpoons H_3AlO_3$. Having the power of altering the color of both red and blue litmus paper —**amphoterism**, *n*.

am phot er·o·di plo pi·a. See *amphodiplopia*.

amphotropin. Trade-mark for methenamine camphorate white, crystalline powder soluble in water used as urinary antiseptic.

am"pli fi·ca tion [L. amplificare, to enlarge]. 1. *In microscopy* the enlargement of the visual area, as *amplification 200×* or *200 diameters* 2. *In sound or radio*, the magnification of sound. 3. *In electricity* the increase of electric current in either voltage or amperage, as of transformer

am pli fi"er [amplificare]. 1. Any device which enlarges, magnifies, or increases the size, strength, or power of an object or force. 2. The concavo-convex lens between the objective and ocular of microscope. 3. An electron tube in radio or radiotherapy 4. A transformer

am pli tude [L. amplitudo, breadth]. One-half the range of periodic variation for symmetric vibrations the maximum displacement from the normal for asymmetric vibrations; largeness extent; range.

am"pro-tro pine phos phate. Generic name for the phosphate of the *dl*-tropic acid ester of 3-diethylamino-2,2-dimethyl-1-propanol. See *syntropan*.

am'pul (am pul, am pōōl) **am pule** (am pewl, am pōōl) **am poule** (am·pōōl' am pōōl) [L. ampulla, bottle] 1. A container commonly made of glass and capable of being hermetically sealed, intended to hold sterile preparations usually intended for parenteral use. 2. Any of class of preparations consisting of sealed container holding medicament. Such preparations are now more commonly known as injections (*injectiones*)

am pul'la (pl. ampullae) [L.]. The dilated extremity of canal or duct, as of the mammary ducts and semicircular canals. —**ampullar am pullary ampullate**, *adj*

a. lactifera. A dilatation of milk duct near its opening on the nipple.

a. of the ductus deferens. That of the ductus deferens just before its junction with the duct of the seminal vesicle. See Plate 44.

a. of the lacrimal duct. A slight dilatation of the lacrimal duct beyond the punctum.

a. of the uterine tube. The dilated end of uterine tube.

a. of the vagina. The dilated upper end of the vagina, where it joins the cervix of the uterus.

a. of Vater The dilatation of the common bile duct and pancreatic duct where they join the duodenum.

membranous ampullae. Those occurring at one end of the membranous semicircular canals near their junction with the utricle, and containing the end organs of the sense of equilibrium.

osseous ampullae. Those parts of the bony labyrinth of the internal ear which house the membranous ampullae.

rectal a. The dilated part of the rectum situated just above the anal canal.

am pul'lu la [L. dim. of ampulla]. A minute ampulla, as in the lymphatic or lacteal vessels

am pu ta tion [L. amputare, to cut away]. The removal, generally by surgical means, of limb, wholly or in part, projecting part or process, or an organ of the body Amputation may occur in the course of pathologic processes, such as gangrene or constriction, or as the result of accident

amniotic a. Amputation of fetal limb by portion of the amnion.

a. appliances. A prosthesis for an amputated limb

a. by transfixion. That performed by thrusting an amputating knife through limb and cutting the flaps from within out.

a. center *In military medicine*, general hospital in home territory where, prior to discharge, amputees are sent for prosthetic appliances, training in the use of artificial limbs, and rehabilitation.

a. in contiguity That performed through joint (disarticulation, dismemberment)

a. in continuity That performed elsewhere than at joint.

a. neuroma. A painful bulbous enlargement of the end of nerve divided in amputation, occurring after the formation of the stump.

a. stump. The rounded and shaped lower portion of an amputated limb or organ.

aperiosteal a. One in which all periosteum is removed in the vicinity of the divided bone ends.
bloodless a. One in which, owing to control, but little blood is lost, or because of crushing or other circumstances, the circulation has ceased within the field of operation. Also called *dry a.*
central a. One in which the flaps are joined so that the suture line runs across the end of the stump.
chop a. One by a circular cut through the soft parts and bone without provision for flaps.
Chopart's a. An amputation of the foot consisting of a dislocation of the tarsal bones, leaving only the talus and calcaneus.
cineplastic a. One in which a muscular stump is left so as to allow for movement of an artificial limb.
cineplastic a. One in which tendons are arranged in the stump to permit their use in moving parts of the prosthetic appliance. Types of cineplastic amputations include the *club*, the *loop*, the *tendon tunnel*, and the *muscle tunnel*.
circular a. An operation performed with the use of a flap by circular sweeps or incisions around the limb vertical to the long axis of the bone. Syn., *guillotine a.*
coat-sleeve a. One in which one long skin flap, like a coat sleeve, is left to enclose the stump.
congenital a. One which takes place in the uterus as the result of some pathologic or accidental process. Syn., *intrauterine a.*
double-flap a. One in which there are two opposing skin and muscle flaps.
elliptic a. One similar in performance to the circular but in which the incision is elliptic.
Gritti-Stokes a. A supracondylar osteoplastic operation in which the patella, after removal of its articular surface, is retained in the flap and attached to the divided end of the femur, the skin and muscle flap being closed posteriorly.
guillotine a. See circular a.
Hey's a. The same as Lisfranc's amputation except that the medial cuneiform bone is sawed through in a line with the articulation of the second metatarsal bone, instead of being disarticulated.
interpelviabdominal a. Amputation of the thigh with a portion of the adjoining half of the pelvis.
interthoracoscapular a. Amputation of the upper extremity at the shoulder girdle with disarticulation of the humerus. It includes removal of the scapula and outer portion of the clavicle.
intrauterine a. See congenital a.
Lisfranc's a. A disarticulation of the tarsometatarsal joints.
Mackenzie a. A modified Syme amputation in which the flap of skin is taken from the medial aspect of the ankle.
major a. Any amputation through the long bones of the upper or lower extremities; disarticulation at the hip joint or shoulder girdle.
mammary a. Removal of the breast, either simple or radical.
mediotarsal a. See Chopart's a. Also called *midtarsal a.*
osteoplastic a. One in which there is a portion of bone fitted to the amputated bone end. See Gritti-Stokes a.
partial a. One in which only a portion of a member, part, or organ has been removed.
pathologic a. One occurring as a result of some pathologic process.
Pirogoff's a. A partial osteoplastic operation in which the calcaneus is sawed through obliquely from above downward and forward, and the posterior portion is brought up and secured against the surface made by sawing off the lower ends of the tibia and fibula.
primary a. One performed immediately after injury during the period of reaction from shock and before the onset of suppuration.
racket a. A variety of elliptic or oval amputation with a long cut, like a racket handle, below the elliptic incision.
renal auto-a. The condition in which a kidney is cut off functionally by a diseased or obstructed ureter.
secondary a. One performed after suppuration has occurred or for the purpose of improving a temporary circular amputation with flaps left open.
spontaneous a. (a) Congenital amputation. (b) Amputation not caused by external trauma or injury, as in ainhum.
subperiosteal a. One in which the divided bone ends are covered by neighboring periosteum.
supracondylar a. An operation in which the femur is sawed through above the condyles. See Gritti-Stokes a.
Syme's a. Amputation above the ankle joint, the malleoli being sawed through, and a flap made with the skin of the heel.
thigh a. One through the femur below the hip joint.
traumatic a. One resulting from direct trauma.
two-stage a. See secondary a.

am"pu·tee' [L. *amputare*, to cut away]. One who has had a major amputation of one or more limbs.

a·muck'. See *amok*.

a·mu'si·a (a·mew'zee·uh, ·see·uh) [G. *a-*, not; *mousa*, muse]. Loss of the ability to produce or comprehend music or musical sounds; an abnormality in regard to music, analogous to aphasia in regard to the faculty of speech.
motor a. That in which music is understood, but the power of singing or otherwise reproducing music is lost.
sensory a. Musical deafness, or the loss of the power of comprehension of musical sounds.

Amussat, Jean Zuléma [French surgeon, 1796–1856]. Remembered for his operation of lumbar colostomy (1839) said to have been the first performed for the relief of intestinal obstruction.

am"y·cho·pho'bi·a (am"i·ko·fo'bee·uh) [G. *amychē*, tearing; *phobos*, fear]. Morbid fear of laceration, as of being scratched or clawed.

am"y·dri'a·sis [G. *a-*, not; *mydriasis*, dilatation of the pupil]. Pupillary contraction. See *mydriasis*.

a·myd'ri·caine hy"dro·chlo'ride (a·mid'ri·kane, ·ka·een, ·ka·in). See *alypin hydrochloride*.

a·my"e·len·ceph'a·lus [*a-*; G. *myelos*, marrow; *enkephalos*, brain]. A monster having neither brain nor spinal cord. —**amyelencephal'ic,** *adj.* **amyelencepha'lia,** *n.*

am"y·e'li·a (am"eye·ee'lee·uh, ·el'ee·uh, am"ee·) [*a-*; *myelos*]. Congenital absence of the spinal cord. —**amyel'ic, amy'elous,** *adj.*

am"y·el"in·at·ed. Having no myelin sheath, as sympathetic nerve fibers; nonmedullated.

a·my'e·lus [*a-*; *myelos*]. A monster with partial or complete absence of the spinal cord.

a·myg'da·la. See *almond*.

a·myg'da·lase. Emulsin.

a·myg"da·lic ac'id. Mandelic acid.

a·myg'da·lin. $C_{20}H_{27}O_{11}N \cdot 3H_2O$. A glycoside of mandelonitrile, $C_6H_5CHOHCN$, and the disaccharide gentiobiose, occurring in the bitter almond and other sources. In the presence of water the enzyme emulsin causes its hydrolysis into glucose, benzaldehyde, and hydrocyanic acid.

a·myg'da·loid. See amygdaloid nucleus.

a·myg″da·loid·ec′to·my Surgical excision of the amygdaloid nucleus, sometimes used to control olfactory hallucinations.

a·myg′da·lo·lith (a·myg′dal·o·lith). Tonsillar calculus.

A·myg′da·lus [G. *amygdalē*, almond]. See *almond*.

am′yl, a·myl [G. *amylon*, starch]. The univalent radical, $—C_5H_{11}$, derived from pentane. Three structural arrangements are possible, as follows: *normal amyl*, written *n-amyl*, the radical $CH_3CH_2CH_2CH_2CH_2—$; *isoamyl*, the radical $(CH_3)_2CH.CH_2CH_2—$; *tertiary amyl*, the radical $CH_3CH_2(CH_3)_2C—$. Syn., *pentyl*. —**amyl′ic**, *adj.*

a. acetate. Isoamyl acetate. $CH_3COOC_5H_{11}$. A colorless liquid, miscible with alcohol, having a characteristic pearlike odor and taste; used as flavor, perfume, and solvent. Syn., *banana oil*. Also called *pear oil*.

a. alcohol. Any of eight isomeric alcohols of the composition $C_5H_{11}OH$, variously denominated. Commercial amyl alcohol, also known as *fusel oil*, consists predominantly of isoamyl alcohol (3-methyl-1-butanol).

a. bromide. Isoamyl bromide. $C_5H_{11}Br$. A colorless liquid, miscible with alcohol. Antiseptic and slightly anesthetic.

a. butyrate. Isoamyl *n*-butyrate. $C_3H_7COOC_5H_{11}$. A colorless liquid, soluble in alcohol; used in fruit essences. *n-Amyl n-butyrate* is similar.

a. nitrite (*amylis nitris*). Isoamyl nitrite. $C_5H_{11}ONO$. A yellowish liquid, having an ethereal, fruity odor and a pungent, aromatic taste; used by inhalation to relax arterial spasms and of especial value in angina pectoris. Its action is immediate but fleeting. Dose, by inhalation, 0.2–0.3 cc. (3–5 min.)

a. valerate, a. valerianate. Isoamyl isovalerate. $C_4H_9COOC_5H_{11}$. A colorless liquid, miscible with alcohol, having an applelike odor and an artificial apple flavor.

tertiary a. alcohol. See *amylene* hydrate.

amyl-. See *amylo-*.

am″y·la′ceous [*amylon*]. Containing starch; starchlike.

am′yl·a·mine hy″dro·chlo′ride (am″il·ah·meen, am″il·am′in, -am′een, am″il·ah·meen′, -min). $C_5H_{11}NH_2.HCl$. Colorless crystals, soluble in water; has been used as an antipyretic. See *isoamylamine*.

am′yl·ase (am′i·lace, -laze). Any amylolytic enzyme which hydrolyzes starch to sugar. See Table of Normal Values of Blood Constituents in the Appendix.

pancreatic a. Amylopsin.

salivary a. Ptyalin.

vegetable a. Diastase.

amylcaine hydrochloride. See *amylsine hydrochloride*.

am′yl·ene. C_5H_{10}. A liquid hydrocarbon having anesthetic properties but too dangerous to use.

a. chloral. Chloral amylene hydrate.

a. hydrate (*amyleni hydras*). Tertiary amyl alcohol, $C_2H_5(CH_3)_2C.OH$. A narcotic substance rarely used by itself, but employed as a solvent for and synergist with tribromoethanol.

am′y·lo-, amyl- [*amylon*]. A combining form denoting *pertaining to starch*.

am′y·lo-, amy′lo-, amyl- [amyl, G. *hylē*, wood, material]. A combining form denoting *amyl*, the radical.

am′y·lo·bar′bi·tone, amyl″ bar′bi·tone. British generic name for *amobarbital*.

am′y·lo·caine hy″dro·chlo′ride. $C_6H_5CO.C(CH_3)(C_2H_5)CH_2N(CH_3)_2.HCl$. The hydrochloride of the benzoyl ester of methylethyldimethylaminomethylcarbinol, a colorless, crystalline powder, soluble in water. Used as a local and spinal anesthetic in concentrations of 1 to 10 per cent. See *stovaine*.

am″y·lo·dex′trin [*amylon*; L. *dexter*, right]. Soluble starch.

am″y·lo·dys·pep′si·a [*amylon*; G. *dyspeptein*, to digest with difficulty]. Inability to digest starchy foods.

a·myl′o·gen [*amylon*; G. *genesthai*, from *gignesthai*, to be produced]. Soluble starch.

am′y·loid [*amylon*; G. *eidos*, form]. A complex protein deposited in tissues, characterized physically by its hyaline structureless nature, and chemically by special staining reactions. Its exact composition is unknown, and probably variable. It is starchlike only in that it stains brown with iodine. Amyloid results from degeneration of tissue and infiltration of unknown substances. It stains brown with iodine in watery solutions and turns a mahogany brown, almost black, when treated subsequently with dilute sulfuric acid. It takes a red tinge when heated in the metachromatic aniline dyes, such as gentian violet, methylrosaniline chloride, and methyl green.

am′y·loid de·gen·er·a′tion. See secondary *amyloidosis*.

am″y·loid·o′sis [*amylon*, *eidos*; G. *-osis*, condition]. Widespread deposit of amyloid in various organs of the body or less commonly deposit in a particular organ, as amyloidosis of the kidney.

a. cutis. The presence of amyloid in the skin in the form of papules or plaques; it is not necessarily associated with systemic amyloidosis.

lichenoid a. A primary amyloidosis involving only the skin, usually of the legs. The papules resemble those of lichen planus, are conical or flat, discrete, brownish-red, and may coalesce to form plaques. The amyloid deposits are small and are found only in the subepidermal region of the skin.

primary a. A rare disease without known cause, characterized by more or less widespread deposit of amyloid in mesodermal structures, including skeletal muscle, tongue, bone, tendons, cartilage, cardiac muscle, lips, and other sites. This amyloid has less uniform staining reactions than the common secondary forms.

secondary a. Deposit of amyloid in various organs of the body—especially liver, spleen, and kidney—secondary to chronic diseases, such as chronic ulcerative tuberculosis of the lungs, chronic tuberculosis of the bones, chronic suppurative osteomyelitis, leprosy, tertiary syphilis, and malignant tumors. The material is first found immediately around capillaries and vascular sinuses, then around small arteries and veins, and then later more widely distributed in the organ. Staining reactions are regular and characteristic. Syn., *amyloid degeneration*.

am″y·lol′y·sis [*amylon*; G. *lysis*, a loosing]. The digestion of starch, or its conversion into maltose. —**amylolyt′ic**, *adj.*

am′y·lon [G.]. 1. Starch. 2. Glycogen.

am″y·lo·pec′tin. The outer, almost insoluble, phosphorus-containing portion of starch granules. It stains violet with iodine and forms a paste with water. See *amylose*. Also called *α-amylose*, *α-starch*.

am″y·lop′sin. An enzyme which changes starch into maltose; found in the pancreatic juice.

am′yl·ose (am′i·loce, -loze). 1. The inner relatively soluble portion of starch granules. It is stained blue by iodine. See *amylopectin*. 2. A polysaccharide. Also called *β-amylose*, *β-starch*, *granulose*.

amylsine hydrochloride. Trade-mark for the local anesthetic substance *naepaine hydrochloride* used to produce corneal anesthesia.

am y-lum. See starch.
am″y-lu′ri a [amylon; G ouron, urine]. Presence of starch in the urine.
a my″o-es the si a, a my″o-es the si-a (-es-thee zhuh, -zee-uh) a my″o-es the sis, a my″o-es the′sis [G a- not; mys, muscle; aisthēsis, sense]. State of being without muscle sense. Lack of the sense of motion, weight, and position.
a-my″o-pla si-a (a-my′o-play′zhuh, -zee-uh, -shuh, -see-uh) [a-; mys; G plasis, to form]. Lack of muscle formation and development. —amyoplas′tic, adj
a. congenita. A congenital muscle deficiency attended by joint fixation, malpresentation, and difficult delivery.
a my″o-sta si-a (a-my″o-stay′zhuh, -zee-uh, -shuh, -see-uh) [a- mys; G stasis, standing]. A tremor of the muscles causing difficulty in standing, often seen in locomotor ataxia. —amyostat′ic, adj
a my″o-tax′i-a, a my″o-tax′y [a- mys; G taxis, arrangement]. Muscular ataxia or incoordination of spinal or cerebellar origin. —amyotax′ic, adj
a-my o to ni a [a- mys; G. tonos, tone]. Lack of muscular tone; myatonia.
a. congenita. A rare congenital disease of the brain stem and spinal cord of infants, marked by absence of postural tone in the voluntary muscles, absence of reflexes, and with no reaction of degeneration in electrical tests. Mental development is rarely retarded, but the ability to sit up, stand, or walk is badly impaired. Also called *Oppenheim disease*.
a-my″o-tro phi a, a my ot′ro phy [a- mys; G trophē, nourishment]. Muscular atrophy. —amyotroph′ic, adj
a. spinalis progressiva. See myelopathic muscular atrophy.
syphilitic a. Progressive muscular atrophy due to syphilitic motor neuron degeneration or associated with a recognized syndrome of neurosyphilis; also called *amyotrophic syphilitic myelitis, syphilitic poliomyelitis*.
am′y-rin. $C_{30}H_{50}O$. A crystalline, resinous principle, derived from Mexican elemi and other gums.
Am′y ris [a-; G myron, balsam]. A genus of tropical trees and shrubs producing fragrant resins and gums, such as elemi.
amytal. Trade-mark for 5-ethyl-5-isoamylbarbituric acid officially designated *amobarbital*. The substance is a white, crystalline powder very slightly soluble in water; it is used as a sedative and hypnotic, having an intermediate duration of action. Dose, 20–200 mg. (⅓–3 gr.)
sodium a. Trade-marked name for the sodium derivative of 5-ethyl-5-isoamylbarbituric acid or amobarbital, the substance being soluble in water.
a-myx′i-a [a- G myxa, mucus]. Absence or deficiency of mucous secretion.
a-myx″or rhe′a, a myx″or-rhoe′a [a-; myxa; G rhoia, flow]. Absence of the normal flow of mucous secretion.
An Chemical symbol for actinon.
an. Abbreviation for anode.
an-. See a-.
-an. 1 *chemistry*, suffix which indicates sugar-like substance, *glycosidic or gum*.
A. N. A. American Nurses Association.
ana [G., preposition used distributively with numerals]. So much of each. Contracted in prescriptions *to āā*.
ana- [G., on, up]. A prefix meaning *back, up, again, through, excessively*.
-a na (-ay′nuh, -ah nuh, -an uh) [L., neuter plural of adjectives in -anus]. A suffix meaning *belonging to, connected with, derived from*. In the naming of subsections or groups of species it is added to the name of a species around which other species naturally cluster.
an ab′a sine (an ab′uh seen, -sin). An alkaloid from the Russian herb *Anabasis aphylla*. It has effects similar to those of nicotine.
a. sulfate. The commercial mixture of the alkaloids of anabasis, used as an insecticide.
an″a bi-ot′ic (an″uh-buy ot′ick) [G anabiosis, to come to life again]. Apparently lifeless, but capable of being revived. —anabio′sis, n.
an″a bi-ot′ic. Any agent used to effect restoration or revival.
an″a bol′er gy [G anabolē, from anaballein, to throw up; ergon, work]. The work performed in anabolism.
a nab o-lin [anabole]. Any substance formed during the anabolic process.
an-ab o-lism [anabole]. Synthetic or constructive metabolism; the conversion of nutritive material into more complex living matter. —anabol′ic, adj
an″a camp tics [G anakamptein, to bend back]. The study of reflection of light or of sound. Obs. —anacamp′tic, adj
An a car di-a ce ae (an uh-car dee-ay see-ee) [G ana, similar to; kardia, heart]. A family of plants, found mostly in the tropics, reported to cause dermatitis on contact, including poison ivy, poison oak.
an″a car′dic ac′id. An acid from cashew nut; has been employed as an anthelmintic.
anacardone. Trade-mark for *nikethamide*.
an″a cat′a-did′y mus. See anakatadidymus.
an″a ce″li a del phous [G ana, up; koilia, cavity; adelphos, brother]. Designating a paired monstrosity united by the thorax or upper part of the abdomen. *Obs.* —anacoeliadelphus, n.
an a cid′i ty [G a-, not; L. acidus, from acere, to be sour]. The complete absence of hydrochloric acid in the stomach, demonstrated by lack of *response to all secretory stimulants, particularly* to histamine; achlorhydria. See hypoacidity.
an ac′la-sis [G anaklasis, bending back]. Reflection or refraction of light or sound. —anaclas′tic, adj
a nac′li-sis [G anaklisis, lying back]. 1 The act of reclining; decubitus. 2. *In psychiatry*, state of being emotionally dependent upon others. 3 *In psychoanalysis*, state in which the satisfaction of the sex libido is conditioned by some other instinct, such as hunger. —anaclit′ic, adj
an-ac′me-sis [G a- not; akmē, culminating point]. The arrest of development in certain bone-marrow cells.
an″a cou′si-a. See anacusis.
a nac″ro-a si-a (a-nack ro ay zhuh, -zee uh, -shuh, -see-uh, an uh kro-) [a-; G akroasis, hearing]. Inability to understand spoken language.
an″a-crot′ic in″ci-su′ra (in sigh sue′ruh). In kymographic tracings, a sharp notch in the upstroke of the central arterial pulse seen in cases of aortic stenosis.
a-nac′ro tism [G. ana, up; krotos, rattling noise]. The condition in which *one or more notches occur* on the ascending limb of the pulse curve. —anacrot′ic, adj
an a-cu′si-a (an uh-cue zhuh, -zee-uh, -shuh, -see-uh, an uh-koo) an″a-cu′sis (an uh-cue sis, koo′sis) an a-cou′si-a (an uh-koo shuh, -see-uh, -shuh, -see uh) *n a-cu′sis [G a- not; akousis,* to hear]. Complete deafness.
an a de ni a [a-; G adēn, gland]. 1 Deficient glandular activity. 2. Absence of glands.
an a did′y mus [G ana, up; didymos, twin]. A monster showing inferior duplicity but union

above. Syn., *dipygus*. Also called *inferior duplicity*. —**anadidymous**, *adj*

an"a dip si a [G. *ana*, intensive; *dipsa*, thirst]. Intense thirst. See *polydipsia*.

a nae mi-a. See *anemia*.

an aer-obe (an air-ohb, an-air ohb, an-ay'ur-ohb) [G. *a-*, not; *aēr*, air; *bios*, life]. A microorganism that will grow in the absence of molecular oxygen. Also called *anaerobion*. —**anaero'bic**, *adj*

facultative a. An organism which will grow in the presence or absence of molecular oxygen.

obligatory a. One which grows only when oxygen is rigorously excluded.

an aer-o-bi'ase (an air-o-buy'ace, -aze, an-air o- an-ay ur-o-) A proteolytic enzyme which acts under anaerobic conditions and is present in a number of anaerobes.

an"aer-o bi-o sis (an air-o-buy-o sis, an-air o- an-ay ur-o-) [*a-*; *aēr*; *bios*; G. *-osis*, condition]. Life sustained in the absence of molecular oxygen. See *anaerobe*. —**anaerobiot'ic**, *adj*.

an aer-o gen'ic [*a-*; *aēr*; G. *genetikos*, from *gignesthai*, to be produced] Not gas-producing.

an aer-o-phyte" (an air-o-fight an-air o- an-ay' ur-o-) [*a-*; *aēr*; G. *phyton*, plant]. *In botany*, plant capable of living without a direct supply of oxygen.

an"aes the si-a. See *anesthesia*.

an a gen e-sis [G. *anagennēsis*, regeneration]. Reparation or reproduction of tissues, regeneration.

Anagnostakis, Andreas [Cretan surgeon, 1826–97]. Remembered for his description of plastic operation for entropion by resection of a strip of orbicularis muscle through an incision the length of the tarsal plate.

an"a go'ge (an uh-go'jee) **an"a go gy** [G. *anagōgē*, bringing up, lifting up]. Spiritual, moral, or idealistic phases of thought.

an a gog'ic (an uh godj'ick) [*anagogē*]. 1. Relating to the mystical or anagoge. 2. *In psychoanalysis*, pertaining to the efforts of the subconscious to achieve the moral, ideal, or uplifting; also, pertaining to dream material which expresses idealistic and spiritual ideas, as contrasted with that representing the sexual forces of the unconscious.

an a gy'rine (an uh jy'reen, -rin, an-adj'i-reen, -rin) $C_{15}H_{20}N_2O$ An alkaloid from the seeds of the shrub, *Anagyris foetida*. It decreases the heart rate and the force of the systole in the frog but is said to have little effect on mammalian blood pressure. Large doses cause respiratory paralysis.

anahaemin anahaemin. A proprietary preparation containing the hematopoietic factors of liver.

an a kat"a-did'y mus [G. *ana*, up; *kata*, down, *didymos*, twin]. A conjoined twin monster exhibiting both inferior and superior duplicity. —**anakatadidymous**, *adj*

an kus' is. See *anacusis*.

a'nal char'ac-ter A type of personality in which anal erotic traits dominate beyond the period of childhood.

an a-lep sis. Restoration, especially of respiration and wakefulness.

an" lep tic [G. *analēptikos*, restorative] 1. Restoring consciousness in fainting or coma. 2. Hastening convalescence.

an lep tic. A restorative drug, used especially for restoration of respiration and wakefulness.

an al'gen. Ortho-ethoxy-monobenzoyl aminoquinoline; white, crystalline, insoluble powder used as an anodyne for headaches, neuralgia, and rheumatism.

an al ge si a (an al jee zee uh, -see-uh) **an al'gi-a** [G. *a-*, not; *algos*, pain]. Insensibility to pain without loss of consciousness.

a. algera. Severe pain in a part with loss of general sensibility.

a. dolorosa. See *a. algera*.

continuous caudal a. See continuous caudal *anesthesia*.

fractional caudal a. See continuous caudal *anesthesia*.

infiltration a. Paralyzing the nerve endings at the site of operation by subcutaneous injection of an anesthetic.

intermittent caudal a. See continuous caudal *anesthesia*.

obstetrical a. That induced to relieve the pain of childbirth; perception of pain is diminished or obliterated without necessarily affecting cerebration or motor nerve activity.

permeation a. See surface a.

serial caudal a. See continuous caudal *anesthesia*.

surface a. Topical application on mucous membranes for local analgesia.

an al ge sic (an al jee sick, -jess'ick, -jee sick) **an al ge't'ic, an-al gic** [*a-*; *algos*]. 1. Anodyne; relieving pain. 2. Not affected by pain. —**analgesic**, *n.*, **an'algize**, *v.t.*

analgesin analgesine. A brand of antipyrine.

an al'gi-a. See *analgesia*.

an"al-ler'gic [*a-*; G. *allos*, other; *ergon*, work]. Not producing allergy, anaphylaxis, or hypersensitivity; applied to especially refined serums which cause no reactions.

an'a log, an a logue [G. *analogos*, conformable]. 1. Organ or part having the same function as another but differing in structure and origin, as the wing of an insect and the wing of a bird. 2. One of a group of compounds with similar electronic structure, but with different atoms, as an isolog.

a nal'o-gy [*analogia*]. 1. Resemblance in two or more attributes between two things which differ in other respects. 2. *In biology*, similarity in function without correspondence in structure and origin. —**analogous**, *adj*

a nal'y sand [G. *analysis*, to unloose]. One who is being psychoanalyzed.

a-nal'y-ses. Plural of *analysis*.

a-nal'y sis [G. loosing]. 1. The determination of the nature, properties, or composition of a substance. 2. The resolution of a compound body into its constituent parts. 3. *In psychiatry*, psychoanalysis.

activation a. A method of analysis by which a small amount of an element, otherwise difficult to identify and quantitatively determine, is made radioactive by bombardment with neutrons or other activating particles, and then qualitatively identified by observing the half-life of one or more of its radioisotopes and the characteristics of its radiations. Quantitative analysis is achieved through similar treatment of reference material containing a known amount of the element found to be present.

chromatographic a. Separation of chemical constituents by differential adsorption. The adsorbent is usually packed in a column and the solution percolated through the column.

clinical a. (a) Thorough examination of symptoms, lesions, and history to determine the nature of a disease and its cause. (b) Examination of body fluids and tissues for the diagnosis of disease.

colorimetric a. Determination of substances by means of the intensity of color of their reaction products.

densimetric a. Analysis for a substance by determining the density of its solution, thus estimating the amount of dissolved matter.

distributive a. Analysis of a subject's symptoms

and complaints according to the concepts of psychobiology as distinguished from psychoanalysis.

gasometric a. Analysis of solid or liquid substance by conversion to gas, or the determination of the constituents of gaseous compounds. Also called *eudiometric a.*

gravimetric a. Quantitative determination, by weight, of the elements of a body.

inorganic a. Determination of the chemical composition of inorganic matter.

microchemical a. (a) Chemical analysis with the aid of microscope. (b) Chemical analysis using small quantities of materials, but employing the conventional reactions.

nephelometric a. Quantitative determination of substance by observation of the degree of turbidity produced by it in suitable dispersion medium.

organic a. Analysis of organic chemical substances.

polariscopic a. Analysis by polariscope.

proximate a. Determination of gross constituents, as alkaloids, glycosides, fat, protein, carbohydrate, etc., in drugs.

qualitative a. Determination of the elements that compose substance.

quantitative a. Determination of the amount of an element or compound in substance.

radiometric a. Determination of an element that is not itself radioactive by means of an interaction (e.g. precipitation) with radioactive element.

spectrophotometric a. Identification and determination of substances through study of the absorption of energy in the ultraviolet, visible, or infrared spectrum.

spectrum a. The determination of the composition of certain substances from study of their spectrums.

thermometric a. Analysis by means of observation of the varying temperatures produced by the interaction of substances combined together.

ultimate a. Resolution of compound into its ultimate elements.

volumetric a. Quantitative determination of constituent by titration with standardized volumetric solutions.

an'a-lyst [G. *analysis*, to unloose]. 1 One experienced in performing analyses. 2. *In psychiatry*, one who analyses the psyche, usually one who adheres to the formulations of the psychoanalytic school of Freud. See *psychoanalyst*.

an" lyt'ic psy-chol'o-gy Psychology which analyses the psyche according to the concepts of Carl Jung; it differs from the psychoanalysis of Freud in that the emphasis in diagnosing and treating neurosis is not on early complexes but on current maladjustments.

an'a ly"zer [G. *analysis*, loosing]. 1 An analyst. 2. In polariscope, the Nicol prism which exhibits the properties of light after polarization. 3. An apparatus for recording the excursions of tremor movements.

An" mir'ta (an ah-mur'tuh) [Skr *an*, not *amrta*, immortal]. A genus of the Menispermaceae.

A. cocculus. The source of cocculus, yielding picrotoxin.

an"am-ne sis [G calling to mind]. 1 Faculty of memory 2. Information gained from the patient and others regarding the past history of case. —**anamnes'tic**, *adj*

An-am ni-o'ta [G. *a-* not; *amnion*, inner membrane around the fetus]. A group of vertebrates having no amnion it includes the fishes and the amphibia.

an am"ni ot'ic [*a-*; *amnion*] Without an amnion.

an a mor'pho-sis (an ah mor fo-sis, -mor'l sis) [G. *anamorphōsis*, forming anew]. 1. The tendency toward increasing complication and differentiation of animate systems contrasted with catamorphosis in inanimate systems. 2. *I optics*, that process by which distorted image is corrected by means of curved mirror

catoptric a. The correction of distorted optical image by means of conic or cylindric mirror

dioptric a. The correction of distorted optical image by means of pyramidal glass.

an n ba si (an an h bay' huh, see-uh, -shuh -see-uh) [G *a-* not, *anabasis*, an ascending] *Inability to ascend to heights.*

an-an" phy lax'is [G *ana*, backward, *phylaxis*, protection]. A condition neutralizing anaphylaxis; antianaphylaxis.

an-an"as ta si-a (-ass-tay zhuh, see-uh, -shuh, -see uh) [*a-* G. *anastasis*, rising up] Abulic inability to rise from sitting posture.

a-nan-cas'ti-a [G *anankastos*, forced]. The constrained feeling in the obsessive neurosis of psychasthenia.

an-an dri [G *a-* not; *andr* man]. Lack of virility; impotence.

n n gi pl si (an jee-o-pl y' huh -see-uh, -shuh, -see-uh) [*a-*; G. *aggeion*, vessel; *plassein*, to form]. Congenital narrowing of the caliber of the blood vessels. *Obs.*

an-an"gi-o-plas'tic [*a-*; *aggeion*, *plassein*] Characterized by defective development of the cardiovascular system.

an"a pau'si [G rest] Hypnotic inducement of calm sleep by allaying excitement.

an" pei rat'ic (an uh pye rat'ick) (G *anapeiraesthai*, to try again]. Denoting condition which results from overuse, as writer's cramp.

an"a phal"an-ti' -sis [G forehead-baldness]. The loss or absence of the eyebrows. *Obs.*

an' phase (an uh-faye) [G *ana*, up; *phasis*, phase]. The stage of mitosis between the metaphase and telophase, in which the daughter chromosomes move apart toward the poles of the spindle, to form the diaster See *mitosis*.

an a'phi-a, an-aph'i-a [G *a-* not *haphē*, touch] 1. Defective or bsent sense of touch. 2 A state of abnormal sensitiveness to touch. 3. A state in which nothing is learned by palpation. —**anaphic**, *adj*

an" pho re sis [*a-*; G *diaphorēsis*, perspiration]. 1 Diminished activity of the sweat glands. 2. The migration of electropositive particles, or ions, into tissues under the influence of an electri field. —**anaphoret'ic**, *adj*

an pho ri-a [G. *ana*, up; *pherein*, to bear]. A tendency toward upward turning of the eyes and of the visual axes. Syn., *anatropia*.

an-aph"ro-dis'i-a (an-af"ro dis'ee-uh) [G *a-* not *Aphroditē*, Venus]. Impairment of sexual appetite. —**an-aph ro-dis'i-ac**, *adj* **anaph rodite a.**

an-aph ro-dis'i-ac [*a-*; G *aphrodisiakos*, sexual] An agent that allays the sexual desire.

an" phy-lac'tic [G. *ana*, backward; *phylaktikos*, from *phylassein*, to watch, defend]. 1 Relating to the production or state of anaphylaxis. 2. Increasing sensitivity

n phy-lac'tin [*ana*, *phylaktikos*]. The antibody concerned in anaphylaxis an allergin. Has been confused with allergen.

n phy lac'to-gen [*ana*; *phylaktikos*; G *gennaein*, from *gignesthai*, to be produced]. A substance which is capable of producing state of anaphylaxis in subject previously sensitized to it. —**anaphylactogen'ic**, *adj*

an a phy lac toid [ana; phylaxis; G. eidos, form]. Anaphylactoid reaction.

an a phyl" tox'in, an phyl" tox'in [ana; G. phylaxis, protection; toxikon, poison]. A poisonous substance liberated in the tissues of sensitized animal when antigen and antibody react claimed by some to be histaminelike.

an"a phy lax'is [ana; phylaxis]. A state of increased susceptibility or hypersensitivity following the parenteral injection of an antigen in an animal. Upon the reintroduction of the antigen after lapse of time (10 to 12 days) there is manifested series of characteristic symptoms, including spasm of smooth muscle, capillary dilatation, glandular secretion, altered permeability of the vessels, and varying degrees of shock. The reaction is believed to be due to fixation of specifi antibody in cer tain tissues, rendering them sensitive to subsequently injected tigen Also called active a.

active a. Hypersensitization produced by th direct introduction of an antigen.

local a. A reaction at th site of injections, dependent upon the union in the tissues of the circulating precipitin and its specific antigen as edema, induration, and necrosis caused by repeated subcutaneous injections of horse serum into rabbits. Also called *Arthus phenomenon*.

passive a. Hypersensitivity produced in an animal by pare teral injection of serum from another previously sensitized animal.

reverse passive a. A type in which the antigen is injected first, then followed by the specifi antibody causing shock.

an a phyl" tox'in. See *anaphylatoxin*.

an pla si-a (an uh-play zhuh, -zee uh, shuh, -see uh) [G anaplasis from ana, plassein, to form]. Reversion of form of cell or cells toward the embryonal together with increased capacity for multiplication term often used by *morphologists* to indicate reversion of form only without reference to capacity for multiplication.

an plas mo sis (an uh-plaz mo'sis) [ana; G plasma, anything formed; -osis, condition] A term sometimes used to indicate infection with *Anaplasma*; disease of cattle.

an plas'tic [G. anaplastikos, from anaplasis] 1 Relating to or affected with anaplasia. 2. Pertaining to the replacement of lost or absent part by surgery

an a plas ty [G ana, again plassein, to form]. An operation for the restoration of lost parts, plastic surgery

an ple-ro sis [G filling p]. The restoration or repair of wound or lesion in which there has been loss of substance Obs.

a a poph y sis [G ana, back, apophysis, off shoot]. An accessory process of lumbar or thoracic vertebra, corresponding to the inferior tubercle of the transverse process of typical thoracic vertebra.

an rith mi [G a- not arithmein, to count]. An inability to cou t.

an-ar thri-a [a- G arthron, joint] Defective articulation in speaking. —anarthric, adj

a. centralis. Partial phasia due to central lesion.

a. literalis. Stammering.

an"a sar'ca [G ana, throughout; sarx, flesh]. An accumulation of serum in the subcutaneous connective tissue and the serous cavities of the body generalized edema. —anasarcous, adj

a. hystericum. A transie t swelling in hysterical individual.

an" schist'ic (an uh skis tick, -shis tick) [G ana, up; schisis, to cleave] I biology applied to bivalents or tetrads that split longitudinally in miosis. See diaschistic.

an"a stal'sis [G., from ana; stalsis, constriction]. 1. Antiperistalsis. 2. Styptic action.

nas ta sis [G rising up]. Recovery; convalescence. —anastat'ic, adj

an as tig mat'ic, an-as"tig mat'ic [G a-, not; a-; stigma, point]. Free from astigmatism; corrected for astigmatism, said especially of photographic objectives which are also corrected for spherical and chromatic aberration.

a nas"to-mo sis (pl. anastomoses) [G an opening]. 1 The intercommunication of blood vessels by the natural anatomic arrangement which, as result of an interruption of the chief arterial blood supply provides alternate pathways for blood supply to peripheral part. Occasionally anastomosis of blood vessels is secured by direct surgical operation pon th vessels themselves. 2. The establishment by surgical means of communication between two hollow organs or two parts of th same organ, as between the jejunum and stomach, the hepatic duct and small intestine, th ureter and colon. 3 Th joining of nerve to another nerve or to portion of the same nerve. —anastomot'ic, adj; nas tomose, v.t., v.i.

arteriovenous a. A modified vessel which connects an artery with ve without the intervention of capillaries. S ch structures are particularly umerous in the palm, the sole, and the skin of terminal phalanges.

cruciate a. An arterial anastomosis in the upper thigh, formed by the inferior gluteal, medial circumflex femoral, lateral circumflex femoral, and first perforating arteries. It is important in the formation of collateral circulation after ligation of the femoral artery

en Y a. See *Roux, César*

intersubcardinal a. A transverse anastomosis between the paired subcardinal veins of the early embryo, ventral to the aorta.

portacaval a. One joining the portal vein to the inferior vena cava also known as *Eck fistula*.

postcostal a. A longitudinal anastomosis between successive intersegmental arteries, the first through the seventh cervical, which forms the vertebral artery

posttransverse a. A longitudinal anastomosis between intersegmental arteries, dorsal to the transverse process forming the deep cervical artery

precostal a. A longitudinal anastomosis between cervical and thoracic intersegmental arteries, which forms the thyrocervical trunk and the superior intercostal artery

a nas"to-mot'i-ca [anastomotic]. A communicating artery or vein.

an as tral [G a-, not aster star]. Without an aster; pertaining to an chromatic figure without asters

anat. Anatomic, anatomical, anatomy

nat' bine (a nat uh been, bin) An alkaloid found in tobacco.

nat' mist [G. anatomē, dissection]. One who specializes or is skilled in anatomy

a nat o-mist' snuff'box" A hollow triangular space on the dorsum of the hand at the base of the metacarpal of the thumb, when t is extended It is formed on the sides by th tendons of the long and short extensor pollicis muscles. Syn tabatière anatomique.

a nat my [anatomē] 1. Science or branch of morphology which treats of the structure of animal and the relation of their parts. 2 Dissection of the various parts of plant or animal. —anatom'ic, anatom'ical adj

applied a. Anatomy as a factor in diagnosis and treatment.
artistic a. That branch of anatomy which treats of the external form of man and animals, their osseous and muscular systems, and their relation to painting and sculpture.
clastic a. Study of anatomy by means of models in which the different layers can be removed to show the position and relations of the structures underneath.
comparative a. Investigation and comparison of the anatomy of different orders of animals or of plants, one with another
descriptive a. Study of the separate and individual portions of the body
general a. That which treats of the structure and physiologic properties of the tissues and their arrangement into systems without regard to the disposition of the organs of which they form part.
gross a. That which deals with the naked-eye appearance of tissues.
homologic a. Study of the correlations of the several parts of the body
microscopic a. Histology Also called *minute a.*
pathologic a. Study of the changes in structure caused by disease. Also called *morbid a.*
physiologic a. Anatomic study of tissues in respect to their functions.
regional a. Study of limited parts or regions of the body
surface a. Study of superficial landmarks for the location of internal structures.
surgical a. Application of anatomy to surgery
topographic a. Anatomy of part in its relation to other parts.

an" tox'in [G. *ana*, backward; *toxikon*, poison]. A toxoid.

an" tre pi a [G *ana*, up *trepō*, turning]. A tendency of the eyes to turn upward when at rest anaphoria.

an an'di-a. Aphonia.

an"a vac'cine [*ana*, L. *vaccinus*, of cows]. A detoxified vaccine.

an" ven'in [G *ana*, throughout; L. *venenum*, poison]. Venoms which have been altered by physical or chemical agents that eliminate their toxic property but make little or no change in their antigenic qualities

anaprolin. Trade-mark for brand of chiniofon.

an-az" to'ri a [G *a-* not *a-* *zō*, life *ouron*, urine]. An absence or deficiency of nitrogenous elements in the urine, affecting chiefly urea.

AnCC Anodal closure contraction; also ACC

an'chor age [L. *ancora*, anchor from G *ankyra*]. 1. The fixation of floating or displaced viscus, whether by natural process or by surgical means. 2. *In dentistry*, the means of retaining dental filling, particularly its initial portion also, the means by which bridge or artificial crown is secured. 3. *In orthodontics*, tooth or teeth used for resistance in applying regulating force.

an'chy-lo- (ang'ki-lo-) **an'cy lo-** (an'ki lo-) For words beginning *anchylo-* or *ancylo-* not found here, see words beginning *ankylo-*.

an'chy lops (ang'ki lops) [G *ankylos* curved *ōps*, eye]. Abscess at the inner angle of the eye.

An-cis'tro-don. See *Agkistrodon*.

an"co-ne'us, an co ne us [G *ankōn*, elbow] A small triangular muscle at the back of the elbow joint. See Table of Muscles in the Appendix.
a. internus. The epitrochleo-olecranonis muscle.

an co noid [*ankōn*, G *eidos*, form]. Resembling the elbow *Obs.*

An"cy los'to-ma [G. *ankylos*, curved; *stoma*, mouth]. A genus of nematodes; the hookworms.

A. braziliense. A species which infests cats and dogs instances of human infestation, producing larva migrans or creeping eruption, have been reported in South America, Africa, and the Orient.
A. caninum. A common species of parasite of dogs and cats found particularly in the Northern Hemisphere human infestation is very rare.
A. duodenale. A species of hookworm which infests man, the principal and optimum host. Occasionally hogs, dogs, felines, and gorillas are infested.

An"cy los"to-mat'i-dae (an"ki-los"to-mat'i-dee) [*ankylos*; *stoma*]. A family of hookworms of the superfamily Strongyloidea, characterized by oral cutting organs. The hookworms of man of the genera *Ancylostoma* and *Necator* belong to this family

an"cy los"t mi' sis [*ankylos*; *stoma*, NL. *-iasis*, condition]. Infestation of the human intestine with *Ancylostoma duodenale* and the resulting morbid state.

Andernach. See *Guenther von Andernach*.

Anders' disease. See *adiposis* tuberosa simplex.

Anderson, John F [*American physician*, 1871–]. Reported the existence of spotted fever in the Rocky Mountains (1903) Made valuable contributions, with Rosenau, concerning sudden death following injection of horse serum (1906) Made notable experimental researches, with Goldberger on production of measles in monkeys (1911)

Anderson, Roger [*American orthopedic surgeon*, 1891]. His name is associated with the treatment of fracture of the femur at various levels by means of well-leg countertraction apparatus, both legs being encased in plaster It permits ambulatory treatment. Called *Anderson splint* or *method*.

Anderson-Nightingale dilution test. See under test.

Andral, Gabriel [*French physician*, 1797 1876]. Editor of Laennec works and vigorous opponent of bloodletting. Said to have originated the terms anemia and hyperemia.

an"dra nat' my [G. *anēr* man *anatomē*, dissection]. Human anatomy; the anatomy or dissection of male. *Obs.*

André, Nicolas (Andry) [*French physician*, 1658–1742]. Author of what is said to be the first book devoted to orthopedics, term he coined Made many important observations and gave sound advice on the value of correct posture for prevention of scoliosis (1741)

André Thomas' sign. See under *sign*.

an drei o-blas-to ma. See *androblastoma*.

an"drei-o ma (an dry-o muh) [G *andreios*, from *anēr* *-ōma*, tumor]. Androblastoma.

Andrews, Edward Wyllys [*American surgeon*, 1856–1927]. Distinguished for his contributions to the surgery of inguinal hernia. His modification of Bassini' method is known as the *Wyllys Andrews method*.

an"dri t'rics, an-dri a try [G. *andreios*, from *anēr* *iatrikos*, skilled in the medical art]. A branch of medicine dealing with those disorders peculiar to men, especially those of the male genitalia.

an'dro- andr [G *anēr* *andros*, man]. A combining form signifying *man* or *male*, *masculine*, *relating to the male sex*

an dro-blas to'ma. A rare tumor resembling fetal testis, which is the testicular homolog of ovarian arrhenoblastoma. It may be associated with feminizing characteristics in the male. Also called *testicular adenoma*, *andreioblastoma*, *andreioma*.

an″dro·ga·lac″to·ze′mi·a [*andr-*; G. *gala*, milk; *zēmia*, loss]. The oozing of milk from the male mamma.

an″dro·gam′one. A gamone present in a spermatozoon.

an′dro·gen [*andr-*; G. *gennaein*, from *gignesthai*, to be produced]. A hormone which controls the physiologic status of the secondary sex characteristics of males. —**androgen′ic, androg′enous,** *adj.*

an″dro·gen′e·sis [*andr-*; G. *genesis*, production]. Activation of the egg by the sperm followed by development without the participation of the egg nucleus (Wilson).

an·drog′e·nous [*andr-*; G. *gennaein*, from *gignesthai*, to be produced]. Giving birth to males.

an′dro·gyne (an′dro·jyne, ·jin), **an·drog′y·nus** (an·drodj′i·nus), **an·drog′y·na** (an·drodj′i·nuh) [*andr-*; G. *gynē*, woman]. A pseudohermaphrodite. —**androg′ynous,** *adj.*

an·drog′y·nism (an·drodj′i·niz·um) [*andr-*; *gynē*]. Hermaphroditism.

an·drog′y·ny (an·drodj′i·nee), **an″dro·gy·ne′i·ty** [*andr-*; *gynē*]. Hermaphroditism. —**androg′ynoid,** *adj.*, *n.*

an′droid [*andr-*; G. *eidos*, form]. Resembling the male.

an″dro·ma′ni·a. Nymphomania.

an·drom″e·do·tox′in [G. *Andromeda*; *toxikon*, poison]. A toxic principle found in *Andromeda* (*Pieris*) *japonica* and other ericaceous plants. It has potent hypotensive action, and causes convulsions, labored respiration, and cardiac paralysis.

an″dro·mor′phous [G. *anēr*, man; *morphē*, form]. Having the form of a man.

an″droph′i·lous [*andr-*; *andros*, man; G. *philein*, to love]. Anthropophilic.

an″dro·pho′bi·a [*andr-*; G. *phobos*, fear]. Morbid fear or dislike of men or of the male sex.

an′dros·tane. $C_{19}H_{32}$. A saturated, solid, steroid hydrocarbon, the parent substance of androgenic hormones. Also called *etioallocholane*.

an″dro·stene′di·ol (an″dro·steen·dye′ole, ·dee′ole, ·dye′ol, ·dee′ol, ·dye′awl, ·dee′awl). $C_{19}H_{28}(OH)_2$. Any one of three isomeric derivatives of androstane characterized by the presence of two alcohol groups and an unsaturated linkage (C═C).

an″dro·stene·di′one (an″dro·steen·dye′ohn, ·dee′ohn). $C_{19}H_{26}O_2$. Any one of three isomeric derivatives of androstane characterized by the presence of two ketone groups and an unsaturated linkage (C═C).

an·dros′ter·one. $C_{19}H_{30}O_2$. 3(α)-hydroxy-17-keto-androstane, an androgenic steroid found in the urine of men and women. See also *isoandrosterone*.

androstine. A proprietary testicular extract available in tablets and ampuls.

androteed. A trade-mark for *testosterone propionate*.

Andry. See *André*.

an″e·de′ous [G. *a-*, not; *aidoia*, genitals]. Lacking external genital organs.

Anel, Dominique [French surgeon, ca. 1679–ca. 1730]. Remembered for his ligation of traumatic aneurysm (1710) and for his original treatment of stenosis of the lacrimal duct by dilatation with probe of his own invention (1713).

an″e·lec″tro·ton′us [G. *ana*, up; *ēlektron*, amber; *tonos*, tone]. Decreased irritability present in a nerve in the neighborhood of the anode during the passage of an electric current. —**anelectroton′ic,** *adj.*

a·ne′mi·a [G. *a-*, not; *haima*, blood]. A significant reduction below normal in the number of erythrocytes per cubic millimeter, the hemoglobin concentration, and the volume of packed red cells per 100 cc. of blood, resulting in a decrease in the oxygen-carrying capacity of a given volume of blood. Anemia may be due to an imbalance between the productive and the destructive blood processes, or to chronic or acute blood loss. Symptoms, when present, vary greatly; they may be general, such as weakness, pallor, and poor appetite, or relate to the underlying disease process. Microscopically anemias may be classified according to cell size (macrocytic, microcytic, normocytic), shape (e. g., sickle cell, anisocytosis, poikilocytosis) and color (normochromic, hyperchromic, and hypochromic). Anemia is to be distinguished from *oligemia* (reduction in total amount of blood), *oligocythemia* (deficiency in total quantity of erythrocytes) and *oligochromemia* (reduction in total quantity of hemoglobin). —**anemic,** *adj.*

achlorhydric a. A chronic hypochromic microcytic anemia, probably due to poor iron absorption, in which hydrochloric acid is frequently not secreted even after injection of histamine. The intrinsic factor is present. Also called *achylanemia*, *anemia achylica*, *Faber's syndrome*.

achrestic a. A rare macrocytic anemia due to an inability of the body to utilize the antianemia factor.

acquired hemolytic a. Any hemolytic normocytic anemia due to the action of an external agent or disease process upon normally constructed erythrocytes.

Addison's a. Pernicious *a.*

American nutritional megaloblastic a. A macrocytic anemia due to defective diet.

a. pseudoleukemia infantum. See infantile pseudoleukemic *a.*

aplastic a. That resulting from defects of the bone marrow, as hypoplasia, aplasia, and degenerative changes. It is marked by a deficiency of red cells, hemoglobin and granular cells, and a predominance of lymphocytes. Also called *aleukia hemorrhagica*, *atrophic*.

aregenerative a., aregeneratory a. See primary refractory *a.*

asiderotic a. See hypochromic microcytic *a.*

Baghdad spring a. A form of acute hemolytic anemia thought to be caused by acquired sensitivity to inhaled pollens of certain plants native to the Middle East.

Belgian Congo a. Kasai.

Biermer's a. See Anton *Biermer*; pernicious *a.*

Bothriocephalus a. Tapeworm *a.*

chlorotic a. See *chlorosis*.

cryptogenic a. See primary refractory *a.*

deficiency a. See hypochromic microcytic.

drepanocytic a. See sickle-cell *a.*

essential a. See pernicious *a.*, idiopathic *a.*

familial erythroblastic a. Thalassemia.

familial hemolytic a. See hereditary *spherocytosis*.

familial microcytic a. Thalassemia.

globe-cell a. See *spherocytosis*.

goat's-milk a. A macrocytic nutritional anemia observed in infants fed goat's milk exclusively and probably due to folic acid deficiency.

hemolytic a. Any anemia characterized by a short life span of the erythrocytes. It may be due to extracorpuscular causes, as infectious agents, chemical agents and drugs, thermal burns, vegetable or animal poisons, immune body reactions, acquired hemolytic anemias without presence of antibodies or secondary to some malignancy or lupus erythematosus; or it may be due to intracorpuscular defects, as in sickle-cell anemia, hereditary spherocytosis, thalassemia, and paroxysmal hemoglobinuria.

hemolytic a. of pregnancy See hyperchromic a. of pregnancy

hemorrhagic a. That following gross hemorrhage.

Herrick's a. See sickle-cell a.

hyperchromic a. That in which the hemoglobin deficiency is comparatively less than that of the red cells (where the color index is high)

hyperchromic a. of pregnancy A condition characterized by pallor asthenia, edema, and later by stomatitis, dyspepsia, diarrhea, and vomiting; erythrocyte count and hemoglobin are low; the spleen may be enlarged. It is progressive while the pregnancy lasts, and is often associated with premature labor after which recovery is often spontaneous. Syn., *hemolytic a. of pregnancy, megalocytic a. of pregnancy, pernicious a. of pregnancy.*

hypochromic microcytic a. An anemia in which the hemoglobin and to a lesser degree the volume of packed red cells are comparatively more reduced than the erythrocyte count, due to the erythrocytes being smaller than normal and greatly deficient in hemoglobin (MCH, MCV and especially MCHC are reduced.) It is readily remedied by iron therapy and may be due to chronic blood loss, disorders of the alimentary tract, and extremely faulty diet, particularly in infants and females, or to thalassemia. Also called *chlorotic, nutritional hypochromic, chronic* or *idiopathic hypochromic a., hypochromic a. of prematurity, infancy, childhood, or pregnancy.* Syn. *iron-deficiency a.*

hypoplastic a. See primary refractory a.

idiopathic a. That in which the lesion is in the blood or blood-forming organs. Syn. *primary a., essential a.*

infantile pseudoleukemic a. A symptom complex characterized by anemia, abnormal erythrocytes, leukocytosis, lymphocytosis, and enlargement of spleen, liver and lymph nodes, seen in infants and young children. It was described by Rudolf von Jaksch (1889) and is now known to be associated with many different conditions, such as malnutrition, gastrointestinal disturbances, syphilis, tuberculosis, and other infections.

infectious a. A refractory anemia secondary to an infection.

infectious a. of horses. A virus disease of horses which may be acute or chronic characterized by fever progressive anemia, edema, and emaciation. The acute phase lasts from four days to three weeks, the chronic for years. The disease is rarely transmitted to man, but if this occurs it causes fever anemia, diarrhea, and nephritic pain. Transmission may be by parenteral injection, by the bite of the fly *Stomoxys calcitrans*, or by contact of the virus with abraded skin or mucous membranes. Syn., *equine malaria, swamp fever of horses.*

iron-deficiency a. Hypochromic microcytic a.

lead a. Anemia resulting from lead poisoning. The basic cause is thought to be due to inhibition of hemoglobin synthesis through failure of iron to enter the porphyrin ring. There is also increased rate of erythrocyte destruction.

Lederer's acute a. An uncommon acquired acute hemolytic anemia of unknown causation, sometimes with hemoglobinuria and variable osmotic fragility. Most cases seem to occur in childhood. Therapy is blood transfusion.

leukoerythroblastic a. See myelophthisic a.

local a. Deficient blood supply to a particular organ or part. See *ischemia.*

lymphatic a. Hodgkin's disease

macrocytic a. Any anemia characterized by the presence in the blood of abnormally large erythrocytes (MCV greater than 96 $\mu\mu^3$). This may occur in megaloblastic anemia, in anemias in which production of erythrocytes is increased without deficiency of iron, and in hypothyroidism. See also *megaloblastic a.*

Mediterranean a. Thalassemia.

megaloblastic a. Any anemia characterized by the presence of megaloblasts in the bone marrow and due to a dietary deficiency or abnormal utilization of one or more hematopoietic factors (vitamin B_{12} or folic acid and related substances). This includes pernicious anemia, sprue syndrome, nutritional macrocytic anemias, the macrocytic anemias of pregnancy and the puerperium, of infancy of primary gastrointestinal disorders, and the anemia associated with the fish-tapeworm infestation.

megalocytic a. of pregnancy A megaloblastic anemia of pregnancy of unknown cause.

metastatic a. See myelophthisic a.

microcytic a. That in which the erythrocytes are smaller than normal. See hypochromic microcytic a.

myelopathic a. See myelophthisic a.

myelophthisic a. An anemia associated with space-occupying disorders of the bone marrow as in metastatic carcinoma, leukemia, multiple myeloma, myelo- or osteosclerosis, Hodgkin's disease, and primary xanthomatoses. Immature precursor cells of both the erythrocytic and the granulocytic series may appear in the blood. Syn., *leukoerythroblastosis.* Also called *leukoerythroblastic a., metastatic a., myelopathic a., myelosclerotic a., osteosclerotic a.*

myelosclerotic a. See myelophthisic a.

normochromic a. (a) A type in which the hemoglobin content of the red blood cell is normal. (b) One with a normal color index and a normal mean corpuscular hemoglobin.

normocytic a. That in which the erythrocytes are of normal size.

nutritional a. See hypochromic microcytic a.

osteosclerotic a. See myelophthisic a.

oval-cell a. See *elliptocytosis.*

pernicious a. A macrocytic anemia characterized by increased blood destruction, achylia gastrica, nervous and digestive disorders, and frequently glossitis. It is thought to be caused by a permanent gastric defect associated with atrophy and failure of secretion of an intrinsic factor and resultant failure of absorption of vitamin B_{12}. Also called *Addison's a., Biermer's disease, primary a.*

pernicious a. of pregnancy A megaloblastic anemia of pregnancy of unknown cause.

physiologic a. That affecting most infants at about the second month and disappearing usually before the end of the first year.

postoperative cerebral a. Cerebral dysfunction after the ligation of the common carotid artery often resulting in hemiplegia.

primary a. Pernicious a.

primary refractory a. Any persistent and often severe anemia, refractory to any treatment other than transfusion of blood. The bone marrow may be hypoplastic, normally cellular or even hyperplastic. It is not associated with any infection, chronic systemic disease, malignancy or malnutrition. Also called *aregeneratory a., cryptogenic hypoplastic a., aleukia hemorrhagica, progressive hypocythemia.*

radiation a. A plastic or hypoplastic anemia following excessive exposure to ionizing radiation. Also called *roentgen-ray a.*

refractory megaloblastic a. A macrocytic anemia of unknown cause and unresponsive

to any therapy (e.g. iron, liver, vitamin B_{12}, folic acid, ascorbic acid, citrovorum factor) other than blood transfusion.

roentgen-ray a. See radiation a.

secondary a. That following or resulting from pathologic condition, as malignancy, poisoning, trauma, or hemorrhagic disease.

secondary refractory a. Anemia alleviated only by transfusion and associated with known infections, chronic kidney disease or malignancy.

sickle-cell a. Hereditary, familial, chronic hemolytic anemia, peculiar to Negroes and sometimes seen in other dark-skinned peoples, but rarely in whites, characterized by the sickling of erythrocytes when hemoglobin is deoxygenated. It is due to a specific gene for sickle-cell hemoglobin (S) and is found in persons homozygous for the gene; sickling without anemia (trait) occurs in those who are heterozygous. Also called *Herrick a.*, *drepanocytosis*, *meniscocytosis*, *sicklanemia*. Syn. *sicklemia*.

spherocytic a. See *spherocytosis*.

splenic a. See chronic congestive *splenomegaly*.

tapeworm a. A clinical syndrome which resembles, or may be coincidental with, pernicious anemia, observed in persons harboring the fish tapeworm, *Diphyllobothrium latum*. The role of the parasite with respect to the anemia is unknown; free hydrochloric acid may be present. Also called *Bothriocephal a.*

target-cell a. Thalassemia.

toxic a. Any hemolytic anemia due to toxins and poisons.

tropical macrocytic a. Macrocytic anemia, observed primarily among natives of tropical and subtropical regions, due to dietary deficiency and relieved by yeast, autolyzed yeast, liver or folic acid. Clinically it resembles pernicious anemia, but achlorhydria and nervous disorders are not characteristic features.

tunnel a. Ancylostomiasis.

von Jaksch's a. Infantile pseudoleukemic a.

an·e·mom·e·ter [G. *anemos*, wind; *metron*, measure]. An instrument for measuring the velocity of the wind.

A·nem·o·ne (a·nem'o·nee) [G. mountain windflower]. A genus of the Ranunculaceae, most of the species of which have active medicinal and poisonous qualities.

a·nem·o·nin. $C_{10}H_8O_4$. Yellowish white crystals, insoluble in water, soluble in hot alcohol, from *Anemone pulsatilla* and some other members of the Ranunculaceae; has been used as antispasmodic, sedative, and anodyne in asthma and pulmonary affections. Syn. *pulsatilla camphor*.

an·e·mo·pho·bi·a (an·ee"mo·fo'bee·uh, an'e·mo-) [G. *anemos*, wind; *phobos*, fear]. Morbid dread of drafts or of winds.

an·en·ce·pha·li·a, an·en·ceph·a·ly [G. *a-*, not; *enkephalos*, brain]. Absence of cerebrum and cerebellum with absence of the flat bones of the skull. —**anenceph'alous, anencephal'ic,** *adj.*

an"en·ceph'a·lus [a-; *enkephalos*]. A monster showing partial or complete anencephalia.

an·en·ter·ous [a-; G. *enteron*, intestine]. *In biology*, having no intestine, as a tapeworm.

an·ep'i·a, an·e·pi·a (G. *anepēs*, speechless). Inability to speak.

an·ep"i·plo'ic [G. a-, not; *epiploon*, omentum]. Having no epiploon or omentum.

an·er·ga·si·a (an·ur·gay'zhuh, -zee·uh, -shuh, -see·uh) [G. unemployment, idleness]. *In psychiatry*, the term coined by Adolf Meyer for psychosis caused by organic lesions of the nervous system. See organic brain syndrome.

an'er·gy [a-; G. *ergon*, work]. 1. Lack of energy or activity. 2. Absence of reaction to specific antigen or allergen. The capacity to resist the effects of potentially harmful agents. —**aner'gic,** *adj.*

an·er·oid [a-; G. *aēros*, water; *eidos*, form]. Working without a fluid, as an aneroid barometer.

anertan. Trade-mark for testosterone propionate.

an·e·ryth"ro·blep·si·a. See *anerythropsia*.

an·e·ryth'ro·cyte [a-; G. *erythros*, red; *kytos*, cell]. An erythrocyte without hemoglobin.

an·e·ryth·ro·pla·si·a (an·i·rith·ro·play'zhuh, -zee·uh, -shuh, -see·uh, an·err"ith·ro-) [a-; *erythros*; G. *plassein*, to form]. Inadequate formation of erythrocytes.

an·e·ryth·rop'si·a [a-; *erythros*; G. *opsis*, sight]. Impaired color perception of red; red blindness.

an·es·the·ki·ne·si·a (an·es"thi·ki·nee'zhuh, -kigh-nee'), **an·es"the·ki·ne·s·a** (-ki·nee'zhuh, -zee·uh, -shuh, -see uh, -kigh nee') [a-; G. *aisthēsis*, feeling; *kinēsis*, movement]. Sensory and motor paralysis, combined.

an"es·the·si·a, an"aes·the'si·a (an·es·thee'zhuh, -zee·uh) [G. *anaisthēsia*, lack of sensation]. Loss of sensation.

a. dolorosa. Severe pain experienced after complete motor and sensory paralysis, observed in certain diseases of the spinal cord.

angiospastic a. Loss of sensibility due to spasm of the blood vessels.

balanced a. That produced by safe doses of two or more agents or methods of anesthesia.

basal a. An incomplete anesthesia; supplementary anesthetics are usually required. Thus, preliminary narcosis may be induced with an injected drug, requiring but a small amount of inhalation anesthetic to produce surgical anesthesia. Among basal anesthetics are the barbiturates, amytal, sodium amytal, avertin.

block a. Anesthesia produced by injecting an anesthetic solution into the nerve trunks supplying the operative field (regional block) or infiltrating close to the nerves (infiltration block) or by a wall of anesthetic solution injected about the field (field block). In all these methods the nerve conduction is blocked, and painful impulses fail to reach the brain.

bulbar a. That due to a lesion in the medulla.

carbon-dioxide absorption a. See closed a.

caudal a. That induced by injection of the anesthetic into the sacral canal; also called *extradural sacral a.*

central a. That due to disease of the central nervous system.

closed a. Inhalation anesthesia with complete rebreathing of the anesthetic gases. Soda-lime generally is used to absorb the excess CO_2.

closed circuit a. That produced by an anesthetizing apparatus in which explosive agents used in anesthesia are prevented from coming in contact with sparks or flame.

combined a. (a) Anesthesia produced by combination of anesthetics—as chloroform, ether and nitrous oxide—or of methods. (b) That produced by anesthetics plus somnifacient drugs.

conduction a. See block a.

continuous caudal a. The caudal needle or plastic catheter is inserted through the sacral hiatus into the sacrum for serial intermittent injections of the anesthetic agent, for producing continuous anesthesia, also called *fractional spinal a.*

continuous sacral a. A continuous caudal needle is inserted into the second posterior sacral foramen and attached to apparatus for periodical injections.

continuous spinal a. The spinal needle is left

in place so that the anesthetic drug can be administered periodically as needed.
crossed a. Anesthesia on one side of the body due to a central lesion on the other side.
cryanesthesia. See *refrigeration a.*
dental a. Anesthesia of the teeth for dental operations.
dissociated a. Loss of pain and temperature sensations, the tactile sense being still present.
electric a. Transient anesthesia caused by the passage of an electric current through part.
endotracheal a. General anesthesia in which the anesthetic is administered by means of a tube which conducts the vapor directly into the trachea.
epidural a. See *peridural a.*
extradural a. See *peridural a.*
fractional caudal a. See *continuous caudal a.*
fractional spinal a. See *continuous spinal a.*
gauntlet a. *Glove a.*
general a. Loss of sensation with loss of consciousness. See *stages of general*
girdle a. A zone of anesthesia encircling the body
glove a. A loss of sensation in an area corresponding to that covered by glove; usually hysterical phenomenon.
hypospray a. That produced by hypospray or jet-injector.
hysterical a. A loss of pain sense in areas of the skin; dictated by suggestion and usually taking on geometric configuration or conforming to zones covered by various articles of apparel. See *glove*
ice a. Refrigeration anesthesia.
infiltration a. That induced by the injection of the anesthetic solution directly into the tissues that are to be anesthetized.
inhalation a. That produced by the inhalation of anesthetic gases or vapors.
insufflation a. That produced by the delivery of anesthetic gases under pressure into the respiratory system.
intermittent caudal a. See *continuous caudal a.*
intravenous a. The injection of an anesthetic into vein, as pentothal sodium
local a. Anesthesia limited to local area. See *regional a.*
mixed a. That produced by two or more anesthetics.
morphine-scopolamine a. See *twilight sleep*
muscular a. Loss of the muscular sense
nerve a. Block anesthesia.
olfactory a. Anosmia.
open a. Inhalation anesthesia with minimum amount of rebreathing.
optic a. Temporary amaurosis
parasacral a. Anesthetization of the sacral nerves near the anterior sacral foramen by injection through the pelvic tissue inferiorly. Syn *presacral block.*
partial a. Anesthesia in which some degree of sensibility is still present.
peridural a. A form of regional anesthesia resulting from the deposition of local anesthetic solution, such as procaine beneath the ligamentum flavum and into the peridural space. Syn *epidural* *extradural a.*
peripheral a. Loss of sensation due to changes in the peripheral nerves.
pharyngeal a. Anesthesia of the pharynx occasionally complicating nervous disorders most common in hysterical patients.
planes of a. Subdivisions of the stages of surgical anesthesia, based on Guedel classification (1937) of the clinical signs of the stages of general anesthesia. The *first plane* is marked by loss of the eyelid reflex; the *second plane* by cessation of eyeball movement the *third plane* by beginning of intercostal paralysis and the *fourth plane* by complete intercostal paralysis and purely diaphragmatic respiration.
pressure a. The topical application of an anesthetic using pressure to force it into the tissue
primary a. The transient anesthesia resulting from small amounts of anesthetic.
pudendal a. Local anesthesia for obstetrical delivery induced by blocking the pudendal nerves near the spinous process of the ischium.
rectal a. That induced by placing th anesthetic agent, such as avertin, paraldehyde, or barbiturate, in the rectum with catheter
refrigeration a. A method of rendering lower limb insensitive by the use of cracked ice applied to the member so as to surround it completely After two and half hours of this application, amputation may be performed without medication or anesthesia.
regional a. That limited to part of the body by blocking nerve conduction from the area. See *block a.*
segmental a. Loss of sensation of an area supplied by one or limited group of spinal nerves
semiopen a. Inhalation anesthesia with partial rebreathing.
serial caudal a. See *continuous caudal a.*
sexual a. Anaphrodisia.
spinal a. (a) That due to lesion of the spinal cord. (b) That produced by the injection of an anesthetic into the spinal subarachnoid space.
stages of general a. Divisions of the sequence of physiologic responses of the patient to circulating general anesthetic, based on Guedel's classification (1937) of clinical signs which are the expression of progressive depression of the central nervous system. The stages of anesthesia are: I. *Analgesia or altered consciousness* (higher cortical centers) from the beginning of the administration of the anesthetic to the loss of consciousness, in which there is progressive loss of sensation. II. *Delirium or excitement* (basal ganglia and cerebellum) from the loss of consciousness to the onset of muscular relaxation, in which the patient tends to exhibit hyperactivity III. *Surgical anesthesia* (spinal cord, motor and sensory) in this stage, which is divided into four planes, there is sufficient muscular paralysis to permit surgical manipulation. IV *Medullary paralysis* (brain stem) usually paralysis of the respiratory center followed by paralysis of the cardiac center
subarachnoid a. That state of conduction nerve block produced by the deposition of local anesthetic agent in suitable mixture into the cerebrospinal fluid of the vertebral canal. The anesthetic acts upon contact with and depolarization of the sensory motor and vasomotor axones. Syn *spinal and intrathecal anesthesia.*
surface a. See *topical a.*
surgical a. Stage III of general anesthesia where muscles are sufficiently relaxed. See *stages of general a.*
synergistic a. That combining several anesthetics used simultaneously
tactile a. Loss of sense of touch.
terminal a. That state of insensitivity produced by the deposition of the local anesthetic agent about the terminal arborizations of the afferent axones. These are designated as nociceptors. This anesthetic works best through very thin mucous membrane surfaces, such as conjunctiva, urethra, urinary bladder larynx, peritoneum, pleura. Syn., *topical anesthesia.*
thalamic hyperesthetic a. See *thalamic syndrome.*
thermic a. Loss of temperature sense.

topical a. Application of an anesthetic to one of the body surfaces, as with swab

traumatic a. Loss of sensation due to injury of nerve.

unilateral a. Hemianesthesia.

an es the si m e ter, an es the si om e ter (an ess thee see-om e tur) [*anaisthēsia*; G. *metron*, measure]. 1. An instrument that measures the amount of an anesthetic administered in given time. 2. An instrument that determines the degree of insensibility of part. Also called *anesthetometer, aesthesiometer*

anesthesin Brand of ethyl aminobenzoate; used as local anesthetic. See *benzocaine*.

an es-the"si ol' o gy (an ess-thee see-ol'o-jee) [*anaisthēsia*; G *logos*, word] The art and science of administering local and general anesthetics to produce the various types of anesthesia. —**anesthesiologist** *n.*

an es the"si-om e ter See *anesthesimeter*

an es-thet'ic, an"es-thet'ic [*anaisthēsia*]. 1. Causing anesthesia. 2. Insensible to touch, pain, or other stimulation.

an es thet'ic, an es thet'ic. A drug which produces local or general loss of sensibility

general a. An agent which produces general anesthesia either by injection or by inhalation.

local a. A drug which, topically applied or injected into the tissues, causes local insensibility to pain.

a es the tize [*anaisthēsia*]. Subject or place under the influence of an anesthetic induce anesthesia; render anesthetic. —**anesthetist, anesthetization, anesthetizer** *n.*

an-es'trum, an oes'trum, an es trus, an-oestrus [G *a-* ot; *oistros*, gadfly]. The interval between the periods of sexual heat of female mammals; diestrum. —**anestrous,** *adj*

an' thole $CH_3O\ C_6H_4\ C_3H_5$ The chief constituent of anise and fennel oils, used as flavor and carminative.

ne'thum [G *anēthon*, dill]. Dill; th dried fruit of *Anethum graveolens*, indigenous to southern Europe used as carminative and flavoring.

an"e-to-der'ma. Degeneration and disappearance of the elastic fibers of the derma, resulting in wrinkling and flabbiness of the skin macular atrophy

an-eu'ploid (new ployd) [G *a-* not; *eu*, well *-ploos*, fold; *eidos*, form] H ving an uneven multiple of the basic umber of chromosomes: *opposed to euploid.* —**aneu'ploidy,** *n.*

neu'ri [*a-*; G *neuron*, nerve]. Lack of nervous energy —**aneuric,** *adj*

an'eu rin (an yoor-in) **a neu'rin** [*a-*; *neuron*]. Name given to vitamin B by Jansen and Donath who first isolated it in crystalline form See *thiamine hydrochloride*.

neu'rine hy"dro-chlo ride. The British Pharmacopoeia title for thiamine hydrochloride.

an'eu rysm, an eu rism [G *aneurysma*, dilatation]. A circumscribed axial or laterally communicating dilatation of the wall of an artery forming blood-containing tumor which pulsates with each systole, produces bruit, and ften is associated with pain, pressure symptoms, and absorption of contiguous parts. Most common in the aorta as result of syphilis. —**aneurys mal aneurysmat'ic,** *adj*

ampullary a. A small saccular aneurysm; it is most common in the arteries of the brain. See berry *a.*

anastomotic a. See cirsoid *a.*

aortic a. An aneurysm of the aorta. It occurs most frequently in the ascending aorta where it may cause severe pressure symptoms and eventually may rupture. The usual cause is syphilitic aortitis.

arteriovenous a. Any bnormal communication between arteries and veins, congenital or acquired. Gunshot wounds of the larger vessels of the extremities are the most common cause. A *varicose aneurysm* is produced by the rupture of an aneurysm into vein. An *aneurysmal varix* results from the establishment of communication between an artery and vein, the latter becoming dilated and pulsating. Also called arteriovenous *fistula*.

atherosclerotic a. Dilatation especially of the basilar and internal carotid arteries and the circle of Willis in cases of severe therosclerosis.

berry a. A saccular aneurysm formed from congenital defect of the media of cerebral artery rupture of which is the most common source of subarachnoid hemorrhage also called *intracranial aneurysm*.

cardiac a. An aneurysm of the heart wall.

carotid a. Aneurysm of the internal carotid, which may cause, by pressure on nerves, defects in the sense of smell, ptosis, convergent strabismus, dilated pupil, and amaurosis. By pressure on the cavernous sinus, it may cause ocular congestio and swelling of the facial veins. Enlargement of the sac may lead to deafness, facial paralysis, and crossed hemiplegia.

carotid-cavernous fistulous a. An aneurysm in the carotid artery at the point where it transverses the cavernous sinus. It is most often the result of head injury but few arise spontaneously *Cephalic bruit and exophthalmos are two common* symptoms.

cirsoid a. (a) A tortuous lengthening and dilatation of part of an artery (b) A dilatation of group of vessels (arteries, veins, and capillaries) the whole forming pulsating subcutaneous tumor occurring most often in the scalp.

circumscribed a. An aneurysm, either true or false, in which the contents are still within the arterial wall though there may be rupture of one or more of its coats.

compound a. One in which one or several of th coats of the artery are ruptured and the others merely dilated.

congenital a. One du to developmental defect.

consecutive a. One following rupture of all the arterial coats, with infiltration of surrounding tissues with blood.

Crisp' a. *Aneurysm of the splenic artery*

cylindric, cylindrical a. An aneurysm f the same transverse diameter throughout the dilatation returning fairly abruptly to the normal diameter of the artery; similar to *fusiform a.*

developmental a. See congenital *a.*

diffused a. See consecutive *a.*

dissecting a. One in which the blood forces its way between the coats of an artery Syn., *intramural a., dissecting hematoma*

ectatic a. An expansion of portion of an artery due to yielding of all the coats.

embolic a. One caused by embolism.

endogenous a. One formed by disease of the vessel walls.

erosive a. An aneurysm due to extension of inflammation from an infected valve (aortic or pulmonic) breaking down the vessel wall.

exogenous a. One due to traumatism.

external a. ( ) One remote from the great body cavities. (b) One in which the cavity of the tumor is entirely or chiefly outside the inner coat of the artery similar to cylindric *a.*

false a. One due to rupture of all the coats of

an artery, the effused blood being retained by the surrounding tissues.

fusiform a. Spindle-shaped dilatation of an artery, similar to cylindric a.

herniał a. One in which the internal coat of the artery, with or without the middle coat, forms the aneurysmal sac which has forced its way through an opening in the outer coat.

intracavernous a. A nonfistulous aneurysm of the internal carotid artery within the cavernous sinus, which, upon enlargement, suddenly produces unilateral pain of the head or face which may continue for a period of weeks. Following the pain, sensation of numbness is often felt over the forehead and infraorbital region. This aneurysm may rupture when quite small and produce fistulous carotid-cavernous aneurysm. Syn., *subclinoid a.*

intracranial a. An aneurysm located on any of the cerebral arteries. Treatment is intracranial ligation of the affected artery. The most frequent is berry aneurysm.

intramural a. See dissecting *a.*

lateral a. One projecting on one side of a vessel, the rest of the circumference being intact.

malignant bone a. See osteogenic sarcoma.

medical a. One which cannot be treated surgically.

miliary a. A minute saclike dilatation of an arteriole.

mural a. See cardiac a.

mycotic a. One caused by bacterial infection and inflammation of the wall of a blood vessel.

osteoid a. Pulsating tumor of bone.

partial a. (a) See lateral *a.* (b) Aneurysmal dilatation of portion of the heart.

peripheral a. One involving the circumference of an artery.

primary a. An aneurysm in which the disease of the arterial wall which predisposes to the dilatation is unknown; also called *spontaneous a.*

racemose a. See cirsoid a.

saccular a. A saclike dilatation of an artery communicating with the main arterial trunk by an opening that is relatively small.

spontaneous a. See primary a.

spurious a. See false a.

subclinoid a. Intracavernous a.

supraclinoid a. One occurring just above the sphenoid bone.

surgical a. One which can be treated surgically.

syphilitic a. One occurring in vessel as result of syphilitic lesions in its wall. It is most common in the ascending aorta.

traction a. One due to traction on the aorta by an incompletely atrophied ductus arteriosus.

traumatic a. One produced by injury, as crushing, or following gunshot wound, as distinguished from one resulting from disease.

true a. One in which the sac is formed of one, two, or all of the arterial coats.

varicose a. An arteriovenous aneurysm in which the sac of hematoma intervenes between the arteries and veins.

an"eu-rys-mec'to-my (an yoor iz-meck'to-mee) [*aneurysma*; G. *ektomē*, excision]. Excision of an aneurysmal sac.

an"eu-rys'mo-graph [*aneurysma*; G. *graphein*, to write]. An x-ray film of an aneurysm.

an"eu-rys"mo-plas"ty [*aneurysma*; G. *plassein*, to form]. Restoration of an artery in aneurysmal reconstructive endoaneurysmorrhaphy.

an"eu-rys-mor'rha-phy (an yoor-iz-mor'uh-fee) [*aneurysma*; G. *rhaphē*, suture]. Repair of aneurysm of an artery by means of an obliterative operation of the sac.

an"eu-rys-mot'o-my [*aneurysma*; G. *tomē*, cutting]. Incision of an aneurysm for the purpose of suturing or to promote granulation.

an"eu-tha-na'si-a (an yoo-th-h nay-zhuh, -zee-uh) [G. *a-*, not; *euthanasia*, easy death]. A painful or difficult death.

an-frac"tu-os'i-ty [L. *anfractus*, a bending round]. 1. Any one of the furrows or sulci between the cerebral convolutions. *Obs.* 2. Any spiral turn or winding.

ethmoidal a. An ethmoidal cell. *Obs.*

an-frac'tu-ous [*anfractus*]. Winding, turning, sinuous.

an'gei-al [G. *angeion*, vessel]. Vascular.

an'gei-o- (an'jee-o-). For words beginning *angeio-*, see words beginning *angio-*.

an-gel'i-ca, an-ge-lique (an-jl-leek') [G. *angelikos*, pertaining to messengers, angelic]. An aromatic plant of the genus *Angelica*, especially *Angelica archangelica*. The fruit, roots, and rhizomes were formerly used, chiefly in household medicine, as carminative, diuretic and emmenagogue. The seeds were supposed to have antimalarial properties.

an-gel'ic ac'id. An unsaturated acid from the roots of *Angelica archangelica*, has been used in the treatment of rheumatism.

an'gel's wing. Winged scapula; a condition in which the scapula projects posteriorly because of weakness or paralysis of the serratus anterior muscle. Syn. *alar scapula.*

an-gi-. See *angio-*.

an"gi-ec'ta-sis, an"gi-ec-ta'si-a [G. *angeion*, vessel; *ektasis*, extension]. Abnormal dilatation of vessel; enlargement of capillaries. —**angiectat'ic,** *adj.*

an"gi-ec'tid. An abnormal intradermal venous dilatation, consisting of circumscribed conglomerate mass of venules, which causes frequently tense and tender elevation of the skin. Angiectids usually occur in the skin of the lower extremities of pregnant women, and are to be distinguished from varicose veins, which are subcutaneous.

an"gi-ec'to-my. See *arteriectomy*; *venectomy*.

an"gi-ec-to'pi-a [*angeion*; G. *ektopos*, away from place]. Displacement or abnormal position of vessel. —**angiectop'ic,** *adj.*

an"gi-i'tis [*angeion*; G. *-itis*, inflammation]. Inflammation of blood or lymph vessel.

consecutive a. Inflammation of vessels by extension from adjacent tissues.

an-gi'na, an'gi-na [L., from *angere*, to strangle]. 1. Any disease marked by attacks of choking or suffocation, particularly affection of the fauces or throat. 2. Sore throat. 3. Spasmodic, cramplike pain or attack. —**angi'nal, an'ginoid, an'ginose, an'ginous,** *adj.*

agranulocytic a. Agranulocytosis.

a. abdominis. Acute attacks of severe colicky intraabdominal pain associated with increased pulse and tension; attributed to sclerosis of the abdominal blood vessels or abdominal aneurysm.

a. cordis. See *a. pectoris.*

a. cruris. Intermittent lameness with pain and cyanosis caused by arterial obstruction. See intermittent *claudication.*

a. diphtheritica. Diphtheria of the pharynx or larynx. Also called *a. membranacea, suffocative a.*

a. epiglottidea. Inflammation of the epiglottis.

a. hypercyanotica. Severe precordial or substernal pain with cyanosis, occurring in patients with mitral stenosis, due probably to myocardial anoxia.

a. maligna. (a) Gangrenous or necrotic pharyngitis. See *gangrenous a.* (b) Septic sore throat.

a. necrotica. See gangrenous a.

a. parotidea. That form due to mumps. Also called *a. externa, a. maxillaris.*

a. pectoris. Paroxysmal pain of psychosomatic origin, characterized by a sense of oppression and severe constriction about the chest. The pain radiates from the precordium to the left shoulder and down the arm along the ulnar nerve. Associated is a sense of apprehension of impending death. The pain is caused by myocardial ischemia and occurs suddenly because of emotional stress or physical exertion. The condition chiefly affects men over 40, and is rare in women. Syn., *a. cordis, cardiac a.*

a. pect ris vasomotoria. Angina pectoris in which the breast pain is comparatively mild but is attended by pallor and cyanosis, with marked coldness and numbness of the extremities. Also called *mock a., a. notha, spurious a., false a.*

a. simplex. Simple sore throat. Also called *a. acuta.*

a. tonsillaris. Quinsy. Syn., *a. vera.*

a. vera. Quinsy.

aphthous a. Throat inflammation associated with the formation of small ulcers.

cardiac a. See *a. pectoris.*

exudative a. Croup. Also called *a. cerina.*

fibrinous a. A noninfectious, diphtherialike disease of the throat, characterized by fibrinous exudate especially over the tonsillar area. Also called *croupous a., pseudomembranous a.*

follicular a. Follicular tonsillitis.

gangrenous a. That form characterized by necrotic patches of the fauces, occasionally following scarlet fever or diphtheria. Syn., *a. maligna, a. necrotica.*

herpetic a. That type marked by the formation of vesicles in the throat, associated with patches of exudation.

hypoleukocytic a. Agranulocytic angina; acute agranulocytosis.

Ludwig's a. An acute streptococcic infection of the floor of the mouth. It begins suddenly with marked constitutional symptoms and swelling under the jaw, rapidly extending into the neck. The floor of the mouth becomes swollen and indurated and the tongue pushed upward. Speech and swallowing are impeded, and the disease may be fatal.

lymphocytic a. See infectious *mononucleosis.*

monocytic a. Infectious mononucleosis.

nerve a. Neuralgic angina due to spasm of the nutrient arteries of the nerves.

phlegmonous a. (a) Inflammation of the mucous and submucous tissues of the throat with edema. (b) Acute inflammation of the deep structures of the throat with a tendency to suppuration.

pseudoangina. A neurosis affecting anemic women, simulating angina pectoris but less severe and never terminating fatally.

pultaceous a. An affection of the throat with whitish or grayish patches which detach easily and are not true exudates.

serous a. ( ) Edema of the glottis. (b) Catarrhal pharyngitis.

thymic a. ( ) Laryngismus stridulus. (b) Allergic asthma.

Vincent's a. An extension of necrotizing ulcerative gingivitis to the faucial and tonsillar region. See also Vincent *stomatitis.*

an"gi"no-pho'bi (an jye no f 'bee uh, an j -no-) [angina; G. *phobos*, fear]. Morbid fear of angina pectoris.

angi- (an"jee o-) **angi-** [G. *angeion*, vessel]. A combining form meaning vessel or denoting *blood vessel*, or *pertaining to* or *covered by* a vessel.

an gi-o blast" [*angeion*, G. *blastos*, germ]. 1. Special primordium derived from extraembryonic endoderm which gives rise to the blood cells and blood vessels in the early embryo. 2. That part of the mesenchyme, especially extraembryonic, from which the first blood cells and blood vessels arise. 3. A vasoformative cell of the mesenchyme. —**a**ngioblas**tic**, *adj.*

an"gi-o blas to'ma [*angeion*, *blastos*; G. *-oma*, tumor]. See *hemangioendothelioma.*

an gi-o-car'di-o-gram" [*angeion*, G. *kardia*, heart; *gramma*, letter]. A radiograph of the heart and large vessels.

an"gi-o-car"di og'ra phy [*angeion*, *kardia*; G. *graphein*, *to write*]. Roentgenographic visualization of the thoracic vessels and the heart chambers after intravenous injection of radiopaque material (diodrast). —**angiocardiograph'ic**, *adj.*

an gi o-car"di-op thy Abnormalities of the heart and great vessels.

an gi o-cav"er no ma. A cavernous angioma.

an"gi -cav'ern ous [*angeion*, L. *cavernosus*, full of hollows]. Relating to cavernous angioma.

an gi-o-chei'l scope (an jee-o kigh'lo scope) [*angeion*, G. *cheilos*, lip; *skopein*, to examine]. An instrument which magnifies the capillary circulation of the lips, permitting observation.

an gi-o-cho-li'tis (an jee o-ko ly tis) [*angeion*, G. *cholē*, bile; *-itis*, inflammation]. Cholangitis.

an gi-o-chon dro ma. A mesenchymoma.

malignant a. A malignant mesenchymoma.

an"gi-o-der'ma pig"men to sum. Xeroderma pigmentosum.

an"gi-o-der"ma ti'tis [*angeion*; G. *derma*, skin; *-itis*]. Inflammation of the vessels of the skin.

an gi o-di ther"my Obliteration of blood vessels by diathermy.

an"gi-o-dys tro phi a, **gi-o dys'tro-phy** [*angeion*, G. *dys*, bad; *trophē*, nourishment]. Defective nutrition of the blood vessels.

n gi-o-e-de ma. See angioneurotic *edema.*

an gi o el" phan ti -sis [*angeion*, G. *elephantiasis*, elephantiasis]. Nodular or lobulated masses of vascular tumors (angiomas) especially of the subcutaneous tissues, which commonly bleed on pressure, may pulsate and sometimes are erectile.

an"gi o en"do-the"li ma [*angeion*, G. *endon*, within; *thēlē*, nipple; *-ōma*, tumor]. A tumor composed of endothelial cells and blood or lymph vessels; also called *Ewing tumor.*

a. of bone See Ewing' *sarcoma.*

an"gi o-fi"bro blas to ma [*angeion*, L. *fibra*, fiber; G. *blastos*, germ; *-ōma*]. An angioma with fibroblastic tissue between the vascular structures.

n gi fi bro ma (an jee-o figh-bro muh) [*angeion*, *fibra*, *-ōma*]. A fibroma rich in blood vessels or lymphatics.

an"gi o-gen sis [*angeion*, G. *genesis*, generation]. The development of the blood vessels. —**angiogenic**, *adj.*

an"gi gli-o ma (an jee-o glye o m h) [*angeion*, G. *glia*, glue; *-ōma*, tumor]. A glioma which is rich in blood vessels.

an"gi gli-o ma to sis (gly muh to sis) [*angeion*, *glia*, *-ōma*, G. *-osis*, condition]. The presence of numerous foci of proliferating capillaries and neuroglia.

an"gi og'ra phy [*angeion*, G. *graphein*, to write]. 1. Determination of the arrangement of blood or lymph vessels without dissection, as by capillaroscopy, fluoroscopy, or radiography. 2. In radiology, the visualization of blood vessels by injection of isotonic radiopaque substance.

intracranial a. Roentgenography of the blood vessels within the cranial cavity following the injection of radiopaque material.

an″gi-o-hy″per-to′ni-a [*angeion*; G. *hyper*, over; *tonos*, tension]. A condition in which the walls of the blood vessels are constricted; vasoconstriction.

an″gi-o-hy″po-to′ni-a [*angeion*; G. *hypo*, under; *tonos*]. A condition in which the walls of the blood vessels are relaxed; vasodilatation.

an′gi-oid [*angeion*; G. *eidos*, form]. Linear; in appearance resembling a blood vessel.

an″gi-o-ker″a-ti′tis [*angeion*; G. *keras*, horn; *-itis*, inflammation]. Vascular keratitis.

an″gi-o-ker″a-to′ma [*angeion*; *keras*; G. *-ōma*, tumor]. A rare disease of the skin, usually of the extremities; characterized by telangiectatic warty growths; often preceded by chilblains.

a. corporis diffusum. A metabolic genodermatosis marked by the presence on the trunk of small telangiectatic verrucous growths, and usually associated with internal lesions, as degeneration of the muscle fibers of blood vessels and the heart.

a. Mibelli. A progressive condition beginning in childhood in which small, vascular verrucous growths are seen on the backs of the fingers and toes and over the knees.

an″gi-o-li″po′ma [*angeion*; G. *lipos*, fat; *-ōma*]. A mixed tumor of vascular and fatty tissue.

an′gi-o-lith″ [*angeion*; G. *lithos*, stone]. A calculus of a blood vessel. —**angiolith′ic**, *adj.*

an″gi-ol′o-gy [*angeion*; G. *logos*, word]. The science dealing with blood vessels and lymphatics.

an″gi-o-lu′poid [*angeion*; L. *lupus*, wolf; G. *eidos*, form]. A cutaneous sarcoid of the type seen in generalized sarcoidosis; usually found on the face; marked by small bluish-red nodules with capillary dilatation. Also called *a. of Brocq and Pautrier*.

an″gi-ol′y-sis [*angeion*; G. *lysis*, loosing]. Obliteration of a blood vessel during embryonal, fetal, or postnatal life; by progressive fibrosis, or by thrombosis followed by organization and cicatrization, as obliteration of the ductus arteriosus.

an″gi-o′ma [*angeion*; G. *-ōma*, tumor]. A tumor composed of blood or lymphatic vessels; hemangioma or lymphangioma. Probably derived from embryonal isolation of mesenchymal structures; it is essentially a hamartoma, but many consider it a neoplasm. —**angiom′atous**, *adj.*

a. arteriale racemosum. A complex meshwork of small blood vessels, near or attached to an artery.

capillary a. See capillary *hemangioma*.

cavernous a. One in which the vascular spaces are large or cystic, like the erectile tissue of the penis. Also called *angiocavernoma*.

fissural a. A vascular nevus occurring at the site of embryonal fissures, as on the face or neck.

plexiform a. One consisting of tortuous capillaries, and sometimes of arteries and veins, usually subcutaneous; produces sessile or wartlike superficial masses.

senile a. See papillary *varix*.

serpiginosum a. A skin disease in which tiny red vascular dots appear in groups on the skin; called *Hutchinson's disease*.

spider a. See spider *nevus*.

telangiectatic a. One in which the component vessels are large, as in angioma of the bone.

an″gi-o-ma-la′ci-a (an″jee-o-ma-lay′shee-uh, -see-uh) [*angeion*; G. *malakia*, softness]. Softening of the blood vessels.

an″gi-o-ma-to′sis [*angeion*; G. *-ōma*, tumor; *-ōsis*, condition]. A pathologic state of the blood vessels marked by the formation of multiple angiomas.

a. retinae. An uncommon disease of the retina marked by areas of proliferating capillaries and neuroglia, indicating a neoplasm. Also called *von Hippel's disease*, *angiogliomatosis*.

encephalotrigeminal a. Nevoid amentia.

an″gi-o-meg′a-ly [*angeion*; G. *megas*, large]. Enlargement of blood vessels, occurring chiefly in the eyelid.

an″gi-om′e-ter [*angeion*; G. *metron*, a measure]. An instrument for measuring the diameter or tension in a vessel. See *sphygmograph*.

an″gi-o-my″o-li-po′ma. A mesenchymoma.

an″gi-o-my-o′ma (an″jee-o-migh-o′muh) [*angeion*; G. *mys*, muscle; *-ōma*, tumor]. A myoma rich in blood vessels or lymphatics.

an″gi-o-my-op′a-thy (-migh-op′uth-ee) [*angeion*; *mys*; G. *pathos*, disease]. Any affection of the vessels involving the musculature.

an″gi-o-my″o-sar-co′ma [*angeion*; *mys*; G. *sarkōma*, fleshy excrescence]. A myosarcoma rich in blood vessels or lymphatics.

an″gi-o-neu-rec′to-my [*angeion*; G. *neuron*, nerve; *ektomē*, excision]. Excision of blood vessels and nerves.

an″gi-o-neu-ro′ma [*angeion*; *neuron*; G. *-ōma*, tumor]. A benign tumor composed of vascular tissue and nerve fibers.

an″gi-o-neu″ro-my-o′ma (-new″ro-migh-o′muh) [*angeion*; *neuron*; G. *mys*, muscle; *-ōma*]. Glomus tumor.

an″gi-o-neu-ro′sis [*angeion*; *neuron*; G. *-ōsis*, condition]. A psychoneurosis which partially expresses itself by a disturbance of the vasomotor system, either of the nature of a spasm of the peripheral blood vessels (*angiospasm*) or of a paralysis (*angioparalysis*) or of a paresis (*angioparesis*); formerly called *vasomotor trophoneurosis*. —**angioneurot′ic**, *n.* and *adj.*

an″gi-o-no′ma [*angeion*; G. *-ōma*, tumor]. Ulceration of a vessel.

an″gi-o-pa-ral′y-sis [*angeion*; G. *paralysis*, paralysis]. Paralysis of blood vessels caused by vasomotor defect. —**angioparalyt′ic**, *adj.*, *n.*

an″gi-o-pa-re′sis (an″jee-o-pa-ree′sis, -par′i-sis) [*angeion*; G. *paresis*, slackening]. Partial paralysis of the vasomotor apparatus.

an″gi-op′a-thy [*angeion*; G. *pathos*, disease]. Any disease of the vascular system.

an″gi-o-pla′ni-a, an″gi-o-pla′ny [*angeion*; G. *planē*, a wandering]. Irregularity or abnormality in the course of a vessel; angiectopia.

an′gi-o-plas″ty [*angeion*; G. *plassein*, to form]. Plastic surgery upon blood vessels.

an″gi-o-pneu″mog′ra-phy [*angeion*; G. *pneumōn*, lung; *graphein*, to write]. Radiographic visualization of the pulmonary artery by means of a nontoxic radiopaque substance.

an″gi-o-poi-e′sis [*angeion*; G. *poiēsis*, production]. The process by which certain cells cause the formation of blood vessels in new tissue.

an″gi-o-poi-et′ic [*angeion*; G. *poiein*, to make]. Forming blood vessels, as in new tissue.

an″gi-o-pres″sure [*angeion*; L. *pressura*, pressure]. The production of hemostasis without ligation, by angiotribe, hemostat, or other pressure.

an″gi-or′rha-phy [*angeion*; G. *rhaphē*, suture]. Plastic suture of a blood vessel or vessels.

an″gi-or-rhex′is [*angeion*; G. *rhēxis*, a breaking]. Rupture of a blood vessel.

an″gi-o-sar-co′ma [*angeion*; G. *sarkōma*, fleshy excrescence]. Sarcoma derived from an angioma or a sarcoma rich in blood vessels or lymphatics.

multiplex a. See multiple idiopathic hemorrhagic *sarcoma*.

an″gi-o-scle-ro′sis (an″jee-o-skli-ro′sis) [*angeion*; G. *sklērōsis*, hardening]. Induration and thickening of the walls of the blood vessels.

an′gi-o-scope [*angeion*; G. *skopein*, to examine]. An instrument for examining the capillary vessels.

an″gi-o-sco-to′ma [*angeion*; G. *skotōma*, dizziness]. Defects in the visual field due to the presence of retinal vessels.

an″gi-o·sis [aggeion; G. -ōsis, condition]. Angiopathy. See angiitis.

an′gi·o-spasm″ [aggeion, G. spasmos, spasm]. A segmental contracture of blood vessel. —angiospas′tic, adj

an′gi-o-sperm″ [aggeion, G sperma, seed]. A plant the seeds of which are protected by pericarp.

an gi o-stax′is [aggeion, G staxis, dropping]. The oozing of blood. See hemophilia.

an″gi-o ste-no sis [aggeion, G. stenōsis, being straitened]. Narrowing of the lumen of blood vessel.

n gi-os″te-o sis [aggeion, G. osteon, bone -ōsis, condition]. Ossification of blood vessels.

an″gi o-tel″ec-ta′si a (-tel eck-tay zhuh, -see-uh, -shuh, -see-uh) [aggeion, G telos, end; ektasis, stretching out]. A condition in which there is dilatation of groups of capillaries telangiectasis.

an″gi-o-ten′ic [aggeion, G teinein, to stretch] Due to or marked by distention of the blood vessels.

an″gi-o-ti′tis [aggeion, G ous, ear; -itis, inflammation]. Inflammation of blood vessels of the ear

an″gi-ot′o-my [aggeion, G. tomē, cutting]. Incision into blood vessel.

an″gi ot o-nase. One of group of enzymes capable of destroying angiotonin. Syn., hypertensinase.

an gi o ton′ic [aggeion, G tonos, tension]. Tending to increase arterial tension.

an″gi-ot′ nin. A polypeptide, the product of the action of the enzyme renin on renin substrate, pseudoglobulin in the blood plasma. The injection of angiotonin into the blood stream causes an brupt, fleeting rise of blood pressure. Syn., hypertensin.

an″gi-o-to′nin ase. See angiotonase.

an gi tribe [aggeion; G. tribein, to grind, to bruise]. A clamp with powerful j ws used to crush arteries embedded in tissue.

an gi-o-troph′ic [aggeion; G trophē nourishment]. Relating to utrition of blood vessels.

an gi ox′yl. An ckidified alcohol pancreatic ex tract used as treatment for hypertension.

an-gi′tis. Angiitis.

Angle, Edward Hartley [American orthodontist, 1855–1930]. Celebrated for his classification of the various forms of malocclusion for his wire splint, designed to hold the lower teeth to the upper in fracture of the mandible and for his clamp band, used with his regulating appliances.

an′gle [L. angulus, an angle]. 1 Degree of divergence of two lines or planes that meet each other; the space between two such lines. 2. A corner —angular adj

acromial a. That formed between the head of the humerus and the clavicle.

alveolar a. That formed between line passing through point beneath the nasal spine and the most prominent point of the lower edge of the alveolar process of the maxilla and the cephalic horizontal line.

a. alpha. The angle formed by intersection of the optic and visual axes at the nodal point of the eye. In myopia, the alpha angle is smaller than normal and the eye appears to converge; in hypermetropia, the angle is larger than normal and the eye appears to diverge.

a. of aberration. See a. of deviation.

a. of anomaly Angular degree of the shift from the normal to the bnormal retinal correspondence observed in squint.

a. of aperture. In optics, that included between two lines joining the opposite points of the periphery of lens and the focus.

a. of circulatory fficiency The angle of elevation of limb at which color returns after ischemia or blanching.

a. of convergence. The angle between the two visual axes, when the eyes are turned inward. See meter-a.

a. of deviation. (a) In magnetism, the angle traversed by th needle when disturbed by some magnetic force. (b) In optics, that formed by refracted ray and the prolongation of the incident ray

a. of elevation. In optics, that made by the visual plane with its primary position when moved upward or downward.

a. of eye. See canthus.

a. of incidence. In optics, the acute angle between ray incident upon surface, and the perpendicular to the surface at the point of incidence.

a. of inclination of pelvic canal. I obstetrics, that formed by the anterior wall of the pelvis with the anteroposterior diameter of the pelvic inlet.

a. of inclination of pelvis. In obstetrics, that formed by the pelvis with the general line of the trunk, or that formed by the plane of the inferior strait with the horizon.

a. of iris. The iridial angle; the angulus iridis [BNA]. That formed by the iris and cornea. Also called filtration a.

a. of jaw The junction of the base of the body of the mandible with the posterior border of its ramus.

a. l lips. That formed by the union of the lips at each extremity of the oral opening.

a. of Ludwig. See a. of sternum.

a. of polarization. In optics, the angle of reflection at which light is most completely polarized.

a. of pubes. That formed by the junction of the pubic bones at the symphysis.

a. of reflection. In optics, that which reflected ray of light makes with line drawn perpendicular to the point of incidence.

a. of refraction. In optics, that which exists between refracted ray of light and line drawn perpendicular to the point of incidence.

a. of rib. An angle of the body of rib at the attachment of the iliocostalis muscle and the point at which the rib bends ventrally

a. of sternum. That between the manubrium and body of the sternum. Also called a. of Louis, a. of Ludwig.

a. of supination f the hand, a. of supination of the radius. The extent to which the hand is capable of being supinated; bout 180°

angles of the scapula. The three angles of the triangular scapula. The inferior gle of the scapula is that formed by the junction of its axillary and vertebral borders. The lateral angle of the scapula is that formed by the junction of its axillary and superior borders It includes the head of the scapula, bearing the glenoid cavity The medial (or superior) gle of the scapula is that formed by the junction of its superior and vertebral borders.

a. of Sylvius. See Sylvian a.

beta a. That formed between the radius fixus and line joining the bregma and hormion.

biorbital a. I optics, that formed by the intersection of the axes of the orbits.

cardiohepatic a. The angle formed by the junction of the upper limit of hepatic dullness with the right lateral line of cardiac dullness.

carrying a. Angle between the longitudinal axis of the forearm and that of the arm when the forearm is extended.

cavosurface a. That formed by the meeting of a cavity wall with the surface of the tooth.

cerebellopontine a. A region bounded laterally by the petrous portion of the temporal bone,

medially by the cerebellum and brain stem, below by the floor of the posterior fossa of the skull, and above by the tentorium cerebelli. An area in which tumors frequently occur

colic a. The angle formed by the junction of abdominal and umbilical colon in the *fetus*.

costal a. The angle formed by the right and left costal cartilages at the xiphoid process also called *infrasternal a.*, *subcostal a.*

costophrenic a. That formed by the ribs and diaphragm.

critical a. I   *optics*, the least angle of incidence at which there is total reflection. It exists when light, traveling in one medium, is incident upon another medium which is less refracting.

distal a. I   *dentistry* that formed by the junction of the *distal surface* with any one of the other surfaces of the crown of   tooth.

distoincisal a. Angle formed by the distal surface and the incisive edge of an incisor

disto-occlusal a. The angle of   premolar or molar formed by the junction of its distal and occlusal surfaces. It forms the distal marginal ridge of the occlusal surfaces of these teeth.

epigastric a. See costal *a.*

facial a. That formed by the union of   line connecting nasion and gnathion with the Frankfort horizontal plane of the head. This may be measured on the dead skull with   craniostat, or on the living head with the aid of   lateral roentgenogram.

filtration a. The iridial angle, at which point filtration of the aqueous humor supposedly occurs.

frontal a. That determined by connecting the point that lies highest in the sagittal curvature of the frontal bone by straight lines with nasion and bregma respectively This angle is greater in   skull with   low receding forehead

gamma a. I   *ophthalmology*, the angle formed by the line of fixation and the optic axis.

gastric a. See angular notch.

gonial a. The angle formed by the ramus and the body of the mandible.

great a. of eye. The inner canthus of the eye.

incisal a. I   *dentistry*, the junction of the incisal edge of an anterior tooth with   proximal surface.

infrasternal a. The costal angle.

iridial a. See *a.* of iris.

kappa a. The angle formed by the visual and pupillary axes; when the pupillary axis is temporal to the visual axis, the angle is positive.

labial a. See *a.* of lips.

limiting a. See critical *a.*

line a. One formed by the meeting of two tooth surfaces.

mesial a. The junction of the mesial surface of   crown of   tooth with one of the other surfaces.

mesio-occlusal a. That formed by the junction of the mesial and occlusal surfaces of   premolar or molar tooth.

metafacial a. That between the base of the skull and the pterygoid process. Also called *Serres a.*

meter-a. I   *optics*, the degree of convergence of the eyes when centered on an   bject one meter distant from each.

nasal a. The inner canthus of the eye.

occipital a. That determined by connecting the point in the sagittal curvature of the occipital bone by straight lines with lambda and the point of the external occipital protuberance respectively The more convex the occipital bone, the smaller is this angle.

optic a. That included between lines joining the extremities of an object and the nodal point. The smallest is   bout 30 seconds.

parietal a. That determined by connecting the highest point in the sagittal curvature that lies highest above the plane passing from right to left through bregma and lambda, by straight lines with bregma and lambda, respectively The greater the angle, the less convex the vault of the skull.

pelvivertebral a. See *a. of* inclination *of pelvis*.

point a. I   *dentistry* that formed by the meeting of three surfaces. Syn., *solid a.*

principal a. The angle formed by that side of prism receiving the incident ray with the side from which the refracted ray escapes.

prism a. The angle made by the two refracting sides of   prism at its apex.

Rolandic a. The acute angle formed by the central sulcus (fissure of Rolando) with the superior border of the cerebral hemisphere.

sacrolumbar a. Old term for sacrovertebral angle.

sacrovertebral a. That which the sacrum forms with the last lumbar vertebra.

sigma a. One between the radius fixus and   line from the hormion to the staphylion.

solid a. One formed by the junction of three surfaces.

sternoclavicular a. That existing between the clavicle and the sternum.

subcostal a. See costal *a.*

subpubic a. That formed at the pubic arch.

Sylvian a. The angle formed by the posterior limb of the Sylvian fissure (lateral cerebral fissure) with   line perpendicular to the superior border of the hemisphere.

temporal a. The outer canthus of the eye.

uranal a. That determined by connecting the point that lies highest in the sagittal curvature of the hard palate by straight lines with the premaxillary point and the posterior nasal spine, respectively The less arched the palate, the greater is this angle.

visual a. See optic *a.*

xiphoid a. That formed by the sides of the xiphoid notch.

An gli·cus su′dor [L.]. English sweating fever

an″go phra si (ang go-fray′zhuh, -see-uh) [G *anchein*, to choke; *phrasis*, utterance] A halting, choking, and drawling type of speech occurring in paralytic dementia.

an gor [L. *angor*   strangling]. Angina, 3 extreme distress.

a. animi A sense of imminent dissolution.

a. nocturnus. Night terrors. Syn., *pavor nocturnus.*

a. pectoris. A gina pectoris.

an″gos tu′ra [Sp., former name of town in Venezuela, from L.   *angustus*, narrow]. The bark of *Galipea cusparia*. It is   stimulant bitter tonic.

g′strom, ång strōm (ang strum, ong′strem. *See* Notes § 35) [after A. J *Ångström*, Swedish physicist, 1814–74]. An angstrom unit;   unit of length equal to 10^{-8} cm. ($^1/_{100}$ millionth of   centimeter); used for measuring wavelengths, as of visible light,   -rays, and radium radiation *Designated* by the symbol A, Å, A.U Å.U A.u Å u., or a.u.

An guil′lu la (ang-gwil yoo luh, ang-gwil′oo-luh) [L., dim. of *anguilla*, eel]. Synonym for *Strongyloides*.

n″guil-lu li′   sis, an″guil-lu lo sis [*Anguillula*; NL. *-iasis*, condition]. Old term for strongyloidiasis.

an gu la′tion [L. *angulatus*, from *angulus*, angle]. 1 The formation f an unnatural angle in   hollow organ (as of the intestine or ureter) These angles often become sites of obstruction. 2. Deviation from the normal long axis, as in a fractured bone healed out of line.

an gu lus. See *angle.*
a. iridis. See *angle* of iris.
an"ha la mine (an"huh-lah-meen, an-hal'uh-meen, -min) $C_{11}H_{15}O_3N$ An alkaloid from mescal buttons.
an'ha line (an'huh-leen, lin) An alkaloid from mescal buttons. It is identical with hordenine found in barley
an"ha lon'i dine (an"huh-lon'i-deen, -din) $C_{12}H_{17}O_3N$ An alkaloid from mescal buttons.
an'ha lo nine (an"huh-lo neen, -nin, an hal'o-) (*anhalonium*) An alkaloid, $C_{12}H_{15}O_3N$ from mescal buttons.
An"ha lo ni um. The former name of a genus of cactus.
A. lewi ii. Old term for *Lophophora williamsii.*
an"he do ni a [G a- not *hēdonē*, pleasure]. In *psychology* diminution or disappearance of pleasure in life; apathy in the performance of acts which normally give pleasure.
an hem"a to poi e'sis, an hem"a to poi-e si (an hem uh to-poy-ee'sis, an hee muh-to-) [a- G *haima*, blood *poiēsis* production]. Defective formation of blood, the result of hypofunction of the bone marrow
an he"ma to sis [a- *haima*, G -*ōsis*, condition]. Anhematopoiesis.
an he"mo lyt'ic (an hee mo-lit ick, an-hem o-) [a- *haima*, G *lysis*, loosing]. Not hemolytic; not destructive of blood corpuscles.
an"hi dro si (an"hi-dro sis, an"high) [a-; G *hidrōs*, sweat -*ōsis*, condition]. Deficiency or absence of sweat secretion also, loosely deficiency or absence of salivation. —**anhidrot'ic,** *adj*
hereditary a. See hereditary anhidrotic ectodermal *dysplasia.*
thermogenic a. See sweat-retention *syndrome.*
anhydr-. See *anhydro-*
an"hy drae mi (an"high-dree mee-uh) See *anhydremia.*
an hy'drase. Any enzyme catalyzing a reaction involving removal of water
carbonic a. The enzyme, found in red blood cells and in parietal cells of gastric mucosa, which catalyzes the reaction $H_2CO_3 \rightleftharpoons H_2O + CO_2$.
n"hy-dra'tion. See *dehydration*
n"hy-dre'mi-a (an"high-dree mee-uh) [a- G. *hydōr* water- *haima*, blood]. A deficiency of the fluid portion of the blood.
an hy'dride. A compound resulting from the abstraction of water from substance.
acid a. An oxide of nonmetal; it forms an acid with water
basic a. An oxide of metal; it forms base with water
inner a. A compound resulting from withdrawal of the elements of water from molecule, with simultaneous formation of ring structure within the molecule.
an hy drite. Anhydrous calcium sulfate.
an hy'dro-, anhydr- [G *anydros*, from a- *hydōr*]. A combining form meaning *waterless*; used to denote *deficiency of water* or *an anhydride of compound.*
an hy dro-git'a lin (-jit'uh-lin, -ji-tay'lin, ji-tal'in) Gitoxin.
n hy dro-hy drox"y pro ges'ter-one (*anhydrohydroxyprogesterone*) $C_{21}H_{28}O_2$. 17 Ethinyltestosterone or pregnenolone, the synthetic steroid resulting from elimination of molecule of water and introduction of hydroxyl group into the molecule of progesterone. It is used like progesterone but is active when given orally Dose, 5-75 mg. (1/12-1¼ gr) daily Syn *ethisterone.* See *lutocylol, pranone, progestoral.*
anhydrone. A trade-mark for anhydrous magnesium perchlorate the substance is used in various chemical procedures for absorption of water
an hy'drous. I *chemistry* denoting the absence of water especially of water of crystallization.
an"hyp-no sis [G a- not *hypnos*, sleep *-sis*, condition]. Sleeplessness; insomnia.
a ni" -si no si [a- Jean Vicot, who introduced tobacco into France, 1560 L. *acidus*, sour; -*in*, chemical suffix; -*ōsis*]. The syndrome produced by deficiency of niacin (nicotinic acid) in the diet Also called *nicotinamidosis.*
an"i n"thi nop sy [a- G *ianthinos*, violet-colored *opsis*, sight]. Inability to recognize violet tints.
an ic-ter'ic. Without jaundice, as in anicteric hepatitis.
an id' us [a-; G *eidos*, form]. The lowest form of omphalosite, in which the parasitic fetus is shapeless mass of flesh covered with skin. Syn *acardiacus amorphus, holoacardius amorphus.* —**anidian, anideous, ani'dous,** *adj*
n'i lide, n'i lid. 1 Any member of the group of compounds containing the radical C_6H_5NH—. They may be formed by the action of an acid chloride or acid anhydride on aniline. 2. A term sometimes applied to compounds having the group $NH\ C_6H_4$—
an'i line (an'i leen, -lin, lyne) **an'i lin** [Ar *al-nil*, the indigo plant]. $C_6H_5NH_2$ A colorless liquid with faint, characteristic odor obtained from coal tar and other nitrogenous substances or prepared by the reduction of nitrobenzene. It is slightly soluble in water miscible with alcohol and ether and forms soluble, crystallizable salts with acids Various derivatives constitute the aniline dyes or coal tar colors. See *anilide.* Formerly it was used in chorea and epilepsy Syn., *aminobenzene, phenylamine, cyanol.*
a. oil. A solvent consisting of mixture of aniline, toluidine, xylidine, and other products resulting from the distillation of coal; used in histologic technic.
a. sulfate. $(C_6H_5NH_2)_2\ H_2SO_4$ White crystals, soluble in water or alcohol; formerly used in chorea and epilepsy
an'i line black. See *nigraniline.*
an'i line blue W S. (C C.) An acid, aniline dye of the triphenylmethane series, mixture of trisulfonates of diphenyl rosaniline and triphenyl pararosaniline used to stain collagenous fibers and as general stain, usually 0.2 to 1.0% solution of aniline blue in water or in 90% alcohol. Also called *China blue soluble blue 3M or 2R, marine blue V, cotton blue, water blue, Berlin blue.*
a ni lin'gus [L. *anus*, anus *lingua*, tongue]. I *psychiatry*, one who applies mouth to anus.
an'i lism. Aniline poisoning, usually incurred industrially by inhaling fumes or fine dust for long periods of time.
a nil'i ty [L. *anilis*, from *anus*, an old woman]. Imbecility or childishness. —**an'ile** *adj*
an'i ma [L breath, spirit, soul]. 1 The soul, the vital principle. 2. The active principle of drug or medicine. 3. In Jung' analytical psychology the inner personality the soul differentiated into *anima* (feminine soul) and *animus* (masculine soul)
an'i mal [L.]. 1 Any member of the higher of the two major classes of living things (plants and animals) There is no special test for strict separation of all plants from all animals. In general, however animals are distinguished by their mode of nutrition, by neuromuscular system which permits locomotion, and by more complex form of development from the egg and more determinate type of growth. 2. The

physical and organic as contrasted with the mental and spiritual. —an'i·mal, *adj.*

control a. (a) One serving as check or standard of comparison in experimental studies. (b) A nonimmune animal. See *control*.

decerebrate a. One in which the brain and higher centers have been removed or disconnected.

experimental a. One which is the subject of experimentation.

Houssay a. One in which the pancreas and hypophysis both have been excised.

laboratory a. See experimental a.

spinal a. One with the cord severed, cutting off connections to the brain.

thalamic a. One with the brain stem severed just above the thalamus.

an"i·mal'cule [dim. from *animal*]. A minute or microscopic animal; a protozoan.

an'i·mal heat. The heat generated in living organisms by metabolism. Animals fall into two great classes regarding temperature: poikilothermic—those whose temperature varies but seldom exceeds that of the environment, and homothermic—those whose temperature is maintained at a level which varies within narrow limits. In man, the normal temperature is 98.6° F (37° C.) with normal fluctuation of 1-2° in 24 hrs.

an'i·mal mag'net·ism. 1. A form of magnetic healing, characterized by the belief that certain men, like certain metals, have remedial powers by virtue of spiritlike effluvium emanating from their bodies. 2. Mesmer's universal fluid which, he believed, emanates from heavenly bodies and influences the health of man. *Obs.*

an"i·mas'tic [L. *anima*, soul]. Pertaining to the psyche or soul.

an"i·ma'tion [L. *animatus*, from *animare*, to fill with breath]. 1. State of being alive, animate. 2. Liveliness, high spirits.

suspended a. A state of interrupted respiration and loss of consciousness; temporary period of apparent death.

an"i·ma·tism [L. *anima*, soul]. The attribution of personality (not soul) to the animate and inanimate phenomena of nature.

an'i·mism (*anima*). 1. The belief that all animals, inanimate objects, and natural phenomena possess conscious souls: characteristic of many primitive religions. 2. The theory of the *anima mundi*, soul of the world (G. E. Stahl, 1720) that all the phenomena of nature are the product of an immaterial, activating soul or spirit.

an'i·mus [L., mind]. 1. A spirit or feeling of hatred or hostility. 2. For the psychoanalytical meaning, see *anima* 2.

an'i·on. An ion carrying one or more negative charges, and migrating to the anode on electrolysis. Examples: acetate ($C_2H_3O_2^-$), chloride (Cl^-), hydroxide (OH^-), phosphate (PO_4^{---}), sulfate (SO_4^{--}).

an"i·rid'i·a (an-eye-rid'ee-uh, an"i-rid'ee-uh) [G. *a-*, not; *iris*, rainbow; iris]. Absence or defect of the iris.

an"is·al'de·hyde. $CH_3O.C_6H_4.CHO$. A volatile oil obtained on oxidizing various essential oils, as anise, fennel, etc. Also called *anisic aldehyde*.

an'ise (an'iss) [G. *anison*, anise] (*anisum*). The dried ripe fruit of *Pimpinella anisum*; a mild aromatic carminative by virtue of its content of volatile oil. Also called *anise seed*, *aniseed*.

a. oil (*oleum anisi*). The volatile oil from anise or star anise; used as carminative in flatulent colic, as flavor and for its expectorant action. Dose, 0.1-0.3 cc. (2-5 min.)

a. spirit (*spiritus anisi*). A 10% alcoholic solution used as stomachic and carminative. Dose, 1-4 cc. (15-60 min.) well diluted.

a. water (*aqua anisi*). A vehicle. Dose, 4-16 cc. (1-4 dr.)

star a. The fruit of *Illicium verum*. It yields a volatile oil. See *a. oil*.

an'i seed. See *anise*.

an"is·ei·ko'ni·meter (an"ice-eye-kon'i-tur) [G. *anisos*, unequal; *eikōn*, image; *metron*, measure]. A device for measuring the inequality of size, when the two retinal images differ. Also called *eikonometer*.

an"i·sei·ko'ni·a [*aniso-*; *eikōn*]. A condition in which the image seen by one eye is different from that seen by the other. See iseikonic lens. Also spelled *anisoiconia*. —aniseikon'ic, *adj.*

meridional a. That form in which one image is larger than the other in one meridian.

overall a. That type in which one image is larger than the other in all meridians.

a·nis'ic ac'id (a-niss'ick, a-nigh'sick). $CH_3O.C_6H_4.COOH$. *p*-Methoxybenzoic acid. A crystalline acid obtainable from anise and fennel; has been used as an antiseptic, antipyretic, and antirheumatic.

an i'so-, an'i·so-, *anis-* [*anisos*]. A combining form denoting *unequal*, *unsymmetrical*, *dissimilar*.

an i"so·chro ma'si·a (an-eye"so-kro-may'zhuh, -see-uh, an"i-so-) [*anisos*; G. *chrōma*, color]. A variation in the color of erythrocytes in which only the peripheral zone of the cell is colored. Occurs as a result of iron deficiency in certain types of anemia.

an·i"so·chro mi·a [*anisos*; *chrōma*]. 1. Variation in the intensity of staining of erythrocytes; due to differences in hemoglobin content. 2. See *heterochromia*. —anisochromic, anisochromat'ic, *adj.*

an·i"so·co'ri·a [*anisos*; G. *korē*, pupil]. Inequality in the diameter of the pupils.

an i"so·cy to'sis (a-nigh"so-sigh-to'sis, an"i-so-) [*anisos*; G. *kytos*, cell; *-ōsis*, condition]. Inequality in the size of the erythrocytes.

an i"so·dac'ty·lous [*anisos*; G. *daktylos*, finger]. With unequal digits. —anisodactylus, *n.*

an i"so·dont [*anisos*; G. *odous*, tooth]. Possessing irregular teeth of unequal length.

an·i"so·ga mete (-nigh so-ga-meet, -gam eet, an i·so-) [*anisos*; G. *gametē*, wife, *gametēs*, husband, from *gamein*, to marry]. A macrogamete or microgamete.

an"i·sog'a my [*anisos*; G. *gamos*, marriage]. The conjugation of gametes having unequal size but the same general morphology. See *isogamous*. —anisogamous, *adj.*

an"i sog'na·thous [*anisos*; G. *gnathos*, jaw]. Having jaws which do not match, one being considerably wider than the other, especially in the molar region.

an"i so·gyn"-e·co·mas'ti a. See under *gynecomastia*.

an'i·sole. $C_6H_5.O.CH_3$. Methyl phenyl ether: a colorless, ethereal-smelling liquid used in perfume, in the manufacture of chemicals, and for destruction of vermin.

an i"so·me'li a [*anisos*; G. *melos*, limb]. An inequality between corresponding limbs. —*anisomelous*, *adj.*

an i"so me ri [*anisos*; G. *meros*, part]. Irregularity between the successive segments of organs or parts. —anisomer ic, *adj.*

an i"so me-tro pi-a [*anisos*; G. *metron*, a measure; *ōps*, eye]. A difference in the refraction of the two eyes. —anisometrop'ic, *adj.*; anisomet rope *n.*

a nis"o·my'cin. An antibiotic substance isolated from cultures of two different species of *Streptomyces*, active, in vitro, against *Trichomonas vaginalis* and *Endamoeba histolytica*. See *flagecidin*.

an"i-so pi a [*anisos*; *ōps*]. See *anisometropia*.

an"i so-sphyg'mi a [*anisos*; G *sphygmos*, pulse]. Inequality of the pulses in symmetrical vessels, as the two radial or dorsalis pedis arteries.

an"i-sos then'ic [*anisos*; G *sthenos*, strength] Not of equal power said of pairs of muscles.

an i"so-ton'ic [*anisos*; G *tonos*, tension]. Denoting unequal osmotic pressure.

an"i-sot ro-py [*anisos*; G *tropē*, turning]. 1 The quality of being doubly refractive or unequally refractive in different directions or of bei g unequally responsive to external influences. 2. *I biology* variation in irritability in different parts or organs. 3. I an ovum, possession of predetermined axis or axes. —**anisotrop'ic**, *adj*

a ni'sum. See *anise*.

an"i su'ri a [*anisos*; G *ouron*, urine]. A condition characterized by alternate polyuria and oliguria.

a"ni trog' nous (ay"nigh-trodj'i us, -nigh an sys) [G *a-* not; *nitron*, sodium bicarbonate *gennethai*, from *gignesthai*, to be produced]. Nonnitrogenous.

An kis'tro-don. See *Agkistrodon*.

an'kle [AS. *ancle*]. The joint between the leg and the foot. It is ginglymus joint, with four ligaments anterior posterior medial, d lateral See Table of Joints and Ligaments in the Appendix.

a. mortise. Th space in the ankle joint, between the lateral and medial malleoli, occupied by the talus.

tailor' a. A ganglion or abnormal bursa over the l teral malleolus in tailors, due to pressure from sitting on the floor with crossed legs.

an'ky lo- (ang'ki lo-) **n'kyl-** [G *agkylos*, crooked]. A combining form denoting *crooked* or *crookedness*, *bent*; *adhesion* or *growing together of parts*.

an"ky-lo-bleph a ron [*agkylos*; G *blepharon*, eyelid] The adhesion of the ciliary edges of the eyelids to each other

an"ky lo-chei'li a an"ky-l -chi'li a (ang"ki lo-kigh'lee-uh) [*agkylos*; G *cheilos*, lip] Adhesion of the lips to each other

an"ky lo-col'pos, an"ky-lo-kol'pos [*agkylos*; G *kolpos*, vagina]. Atresia of the vagina or the vulva

an"ky lo-dac-tyl'i a [*agkylos*; G *daktylos*, finger]. A deformity resulting from the adhesion of fingers or toes to one another

an"ky lo-don'ti a [*agkylos*; G *odous*, tooth] Fusion of the dental roots. See *concrescence*.

an"ky lo-glos'si-a [*agkylos*; G *glōssa*, tongue]. Tongue-tie.

an"ky lo-kol'pos. See *ankylocolpos*.

an'ky losed (ang'kil ohzd, ohst) [G *agkylōsis*, stiffening of joints]. Stiff; firmly united; bound down with adhesions; designating joint immobilized by some pathologic or operative process within or outside the capsule —**ankylose** *v.t.*, *v.i*

an"ky lo sis [*agkylōsis*]. Stiffness or fixation of joint. —**an'kylose**, *v t* **an'kylosed**, *adj*

bony a. Complete fixation of joint due to fusion of the bones. Also called *true a*.

capsular a. That due to cicatricial thickening or shortening of the joint capsule.

congenital fibrous a. Fibrosis affecting many of the joints due to variety of causes manifested as clubfoot, extension of knees and ankles.

extracapsular a. That due to rigidity of the parts external to the joint such as interference resulting from bony block, adhesions of tendons and tendon sheaths, contractures due to muscles, scars, or thickening of skin from scleroderma. Also called *false a.*, *spurious a*.

fibrous a. Th t due to fibrosis in the joint capsule or fibrous adhesions between the joint surfaces.

intracapsular a. That due to rigidity of structures within the joints.

ligamentous a. See fibrous *a*.

operative a. Arthrodesis.

partial a. That producing limitation of joint motion but not complete fixation.

teeth a. Fixation of the joint formed by tooth and the alveolus. See *synostosis*, *concrescence*.

an"ky los"to mi'a-sis. See *ancylostomiasis*.

An"ky los'to-ma [G *agkylos*, crooked; *stoma*, mouth]. Old term for genus of nematode worms

A. americanum. See *Necator americanus*.

A. duodenale. See *Ancylostoma duodenale*.

an"ky lo-tome (ang'kil-o-tome, ang-kil'o-) [*agkylos*, *tomos*, cutting]. 1 A knif for operating on tongue tie. 2. Any curved knife.

an"ky lot' omy [*agkylos*; G *tomē*, cutting]. An operation for the relief of tongue-tie.

an'la-ge (ahn'lah-guh) [Ger arrangement]. 1 A rudiment the indifferent embryonic cells or tissue from which an organ or part develops. Syn., *primordium*, *blastema*. 2. *In genetics*, the hereditary predisposition for given trait (such as talent or disorder) or even for th entire genotype of an individual.

mbryonal a. The germ or embryonic disk.

vesicourethral a. That part of the urogenital tube, cephalad to the opening of the mesonephric ducts, which forms the urinary bladder and primary urethra. Syn *vesicourethral canal*.

An-nam' ul'cer See tropical ulcer

an nat'to (ah-nah'to nat o) **n nat'ta** [Galibi *annoto*, name of the tree] A coloring matter obtained from the pulp surrounding the seeds of the *Bixa orellana*, used to color plasters and butter

n neal' [AS. *anaelan*, from *an*, on *aelan*, to kindle]. Temper apply regulated process of heating and subsequent cooling to glass or metal to render it less brittle.

an-nec tent, an-nec'tant [L. *adnectere*, to bind to]. Linking, joining, or binding together as annectent convolutions.

An nel' da [L. *anellus*, little ring]. A phylum of segmented worms including the earthworms and many other worms. —**an nelid**, *n.*, *adj*

an ne-lism [*anellus*]. The state of being ringed; ringed structure.

an-nat'to. See *annatto*.

An"nu la'ta [L. *annulatus*, ringed] Old name for the phylum Annelida.

an nu late [L. *anulus*, ring]. 1 Characterized by made up of, or surrounded by rings. 2. Pertaining to the Annelida.

an nu late. One of the Annelid

an' nu lose [*anulus*]. Possessing rings.

an"nu lo-spi'ral [*anulus*; L *spira*, coil, twist]. Afferent nerve endings, with bandlike branches winding around th muscle fiber found in muscle spindles.

an'nu lus (pl. *annuli*) [*anulus*] A ring of tissue bout an opening —**an nular** **annulate** *adj*.

a. cruralis. See femoral *ring*.

a. femoralis. See femoral *ring*

a. fibrocartilagineus membranae tympani [BNA] Margin of the tympanic membrane fixed in the tympanic sulcus.

a. fibrosus. ( ) External part of an intervertebral disk Also called *a. fibrosus fibrocartilaginis intervertebralis* [BNA]. (b) Firm connective tissue containing elastic fibers surrounding the atrioventricular (*a fibrosus atrioventricularis*) ortic, and pulmonary openings of the heart ( ) Circular fibrous ttachment of the tympa ic membrane to the tympanic sulcus Syn *a. fibrocartilagineus membranae tympani* [BNA] (d) F brous loop holding tendon in place

a. inguinalis abdominalis. See abdominal inguinal *ring*

a. inguinalis subcutaneus (externus). BNA term for subcutaneous inguinal ring.
a. iridis major. BNA term for the *greater ring of the iris.* See under ring.
a. iridis minor. BNA term for the *lesser ring of the iris.* See under ring.
a. migrans. Disease of the tongue marked by red patches with yellow borders which spread over its dorsal surface and sometimes over its margins and under surface.
a. ovalis. Rounded or oval margin of the foramen ovale of the heart. Syn., *limbus fossae ovalis* [BNA].
a. tendineus communis [BNA]. Fibrous ring from which arise the four rectus muscles of the eye. It is attached to the dural sheath of the optic nerve and to the upper and medial margins of the optic foramen; it bridges the superior orbital fissure. Also called *ligament of Zinn, tendon of Zinn.*
a. tympanicus. BNA term for tympanic ring.
a. urethralis. BNA term for the urethral ring.
an'o- [G. *anō*, up, upper, upward]. A combining form meaning up, upper, upward.
a'no- [L. *anus*, anus]. A combining form signifying anus or anal.
AnOC Anodal opening contraction.
an"o-chro-ma'si-a (an"o-kro-may'zhuh, -see-uh) [G. *anō*, up; *chrōma*, color]. 1. Concentration of hemoglobin about the periphery of the red cells with the centers pale, a condition noted in certain types of anemia. 2. Absence of the usual staining reaction in a cell or tissue; achromasia.
a-no"ci-as-so"ci-a'tion, a-no"ci-a'tion [G. *a-*, not; L. *nocere*, to injure; *associare*, to join to]. An anesthetic procedure whereby surgical shock, fear and postoperative neuroses are minimized greatly by excluding most of the painful and harmful stimuli. Syn., *anocithesia.*
a-no"ci-cep'tor. See nociperceptor.
a-no"ci-the'si-a (a-no"si-thee'zhuh, -zee-uh) [a-; *nocere*; G. *aisthēsis*, feeling]. Anociassociation.
a"no-coc-cyg'e-al (ay"no-cock-sidj'ee-ul, an"o-) [L. *anus*, anus; G. *kokkyx*, coccyx]. Pertaining to the anus and the coccyx.
an"o-dal clo'sure. The closure of an electric circuit with the anode placed in relation to the muscle or nerve which is to be affected. Abbreviated AC.
an-o'dal con-trac'tion. See under contraction.
an-o'dal o'pen-ing. The opening of an electric circuit at the anode, as in stimulating a nerve or muscle. Abbreviated AO.
an'ode [G. *anō*, up; *hodos*, way]. The positive pole of a galvanic battery or other electric device. Abbreviated, a., An. —**ano'dal,** *adj.*
an'ode block. An increase of the positive charge on the outside of a nerve membrane, which diminishes depolarization of the nerve membrane and blocks nerve impulse conduction.
an'ode ex-ci-ta'tion. Excitation of the nerve at the anode when the anode block is removed.
an"o-der'mous [G. *a-*, not; *derma*, skin]. Without the appearance of an epidermis.
a-nod'ic ox"i-da'tion. See under oxidation.
an-o'dmi-a [a-; G. *odmē*, smell]. Anosmia.
an"o-don'ti-a [a-; G. *odous*, tooth]. Absence of the teeth.
a. vera. That due to failure of development of the tooth buds.
senile a. Absence of the teeth because of their removal, in older persons.
an"o-don'tous, an'o-dous [a-; *odous*]. Toothless.
an'o-dyne [a-; *odynē*, pain]. A medicine that eases pain. —**an'o-dyne,** *adj.*
an o-dyn'i-a (an"o-din'ee-uh, -dye'nee-uh) [a-; *odynē*]. Absence of pain. —**anod'ynous,** *adj.*

an"o-e'si-a (an"o-ee'zhuh, -zee-uh) [G., want of sense]. Want of understanding; idiocy.
an-oes'trum. See anestrum.
an"o-et'ic [G. *anoētos*, want of sense]. 1. Not entirely conscious; pertaining to the fringe of consciousness. 2. Affected with, or of the nature of, anoesia.
a-noi'a [G., want of understanding]. Idiocy; anoesia.
a-nom"a-lo-scope [G. *anōmalos*, irregular; *skopein*, to examine]. Instrument used for the detection of color blindness.
a-nom'a-ly [G. *anōmalia*, irregularity]. Any deviation from the usual; any organ or part existing in an abnormal form, structure, or location. For representative anomalies, see Table in the Appendix. See Plate 25. —**anomalous,** *adj.*
Pelger's a. See Karel *Pelger.*
a-no'mi-a [G. *a-*, not; *onoma*, name]. Loss of ability to name objects or to recognize names, usually associated with hemianopsia. Also called *optic aphasia.*
an-o'mous [a-; G. *ōmos*, the shoulder]. Without shoulders.
an"o-nych'i-a (an"o-nick'ee-uh) [a-; G. *onyx*, nail]. Absence of the nails.
a-non'y-ma [a-; G. *onyma*, name]. The innominate artery.
an"o-op'si-a [G. *anō*, upward; *opsis*, vision]. Strabismus in which the eye is turned upward.
a"no-per"i-ne'al [L. *anus*, anus; G. *perineos*, space between the anus and scrotum]. Relating to the anus and the perineum.
A-noph'e-les (-nof'i-leez) [G. *anōphelēs*, harmful]. A genus of mosquitoes belonging to the family Culicidae. They alone transmit malaria and are important vectors of dengue and filariasis and may transmit yellow fever.
A. albimanus. A species of mosquito native to tropical America, characterized by white hind feet; a common malarial vector.
A. argyritarsis. A South American vector of malaria.
A. crucians. A species carrying the malaria parasite; infrequently molests man.
A. culicifacies. A species common to Arabia, India, and Siam. The most important vector of malaria in India.
A. darlingi. A species from Brazil and British Guiana. A domestic species, it is highly anthropophilous.
A. gambiae. A South African and Brazilian species which transmits a very virulent type of malaria.
A. hyrcanus. A species found from South Europe to China and Japan. Important transmitter of malaria and filariasis.
A. maculipennis. The type species of this genus, found throughout Europe and many other parts of the world; it is an active vector of malaria.
A. quadrimaculatus. A species which serves as the chief vector of human malaria in the United States.
an o-phel'i-cide [*anophele*; L. *caedere*, to kill]. An agent which is destructive to anopheles mosquitoes.
an o-phel'i-fuge [*anophele*; L. *fugare*, to put to flight]. An agent which prevents the bite or attack of anopheles mosquitoes.
A noph"e-li'ni (a-nof"i-lye'nigh) [*anophele*]. A tribe of the subfamily Culicinae of mosquitoes, including three genera, of which *Anopheles* is important as a vector of malaria.
an"o-pho'ri-a [G. *anō*, upward; *phoros*, to bear]. Anotropia.

an″oph thal′mi-a [G. *a-*, not; *ophthalmos*, eye]. Anophthalmos.

an oph thal′mos [*a-*; *ophthalmos*]. 1. Congenital absence of the eyes. 2. A person born without eyes.

an o pi a [*a-*; G. *ōps*, eye]. 1. Absence of sight, especially that due to defect of the eyes. 2. Anopsia.

a no-plas ty [L. *anus*, anus; G. *plassein*, to form]. Plastic surgery or repair of the anus or anal canal.

An″o-plu ra [NL., from G. *anoplos*, unarmed]. An order of the Insecta; parasitic, sucking insects without wings; lice.

an-op si [G. *a-*, not; *opsis*, sight]. 1. Failure to use visual capacity. 2. Upward strabismus. anoopsia.

an-or′chism (an-or′kiz um, an or-), **an-or′chi-a** (an-or′kee-uh), **an-or′chid-ism** (an or′ki-diz-um) [*a-*; G. *orchis*, testis]. Absence of the testes. —**anorchous**, *adj*

an-or′chus (an-or′kus) [*a-*; *orchis*]. A person showing congenital absence of the testes.

a″no-rec′tal [L. *anus*, anus; *rectus*, straight]. Pertaining to the anus and the rectum. —**anorec′tum**, *n.*

a″no rec″to plas′ty. Surgical repair or reconstruction of the anus and rectum.

an″o-rex′i a [G. *a-*, not; *orexis*, appetite]. Absence of appetite. —**anorec tic, anorec′tous**, *adj*

a. nervosa. A hysterical aversion to food, which may lead to serious malnutrition.

f lse a. A condition found in hysteria, in which the patient apparently eats nothing, but consumes large quantities of food in secret

an or gas′my (an or-gaz′mee) [*a-*; G. *orgasmos*, swelling]. A condition, usually psychic, in which there is failure to reach climax during coitus.

an″or thog′ra phy [*a-*; G. *orthos*, straight; *graphein*, to write]. Incapacity to write correctly; motor agraphia.

an″or-tho pi-a [*a-*; *orthos*; G. *ōps*, eye]. 1. A defect in vision in which straight lines do not seem straight, and parallelism or symmetry is not properly perceived. 2. Squinting; obliquity of vision. See *strabismus*.

an″or tho sis [*a-*; G. *orthōsis*, making straight]. Absence or defect of erectility. *Obs.*

a no-scope [L. *anus*, anus; G. *skopein*, to examine]. Instrument for examining the rectum and anal canal. —**anos′copy**, *n.*

an-os′mi (an oz′mee-uh, an-os mee-uh) [G. *a-*, not; *osmē*, smell]. Absence of the sense of smell. In type, it is *afferent* when due to the loss of conductivity of the olfactory nerves; *central*, if due to cerebral disease; *organic*, if due to disease of the nasal olfactory membrane; *peripheral*, if due to disease of the peripheral ends of the olfactory nerves. —**anosmic, anosmat′ic**, *adj*

an-o sog no si-a (an-o sog-no shuh, -see-uh, -zhuh, -zee-uh) [*a-*; G. *nosos*, disease; *gnōsis*, knowledge]. Inability on the part of the patient to recognize that he is hemiplegic.

a″no-spi′nal [L. *anus*, anus; *spina*, spine]. Relating to the anus and the spinal cord.

an os te o sis [G. *a-*, not; *osteon*, bone; *-ōsis*, condition]. Defective development of bone.

an-o′ti-a (an-o shuh, -shee-uh) [*a-*; G. *ous*, ear]. Congenital absence of the pinnae or external ears. See *anotus*.

an o-tro pi-a [G. *anō*, upward; *tropos*, to turn]. The tendency of one eye to latent upward deviation. Syn., *anophoria*.

an-o′tus [G. *a-*, not; *ous*, ear]. A person showing congenital absence of the ears. —**anotous**, *adj*

a no ves′i cal [L. *anus*, anus; *vesica*, the bladder]. Pertaining conjointly to the anus and urinary bladder

an-ov′u lar (an-ov yoo-lur), **an-o vu la to ry** (an-ov′yoo-) [G. *a-*, not; L. *ovum*, egg]. Not associated with ovulation, applied to menstruation. See *anovular menstruation*.

an ox e′mi a [*a-*; G. *oxys*, sharp; *haima*, blood]. A lack of oxygen in the blood from insufficient aeration due to high elevation, low partial pressure of oxygen in anesthesia, cardiac failure, or strangling.

an-ox′i-a [*a-*; *oxys*]. 1. Absence of oxygen, a condition incompatible with many forms of life. 2. Failure of tissue either to receive or to utilize an adequate amount of oxygen; former term now more properly *hypoxia*, and classified into anemic, anoxic, stagnant, and histotoxic needs. 3. The disturbance of bodily and mental functions resulting from hypoxia. —**anox′ic**, *adj.*

an sa (pl. *ansae*) [L., handle]. A loop.

a. hypoglossi A loop formed at the side of the neck by the junction of the descendens hypoglossi and descendens cervicis nerves.

a. lenticularis. A bundle of efferent fibers from the globus pallidus, passing around the medial border of the internal capsule to join the fasciculus lenticularis. Syn., *a. lentiformis*, *lenticular loop*.

a. lentiformis. See *a. lenticularis*.

a. peduncularis. Fibers from the medial and basal surface of the thalamus passing below the lenticular nucleus and radiating to the cortex of the temporal lobe and insula.

a. sacralis. One joining the coccygeal ganglion with the sympathetic trunks of the two sides.

a. subclavia. A loop, between the inferior and middle cervical ganglions of the sympathetic chain, passing around the subclavian artery. Also called *a. of Vieussens*.

a. vitellina. See vitelline *a.*

cervical a. One of the intercommunicating branches between the anterior rami of the first four cervical nerves.

supramaxillary a. One of the communications between the anterior and posterior superior alveolar nerves.

vitelline a. Yolk-sac vein uniting with the umbilical vein in young embryos. Syn., *a. vitellina*.

ansadol. A trade-mark for salicylanilide, the substance being supplied in ointment form for use as fungicide.

an sae (an see). Plural of *ansa*.

an′sate [L. *ansatus*, from *ansa*, handle]. Having handle; handle-shaped; loop-shaped, ansiform.

an ser ine [L. *anser*, goose] (an′sur-yne, -in). Pertaining to or like a goose.

an ser ine. (an sur-een, -in) $C_{10}H_{16}N_4O_3$. N-methylcarnosine, a dipeptide found in muscles of birds, reptiles, and fishes.

an′si form [L. *ansa*, handle; *forma*, shape]. Loop-shaped; ansate.

ansolysen. Trade-mark for pentamethylene-1:5-bis-(1-methylpyrrolidinium bitartrate), known also by the generic name *pentolinium bitartrate*, a ganglionic blocking agent used in the management of hypertension.

ant-. See *anti-*.

antabuse. Trade-mark for tetraethylthiuram disulfide, used in the treatment of alcoholism.

ant ac′id [G. *anti*, against; L. *acidus*, sour]. A substance which neutralizes acids or relieves acidity.

an tag′o-nism [G. *antagōnizesthai*, to struggle against]. Opposition; the mutually opposing or resisting action seen between organisms (antibiosis), muscles, functions, diseases, and drugs; or between drugs and functions; or drugs and diseases. —**antagonis′tic**, *adj*

bacterial a. The adverse effect produced by one species of microorganism upon the growth and

development of another, as the action of actinomycosis on many Gram-positive organisms.

an·tag'o·nist [G. *antagonistēs*, from *anti*, against, *agōn*, struggle]. 1. A drug that neutralizes the effects of another. 2. *In anatomy*, a muscle that acts in opposition to another. 3. *In dentistry*, a tooth that meets one in the opposing dental arch during occlusion or mastication.

associated a. One of two muscles or groups of muscles which pull in almost opposite directions. When they contract simultaneously, the affected part moves in a path between their divergent lines of action.

ant·al'ka·line [*anti*; Ar. *al-qili*, ashes of saltwort]. An agent which neutralizes alkalies. —**ant·al'ka·line**, *adj.*

ant"aph·ro·dis'i·ac (ant"af-ro-diz'ee-ack) [*anti*; G. *aphrodisiakos*, sexual]. An agent that lessens sexual desire; an anaphrodisiac. —**antaphrodisi'ac**, *adj.*

an·taz'o·line hy"dro·chlo'ride. Generic name for the hydrochloride salt of the antihistaminic substance 2-(N-benzylanilinomethyl)-2-imidazoline hydrochloride, preparations of which are supplied under the trade-marked name antistine hydrochloride.

an'te- [L., before]. A prefix denoting *before*, *preceding*, *in front of*, *prior to*, *anterior to*.

an"te·au'ral [*ante*; L. *auris*, ear]. In front of the ear.

an"te·bra·chi'um. See antibrachium.

an'te ci'bum [L.]. Before meals. Abbreviated, a.c.; used in prescriptions.

an"te·cu'bi·tal [*ante*; L. *cubitum*, elbow]. Situated in front of the elbow.

an"te·cur'va·ture [*ante*; L. *curvare*, to bend]. A forward curvature.

an"te·flex'ion [*ante*; L. *flectere*, to bend]. A bending forward.

a. of the uterus. A condition in which the fundus of the uterus is bent excessively forward on the cervix.

an"te·hy·poph'y·sis (an"tee-high-pof'i-sis, -hi-pof'i-sis) [*ante*; G. *hypophysis*, attachment underneath]. The anterior lobe of the pituitary as differentiated from its posterior portion.

an'te mor'tem [L.]. Before death. —**ante-mortem**, *adj.*

an"te·na'ri·al [*ante*; L. *naris*, the nostril]. Situated in front of the nostrils.

an"te·na'tal [*ante*; L. *natus*, born]. Occurring or existing before birth; prenatal.

an'te par'tum [L.]. Before delivery. —**ante-partum**, *adj.*

antergan. Trade-mark for the antihistaminic substance N-benzyl-N',N'-dimethyl-N-phenylethylenediamine, commonly employed in the form of the hydrochloride salt.

an·te'ri·or [L., foremost, former]. Situated before or in front of; toward the ventral aspect of the body; noting the forward part of an organ. Abbreviated, a. —**anterior**, **anteriorly**, *adv.*

an'ter·o-, anter- [*anterior*]. A combining form meaning *anterior*, *front*, *from front to*.

an"ter·o·dor'sal [*anterior*; L. *dorsum*, back]. *In embryology*, pertaining to the dorsal aspect of the head region.

an"ter·o·ex·ter'nal [*anterior*; L. *externus*, outward]. Situated in front to the outer side.

an"ter·o·grade" [*anterior*; L. *gradi*, to go]. Proceeding forward.

an"ter·o·in·fe'ri·or [*anterior*; L. *inferior*, lower]. Situated in front and below.

an"ter·o·in·te'ri·or [*anterior*; L. *interior*, inner]. Located ventrally and internally.

an"ter·o·in·ter'nal [*anterior*; L. *internus*, inward]. Situated in front to the inner side.

an"ter·o·lat'er·al [*anterior*; L. *latus*, side]. In front and to one side; from the front to one side.

an"ter·o·me'di·an [*anterior*; L. *medius*, middle]. In front and toward the middle.

anteron. A proprietary gonadotropic extract from pregnant mares' serum.

an"ter·o·pa·ri'e·tal [*anterior*; L. *paries*, wall]. Forward and parietal, as the anteroparietal area of the cranium.

an"ter·o·pi·tu'i·tar·y [*anterior*; L. *pituita*, phlegm]. Referring to the anterior lobe of the pituitary gland.

an"ter·o·pos·te'ri·or [*anterior*; L. *posterior*, backward]. Extending from before backward; relating to both front and back.

an"ter·o·su·pe'ri·or [*anterior*; L. *superior*, upper]. Situated in front and above.

an"te·ver'sion [L. *ante*, before; *vertere*, to turn]. A tipping, tilting, or displacement forward of an organ or part, especially of the uterus. —**antevert'ed**, *adj.*; **antevert'**, *v.t.*, *v.i.*

anthallan. Trade-mark for the antihistaminic substance 3-dibutylaminomethyl-4,5,6-trihydroxy-1-isobenzofuranone.

ant·he'lix, an"ti·he'lix [*anti*; *helix*, coil]. The curved ridge of the pinna just anterior to the helix and following through most of the course of the helix.

ant·hel·min'tic, an·thel·min'tic [G. *anti*, against; *helmins*, worm]. A remedy for the destruction or elimination of intestinal worms. —**ant"helmin'tic, an"thelmin'tic**, *adj.*

an'thel·one. The principle or principles extractable from the mucosa of the small intestine (*enteroanthelone*) and from urine (*uroanthelone*) which exerts an anti-ulcer effect in Mann-Williamson dogs and has been used in the treatment of human peptic ulcer patients.

an·the'ma, an'the·ma (pl. *anthemata*) [G., from *anthein*, to bloom]. 1. An exanthema. 2. An elementary lesion of the skin.

an'the·mis [G., camomile]. English or Roman camomile. The flower heads of *Anthemis nobilis*, the properties of which are due to a volatile oil, anthemic acid, and a bitter principle. It has been used in coughs and spasmodic infantile complaints, and as a stomachic tonic. Dose, 2–4 Gm. (30–60 gr.)

ant"hem·or·rhag'ic (ant"hem-o-radj'ick) [G. *anti*, against; *haima*, blood; *rhēgnynai*, to burst]. Checking or preventing hemorrhage.

an'ther [G. *anthēros*, flowery, blooming]. *In biology*, that part of the stamen which contains pollen.

anthiomaline. Trade-mark for antimony lithium thiomalate, approximately $Li_6C_{12}H_9O_{12}S_3Sb$·$9H_2O$, used for the treatment of filariasis, trypanosomiasis, lymphogranuloma, and schistosomiasis.

anthisan. A trade-mark for the antihistaminic substance pyrilamine maleate.

an'tho-, anth- [G. *anthos*, flower]. A combining form meaning *flower*, *floral*, *flowerlike*.

an"tho·cy·an'i·din. See anthocyanin.

an"tho·cy'a·nin. Any of a class of glycosides comprising the soluble coloring matter of blue, red, and violet flowers, and the reds and purples of autumn leaves. See anthophyll.

An"tho·my'ia [*antho*; G. *myia*, fly]. A genus of flies which, depositing their ova on food, especially on vegetable material, cause intestinal myiasis.

Anthony's method. See under *stain*.

an"tho·pho'bi·a [*antho*; G. *phobos*, fear]. A morbid fear of flowers.

an'thra-, anthr- [G. *anthrax*, coal]. A combining form denoting the presence of the anthracene nucleus.

an"thra ce'mi a an"thra-ce-mi-a [*anthrax*; G. *haima*, blood]. A disease due to the presence in the blood of *Bacillus anthracis*; woolsorter disease; anthrax; splenic fever of animals.

an thra-cene. $C_{14}H_{10}$. A colorless, solid hydrocarbon obtained by distillation from coal tar and other carbon compounds.

a. blue. See *alizarin blue*.

an'thra-co- anthrac- [*anthrax*]. A combining form meaning *coal* or *carbuncle*.

an'thra coid [*anthrax*; G. *eidos*, form]. Resembling carbon, anthrax, or the carbuncle (gem).

an"thra co-ne-cro sis [*anthrax*; G. *nekrōsis*, death]. Necrosis occurring in foci of anthracosis. *Obs.*

an"thra-co-sil"i-co sis [*anthrax*; L. *silex*, flint; G. *-osis*, condition]. Diffuse fibrosis of the lungs accompanied by black pigmentation, caused by the prolonged inhalation of dusts containing silicon dioxide and carbon; form of pneumonoconiosis. Syn., *coal miner' disease*, *miner' phthisis*, *miner' asthma*.

an"thra co sis [*anthrax*; *-osis*]. Black pigmentation of the lungs associated with mild degree of chronic inflammation; due to the inhalation of carbon dust. A form of pneumonoconiosis. —**anthracot'ic**, *adj*

an"thra gal'lol (an thrah gal ol -ol, -awl). $C_{14}H_8O_5$. A reaction product of benzoic, gallic, and sulfuric acids. It occurs as a dark-brown paste or orange-red acicular crystals, soluble in alcohol used in dyeing. Syn., *trihydroxyanthraquinone*.

an"thra glu co rhe in. A glycoside found in rhubarb; used as a cathartic.

an'thra-lin. $C_{14}H_{10}O_3$; 1,8-dihydroxyanthranol, a crystalline, yellowish-brown powder insoluble in water. It is used externally for treatment of various skin diseases. Syn., *dithranol*. See *cignolin*.

an"thra nil'ic ac'id. $NH_2C_6H_4COOH$. *o*-aminobenzoic acid, first obtained from indigo, but synthesized in other ways; it is an important intermediate in many syntheses.

an'thra-nol. $C_{14}H_{10}O$. 9-hydroxyanthracene, derivatives of which are used medicinally. See *anthralin*, *anthrarobin*.

an"thra pur'pu rin. 1,2,8-Trihydroxyanthraquinone. Orange-colored needles used in the manufacture of dyes. See *purpurin*.

a. acetate. A fine, yellow tasteless powder sparingly soluble in alcohol insoluble in water used as purgative and laxative (it colors the urine red). Dose, 0.5 Gm. (7½ gr.). Also called *a. diacetate*, *purgatin*, *purgatol*.

an"thra-qui none (an thrah kwi-nohn kwin ohn). $C_{14}H_8O_2$. A substance produced by oxidizing anthracene with HNO_3. Derivatives of it occur in aloe, cascara sagrada, rhubarb and senna and are responsible for the cathartic action.

an"thra ro'bin. 1,4-Dihydroxyanthranol. Yellowish brown crystals used externally in alcoholic solution or as an ointment in skin diseases.

anthrasol. A proprietary colorless, coal-tar preparation used in the form of an ointment for pruritus and other skin affections.

an'thrax [G.]. 1. A carbuncle. 2. An acute infectious disease of cattle and sheep, transmissible to man and caused by *Bacillus anthracis*. Syn., *charbon*, *woolsorter' disease*, *malignant pustule malignant e.*, *milzbrand*, *ragpicker disease*, *tanner' disease*. Also called *splenic fever*. See Plate 31

a. polypeptide. A base polypeptide of cellular origin isolated from fluids and tissues of species insusceptible to *Bacillus anthracis* and capable of killing this organism.

cerebral a. A complication of intestinal or pulmonary anthrax in which the organisms in ade the brain. This form is marked by raging and violent delirium.

contagious a. See *malignant a.*

hemorrhoidal a. A contagious type of anthrax affecting the rectum of animals and marked by dark bloody evacuations.

malignant a. Infectious and fatal disease of sheep and cattle marked by ulceration or hard edema at the point of inoculation, followed by symptoms of general sepsis, prostration, and collapse. Transmissible to man. See *anthrax*, 2.

pulmonary a. The form usually called woolsorter' disease, acquired by inhalation of contaminated dust, resulting in pulmonary gangrene with grave symptoms of systemic infection, coughing, dyspnea, and prostration.

symptomatic a. An infection of cattle and sheep characterized by subcutaneous, emphysematous swellings and nodules, due to infection by *Clostridium feseri*. Also called *emphysematous a.*

an'threne. $C_{14}H_{12}O$. 9,10-dihydro-9-oxoanthracene, occurring in needlelike crystals used in the determination of sugar in body fluids.

an"thro-pho'bi a. See *anthropophobia*.

an'thro-po- anthrop- [G. *anthrōpos*, human being]. A combining form meaning *human being*, *man*.

an"thro po-bi-ol'o-gy (an thro-po-bay ol'o-jee) [*anthrōpos*; G. *bios*, life *logos*, word]. The biologic study of man and the anthropoid apes.

an"thro po-gen e-sis, an"thro pog'e-ny (an thro-podj'i nee) [*anthrōpos*; G. *genesis*, production]. The evolution and development of man, as race (phylogenesis) and as an individual (ontogenesis) —**anthropogenet'ic, anthropogenet'ic**, *adj*

an'thro poid [*anthrōpos*; G. *eidos*, form]. Pertaining to or resembling the primates, i e., man, the apes, and the monkeys.

An"thro poi'de a [*anthrōpos*; *eidos*]. A suborder of Primates, including man, apes, and monkeys.

an"thro-pol'o-gy [*anthrōpos*; G. *logos* word]. The science of man, in all of its ramifications, both physical and cultural.

criminal a. The study of man in relation to the habitual criminal, utilizing all of the measurements and identification data of anthropology bertillonage. See A. *Bertillon*.

cultural a. The study of prehistoric and contemporary man in relation to his customs, technologies, his social, political and economic life, his religions, languages, folklores, and arts, and his adaptation to his own specific setting.

physical a. The study of prehistoric and contemporary man on purely biological basis, including his organic growth, development, and degeneration, inheritance of body traits, the influences of environment, and his physical types and racial differences.

an"thro pom e-ter [*anthrōpos*; G. *metron*, measure]. A somatometric caliper used in taking the larger measurements of the human body —**anthropomet'ric**, *a.*

an"thro-pom try [*anthrōpos*; *metron*]. The scientific measurement of the human body its various parts, and the skeleton. The metric data thus obtained are used extensively in serial and comparative studies and in systems of identification.

an"thro-po-mor'phic [*anthrōpos*; G. *morphē*, form]. Manlike; having human form.

an"thro-poph'a gy [*anthrōpos*; G. *phagein*, to eat]. 1. Cannibalism. 2. Sexual perversion leading to rape, mutilation, and cannibalism.

an"thro po-phil'ic [*anthrōpos*; G. *philein*, to love]. Showing preference for human beings over animals androphilous; man-loving.

an"thro-po-pho'bi-a [*anthrōpos*; G. *phobos*, fear]. Morbid fear of people or society.

an"thro-po-so-ma-tol'o-gy [*anthrōpos*; G. *sōma*, body; *logos*, word]. The science of the development, structure, and functions of the human body.

ant"hyp-not'ic [G. *anti*, against; *hypnos*, sleep]. An agent that tends to induce wakefulness or prevent sleep. —**ant"hyp-not'ic**, *adj.*

an'ti-, ant- [G.]. A prefix meaning *against*, *in return*, *opposed to*, *instead*, *counter*.

an"ti-ac'id. Antacid.

an"ti-ag-glu'ti-nin [*anti*; L. *agglutinare*, to glue]. A substance having the power of neutralizing the corresponding agglutinin.

an"ti-ag-gres'sin [*anti*; L. *aggressus*, from *aggredi*, to attack]. An antibody which neutralizes an aggressin or spreading agent produced by microorganisms.

an"ti-al"bu-mate, an"ti-al-bu-mi-nate. A product resulting from the incomplete digestion of albumin formed during gastric digestion. Syn., *parapeptone*.

an"ti-al-bu'mid, an"ti-al-bu'min (an-tee-al-bew-min, -al'bew-min) [*anti*; L. *album*, white]. A poorly defined product of partial digestion of albumin.

an"ti-...ler'in. See *anticomplement*.

an"ti-am"bo-cep-tor. See *antiantibody*.

an"ti-am'yl-ase (an-tee-am'i-lace, -laze). A substance which neutralizes the action of amylase.

an"ti-an"a-phy-lax'is [*anti*; G. *ana*, backward; *phylaxis*, watching, guarding]. A condition in which a sensitized animal (guinea pig) is refractory to anaphylaxis because of saturation or exhaustion of fixed antibodies, or because of an excess of free antibodies which prevents the antigen from making contact with the fixed antibodies.

an"ti-a-ne'mi-a prin-ci-ple. A substance counteracting or preventing anemia; usually the specific principle in liver used in treating pernicious anemia.

an"ti-a-ne'mic [*anti*; G. *a-*, not; *haima*, blood]. A substance which relieves anemia. See *antianemic factor*. —**an"ti-a-ne'mic**, *adj.*

an"ti-an"thrax pol"y-pep'tide. See *anthrax polypeptide*.

an"ti-an'ti-bod"y [*anti*; *anti*; AS. *bodig*]. An antibody to an antibody.

an"ti-ar"ach-nol'y-sin (an-tee-ar-ack-nol'i-sin) [*anti*; G. *arachnē*, spider; *lysis*, loosing]. An antivenin counteracting spider venom.

an"ti-a-rin (an-tee-ah-rin, an-tee-ah-rin, an-tee-ar-in) $C_{27}H_{42}O_{10}.2H_2O$. An alkaloid from the gum-resinous exudate known as upas antiar, obtained from the East Indian tree *Antiaris toxicaria* or deadly upas tree. It is a violent poison, causing vomiting, evacuation, irregular heart action, prostration, and death.

an"ti-a-ris. An arrow poison produced from the resinous exudate of the upas tree of the East Indies. Its action is similar to that of curare.

an"ti-ar-thrit'ic [*anti*; G. *arthron*, joint; *-itis*, inflammation]. Tending to relieve or cure arthritis. —**an"ti-ar-thrit'ic**, *n.*

an"ti-bac-te'ri-al [*anti*; G. *baktērion*, little staff]. Preventing the growth of bacteria or destroying bacteria by physical and chemical agents. —**an"ti-bac-te'ri-al**.

an"ti-bi-o'sis (an-ti-bye-o-sis) [*anti*; G. *bios*, life; *-sis*, condition]. An association between two or more organisms which is harmful to one of them; the opposite of symbiosis.

an"ti-bi-ot'ic (an"ti-bye-ot'ick) [*anti*; *bios*]. 1. Pertaining to antibiosis. 2. Tending to destroy life; designating the extracts of certain organisms, or their synthetic equivalents, employed against infections caused by other organisms—that most commonly used is penicillin.

an"ti-bi-ot'ic. An antibiotic substance.

broad-spectrum a. One effective against a variety of microorganisms.

an"ti-bi'o-tin. See *avidin*.

an"ti-black'out" suit. A flying suit in which the limbs may be compressed by inflating airtight chambers. This prevents the blackout ensuing from an undue amount of blood leaving the brain and entering the extremities during rapid deceleration in aerial flight.

an"ti-blas'tic [*anti*; G. *blastos*, germ]. Antagonistic to bacterial growth.

an'ti-bod"y [*anti*; AS. *bodig*]. One of a class of substances, natural or induced by exposure to an antigen, which have the capacity to react as agglutinins, lysins, precipitins, etc., with the specific or related antigens. In the serum, they are intimately associated with certain globulin fractions. Also see *antigen*. For specific antibodies (agglutinins) in blood, see under *blood group*.

anaphylactic a. The antibody concerned in anaphylaxis. Also called *anaphylactin*.

complete antibodies. *In hematology*, bivalent antibodies which usually occur early in the course of immunization. They are relatively thermolabile, are active in saline as well as plasma, and readily clump erythrocytes carrying the corresponding specific antigen. Also called *first-order antibodies* or *agglutinins*.

heterophile a. Antibody to the heterophile antigen. This antibody (agglutinin) found in the serum of patients with infectious mononucleosis, agglutinates sheep red cells often in high titers.

incomplete antibodies. *In hematology*, the forms in which antibodies of any specificity may occur. They tend to appear late in the course of immunization, are relatively thermostable and combine specifically (in saline) with the erythrocytes carrying the specific antigens but without clumping of these cells. In media containing plasma or albumin clumping occurs. Syn. *blocking*, *hyperimmune*, *albumin-acting*, *second-order* or *univalent antibodies*; *glutinins*, *agglutinoids*.

inhibiting a. A thermostable antibody sometimes produced in both allergic (atopic) and nonallergic individuals as a response to specific immunization which is believed to prevent the union of antigen (atopen, allergen) and reagin. Clinical tolerance in allergy following various desensitizing procedures may depend upon the titer of this antibody.

natural a. *In hematology*, an isoagglutinin.

sensitizing a. An anaphylactic antibody.

third-order a. Cryptagglutinoid.

an"ti-bra"chi-um (an-ti-bray'kee-um, -brack'ee-um) [BNA] [L. *anti*, opposed; *brachium*, arm]. The forearm. —**antibrachial**, *adj.*

an"ti-can"cer-o-gen [G. *anti*, against; *karkinos*, cancer; *gennathai*, from *gignesthai*, to be produced]. A substance or agent which opposes the action of carcinogens.

an"ti-car'i-ous (an-ti-kair'ee-us) [*anti*; L. *caries*, decay]. Inhibiting or preventing dental caries.

an"ti-cat'a-lyst, an"ti-cat'a-lys-er [*anti*; G. *katalysis*, to dissolve]. Any substance which retards the action of a catalyst by acting directly upon it.

an"ti-ca-thex'is [*anti*; G. *kathexis*, from *katechein*, to hold]. A condition in which an emotional charge is released from one impulse and shifted to an impulse of an opposite nature. Also called *countercathexis*.

an"ti-cath'ode, an"ti-kath'ode [*anti*; G. *kathodos*, descent]. The metal plate or target of a Crookes or x-ray tube. It is situated opposite the cathode

and is struck by the cathode rays, giving rise to the -rays.

an"ti-ceph a lin [*anti*, G *kephalē*, head]. An inhibitor in plasma of thromboplastin, obtained from the hemophiliac in form several times more active than normal.

an"ti-chei-rot'o-nus, an"ti-chi rot o nous (an ti-kigh rot o- nus) [G. *antichcir* thumb *tonos*, tension]. Forcible and steady inflexion of the thumb, seen at times in or before attacks of epilepsy

an'ti-chlor Sodium thiosulfate.

an"ti-chol in-er'gic. Pertaining to, designating, or caused by cholinergic blocking agent.

an"ti-cho"lin-es'ter-ase (an ti ko"lin-es tur-ace, -aze) A substance which inhibits the enzyme activity of cholinesterase. Eserine (physostigmine) is a powerful anticholinesterase.

an"ti-chro-mat'ic re-spon'ses. See under *response*.

an"ti co-ag'u lant [*anti*, L. *coagulare*, to cause a fluid to curdle]. Opposed to or preventive of coagulation. —**anticoag'ulant**, *n*.; **anticoag'ulative** *adj*

an"ti-col-la gen-ase' An antibody capable of neutralizing collagenase found in the commercial preparations of *Clostridium perfringens* antitoxin.

an"ti com'ple-ment [*anti*, L. *complementum*, complement]. A substance having the capacity to neutralize, inhibit, or destroy complement; antialexin. —**anticomplemen tary** *adj*

an"ti con cep'tive [*anti*, L. *concipere*, to conceive]. Contraceptive.

an"ti con cus'sion plug. A device fitted into the external auditory meatus and worn in battle during artillery fire to protect the ears from injury

an"ti-con vul'sive [*anti*, L. *convulsus*, from *convellere*, to shake]. An agent which arrests or prevents convulsions. —**anticonvul'sive**, *adj*.

an"ti cus [L. in front]. Anterior in front of. *O.T*

an"ti-cu'tin. Any substance capable of specifically inhibiting or reducing the capacity of an excitant to produce reaction in th sensitive skin, or of specifically inhibiting or reducing the capacity of the skin to react to an excitant.

an"ti di" bet'ic [G *anti*, against; *diabētēs*, siphon]. Efficient against diabetes, as the antidiabetic hormone, insulin. —**antidiabet'ic**, *n*.

an"ti-di"ar-rhe i [*anti*, G. *diarrhein*, to flow through] Preventing or overcoming diarrhea.

an"ti di u-ret'ic [*anti*, G. *diourētikos*, from *diourein*, to pass urine]. Opposing or preventing excretion of urine. —**antidiure sis**, *n*., **antidiuret'ic**, *n*.

an'ti-dote [G *antidoton*, from *anti*; *didonai*, to give]. Any agent administered to prevent or counteract the action of poison. —**an'tidotal**, *adj*

chemical a. One that changes the chemical nature of the poison so that it becomes an insoluble or harmless compound.

mechanical a. An agent which prevents absorption of the poison.

physiologic a. One that counteracts the physiologic ffects of poison.

an"ti drom'ic [*anti*, G. *dromos*, running]. Conducting nerve impulses in direction opposite to the normal, as when vasodilatation follows peripheral stimulation of an afferent nerve or dispatching impulses t the spinal cord via the anterior roots by experimental stimulation.

an"ti dys"en ter'ic [*anti*, G *dysenteria*, from *dys*-, difficult *enteron*, intestine]. A remedy for or preventive of dysentery —**antidysenter'ic**, *adj*.

an"ti-e met'ic [*anti*, G. *emetikos*, provoking sickness]. Relieving or preventing nausea and vomiting. —**antiemet'ic**, *n*.

an"ti-en zyme. 1 A substance of enzymatic nature which exerts specific inhibiting action upon another enzyme. 2. An immune body formed by the injection of an enzyme into an animal It acts as defense against the injected enzyme.

an"ti fe'brile (an ti fee'bril, -feb ril) [*anti*, L. *febris*, fever]. Relieving or reducing fever

antifebrin. A proprietary name for acetanilid.

an"ti fer'ment [*anti*, L. *fermentum*, leaven]. 1. An agent that prevents fermentation. 2. Any substance which counteracts an enzyme. Syn., *antienzyme*. —**antiferment'ative**, *adj*

an"ti fi"bri nol'y sin. The inhibitors of plasmin in serum or plasma; formerly antistreptokinase.

an"ti fi bro"ma to-gen'ic (figh bro muh-to jen ick) [*anti*, L. *fibra*, fiber G -*ōma*, tumor *genesthai*, from *gignesthai*, to be produced]. Acting to prevent the formation of fibromas.

an"ti-flash' gear Equipment worn by naval gun crews for protection against flash burns.

antiformin. Trade name for strongly alkaline solution of sodium hypochlorite used as disinfectant and as an aid in the recognition of tubercle bacilli in sputum. It liquefies the sputum and dissolves other bacteria.

antifungin. A brand of magnesium borate. A white powder slightly soluble in water used as preservative and gargle.

an"ti ga lac'tic [*anti*, G *gala*, milk]. A drug or agent that lessens the flow of milk. —**antigalactic**, *adj*

an'ti gen [*anti*, G *genesthai*, from *gignesthai*, to be produced]. 1 Any substance which stimulates the production of antibodies or reacts with them. A **complete antigen** performs both functions. An **incomplete antigen** (hapten, or partial antigen) is that part of an antigenic complex responsible for its specificity. Separate from the complex, it reacts with antibodies in vitro, but cannot stimulate their production. 2. A lipoid substance, incapable of eliciting antibodies, employed in syphilis tests; as **beef heart antigen**, that obtained from beef heart by alcoholic extraction. **Acetone-insoluble antigen** is that part of beef heart antigen insoluble in acetone; redissolved in alcohol and reinforced by the addition of cholesterol, it is known as **cholesterinized antigen**. Also see *antibody*. —**an ti gen'ic**, *adj*

a. A A group of red blood cell antigens (A_1, A_2, etc.) occurring in types A and AB blood.

a. B The red blood cell antigen occurring in types B and AB blood.

artificial a. ( ) A conjugated antigen prepared by compounding an incomplete antigen with protein, as an azoprotein. (b) An antigen, the specificity of which has been altered through physical or chemical treatment, as through denaturation, nitration, or oxidation.

Boivin a. A nondialyzable, toxic complex consisting of specific polysaccharide, fatty acids, phosphoric and acetic acid.

cat-scratch a. M terial from an infected lymph node or bubo of known case of cat-scratch disease, used in an intradermal skin test.

conjugated a. An antigen in which an acyl group or simple compound is attached to the protein.

diphasic antigens. Antigens such as those found in *Salmonella*, which exist in two phases—a specifi phase and group phase.

flagellar a. The antigenic component or components of flagella.

Forssman a. A heterophil antigen, found in the tissues of the guinea pig, cat, and horse, the red

cells of the sheep and man, the tissues and red cells of certain birds, and many species of bacteria, including *Diplococcus pneumoniae* and *Salmonella typhosa*, also in certain plant tissues. It is not found in other animals, such as the rabbit. Injection of emulsions of tissues containing this antigen into an animal not containing the antigen results in the formation of antibodies which are hemolytic for sheep red cells.

H a. A thermolabile, flagellar antigen which confers type specificity like the capsular polysaccharides.

heterogenetic a. See heterophil a.

heterophil a. One occurring in entirely unrelated species of animals and having similar or identical serologic properties. Also called *heterogenetic a.* Also see *Forssman a.*

Kveim a. Emulsified material from lymph node proved to be sarcoid, which, on injection into an individual with sarcoidosis, usually results in the formation of sarcoid tubercles; used in the Nickerson-Kveim *test*.

O a. The thermostable, somatic antigen of flagellated organisms.

pollen a. The antigenic protein or polypeptide extracted from pollen and used for diagnosis and specific pollen desensitization in hay fever.

Vi-antigen. A thermolabile antigen demonstrated in freshly isolated, virulent cultures of *Salmonella typhosa*.

an"ti-ge-nic'i-ty (an"ti-ji-nis'i-tee) [*anti*; *genesthai*]. The property of certain substances to produce antibodies.

an"ti-g' suit. A suit worn by an aviator to avoid the deleterious effects of rapid changes in velocity and direction of flight, consisting of rubber bladders which, when rapidly inflated, exert pressure over the abdomen and lower extremities, thus preventing venous pooling in those areas and lowering of arterial pressure in the head. Also called *g suit*.

an"ti-he'lix. See anthelix.

an"ti-he"mo-lyt'ic (an"ti-hee"mo-lit'ick, -hem"o-lit'ick) [*anti*; G. *haima*, blood; *lysis*, loosing]. 1. Relating to an antihemolysin. 2. Not capable of dissolving blood cells; preventing hemolysis.

an"ti-he"mo-phil'ic fac'tor. See under *factor*.

an"ti-hem"or-rhag'ic (-hem"o-radj'ick) [*anti*; *haima*; G. *rhēgnynai*, to burst forth]. 1. Checking hemorrhage. 2. Pertaining to vitamin K.

an"ti-hem"or-rhoi'dal [*anti*; G. *haimorrhois*, piles]. A drug or agent that prevents or relieves hemorrhoids. —antihemorrhoi'dal, *adj.*

an"ti-hi-drot'ic (-hi-drot'ick, -high-drot'ick) [*anti*; G. *hidrōs*, sweat]. Diminishing the secretion of sweat. —antihidrot'ic, *n.*

an"ti-his'ta-mine. A substance capable of preventing or diminishing several of the pharmacologic effects of histamine, by a mechanism other than the production of pharmacologic responses diametrically opposed to those produced by histamine. —antihistamin'ic, *adj.*

an"ti-hor'mone [*anti*; G. *hormainein*, to set in motion]. A substance in the blood of animals which antagonizes the action of certain pituitary hormones.

an"ti-hy"a-lu-ron'i-dase. An antienzyme which destroys hyaluronidase. Syn., *antinvasin I*.

an"ti-hy-drop'ic, ant"hy-drop'ic (-high-drop'ick) [*anti*; G. *hydrōpikos*, suffering from dropsy]. Relieving dropsical states or conditions. —antihydrop'ic, anthydrop'ic, *n.*

antihypo. $K_2C_2O_6·H_2O$. A trade name for potassium percarbonate.

an"ti-in-fec'tive [*anti*; L. *infectus*, from *inficere*, to infect]. A substance that counteracts infection. —antiinfec'tive, *adj.*

antikamnia. A proprietary preparation containing acetanilid, caffeine, and sodium bicarbonate; used as analgesic.

an"ti-kath'ode. See *anticathode*.

an"ti-ke"to-gen'e-sis [*anti*; Ger. *Keton*, from F. *acétone*, L. *acetum*, vinegar; G. *genesis*, production]. The diminution of acidosis by the oxidation of sugar and allied substances in the body. —antiketogenic, *adj.*; antike'togen, *n.*

an"ti-li'pase (an"ti-lye'pace, -lip'ace). A substance inhibiting or counteracting a lipase.

an"ti-lip-fa-no-gen. An agent in blood serum which opposes the formation of fat granules from lipfanogens.

an"ti-lu-et'ic [*anti*; L. *lues*, plague]. Efficacious against the *Treponema pallidum*. Syn., *antisyphilitic*.

an"ti-lu-et'ic. An agent used to treat syphilis. See *antisyphilitic*.

an"ti-lyt'ic [*anti*; G. *lysis*, loosing]. A term applied to the secretion arising in a control gland as a result of experimental denervation of the gland of the opposite side; used in contradistinction to paralytic, a term applied to secretion arising in the denervated gland. Syn., *antiparalytic*.

an"ti-ma-lar'i-al [*anti*; It. *mala aria*, bad air]. Preventing or suppressing malaria. —antimalar'ial, *n.*

an"ti-mel'lin. A glycoside from the bark of *Eugenia jambolana* or jambul.

an"ti-men-or-rhag'ic. A medication or method which will control profuse prolonged menstrual flow. —antimenorrhag'ic, *adj.*

an'ti-mer. Enantiomorph; enantiomer.

an'ti-mere [*anti*; G. *meros*, part]. 1. Any one of the segments of the body that are bounded by planes typically at right angles to the long axis of the body. 2. A segment exhibiting bilateral symmetry with respect to the longitudinal axis.

an"ti-me-tab'o-lite [*anti*; G. *metabolē*, change]. A substance having a molecular structure similar to but a pharmacologic effect antagonistic to an essential metabolite. The mechanism of antagonism is considered to be a competition between antimetabolite and metabolite for a specific protein in an organism.

an"ti-me-tro-pi-a [*anti*; G. *metron*, a measure; *ōps*, eye]. A condition characterized by opposing states of refraction in the two eyes, as the existence of myopia in one eye and of hypermetropia in the other.

antimonial powder. See *antimony powder*.

an"ti-mo'nic (an"ti-mo'nick, -mon'ick) [ML. *antimonium*]. Relating to compounds of pentavalent antimony. See *antimony pentoxide*.

an'ti-mo-nous, an"ti-mo'ni-ous [*antimonium*]. Denoting compounds of trivalent antimony.

an"ti-mo-nous acid. See *antimony trioxide*.

an'ti-mo"ny [*antimonium*] (*stibium*). Sb = 121.76. A metallic, crystalline element possessing a bluish white luster. Found native, as the sulfide, Sb_2S_3, and the oxide. It is a constituent of many minerals. Used commercially chiefly for making alloys where its property of expanding on solidification is of considerable value. Type metal, Britannia metal, and Babbitt antifriction metal are alloys of antimony. The actions of antimony compounds resemble those of arsenic, but they are less toxic. They produce nausea, emesis, enteritis, and nephritis. The nauseant action is used in expectorant and diaphoretic mixtures; they were formerly employed to produce circulatory depression in fever and for catharsis and emesis. Certain complex antimony compounds are valuable antiprotozoan

a. aniline tartrate. Colorless crystals, soluble in water and alcohol, containing 22% of antimony. Used in sleeping sickness. Dose, 15 mg. (¼ gr.) intravenously.
a. butter. Antimony chloride, $SbCl_3$.
a. chloride. $SbCl_3$, the so-called antimony butter; a strong caustic.
a. lithium thiomalate. See *anthiomaline*.
a. pentoxide. Sb_2O_5. Antimonic acid; combines with bases to form salts called antimoniates.
a. potassium tartrate. $2KSbOC_4H_4O_6.H_2O$; so-called tartar emetic. Occurs in colorless, transparent crystals or as a white powder; soluble in water and in glycerin. Dose, as a diaphoretic or expectorant, 1.5–8.0 mg. (1/40–1/8 gr.); as an emetic, 30–60 mg. (½–1 gr.); as a protozoacide, 30–120 mg. (½–2 gr.) intravenously in 1 or 2% solution.
a. powder (*pulvis antimonialis*). Antimonial powder; James' powder; consists of antimony trioxide and calcium phosphate and is diaphoretic, emetic in large doses, and cathartic. Has been used in a dose of 0.2–0.3 Gm. (3–5 gr.).
a. sodium tartrate. Used the same as the potassium compound but more soluble in water and better suited for intravenous use.
a. sodium thioglycollate. $NaOOC.CH_2.S.Sb.S.CH_2COO$. White or faintly pink powder soluble in water, insoluble in alcohol, used in the treatment of granuloma inguinale, kala-azar and filariasis. Dose 0.05–0.1 Gm. in 10–20 cc. of sterile water intramuscularly or intravenously.
a. sulfide. Sb_2S_3. Black sulfide of antimony. Dose, 0.015–0.06 Gm. (¼–1 gr.).
a. tartrate. $(SbO)_2C_4H_4O_6 + H_2O$. A white, crystalline powder; has been used internally as a substitute for arsenic in affections of the skin.
a. thioglycollamide. $Sb(S.CH_2CONH_2)_3$. White crystals, soluble in about 200 parts of water; used in the treatment of granuloma inguinale, kala-azar and filariasis. Dose 0.06 Gm. in 20 cc. of sterile water intramuscularly or intravenously.
a. trioxide. Antimonous acid, Sb_2O_3; soluble in hydrochloric and tartaric acids. Dose, 0.06–0.12 Gm. (1–2 gr.). It is an ingredient of antimony powder.
a. wine (*vinum antimonii*). Boiling water 60; tartar emetic, 4; stronger white wine, 1000 parts. It contains about 2 gr. of tartar emetic to the ounce. Dose, 0.3–1.0 cc. (5–15 min.)
black a. Purified antimony sulfide, Sb_2S_3.
compound a. pills. Plummer's pills; contain calomel and sulfurated antimony of each, 0.02 Gm. (⅓ gr.).
golden a. sulfide. Sb_2S_5. A fine, odorless, orange-yellow powder soluble in alkaline solutions; has been used as an alterative, diaphoretic, emetic, and expectorant.
sulfurated a. The sulfide with a small but indefinite amount of the oxide.
vegetable a. Boneset.

an ti mo nyl. SbO. The univalent radical of antimonous compounds.
an"ti my'cin A. An antibiotic substance, isolated from *Streptomyces* species possessing also insecticidal and miticidal activity.
an"ti my-cot'ic (an ti-migh-cot'ick) [G. *anti*, against; *mykēs*, fungus]. Preventing the growth of fungi or the destruction of fungi by physical and chemical agents.
an"ti-nar-cot'ic [*anti*; G. *narkōsis*, benumbing]. Preventing narcosis.
an"ti neu-ral'gic [*anti*; G. *neuron*, nerve; *algos*, pain]. Alleviating neuralgia.
an"ti neu rit'ic [*anti*; *neuron*; G. *-itis*, inflammation]. Efficient in neuritis. —**antineurit'ic**, *n.*
an tin'i-on [*anti*; G. *inion*, occipital bone]. The glabella: the point in the sagittal plane farthest removed from the inion. —**antinial**, *adj.* **antinied**, *adj.*
an"tin va sin I. An enzyme found in normal blood plasma of all animals, including man. It acts by destroying the hyaluronidase of bacteria and other sources and, by this action, counteracts invasion and spreading of those organisms and toxins which elaborate hyaluronidase.
an"tin va sin II. A protective enzyme observed in normal blood plasma which causes rapid destruction of proinvasin I in pathogenic organisms and venoms. With proinvasin I inactivated, antinvasin I is left intact to destroy hyaluronidase, the enzyme which aids invasion and spreading.
an"ti-o-be'sic [*anti*; L. *obesus* from *obedere*, to devour]. Efficient against corpulence or obesity. —**antiobe sic**, *n.*
an"ti-o-don tal'gic [*anti*; G. *odous*, tooth; *algos*, pain]. Relieving or preventing toothache.
an"ti-op so-nin. A substance retarding or destroying the action of an opsonin.
an"ti-ox'i dant. Any substance which delays the process of oxidation.
an"ti par"a lyt'ic. Antilytic.
an"ti par"a-sit'ic [*anti*; G. *parasitos*, parasite]. Destroying parasites. —**antiparasit'ic**, *n.*
an"ti pep'sin. A hypothetical antiferment or substance which inhibits the action of pepsin.
an"ti pep tone [*anti*; G. *peptos*, cooked]. A variety of peptone not acted upon by trypsin.
an"ti per"i-od'ic. A medicinal preparation for the treatment of periodic disease, especially malaria.
an"ti per"i-od'ic. Of, pertaining to, or preventing attacks of periodic disease, as of malaria.
an"ti per"i stal'sis [*anti*; G. *peri*, around; *stalsis*, constriction]. Reversed peristalsis.
an"ti phag"o-cyt'ic [*anti*; G. *phagein*, to eat; *kytos*, cell]. Preventing phagocytosis.
an"ti phlo-gis'tic [*anti*; G. *phlogistos*, burning heat]. An agent subduing or reducing inflammation or fever. —**antiphlogis'tic**, *adj.*
antiphlogistine. Trade-mark for certain proprietary medicinals, including an analgesic poultice containing clay, glycerin, and antiseptic and aromatic substances.
an'ti phone [*anti*; G. *phōnē*, sound]. An appliance worn in the auditory meatus and intended to protect the wearer from noises.
an"ti phthi ri"a, an"ti phthei'ri a (an ti-tigh ree-ack, an ti thigh, an ti thigh) [*anti*; G. *phtheir*, louse]. Efficient against lice or the condition caused by them. *Obs.*
an"ti plas'min. A substance or substances found in plasma which inhibit plasmin (a plasma proteolytic enzyme). Syn. *plasmin inhibitor*.
an"ti plas'tic [*anti*; G. *plassein*, to form]. 1. Unfavorable to granulation or to the healing process. 2. Preventing or checking plastic exudation. Not to be confused with *plastic*.
an"ti pneu"mo-coc'ci (-new"mo cock'sigh) [*anti*; G. *pneumōn*, lungs; *kokkos*, berry]. Destructive to *Diplococcus pneumoniae*.
an tip'o-dal [*anti*; G. *pous*, foot]. Situated directly opposite.
an"ti-pro throm'bin [*anti*; G. *pro*, before; *thrombos*, clot]. An agent present in the blood which prevents coagulation by neutralizing prothrombin. Substances having similar action are heparin, hirudin, and dicoumarin.
an"ti-pro'ton. A postulated elementary particle which differs from a proton only in having a negative charge.

an"ti-pru-rit'ic [*anti*; L. *pruritus*, itching]. Relieving or preventing itching. —**antiprurit'ic**, *n*.

an"ti py"o-gen'ic [*anti*, G *pyon*, pus *gennaōein*, from *gignesthai*, to be produced]. Preventing or inhibiting suppuration.

an"ti py ret'ic (an ti-pye ret'ick) [*anti*, G *pyretos*, burning heat]. An agent reducing fever The most important antipyretic agents are cold, diaphoretics, quinine, and many coal-tar products, such as salicylates, antipyrine, acetanilid, acetophenetidin. —**antipyre'sis**, *n*.; **antipyret'ic**, *adj*

an"ti py'rine (an ti pye rin, -reen, an"ti pye-reen") (*antipyrine*) $C_{11}H_{12}N_2O$. 1 Phenyl-2,3-dimethyl-5-pyrazolone. A white, crystalline powder with slightly bitter taste soluble in water or alcohol used as antipyretic and analgesic. Locally its anesthetic and vasoconstrictive actions are useful in various mucous-membrane inflammations. May cause giddiness, sweating, skin eruption, or other toxic symptoms. Dose, 0.3–1.0 Gm. (5–15 gr) Syn., *phenazone*.

a. amygdalate. See a. mandelate.

a. chloralhydrate. See *hypnal*.

a. mandelate. A white, crystalline powder used in whooping cough. See *tussol*.

a. salicylate. A white, odorless, crystalline powder, used as analgesic, antipyretic, and antirheumatic. Syn., *salipyrazolone*. See *salipyrin*.

an"ti py"ri -o-ma ni-a [*anti*, G *pyrinos*, fiery; *mania*, madness]. A condition similar to morphinism, due to excessive use of antipyrine. It is marked by nervous excitement.

an"ti ra'bic, an"ti rab'ic [*anti*, L. *rabies*, madness]. Preventing rabies, as the Pasteur treatment.

an"ti ra chit'ic (an ti-ra kit'ick) [*anti*, G. *rhachis*, spine]. An agent for the prevention or cure of rickets. —**antirachit'ic**, *adj*

an"ti-ren'net. Antirennin.

an"ti ren nin [*anti*, ME., from *rennen*, to run] An antibody which is capable of neutralizing the milk-curdling action of rennin.

an"ti re-tic"u lar [*anti*, L. *reticulum*, net]. Pertaining to factor operating against the reticuloendothelial system.

an"ti-rhe'o-scope [G *antirrhoia*, back current; *skopein*, to examine]. A device for observing the manifestations of visual vertigo.

an"ti-rheu mat'ic [G *anti*, against; *rheumatikos*, subject to flux]. Preventing or useful in treating rheumatism. —**antirheumat'ic**, *n*.

"ti-Rh se'rum. See *Rh factor*

an"ti-ri bo-fla vin (-rye"bo-flay vin, flav'in, -nb'o-) Any compound which interferes with the action of riboflavin in the organism.

an"ti-ri'cin (an ti-rye sin, -ris'in) [*anti*, L. *ricinus*, castor-oil plant]. The antibody to ricin.

an"ti-sca bet'ic [*anti*, L. *scabies*, itch]. Effective against the *Sarcoptes scabiei*, which causes scabies.

an"ti-scor bu'tic [*anti*, L. *scorbutus*, scurvy]. An agent hich prevents or cures scurvy see *vitamin C*. —**antiscorbu'tic**, *adj*

an"ti-scor-bu'tic vi"ta min. See *ascorbic acid*.

an"ti-sep sis [*anti*, G. *sēpsis*, decay]. Prevention of sepsis or poisoning by the destruction of microorganisms or their exclusion from the body tissues and fluids, or by preventing or checking their growth and multiplication.

an"ti-sep tic [*anti*, *sēptis*]. Any one of large group of organic and inorganic compounds which stops or inhibits the growth of bacteria without necessarily killing them, thus checking putrefaction, as alcohol, mercuric chloride, phenol, sodium chloride, phenylmercuric salts, etc. —**antisep tic**, *adj*.

an"ti-sep'tol. Cinchonine iodosulfate; reddish brown, insoluble powder used like iodoform.

an"ti-se rum [*anti*, L. *serum*, whey watery part] 1 The serum of man or animal immunized against bacteria or their products, or other antigenic agents, and therefore containing antibodies specific for these agents. 2. Serum containing natural antibodies such as hemagglutinins. 3 An immune therapeutic agent, such as diphtheria or tetanus antitoxin.

Rh antiserums. Antiserums reacting with one or more of the Rh factors.

an"ti si-al'a gogue, an"ti si-al' gog (-sigh-al' ah-gog) [*anti*, G *sialon*, saliva; *agōgos*, leading]. Preventing or checking salivation.

an"ti si al'ic (-sigh-al'ick) [*anti*, *sialon*]. An agent that checks the secretion of saliva. —**antisial'ic**, *adj*

an"ti so cial [*anti*, L. *socius*, comrade]. Denoting psychopathic state marked by the refusal to accept the bligations and restraints imposed by society —**antisocialism** *n*.

an"ti spas mod'ic [*anti*, G *spasmōdēs*, spasmodic]. An agent relieving convulsions or spasmodic pains, as the narcotics, diphenylhydantoin sodium, the nitrites, atropine. Syn., *spasmolytic*. —**antispasmod'ic**, *adj*.

an"ti spas'tic [*anti*, G *spastikos*, drawing in, absorbing]. Antispasmodic.

an"ti spi"ro-che tic (-spy"ro-kee tick, ket'ick) [*anti*, G *speira*, coil *chaitē*, hair]. Arresting the growth and development of spirochetes. —**antispiroche tic**, *n*.

an"ti-ster'num [*anti*, G. *sternon*, breast]. The part of the back opposite the breast. *Obs*.

antistine hydrochloride. Trade-marked name for the antihistaminic substance known by the generic name *antazoline hydrochloride*.

n"ti-strep"to-coc'cic (-strep to-cock'sick) [*anti*, G *streptos*, twisted; *kokkos*, berry]. Antagonistic to or preventing the growth of streptococci.

an"ti strep"to-dor'nase. An antibody capable of neutralizing streptodornase.

an"ti strep"to he"mo ly'sin (hee mo lye sin, -hem o- -hem-ol'i sin) [*anti*, *streptos*; G *haima*, blood *lysis*, loosing]. An antibody formed in response to the antigen streptohemolysin.

an"ti-strep"to ki'nase. An antibody present in the serum which prevents the activation of plasminogen by streptokinase. It may be introduced into the serum by infection with hemolytic streptococci containing sufficient streptokinase or by injections of streptokinase for therapeutic reasons.

an"ti strep"to-ly'sin [*anti*, *streptos*; *lysis*]. An antibody which operates against the hemotoxin of hemolytic streptococci.

an"ti-su"dor-if'ic [*anti*, L. *sudor* sweat; *facere*, to make]. An agent that checks excretion of sweat also called *antisudoral*. —**antisudorif'ic**, *adj*

n"ti-syph"i lit'ic [*anti*; NL. *syphilis*, syphilis]. A remedy used in the treatment of syphilis. —**antisyphilit'ic**, *adj*

an"ti the nar [*anti*, G *thenar* palm of the hand, flat of the foot]. Old term for hypothenar

an"ti ther'mic [*anti*, G. *thermē*, heat]. Cooling antipyretic.

an"ti ther'min. Phenylhydrazine-levulinic acid. $C_6H_5NH.N:C(CH_3).CH_2CH_2COOH$. A white, crystalline powder formerly used as antipyretic, analgesic, and antiseptic. It is vasomotor depressant causing pallor sweating, and other toxic effects.

an"ti throm'bin [*anti*, G *thrombos*, clot]. A substance present in blood plasma, neutralizing thrombin.

an"ti throm"bo-plas'tin [*anti*; *thrombos*; G *plas-*

ein, to form]. A substance which inactivates thromboplastin.

an"ti tox'i gen, an"ti tox in o-gen [*anti*, G *toxikon*, poison; *gennethai*, from *gignesthai*, to be produced]. Any antigen, or toxin, which promotes antitoxin elaboration.

an"ti tox'in [*anti*, *toxikon*]. 1 A substance elaborated in the body capable of neutralizing given toxin (bacterial, plant, or animal toxin) 2. One of the class f specific antibodies. —**antitoxic**, *adj*

an"ti trag'i-cus. A vestigial slip of muscle associated with the antitragus.

an"ti tra gus [*anti*, G. *tragos*, goat]. The projection of the pinna just opposite and posterior to the tragus. —**antitrag'ic**, *adj*

an"ti tris mus [*anti*, G *trismos*, a grinding]. A condition of tonic spasm in which the mouth cannot be closed.

an"ti trope [*anti*, G *trepein*, to turn]. 1 Either one of pair of symmetrical organs. 2. An antibody

n"ti tryp sin [*anti*, G *tryein*, to rub down; pepsin] An antibody inhibiting the action of trypsin.

n"ti tryp'tase. See *antitrypsin*.

antitussin. A proprietary ointment containing 5% of difluorodiphenyl; pplied by inunction in whooping cough.

an"ti tus'sive. Decreasing or relieving the mount and severity of coughing; or of pertaining to any agent which reduces or relieves coughing.

an"ti tus'sive. Any medication designed to reduce the amount and severity of coughing.

an"ti ty'phoid [*anti*, G *typhos*, fever; *eidos*, form]. Counteracting or preventing typhoid fever

an"ti ty'phoid. An antityphoid serum.

n"ti u're-ase (an ti-yoor'ee-ace, -ase) An antibody to urease.

an"ti ven'ene. See *antivenin*.

n"ti ve-ne re al [*anti*, L. *venereus*, venereal]. Preventive or curative of venereal disease.

an"ti ven'in, an ti ven ene (ven een, -vi-neen') [*anti*, L. *venenum*, poison]. 1 An antitoxin t venin. 2. An antitoxi serum prepared by immunizing animals against the venom of snakes, insects, or other animals.

bothropic a. Polyvalent serum for the venom of pit vipers of the genus *Bothrops*.

Crotalus a. Polyvalent serum for the venom of rattlesnakes.

an"ti-vi'ral [*anti*, L. *virus*, poison]. Antagonistic to virus, weakening or destroying its pathogenicity

an"ti vi rot'ic. A substance which is detrimental to viruses and can be used to treat virus diseases.

an"ti vir'u lin. 1 A substance counteracting virulin. 2. The antibodylike substance elaborated in animals injected with rabies virus, inactivating the pathogenicity of the virus.

an"ti vi'rus [*anti*, *virus*]. A broth culture, filtered of its bacteria and heated to attenuate its toxicity used in producing local immunity

an"ti vi'ta min. Any substance that prevents the normal metabolic functioning of vitamins; vitamin-destroying enzyme, or chemical substance that renders the vitamin unabsorbable or ineffective.

an"ti viv"i sec'tion [*anti*, L. *vivus*, living; *secare*, to cut]. Opposition to vivisection or animal experimentation. —**antivivisectionist**, *n.*

an"ti xen'ic (an ti zen'ick) [*anti*, G *xenos*, foreign]. Relating to the reaction which occurs when foreign substance is introduced into living tissue.

an"ti xe roph thal'mic [*anti*, G. *xeros*, dry; *ophthalmos*, eye]. Preventive of xerophthalmia. See *vitamin A*.

an"ti xe-rot'ic [*anti*, *xeros*]. Preventing dryness of the skin.

an"ti zy mot'ic (-sye-mot'ic) [*anti*, G. *zymōtikos*, causing to ferment]. Preventing or checking fermentation. —**antizymot'ic**, *n.*

nt"le pho'bi a [G *antlos*, flood; *phobos*, fear]. A morbid fear of floods.

antodyne. Trade-mark for phenyl glyceryl ether $C_6H_5O.CH_2.CHOH.CH_2OH$; an analgesic in neuralgia, migraine, etc.

an trec to my [G *antron*, cave *ektomē*, excision]. Surgical removal of the walls of an antrum, especially the mastoid antrum.

antrenyl bromide. Trade-marked name for the anticholinergic agent *oxyphenonium bromide*.

an tri'tis [*antron*, G -*itis*, inflammation]. See maxillary *sinusitis*.

an'tro- ntr [*antron*]. A combining form meaning cavern, cavity

an"tro-at"ti-cot' my [*antron*, F *attique*, G. *Attikos*; G. *tomē*, cutting]. I surgery the opening of the mastoid antrum and the attic of the tympanum.

an'tro-cele an'tro cele [*antron*; G *kēlē*, tumor]. An accumulation of fluid in the maxillary sinus.

an"tro-na'sal [*antron*, L. *nasus*, nose]. Pertaining to the maxillary sinus and the nasal cavity

ant'ro phose (an'tro-foze) [*antron*, G *phōs*, light]. A phose having its origin in the central ocular mechanism.

an'tro-scope" [*antron*, G. *skopein*, to examine]. An instrument for examining the maxillary sinus. —**antros'copy** *n.*

n-tros'to-my n trot'o-my [*antron*, G *stoma*, mouth] Opening of an antrum for drainage.

an"tro-tym pan'ic [*antron*, G *tympanon*, drum]. Relating to the mastoid antrum and the cavity of the middle ear

an'trum [L.]. 1 A cavity or hollow space, especially in a bone. 2. The maxillary sinus. Formerly called *a. of Highmore*. —**antral**, *adj.*

a. of the ear The mastoid antrum.

a. of the testis. See *mediastinum* testis.

a. of the tube. A saclike dilatation of the uter ine tube bout an inch from the fimbriated extremity; regarded by some as occurring only in pregnancy

cardiac a. A dilatation sometimes found in the esophagus immediately above its passage through the diaphragm.

dental a. The pulp chamber of tooth. *Obs.*

duodenal a. The normal dilatation presented by the duodenum near its origin. See duodenal *cap*.

ethmoidal a. An ethmoid sinus.

mast id a. See tympanic *a*.

maxillary a. The maxillary sinus.

pyloric a. The cavity of the pylorus (2); the first part of the pylorus region of the stomach, proximal to the pyloric canal.

tympanic a. The pneumatic space between the epitympanic recess and the mastoid cells. Syn., *mastoid a.*

ntrycide. Trade-mark for various 4-amino-6-(2-amino-6-methyl-4-pyrimidylamino)quinaldine-1, 1-dimetho salts having trypanocidal action in animals.

ntrypol. See *suramin*.

ANTU Alpha-naphthylthiourea, gray powder insol ble in water with little odor or taste. It is harmless to human beings, unless ingested in large quantities, but is highly specific poison fo the common brown, or Norway rat by causing accumulation of fluid in the lungs with strangulation. It is less effective against other rats and against mice. Poisonous to domestic pets.

antuitrin-growth. Trade-mark for preparation of growth hormone extracted from the anterior pituitary

antuitrin-S. Trade-mark for preparation of chorionic gonadotropin extracted from the urine of pregnancy

Antyllus (Antylles) [*Greek physician and surgeon, second or third century*]. One of the great surgeons of antiquity best known today for having recognized two forms of aneurysm the congenital and the traumatic.

a nu'cle-ar (ay-new'klee-ur new') [G. *a-* not; L. *nucleus*, kernel]. Without a nucleus applied to an erythrocyte.

an-u ri-a, an u ry an"u re al [a-; G *ouron*, urine]. Arrest of urinary output, resulting from lack of renal function (*secretory type*) or from obstruction in the urinary tract (*excretory type*) —**anuret'ic, anu'ric,** *adj*

compression a. See compression *syndrome*.

postrenal a. Anuria on the basis of urinary tract obstruction.

prerenal a. That characterized by disturbances in blood flow to the kidney as in shock and renal vascular thrombosis.

renal a. Failure of urine formation due to bilateral intrinsic renal dysfunction.

traumatic a. That in lower nephron nephrosis following injury

an-u rous [a-; G. *oura*, tail]. Without tail; applied to frogs and toads.

a nus [L.]. The termination of the rectum the outlet of the alimentary canal. See Plates 14, 41, 44. —**anal,** *adj*

a. vesicalis. An anomaly in which the anus is imperforate, the rectum opening into the urinary bladder

a. vulvovaginalis. An anal opening communicating with the vulva.

artificial a. A permanent artificial opening made surgically from the exterior into the intestine.

fissure of a. A slight tear in the mucous membrane at the anus, usually due to passage of hardened feces.

fistula of a. Fistula in ano, sinus opening from the rectum into the connective tissue about the rectum or discharging externally

imperforate a. Absence of the anus, the natural opening being closed by membranous septum.

infundibuliform a. A relaxed condition of the anus with destruction of the natural folds.

preternatural a. An abnormal aperture serving as an anus, whether congenital, made by operation, or due to disease or injury

preternatural ileovaginal a., preternatural vaginal a., a. praeternaturalis vestibularis. The rare abnormality of the rectum opening through the vulva.

vulvar a. An anomalous condition in which the anus is imperforate, the rectum opening into the vulva.

umbilical a. A preternatural anus located in the umbilical region.

Anusol. Trade-mark for suppositories containing bismuth subgallate, bismuth-resorcin compound, and other ingredients; used for relief of hemorrhoids.

an'vil [AS. *anfilt*]. An ossicle of the middle ear See *incus*.

anx-i'e-ty [L. *anxietas*, anxiety]. The awareness of the physiologic reactions to the perception of dangerous situation calling for fight-or-flight responses. It may be produced by fear of impulses within the personality as well as by external situations. Causes include social dangers such as loss of love or prestige. The person in the anxiety reaction manifests not only the signs and symptoms of anxiety but also his individual defense mechanisms against anxiety Also see under *complex, neurosis, reaction*.

castration a. A fear of the young male child based on the phantasy that he will lose his penis.

negative a. Anxiety which leads to the breakdown of the defensive mechanisms of the individual.

positive a. The anxiety for growth.

anx i'e-ty at tack' *I psychoanalysis*, feeling of impending death or physical collapse, acute panic or crisis; occurs in an anxiety reaction.

AO 1. Anodal opening. 2. Opening of the atrioventricular valves.

AOC, AnOC Anodal opening contraction.

aolan. A proprietary injection prepared from milk; used in nonspecific protein therapy

A. O M. *Artium Obstetriciarum Magister* Master of Obstetric Art.

aort See *aorta-*.

a-or'ta (ay-or'tah) [G *aortē*, aorta, from *aeirein*, to raise]. The large vessel arising from the left ventricle and distributing, by its branches, arterial blood to every part of the body It ends by bifurcating into the common iliacs at the fourth lumbar vertebra. The arch extending from the heart to the third thoracic vertebra is divided into an *ascending* *transverse*, and *descending* part. The *thoracic* portion extends to the diaphragm the *abdominal*, to the bifurcation. See Plates 5, 8. See Table of Arteries in the Appendix. —**aortal, aortic,** *adj*

ascending a. The first part of the aorta. See Plate 5.

cardiac a. That part of the embryonic vascular system giving rise to the aortic arches. Sometimes refers to the bulbus arteriosus. Syn., *ventral a., aortic sac*.

descending a. The thoracic and abdominal portions of the aorta. See Plates 5, 7 8, 14.

dorsal a. (a) See primitive a. (b) Thoracic aorta.

double a. Persistence of both right and left fourth aortic arches and dorsal aortas.

left a. The left primitive or dorsal aorta, especially in the aortic arch region where fusion of the aortas does not occur

main a. See primitive a.

pericardial a. The part of the aorta within the pericardial cavity: the bulbus arteriosus.

primitive a. (a) That part of the aorta extending from its origin to the point where it first branches. (b) Two embryonic branches of the cardiac aorta extending through the first visceral arch and uniting to form the dorsal aorta.

right a. The embryonic division of the aortic bulb which finally forms the pulmonary artery

root of a. The origin of the aorta at the heart. Also called *radix aortae*.

systemic a. See left a.

throbbing a. Exaggerated pulsation of the abdominal aorta, perceptible to the patient.

ventral a. The arterial trunk or trunks between the heart and first aortic arch in embryos or lower vertebrates.

a or tal'gi a [*aort*; G. *algos*, pain]. Severe, constant ache in the upper thorax, neck, and shoulders due to pressure of an aneurysm against the surrounding tissues, or to periaortitis of syphilitic origin.

a-or"ti-co-re nal (ay-or ti-ko-ree nul) [*aort*; L. *renes*, kidneys]. Near the aorta and kidney as the aorticorenal ganglion.

a or ti'tis (ay'or tye tis) [*aort*; G. *-itis*, inflammation]. Inflammation of the aorta.

acute a. Inflammation usually observed in the intima, as an infiltration of lymphocytes, plasma cells, large mononuclear cells, and few polymorphonuclear leukocytes.

acute bacterial a. See *mycotic aortitis*.
mycotic a. A form of infectious aortitis usually due to lodgment of infected emboli; complication of bacterial endocarditis, tuberculosis, rheumatic fever typhoid fever Syn., *bacterial aortitis*.
rheumatic a. A form of intimal arteriosclerosis with large sausagelike plaques, due presumably to rheumatic fever
suppurative a. Suppuration of the wall of the aorta as result of extension of neighboring pyogenic infection.
syphilitic a. Inflammation of the aorta due to syphilis. It affects the proximal part of the aorta but may be more extensive The principal lesion is destruction of parts of the media as result of syphilitic inflammation around the medial arterioles. The intima shows stellate lines of depression and often hyaline plaques. It begins probably as deforming or obliterative endarteritis of the vasa vasorum. Also called *syphilitic mesaortitis*.
verrucous (verrucose) a. Inflammation of the intima with the formation of verrucae.

a or'to- (ay-or to-) **aort** [*aortē*]. A combining form meaning *aorta*.
a"or tog'ra phy Roentgenography of the aorta.
a or tot o my Cutting or opening the aorta.
A. O. T. A. American Occupational Therapy Association.
ap- See *ps-*
A. P. A. American Physiotherapy Association.
a pal"les the si a. See *apallesthesia*.
a pal"les-the si a (-pal"es-thee zhuh, -zee-uh) [G *a-* not *pallein*, to sway *aisthēsis*, *feeling*]. Loss of vibration sense. Syn., *pallanesthesia*.
a pan cre a (y-pang'kree uh, -pang) [*a-* G. *pas*, all *kreas*, flesh]. Absence of the pancreas. —**apancreat'ic**, *adj*
a-pan dri-a [G *apo*, from *anēr* man]. Morbid dislike of the male sex.
ap an thro pi-a, a pan'thro py [*apo*; G *anthrōpos*, man]. 1. Morbid desire for solitude. 2. Morbid version to human associations.
a par"a lyt'i (ay-par uh lit'ick, -par) [G *a-* not; *paralysis*, paralysis] Without paralysis.
p ar thro'sis [G articulation] Diarthrosis. *Obs.*
pas'ti [G abstaining from food]. Abstinence from food; seen in mental disorder —**apastic**, *adj*
ap a-thism [G *apatheia*, pathy from *a-* *pathos*, feeling]. Slowness in reacting, as opposed to *erethism*.
p'a thy [*apatheia*]. 1 Want of passion or feeling. 2. Indifference. —**apathet'ic**, *adj*
ap a tite [G. *apatē*, deceit, since it has been mistaken for other minerals] A type of mineral having the formula $[Ca_3(PO_4)_2]_3$ CaX_2, where X may be CO_3, $(OH)_2$, Cl_2, F_2, O or SO_4. The inorganic component of bones and teeth contains form of apatite.
ap-at"ro-pine (pat ro-peen, pin) See *apoatropine*
APC Common bbreviation for therapeutic formulations of acetylsalicylic acid, acetophenetidin (phenacetin) and caffeine.
ape [AS. *apa*]. A manlike, tailless primate.
pei"ra pho'bi (a pye ro f 'bee-uh) [G *peiros*, boundless; *phobos*, fear]. A morbid fear of infinity
pel'lous [G *a-* not L. *pellis*, skin]. 1. Skinless; not cicatrized, applied to wounds. 2. Without prepuce circumcised.
Apelt' test. See Nonne-Apelt's *test*.
ap en-ter'ia. Abenteria.
pe ri-ent [L. *perire* to open]. Laxative mildly purgative. —**ape rient**, *n*.
pe ri-od'ic (ay-peer ee-od'ick, a-peer) [G *a-* not *periodos*, goi g round]. Devoid of periodicity or rhythm. —**aperiodic'ity** n.

a per"i-stal'sis (ay-perr"i stal'sis, a perr") [*a-*; G. *peri*, around *stalsis*, constriction]. Absence of the peristaltic movements of the intestine.
a per'i tive (-perr'i tiv) [L. *aperire*, to open]. 1 Aperient. 2. Deobstruent. 3. Stimulating the appetite.
Apert's syndrome. See *acrocephalosyndactylia*.
p er tom ter [*aperire*; G. *metron*, measure]. An optic device for determining the angle of perture of microscopic objectives.
ap"er tu'ra (pl. *aperturae*) [L., from *perire*]. An opening.
a. aqueductus cochleae. Opening of the aqueduct of the cochlea on the petrous bone.
a. canalis i guinalis. Inguinal ring.
a. externa aqueductus vestibuli. External opening of the aqueduct of the vestibule.
a. lateralis ventriculi quarti. Aperture at the tip of the lateral recesses of the fourth ventricle. Also called *foramen of Luschka*.
a. medialis ventriculi quarti. Medial aperture in the roof of the fourth entricle also called *foramen of Magendie*.
a. pelvis inferior [BNA]. Lower opening of the true pelvis (*O.T* pelvic outlet)
a. pelvis superior [BNA]. Upper opening of the true pelvis (*O.T* pelvi inlet)
a. piriformis [BNA]. A terior nasal openings of the skull.
a. sinus sphenoidalis. Opening of the sphenoid sinus.
ap er ture [*apertura*]. 1 An opening orifice. 2. *I optics*, the diameter of the exposed portion of a lens, designated as the ratio of the focal length to this diameter as F/4, in which the aperture is one inch and th focal length is 4 in.
angular a. Diameter of microscope objective measured by the angle made by lines from the most divergent rays capable of entering the objective from the focal point.
a. of the lens. See angular a.
lateral apertures of the fourth ventricle. Two openings t the lateral recesses of the fourth ventricle through which cerebrospinal fluid passes into the subarachnoid space. Also called *foramina of Luschka*.
medial a. of the fourth ventricle. One in the posterior central portion of the roof of the fourth ventricle through which cerebrospinal fluid passes into the subarachnoid space Also called *foramen of Magendie*.
numerical a. Capacity of the objective t receive and transmit light rays t the image expressed by the formula $N.A. = \sin \frac{1}{2}\angle a \times$ in which $\angle a$ = angular perture and n = index of refraction of the medium in front of the lens.
urogenital a. External opening of the embryonic urogenital sinus after rupture of the urethral plat
apestrin. Trade-mark for brand of chorionic gonadotrophin obtained from human pregnancy urine See *antuitrin-S*.
a pex [L the extreme end] 1. Summit or top of anything; point or extremity of cone. 2. *I optics*, junction of the two refractive sides of prism. 3. *I craniometry* the highest point in the transverse vertical section of the vault of skull oriented on th Frankfort horizontal plane, the plane of section passing through the poria. —**ap ical, apic'iform**, *adj*
a. auriculae Darwini. Old term for auricular tubercle of Darwin, thought to correspond to the pex of the ear in lower mammals.
a. of the head of the fibula. Apex capituli fibulae [BNA] the pointed proximal extremity of the fibula; the styloid process of the fibula.

a. of the lung. Upper extremity of the lung behind the border of the first rib.

a. radicis dentis. Radicular end of a tooth.

pexol. A trade-mark for vitamin A.

APF *Animal protein factor.* A substance, present in animal protein, necessary for normal growth of many animal species. The factor may be vitamin B_{12}.

aph-. See apo-.

A. P. H. A. American Public Health Association.

A. Ph. A. American Pharmaceutical Association.

a-pha ci a (-fay shee-uh, -see-uh) See aphakia.

a pha gi a [G. a- not, phagein, to eat]. Loss of the ability to swallow.

a. algera. Inability or refusal to swallow because of pain.

a pha'ki-a [a- G. phakos, lentil]. Condition in which the lens is absent from the dioptric system. —**aphakic, aphakial,** *adj*

aph'a-lan'gi-a, pha"lan-gi' ah [a- G. phalanx, bone between two joints of the fingers and toes]. Loss or absence of fingers or toes. See adaktyly.

aph"al ge'si-a (af"al jee'zee-uh, -see-uh) [G. apo, from; algos, pain]. A hysterical state wherein pain is induced by contact with a harmless object having symbolic significance.

a phan"i-sis [G. from aphanizein, to do away with]. Absence of all phases of sexuality in the individual.

a pha si-a (a-f y'zhuh, -see-uh) [G. from a- not; phasis, speech]. Loss or impairment of the capacity to use words as symbols of ideas. Aphasia is organic and is caused by a lesion or lesions in the cortex and association paths of the dominant hemisphere. It does not refer to a defect in the mechanics of hearing or speaking but to an impairment of the highest function of the use of language as translating thought. Hysterical speech defects may imitate the symptoms of aphasia. There are many subdivisions according to the degree of loss and specific language function affected. Aphasia may be partial or total (global). The predominant defect may affect the ability to speak, called **motor verbal,** or **expressive aphasia.** The lesion responsible is located in the parolfactory area at the posterior end of the third frontal convolution. The failure may be a lack of comprehension of the spoken word, or **auditory aphasia.** This is a form of **sensory** or **receptive aphasia.** Words are evoked with difficulty, used incorrectly and do not translate ideas accurately. Sometimes words are uttered fluently but inappropriately, as in jargon or paraphasia; this is allied to **amnestic aphasia,** which is a loss of memory for specific words, with hesitant and fragmentary speech. The lesions which cause these types of aphasia lie in the parietal lobe at or near the angular gyrus. Expressive and receptive aphasia are the two most common types, and may occur together in mixed forms. Other varieties are **acalculia** (loss of ability to do mathematical reckoning); **agraphia** (inability to write); **alexia** or **visual aphasia** (loss of ability to understand the written word); **nominal aphasia** (anomia, dysnomia, loss of ability to name objects); **semantic aphasia** (loss of meaning of words); **syntactic aphasia** (loss of correct grammatical construction). —**aphasiac,** *adj.,* *n.*

Broca's a. Motor aphasia.

congenital a. Developmental a.

developmental a. A deficiency in learning to speak which is not commensurate with the individual's (child's) mental age or development and accomplishment quotients along other lines. Syn., congenital a.

dysarthric a. Faulty articulation or speech disturbance due to paresis of the peripheral nerves to the tongue, lips, and throat.

global a. Total loss of all sensory and motor functions of communication by speech or writing.

Wernicke's a. Cortical sensory aphasia in which both auditory aphasia and visual aphasia are present.

a phel'x'i-a [G. aphelxis, to draw away]. Absentmindedness; inattention or indifference to external impressions. —**aphelot'ic,** *adj*

a phe'mi-a [G. a-, not; phēmē, voice]. Motor aphasia; inability to articulate words or sentences, due to central lesion. See aphasia. —**aphem'ic,** *adj*

aph"e-pho'bi a [G. haphē, touch; phobos, fear]. Morbid fear of physical contact with other persons.

aph'e ter [G., starting-point]. A hypothetic substance, believed to be a catabolite, which initiates the decomposition of inogen, thus beginning muscular contraction. In a general sense, any trigger substance which initiates a function may be an apheter. See trigger action.

a"phil-an'thro py [G. a-, not; philein, to love; anthrōpos, man]. Loss or absence of social feeling; a frequent sign of approaching psychosis.

Aph"i o-chae'ta (af"ee-o-kee tuh). A genus of flies of the family Phoridae. The species *A. ferruginea and A. scalaris produce intestinal myiasis.*

a pho ni a (ay-fo'nee uh, a-f nee uh) [a- G. phōnē, voice]. 1. Loss of speech due to some peripheral lesion. 2. Hysterical loss of the power of speech. 3. Voicelessness. —**aph onous, aphon'ic,** *adj*

a. clericorum. Clergyman's sore throat.

a. paranoica. The stubborn silence sometimes encountered in the insane.

paralytic a. Paralysis of the speech muscles. Syn., *phonetic paralysis.*

spastic a. Spasm of the vocal muscles initiated by efforts to speak. Syn., *dysphonia spastica.*

phose (ay'fohz, fohs' af'ohs) [a- G. phōs, light]. A subjective dark spot or shadow in the field of vision. See phose.

a phra si-a (-fray'zhuh, -zee-uh) [a- G. phrasis, to declare]. Loss of the power to utter connected phrases.

aph ro dis'i a (af"ro-diz'ee-uh) [G. from Aphrodite, goddess of love]. 1. Sexual desire, especially when morbid or immoderate. 2. Sexual union.

aph"ro-dis'i-ac (af"ro-diz'ee ack) [aphrodisia]. Stimulating the sexual appetite; erotic.

aph ro-dis'i ac. Any preparation or agent stimulating the sexual passion.

aph ro dis"i-o-ma ni-a [aphrodisia; G. mania, madness]. Exaggerated sexual interest and excitement. Syn., *erotomania.*

aph"ro-ne si a (af"ro-nee zhuh, -zee-uh, -shuh, -see-uh) [G. a-, not; phronēsis, good sense]. Foolishness, silliness, madness.

aph'tha (*pl.* *aphthae*) [G., thrush]. 1. A round, pearly speck found in the mouth and gastrointestinal tract, and on the lips, caused by fungi; characteristic of certain diseases, as sprue, aphthous stomatitis. 2. Aphthous stomatitis.

a. anginosa. A form of sore throat attended by slight fever, redness, enlargement of the fauces, and the formation of small white specks on the tongue and mucosa of the throat.

a. epizootica. See foot-and-mouth disease.

aphthae tropicae. A disease of the tropics marked by epigastric fullness, pain, vomiting, diarrhea, and redness of the tongue with the formation of small, white, painful spots. Also called *angulllulosis, gastroenteritis aphthosa indica, phlegmasia membranae mucosae gastropulmonalis, psilosis, tropical sprue.*

a. tubelis. Ulceration of the mouth, extending to

the esophagus and stomach and accompanied by fever.

phthae Riga. See cachetic a.

a. serpens. See gangrenous stomatitis.

Bednar's aphthae. Two symmetrically placed ulcers, seen t times on the hard palate of cachectic infants, one on each side of the median line.

cachectic phthae Those appearing beneath the tongue, and associated with grave constitutional symptoms. Also called *Cardarelli aphthae, Valleix' aphthae, aphthae Riga.* See Bednar' aphthae. Syn., *Riga disease.*

ph thenx'i a [G a- not; *phthenxis*, utterance]. An aphasia in which articulate sounds are poorly enunciated or expressed.

aph'thoid. See *aphthous.*

ph thon gi [a- G *phthongos*, sound]. A rare phasia due to spasm of the muscles of speech controlled by the hypoglossal nerves.

aph the sis. A degenerative disease of mucous membrane with the development of ulcers. See *aphtha.*

Touraine's a. A condition in which small round or oval ulcers with yellow sloughs develop in the mouth, vulva, or glans penis. It is associated with keratitis, conjunctivitis, or scleritis.

ph'thous, aph'thoid [G *phtha*, thrush]. Relating to, affected with, or resembling aphthae.

a'pi [L. *apis*, bee]. A combining form meaning *bee.*

a"pi-cec't my (y'pi-seck to-mee, ap'i) [L. *apex* top G *ektomē*, excision]. 1 Resection of tooth. 2. Exenteration of the air cells of the apex of the petrous pyramid.

ap"i-ci'tis [apex, G -*itis*, inflammation]. Inflammation of any apex, as of tooth root or of lung.

p"i-co-ec'to-my [apex; G *ektomē*, excision]. Removal of th root of tooth. See *apicectomy.*

ap"i-co-lo ca tor ap"i lo ca tor [apex; L. *locus*, place] Instrument for locating the pex of tooth

ap"i-col'y-sis [apex; G *lysis*, loosing] Artificial collapse of the upper portion of lung by separation of the parietal pleura from the chest wall; used in the treatment of pulmonary tuberculosis with apical cavities.

apicosan. A proprietary preparation of bee venom used in rheumatism.

a"pi cot my See *apicectomy.*

pi in [L. *apium*, parsley] A substance, perhaps glycoside, which is obtained from early garden parsley *Petroselinum crispum.*

ap"i lo ca tor See *apicolocator*

A. P I M Association Professionnelle Internationale des Médecins.

ap'i nol. A prod ct, chiefly levo-menthone, $C_{10}H_{18}O$ obtained by the destructive distillation of the wood of th pine, *Pinus palustris.* A clear amber-colored oil with pine odor Has been used locall as antiseptic and anesthetic internally as expectora t in chronic respiratory catarrh.

a pi ol, ap'i-ol. $C_{12}H_{14}O_4$ White, crystalline powder with faint odor of parsley; obtained from oleoresin of parsley and from celery It has been used in dysmenorrhea and other uterine disorders. Syn., *parsley camphor*

liquid a. A green or yellow oily liquid with parsley odor used as apiol it consists of oleoresin of parsley fruit, made by percolating the fruit with ether It is sometimes called *apiol.* Syn., *parsley oleoresin, parsley-seed oil.*

a pi-o ther' py [L. *apis*, bee; G *therapeia*, therapy]. Treatment of disease, especially rheumatism, with bee venom.

a pi-pho'bi-a (y'pi f 'bee-uh, ap'i) [apis; G *phobos*, fear]. Morbid terror of bees and their sting.

A pis [L.]. A genus of hymenopterous insects.

A. mellifera. The honeybee.

apis purra. A proprietary preparation of bee venom; used by intracutaneous injection i rheumatism.

A pi um [L., parsley]. A genus of herbs of the carrot family

A. graveolens. Wild celery source of apiol.

A.P.L. 1 Abbreviation for anterior pituitarylike (see anterior pituitarylike substance) 2. Designation of proprietary preparation of chorionic gonadotropic hormon used intramuscularly

pla-cen'tal ap"la-cen tal [G a- not; L. *placenta*, cake]. Without placenta.

ap"la nat'ic [a- G *planasthai*, to wander]. Corrected for spherical aberration, as an planatic focus, or an aplanatic lens (rectilinear lens) —**aplana'sia, aplan atism,** n.

a pla'si (a-play'zhuh, see-uh, -shuh, -see-uh) [a-; G *plasis*, to form]. 1 Defective devel pment or congenital bsence of part. Syn., *agenesis.* 2. In the somatotype, physique in which the whole body or a region of the body is poorly developed.

a. axialis extracorticali congenita. A heredofamilial disorder appearing in early infancy manifested by rotary movements of the eyes and head, by spasticity of all limbs, cerebellar ataxia, intention tremor slurring speech, and dementia; noninflammatory degeneration of the white matter of the brain and brain stem. Also called *Merzbacher-Pelizaeus disease.*

nuclear a. A congenital defect in which certain cranial nerve nuclei are absent or imperfectly developed also called *cranial nerve a.*

plas'tic (ay-plas'tick, plas'tick) [a- *plassein*]. 1 Structureless; formless. 2. Incapable of forming new tissue. 3. Relating to aplasia. 4. Defective in fibrin. 5. Designating an inflammation with little or no production of granulation tissue.

pleu'ri (ploor'ee uh, ay-ploor) [a- G *pleura*, rib]. Congenital absence of the ribs; ecostatism.

ap ne a, ap-noe [a-; G *pnein*, to breathe]. A transient suspension of respiration because of decrease of carbon dioxide tension of the blood with the resultant absence of stimulation of the respiratory center Also called *a. vera.*

a. vagi. Temporary cessation of breathing due to vagal stimulation.

cardiac a. The temporary period of suspended breathing in Cheyne-Stokes respiration.

ap-neu mа t sis. See *atelectasis.*

ap-neu'mi-a [a- G *pneumōn*, the lungs] Congenital absence of the lungs.

p-neu sis [a- G *pneuma*, breath -*sis*, state or condition]. A state of maintained contraction of the inspiratory muscles observed when rhythmic inhibitory influences are prevented from reaching the inspiratory center in the brain.

ap o-, ap- aph- [G. from]. A prefix meaning *away from, from.* It implies deprivation or separation.

ap o-at ro-pine ap at're-pine (-at ro-peen, -pin) A chemical substance, $C_{17}H_{21}O_2N$ derived from tropine by the action of nitric acid.

ap o-cam-ne sis [G *apokamnein*, to grow quite weary -*sis*, condition] Intense and readily induced fatigue.

ap o-car"te-re sis [G *apokarterēsis*, suicide by hunger]. Suicide by self-starvation.

ap -chro mat'ic [G. *apo*, from *chrōma*, color]. *Free of color,* corrected for spherical and chromatic aberration, as an pochromatic lens.

ap o-ciei'sis (p kly'sis) [G *apokleisis*, shutting up]. Aversion to eating.

ap o-co de-ine (ko'dee een, -in, -ko deen) An alkaloid, $C_{18}H_{19}NO_2$ derived from codeine, and having expectorant and emetic qualities.

ap'o-crine (ap o-kryne, krin) [G *apo*, from; *krinein*, to separate]. Designating a type of secretion in which the secretion-filled free end of gland

cell is pinched off leaving the nucleus and most of the cytoplasm to recover and repeat the process.

ap″o-cyn-am′a-rin. A bitter principle obtained from *Apocynum androsaemifolium*, probably identical with the aglycone of cymarin. It is emetic and diuretic.

new a. See cymarin.

ap-o-cyn′e-in (ap-o-sin′ee-in, -sigh nee-in). A glycoside from apocynum; it acts like digitalin.

a-poc′y-nin (a-poss′i-nin). A principle, chemically acetovanillone, 4-hydroxy-3-methoxy acetophenone, from apocynum; colorless prisms, slightly soluble in water.

a-poc′y-num (a-poss′i-num) [G. *apokynon*, dog's-bane]. The dried rhizome and roots of *Apocynum cannabinum* or of *Apocynum androsaemifolium*. Its most important constituent is cymarin, a glycoside closely related to many glycosides of the digitalis group. The physiologic actions of apocynum are similar to those of digitalis. It is more irritant to mucous membranes than either digitalis or strophanthus, and therefore may cause nausea and catharsis. Dose, 0.06–0.3 Gm. (1–5 gr.). Syn., *black Indian hemp*, *Canada hemp*.

ap-o-de″mi-al′gi-a [G. *apodēmein*, to be away from home; *algos*, pain]. A morbid dislike of home life, with a desire for wandering; wanderlust.

a-po′di-a, a-pod′y [G. *a-*, not; *pous*, foot]. Congenital absence of feet. —**ap′odal, ap′odous, ap′ous,** *adj.*

ap″o-en′zyme (ap-o-en′zime, -zim). The purely protein part of an enzyme which, with the coenzyme, forms the complete or *holoenzyme*.

a″po-er′y-thein. A protein fraction which is apparently the same as the intrinsic factor of pernicious anemia. It is present in normal gastric juice, but absent in the gastric juice of patients with pernicious anemia. Although it is present in the saliva it is destroyed in the stomach of such patients.

ap-o-β-e-ryth-roi′dine. $C_{16}H_{17}NO_3$; a degradation product of β-erythroidine.

ap-o-fer′ment [G. *apo*, from; L. *fermentum*, leaven]. Apoenzyme.

ap-o-fer′ri-tin [apo-; L. *ferrum*, iron]. The protein resulting when iron is removed from ferritin.

a-pog′a-my, ap″o-gam′i-a [apo-; G. *gamos*, marriage]. The production of a sporophyte from the gametophyte without the formation or union of gametes. Syn., *apomixis*, *parthenogenesis*. —**apogam′ic, apog′amous,** *adj.*

ap″o-mix′is, ap-o-mix′i-a [apo-; G. *mixis*, mingling]. Apogamy. Syn., *parthenogenesis*.

ap-o-mor′phine (ap-o-mor′feen, -fin, -mor feen′). $C_{17}H_{17}NO_2$. An artificial alkaloid, derived from morphine by the abstraction of a molecule of water.

a. bromomethylate. See *a. methylbromide*.

a. hydrochloride (*apomorphinae hydrochloridum*). The salt is a grayish, crystalline powder. It is an emetic of prompt action. Dose, 3–6 mg. (1/20–1/10 gr.) hypodermically. It is expectorant in doses of 1–2 mg. (1/60–1/30 gr.). The salt should not be used if it at once imparts a green color to 100 parts of distilled water when shaken with it.

a. methylbromide. $C_{17}H_{17}NO_2.CH_3Br.H_2O$. It is used like the hydrochloride. Its solution is said to be more stable. Dose, 3–5 mg. (1/20–1/12 gr.). Syn., *apomorphine bromomethylate*, *euporphin*.

ap″o-myt-to′sis [G. *apomyttesthai*, to blow one's nose; *-ōsis*, condition]. Any disease marked by stertor or sneezing.

ap′o-nal. Tertiary amyl carbamate, $C_2H_5(CH_3)_2$-$C.CO_2NH_2$; has been used as a sedative and hypnotic.

a-pon″eu-ror′rha-phy [G. *apo*, from; *neuron*, tendon; *rhaphē*, suture]. Suturing of an aponeurosis, as of the abdominal wall.

a-pon″eu-ro′ses (a-pon-yoor-o′seez). Plural of aponeurosis.

a-pon″eu-ro′sis, ap-o-neu-ro′sis [apo-; *neuron*; G. *-ōsis*, condition]. An expanded tendon consisting of a fibrous or membranous sheet, serving as a means of attachment for flat muscles at their origin or insertion, or as a fascia to enclose or bind a group of muscles. —**aponeurot′ic,** *adj.*

abdominal a. The wide, tendinous expanse by which the external oblique, internal oblique, and transversus muscles are inserted.

a. of insertion. A wide tendon serving as an insertion for a wide muscle.

a. of investment. A wide tendon serving as a fascia to bind or enclose groups of muscles.

a. of occipitofrontalis muscle. The galea aponeurotica.

a. of origin. One serving as an attachment of origin.

a. of soft palate. A thin, firm, fibrous layer attached above to the hard palate and becoming gradually thinner toward the free margin of the velum.

bicipital a. The lacertus fibrosus.

epicranial a. The galea aponeurotica [BNA]. Syn., *a. of the occipitofrontalis muscle*.

palatal a. See *a. of soft palate*.

pharyngeal a. The submucous layer of the pharynx.

subscapular a. The thin membrane attached to the entire circumference of the subscapular fossa, affording attachment by its inner surface to some of the fibers of the subscapularis muscle.

supraspinous a. A thick and dense membranous layer that completes the osseofibrous case in which the supraspinatus muscle is contained, affording attachment by its inner surface to some of the fibers of the muscle.

vertebral a. A thin aponeurotic lamina extending along the whole length of the back part of the thoracic region, serving to bind down the sacrospinalis muscle and separating it from those muscles that unite the spine to the upper extremity.

a-pon″eu-ro-si′tis (a-pon-yoor-o-sigh′tis, ap-o-new-ro-) [apo-; *neuron*; *-ōsis*; G. *-itis*, inflammation]. Inflammation of an aponeurosis.

a-pon″eu-rot′o-my (a-pon-yoor-ot′o-mee, ap-o-new-rot′o-mee) [apo-; *neuron*; G. *tomē*, a cutting]. Incision of an aponeurosis.

a-pon′i-a [G. *a-*, not; *ponos*, toil]. 1. Abstention from work; nonexertion. 2. Absence of pain.

a-poph′y-sate [G. *apo*, from; *physis*, growth]. Provided with an apophysis.

a-poph′y-sis [G.]. A process, outgrowth, or projection of some part or organ, as of a bone. —**apophys′eal, apophys′ial,** *adj.*

basilar a. Basilar process of the occipital bone.

calcaneal a. Epiphysis of the posterior part of calcaneus.

cerebral a. Pineal gland.

false a. See *epiphysis*.

lenticular a. The lenticular process.

mammillary a. Olfactory bulb.

true a. One which has never been an epiphysis.

a-poph″y-si′tis [apophysis; G. *-itis*, inflammation]. Inflammation of an apophysis.

ap″o-plas′mi-a (ap-o-plaz′mee-uh) [G. *apo*, from; *plasma*, from *plassein*, to form]. Deficiency of the blood plasma.

ap-o-plec′ti-form [G. *apoplēssein*, to cripple by stroke; L. *forma*, form]. Resembling apoplexy.

ap′o-plex″y [G. *apoplēxia*, from *apoplēssein*]. 1. The symptom complex resulting from hemorrhage into

or upon the brain, or from embolism or thrombosis of the cerebral vessels, consisting of sudden onset of coma, and focal neurological signs. 2. Gross hemorrhage into any organ, as the lungs, spleen, ovary, eye, etc.; designated as apoplexy of the affected organ. *Rare.* —**apoplec tic, apoplec tiform,** *adj.*

asthenic a. That due to vital depression or debility.

bulbar a. That due to hemorrhage into the substance of the medulla oblongata or pons, causing paralysis of one or both sides of the body, inability to swallow, difficulty in protruding the tongue, dyspnea, gastric disorders, and disturbed heart action.

capillary a. That resulting from the rupture of capillaries.

cerebellar a. That affecting the cerebellum.

cerebral a. That affecting the cerebrum.

embolic a. Apoplexy resulting from the plugging of a cerebral vessel by an embolus.

fulminant a. A sudden and fatal form of cerebral hemorrhage.

ingravescent a. A form in which there is a slowly progressing loss of consciousness, owing to gradual leakage of blood from a ruptured vessel, or to thrombosis. Also called *progressive a.*

nervous a. (a) Acute anemia of the brain. (b) A condition simulating apoplexy caused by some functional nervous condition, as hysteria. Also called *functional a.*

placental a. Escape of blood into the placental substance.

pulmonary a. Escape of blood into the pulmonary parenchyma.

renal a. *A misuse of the word apoplexy* commonly used for ischuria, or suppression of urine from hemorrhage into the substance of the kidney or other renal lesion.

retinal a. Hemorrhage into the retina.

sanguineous a. Hemorrhage into or upon the brain; true apoplexy.

serous a. (a) That due to an effusion of serous matter into or upon the brain, usually by effusion into the ventricles causing distention. (b) Serous meningitis. Also called *pituitous a.*

simple a. Fatal coma in which no cerebral accident can be found.

spinal a. Rupture of a blood vessel into the substance of the spinal cord.

splenic a. Hemorrhage into the splenic substance.

suppurative a. That due to purulent processes.

uterine a. Escape of blood into the muscular tissue of the uterus.

uteroplacental a. See Couvelaire *uterus.*

a·pop·nix'is [G. *apopnixis*, to choke]. A choking sensation. Syn., *globus hystericus.*

ap·o·qui'nine (ap-o-kwye'nine, kwi neen') $C_{19}H_{22}N_2O_2$; an alkaloid obtained by demethylation of quinine.

ap'or·rhip·sis [G., from *aporrhiptein*, to throw away]. The throwing off of the clothes or the bedclothes; a symptom seen in some cases of mental disorder.

a·po'si·a (a po shuh, -see uh) [G. *a-*, not; *posis*, drinking]. Absence of thirst or of the feeling of thirst; adipsia.

ap·o·sid'er·in. A brown, granular, iron-negative pigment apparently formed from hemosiderin by action of acid fixatives.

ap'o·si'ti·a (ap·o·sish'ee·uh, ·sit'ee·uh) [G. *apo*, from; *sitos*, food]. Aversion to or loathing of food. —**aposit'ic,** *adj.*

ap·o·some [*apo*; G. *sōma*, body]. A cytoplasmic cellular inclusion produced by the cell itself.

a·pos'po·ry [*apo*; G. *sporos*, spore]. Apogamy involving the replacement of spores by unspecialized cells not undergoing miosis.

a·pos'ta·sis [G., defection]. End or crisis of an attack of disease; termination by crisis.

a·pos·thi'a [G. *a-*, not; *posthē*, foreskin]. Congenital absence of the prepuce.

a·poth·e·car'ies' weight. A system of weights and measures used in compounding medicines. The troy pound of 5760 grains is the standard. It is subdivided into 12 ounces. The ounce is subdivided into 8 drachms, the drachm into 3 scruples, and the scruple into 20 grains. For fluid measure the quart of 32 fluidounces is subdivided into 2 pints, the pint into 16 fluidounces, the fluidounce into 8 fluidrachms, and the fluidrachm into 60 minims. The following symbols and abbreviations are used:

♏, *minim.*
℈ *scrupulus*, scruple (20 gr.)
ʒ *drachma*, drachm (60 gr.)
℥ *uncia*, an ounce (480 gr.)
℔., *libra*, pound.
C., *congius*, gallon.
O *octarius*, pint.
gr *granum*, grain.
ss., *semissis*, one-half

See Tables of Weights and Measures, Appendix.

a·poth·e·car'y [G. *apothēkē*, storehouse]. 1. A druggist or pharmacist; one who prepares and sells drugs, fills prescriptions, etc. 2. In Great Britain, a physician filling his own prescriptions, especially one licensed by the Society of Apothecaries of London, or by the Apothecaries' Hall of Ireland. *Obs.*

apothesine hydrochloride. Trade-mark for a local anesthetic, gamma-diethylaminopropyl cinnamate hydrochloride. It is effective for injection anesthesia but relatively inefficient when applied to mucous membranes.

ap·ox·e·me'na [G. *apoxein*, to scrape off]. The group of substances removed from a pocket in the treatment of periodontoclasia.

ap·ox·e'sis [G., smoothing, from *apoxein*]. The act of removing apoxemena from the periodontoclasial pocket, and rendering the denuded cementum smooth.

a·po·zy'mase. The residue from yeast after drying and extracting the enzymase with water.

ap·pa·ra'tus [L., preparation]. 1. A collection of instruments or devices used for a special purpose. 2. *In anatomy,* used to designate collectively the organs or parts of organs performing a certain function; mechanism.

canalicular a. See internal reticular *a.*

Golgi a. See internal reticular.

Guthrie-Smith a. One used to facilitate exercises in cases of poliomyelitis. The limb or trunk is suspended in slings, and exercises are controlled by adjusting the point of suspension.

Hertel a. An apparatus for measuring the degree of exophthalmos.

internal reticular a. An organoid, probably present in all cells, demonstrated by special staining methods. It may be important in cellular activities, especially in the secretion of gland cells. Syn., *Golgi a., canalicular a., nemosome.* Formerly called *trophospongium, apparatus a.*

juxtaglomerular a. A cuff of epithelioid cells in the kidney around the afferent arteriole near its entrance into the glomerulus.

lacrimal a. The mechanism for secreting tears and draining them into the nose, consisting of the lacrimal gland, lake, puncta, canaliculi, sac, and the nasolacrimal duct. See Plate 19.

stereotaxic a. An apparatus which allows accurate insertion of long electrodes deep into the

brain. This may be used in physiologic experimentation or in neurosurgery.

Tiselius a. An electrophoresis apparatus which permits the measurement of electric mobilities of proteins by use of the moving-boundary method. The cell is divided into compartments which permit easy isolation of the components separated by the electric current.

vestibular a. The anatomical parts concerned with the vestibular portion of the eighth cranial nerve, including the saccule, utricle, semicircular canals, vestibular nerve, and vestibular nuclei.

appella. A proprietary dehydrated, concentrated apple powder for use in the treatment of diarrhea.

ap·pend'age [L. *appendere*, to weigh, hang]. Anything appended, usually of minor importance. —**appendic'ular**, **appendic'ulate**, *adj.*

appendages of the eye. The eyelashes, eyebrows, lacrimal gland, lacrimal sac and ducts, and conjunctiva.

auricular a. (a) The projecting part of either cardiac atrium. See *auricle*, 2. (b) See *auricle*, 1. (c) Any ear-shaped structure or appendage.

cecal a. *Old term for the vermiform appendix.*

cutaneous appendages. Nails, hair, sebaceous glands, mammary glands, and sweat glands.

epiploic appendages. See under *appendix*.

fetal appendages. Placenta, amnion, chorion, and umbilical cord.

ovarian a. Parovarium.

pineal a. Epiphysis.

pituitary a. The pituitary.

uterine appendages. Ovaries and oviducts.

ap"pen·dec'to·my, **ap·pen"di·cec'to·my** [L. *appendix*, appendage; G. *ektomē*, excision]. Excision of the vermiform appendix.

atrial a. Excision of an auricular appendage of cardiac atrium, especially that of the left atrium as part of an operation for the relief of mitral stenosis.

ap·pen"di·ci'tis [*appendix*; G. *-itis*, inflammation]. Inflammation of the vermiform appendix.

actinomycotic a. That form due to infection with actinomyces.

acute a. That form characterized by sudden onset of abdominal pain, generalized at first, then becoming localized to the right lower quadrant, with nausea, vomiting, and constipation, fever, leukocytosis, localized tenderness, and rigidity. In the absence of operation the attack subsides or goes on to gangrene, perforation, and abscess formation or peritonitis.

acute catarrhal a. The early stage of the disease characterized by inflammation of the mucosa with nonpurulent exudate. It may heal spontaneously or go on to the diffuse type. Also called *simple a.*

acute diffuse a. A later stage of the disease than the catarrhal form, characterized by more extensive inflammation, purulent exudate, ulceration of the mucosa, and sometimes gangrene and rupture.

chronic a. That form characterized by recurring attacks of right-sided pain without the signs and symptoms of acute attacks. The appendicular origin of this ailment is doubted by many.

gangrenous a. Acute appendicitis with formation of pus and necrosis of the appendix.

obliterative a. That form in which the lumen is narrowed or closed; often found in so-called chronic appendicitis.

perforating a. This form follows acute gangrenous appendicitis with perforation of the appendix and peritonitis or abscess formation.

phlegmonous a. Abscess formation following perforating appendicitis.

purulent a. Suppurative appendicitis.

recurrent a. Repeated attacks of acute appendicitis.

subacute a. Mild acute appendicitis.

suppurative a. Acute appendicitis with formation of pus.

sympathetic a. Inflammation of the appendix due to disease of adjacent structures.

tuberculous a. Chronic ulcerative appendicitis of tuberculous origin.

ap·pen"di·clau'sis. Chronic appendicitis, especially of the obliterative type. See *chronic appendicitis*, obliterative *appendicitis*.

ap·pen"di·co·en"ter·os'to·my. See *appendicostomy*.

ap·pen"di·co·li'thi" [*appendix*; G. *lithos*, stone]. A concretion of dried mucus, bacteria, and cellular debris, or of fecal matter coated with mucus often found in inflamed appendices.

ap·pen"di·cos'to·my [*appendix*; G. *stoma*, mouth]. Withdrawal of the appendix and mesoappendix through a McBurney incision, anchoring the former to the abdominal wall. The tip is then cut off and a catheter passed through the appendiceal lumen into the cecum for subsequent irrigation.

ap·pen'dix (*pl. appendixes, appendices*) [L.]. An appendage. —**appen'diceal**, **appendicial**, **appendiceal**, *adj.*

appendices epiploicae. Fatty projections of the serous coat of the large intestine.

appendices epoophori. Vestigial remnants of the mesonephric tubules or ducts found in or on the broad ligament of the uterus or near the fimbriae of the uterine tube.

a. auricularis. See auricular *appendage*.

a. epididymidis. Vestigial mesonephric tubules or ducts attached to the head of the epididymis.

a. of the laryngeal ventricle. A blindly ending diverticulum of mucous membrane extending from the laryngeal ventricle upward, between the ventricular fold and the inner surface of the thyroid cartilage; saccule of the larynx.

a. testis. A remnant of the cranial part of Müller's duct, attached to the testis. Formerly called *hydatid of Morgagni*.

auricular a. See *auricle*, 2.

vermiform a. The small, blind gut projecting from the cecum. See Plate 13.

vesicular appendixes. Vestigial remnants of cranial mesonephric tubules, located in the distal end of the mesosalpinx or adjacent broad ligament.

xiphoid a. The third piece of the sternum. It becomes osseous in mature age. Also called *xiphoid cartilage*, *xiphoid process*, *ensiform process*.

ap·per·cep'tion [L. *ad*, to; *percipere*, to perceive]. Consciousness of the relation of new events, situations, or sensations to past experiences. —**apperceptive**, *adj.*

ap·per·son"i·fi·ca'tion [*ad*; L. *persona*, person; *facere*, to make]. Unconscious transfer to one's own ego of certain qualities in other persons or objects. Syn., *identification*.

ap'pe·tite [L. *appetitus*, from *appetere*, to strive after]. Desire for food, not necessarily prompted by hunger; any natural desire or craving.

a. juice. Gastric juice, the flow of which is initiated by the sight, odor, or thought of food (psychic causes) and by tasting or chewing food, without swallowing it.

excessive a. Bulimia.

perverted a. A desire for unnatural or indigestible foods, seen occasionally during pregnancy; pica.

ap·pe·ti"zer [*appetere*]. A medicine or aperitif taken before a meal to stimulate the appetite.

ap·pla·nate [L. *ad*, to; *planus*, flat]. Horizontally flattened. —**applana'tion**, *n.*

ap·pli·ca"tor [L. *applicare*, to apply]. An instrument used in making local applications.

ap po-si'tion [L. *appositus*, from *apponere*, to apply to]. The act of fitting together; the state of being fitted together. Juxtaposition.

ap proach [OF. *aprochier* from L. *ad*, *propiare*, to draw near]. In *surgery*, the manner of securing access to a joint, cavity, part, or organ by suitable incision through the overlying or neighboring structures, as the anterior axillary approach for exposing the shoulder joint.

a pprox'i mal, ap-prox'i mate [L. *approximare*, to draw near to]. Situated close or near; contiguous; next to each other; as approximal fillings.

ap-prox"i ma'tion [*approximare*]. The act or process of bringing together. —**approx'imate**,

a-prac"tag no'si-a. A type of agnosia in which there is disorientation for right and left.

a prax'i a (ay-prack'see-uh, prack') [G. from *a-*, not; *prassein*, to do]. A disorder of the nervous system, caused by lesions in the cortical area characterized by inability to perform purposeful movements, although no muscular paralysis or sensory disturbance is present. Also called *constructional apraxia*.

amnestic a. That due to inability to remember command.

ideational a. That in which there is lack of ideas for planning an act, or distorted sequence of ideas or conception of how to use them; due to diffuse brain disease.

ideokinetic a. See ideomotor *a*.

ideomotor a. That in which simple single acts are correctly performed, but the sequence of associated acts is incorrect and final, complex act cannot be carried out; due to interruption of the association pathways between ideational and motor kinesthetic areas. Syn., *ideokinetic a.*

kinetic a. See motor a.

motor a. Apraxia in which simple movements are clumsy and individual finger movements are often lost, caused by lesion of the precentral gyrus involving kinesthetic memory. Syn., *kinetic a.*

ocular motor a. A syndrome characterized by the absence of willed movements of the eyes laterally, retention of random movements, and fixation gaze accomplished by jerky overshooting of the head.

apresoline hydrochloride. Trade-marked name for hydralazine hydrochloride or 1-hydrazinophthalazine hydrochloride, an antihypertensive agent.

a pro-bar'bi tal. Generic name for *allylisopropylbarbituric acid*. See alurate.

a proc'ti-a (ay prock'shee-uh, prock') [a- G *proktos*, anus]. Imperforate anus. —**aproctous**, *adj*

a"pro-sex'i a [G., want of attention]. A mental disturbance consisting in inability to fix attention upon subject.

a. nasalis. Inattention and mental dullness often seen in chronic nasal catarrh, especially when associated with adenoids, in children.

a pro-so pi [G a- not *prosopon*, face]. Congenital absence of part or all of the face. —**apros'opous**, *adj* **apros'opus**, *n.*

ap sel"a phe si a (p-sel uh fee shuh, -see-uh, -zhuh, -zee-uh) [a-; G *psēlaphēsis*, touching]. Loss of the tactile sense.

ap si thy'ri **ap si thu're-** [a- G *psithyrisis*, to whisper]. Hysterical aphonia, in which the patient loses the voice, being unable even to whisper

ap-sych'i-a (ap-sick ee-uh, ap sigh'kee-uh, ay-sick' sigh') [a- G *psychē*, the conscious self]. Unconsciousness; faint or swoon. *Obs.*

ap-ty'a-lism (ap tye -lis-um, y-tye) **ap"ty-a'li-a** (ap'tye-ay'lee-uh, ap'ti-) [a- G *ptyalizein*, to salivate]. Deficiency or absence of saliva.

a'pus [a- G *pous*, foot]. Lacking feet, or without the entire lower extremities.

a py e-tous [a- G *pyon*, pus]. Nonsuppurative, nonpurulent without pus. *Obs.*

a-py'rene (ay-pye reen) [a-; G *pyrēn*, fruit-stone]. Descriptive of abnormal sperm cells in which all the chromosomes degenerate, so that they lack nucleus. See *eupyrene*, *oligopyrene*.

a"py-rex'i a (y'pye-reck'see-uh, -pye-) [a-; G. *pyressein*, to be feverish]. Absence of fever. —**apyrexial, apyret'ic**, *adj.*

AQ, A.Q Achievement quotient.

aq. *Aqua*, water; water of crystallization.

A qrs In *electrocardiography* symbol for the mean manifest magnitude of QRS determined algebraically and measured in microvolt seconds.

aq'ua (ack'wuh, ay'kwuh) (pl. *aquae*) [L., water]. Water; medicated water as aromatic waters, saturated solutions of volatile oils or other volatile substances in water. Abbreviated, a., aq. —**a que-ous**, *adj*

aquacillin. A trade-mark for certain preparations of crystalline procaine penicillin G for administration by aqueous injection.

aq"uae-duc'tus. See *aqueduct*.

aquakay Trade-mark for water-soluble derivative of menadione.

aquaphor A proprietary ointment base with the ability to absorb three times its own weight of water or aqueous solutions of medicaments.

aquasol A. Trade-mark for water-dispersible preparation of vitamin A.

aq'ue-duct [aqua; L. *ductus*, leading]. A canal for the passage of fluid any canal.

a. of Fallopius. Old term for facial *canal*.

a. of Sylvius. See cerebral *a*.

a. of the cochlea. A canal which establishes communication between the perilymphatic space of the osseous labyrinth and the subarachnoid space, and transmits vein for the cochlea.

a. of the vestib le. A canal of the vestibule of the ear running from the vestibule and opening on the back of the petrous portion of the temporal bone and containing the endolymphatic duct and small vein.

cerebral a. The elongated, slender cavity of the midbrain which connects the third and fourth ventricles. Also called *a. of Sylvius*. See Plate 18.

accommunicating a. A small canal sometimes found at the junction of the mastoid and petrous portions of the temporal bone it gives passage to an emissary vein from the transverse sinus.

que-ous (ay'kwee-us, ack'wee-us) [aqua]. The aqueous humor the transparent fluid of the anterior chamber of the eye

aquinone. Trade-mark for menadione.

aq"uo-i'on. A complex ion containing one or more molecules of water

ar-. 1. I *chemistry* combining form denoting *aromatic*. 2. A form of Latin *ad-* assimilated in English before

Ara's test. See Takata-Ara *test*.

ar' bic ac'id (ar'uh bick, -rab'ick) The chief constituent of acacia, in which it occurs in the form of calcium, magnesium, and potassium salts. It is polysaccharide yielding on hydrolysis with dilute acid, L-arabinose, L-rhamnose, D-galactose, and an aldobionic acid containing D-glucuronic acid and D-galactose in glycosidal combination. Syn arabin.

ar'a-bin [G *Arabikos*, Arabic]. Arabic acid.

a rab'i nose, ar' bi nose" CHO(CHOH) CH₂-OH an aldopentose which exists in two structural configurations having mirror-image relationship to one another and differentiated as L-arabinose and D-arabinose. The former is dextrorotatory

and hence is sometimes referred to as L(+)-arabinose; the latter is levorotatory and is therefore designated D(−)-arabinose. The L-sugar, also called *pectinose, pectin sugar* and *gum sugar* is widely distributed in plants, usually as component of complex polysaccharide; thus, it may be obtained by hydrolysis of arabic acid from acacia. D-Arabinose may be obtained by degradation of dextrose (D-glucose)

a-rab'i tol. $CH_2OH(CHOH)_3CH_2OH$; an alcohol derived from arabinose.

a-rach'ic, ar" -chid'ic ac'id. $CH_3(CH_2)_{18}COOH$; solid fatty acid obtained from peanut oil.

ar" -chid'ic (ar"uh kid'ick) [G *arakos*, leguminous plant]. Pertaining to the peanut, *Arachis hypogaea.*

a-rach"i-don'ic ac'id (a-rack"i-don'ick, rake"i ar"uh ki) $C_{20}H_{32}O_2$ An unsaturated, fatty acid occurring in lecithin and cephalin. It is one of the fatty acids which will cure the syndrome in the rat caused by dietary deficiency of essential fatty acids.

ar'a-chin (ar uh kin) A globulin from peanuts.

arachn-. See *arachno-*

-rach"no-pho'bi-a (a-rack"ni-) [G *arachnē*, spider; *phobos* fear]. Morbid fear of spiders.

A-rach'ni-da (a-rack'ni-duh) [*arachnē*]. A large class of the Arthropoda which includes scorpions, spiders, mites, and ticks. They are wingless, usually lack antennae, and, as adults, have four pairs of legs.

a rach'nid-ism, a rach noid-ism [*arachnē*; G *eidos*, form]. A condition produced by the bite of poisonous spider; venom poisoning.

ar"ach-ni'tis (ar"ack-nigh tis) See *arachnoiditis*.

-rach no- (a-rack no-) arachn- [*arachnē*]. A combining form meaning *spider*

a-rach no-dac'ty ly [*arachnē*; G. *daktylos*, finger]. Spider fingers condition in which the fingers, and sometimes the toes, are abnormally long; Marfan's syndrome. Syn., *dolichostenomelia*.

a-rach'noid (a-rack noyd) [*arachnē*; G *eidos*, form]. The *arachnoidea encephali* [BNA], and *arachnoidea spinalis* [BNA]. The arachnoid membrane; the central of the three meninges covering the brain and spinal cord. It is very fine and delicate in structure, following the pia mater into each sulcus and around each convolution, but separated from it by the subarachnoid space. The two membranes are often considered as one organ, the piarachnoid. —**arach-noi'dal**, *adj*

rach-noi'de-a [BNA]. The arachnoid membrane. See *arachnoid*.

-rach'noid ism. See *arachnidism*.

a-rach noid-i'tis [*arachnē*; *eidos*; G -*itis*, inflammation]. Inflammation of the piarachnoid of the spinal cord and brain.

adhesive a. Adhesion of the arachnoid layers due to inflammation subsequent to infection, noxious agents, or trauma. The cicatrix may occur in any region of the central nervous system which is enveloped by arachnoid membrane.

a. of cerebral hemispheres. A collection of fluid in thickened and opaque arachnoid in the surface of the brain. It is characterized by headache, monoplegia, speech disturbance, and changes in the visual fields, and later by focal epileptic attacks.

chiasmal a. Localized inflammation of the meninges around the optic chiasm and optic nerves and of the contained structures, formerly considered the pathogenetic factor in syphilitic optic atrophy. Syn., *opticochiasmic a.*

chronic serous a. A form which may be local or generalized, similar to cerebellar tumor with thickening of the arachnoid over the cerebellum and enlargement of the basilar cisterns causing internal hydrocephalus. Treatment is the surgical opening of the basal cisterns. Also called *cisternal arachnoiditis.*

cisternal a. Chronic serous arachnoiditis.

opticochiasmic a. See chiasmal a.

posterior cranial fossa a. Inflammation of the arachnoid in the posterior cranial fossa, common complication of mastoiditis, petrositis, lateral sinus thrombosis, chronic middle-ear disease, and leptomeningitis. It may increase intracranial pressure by impeding the escape of the cerebrospinal fluid from the fourth ventricle, thus causing obstructive internal hydrocephalus.

segmental a. A type in which arachnoidal adhesions connect th neighboring nerve roots with each other and with the dura mater

a-rach'noid-o-u-re"ter-os'to my A one-stage operation for the relief of progressive hydrocephaly in infants, in which cerebrospinal fluid is shunted into the urinary tract. One kidney is removed and polyethylene tube is inserted into the ureter. The other end of the tube is introduced into the subarachnoid space at the level of the second lumbar vertebra.

ar"ach nol'y-sin (ar"ack-nol'i-sin) [*arachnē*; G *lysis*, loosing]. A substance contained in the spider *Epeira diadema*, which reacts strongly with the blood of the rabbit and man but not with the blood of the horse or guinea pig.

aralen diphosphate. Trade-mark for chloroquine phosphate.

A ra'li-a [perhaps Iroquoian in origin]. A genus of aromatic plants of the Araliaceae.

A. nudicaulis. Wild sarsaparilla used similarly to *A. racemosa.*

A. racemosa. American spikenard, whose dried rhizome and roots yield volatile oil and a saponin, formerly used as stimulant, diaphoretic, and alterative.

Aran, François Amilcar [*French physician*, 1817 61]. Described progressive spinal muscular trophy (1850) shortly after Duchenne (1849) Thus is called *Duchenne-Aran muscular atrophy, Cruveilhier's disease.*

Aranzi, Giulio Cesare (Arantius, Aranzio) [*Italian anatomist*, 1530–89]. Remembered for his description of the ductus venosus (called *duct of Arantius*) ligamentum venosum semilunar valves, and Arantius ventricle. The *nodules of Arantius* are those of the semilunar valves.

a-ra phi-a. Dysraphism.

a ra-ro'ba (ahr"ah-ro'buh, ar"uh-ro'bah) [Pg.]. Goa powder An oxidation product of the resin found deposited in the wood of the trunk of *Andira Araroba*, of Brazil. From it is obtained chrysarobin, complex mixture of reduction products of chrysophanol. It is used in skin affections.

ar"bor i za'tion [L. *arbor* tree]. A conformation or arrangement resembling the branching of tree. —**ar'borize**, *v.i.*, *t.*; **arbo real, arbo' reous, arbores cent**, *adj*

terminal a. (a) Branched end of sensory nerve fiber (b) A motor end plate. (c) Terminal ramifications of the Purkinje system of the heart.

vascular a. A treelike branching of blood vessels.

ar"bor vi'tae (ahr"bor vy'tee) [L., tree of lif]. 1. Arborescent appearance of the white substance in median section of the cerebellum. 2. Series of ridges and folds of the mucosa within the uterine cervix also called *plicae palmatae cervicis.*

ar'bu tin [L. *arbutus*, strawberry tree]. A bitter glycoside from the *Arctostaphylos Uva-ursi*, (or bearberry See *uva ursi.*

arc [L. *arcus*, bow an arch]. A part of the circum-

ference of a circle; a more or less curved passageway

a. de cercle. A pathologic posture in which there is extreme bending of the body forward or backward sometimes seen in hysteria.

arterial a. of Riolan. An occasional artery situated in the posterior abdominal wall which forms a connection between the superior mesenteric artery and branch of the inferior mesenteric artery

bigonial a. (of lower j w) A measurement around the anterior margi of the jaw

binauricular a. A measurement from the center of one auditory meatus to the other directly upward cross the top of the head.

bregmatolambdoid a. A measurement along the sagittal suture from the bregma to the lambda.

frontal a. The measurement from the nasion to the bregma.

maximum transverse a. The measurement across the face from point on each side just anterior to the external auditory meatus.

nasobregmatic a. A line measured from the root of the nose to the bregma.

nasomalar a. Measurement between the outer margins of the orbits over the nasion.

naso-occipital a. Measurement from the root of the nose to the lowest point of the occipital protuberance.

neural a. A nerve circuit consisting f two or more neurons, the receptor and the effector with intercalated eurons between them.

nuclear a. Lens star

occipital a. Measurement from the lambda to the opisthion.

parietal a. Measurement from the bregma to the lambda.

reflex a. The nervous pathway traversed by an impulse during reflex action, extending from receptor to an effector

ar·cade [arcus] A series of arches; term used in reference to blood vessels.

crural a. The inguinal ligament.

inferior temporal a. The zygomatic arch.

superior temporal a. The upper margin of the orbit.

arcanol. A proprietary preparation in tablet form, containing atophan and acetylsalicylic acid.

ar·ca·num [L., secret]. A secret medicine.

ar″cu a tu′ra [L. arcus, bow an arch]. A condition of horses marked by the undue outward curvature of the forelegs.

arch [arcus]. A structure having curved outline resembling that of an arc or bow

abdominothoracic a. The lower boundary of the front of the thorax.

alveolar a. That formed by the alveolar process of each jaw

anastomotic a. One uniting two veins or arteries.

aortic arches. Six pairs of embryonic vascular arches encircling the pharynx in the visceral arches. In mammals, the left fourth arch becomes a part of the systemic circulatory system and the sixth pair becomes incorporated in the pulmonary circulation.

arches of the foot. (a) The *metatarsal arch*, transverse hollow on the inner part of the sole in the line of the tarsometatarsal articulations. (b) The *inner longitudinal arch*, consisting of the calcaneus, the talus, the navicular three cuneiform bones, and the first three toes. (c) The *outer longitudinal arch*, made up of the calcaneus, the cuboid, and the fourth and fifth toes.

a. of the aorta. The transverse portion of the aorta between its ascending and descending portions. See Plates 5, 7

axillary a. An occasional muscle slip in the axilla connecting the latissimus dorsi or teres major with the pectoralis major

branchial a. (a) One of the posthyoid gill arches in lower vertebrates. (b) Any of th visceral arches in embryos of higher vertebrates.

carpal arches. See dorsal carpal *rete*.

cervical a. One of the second to sixth visceral arches forming part of the cervical region.

cortical a. The renal substance which stretches from one column to another and surrounds the base of pyramid.

costal a. The arch of the ribs.

deep femoral a. A band of fibers originating apparently in the transversalis fascia, arching across the femoral sheath and attached to the middle of the inguinal ligament and the pectineal line.

deep palmar a. See deep volar a.

deep volar a. That formed by the anastomosis of the terminal part of the radial artery with the deep volar branch of the ulnar artery Syn., *deep palmar a.*

dental a. The parabolic curve formed by the cutting edges and masticating surfaces of the teeth; the alveolar arch.

double aortic a. Failure of the right fourth branchial arch to disappear during normal embryological development, resulting in two aortic arches or an aortic ring.

facial a. The hyoid arch supplied by the facial nerve.

frontal a. I *comparative anatomy* the ring formed by the presphenoid, orbitosphenoid, and frontal bones.

glossopalatine a. That formed by the projection of the glossopalatinus muscle covered with mucous membrane. Also called *palatoglossal a.* Formerly called *anterior pillar of the fauces*.

gluteal a. An opening in the gluteal fascia allowing passage for the gluteal vessels and nerves.

gothic a. A dental arch which is depressed laterally and pointed anteriorly

hemal a. I *comparative anatomy*, the inferior loop of the typical vertebra, surrounding the essential portion of the vascular system. In man, the arch formed by the body of vertebra together with the ribs and sternum.

hyoid a. The second visceral arch.

hypochordal a. A condensation of mesenchyme forming transverse bands connecting the ventral ends of the embryonic neural processes of the cervical vertebrae Transitory except in the first cervical segment where it develops into the ventral arch of the atlas.

jugular a. A communicating vein between the anterior jugular veins situated in the suprasternal space.

lumbocostal a. A ligamentous arch from the twelfth rib to the first lumbar vertebra serving as part of the attachment of the diaphragm. The **lateral lumbocostal arch** is that lying anterior to the quadratus lumborum; the **medial lumbocostal arch** is that lying anterior to the psoas major

mandibular a. The first visceral arch, including the maxillary process also called *Meckel' bar*

maxillary a. See palatomaxillary a.

nasal a. One uniting the two frontal veins.

neural a. (a) Vertebral arch (b) I *comparative anatomy*, the superior loop of the typical vertebra including the neural canal.

occipital a. I *comparative anatomy*, the ring formed by the basioccipital, exoccipital, and supraoccipital bones.

palatal a. The concavity of the hard palate when seen in transverse section.

palatine arches. The glossopalatine and pharyngopalatine arches.

palatomaxillary a. One formed by the palatine, maxillary and premaxillary bones.

palmar arches. See deep volar a. and superficial volar a.

parietal a. *In comparative anatomy,* the ring formed by the basisphenoid, alisphenoid, and parietal bones.

pharyngeal a. See visceral a.

pharyngopalatine a. That formed by the projection of the pharyngopalatinus muscle covered by mucous membrane. Also called *palatopharyngeal a.* Formerly called *posterior pillar of the fauces.*

plantar a. The arch, in the sole of the foot, made by the lateral plantar artery and the deep plantar branch of the dorsalis pedis artery.

postoral a. Any one of the second to sixth visceral arches.

pubic a. That formed by the conjoined inferior rami of the pubis and ischium.

sitting a. That representing the line of transfer of weight through the pelvis in the sitting position; from the sacrum through the ilia and ischia to the ischial tuberosities.

standing a. That representing the line of transfer of weight through the pelvis in the standing position; from the sacrum through the ilia to the acetabulums and heads of the femurs.

superciliary a. See supraorbital a.

superficial palmar a. See superficial volar a.

superficial volar a. That formed by the ulnar artery in the palm of the hand and completed by a branch of the radial artery. Syn., *superficial palmar a.* See Plate 7.

supraorbital a. The curved and prominent margin of the frontal bone that forms the upper boundary of the orbit.

tarsal arches. The arches of the palpebral arteries.

tendinous a. A thickened portion of the parietal pelvic fascia extending from the medial aspect of the body of the pubic bone to the spine of the ischium; the fibers of the iliococcygeal portion of the levator ani muscle attach to it. Syn., *arcus tendineus, white line of the pelvis.*

tonsillar a. The isthmus of the fauces.

vertebral a. That formed by the paired pedicles and laminas of a vertebra, the posterior part of a vertebra which together with the anterior part, the body, encloses the vertebral foramen in which the spinal cord is lodged.

visceral a. (a) One of the series of mesodermal ridges covered by epithelium bounding the lateral wall of the oral and pharyngeal region of vertebrates; embryonic in higher forms, they contribute to the formation of the face and neck. (b) The skeleton of a visceral arch. (c) In gill-bearing vertebrates, one of the first two arches as opposed to the remaining or branchial arches.

volar arches. See deep volar a. and superficial volar a.

zygomatic a. That formed by the zygomatic process of the temporal bone and the temporal process of the zygomatic bone.

arch-. See *archi-.*

ar-cha'ic [G. *archaikos,* old-fashioned]. *In psychiatry,* designating elements in the unconscious which are remnants of man's prehistoric past, and which reappear in dreams and other symbolic manifestations.

ar"che-go'ni-um (ahr"ki-go'nee-um) [G. *archē,* beginning; *gonos,* race]. *In botany,* the structure which produces the egg in bryophytes and pteridophytes.

ar-chen'ter-on (ahr-ken'tur-on) [*arch-*; G. *enteron,* intestine]. The embryonic alimentary cavity of the gastrula, lined by endoderm. Syn., *archigaster, coelenteron, gastrocoel, primitive* or *primary gut, progaster, primitive stomach.* —**archenter'ic,** *adj.*

ar"che-o-ki-net'ic (ahr"kee-o-ki-net'ick, kigh-net'ick) [G. *archaios,* ancient; *kinēsis,* motion]. Referring to an ancient or primitive type of motor function.

ar-che-py'on (ahr-ki-pye'on, ahr-kep'ee-on) [G. *archē,* beginning; *pyon,* pus]. Pus that has become caseated, or so thick that it does not flow.

ar'che-type (ahr'ki-type) [G. *archetypon,* pattern]. 1. A basic model; prototype. 2. *In comparative anatomy,* an ideal, generalized structural pattern of one of the main kinds of organisms, assumed to be the form of the original ancestor of the group.

ar'chi-, arch- [L., G. prefix *archi-* from *archein,* to be first, and *archos,* chief]. 1. A prefix denoting *chief, first.* 2. *In anatomy* and *biology,* a prefix denoting *primitive, original, ancestral.*

ar"chi-a'ter [G. *archiatros,* court physician]. 1. The head physician at a court. 2. Chief physician of an institution. *Obs.*

ar'chi-coele (ahr'ki-seel) [G. *archē,* beginning; *koilia,* cavity]. The most primitive cavity of the embryo. Syn., *blastocoele.* Also called *segmentation cavity. Obs.*

ar'chi-gas"ter (ahr'ki-gas"tur). Archenteron.

ar"chi-gas'tru-la [*archi-*; G. *gastēr,* belly]. A primitive ciliated type of gastrula formed largely by simple invagination.

ar"chi-neph'ron [*archi-*; G. *nephros,* kidney]. The primitive kidney; pronephros. —**archineph'ric,** *adj.*

ar"chi-pal'li-um [*archi-*; L. *pallium,* cloak]. The olfactory pallium or the olfactory cerebral cortex; the rhinencephalon; the oldest part of the cerebral cortex. —**archipallial,** *adj.*

ar'chi-plasm. See *archoplasm.*

ar"chi-tec-ton'ic [G. *architektōn,* master-builder]. Pertaining to the structural arrangement or architectural construction of an organ or part. —**architectonics,** *n.*

ar'cho- (ahr'ko-) [G. *archos,* rectum]. A combining form formerly used to mean *rectal. Obs.*

ar'cho-plasm (ahr'ko-plaz-um), **ar"cho-plas'ma** (ahr"ko-plaz'muh), **ar'chi-plasm** (ahr'ki-plaz-um) [G. *archein,* from *archein,* to be first; *plasma,* thing formed]. The protoplasmic matter from which the centrosomes, asters, and spindle fibers are derived and of which they are composed. Syn., *ergoplasm, kinoplasm.* —**archoplas'mic,** *adj.*

ar'chos [G.]. The anus. *Obs.*

ar-chu'si-a. An extractable substance which aids the migration, growth, and reproduction of cells, soluble in blood, serum, plasma, and isotonic salt solutions. The cells do not retain it, so its concentration depends upon the surrounding medium.

ar'ci-form [L. *arcus,* bow, arch; *forma,* form]. Arcuate, bow-shaped, especially used to designate certain sets of fibers in the medulla oblongata, and certain veins and arteries of the kidney. See Table of Arteries in the Appendix.

arc-ta'tion [L., from *arctare,* to draw close together]. Contraction of an opening or canal; stenosis.

ar'cu-ate, ar'cu-al [L. *arcuare,* to curve like a bow]. Arched, curved; bow-shaped, as the arcuate fibers of the cerebellum and the cerebrum which serve as association fibers.

ar"cu-a'tion [L. *arcuatio,* a bowing]. Curvature, especially of a bone. —**ar'cual,** *adj.*

ar'cus [L.]. An arch.

a. anterior atlantis [BNA]. The anterior arch of the atlas.

a. juvenilis. A white ring around the cornea

occurring in young individuals and resembling the arcus senilis.

a. posterior atlantis [BNA]. The posterior arch of the atlas.

a. senilis. An opaque ring at the edge of the cornea, seen in the aged.

a. senilis lentis. *An opaque ring in the equator* of the crystalline lens; it sometimes occurs in the aged.

a. superciliaris [BNA]. The supraorbital ridge.

a. tarseus inferior An arterial arch along the edge of the lower eyelid.

a. tarseus superior An arterial arch along the edge of the upper eyelid.

a. tendineus. See tendinous *arch.*

arc'-weld"er's dis-ease See *siderosis.*

ARD Abbreviation for acute respiratory disease.

Arderne. See *John of Arderne.*

a're-a [L., an open space]. A limited extent of surface; region; structural or functional part of the cerebral cortex.

aortic a. The second right interspace near the sternum, where aortic sounds and murmurs are best heard.

a. acustica. An area in the lateral angle of the floor of the fourth ventricle overlying the nuclei of the vestibular nerve.

a. centralis. A thickened area of the retina in the center of which is the fovea centralis.

a. chorioidea. A thin-walled part of the embryonic brain, the site of the future choroid plexus of the third ventricle.

a. cribrosa. ( ) A small perforated space in the internal auditory meatus through which pass filaments of the acoustic nerve. (b) The surface onto which the papillary ducts of renal pyramid open into minor calyx.

a. opaca. The opaque peripheral area of the blastoderm of birds and reptiles, continuous with the yolk.

a. paraterminalis. A space on the medial aspect of the embryonic cerebral hemisphere.

a. pellucida. The central transparent area of the blastoderm of birds and reptiles overlying the subgerminal cavity

a. postrema. A narrow zone on the lateral wall of the fourth ventricle, separated from the ala cinerea by the funiculus separans.

a. vasculosa. The inner vascular zone of the area opaca; it consists of three layers.

a. vitellina. The outer nonvascular zone of the area opaca; it consists of ectoderm and endoderm.

association a. A term formerly used to designate cortical areas which supposedly had connections only with other parts of the cortex. Now used to designate many areas between the primary projection areas.

auditopsychic a. The auditory association area of the temporal cortex. Also called *Brodmann a. 42.*

auditory projection a. The cortical receptive center for auditory impulses, located in the transverse temporal gyri Also called *Brodmann a. 41 auditosensory a., auditory cortex.*

auditosensory a. The primary auditory projection area of the temporal cortex. Also called *Brodmann a. 41*

bare a. of the liver Triangular area on the superior surface of the liver devoid of peritoneum, enclosed by the coronary ligament.

Broca's a. See Pierre Paul *Broca.*

Brodmann's areas. Numbered regions of the cerebral cortex originally differentiated by histologic criteria, now used in discussions of cortical functions; as **areas 1, 2, 3,** the postcentral gyrus, the somesthetic area; **area 4,** the posterior part of the precentral gyrus, the motor area; **area 4S,** between areas 4 and 6, lesion of which causes spasticity of the muscles innervated by it. syn., *strip a. suppressor* **area 6,** the anterior part of the precentral gyrus and the adjacent posterior superior part f the frontal cortex, the premotor area **area 17** the walls and margins of the calcarine fissure, the visual projection area; **area 41,** the two transverse temporal gyri, the auditory projection area.

buccopharyngeal a. That part of the embryonic disk anterior to the head process and devoid of mesoderm; the anlage of the buccopharyngeal membrane.

calcarine a. The visual projection area of the occipital cortex in the walls and margins of the calcarine fissure Brodmann area 17

cardiogenic a. The region in the splanchnic mesoderm of the anterior part of the embryonic disk where the heart first appears in development

dentofacial a. That portion of the *face* which includes the teeth and their supporting structures.

dermatomic a. The ringlike bands of the integument innervated by the segmental spinal nerves.

diffraction a. A clear area seen in the microscopic image around all bodies of greater or less refractive power

embryonic a. That part of the blastoderm forming the embryo proper Also called *embryonic disk, germinal disk.*

extrapyramidal motor areas. Those portions of the cortex other than the pyramidal cortex, from which motor responses can be obtained upon stimulation, or motor losses observed after ablation Brodmann areas 6, 8, 19, 22.

germ a. The germinal disk.

germinal a. The germinal disk.

hypothenar a. (a) The region of the hypothenar eminence. (b) The medial or ulnar palmar space

intracochlear a. The posterior-inferior portion of the cochlear part f the otic capsule.

infranasal a. The ventral part of the median nasal process between the globular processes forms the mobile septum of the nose.

Kiesselbach's a. See Wilhelm *Kiesselbach.*

limitrophic a. Limitrophic zone.

Little's a. See Wilhelm *Kiesselbach.*

mesobranchial a. The ventral pharyngeal region between the visceral arches and grooves.

motor a. The precentral gyrus containing centers for voluntary movement; characterized histologically by the presence of Betz cells. Also called *Brodmann a. 4, pyramidal a., motor cortex.*

motor speech a. That located in the triangular and opercular portions of the inferior frontal gyrus its destruction causes motor aphasia. Also called *Brodmann a. 44, Broca' a., Broca' center*

nasal a. The ventrolateral thickened ectoderm of the frontonasal process from which the olfactory placode arises. Syn., *nasal field, olfactory field.*

nonnucleated a. Hypothetic spaces found at times between the endothelial cells of blood vessels; they have no nuclei, are smaller than endothelial cells, and are considered to be due to the removal of parts of the surrounding endothelium.

Obersteiner-Redlich a. The zone of entrance of dorsal roots into the spinal cord, where they are constricted and devoid of myelin. Syn., *root entrance zone.*

olfactory a. See anterior perforated *substance.*

oval a. of Flechsig. See septomarginal *tract.*

parastriate a. The visual association area of the occipital cortex immediately surrounding the visual area. Also called *Brodmann a. 18*

parolfactory a. An area of the cerebral cortex separated by the posterior parolfactory sulcus from the subcallosal gyrus and, incompletely by the anterior parolfactory sulcus from the superior frontal gyrus and gyrus cinguli.

peristriate a. The visual association area of the occipital cortex surrounding the parastriate area and extending to the borders of the occipital lobe; the second concentric area around the visual cortex. Also called *Brodmann a. 19*

piriform, pyriform a. The lateral olfactory gyrus, anterior part of hippocampal gyrus, and the uncus collectively

portal a. See portal space.

preceruminal a. See paraterminal body.

premotor a. The main cortical extrapyramidal motor area lying immediately in front of the motor area from which it differs histologically by the absence of Betz cells. Also called *Brodmann a. 6*

preoptic a. See preoptic region.

pretectal a. The area, rostral to the superior colliculus and lateral to the posterior commissure, which receives fibers from the optic tract.

projection a. An area of the cortex connected with lower centers by projection fibers. See under *fiber*

psychoauditory a. The cortical area concerned in perception of sound.

pyramidal a. The motor area of the cerebral cortex characterized histologically by the presence of giant pyramidal, or Betz, cells. Brodmann area 4.

seborrheic areas. The scalp, sides of the nose, chin, center of the chest, back, axillae, and groins.

sensory a. The general area of the cerebral cortex in which sensation is perceived.

septal a. See paraterminal body.

somesthetic a. The receptive center for proprioceptive or tactile sensation in the postcentral gyrus. Also called *Brodmann areas 1 2 3*

somesthetopsychic a. The somesthetic association area of the parietal cortex Brodmann's areas 5 and 7

striate a. The visual projection area of the occipital cortex characterized by the line of Gennari; Brodmann area 17

strip a. Area 4S of Brodmann areas.

suppressor a. See suppressor band.

thenar a. (a) The region of the thenar eminence. (b) The lateral palmar space.

triangular a. That portion of the median nasal process between the nasofrontal sulcus and the future tip of the nose forms the dorsum, or bridge, of the nose.

ulcer-bearing a. The posterior wall of the pyloric portion of the stomach, in which the great majority of all gastric ulcers occur

vestibular a. A triangular area, lateral to the sulcus limitans, beneath which lie the terminal nuclei of the vestibular nerve.

viscerocutaneous areas. Areas of skin and viscera corresponding to different spinal segments.

visual a. See visual projection a.

visual projection a. The cortical receptive center for visual impulses, located in the walls and margins of the calcarine fissure of the occipital lobe, characterized by the line of Gennari. Also called *Brodmann a. 17* visuosensory a., calcarine a., *striate* *visual cortex* *visual a.*

visuopsychic a. The visual association areas of the occipital cortex surrounding the visual projection area; Brodmann's area 18, the parastriate area, and Brodmann area 19 the peristriate area, collectively

visuosensory a. See visual projection a.

vocal a. The portion of the glottis lying between the vocal bands.

ar″e-a′tus [area]. Occurring in patches.

Ar′e-ca **A re ca** [NL., *areca*, from Malayalam *adekka*] A small genus of Palmae of tropical Asia and the Malay Archipelago; areca palm.

A. catechu. A species extensively cultivated in India, the Malay Archipelago, and the East Indies; betelnut palm. The dried ripe seeds contain several alkaloids, the most important being arecoline. The ground seeds are employed by veterinarians as a vermifuge. Dose, dogs, 2–4 Gm. (30–60 gr); sheep, 4–8 Gm. (1 2 dr.) The seeds mixed with leaves of *Piper Betle* and lime are used as masticatory

ar′e-cin. Areca red the red coloring matter from areca palm.

a **lin** (reck lee li ee′ko-) $C_8H_{13}NO$ A liquid alkaloid isolated from the seeds of *Areca catechu*. It is powerful poison, affecting the heart similarly to muscarine. It has anthelmintic properties. Dose 4–6 mg. (1/15–1/10 gr) *In veterinary medicine*, it is used also as cathartic.

a re-flex′i-a (ay′ri-fleck′see uh, -ri-) [G a- not; L. *reflectere* to bend back]. Absence of reflexes.

a re gen″er **tion** [a, LL. *regeneratio*, new growth, repair]. Failure of tissues to regenerate after disease or injury —**aregen erative,** *adj*

ar **na ceous** [L. *arenaceus*, from *arena*, sand]. Sandy

ar″ **na tion** [arena]. A sand bath. Therapeutic use of sand baths. Syn., *ammotherapy*

ar′ene. Any aromatic hydrocarbon any hydrocarbon in which t least one benzene ring is present.

-re o-la [L., dim. of area, area]. 1 Any minute interstice or space in tissue. 2. A colored or pigmented ring surrounding some central point or space, as nipple, pustule. 3. The part of the iris enclosing the pupil. —**areolar** *adj.*

a. mammae. The pigmented area surrounding the nipple of the breast. This enlarges during pregnancy producing the *second areola*. Also called *a. papillaris*, *mammary a.* See Plate 43.

umbilical a. A pigmented ring which surrounds the umbilicus in some individuals.

vaccinal a. A red ring surrounding pustule.

Aretaeus the Cappadocian (Aretaeus) [Greek physician and clinician in Rome, fl. second or third century]. Second only to Hippocrates in descriptive power Wrote on pneumonia, diabetes, tetanus, and diphtheria.

ar gam″bly-o pi-a, ar″gi-am″bly-o pi a [G *argos*, idle; *amblys*, dull; *ōps*, eye]. Amblyopia due to disuse of the eye.

Ar′gas [NL., probably from G *argos*, living without labor]. A genus of ticks.

A. persicus. A species primarily ectoparasitic on birds and occasionally man; believed to be the vector of tick fever

Ar gas′i-dae (ahr-gas′i-dee) [NL., probably from *argas*]. A family of soft-bodied ticks.

ar′ge-ma (pl. *argemata*) [G., an ulcer]. A white ulcer of the cornea, following phlyctenula.

argentitl. $AgCl.5CH_4N_2S$. Proprietary antiseptic consisting of complex salt of silver chloride with thiourea; used topically as 1:400 solution.

ar′gent See argento-

ar-gen′taf fin ar-gen′taf fine. Referring to the capacity of certain tissue elements t reduce silver in staining solution.

ar″gen taf fi no ma. See carcinoid.

ar gen′tic [argentum]. Containing silver in higher valence state.

argentide. A proprietary solution of silver iodide; used locally as astringent and antiseptic.

ar gen'to-, ar'gent [*argentum*] A combining form denoting *silver containing silver*

ar gen't phile ar gen to-phil. See *argentaffin*.

ar gen'tous [*argentum*]. Containing silver in lower valence state.

ar gen tum [L.]. See *silver*

ar"gi am"bly-o pi-a. See *argamblyopia*.

r"gil la ceous (ahr ji-lay shus) [G *argillos*, whit clay]. Claylike composed of clay

ar'gi nase (ar'ji-nace, -nase) Enzyme found in the liver kidney and spleen of mammals and in the seeds of certain plants. Its action is to split arginine into ornithine and urea.

ar'gi nine (ahr'ji-neen, -nin) α-Amino-δ-guanidinovaleric acid. $NH_2C(:NH)NHCH_2CH_2CH_2CH(NH_2)COOH$. An essential amino acid obtained from both animal and vegetable proteins. It occurs as colorless crystals soluble in water

ar'gi nyl. The univalent radical, $H_2NC(:NH)NHCH_2CH_2CH_2CH(NH_2)CO—$ of the amino acid arginine.

ar'gol. The impure potassium bitartrate deposited during the fermentation of grape juice. See *tartar*

ar'gon [G. *argos*, idle]. A = 39 944. An inert gaseous element present in the atmosphere. It may be obtained by fractionation of liquid air

Argyll Robertson, Douglas Moray Cooper Lamb [*Scottish physician*, 1837 1909]. Remembered for his description of the pupil which reacts to accommodation but not to light, characteristic of certain diseases (1869) called *Argyll Robertson pupil*.

rgyn. Colloidal compound of silver oxide and serum albumin brand of mild silver protein.

ar gyr'i-a (ahr-jirr'ee-uh, ahr-jy'ree-uh) [G *argyros*, silver]. A dusky-gray or bluish discoloration of the skin and mucous membranes produced by the prolonged administration or application of silver preparations, the granules of silver being deposited in much the same sites as those of the natural pigment of the skin. Syn. *argyrosis*. —**argyric,** *adj*.

ar'gy ro- argyr [*argyros*]. A combining form meaning *silver*

argyrol. Proprietary preparation somewhat similar to mild silver protein used as nonirritating antiseptic in infections of the mucous membranes.

ar gy'ro len tis. A condition of the lens of the eye seen rarely in prolonged silver intoxication, characterized by golden sheen to the anterior lens capsule.

ar gy'ro phile, ar gy'ro-phil (ahr-jy'ro- ahr'ji-ro-) [*argyros*; G. *philein*, t love]. Easily stained with silver Syn *argentaffin*, *argentophile*, *argentophil*.

ar"gy ro sis. Argyria

rhin en-ce pha'li a. See *arrhinencephalia*.

a-rhin'i a. See *arrhinia*.

a ri"bo-fla"vi no sis (rye"bo flay vi-n sis, -flav"i-no sis, rib o-) [a-; *ribose*, from Ger transposition of *arabinose*, pentose sugar L *flavus*, yellow G. *-osis*, condition]. Deficiency of riboflavin, condition formerly confused with pellagra. It is characterized by cheilosis, corneal and other eye changes, and dermatitis seborrheica.

ar'i-cine (ar seen, -sin) $C_{23}H_{26}N_2O$ An alkaloid obtained from several varieties of cinchona bark. Syn., *quinovatine*.

ariphen. Trade name for an analgesic and antipyretic preparation containing acetylsalicylic acid, sodium citrate and citrated caffeine.

a-ris"to gen'ic [G *aristos*, best; *genos*, race]. Well endowed eugenically —**aristogenics,** *n*.

aristol. Trade-mark for brand of thymol iodide.

A ris"to lo chi (a-ris"to lo"kee uh) [*aristos*; G *locheia*, childbirth]. A genus of Aristolochiaceae, many species of which are reported to have active medicinal qualities.

A. symbifera. Partial source of the drug guacin.

A. reticulata. Texas snakeroot. See *serpentaria*.

A. serpentaria. Virginia snakeroot. See *serpentaria*.

a ris"to-lo chine (ris"to-lo'keen, kin, ar is tol'o-) [*aristos*; *locheia*]. A poisonous alkaloid found in *Aristolochia serpentaria*.

Aristotle [*Greek philosopher and scientist*, 384–322 B.C.] Tutor of Alexander the Great and founder of comparative anatomy His influence on medical and scientific thought is felt to this day

ar"ith met'ic mean. The arithmetic verage.

rith"mo ma ni [G. *arithmos*, umber; *mania*, madness]. A morbid impulse to count objects; preoccupation with numbers.

ar"ky-o-chrome [G *arkys*, net; *chrôma*, color]. A nerve cell in which the stainable portion of the cytoplasm is in the form of network (Nissl)

Arlt, Carl Ferdina d von [*Bohemian ophthalmologist*, 1812–87]. Known for his operation for distichia, in which the ciliary bulbs are dissected from the tarsus by excision of crescent-shaped piece of skin and transplanted away from the edge of the lid this is known as *Arlt' operation*, *Arlt-Jaesche technic*. Arlt name has been given to many operative procedures upon the eye and eyelid for the relief of entropion, ectropion, stricture of the lacrimal duct, and symblepharon (1854–56) H also introduced an operation for enucleation of the eye. The granular form of trachoma is called *Arlt' trachoma*.

arm [AS]. 1 I anatomy the upper extremity from the shoulder to the elbow 2. Popularly the arm and the forearm. 3. That porti of the stand connecting the body or tube of microscope with the pillar

ar"ma men tar'i um (tair ee um) [L., an arsenal]. All of the books, journals, medicines, instruments, and laboratory and therapeutic equipment possessed by physician, surgeon, or medical institution to assist in the practice of his or its profession.

Ar mil'li fer [L. *armilla*, bracelet *ferre*, to bear]. A genus of pentastomes (tongue worms) whose larvae have been found in the liver lungs, and spleen of man. The medically important species are **A. armillatus** and **A. moniliformis**.

Ar mor Med'i-cal Re-search Lab' ra to ry An experimental station of the Army Medical Department, for research in the physiologic effects of armor equipment operation on personnel, and having for its object the reduction of operational hazards by the development of armor equipment.

rm pit" [AS. *arm*, arm; *pytt*, from L. *puteus*, well]. The axilla. See Plate 11

Ar'my Med'i-cal Cen'ter A centrally situated installation of the Army Medical Department where are located general hospital, research facilities, training schools for service personnel, laboratories, etc.

Arnaldus. See *Arnald of Villanova*.

Arnott, Neils [*Scottish physician*, 1788–1874]. Introduced local anesthesia maintained by the use of ice and salt, called *Arnott' anesthesia*.

Arnaud de Villeneuve. See *Arnald of Villanova*.

Arndt, Rudolph [*German psychiatrist* 1835–1900]. Remembered for his law in physiology that weak stimuli excite physiologic action, moderate ones favor it, and strong stimuli retard the action or abolish it altogether

Arneth, Joseph (1873–) German physician who introduced classification of the leukocytes of the myeloid series (1904) according to shape and lobulation of their nuclei by setting up five classes and number of subdivisions. Arneth formula

gives the approximate class percentages found in healthy persons: I. Single-lobed neutrophils, 5%; II. Two-lobed, 35%; III. Three-lobed, 41%; IV. Four-lobed, 17%; V. Five- (or more) lobed, 2%. He correlated his classification of the neutrophils with their development, and shifts in class percentages with pathologic states. By tabulating the series from left (Class I) to right (Class V) he introduced the terms, *shift to left* to indicate percentage increase of immature forms, and *shift to right* for an increase in older forms. He extended this system to the other formed cellular elements of the blood (leukocytes and erythrocytes) and to the platelets (1942). He also devised a phagocytic index based on the assumption that those neutrophils with three or more lobes possess the greatest phagocytic power (1904).

ar'ni·ca [perhaps corruption from G. *ptarmikē*, sneezewort]. The dried flower heads of the *Arnica montana*. Arnicin, arnidiol (or arnisterin) and volatile oil have been isolated from it. Arnica is an irritant, and was popularly used as a tincture for sprains, bruises, and surface wounds. It is rarely used internally.

ar'ni·cin. A brownish, bitter neutral principle which is extracted from the flowers of *Arnica montana*.

Arnold, Friedrich [*German anatomist and physiologist*, 1803–90]. Known for his descriptions of the frontopontine bundle or tract of the brain which bears his name, and of the small canal in the petrous portion of the temporal bone which gives passage to the auricular branch of the vagus nerve. Also described the ligament connecting the body of the incus with the roof of the tympanic cavity.

Arnold, Julius [*German pathologist*, 1835–1915]. See *Arnold-Chiari syndrome* under *Chiari*.

Arnold of Villanova (Arnoldus Catalanus, Arnoldus Villanovanus, Arnaud de Villeneuve) [*Spanish or Catalan physician and alchemist*, ca. 1235–ca. 1312]. Credited with the introduction of tinctures into pharmacology.

Arnold and Gunning's method. See under *method*.

Arnold method. See Volhard-Arnold method.

Arnold sterilizer. See under *sterilizer*.

ar·no'ta. See *annatto*.

Arneth, Emile [*French gynecologist*, 1871–]. Published an important contribution to the study of kraurosis vulvae (1899). Distinguished the double and quadruple rhythmic sounds of the two fetal hearts beating in and out of unison in twin pregnancy; known as *Arnoux's sign*.

ar"o·mat'ic [G. *arōma*, spice]. 1. Having a spicy odor. 2. Characterized by a fragrant, spicy taste and odor, as cinnamon, ginger, or the essential oils. 3. A qualification applied to any carbon compound originating from benzene, C_6H_6.

ar·rec'tor (pl. *arrectores*) [L. *arrectus*, from *arrigere*, to erect]. An erector, an erector muscle.

arrectores pilorum. Minute, fanlike, involuntary muscles attached to the hair follicles which, by contraction, erect the hair and cause so-called goose flesh. See Table of Muscles in the Appendix.

ar·rest' [L. *ad*, at; *restare*, to stop]. A stopping, checking, or restraining.

cardiac a. Standstill of the entire heart.

pelvic a. In *obstetrics*, condition accompanying labor in which the presenting part of the fetus becomes fixed in its position in the maternal pelvis.

sinus a. See sinoatrial heart block.

transverse a. In *obstetrics*, faulty condition in the mechanism of labor when a flat type of maternal pelvis causes fixation of the fetal head in the transverse position.

Arrhenius, Svante August [*Swedish physicist and chemist*, 1859–1927]. Widely known for his work in the fields of chemistry and astronomy. Introduced the electrolytic dissociation theory. Nobel laureate (1903).

ar"rhe·no·blas·to'ma (ar"i·no·blas·to'muh, ·ren·o·) [G. *arrhēn*, male; *blastos*, germ; *-ōma*, tumor]. An infrequent tumor of the ovary, moderate in size, encapsulated, nodular, firm, and nearly always unilateral, occurring most often in young adults; may be malignant. Three microscopic forms are observed: *testicular tubular adenoma*, *sarcomatoid* form, and *mixed tubular and sarcomatoid* form. The latter two forms, especially the sarcomatoid, are usually if not always, accompanied by defeminization and virilization, somewhat resembling that in Cushing's syndrome. Also called *arrhenoma*, *arrhenonoma*.

ar"rhe·no·ma, ar·rhen"o·no'ma. See *arrhenoblastoma*.

ar"rhe·no·to'ky (ar·rhe"no·to'cy) [*arrēn*, G. *tokos*, childbirth]. In *zoology* the parthenogenetic production of male individuals exclusively. —**arrhenotok'ous**, *adj.*

ar·rhin"en·ce·pha'li·a [a-; G. *rhis*, nose; *enkephalos*, brain]. A form of partial anencephalia in which there is partial or total absence of the rhinencephalon and malformation of the nose. Also spelled *arhinencephalia*.

ar·rhi'ni·a, a·rhi'ni·a [G. *a-*, not; *rhis*, nose]. Congenital absence of the nose. —**arrhin'ic**, *adj.*

ar·rhyth'mi·a [a-; G. *rhythmos*, rhythm]. Absence of rhythm. —**arrhyth'mic**, *adj.*

neurogenic a. Phasic sinus a.

paroxysmal a. One caused by a stressful life situation which arouses anxiety, hostility, or depression.

phasic sinus a. Gradual waxing and waning of pulse rate, usually synchronous with the acts of breathing. May also be independent of respiration. Also called *neurogenic a.*, *reflex a.*, *vagal a.*

reflex a. Phasic sinus a.

respiratory a. Disturbed breathing.

vagal a. Phasic sinus a.

ar'row poi'son. See *curare*.

ar'row·root' [ME. *arwe*; *roote*]. A variety of starch derived from *Maranta arundinacea* of the West Indies and southern United States.

ars a·man'di [L., art of loving]. Sexual prowess.

ar"sa·nil'ic ac'id. $NH_2C_6H_4AsO(OH)_2$; *p*-Aminobenzenearsonic acid. The starting compound for the synthesis of many useful medicinal arsenicals.

arsen-. See *arseno-*.

ar'se·nate (ar·se·ni·ate) [G. *arsenikon*, yellow orpiment]. Any salt of arsenic acid.

ar'se·nic, ar·sen'i·cum, ar·se'ni·cum [*arsenikon*]. As = 74.91. 1. A brittle, usually steel-gray element of both metallic and nonmetallic properties. It exists in four allotropic modifications, the most important of which is the gray or so-called metallic, arsenic. It sublimes readily, the vapor having a garlicky odor. Its salts are used in medicine for their tonic effect in wasting diseases; for their ability to increase the hematinic effect of iron; in skin diseases; in certain pulmonary diseases; for destruction of protozoan parasites and as caustics. 2. Arsenic trioxide. —**arsen'ic**, *adj.*

a. bromide. $AsBr_3$. Arsenic tribromide, arsenous bromide. Dose, 1–4 mg. ($\frac{1}{60}$–$\frac{1}{15}$ gr.)

a. butter. See a. chloride.

a. chloride. $AsCl_3$. Arsenous chloride, arsenic trichloride; a colorless, oily liquid decomposed by water. Syn., *a. butter*.

a. disulfide. As_2S_2. Occurs native as *realgar*. Also called *red a.*, *red a. sulfide*. An artificial product is known as *red a. glass* or *red orpiment*.

a. iodide. See a. triiodide.

a. test. The United States Pharmacopeia arsenic test involves comparison of the stains produced on mercuric bromide test papers by standard arsenic solution and by the sample being tested when the arsenic present is reduced to arsine (AsH_3) and the latter reacts with the test paper.

a. tribromide. See *a.* bromide.

a. trichloride. See *a.* chloride.

a. triiodide (*arseni triiodidum*) AsI_3. Arsenous iodide. Dose, 3–12 mg. ($\frac{1}{20}$–$\frac{1}{5}$ gr.) An ingredient in *arsenic and mercuric iodides solution* (*liquor arseni et hydrargyri iodidorum*) also known as *Donovan solution*, which contains 1% each of arsenic triiodide and mercuric iodide: has been used in chronic skin diseases.

a. trioxide (*arseni trioxidum*) Arsenous oxide, As_2O_3. Dose, 1–3 mg. ($\frac{1}{60}$–$\frac{1}{20}$ gr.) Syn., *arsenous acid, white a.*

a. trisulfide. As_2S_3. Translucent, lemon-colored masses occurring in nature: formerly used as depilatory. Syn., *orpiment, a. yellow sulfide, king's yellow.*

a. yellow sulfide. See *a.* trisulfide.

arsenious acid solution (*liquor acidi arseniosi*) A 1% arsenic trioxide solution in hydrochloric acid and distilled water. Dose, 0.12–0.3 cc. (2–5 min.) Also called *hydrochloric solution of a., a. chloride solution.*

white a. See *a.* trioxide.

ar·sen'ic ac'id. H_3AsO_4. Orthoarsenic acid; a white, hygroscopic powder used in the manufacture of medicinal and insecticidal arsenates.

ar·sen'i·cal. A drug, fungicide, or insecticide the effect of which depends on its arsenic content. —**arsen'ical,** *adj.*

ar·sen'i·co der'ma. Dermatitis medicamentosa due to arsenic.

ar·sen'i·cum. See *arsenic.*

ar'se·nide. A compound of arsenic with another element in which the arsenic is negatively charged.

ar·se·ni'ous. Arsenous.

ar'se·nite. A salt of arsenous acid.

ar·se·niu·ret'ted. Combined with arsenic so as to form an arsenide.

ar'se·no- (ahr'si·no-, ahr·sen'o-) **arsen-** [*arsenikon*]. A combining form designating *a drug combined with arsenic.*

arseno-bismulak. A trade name for the antisyphilitic substance bismuth sodium p-aminophenylarsonate.

arsenoferratose. Proprietary elixir containing iron and arsenic in organic combination; used as hematinic.

p-ar"sen·o·s'so phen"yl bu tyr'ic ac'id. $C_{10}H_{13}AsO(CH_2CH_2CH_2COOH)$; trivalent arsenical having trypanocidal activity. Syn., *butarsen.*

ar"se·no·ther'a·py [*arsenikon*, G *therapeia*, treatment]. Treatment of disease by means of arsenical drugs.

ar'se·nous, ar·se·ni·ous [*arsenikon*]. Containing arsenic in the positive trivalent form.

ar'se·nous ac'id. See *arsenic* trioxide.

ar'se·nous bro'mide. See *arsenic* bromide.

ar'se·nous chlo'ride. See *arsenic* chloride.

ar'se·nous i'o·dide. See *arsenic* triiodide.

ar'se·nous ox'ide. See *arsenic* trioxide.

ar"se·nox'ide. 3-Amino-4-hydroxyphenyl-arsine oxide. $C_6H_6AsNO_2$. A breakdown product of arsphenamine which accounts for its activity. See *oxophenarsine hydrochloride.*

ar·se'num. See *arsenic.*

ar·sine (ahr·seen, ahr'seen, ahr'sin) AsH_3. Hydrogen arsenide, or arsenous hydride. A poisonous gas with garlicky odor.

ar·sin'ic ac'id. Any acid of the type of $RHAs(:O)OH$ or of $RR'As(:O)OH$, where R is any hydrocarbon radical and R' is the same or different hydrocarbon radical.

ar·son'ic ac'id. Any acid of the type of $RAs(:O)(OH)_2$, where R is any hydrocarbon radical.

Arsonval, Jacques Arsène d' [*French physiologist*, 1851–1940]. Introduced high-frequency currents in electrotherapy (1892). The high potential discharge of current condenser through large solenoid of wire is known as *d'Arsonval current.*

ar"son·val"i·za'tion [after Jacques Arsène d'Arsonval]. The therapeutic application of high-frequency currents. Three types are used: desiccating, coagulating, and cutting. Also called *darsonvalization.*

ars·phen'a·mine (ahrs·fen'ah·meen, -min, ahrs"fi·nam'een, -in, ahrs"fen·ah·meen') (*arsphenamina*) Diaminodihydroxyarsenobenzene dihydrochloride, $C_{12}H_{12}As_2N_2O_2.2HCl.2H_2O$. A yellow hygroscopic crystalline powder, unstable in air, soluble in water with acid reaction. A specific in syphilis and other protozoan infections. This drug has been largely superseded by neoarsphenamine and other arsenicals (more conveniently and safely administered) and by antibiotics. Also called *606.* See *salvarsan.*

ars·phen'a·mized. Having been treated with arsphenamine.

ars'thin·ol. Generic name for the cyclic 3-hydroxypropylene ester of 3-acetamido-4-hydroxydithiobenzenearsonous acid, trivalent arsenical supplied under the trade-mark *balarsen.* The substance is effective against intestinal amebiasis and yaws.

artane. Trade-mark for 3-(1-piperidyl)-1-phenyl-1-cyclohexyl-1-propanol hydrochloride, an antispasmodic drug. See *trihexyphenidyl.*

ar'tar root. A drug from West Africa, probably the root of *Xanthoxylum senegalense*, of the Rutaceae.

ar'te·fact, ar'ti·fact [L. *ars*, art; *facere*, to make]. 1. *In microscopy and histology*, structure that has been produced by mechanical, chemical, or other artificial means; a structure or tissue that has been changed from its natural state. 2. *In electroencephalography*, a wave not originating in the brain.

Ar"te·mis'i·a (ahr"ti·mis'ee·uh, ·mizh'ee·uh, ·miz'ee·uh) [G. plant of Artemis]. A genus of widely distributed plants of the Compositae. Various members have been used in folk medicine, the drugs of most recent importance being absinthium and santonica. Because the pollens of these plants are wind-borne, they are among the more important causes of hay fever, especially in the Mountain and Pacific States.

ar"ter·ec'to·my. See *arteriectomy.*

ar·ter'e·nol. Norepinephrine.

arteri-. See *arterio-.*

ar·te'ri·a (pl. *arteriae*). See *artery.*

ar·te·ri·al·i·za'tion [G. *artēria*, artery]. The process of making or becoming arterial; the change from venous blood into arterial. 2. Vascularization. —**arte'rialize,** *v.*

ar·te"ri·arc'ti·a (ar·teer·ee·ark'shee·uh, ·tee·uh) [*artēria*; NL. from L. *arctare*, to press together]. Vasoconstriction or stenosis of an artery.

ar"te·ri'·a·sis [*artēria*; NL. *-iasis*, condition]. Degeneration of an artery.

ar·te·ri·ec'ta·sis, ar·te·ri·ec·ta'si·a (-eek·tay·shuh, -see·uh, -shuh, -see·uh) [*artēria*; G *ektasis*, stretching out]. Arterial dilatation.

ar·te"ri·ec'to·my [*artēria*, G *ektomē*, excision]. Excision of an artery or portion of an artery, used to treat intractable pain persisting after recovery from an acute arterial occlusion. Also spelled *arterectomy.*

ar·te·ri·ec·to·pi'a [*artēria*, G *ektopos*, away from

place]. Displacement or abnormality of the course of an artery.

ar·te·ri·o- arteri- [*artēria*]. A combining form signifying *artery, arterial*.

ar·te″ri·o·cap′il·lar″y [*artēria*; L. *capillaris*, of the hair]. Blood vessel between an arteriole and capillary usually called arterial capillary. Syn., *precapillary, precapillary arteriole*.

ar·te″ri·o·fi·bro′sis (ahr-teer″ee-o-figh-bro′sis) See arteriocapillary *fibrosis*.

ar·te′ri·o·gram″ [*artēria*; G. *gramma*, letter]. 1. A roentgenogram of an artery after injection with contrast material such as diodrast. 2. Arteriograph; tracing of the arterial pulse.

ar·te′ri·o·graph [*artēria*, G. *graphein*, to write]. 1. Instrument which graphically presents the pulse. 2. Tracing of the arterial pulse. 3. Arteriogram.

ar·te″ri·og′ra·phy [*artēria*; *graphein*]. 1. Graphic presentation of the pulse; sphygmography. 2. Roentgenography of the arteries. —**arterio·graph′ic**, *adj.*

carotid a. Roentgenography of the carotid artery.

vertebral a. Roentgenography of the vertebral artery.

ar·te″ri·o′la (pl. *arteriolae*) [L., dim. of *artēria*]. An arteriole.

a. recta. One of the straight arterioles going from the glomeruli to the pyramids of the kidney.

ar·te′ri·ole [*arteriola*]. A very small artery.

precapillary arterioles. See *precapillary*.

straight a. See *arteriola recta*.

ar·te′ri·o·lith″ [G. *artēria*, artery; *lithos*, stone]. A calculus in an artery.

ar·ter″i·o·li′tis. Inflammation of arterioles.

ar·te″ri·o″lo·ne·cro′sis [L. *arteriola*, dim. of *artēria*; G. *nekrōsis*, mortification]. Degeneration of the arterioles resulting in necrosis, as in nephrosclerosis. —**arteriolonecrot′ic**, *adj.*

ar·te″ri·o″lo·scle·ro′sis [*arteriola*, G. *sklērōsis*, hardening]. Arteriolar sclerosis. —**arteriolosclerot′ic**, *adj.*

ar·te·ri·o·ma·la·ci·a (ahr-teer″ee-o-ma-lay′shee-uh, -see-uh) [G. *artēria*, artery; *malakia*, softness]. Softening of an artery wall.

ar·te″ri·o·ne·cro′sis [*artēria*; G. *nekrōsis*, mortification]. Necrosis of an artery or arteries.

ar·te″ri·op′a·thy [*artēria*; G. *pathos*, disease]. Any disease of an artery or of arteries. *Obs.*

ar·te·ri·o·pla·ni·a [*artēria*; G. *planē*, wandering]. A condition in which an anomaly is present in the course of an artery.

ar·te′ri·o·plas″ty [*artēria*, G. *plassein*, to form]. An operation for aneurysm in which the vessel is reconstructed by using the aneurysmal walls to restore its continuity. Syn., *aneurysmorrhaphy*. —**arterioplas′tic**, *adj.*

ar·te″ri·o·pres′sor [*artēria*; L. *pressor*, from *premere*, to press]. Causing increased blood pressure in the arteries.

ar·te′ri·o·punc″ture [*artēria*; L. *punctura*, puncture]. The surgical division or opening of an artery, chiefly for the abstraction of blood.

ar·te″ri·o·re′nal [*artēria*; L. *renes*, kidneys]. Pertaining to the renal arterial blood vessels.

ar·te·ri·or′rha·phy [*artēria*; G. *rhaphē*, suture]. Suture of an artery.

ar·te″ri·or·rhex′is [*artēria*; G. *rhēxis*, breaking]. Rupture of an artery.

ar·te″ri·o·scle·ro′sis (ahr-teer″ee-o-skli-ro′sis) [*artēria*; G. *sklērōsis*, a hardening]. Any of various proliferative and degenerative changes in arteries, not necessarily related to each other, resulting in thickening of the walls, loss of elasticity, and in some instances, calcium deposition. —**arterio·sclerot′ic**, *adj.*

a. obliterans. Arteriosclerosis associated with proliferation of the intima to the extent of obstructing the lumen.

cerebral a. That which affects the vessels of the brain.

decrescent a. Senile *a*.

diffuse a. See generalized *a*.

disuse a. Intimal fibrosis of an artery proximal to an occlusion, or in an organ or part that is atrophic, as in an atrophic ovary or leg. Syn., *involutional a*.

generalized a. A generalized thickening of the intimal portion of the smaller vessels. It is seen in chronic nephritis and essential hypertension.

intimal a. See *atherosclerosis*.

involutional a. See disuse *a*.

medial a. That which affects the middle coat of the small and medium-sized arteries, showing extensive destruction and atrophy of the muscular elements and deposition of calcium. Also called *Mönckeberg's a*.

Monckeberg's a. Medial *a*.

senile a. That which often occurs in old age and affects the medium-sized arteries, especially those of the extremities.

syphilitic a. The arterial sclerosis due to syphilis. It affects chiefly the media, but also the adventitia.

ar·te·ri·o·spasm″ [*artēria*, G. *spasmos*]. Spasm of an artery.

ar·te″ri·o·ste·no′sis [*artēria*; G. *stenōsis*, being straitened]. Narrowing of the caliber of an artery in any part.

ar·te·ri·os·te·o′sis [*artēria*; G. *osteon*, bone; *-ōsis*, condition]. Calcification of an artery.

ar·te″ri·o·streph′sis [*artēria*, G. *strepsis*, twisting]. The twisting of an artery for the purpose of staying hemorrhage.

ar·te′ri·o·tome″ [*artēria*, G. *tomos*, cutting]. Knife for use in arteriotomy. *Obs.*

ar·te″ri·ot′o·my [*artēria*, G. *tomē*, cutting]. Cutting or opening of an artery for the purpose of bloodletting.

ar·te·ri·o·ve′nous [*artēria*; L. *vena*, vein]. Both arterial and venous; involving an artery and vein, as an arteriovenous aneurysm.

ar·te″ri·o·ver′sion [*artēria*, L. *vertere*, to turn]. A method of arresting hemorrhage by turning vessels inside out. —**arteriovert′er**, *n.*

ar″te·ri′tis [*artēria*; G. *-itis*, inflammation]. Inflammation of an artery. See *endarteritis, periarteritis*.

a. deformans. A chronic endarteritis with calcareous infiltration. See *endarteritis*.

a. obliterans. Inflammation of arteries which leads to obstruction of the lumen. See *endarteritis*.

a. umbilicalis. Septic inflammation of the umbilical arteries.

gummatous a. See syphilitic *a*.

necrotizing a. See *polyarteritis nodosa*.

rheumatic a. A pathologic alteration of arteries caused by rheumatic fever and occurring particularly in coronary arteries.

syphilitic a. A syphilitic infection of arteries characterized by destruction and fibrosis of the media and adventitia, and secondarily of the intima. In some instances the result is narrowing of the lumen by the intimal proliferation and in others by aneurysm formation. Also called *gummatous a*.

temporal a. A self-limiting disease of unconfirmed etiology occurring in the fifth to eighth decade. It involves inflammation of arteries, particularly the temporal arteries. Symptoms include malaise, lassitude and weakness, anorexia, mental depression, aching and tenderness of muscles and joints, sciatic and brachial neuropathy, night sweats,

headache, and scalp tenderness. The disease usually lasts for several months, and the prognosis is generally good.

tuberculous a. Involvement of arteries by tuberculous inflammation, frequently resulting in thrombosis and occasionally in hemorrhage.

ar'ter y [*artēria*]. A vessel conveying blood from the heart. It is composed of three coats: an outer *adventitia*, consisting of connective tissue and elastic fibers; an inner *intima* lined with endothelium and containing collagenous and elastic fibers; and a middle coat, the *media*, composed of elastic and muscular fibers. For arteries listed by name, see Table of Arteries in the Appendix. See Plates 7, 8. Abbreviated, a. —arte rial, *adj.*

arciform a. An arterial arch at the base of a renal pyramid; a branch of a renal interlobar artery.

arcuate a. See arciform *a.*

axial a. The first main artery to a developing limb bud.

conducting a. One of large caliber and elastic walls, as the aorta, subclavian, common carotid.

copper wire a. One of the type of bright retinal vessels noted in arteriosclerosis.

corkscrew a. One of the smaller tortuous, retinal vessels in the macular region, noted in hypertension.

dental a. 1. See *alveolar* artery in Table of Arteries. 2. A twig of an alveolar artery supplying a root of a tooth.

distributing a. Any of the arteries intermediate between the conducting arteries and arterioles. The muscular coat of the arterial wall is well developed. Also called *muscular a.*

end a. One without branches or anastomoses.

helicine a. A spiral vessel which empties into the cavernous sinuses of erectile tissue.

hyaloid a. In the embryo, a forward continuation of the central artery of the retina traversing the vitreous body to ramify on the posterior surface of the lens capsule.

interlobar a. One lying between the lobes of an organ. *A branch of the renal artery running in* a renal column.

interlobular a. One lying between the lobules of an organ. One of the radial branches of an arciform artery running in the renal radial cortex.

intralobular a. One lying within the lobule of an organ.

muscular a. A distributing artery.

nutrient a. One which supplies blood to a bone.

pipestem a. One with advanced calcification and stiffening, noted in senile arteriosclerosis.

radicular a. One which supplies the spinal cord, entering with the anterior and posterior nerve roots.

sheathed a. The thick-walled, second portion of one of the arterioles of a penicillus in the spleen.

stapedial a. An artery present in the middle ear of the embryo; the stapes develops around it.

terminal a. See end *a.*

venous a. One carrying venous blood, as the pulmonary artery.

vitelline a. One passing from the yolk sac to the primitive aorta of the embryo. Also called *omphalomesenteric a.*

arthr-. See *arthro-*.

arthralgen. Trade-mark for an antiarthritic preparation containing methacholine chloride, thymol, menthol, and methyl salicylate in an absorbable washable ointment base.

ar-thral'gi-a [G. *arthron*, joint; *algos*, pain]. Pain in a joint. Syn., *articular neuralgia*. —arthralgic, *adj.*

a. hysterica. Pain in the joints of hysterical origin.

a. saturnina. Painful joints with rigidity and cramps in approximate muscles; symptomatic of lead poisoning.

gonorrheal a. Transient pain in joints occurring in gonorrhea without objective signs of disease.

menopausal a. See menopausal *arthritis* (b).

ar threc'to my [*arthron*; G. *ektomē*, excision]. Excision of a joint.

ar"thre-de'ma, ar"throe-de ma [*arthron*; G. *oidēma*, swelling]. Edema affecting a joint.

ar"thres the'si a. Sensation in the joints.

ar thrit'ic [*arthron*; G. -*itis*, inflammation]. An individual affected with arthritis.

ar thrit'i-des (ahr-thrit'i-deez) [G., from *arthron*, -*itis*]. General term to include the various types of arthritis.

ar thri'tis (pl. *arthritides*) [*arthron*; -*itis*]. Inflammation of a joint. —arthrit'ic, *adj.*

acromegalic a. A degenerative disease of the joints due to acromegaly.

acute a. Acute joint inflammation.

allergic a. (a) Intermittent hydrarthrosis, usually following ingestion of food allergens. (b) Serum sickness; usually occurring 7 to 10 days after injection of horse serum, characterized by fever and urticaria. There may be pain, redness, swelling, and stiffness of the joints resembling rheumatic fever.

a. deformans. Any chronic arthritis, usually degenerative joint disease.

a. deformans juvenilis. See *osteochondritis deformans juvenilis*.

a. of rheumatic fever. Acute, reversible, migratory synovitis of short duration occurring during exacerbations of rheumatic fever.

atrophic a. See rheumatoid *a.*

blennorrhagic a. See gonorrheal *a.*

chronic a. A general term for any chronic joint disease, but usually rheumatoid arthritis or degenerative joint disease.

chronic infectious a. See rheumatoid *a.*

climacteric a. See menopausal *a.*

degenerative a. See degenerative joint *disease*.

febrile a. See epidemic tropical acute *polyarthritis*.

fungous a. Tuberculous disease of the joints; white swelling.

gonorrheal a. A specific, blood-borne, gonococcal infection in joint tissue. May be very mild and transient, or may be severe, becoming purulent and leading to bony ankylosis.

gouty a. Arthritis due to gout, characterized by sudden, severe, painful attacks, often coming on in the night; affects one joint, and lasts weeks or months; followed by complete recovery. After repeated attacks in the same joint, degenerative joint disease results.

Heberden's a. Degenerative joint disease of the terminal joints of the fingers, producing enlargement and flexion deformities. Most common in women, occurring idiopathically and as a result of heredity. May result from trauma.

hematogenous a. An arthritis presumably caused most frequently by blood-borne pneumococcus or gonococcus infection.

hemophilic a. Inflammation due to blood in the joint of a hemophiliac. Repeated episodes lead to thickening of the synovial tissues and finally to degenerative joint disease.

hypertrophic a. See degenerative joint *disease*.

infectious a. An acute or chronic inflammatory disease of a joint caused by invasion of the articular tissue by microorganisms. Infection is usually hematogenous in origin, beginning in th

synovia or on subchondral marrow and spreading to other structures. Its course depends on the invading organism.

menopausal a. (a) Degenerative joint disease. (b) An arthralgia without objective or roentgenographic evidence of disease. It occurs in women at the menopause.

mixed a. A combination of features typical both of rheumatoid arthritis and of degenerative joint disease seen in the same patient or the same joint.

neurotrophic a. A trophic disease of joints seen in tabes dorsalis, leprosy, syringomyelia, and other diseases of the nervous system. There is marked enlargement and disorganization of joint structures and hypermotility. It is usually painless. Also called *neuropathic a.*, *Charcot's a.*

nonsuppurative a. Any inflammatory joint disease not associated with purulent synovial fluid and not progressing to suppuration; one of the varieties of inflammatory joint disease, e.g., rheumatoid arthritis, which are not known to be infectious in origin.

ochronotic a. A rare form of arthritis associated with ochronosis. See under *osteoarthritis*.

proliferative a. See rheumatoid a.

psoriatic a. (a) A type of rheumatoid arthritis associated with psoriasis. The cause and mechanisms of the association are not clear. (b) Rarely, a degenerative arthropathy unrelated to rheumatoid arthritis, involving principally the phalangeal joints.

purulent a. An arthritis caused either by the spreading of a generalized infection through the blood, by the spread of osteomyelitic lesions of the bone, or by direct introduction through penetrating wounds.

rheumatic a. See a. of rheumatic fever.

rheumatoid a. A chronic arthritis of unknown etiology; affects multiple joints, producing constitutional effects such as debility, weakness, and loss of weight. The specific lesion is a proliferation of granulation or connective tissue in synovial and periarticular tissues over the joint surfaces and in subchondral spaces. There is pain, limitation of motion, deformity, and sometimes bony ankylosis. Syn., *atrophic a.*, *chronic infectious a.*, *proliferative a.*

rheumatoid a. of the spine. Ankylosing spondylitis.

scarlatinal a. A form common in scarlet fever epidemics, usually appearing at the end of 10 days, with redness, pain, and swelling of the wrists, hands, elbows, and knees due to synovial distention. Also called *scarlatinal synovitis*.

senescent a. See degenerative joint disease.

syphilitic a. (a) Painful and swollen joints due to syphilis, especially during the secondary stage or gumma of the joint. (b) Symmetrical synovitis associated with prenatal syphilis. See Henry Hugh Clutton.

traumatic a. Synovitis secondary to acute trauma.

tuberculous a. Invasion of synovial tissues or bone with *Mycobacterium tuberculosis*. It gives rise to tubercle formations, fibrosis, caseation, and causes marked destruction of articular structures; healing may occur through ankylosis.

ar'thro-, arthr- [*arthron*]. A combining form denoting *relation to the joints*.

ar-throc'a-ce (ahr-throck'uh-see) [*arthron*; G. *kakos*, bad]. Caries of a joint, as in tuberculous arthritis.

ar'thro-cele [*arthron*; G. *kēlē*, tumor]. 1. Any swollen joint. 2. Hernia of the synovial membrane through a joint capsule.

ar"thro-cen-te'sis [*arthron*; G. *kentēsis*, pricking]. Incision into or puncture through a joint capsule to relieve an effusion.

ar"thro-chon-dri'tis (ahr"thro-kon-dry'tis) [*arthron*; G. *chondros*, cartilage; *-itis*, inflammation]. Inflammation of the cartilaginous parts of a joint.

ar"thro-cla'si-a (ahr"thro-clay'zhuh, see-uh, -shuh, -see-uh) **ar"thro-cla'sis** (ahr-thro-clay'sis, ahr-throck'luh-sis) [*arthron*; G. *klasis*, to break]. The breaking down of ankylosis in order to produce free movement of a joint.

ar"thro-de'sis, ar"thro-de'si-a [*arthron*; G. *desis*, binding together]. Fusion of a joint by removing the articular surfaces and securing bony union; operative ankylosis.

ar-thro'di-a [G., a kind of articulation]. A form of joint permitting a gliding movement. —**arthro-dial**, *adj.*

ar"thro-dyn'i-a [G. *arthron*, joint; *odynē*, pain]. Pain in a joint; arthralgia. —**arthrodynic**, *adj.*

ar"thro-dys-pla'si-a (-dis-play'zhuh, -see-uh, -shuh, -see-uh) [*arthron*; G. *dys-*, bad; *plassein*, to form]. A familial disease in which the patellas are rudimentary, the heads of the radii dislocated, and the nails generally absent.

ar"thro-e-de'ma. See *arthredema*.

ar"thro-em-py-e'sis (-em-pye-ee'sis, -em-pee-ee'sis) [*arthron*; G. *empyēsis*, suppuration]. Suppuration in a joint.

ar"thro-en-dos'co-py [*arthron*; G. *endon*, within; *skopein*, to examine]. Examination of the interior of a joint by means of an endoscope.

ar"thro-er-ei'sis (ar"thro-er-eye'sis). Surgical reduction of the mobility of a joint.

ar-throg'ra-phy [*arthron*; G. *graphein*, to write]. 1. Roentgenography of a joint. 2. A treatise or monograph relating to the joints.

ar"thro-gry-po'sis (ahr"thro-grye-po'sis, -gri-po'sis) [*arthron*; G. *grypōsis*, a crooking]. 1. Permanent flexure of a joint; ankylosis. 2. Persistent idiopathic contracture of a joint.

ar"thro-ka-tad'y-sis [*arthron*; G. *katadysis*, going down]. Intrapelvic protrusion of the acetabulum from thinning and eburnation of the pelvic wall of undetermined etiology; Otto pelvis.

ar'thro-lith [*arthron*; G. *lithos*, stone]. A calcareous or gouty deposit or free body within a joint; chalkstone. —**arthrolithi'asis**, *n.*

ar-throl'o-gy [*arthron*; G. *logos*, word]. The science which treats of joints.

ar-throl'y-sis [*arthron*; G. *lysis*, a loosing]. Surgical freeing of an ankylosed joint. *Obs.*

ar-throm'e-ter [*arthron*; G. *metron*, a measure]. An instrument for measuring and recording the extent of movement in a joint. Syn., *goniometer*. —**arthrometry**, *n.*

ar-thron'cus [*arthron*; G. *onkos*, a mass]. A joint tumor; swelling of a joint. *Obs.*

ar-throp'a-thy [*arthron*; G. *pathos*, disease]. Any joint disease, especially a neurotrophic disorder associated with tabes dorsalis and syringomyelia, and rarely with general paralysis and disseminated sclerosis. —**arthropath'ic**, *adj.*

deforming a. Arthritis deformans.

inflammatory a. Any inflammatory condition affecting joints; arthritis.

neurogenic a. An osteoarthritis associated with swelling, hypermobility, bone destruction, and trophic disturbances. Also called *Charcot's joint*, *neuropathic a.*, *tabetic a.*

osteopulmonary a. See hypertrophic pulmonary *osteoarthropathy*.

psoriatic a. A type of arthritis occurring in association with psoriasis. Also called *arthropathia psoriasis*.

tabetic a. See neurogenic a.

vertebral a. That associated with depressions and rugosities of the vertebrae.

ar'thro·phyte [*arthron*; G. *phyton*, plant]. An abnormal growth occurring within a joint.

ar'thro·plas"ty [*arthron*; G. *plassein*, to form]. 1. The making of an artificial joint. 2. Reconstruction of a new and functioning joint from an ankylosed one by plastic operation upon the joint. —**arthroplas'tic**, *adj.*

Ar·throp'o·da [*arthron*; G. *pous*, foot]. The largest phylum of the animal kingdom; includes the crustacea, insects, myriopoda, arachnida, and related forms. The members are bilaterally symmetrical, having a limited number of segments, a chitinous exoskeleton, and jointed appendages. —**ar'thropod**, *adj.*, *n.*, **arthropod'ous**, *adj.*

ar"thror·rha'gi·a [*arthron*; G. *rhēgnynai*, to burst]. Hemorrhage into a joint.

ar'thro·scope [*arthron*; G. *skopein*, to examine]. An instrument used for the visualization of the interior of a joint.

ar·thros'co·py [*arthron*; *skopein*]. The act of examining the interior of a joint with an arthroscope.

ar·thro'sis [*arthron*; G. *-ōsis*, condition]. 1. Articulation or joint; a suture. 2. A degenerative process in a joint.

a. deformans. Degenerative joint disease.

ar'thro·spore [*arthron*; G. *sporos*, seed]. A cell functioning as a spore that forms by the breaking off of a hyphal cell from the parental hypha.

ar·thros'to·my [*arthron*; G. *stoma*, mouth]. Incision into a joint, as for drainage.

ar'thro·tome [*arthron*; G. *tomos*, cutting]. A stout knife used in joint surgery; a cartilage knife.

ar·throt'o·my [*arthron*; G. *tomē*, a cutting]. Incision into a joint.

ar"thro·tro'pi·a [*arthron*; G. *tropē*, a turning]. Torsion of a limb.

ar'throus [*arthron*]. Pertaining to a joint or joints; jointed.

Arthus, Nicolas Maurice [French physiologist, 1862–1945]. Known for his description of a generalized or local anaphylactic reaction, the result of the union of antigen and antibody within the tissues, manifested by local edema and inflammation (1903–06); called *Arthus' phenomenon*. Credited also with the first mention of the essential role of calcium in the mechanics of blood coagulation (1890).

ar·tic'u·la, **ar·tic"u·la're** [L. *articulare*, to divide in joints]. Os articulare; a bone of the lower jaw of fishes, amphibians, and reptiles which articulates with the quadrate bone to form the mandibular joint. Its homolog in man is the malleus. Syn., *articular bone*.

ar"tic·u·lar'is ge'nus. A small muscle arising from the distal fourth of the anterior surface of the femur and inserted into the capsule of the knee joint.

ar·tic'u·late [L. *articulare*, to divide in joints]. 1. Divided into joints. 2. Distinct, clear.

ar·tic'u·late. In dentistry, to position or adjust artificial teeth.

ar·tic'u·lat"ing pa'per. In dentistry, a carbon paper on which the patient bites, in order to show the relationship of the teeth in mastication.

ar·tic"u·la'ti·o (ahr-tick"yoo-lay'shee-o) (pl. *articulationes*) [L., the putting forth of new joints (belonging to the language of the vineyard)]. A joint. See *articulation*. See Table of Joints and Ligaments in the Appendix.

a. coxae [BNA]. Hip joint.

a. cubiti [BNA]. Elbow joint.

a. genus [BNA]. Knee joint.

a. humeri [BNA]. Joint of the head.

articulationes capitulorum [BNA]. Articulations between the heads of the ribs and the vertebrae.

articulationes digitorum manus [BNA]. Joints of the fingers.

articulationes digitorum pedis [BNA]. Joints of the toes.

a. pedis [BNA]. Joint of the foot.

a. sellaris [BNA]. Saddle joint.

a. simplex [BNA]. Simple joint.

ar·tic"u·la'tion [*articulatio*]. 1. The enunciation of speech. 2. A joint; the junction of two or more bones. The articulations are divided into *synarthroses*, or immovable joints, which are subdivided into (a) *schindyleses*, or grooved joints, (b) *gomphoses*, or sockets, as for the teeth, and (c) *sutures*, as the bones of the skull; *diarthroses*, or movable joints, which are subdivided into (a) *arthrodia*, or gliding joints, (b) *ginglymi*, or hinge-like joints, (c) *enarthroses*, or ball-and-socket joints; and *amphiarthroses*, or those of the mixed type. For articulations listed by name, see Table of Joints and Ligaments in the Appendix. 3. The positioning of artificial teeth. 4. Occlusion, 4: loose and improper usage. —**artic'ular**, *adj.*

compound a. A diarthrosis in which more than two bones are involved.

condyloid a. A type of diarthrosis in which an ovoid articular surface, or condyle, is received into an elliptical cavity. Syn., *ellipsoid a.*

congruent a. One in which the surfaces correspond in form and curvature.

ellipsoid a. See condyloid a.

false a. One formed between the end of a dislocated bone and the contiguous parts, or between fragments of a broken bone. Syn., *pseudarthrosis*.

hinge a. Ginglymus; an articulation in which a convex cylindrical surface is grooved at right angles to the axis of the cylinder, or trochlea, and meets a concave cylindrical surface which is ridged to fit the trochlea in such a manner as to permit motion in only one plane.

incongruent a. One in which two or more opposing surfaces may differ in form or present curves of unequal radii resulting in imperfect fitting.

irregular a. A type of diarthrosis in which the surfaces are small, irregular, flat, or slightly curved.

reciprocal a. A mode of articulation in which the articular surface is convex on one side and concave on the other. See condyloid *articulation*.

screw a. A hinge articulation in which the groove of the trochlea is in a plane not at right angles with the axis, and the hinge movement is accompanied by progression at right angles to the hinge plane. Also called *cochlear articulation* or *spiral joint*.

simple a. A diarthrosis in which only two bones are involved.

spheroid a. A type of diarthrosis in which a rounded head is lodged in a concave surface.

supplementary a. A false articulation in which the ends of the fragments become rounded and covered with a fibrous capsule.

trochoid a. A type of diarthrosis in which a pivotlike process rotates within a ring, or a ring rotates around a pivot, the ring being formed partly of bone, partly of ligament.

ar·tic"u·la'ti·o"nes (ahr-tick"yoo-lay-shee-o'neez). Plural of articulatio.

ar·tic'u·la"tor [L. *articulus*, joint]. An instrument used in dentistry for holding casts of the jaws or teeth in proper relation during the stages of the construction of artificial dentures. It may be adjusted so as to duplicate the mandibular movements of the patient.

ar·tic'u·lus (pl. and gen. *articuli*) [L.]. 1. A joint; knuckle. 2. A segment part; limb.

ar'ti·fact. See *artefact*.

ar"ti·fi'cial [L. *artificialis*, of or belonging to art, artificial]. Made or constructed by art, not natural.

ar"ti·fi'cial res"pi·ra'tion. The artificial promotion of normal breathing in one apparently dead, by the forcing of air into and out of the lungs to aerate the blood. Used in drowning, asphyxia neonatorum, asphyxia from smoke or toxic gases, electric shock, etc. Pulmotors or respirators are used for prolonged application, but numerous hand methods are employed. Chief methods are *Bain' method* for asphyxia neonatorum, in which the child is alternately transferred from one hand of the obstetrician to the other, being supine in one and prone in the other; *Drinker' method*, which is the same as the Schafer method, with the addition of a second operator who kneels at the patient's head and raises the arms to assist in inspiration; *Eve' method*, in which the patient is tipped alternately head up and head down on a stretcher, inspiration and expiration occurring as the diaphragm moves up and down from shifting of the abdominal viscera; *Fell-O'Dwyer method*, in which air is forced into the lungs by a bellows through an intubation tube, expiration occurring spontaneously due to elasticity of the chest or being aided by external pressure; *hip-roll prone pressure method* or *hip-lift prone pressure method*, in which the Schafer method is combined with lifting the hips in expiration; the hips also may be rolled to one side, an action which is less effective but less exhausting for the operator; *Holger Nielsen method*, in which the patient lies prone and the operator extends the patient's arms in inspiration and presses on the scapulae in expiration; *Howard' method*, in which the patient is placed on his back with his head lower than his abdomen and his hands over his head; rhythmic pressure is applied upward and inward against the lower lateral parts of the chest; *Laborde method*, in which the respiratory center is stimulated by rhythmic traction of the tongue with the fingers or a specially designed forceps; *Marshall Hall' method*, in which the patient is alternately rolled from his side or back to his abdomen to expand or compress the lungs, expiration being augmented by pressure on the chest; *Prochownick method*, for asphyxia neonatorum, in which the infant is suspended with the head extended, and intermittent pressure is applied to the chest; the *rocking method*, which is synonymous with Eve's method; the *rowing method*, in which the patient is supine with the operator at his head; the patient's arms are extended firmly above his head and then rapidly dropped back toward his chest at a rate of 10 to 12 times a minute; *Satterthwaite' method*, in which the patient is placed on his back, and there is alternate pressure and relaxation of the abdomen; *Schafer (prone pressure) method*, in which the patient is placed on his abdomen and his head turned to one side and rested on his arm, intermittent pressure over the lower part of the thorax 15 times per minute causes inspiration and expiration simulating natural breathing; *Schroeder' method* for asphyxia neonatorum, in which the infant is placed in a bath with its back supported by the operator, who then effects forceful expiration by bending its body over the belly, thus compressing the thorax; *Schultze method*, in which the newborn child is held by the shoulders from behind so that the operator has his thumbs on the front of the child's shoulders, the index fingers in the axillae, and the other fingers over the back. The child is gradually tipped up until the legs fall forward and the body is sharply flexed, so that the abdomen and chest are tightly compressed, thus producing forcible expiration and allowing fluids to drain out of the nose and mouth; *Silvester' method*, in which the patient is placed on his back and his arms raised to the sides of his head and then turned down and pressed against the chest.

ar"y·ep"i·glot'tic, ar"y·ep"i·glot·tid'ean, ar"y·te"no·ep"i·glot'tic (ar"i·tee"no-, a·rit"i·no-) [G. *arytaina*, ladle; *epi*, upon; *glottis*, glottis]. 1. Relating to the arytenoid cartilage and the epiglottis. 2. Designating two folds of mucous membrane extending between these structures (aryepiglottic folds), each containing an aryepiglottic muscle. See Table of Muscles in the Appendix.

ar'yl [G. *arōma*, aromatic herb; *hylē*, material]. An organic radical derived from an aromatic hydrocarbon by the removal of one hydrogen atom, as phenyl (C_6H_5—) from benzene.

ar"yl·ar·se·nate. Any aromatic organic salt of arsenic, as arsphenamine.

ar'yl·ene. Any bivalent radical derived from an aromatic hydrocarbon by removal of a hydrogen atom from each of two carbon atoms of the nucleus, as phenylene (C_6H_4=) from benzene.

ar"y·te"no·ep"i·glot'tic. See *aryepiglottic*.

ar"y·te"no·ep"i·glot"ti·cus. The continuation of the oblique arytenoid muscle; old term.

a·ryt'e·noid, ar"y·te'noid [G. *arytaina*, ladle; *eidos*, form]. 1. Resembling the mouth of a pitcher. 2. Pertaining to the arytenoid cartilages, glands, and muscles. See Table of Muscles in the Appendix.

ar"y·te"noid·ec'to·my (ar"i·tee"noy·deck'to·mee, a·rit"i·noy-) [*arytaina*; *eidos*; G. *ektomē*, excision]. Removal of an arytenoid cartilage.

ar"y·te"noid·i'tis (ar"i·tee"noy·dye'tis, a·rit"i·noy-) [*arytaina*; *eidos*; G. *-itis*, inflammation]. Inflammation of the arytenoid cartilages or muscles.

ar"y·te·noi'do·pex"y [*arytaina*, *eidos*; G. *pēxis*, fixing]. Surgical fixation of the arytenoid cartilages.

ar"y·vo·cal'is. A portion of the vocalis muscle inserted into the vocal fold.

As Chemical symbol for arsenic.

As. Abbreviation for astigmatism, astigmatic.

As. h. Hyperopic astigmatism.

As. m. Myopic astigmatism.

a.s. *Auris sinistra*; left ear.

as·a·fet'i·da, as"a·foet'i·da [NL. *asa*, from Per. *azā*, mastic; L. *fetidus*, stinking]. An oleo-gum-resin obtained from the rhizomes and roots of *Ferula Assa-foetida*, *F. foetida*, and other species of *Ferula*. It consists of soft masses of yellow-brown color, bitter taste, and persistent, offensive odor. The odor is due to a volatile oil consisting largely of a mercaptan of the formula $C_7H_{14}S_2$. It is carminative and psychic sedative. Dose, 0.33–0.65 Gm. (5–10 gr.) preferably in pill form. An emulsion prepared by shaking the drug in water has been used in infantile colic.

as"a·phi'a (ass"uh·figh'uh, a·saf'ee·uh, a·say'fee·uh) [G. *asapheia*, want of clearness]. Indistinct speech, especially that due to cleft palate. Obs.

as'a·prol. $CaC_{20}H_{12}S_2O_8 + 3H_2O$. Calcium beta-naphthol-alpha-monosulfonate, a substance readily soluble in water and alcohol, employed as antipyretic and antirheumatic.

a·sar'ci·a [G. *a-*, not; *sarx*, flesh]. Emaciation; leanness.

as'a·rone. A stearoptene from the oil of *Asarum europaeum*. It forms monoclinic prisms, has an aromatic taste, and smells like camphor.

as'a·rum [G. *asaron*, hazelwort]. The dried rhizome and roots of *Asarum canadense*. It contains an

acrid, bitter resin and an aromatic volatile oil. It is carminative but is used chiefly as a bitter aromatic flavor. Also called *Canada snakeroot, wild ginger.*

as·bes'tos [G. unquenchable]. A soft fibrous silicate mineral of flexible or elastic fibers; the best nonconductor of heat. Mixed with plaster it is used in dentistry as a substitute for sand to form the investment preparatory to soldering. It is used by the military for making protective clothing against flash and gasoline burns. Workers in asbestos frequently acquire hyperkeratotic papules on their hands (asbestos corns, or warts), a foreign-body type of reaction caused by spicules of the substance.

as"bes·to'sis [asbestos; G. -ōsis, condition]. Pneumonoconiosis marked by fibrosis of the lungs from prolonged inhalation of dust laden with asbestos. See *silicosis.*

as·bes'tos trans"for·ma'tion. A change in cartilage, especially of the hyaline type, often associated with advanced age, which leads to a softening of the tissue and to the formation of spaces in it.

as"ca·ri'a·sis [G. askaris, worm in the intestines; NL. -iasis, condition]. An infestation disease caused by the presence of the *Ascaris lumbricoides*; the intestine is most commonly affected but the infestation may spread to the stomach, liver and lungs.

as·car'i·cide [askaris; L. caedere, to kill]. A medicine that kills ascarides.

As·car'i·dae (as-kar'i-dee) [askaris]. A family of nematode worms, to which belong the roundworm (*Ascaris lumbricoides*) and the threadworm (*Enterobius vermicularis*).

as·car'i·dol, as·car'i·dole. $C_{10}H_{16}O_2$. An unsaturated terpene peroxide which constitutes from 45 to 70% of chenopodium oil. It is the active principle of the oil.

As'ca·ris [G.]. A genus of intestinal nematodes. —**ascarid,** *n.*

A. equorum. A species infesting horses; the maw worm.

A. lumbricoides. A species of roundworm causing ascariasis.

A. megalocephala. See *A. equorum.*

A. mystax. Synonym for *Toxocara cati*, the common ascarid of the domestic cat. Also see *Toxocara canis.*

A. suum. A species of roundworm causing ascariasis in the pig.

as·cend'ing [L. ascendere, to rise]. Taking an upward course; rising.

Asch, Morris Joseph [American otolaryngologist, 1833–1902]. Remembered for his operation for the correction of deviation of the nasal septum through cruciate incision over the deflection. Also devised perforated hard rubber nasal splint to fit the nasal passages; this had wide use in the treatment of fractures of the nasal bones.

Ascherson, Ferdinand Moritz [German physician, 1798–1879]. Long associated with the discovery of the casein coat surrounding milk globules and with the vesicles he described as being formed when oil and an albuminous fluid are agitated together.

Aschheim, Selmar [German physician and biochemist, 1878–]. Known as one of the discoverers of the gonadotropic hormone of the adenohypophysis. Introduced, with Zondek, test for pregnancy (1928); see Aschheim-Zondek test, reaction.

Aschner, Bernard [Austrian gynecologist in America, 1883–]. The oculocardiac reflex is called Aschner's phenomenon. See under *reflex.*

Aschoff, Karl Albert Ludwig [German pathologist, 1866–1942]. Studied the reticuloendothelial system. His writings on rheumatic myocarditis are regarded as classics. See Aschoff *nodule, cell.*

as·ci'tes (a-sigh'teez) [G. askitēs, kind of dropsy, from askos, bag]. An abnormal accumulation of serous fluid in the peritoneal cavity caused by increased venous pressure or a decrease of plasma albumin. The clear, yellowish fluid coagulates on standing but may be turbid, sanguineous, or contain shreds. Physical examination reveals painless abdominal enlargement, dullness over fluid, shifting with position, and fluid wave. The condition is associated most frequently with cardiac failure, cirrhosis of the liver, and renal deficiency. Syn., *abdominal dropsy, hydroperitoneum.* —**ascit'ic,** *adj.*

acute a. A very sudden and large accumulation of fluid in the abdomen.

a. adiposus. An accumulation of milky fluid due to contained cells which have undergone fatty degeneration. Seen in chronic peritoneal inflammations as in tuberculosis, carcinoma, etc.

a. chylosus. Chyle in the peritoneal cavity due to rupture of the lacteals. Also called *chylous a.*

a. intercus. An effusion occurring between the skin and the peritoneum.

a. saccatus. (a) A form in which the effusion is prevented by adhesions or inflammatory exudate from entering the general peritoneal cavity. Syn., *encysted dropsy of the peritoneum.* (b) An ovarian cystoma.

a. vaginalis. A collection of liquid within the sheath of the rectus abdominis muscle.

a. vulgatior. A form apparently due to diseased kidneys, and preceded by scanty, highly colored urine.

gelatinous a. See *pseudomyxoma peritonei.*

mechanical a. That due to portal obstruction. Also called *passive a.*

pseudochylous a. Presence in the peritoneal cavity of milky fluid which contains protein but no fat.

sanguineous a. A bloody form affecting sheep and lambs. Syn., *darkness.*

as·cle·pain (ass'kli-pane) [G. asklēpias, swallowwort, named from Asclepius]. A proteolytic enzyme derived from the latex of species of *Asclepias.*

Asclepiades of Bithynia [Greek physician, b. ca. 124 B.C.]. Established Greek medicine in Rome. An opponent of Hippocrates, he held stubbornly to his own theories. Said to have been the first to mention tracheotomy.

as"cle·pi·ad'in (ass"kli-pye'uh-din). A bitter glycoside obtained from various species of *Asclepias.* It is poisonous, and has emetic, purgative, and sudorific properties.

as·cle'pi·as [G. asklēpias, swallow-wort, named from Asclepius]. Pleurisy root; the root of *Asclepias tuberosa,* a plant of the order Asclepiadaceae. A popular remedy in the southern states for pleurisy. It is diaphoretic, emetic, and cathartic.

as'co·carp [G. askos, bladder; karpos, fruit]. The developed fruit of Ascomycetes.

as"co·car'pi [askos; karpos]. Of, or relating to, an ascocarp.

as"co·go·nid'i·um [askos; root of G. gignesthai, to be produced]. A portion of the female sex organ in ascomycetous fungi which, after fertilization, develops into asci.

Ascoli test. See under *test.*

As"co·my·ce'tes (ass"ko-migh-see'teez) [askos; G. mykēs, fungus]. One of the four large classes of fungi. —**as"co·my·ce'tous,** *adj.*

a·scor′bate. A salt of ascorbic acid.

a·scor′bic ac′id (*acidum ascorbicum*). $C_6H_8O_6$ substance, present in fresh green foods, citrus fruits, and various other uncooked materials, the lack of which in the body eventually leads to scurvy. It is white or slightly yellowish, odorless, crystalline powder optically active and fairly stable when dry but rapidly destroyed by the oxygen of the air when in aqueous solution. Ascorbic acid functions in various oxidation-reduction reactions of the tissues and is essential for normal metabolism. It appears to be necessary for fibroblastic formation of collagenic connective tissue, and thus for wound-healing and tissue-repair. Dose, 25 mg. to 1 Gm. daily depending on prophylactic or curative use. Also called *L-ascorbic acid*. Syn., *vitamin C*, *cevitamic acid*, *antiscorbutic vitamin*. See Tables of Vitamins and of Normal Values of Blood Constituents in the Appendix.

a. a. oxidase. (a) A general term for any enzyme capable of promoting the oxidation of ascorbic acid either directly or indirectly through the formation of compound which acts as the oxidant. (b) More properly limited to an enzyme present in many vegetables, particularly squash and cucumber. In the presence of oxygen and water it causes ascorbic acid to take up two —OH radicals to form dehydroascorbic acid.

as′co·spore [askos; G. sporos, seed]. A spore produced in an ascus.

as′cus (pl. asci) [askos]. The characteristic spore case of the ascomycetes; usually consisting of single terminal cell containing eight spores.

-ase (-ase, -ase) [diastase, from G. diastasis, separation]. Suffix denoting an enzyme.

Aselli, Gaspare [*Italian physician and anatomist*, 1581-1626]. Discovered the lacteal vessels (lymphatics). *Aselli glands* are the lymph nodes near the pancreas.

as″e·mas′i·a. See asemia.

a·se′mi·a [G. a-, not; sema, sign]. An aphasia in which the patient is unable to understand or use speech, writing, or gestures as means of communication. Syn., *asemasia*, *asymbolia*. —**asem′ic**, *adj.*

asepsin. A brand of bromoacetanilid. Also called *antisepsin*.

a·sep′sis [G. a-, not; sepsis, putrefaction]. Exclusion of microorganisms producing decay. —**asep′tic**, *adj.*

a·sex′u·al (ay-seck′shoo-al, -seck′shoo-ul) [a-; L. sexus, sex]. 1. Not involving the distinction between male and female. 2. Denoting reproduction without sexual union. —**asex′ually**, *adv.*

ash [AS. asce]. The incombustible mineral residue that remains when substance is incinerated.

bone a. The white mineral constituents that remain after calcination or incineration of bone.

Ashford, Bailey Kelly [*American Army medical officer*, 1873-1934]. Discovered the great prevalence of ancylostomiasis in Puerto Rico (1900) and devoted his life to the eradication of the hookworm.

Ashhurst, John [*American surgeon*, 1839-1900]. Known for his introduction of a splint for use in leg fractures, called *Ashhurst's splint*.

a·si·a′li·a (G. a-, not; sialon, saliva). Deficiency or failure of the secretion of saliva.

a″si·at′i·co·side″ An antibiotic substance derived from Madagascar varieties of the perennial umbelliferous herb *Centella asiatica* (*Hydrocotyle asiatica*); it is active against *Mycobacterium tuberculosis* in animals but is toxic.

Askoerlsolt's method. See under method.

Asklepios. Greek god of healing, son of Apollo; his cult was widespread in ancient Greece his temples were houses of healing, precursors of the modern hospital; as Roman god of medicine, *Aesculapius*.

A. S. O American Society of Orthodontists.

a·so·cial (ay so shul, a·so′shul) [a- L. socius, companion]. Withdrawn from, not interested in others and their activities nor in realities.

a·so′ma [a-, G. soma, body]. A placental parasite with an ill-formed head and only rudimentary body. —**asomatous**, *adj.*; **asomus**, *n.*

a·so′ni·a [a-; L. sonus, sound]. Tone deafness.

A. S. P American Society of Pedodontists.

asp [G. aspis, asp]. A small venomous snake found in Africa and the Near East. *Vipera aspis*.

as″pal·a·so′ma [G. aspalax, blind rat; soma, body]. A monster with median or lateral eventration of the lower abdomen, having three distinct openings for the urinary bladder the rectum, and the sexual organs.

as·par′a·gin as·par′ gine. COOH.CH(NH$_2$) CH$_2$.CONH$_2$ the β-amide of asparaginic acid, found in the sprouts of dicotyledons and in many seeds; it occurs in white rhombic crystals, and is soluble in hot water insoluble in alcohol or ether; constituent of many proteins. Syn., *asparamide*, *a-aminosuccinamic acid*.

as·par′a·gin·ase. An enzyme, present in liver and other animal tissues as well as in plants, yeast, and bacteria, which catalyzes hydrolysis of asparagin to asparaginic acid and ammonia.

as par″a gin′ic ac′id. COOH CH(NH$_2$).CH$_2$.COOH. Aminosuccinic acid, a hydrolysis product of asparagin and of many proteins. Syn., *aspartic acid*.

as·par gi nyl. The univalent radical, H$_2$NCOCH$_2$CH(NH$_2$)CO— of asparagin, the monamide of asparaginic acid.

as par·am′ide, as par′am ide. Asparagin.

as par′tase. An enzyme, present in several bacteria, which catalyzes the conversion of aspartic acid to fumaric acid and ammonia.

as par′tic ac′id. Asparaginic acid.

as·par′to yl. The divalent radical, —COCH$_2$CH(NH$_2$)CO— of aspartic acid, an amino acid having two carboxyl groups.

as par′tyl. The univalent radical, HOOCCH$_2$CH(NH$_2$)CO— of aspartic acid, an amino acid having two carboxyl groups.

a·spas′tic [G a- not; spasmos, convulsion]. Not spastic.

a spe·cif′ic [a-; ML. specificus, from species, sort, kind]. Nonspecific not specific.

as″per·gil′lic ac′id (ass″pur-jil′ick) An antibiotic substance produced by *Aspergillus flavus*.

as per gil′lin. 1. An antibiotic substance obtained from certain fungi; it is probably identical with flavacidin, flavatin, flavicin, gigantic acid, and parasiticin. 2. A pigment obtained from the spores of *Aspergillus niger*

as·per″gil lo′sis (ass-pur″jil-o′sis, ass″pur-) [L. aspergere, to sprinkle; G. -osis, condition]. An infectious disease caused by any species of *Aspergillus*. Infections of lungs, bronchi, external ear paranasal sinuses, orbit, bones, brain, and meninges have been described.

As″per gil′lus (as pur-jil us) [aspergere]. A genus of fungi important as contaminant of lesions and as an agent of infection. The species *A. fumigatus* is the most common invader but *A. flavus*, *A. nidulans*, and *A. niger* are also found in man.

a·sper′ma tism (ay-spur′muh tiz-um, a-spur) **a-sper′mi·a** (ay-spur′mee-uh, -spur) [G a- not; sperma, seed]. 1. Nonemission of semen,

whether owing to nonsecretion or to nonejaculation. 2. Defective secretion of semen or lack of formation of spermatozoa. —**aspermat'ic, aspermous,** *adj*

a sper"ma to-gen e-sis [a- *sperma*, G *genesis*, production]. Failure of maturation of spermatozoa.

as'per ous [L. *asper* rough]. Uneven having sur face with distinct, min te elevations.

as phyx'i a [G from not; *sphyxis*, to throb]. Suffocation some the result of deprivation of oxygen causing anoxia in the body and an accumulation of carbon dioxide and fixed acids. Asphyxia should be differentiated from anoxia and pnea. —**asphyxial** *adj*

a. cyanotica. Traumatic asphyxia.

a. livida. Asphyxia neonatorum associated with cyanoti skin, strong pulse, and ctive reflexes. Syn., *blue a.*

a. neonatorum. Asphyxia of the newborn.

a. pallida. Asphyxia neonatorum attended by slow weak pulse, abolished reflexes, and very pale skin.

blue a. See *a.* livida.

fetal a. Asphyxia of the *fetus* while in the terus caused by interference with its blood supply as by cord compression or premature placental separation. Syn., *intrauterine a.*

intrauterine a. Fetal a.

local a. Stagnation of the circulation in part, as the fingers, hands, toes, or feet.

traumatic a. Cyanosis of the head and neck from sudden compression of the thorax, upper abdomen, or both. Also called *ecchymotic mask, traumatic pnea, pressure stasis.*

as-phyx'i nt [a- *sphyxis*] An agent capable of producing asphyxia. —**asphyx'iant,** *adj* ; **asphyxiate** *v.t* *i.*

as'pi din. $C_{23}H_{27}O_8$. An active principle btained from aspidium, the rhizome and stipes of *Dryopteris Filix-mas.*

as pid'i um [G. *aspidion*, little shield]. The rhizome and stipes of European aspidium or male fern (*Dryopteris Filix-mas*) or of American aspidium or marginal fern (*D marginalis*) both are sources of **aspidium oleoresin,** used for expelling tapeworm.

as"pi-do sper'ma [G *aspis*, shield; *sperma*, seed]. Quebracho. The dried bark of *Aspidosperma quebracho-blanco* containing the alkaloids aspidospermine, quebrachine, and thers it has been used as respiratory stimulant in asthmatic and cardiac dyspnea.

as"pi-do-sper'mine (as pi-do-spur'meen, -min) $C_{22}H_{30}N_2O$ An alkaloid extracted from quebracho (aspidosperma) It stimulates respiration and depresses circulation.

as"pi-ra'tion [L. *aspirare*, to breathe upon]. 1. Act of sucking p or sucking in inspiration imbibition. 2. Act of using the aspirator 3. The withdrawing of fluids and gases from cavity —**as'pirate,** *v.*

as'pi-ra"tor [*aspirare*]. A negative pressure apparatus for withdrawing liquids from cavities.

as'pi rin. See *acetylsalicylic acid.*

As'pi [G. *aspis*, asp]. A genus of snakes of the Viperidae.

A. cerastes. The horned viper of the African deserts. The venom of this species is predominantly hemotoxic.

aspogen. A trade-mark for the gastric antacid substance *dihydroxyaluminum aminoacetate.*

-spo ro gen'ic (y-spor'o-jen'ick, spor o- aw po ro) **as po rog' nous** (as por-odj'i-nus) [G *a-*, not *sporos*, seed *gennaein*, from *gignesthai*, to be produced]. 1 Producing no spores. 2. Reproduced without spores.

a spo rous (y-spor us, a-spor us) [a- *sporos*]. Without spores especially without the resistant phase, as in the case of many bacteria.

a spor'u lat (y-spor yoo-l te -spor') [a- *sporos*] Producing no spores.

as-sault [OF *asaut*, from L. *ad*, to, *saltus*, leaping]. An unlawful attempt to do bodily injury to another

felonious a. A malicious ttack showing criminal intent upon the person of another

as say' **as say** [OF *assai*, trial]. 1. Testing or analysis of metal or drug to determine the relative proportion of its constituents. 2. Process of assaying. 3. Substance to be analyzed also the report of the analysis. 4. Any substance to be analyzed.

Assézat, Jules [*French anthropologist*, 1832–76]. Remembered for his triangle formed by lines uniting the nasion and the basion and alveolar point called *Assézat triangle.*

as sim"i la'tion [L. *assimilatio* similarity]. 1. Process of transforming food into state suitable for bsorption by the circulation and conversion into body tissue; synthetic or constructive metabolism; anabolism. 2. *I psychology,* mental reception of impressions, and their assignment by the consciousness to their proper place; mental assimilation. 3. The abnormal fusion of bones, as the fusion of the transverse processes of the last lumbar vertebra with the lateral masses of the first sacral vertebra, or the tlas with the occipital bone. —**assim'ilable,** *adj* **assim'ilate,** *t.*

a. limit. Amount of starchy or saccharine food which person can ingest without the ppearance of glycosuria.

primary a. Conversion of food into chyle.

secondary a. Conversion of food elements into body tissue.

as-so"ci 'tion [L. *associare*, to join to]. 1 A connection, union, joining, or combination. 2. A society or united group of persons. 3. *I chemistry,* the correlation or ggregation of substances or functions. 4. *I psychology* mental linking, as that of objects, persons, or events ith ideas, thoughts, or sensations.

a. of ideas. That established between two similar ideas or two ideas of simultaneous occurrence.

clang a. Association of words because of their similarity in sound; seen in manic patients.

controlled a. Directed associati of relevant ideas, due to specific stimulus.

free a. Spontaneous consciously unrestricted association of ideas or mental images. *I psychoanalysis,* the free-association method is used to gain an understanding of the organization of the content of the mind.

induced a. A form of controlled association in which the person to be tested calls out the first word coming to mind in response to specific stimulus word.

as'so nance [L. *assonare*, to respond to]. A morbid tendency to employ alliteration.

as'sue-tude (ass wi tewd, -soo'i tewd) [L. *assuetudo* custom, habit]. 1 Habituation to disturbing influences. 2. Condition of an organism in which it has acquired such tolerance for drug or poison that the effect is lost.

As'ta-cus [G *astakos*, lobster from *ostakos*]. A genus of crustaceans containing the crayfish. The species **A. japonicus** and **A. similis** are important second intermediate hosts of the *Paragonimus westermani.*

sta si (stay'zhuh, see uh, -shuh, -see uh) [G., from *a-*, not *stasis*, standing]. Motor incoordination for standing.

a.-abasia. Apparent inability to walk or stand, due to some mental conflict; not accompanied

ith organic paralysis. It is a symptom of neurosis. Also called *hysterical ataxia*.

as'ta-tine (ass'tuh-teen, -tin) [G. *astatos*, unstable]. At = 210. Element number 85, prepared in 1940 by bombarding bismuth with alpha particles; formerly called alabamine. It is radioactive and forms no stable isotopes.

as"ta-xan'thin, $C_{40}H_{52}O_4$; a carotenoid pigment found mostly in animal organisms, but also occurring in plants.

a-ste"a-to'sis, as"te-a-to'sis [a-; G. *stear*, suet; -*osis*, condition]. 1. A deficiency or absence of the sebaceous secretion. 2. Any skin disease (as xeroderma) characterized by scantiness or lack of sebaceous secretion, the skin becoming dry, scaly, and often fissured. Syn., *xerosis*. Also called *a. cutis*.

as'ter [G., star]. The radiating structure surrounding the centrosome of the cell, seen at the beginning of mitosis. —**astral**, *adj*.

fibrin a. Radiation of fibrin lines from centers of platelets or leukocytes. Syn., *fibrin stars*.

as-ter"e-og-no'sis [G. *a-*, not; *stereos*, solid; *gnōsis*, knowledge]. Inability to recognize objects by the sense of touch. Also called *astereocognosy*.

as-te'ri-on [G. *asterios*, starry]. *In craniology*, the meeting point of the lambdoid, parietomastoid, and occipitomastoid sutures.

a-ster'nal (ay-stur'nul, a-stur'nul) [G. *a-*, not; *sternon*, breast]. 1. Not joined to the sternum, as the asternal ribs. 2. Without a sternum.

a-ster'ni-a [a-; *sternon*]. Absence of the sternum.

as'ter-o-, aster- [G. *astēr*, star]. A combining form meaning *star*.

as'ter-oid [*astēr*; G. *eidos*, form]. Star-shaped.

Asterol dihydrochloride. Trade-marked name for the antifungal agent *diamthazole dihydrochloride*.

as-the'ni-a [G. *astheneia*, want of strength]. Absence or loss of strength; adynamia. —**asthen'ic**, *adj*.

a. pigmentosa. See *adrenal cortical hypofunction*.

a. universalis. Visceroptosis associated with neurasthenic tendency, vasomotor weakness, and intestinal atony.

grave hypophyseal a. A serious cachexia of pituitary origin marked by anorexia, emaciation, constipation, amenorrhea, subnormal temperature, hypotonia, and hypoglycemia. See *hypopituitarism*.

myalgic a. A state of generalized fatigue associated with muscular pains.

neurocirculatory a. A psychosomatic disorder characterized by dyspnea, palpitation, vertigo, faintness, fatigue, tremor, precordial pain, and tachycardia, occurring most frequently in soldiers during the stress and danger of training and combat. It may occur physiologically in untrained persons who exercise violently. Also called *effort syndrome*, *soldier's heart*, *irritable heart*, *disordered action of the heart*, *Da Costa's syndrome*. Abbreviated, N. C. A.

tropical anhidrotic a. Heat exhaustion due to inability to sweat. See *sweat-retention syndrome*.

as-then'ic type. A physical type (Kretschmer) marked by a tall, slender, flat-chested, angular form, and poor muscular development.

as'the-no-, asthen- [G. *asthenēs*, weak]. A combining form meaning *weak*.

as"the-no-bi-o'sis (ass"thi-no-buy-o'sis) [*asthenēs*; G. *bios*, life; -*osis*, condition]. A biologic state closely allied to hibernation or estivation, yet not induced by climate, temperature, or humidity.

as"the-no-co'ri-a [*asthenēs*; G. *korē*, pupil]. A sluggish pupillary light reflex, as in hypoadrenia.

as"the-no-ge'ni-a, as"the-no-gen'e-sis [*asthenēs*; G. *genesis*, production]. Production of asthenia. —**asthenogen'ic, asthenogenet'ic**, *adj*.

as"the-nol'o-gy [*asthenēs*; G. *logos*, word]. The theory that anatomic and functional anomalies are associated with constitutional weakness or debility.

as"the-nom'e-ter [*asthenēs*; G. *metron*, a measure]. An instrument for detecting and measuring asthenia, especially a device for measuring muscular asthenopia.

as"the-no-pho'bi-a [*asthenēs*; G. *phobos*, fear]. Morbid fear of weakness.

as"the-no'pi-a [*asthenēs*; G. *ōps*, eye]. Weakness of the ocular muscles or of visual power due to errors of refraction, heterophoria, overuse, etc. —**asthenop'ic**, *adj*.; **as'thenope**, *n*.

accommodative a. Subnormal power of the function of accommodation, or the pain or discomfort resulting from accommodative effort.

muscular a. That due to weakness, incoordination (heterophoria), or strain of the external ocular muscles.

as"the-no-sper'mi-a [*asthenēs*; G. *sperma*, seed]. Weakness or loss of vitality of the spermatozoa.

as"the-nox'i-a [*asthenēs*; G. *oxys*, sharp]. Insufficient oxidation of waste products, as ketosis from insufficient oxidation of fatty acids.

asth'ma (az'muh, ass'muh) [G., panting]. Paroxysmal dyspnea. Commonly, however, it refers to **allergic asthma**, characterized by dyspnea, cough, wheezing, mucous sputum, and a sense of constriction of the chest. Pathologic changes consist of bronchiolar spasm, edema of mucosa, hypertrophy of glandular elements, and secretion of mucuslike substance. Is usually due to hypersensitiveness to inhaled or ingested substances, or bacteria. In allergic asthma, the name may include the etiologic factor, as **bacterial asthma**, **food asthma**, **horse asthma**, **pollen asthma**. —**asthmat'ic**, *adj*.

bronchial a. See allergic a.

cardiac a. Paroxysmal dyspnea due to cardiac failure occurring, usually at night, in patients with passive congestion of the lungs, secondary to failure of the left side of the heart; accompanied by characteristic rales.

fuller's a. A pulmonary affection due to the inhalation of lint and dust in the manufacture of wool cloth.

grinders' a. An interstitial pneumonia due to the inhalation of fine particles set free in grinding steel, etc. See *fibroid phthisis*.

intrinsic bronchitic a. A form due probably to infection resulting in structural changes.

miners' a. Dyspnea due to anthracosis.

potters' a. Pneumonoconiosis.

psychogenic a. An intrinsic asthma due to psychic causes, occurring usually in persons over thirty years of age.

renal a. Paroxysmal dyspnea occurring as a result of renal failure or uremia.

steam fitters' a. Asbestosis.

stone a. Pressure and pain in the chest due to the presence of a calculus in the bronchus.

symptomatic a. Asthma which is secondary to some other condition.

thymic a. A rare type due to an enlarged thymus.

asth'ma weed. Lobelia.

a-stig'ma-graph [G. *a-*, not; *stigma*, point; *graphein*, to write]. An instrument for detecting astigmatism of the eye.

a-stig'ma-tism [a-; *stigma*]. The faulty vision which results from irregularity in the curvature of one or more refractive surfaces (cornea, anterior and posterior surfaces of the lens) of the eye. When such a condition occurs, rays emanating from a point are not brought into focus at a point on the retina, but appear to spread as a line in various

directions depending upon the curvature. Abbreviated As. The condition may be **congenital** or **acquired.** When the irregularity is in the cornea, it is **corneal astigmatism;** when in the lens, **lenticular astigmatism.** When the greatest refractive power is along the horizontal meridian, it is called **astigmatism against the rule;** when along the vertical meridian, **astigmatism with the rule.** Astigmatism may complicate myopia or hypermetropia, causing **simple** ***hypermetropic astigmatism,*** where one principal meridian is hypermetropic, the other normal, or **compound hypermetropic astigmatism** with both meridians hypermetropic, one more so than the other. Abbreviated Ah. In the same manner complicating myopia, there may be **simple myopic astigmatism** and **compound myopic astigmatism** (symbol, M + As). When one meridian is myopic and the other hypermetropic, **mixed astigmatism** is the result. Also, when the principal meridians are at right angles, the condition is known as **regular astigmatism,** and when different parts of the meridian have different refractive powers, **irregular astigmatism.** —**astigmat'ic, astig'mic,** *adj.*

retinal a. Changes in the localization of the fixation point, thought to be due to changes in light intensity.

a-stig"ma-tom'e-ter. See *astigmometer.*

as"tig-mat'o-scope. See *astigmoscope.*

as"tig-mom'e-ter (**a-stig"ma-tom'e-ter**) [*a-*; *stigma*; G. *metron*, measure]. An instrument which measures the degree of astigmatism. —**astigmom'etry,** *n.*

a-stig'mo-scope, as"tig-mat'o-scope [*a-*; *stigma*; G. *skopein*, to examine]. An instrument for measuring astigmatism. —**astigmos'copy,** *n.*

a-stom'a-tous (a-stom'uh-tus, a-sto'muh-tus), **as'-to-mous,** (-sto'mus) [*a-*; G. *stoma*, mouth]. 1. Without a mouth or stoma. 2. *In botany,* without stomas.

a-sto'mi-a [*a-*; *stoma*]. Congenital absence of the mouth.

as-trag"a-lec'to-my [G. *astragalos*, ball of the ankle joint; *ektomē*, excision]. Excision of the astragalus, or talus.

As-trag'a-lus [G. *astragalos*, milk vetch]. A genus of leguminous plants some varieties of which yield gum tragacanth.

A. mollissimus is the locoweed. Several species of this genus produce peculiar intoxicating effects in horses and other animals.

as-trag'a-lus [G. *astragalos*, ball of the ankle joint]. The ankle bone, upon which the tibia rests. O.T. Syn., *talus* [BNA]. See Table of Bones in the Appendix. —**astrag'alar,** *adj.*

as"tra-pho'bi-a, as"tra-po-pho'bi-a [G. *astrapē*, lightning; *phobos*, fear]. Morbid fear of lightning and thunderstorms.

as-trin'gent [L. *astringere*, to bind together]. An agent that produces contraction of organic tissues, or arrests hemorrhages, diarrhea, etc. —**astringency,** *n.*, **astrin'gent,** *adj.*

as'tro-, astr- [G. *astron*, star]. Combining form signifying *pertaining to the stars.*

as'tro-blast [*astron*; G. *blastos*, germ]. A primitive cell which develops into an astrocyte.

as"tro-blas"to-ma, as"tro-cy-to'ma. See *astroblastoma.*

as"tro-blas-to'ma [*astron*; *blastos*; G. *-ōma*, tumor]. A glial tumor occurring in all parts of the central nervous system but with less frequency than the astrocytoma, and differing from it by being less fibrillar and having more numerous cells. The cells are larger, have thicker processes often extending to vessels, and have hyperchromatic nuclei.

Also called *astroblastic-astrocytoma, ganglion-cell glioma, ganglion-celled neuroma, glioblastoma-astroblastoma, spongioblastoma, spongioblastoma polare* or *unipolare.* Syn., *astrocytoma, Grade 2.*

a. of the nose. See heterotopic *glioma.*

as'tro-cytes (as'tro-sights) [*astron*; G. *kytos*, cell]. The many-processed stellate cells of the neuroglia, attached to the blood vessels of the brain and spinal cord by perivascular feet. Also called *astroglia, Cajal' cells, macroglia, spider cells.*

fibrous a. *Those in the white matter* characterized by long, unbranched processes.

protoplasmic a. Those in the gray matter characterized by numerous, freely branching protoplasmic processes.

as"tro-cy-to'ma (-sigh-to'muh) [*astron*; *kytos*; G. *-ōma*, tumor]. One of the commonest glial tumors of the central nervous system formed of protoplasmic or fibrillary astrocytes. In grading of this series of tumors, it is synonymous with *astrocytoma, Grade 1; astroblastoma,* with *astrocytoma, Grade 2;* and *glioblastoma multiforme,* with *astrocytoma, Grades 3* and *4.* Also called *gemistocytic a., pilocytic a., piloid a., astrocytic glioma, astroglioma, astroma, spongiocytoma.*

a. gigantocellulare. See *glioblastoma multiforme.*

a. of the nose. See heterotopic *glioma.*

fibrillary a. One in which the glial cells show abundant interlacing fibrils.

protoplasmic a. One in which the glial cells are rich in cytoplasm and the fibrils scanty or absent.

as-trog'li-a [*astron*; G. *glia*, glue]. Neuroglia composed of astrocytes.

as-trog"li-o'ma. A glial tumor of the central nervous system. See *astrocytoma.*

a. of the nose. See heterotopic *glioma.*

as'troid [*astron*; G. *eidos*, form]. Star-shaped.

as-tro'ma. See *astrocytoma.*

as"tro-pho'bi-a [*astron*; G. *phobos*, fear]. Morbid fear of the stars and celestial space.

as'tro-sphere [*astron*; G. *sphaira*, sphere]. 1. The central mass of the aster exclusive of the filaments or rays. 2. The entire aster exclusive of the centriole. Syn., *centrosphere, centrosome, attraction sphere.*

a-styph'i-a [G. *a-*, not; *styphein*, to make stiff]. Sexual impotence; inability to erect the penis.

a-sys'i-a (a-sizh'uh, a-siz'ee-uh, -sizh'ee-uh, -sis'ee-uh) [*a-*; *stysis*]. Incomplete power to erect the penis; sexual impotence.

a-syl-la'bi-a [*a-*; G. *syllabē*, syllable]. A form of aphasia in which individual letters are recognized, but the formation of syllables and words is difficult or impossible.

a-sy'lum [L., place of refuge]. An institution for the support, safekeeping, cure, or education of those incapable of caring for themselves, such as the insane, the blind, etc.

a"sym-bo'li-a [G. *a-*, not; *symbolon*, token]. See *asemia.*

a"sym-met'ric (ay"si-met'rick, ass"i-met'rick) [*a-*; G. *symmetria*, symmetry]. Pertaining to or exhibiting asymmetry.

a"sym-met'ri-cal at'om. One which has each of its valence bonds satisfied by a different atom or radical; of special significance in respect to carbon and nitrogen atoms.

a-sym'me-try (ay-sim'i-tree, -sim'-) [*a-*; *symmetria*]. 1. *In anatomy* and *biology,* lack of similarity or correspondence of the organs and parts on each side of an organism. 2. *In chemistry,* absence of symmetry in the arrangement of the atoms and radicals within a molecule. —**asymmet'ric, asymmet'rical,** *adj.*

a-sym'phy-tous [G. *asymphytos*, not growing together]. Distinct; not grown together.

a″symp-to-mat′ic (ay″simp-to-mat′ick, a-simp to-) [G. *a-*, not; *symptōmatikos*, from *symptōma*, symptom]. Symptomless; exhibiting no symptoms.

as″ymp-tot′ic [a-; G. *symptōsis*, collapsing]. Of or pertaining to a straight line which an indefinitely extended curve continually approaches as a limit. Also see *asymptotic wash fulfillment*.

a-syn-chro-nism (ay-sing′kro-niz um, -sing) [a-; G. *synchronismos*, agreement of time]. Absence of synchronism; disturbed coordination.

-syn-clit-ism (ay-sing′kli tiz-um, -sing′) [a-; G. *syn*, with; *klisis*, inclination]. An oblique presentation of the fetal head at superior strait of pelvis.

anterior a. Biparietal obliquity; the lateral inclination of the fetal head at the superior pelvic strait, which brings the sagittal suture nearer to the sacral promontory. Also called *Naegele's obliquity*.

posterior a. The lateral inclination of the fetal head at the superior pelvic strait which brings the sagittal suture toward the symphysis pubis while the posterior parietal bone occupies most of the superior strait; also called *Litzmann's obliquity*.

a-syn′de-sis [a-; G. *syndesis*, to bind together]. Incoherency in syntax or sentence construction. —**asyndet′ic**, *adj.*

a″syn-ech′i (ay″si-neck′ee-uh, -nee′kee-uh, si-nigh-uh) [a-; G. *synecheia*, from *synechein*, to hold together]. Absence of continuity in structure.

-syn′er-gy, **as″y-ner′gi-a** [a-; G. *synergia*, cooperation]. Faulty coordination of groups of organs or muscles normally acting in unison; particularly the abnormal state of muscle antagonism in cerebellar disease. Syn., *dyssynergy*. —**asyner′gic**, *adj.*

appendicular a. Asynergy of the limbs.

axial a. Asynergy of the axial musculature and muscles of the trunk. Syn., *truncal a.*, *trunk ataxia*.

progressive cerebellar a. See *cerebellofugal degeneration*.

progressive locomotor a. See *tabes dorsalis*.

truncal a. See *axial a.*

verbal a. Defective coordination of speech, as in aphasia, and in the scanning speech of multiple sclerosis.

vocal a. Faulty coordination of the muscles of the larynx, due to chorea.

a″syn-e′si-a [G., want of understanding]. Stupidity; loss or disorder of mental power. —**asynet′ic**, *adj.*

as″y-no′di a [G. *a-*, not; *synodia*, journey in company]. Sexual impotence.

syn-tax′i-a dor-sa′lis (ay″sin-tack′shuh, tack see uh, sin-) Failure of the neural tube to close.

sys″tem-at′ic (ay-sis″ti-mat′ick, -sis) [a-; G. *systematikos*, from *systēma*, system]. Diffuse; not restricted to any one of several systems of nerve fibers; applied to nervous diseases that are general.

a″sys-to′li-a (ay″sis-to′lee-uh, -sis-) -**sys′to-le** (ay sis′to-lee, -sis) [a-; G. *systolē*, contraction]. Faulty or imperfect contraction of the cardiac ventricles, especially of the right ventricle, as seen in the last stages of mitral disease. —**asystol′ic**, *adj.*

cardiotachic a. Temporary asystolia due to rapid heart rate.

cardioplegic a. That resulting from weakness or injury of the heart muscle.

A.T. 10 (*anti-tetany*) A preparation of dihydrotachysterol used in the treatment of parathyroid tetany.

A t I *electrocardiography* symbol for the mean manifest magnitude of repolarization of the myocardium determined algebraically and measured in microvolt seconds.

At Chemical symbol for astatine.

atabrine dihydrochloride. Trade-mark for a brand of quinacrine hydrochloride. Also called *atebrine*.

at″a-bri ne-der′ma. Atabrine dermatitis.

-tac′tic [G. *ataktos*, irregular]. Irregular; incoordinate. Pertaining to muscular incoordination especially in aphasia, ataxia.

a-tac′ti form [*ataktos*; L. *forma*, form]. Ataxialike; mildly ataxic.

a″tac-til′i a (ay″tack-til′ee uh, -tack) [G. *a-*, not; L. *tactilis*, from *tangere*, to touch]. Loss of tactile sense.

-tav′i-cus [L. *atavus*, ancestor]. Not resembling either parent, but similar to a grandparent.

at′a-vism [*atavus*]. The reappearance of remote ancestral characteristics in an individual. Syn., *reversion*. —**atav′ic**, **atavis′tic**, *adj.*

a tax″ apha′si (a-tack″suh-fay′zhuh, -zee uh) [G. *ataxia*, disorder; *aphasia*, speechlessness]. Inability to arrange words into sentences.

a tax′i a [G.]. Incoordination of muscular action. —**ataxic**, *adj.*

acute a. That developing after a severe acute infection, presumably due to selective toxic effect on the spinocerebellar tracts; also called *Leyden a.*, *Leyden-Westphal a.*

a. cordis. See *fibrillation*.

bulbar a. That due to a lesion in the pons or medulla oblongata.

cerebellar a. That due to disease of the cerebellum of the brain.

cerebellofugal degeneration a. Ataxia as the main manifestation of cerebellofugal degeneration.

diphtheritic a. A sequel of diphtheria preceding diphtheritic paralysis, in which the chief phenomena of tabes dorsalis are present.

Friedreich's a. A progressive, familial disease occurring in childhood and characterized by ataxia, absent deep reflexes, positive Babinski sign, speech disturbances, nystagmus, and clubfoot. The specific lesions are degenerations of lateral and posterior columns of the spinal cord and to some extent in the cerebellum and medulla.

hereditary cerebellar a. Inherited ataxia similar to Friedreich's ataxia but characterized by later onset (20–45 years) optic atrophy, incoordination of arms, legs, and trunk, speech disorders, and often mental deterioration. In contrast to Friedreich's ataxia, there may be hyperreflexia but no sensory disturbances and clubfoot. Also called *Marie's a.*, *Nonne-Marie syndrome*.

hereditary spinal a. See Friedreich's a.

hysterical a. See *astasia-abasia*.

locomotor a. T bes dorsalis.

Marie's a. See hereditary cerebellar a.

moral a. The inconstancy of ideas and will, attended with convulsions and pain, observed in hysterical subjects.

motor a. Inability to coordinate the muscles in walking.

spinal a. That due to disease of the spinal cord.

static a. Lack of muscular coordination in standing still, or in fixed positions of the limbs.

tabetic a. See *tabes dorsalis*.

thermal a. Large and irregular fluctuations of the body temperature.

trunk a. See axial asynergy.

vasomotor a. Instability of the circulatory mechanism, due to lack of coordination between the sympathetic and the parasympathetic nervous systems in relation to the vasomotor phenomena.

a-tax′i-a-graph [ataxia; G. *graphein*, to write]. A device for recording the degree of ataxia.

a tax″i-o-pho′bi [ataxia; G. *phobos*, fear]. A morbid fear of disorder

a·tax″o·phe′mi·a [ataxia; G. phēmē, speech]. Incoherence; faulty coordination of words.

ATCC American Type Culture Collection.

at′e·brin. See *atabrine dihydrochloride*.

at″e·lec′ta·sis [G. atelēs, imperfect; ektasis, extension]. Collapsed or airless state of all or part of lung; also called *apneumatosis*. —**atelectat′ic,** *adj.*

acquired a. Obstructive or compression a.

a. of newborn. Imperfect expansion of the lungs at birth and for the first few days of life. Syn., *congenital a.*

compression a. Collapse of part or all of lung due to pressure by extrinsic factors, as pleural effusion or the elevation of the diaphragm.

congenital a. A. of newborn.

lobular a. Airlessness in group of lung lobules patchy a.

massive a. See massive *collapse*.

obstructive a. Atelectasis caused by occlusion of bronchus during inspiration by intrinsic factors, such as tumor or mucous plug, with subsequent absorption of the trapped air and collapse of the alveoli.

patchy a. See lobular a.

a·tel″en·ce·pha′li·a, a·tel″en·ceph′ ly, at″e·le·en·ce·pha′li·a [atelēs; G. enkephalos, brain]. Imperfect development of the brain.

a·t ″li·o·sis (tee″lee sis, -tel ee -tee″lye-o sis) **a·te″lei·o·sis** (tee″lye sis) [G. ateleia, incompleteness; -ōsis, condition]. Infantilism or dwarfism; generalized type of underdevelopment characterized by childish face, thin voice, slender limbs, and normal intelligence. All parts are proportionately smaller giving the impression of an adult in miniature, as differentiated from cretinism or achondroplastic dwarfs, where disproportion is the rule. —**ateliot′ic, ateleiot′ic, ate′lic,** *adj.*

t′el·o- atel- [G. atelēs, imperfect]. Combining form signifying *imperfect* or *incomplete development*.

at″e·lo·car′di·a [atelēs; G. kardia, heart]. An imperfect or undeveloped state of the heart.

at″ lo·ceph lous [atelēs; G. kephalē, head]. Having the skull or head more or less imperfectly developed.

at″e·l chei′li·a (t″l·lo·kigh′lee·uh) [atelēs; G. cheilos, lip]. Defective development of the lip.

at″e·lo·chei ri·a (kigh ree·uh) [atelēs; G. cheir hand]. Defective development of the hand.

at″ lo·en ce pha′li a. See *atelencephalia*.

at″e·lo·glos si a [atelēs; G. glōssa, tongue]. Congenital defect in the tongue.

at″ log nath′i·a (at″l log nath ee·uh, -nayth ee uh) [atelēs; G. gnathos, jaw]. Imperfect development of j w especially of the lower j w.

at″e·lo·mit′i atelēs; G. mitos, thread]. Nonterminal applied to the spindle-fiber attachm t of chromosomes.

at″ lo·my·e′li·a (at″l lo migh·ee′lee·uh) [atelēs; G. myelos, marrow]. Congenital defect of spinal cord.

at″ lo·po di [atelēs; G. pous, foot]. Defective development of the foot.

t e·lo·pro·so pi a [atelēs; G. prosōpon, face]. Incomplete facial development.

at″e·lo ra hid′i at″ lor·rha·chid′i·a (-ra-kid″ee uh) [atelēs; G. rhachis, spine]. Imperfect development of the spinal column, as in spina bifida.

at″e·lo·sto mi [atelēs; G. stoma, mouth]. Incomplete development of the mouth.

atepe. An antimalarial consisting of quinacrine hydrochloride and pamaquine naphthoate in the ratio of 1 20.

at″e·pho′bi [G. atē, ruin phobos, fear]. Morbid fear of ruin.

the′li [G. a- not thēlē, nipple]. Absence of the nipples.

ath″er·o·gen -sis. Production of fatty degeneration in arteries. —**atherogen′ic,** *adj.*

ath er·o·ma [G. athērē, porridge -ōma, tumor]. 1. A sebaceous cyst; steatoma. 2. The fatty degeneration and infiltration by lipids of the walls of the arteries in arteriosclerosis. —**atherom atous,** *adj.*

capillary a. The formation of fatty granules in the walls of the capillaries.

ath″er·o ma to sis [athērē, -ōma; G. -ōsis, condition]. Generalized atheromatous condition of the arteries.

ath er·o″scle·ro si [athērē; G. sklērōsis, hardening]. A form of simple intimal arteriosclerosis with atheromatous deposits within and beneath the intima. —**atherosclerogen′ic,** *adj.*

th″e·to sis [G. athetos, without position -ōsis, condition]. A condition chiefly affecting children, characterized by recurrent, slow and continual change of position of the fingers, toes, hands, feet, and other parts of the body usually the result of central brain lesion. Also called *Hammond' disease, posthemiplegic chorea*. —**ath toid, athetosic, thetot′ic,** *adj.*

double a. Bilateral congenital thetosis, usually nonprogressive, in which the face and neck muscles and those of all four extremities are involved speech is distorted also called *infantile spasmodic paraplegia, Vogt syndrome.*

pupillary a. Hippus.

a·thi″a·min·o sis. See *beriberi*.

ath′lete′ foot. See *dermatophytosis*.

a·threp′si a. See *marasmus*.

a·thy′mic (y·thy′mick, ath·im ick) [G. a- not; thymos, mind]. Without feeling, as an athymic psychopath.

thy re·o sis, thy·ro sis. The condition associated with absence of secretion of thyroid hormone. If it occurs in infants, cretinism results in older children or adults, myxedema. Syn., *athyrea, athyroidism.*

t·lan′to- [G. atlas, first of the neck vertebrae, from the Greek giant, *Atlas*, who supported the world on his shoulders]. A combining form signifying *relation to the atlas*.

t lan″t ax′i al [atlas; L. axis, axis]. Pertaining to the tlas and the axis or epistropheus pplied to the joints between these two vertebrae and the ligaments which join them. Syn., *atlantoepistrophic*.

at lan″to bas·i lar′i ln ter′nus. A rare variant of the longus capitis muscle arising from the anterior tubercle of the tlas and inserted into the basilar part of the occipital bone.

t lan″to·ep″i stroph′ic [atlas; G. epistropheus, turning on pivot]. Pertaining to the atlas and the epistropheus or axis; applied to the joints between these two vertebrae and the ligaments joining them Syn., *atlantoaxial*. See Table of Joints and Ligaments in the Appendix.

at lan″to·oc·cip′i tal (-ock·sip′ tul) [atlas; L. occiput, back part of the head]. Pertaining to the tlas and the occipital bone applied to the joints between these two bones and the ligaments joining them. See T ble of Joints and Ligaments in the Appendix.

at′las [G.] The first cervical vertebra. It articulates with the occipital bone of the skull and with the xis. See Table of Bones in the Appendix.

at′las as sim″l la tion. See *platybasia*.

Atlee Washington Lemuel [American physician, 1809–78] One of the first to study surgical removal of uterine fibroids. With his brother **John Light Atlee** (1799–1885) established the operation of ovariotomy.

at″lo·ax′oid. Atlantoaxial.

at·lod′y mus, at″l -did′y mus [atlas; G. didymos,

twin]. A monster with two heads on one neck and single body. Syn., *dicephalus monauchenos*.

at·mo- atmo- [G. *atmos*, steam]. A combining form denoting steam or vapor.

at·mol'y·sis [*atmos*; G. *lysis*, a loosing]. A method of separating mixed gases or vapors by means of diffusion through a porous substance.

at·mom'e·ter [*atmos*; G. *metron*, measure]. An instrument which measures the amount of water evaporated from a given surface in a given time, to determine the humidity of the atmosphere.

at'mos·phere [*atmos*; G. *sphaira*, sphere]. 1. Layer of air surrounding the earth to a height of approximately 200 miles. 2. A unit of pressure: the amount of pressure exerted by the air on one square inch of surface at sea level—about 15 lb. *In physics*, one atmosphere is equivalent to the pressure of a column of mercury 760 mm high, at sea level and 0° C. 3. Climatic conditions of a locality. 4. *In chemistry*, gaseous medium surrounding a body. —**atmospher'ic,** *adj.*

at"mos·pher'ic blast. Blast injury.

a·te·ci·a (a-tee'shee-uh, -see-uh) [G. *atekia*, barrenness]. Sterility of the female.

at'om [G. *atomos*, uncut, indivisible]. The smallest particle of an element capable of existing individually or in combination with one or more atoms of the same or another element. It consists of a relatively heavy inner core, or nucleus, with a positive electric charge, and a number of lighter planetary particles, with negative charges, revolving or vibrating continuously around the nucleus in a vast empty space. The positive heavy particles in the nucleus are called *protons*, and the orbital particles are called *electrons*. The number of protons or of electrons in an electrically neutral atom is given by its *atomic number*. In addition to protons, the nucleus also contains *neutrons*, which are neutral particles resulting from the combination of a proton and an electron. The sum of protons and neutrons in the nucleus is called the mass number of the atom, or its mass or atomic weight. All atoms are constructed of these three fundamental building stones. —**atom'ic,** *adj.*

recoil a. The remainder of an atom still in motion after emission of an alpha particle, a beta particle, or a neutron.

a·tom'ic dis·in"te·gra'tion. The disintegration of atoms, either naturally as in natural radioactivity or artificially as by the bombardment of atomic nuclei with protons, deuterons, alpha particles, neutrons, or photons, whereby new atoms are formed and more or less energy is liberated. Practically all elements have been disintegrated by artificial means. Generally the product differs only slightly from the original, but some atoms, as uranium of atomic weight 235, undergo fission into two atoms of approximately equal weight with release of much energy. See *isotope*.

at"o·mic'i·ty (at"o-miss'i-tee) [*atomos*]. Chemical valence.

atom'ic pile re·ac'tor. See nuclear reactor.

at"om·i·za'tion [*atomos*]. Mechanical process of breaking up a liquid into a fine spray. —**at'omizer,** *n.*

a·to·ni·a, at'o·ny [G. *a-*, not; *tonos*, tone]. Abnormally low degree of tonus; absence of tonus. —**aton'ic,** *adj.*; **atonic'ity,** *n.*

a. of bladder. Inability to expel the urine, due to deficient muscular power.

at'o·pen [G. *atopos*, from *a-*; *topos*, place]. An antigen or allergen, usually inhaled or ingested, which produces an atopic disease.

atophan. Trade-mark identifying the original cinchophen.

a·top'ic (ay-top'ick, a-top'ick) [*atopos*]. 1. Pertaining to atopy or to an atopen. 2. Old term for ectopic.

a·top"og·no'si·a (a-top"og-no'sis) [*atopos*; G. *gnōsis*, knowledge]. Lack of ability to locate a sensation accurately.

at'o·py. A peculiar form of allergy marked by a familial tendency to certain hypersensitivities, as hay fever, asthma, atopic dermatitis, an immediate vascularization and exudation of the sensitive tissue when exposed to the stimulant, and the presence of certain antibodies, called atopic reagins. Syn., *atopic hypersensitivity*.

a·tox'ic (ay-tock'sick, a-tock'sick) [G. *a-*, not; *toxikon*, poison]. Not venomous; not poisonous.

a·tox'yl (a-tock'sil, ay-tock'sil). $C_6H_4NH_2AsO \cdot OH \cdot ONa \cdot 3H_2O$. Sodium arsanilate. A white, odorless, crystalline powder; formerly used in the treatment of syphilis, psoriasis, and trypanosomiasis. It may cause blindness.

ATP Adenosine triphosphate.

ATPase Adenosine triphosphatase.

a·tra·che'li·a (ay"tra-kee'lee-uh, a-tra-) [G. *atrachēlos*, from *a-*; *trachēlos*, neck]. The condition of having little or no neck. —**atrachelous,** *adj.*

a·trach"e·lo·ceph'a·lus (a-track"e-lo-sef'uh-lus) [*atrachēlos*; G. *kephalē*, head]. A monster with head and neck absent or poorly developed.

A'trax. A genus of Australian poisonous spiders related to the American tarantulas. They are similar to the black widow in effects and treatment for their sting is similar.

a·tre·mi·a [G. *a-*, not; *tremein*, to tremble]. Hysterical inability to walk, stand, or sit without general discomfort and paresthesia of the head and back, all movements being readily executed without tremor in the recumbent posture. Also called *Neftel's disease*.

a·tre·si·a (a-tree'zhuh, -see-uh, -shuh, -see-uh) [*a-*; G. *trēsis*, perforation]. Imperforation or closure of a normal opening or canal, as of the anus, vagina, auditory meatus, or pupil. —**atresic, atret'ic,** *adj.*

aortic a. Defective development of the aortic orifice with coexisting patent ductus arteriosus; an extremely rare malformation in which the left ventricle may be absent or very poorly developed.

a. ani vaginalis. An anomaly in which there is imperforate anus, the rectum opening into the vagina. Also called *anus vaginalis*.

a. folliculi. The blighting of an ovarian follicle with degeneration of the ovum before maturation. The atresic follicle is characterized by a small cystic space, lined with thinned follicle cells, which subsequently progresses to complete obliteration.

a. of iter. See aqueduct *stenosis*.

tricuspid a. Failure in development of tricuspid valve, with diminutive right ventricle, and interatrial septal defect or patent foramen ovale.

a·tre·to- [G. *atrētos*, not perforated, from *a-*; *tetrainein*, to perforate]. A combining form meaning *imperforation, absence or closure of a passage*.

a·tre"to·ceph'a·lus [*atrētos*; G. *kephalē*, head]. A monster with imperforate nostrils or mouth.

a·tre"to·cor'mus [*atrētos*; G. *kormos*, trunk]. A monster having one or more of the body openings imperforate.

a·tre"to·cys'ti·a [*atrētos*; G. *kystis*, bladder]. Atresia of the urinary bladder.

a·tre"to·gas'tri·a [*atrētos*; G. *gastēr*, stomach]. Imperforation of the cardiac or pyloric orifice of the stomach.

a·tre"to·le·mi·a [*atrētos*; G. *laimos*, gullet]. Imperforation of the esophagus or pharynx.

a·tre"to·me'tri·a [*atrētos*; G. *mētra*, womb]. Atresia of the uterus.

at″re-top′si-a [*atretos*; G. *opsis*, vision]. Imperforation of the pupil. Also called *membrana pupillaris persistens*.

a-tret″or-rhin′i-a [*atretos*; G. *rhis*, nose]. Nasal atresia.

a-tre″to-sto′mi-a [*atretos*; G. *stoma*, mouth]. Imperforation of the mouth.

a-tret″u-re′thri-a [*atretos*; G. *ourēthra*, urethra]. Imperforate urethra.

a′tri-a. Plural of atrium.

at″ri-cho′sis (at″ri-ko′sis), **a-trich′i-a** (a-trick′ee-uh) [G. *a-*, not; *thrix*, hair]. A condition characterized by absence of hair.

a. congenitalis. The congenital absence of hair.

at′ri-chous (at′ri-kus) [*a-*; *thrix*]. Denoting bacteria having no flagella.

at′ri-nal. $C_{17}H_{23}O_4NS$, tropinesulfuric acid; the sulfuric acid ester of tropine; occurs as white crystals; sparingly soluble in water; insoluble in alcohol. Its action is similar to that of atropine.

a′tri-o- [L. *atrium*, atrium]. A combining form denoting *atrium* or *atrial*.

a″tri-o-sep″to-pex′y [*atrium*; L. *saeptum*, partition; G. *pexis*, fixation]. Operation on the atrial septum of the heart for closure of defect.

a″tri-o-ven-tric′u-lar [*atrium*; L. *ventriculus*, ventricle]. Relating to the atria and the ventricles of the heart. Abbreviated **AV**, **A.-V.**

a″tri-o-ven-tric″u-lar′is com′mu-nis. A malformation of the heart in which the atrial and ventricular septa have failed to fuse, leaving a free communication between all four chambers. The mitral and tricuspid leaflets are fused to form a single atrioventricular valve.

a′tri-um (pl. *atria*) [L.]. 1. The first chamber of the heart, which receives the blood from the veins. 2. The part of the tympanic cavity of the ear below the head of the malleus. *O.T.* 3. The end of an alveolar duct. See Plate 5. —**atrial**, *adj.*

a. cordis. An atrium of the heart.

a. cordis dextrum. Right atrium of the heart.

a. cordis sinistrum. Left atrium of the heart.

a. vaginae. The vestibule of the vulva.

infection a. The point of entrance of the bacteria in an infectious disease.

primitive a. The embryonic unpaired chamber of the heart between the sinus venosus and the primitive ventricle which becomes the adult atria. See *sinus venosus*.

At′ro-pa [G. *Atropos*, one of the Fates]. A genus of the Solanaceae; source of belladonna and atropine.

a-tro-phi″ma-cu-lo′sa et stri-a′ta. See *atrophoderma maculatum*.

at″ro-pho-der′ma [G. *atrophia*, want of food, atrophy; *derma*, skin]. Atrophy of the skin.

a. albidum. A stockinglike type of atrophy affecting the extremities; usually starts in childhood and involves the lower limbs.

a. maculatum. 1. Primary macular atrophy of the skin, characterized by the formation of a macule which gradually disappears leaving a shiny white depressed spot. 2. Macular atrophy of the skin due to syphilis; also called *atrophia maculosa et striata*.

a. neuriticum. Glossy skin.

a. pigmentosum. Xeroderma pigmentosum.

a. reticulatum. See *folliculitis ulerythematosa reticulata*.

a. vermiculatis. See *folliculitis ulerythematosa reticulata*.

at″ro-pho-der″ma-to′sis [*atrophia*, *derma*; G. *-ōsis*, condition]. A class of skin diseases characterized by atrophy of the cutis.

at′ro-phy [*atrophia*]. A reduction in size of an organ or cell which had previously reached mature size; hypoplastic organs may exhibit atrophy. It may be physiologic or pathologic, the latter type being accompanied by some degree of degeneration. —**atrophied**, **atroph′ic**, *adj.*

acute yellow a. See postnecrotic *cirrhosis*.

brown a. A form in which the atrophic organ is of a deeper brown than normal because of an increase of pigment (hemosiderin and hemofuscin); observed in the heart, skeletal muscles, and liver.

cardiac a. Atrophy of the heart observed especially in chronic, wasting diseases.

chronic spinal muscular a. See progressive muscular *dystrophy*.

circumscribed cerebral a. Atrophy and gliosis of cerebral tissue in parts of the frontal, temporal, or parietal lobe or in combination, resulting in aphasia and progressive dementia; also called *convolutional cerebral a.*, *Pick's disease* (for Arnold Pick). See also lobar *sclerosis*.

compression a. See pressure *a.*

concentric a. That which proceeds from without inward, as atrophy of bone beginning in the periosteal portion.

convolutional cerebral a. See circumscribed cerebral *a.*

correlated a. Atrophy secondary to the removal or destruction of other parts of the body as atrophy of bone and muscle following amputation of an extremity.

cyanotic a. Atrophy of the liver accompanying prolonged passive hyperemia, largely degenerative.

degenerative a. A form in which cellular degeneration is conspicuous.

disuse a. That form resulting from inactivity usually affecting glandular or muscular structures. Also called *inactivity a.*

eccentric a. That which proceeds from within outward, as atrophy of bone beginning next to the marrow cavity.

exhaustion a. That of an endocrine gland, presumably due to prolonged excessive stimulation.

facioscapulohumeral a. A hereditary progressive muscular dystrophy that usually begins early in life and affects the muscles of the face, shoulder girdle, and arm, but not of the forearm. The sacrospinalis may also be involved. Also called *facioscapulohumeral dystrophy*, *Landouzy-Dejerine a.*

gray a. Degeneration in the optic disk with assumption of a gray color.

gyrate a. of choroid and retina. A patchy destruction of the choroid and retina in which irregular patches of white sclera are visible on funduscopic examination.

halisteretic a. Old term for atrophy of bone, or osteoporosis, thought to be due to a withdrawal of mineral salts from the bone.

hydronephrotic a. Loss of kidney substance secondary to formation of hydronephrosis.

inanition a. That due to inadequate nutrition.

infantile spinal muscular a. A disease of very young children characterized by extensive muscular atrophy as a result of degenerative changes in the anterior horn cells of the spinal cord. Death occurs within a year.

Kienböck's a. See Robert *Kienböck*.

Landouzy-Dejerine a. See facioscapulohumeral *a.*

Leber's optic a. A rare hereditary form of axial neuritis of the optic nerve.

linear a. Atrophy of the papillary layer of skin, resulting in striae atrophicae.

lobar a. See lobar *sclerosis*. See also circumscribed cerebral *a.*

macular a. See *anetoderma*.

muscular a. That in which muscle becomes atrophic, especially skeletal muscle; may be hereditary or acquired, idiopathic, myelopathic, myopathic, neuropathic, primary secondary simple, or progressive often part of disease, such as progressive muscular atrophy myasthenia gravis, and various forms of myotonia.

myelopathic muscular a. See progressive spinal muscular a.

myotonic a. A hereditary progressive weakening and atrophy of muscles; usually begins in early life. Syn., *dystrophia myotonica*.

necrobiotic a. Atrophy resulting from slow disintegration and loss of cells by necrobiosis.

neuritic muscular a. See progressive neuropathic (peroneal) muscular a.

neurotrophic a. A form particularly observed in muscle as the result of interruption of motor nerve supply; due partly to inactivity and partly to absence of nutritional influences.

numerical a. Reduction in the number of cells of an organ; necrobiotic atrophy

oli[illegible] a. A heredodegenerative disease occurring in the later decades of life; causes ataxia, hypotonia, and dysarthria.

oliv[illegible] a. A heredodegenerative disease involving the postural centers of the brain stem, particularly the superior cerebellar peduncle; causes ataxia, coarse tremor and hypotonia.

optic a. Atrophy of the optic nerve.

overwork a. A type which follows hypertrophy and is due to excessive use of the part. It is often occupational, being seen, for example, in musicians, typists, and blacksmiths.

pathologic a. That due to disease or other abnormality

periodontal a. Progressive resorption of alveolar bone with gingival recession and loss of the corresponding part of the periodontal membrane.

peroneal muscular a. See progressive neuropathic (peroneal) muscular a.

physiologic a. That which affects certain organs at different times of life, as atrophy of the thymus at puberty atrophy of the mammary glands and ovaries after the menopause.

pressure a. That following prolonged pressure on part, chiefly the result of local inanition

progressive nervous a. Atrophy of spinal nerve roots due to pressure from fibrosis of the spinal arachnoid.

progressive neuropathic (peroneal) muscular a. A form of muscular atrophy due to degeneration of the cells of the posterior columns of the spinal cord and of the peripheral motor nerves. It begins in the muscles supplied by the peroneal nerves, progressing slowly to involve the muscles of the hands and arms. Also called *peroneal muscular a.*, *Charcot-Marie-Tooth disease*, *progressive neural muscular a.*

progressive spinal muscular a. A chronic disease characterized by progressive wasting of individual muscles, or physiologic groups of muscles, and by an associated and proportional amount of paralysis due to degeneration and atrophy of the multipolar cells in the anterior gray horns of the spinal cord, with consecutive degeneration of the anterior nerve roots and muscles. Syn., *chronic anterior poliomyelitis*, *Cruveilhier' disease*, *Duchenne-Aran muscular a.*, *myelopathic muscular a.*, *wasting palsy*.

progressive unilateral facial a. Slowly progressive atrophy of skin, subcutaneous tissue, bone, and, less often, of the muscles of one side of the face.

red a. See cyanotic a.

senile a. That which occurs in old age.

serous a. Atrophy of fat associated with accumulation of serous fluid.

subacute yellow a. See postnecrotic *cirrhosis*.

Sudeck's a. Aseptic necrosis of bone following injury described by Paul Herman Martin *Sudeck*.

sympathetic a. Rarely observed in one member of paired organs secondary to atrophy of its fellow

syphilitic primary optic a. A condition involving pupillary abnormalities, which accompanies neurosyphilis. It occurs number of years after infection, and is found predominantly in males.

syphilitic spinal muscular a. Progressive spinal muscular atrophy due to destruction of the anterior horn cells of the spinal cord by syphilis.

toxic a. Atrophy which ppears in the course of prolonged wasting and infectious diseases, due probably to malnutrition rather than toxins.

trophoneurotic a. See neurotrophic a.

Wucher a. F t replacement trophy resulting from inflammatory infiltration into the subcutaneous tissue. This leads to degenerative or destructive changes of the fat cells.

at're-pic ac'id. See under *acid*.

at'ro-pine (at're-peen, pin) [G *Atropos*, one of the Fates] $C_{17}H_{23}O_3N$ A white, crystalline alkaloid obtained from *Atropa belladonna* and other solanaceous plants. It is sol ble in alcohol and but sparingly sol ble in water It causes paralysis of all responses to parasympathetic stimulation, resulting in mydriasis, cycloplegia, suppression of sweat, tears, and mucus quickening of the heart and relaxation of the smooth muscles of the intestines, and bronchi, etc. Toxic doses cause motor restlessness, excitement, delirium, and coma. It is an antidote for morphine, pilocarpine, and hydrocyanic acid. Internally it is used in treating acute attacks of bronchial asthma, intestinal and biliary colic, and pylorospasm in cathartic pills; and in hypersecretion, especially of sweat. Topically it is used extensively in ophthalmology for dilating the pupil and treating various eye conditions.

a. hydrobromide. $C_{17}H_{23}O_3N.HBr$ A white, *crystalline powder soluble in water or alcohol*.

a. hydrochloride. $C_{17}H_{23}O_3N.HCl$. A white, crystalline powder soluble in water or alcohol.

a. methylbromide. Methylatropine bromide. $C_{17}H_{23}O_3N(CH_3)Br$. Occurs as white crystals soluble in water or alcohol; used as is atropine. Dose, 1–3 mg. ($\frac{1}{60}$–$\frac{1}{20}$ gr.)

a. methylnitrate. Methylatropine nitrate $C_{17}H_{23}O_3N(CH_3)NO_3$ Occurs as white, crystalline powder soluble in water or alcohol. Its action is essentially like that of atropine. Dose, 1 3 mg. ($\frac{1}{60}$–$\frac{1}{20}$ gr.) See *eumydrin*.

a. sulfate (*atropinae sulfas*) $(C_{17}H_{23}O_3N)_2H_2SO_4.H_2O$ The most frequently used salt of atropine. A white, crystalline powder soluble in 0.5 part of water 5 parts of alcohol, or 2.5 parts of glycerin. Dose, 0.3–1.2 mg. ($\frac{1}{200}$–$\frac{1}{50}$ gr.)

at"ro-pine-sul fu'ric ac'id. See *atrinal*.

at'ro pin ize [*Atropos*]. 1. Bring under the influence of, or treat with, atropine. 2. Administer belladonna or atropine until physiologic effects become manifest. —**atropiniza'tion**, *n.*

at're-scine (t ro seen, -sin) $C_{17}H_{21}O_4N.H_2O$ *dl*-Scopolamine. An optically inert alkaloid prepared from several species of the Solanaceae. Used as mydriatic in 0.2–0.5% solution in oil.

a. hydrobromide. An atroscine salt, soluble in water and used in 1% solution as mydriatic.

A. T. S. Antitetanic serum; anxiety tension state; American Temperance Society

at'tar [Per. *atar* from Ar *'itr* perfume]. A general name for any of the fragrant volatile oils.

at ten'tion [L. *attentio*, from *attendere*, to direct the attention] An act of consciousness directed toward external or internal stimuli; the application of intellectual energy in awareness and alertness.

at ten"u a'tion [L. *attenuare*, to weaken]. A thinning, weakening, or diluting; especially reduction of the virulence of a virus or pathogenic microorganism, as by successive culture, repeated inoculation, or exposure to light, heat, air or weakening agent. —**atten'uant**, *adj* & *n* **atten uate**, *v.t., v.i.*, **atten'uated**, *adj*

at'tic [F *attique*, G. *Attikos*]. Part of the tympanic cavity situated above the atrium. It contains the incus and the head of the malleus. Syn., *epitympanic recess*.

at'tic dis-ease Chronic suppurative inflammation of the attic of the tympanic cavity

at"ti-co-an trot'o-my [*Atticus*; G *antron*, cave; *tomē*, cutting]. Opening of the attic and mastoid air cells.

at"ti co-mas'toid [*Atticus*; G *mastoeidēs*, like breast]. Relating to the attic and the mastoid.

at"ti-cot o-my [*Atticus*; G *tomē*, cutting]. Surgical incision of the attic.

at'ti tude [F from L. *aptus* suited]. Posture; the position of the body and limbs.

a. of fetus. Relation of the fetal members to one another *in utero*

crucifixion a. In hysteroepilepsy rigid state of the body the arms stretched out at right angles.

discobolus a. A position of the body assumed as result of stimulation of one labyrinth. The trunk, head, and arms are turned toward the side stimulated in order to counteract the false sensation of falling in the opposite direction.

frozen a. A peculiar stiffness of the gait characteristic of disease of the spinal cord, especially of amyotrophic lateral sclerosis.

passionat a. Assumption of dramatic or theatrical expression, position assumed by som hysterical patients.

at'to-lens au'rem. Old name for the auricularis superior muscle.

at ton'i ty [L. *attonitus*, stunned]. A state of stupor with complete or partial immobility occurs most frequently in the catatonic form of schizophrenia but also in some forms of melancholia.

at trac'tion [L. *attractus* from *attrahere*, to draw to]. The force exerted by one mass upon another drawing them together Syn., *gravitation*, *affinity cohesion*.

capillary a. The force which draws fluids into and along the lumen of capillary tube.

chemical a. The force which unites the atoms of one element to those of others, forming compounds. See *affinity*

electric a. The tendency of bodies to draw together when carrying opposite charges of electricity Also called *magnetic*

at'tra hens au'rem. Old name for the auricularis anterior muscle.

at tri'tion (a-trish un) [L. *attritus*, from *atterere*, to rub against]. An abrasion, rubbing, or chafing of the skin or any surface thus the wearing way of tooth enamel by mastication, brushing, or clasp friction is called attrition of enamel.

at. wt. Atomic weight

a typ'i-cal. Not typical Irregular For **primary a. pneumonia**, see under *pneumonia*.

A.U., Å.U. Angstrom unit.

A.u., Å.u. Abbreviation for angstrom unit.

a.u., å.u. Abbreviation for angstrom unit.

Au Chemical symbol for gold.

Aubert, Hermann [*German physiologist* 1826–92]. His name is associated with the optical illusion in which vertical line inclines to one side as the head is inclined to the opposite side.

Auch"me ro my'ia (awk"mi-ro-my'ah) [G. *auchmēros*, dirty; *myia*, fly] A genus of Diptera found in Africa.

A. luteola. A species whose larvae (Congo floor maggots) feed on blood and cause myiasis.

au"di mu'tism [L. *audire*, to hear *mutus*, mute]. Muteness not associated with deafness.

au'di-o-, au'di to- [*audire*] A combining form denoting *pertaining to hearing*

au"di-o-ep"i lep tic sei'zure. See reflex *epilepsy*

au"di-o-gen'ic [*audire*; G *gennan*, from *gignesthai*, to be produced]. Caused or induced by sound.

au'di-o gram [*audire*; G *gramma*, letter]. A graphic record showing the variations of auditory acuity of an individual, as indicated by the audiometer Syn., *audiometric curve*

au"di-ol'o-gy [*audire*; G *logos*, word]. The science of hearing.

au"di-om e-ter [*audire*; G. *metron*, measure]. An instrument for measuring the acuity and range of hearing. There are two main types: the pure tone audiometer and the speech or phonograph audiometer Either may be used for an individual test or in screening large groups of people. —**audiomet'ric**, *adj*

Békésy a. A self-recording and completely objective pure tone audiometer

au"di-om'e-try The quantitative and qualitative evaluation of person hearing by the use of an audiometer —**audiom'etrist**, *n*.

air conduction a. Quantitative evaluation of hearing by introducing the stimulus through the air column in the external ear canal

bone conduction a. Qualitative evaluation of hearing by introducing the stimulus directly to the skin over the mastoid process of the temporal bone.

au"di o-vi u-al [*audire*; L. *visus*, from *videre*, to see]. Pertaining to, or using, both sound and visual impressions, as the sound movies.

au-di'tion [L. *auditio*, hearing]. Hearing ability to hear

chromati a. A condition in which certain sounds are said to produce subjective sensations of color

gustatory a. A condition in which certain sounds are believed to cause sensation of taste.

au di tive [L. *audire*, t hear]. Auditory

au"di tog no sis. Recognition of sounds.

au"di to-psy' hic [*audire*; G *psychē* soul]. Pertaining to the auditory association area of the temporal cortex, Brodmann area 42.

au'di to"ry [L. *auditorius*, from *auditor* hearer]. Pertaining to the act or the organs of hearing.

au'di to"ry mem o-ry span. The number of individual speech sounds that person is ble to recall and to repeat in order after having heard them given once at the rate of one per second.

au di to sen so-ry [L. *audire*, to hear *sentire*, to feel]. Pertaining to the auditory projection area of the temporal cortex, Brodmann area 41

Auenbrugger von Auenbrugg, Leopold Joseph [*Austrian physician*, 1722–1809] Introduced percussion of the chest as means of diagnosis. Also remembered for his description of the bulging of the epigastric region in cases of extensive pericardial fusion called *Auenbrugger sign*.

Auer John [*American physician*, 1875–1948]. With Samuel J. Meltzer demonstrated the anesthetic effects of magnesium salts (1905) and developed method of anesthesia by intratracheal insufflation (1909) With Paul A. Lewis, described the physiologic reactions resulting in fatal anaphylactic shock (1910)

Auerbach, Leopold [*German anatomist*, 1828–97]. Noted for his description of the myenteric plexus and of the ganglion cells found therein (1863); called *Auerbach plexus, ganglion*. Described the red-staining nuclear substance of cells, naming this *erythrophil*.

aug"men ta tion [L. *augmentare*, to increase]. 1 Exacerbation; aggravation of symptoms or signs. 2. Production by growths greater than normal. —**augment'** *v.*

aug men'tor [*augmentare*]. An agent which increases or accelerates the action of auxetics, though it is unable to initiate cell division when used alone.

a. nerves. Those which increase the force as well as the rate of cardiac contractions. See *accelerator*

aug na'thus [G *au*, again *gnathos*, jaw]. A rare anomaly in which second lower jaw is parasitic on that of the host.

Aujeszky Aladár [*Hungarian physician*, 1869–1933] Known for his description of pseudorabies (bulbar paralysis or mad itch) caused by filtrable virus and widely distributed in the animal world. It affects principally the central nervous system and is characterized by an intense pruritus; called *Aujeszky disease*.

au"lo-pho'bi-a [G *aulos*, tube, *phobos*, fear]. A morbid fear of flutes.

au'lo phyte [*aulos*; G. *phyton*, plant]. A symbiotic plant one that lives within another but not as parasite.

au'ra [G., breeze]. 1. A premonitory sensation preceding convulsion, usually experienced by epileptics. 2. *I electricity* the current of air which attends the receipt of static electric discharge.

auditory a. An acoustic sensation which sometimes ushers in an epileptic seizure.

a. asthmatica. Oppression of the chest, flatulence, or other subjective phenomena which usher in an asthmatic attack.

a. hysterica. Sensation similar to those experienced in epilepsy which introduce hysterical attack.

cephalic a. A diffuse head sensation often described as heaviness, fullness, or pressure.

epigastric a. A midline sensation over the gastric area which may ascend to the throat.

olfactory a. A sudden disagreeable sensation of smell.

somatosensory a. A sensation of tingling, numbness, or of invisible movement in part of the body

vertiginous a. Dizziness announcing an epileptic seizure.

visual a. Flashing of bright light, whirling or colored light, or sudden darkness in the visual fields.

aurae. Plural of *aura*, also often auras.

au'ral [*aura*] Relating to the air or to an aura.

au ral [L. *auris*, ear]. Relating to the ear or to the hearing.

au'ra mine O (‑w rah-meen") (C.C.) A basic amine dye of the diphenyl methane series used in fluorescence microscopy Also called canary yellow pyoktanin yellow, pyoktaninum aureum.

au rant ti $C_6H_2(NO_2)_3.N\cdot C_6H_2(NO_2)_3.NO$ O.NH An orange coal-tar dye an ammonium salt of hexanitrodiphenylamine.

au-ran"ti-am -rin [L. *aurantium*, orange; *amarus*, bitter]. A bitter glycoside obtained from orange peel.

aur"an-ti' -sin cu'tis. Carotenosis.

au ran'ti-um (aw-ran shee-um) [L.]. Orange.

au'rate. A salt of auric acid

aureomycin hydrochloride Trade-marked name for the antibiotic substance *chlortetracycline hydrochloride*.

au'ri- [L. *auris*, ear]. A combining form denoting *the ear*

au ri- [L. *aurum*, gold] A combining form denoting *gold*, and more precisely *in chemistry the presence of gold in the trivalent or auric state*

au'ric [*aurum*]. 1 Pertaining to or containing gold. 2. *I chemistry* referring to compounds of trivalent gold. See *aurous*.

au'ric ac'id. H_3AuO_3 Gold trihydroxide insoluble in water but soluble in alkalis to form aurates.

au'ri-cle [L. *auricula*, the external ear]. 1. The pinna of the ear the ear flap or external ear auricula. 2. An appendage to an atrium of the heart auricular appendage. 3. Any ear-shaped structure or appendage. 4. Commonly used mistakenly for atrium. —**auric'ular** *adj*

cervical a. Accessory auricle; projection of the skin, sometimes containing cartilage, found over the sternocleidomastoid muscle developmental anomaly of the region around the second visceral groove also called auricular appendage (*n*)

au-ric'u la [L.]. Auricle.

au ric u la're (aw-rick"yoo-lair'ee, lahr' y) [*auricula*]. A point on the root of the zygomatic process of the temporal bone lying perpendicularly above the center of the external auditory meatus.

au"ric u lar is. Any of number of vestigial muscles associated with the external ear See Table of Muscles in the Appendix.

au-ric"u lo fron tal'is. A portion of the auricularis anterior muscle.

au-ric"u lo tem'po-ral [*auricula*, L. *tempus*, temple]. Relating to the auricle and to the temporal region.

au ric"u lo-ven-tric u lar See *atrioventricular* Abbreviated AV A. V

au rin. Rosolic acid.

au ris [L.]. The ear —**auriform**, *adj*

a. dextra. Right ear Abbreviated, a.d.

a. externa. The external ear auricle pinna.

a. interna. The internal ear labyrinth.

a. media. The middle ear tympanic cavity

a. sinistra. Left ear Abbreviated, a.s.

au'rist [*auris*]. A specialist in diseases of the ear

au'ro- [L. *aurum*, gold] A combining form denoting *gold*, and more precisely *in chemistry the presence of gold in the univalent or aurous state.*

au ro ra pho'bi [L. *aurora*, dawn; G. *phobos*, fear] A morbid fear of northern lights.

au ro-ther' py [L. *aurum*, gold; G *therapeia*, treatment]. The administration of gold salts. Has been employed for the treatment of arthritis and various skin diseases.

au"ro-thi" glu'cose. $C_6H_{11}AuO_5S$ compound of gold with thioglucose, linked through the sulfur atom of the latter containing bout 50% of gold yellow powder freely soluble in water It is used in the treatment of rheumatoid arthritis and nondisseminated lupus erythematosus, being administered in oil suspension. Syn., *gold thioglucose* See *solganal*.

au ro-thi" glyc an-ide. Generic nam for α-auromercaptoacetanilid; C_6H NHCO CH_2SAu; water-insoluble gold compound administered in oil suspension for the treatment of rheumatoid arthritis. See *lauron*.

au'rous [*aurum*]. 1 Pertaining to gold and its compounds. 2. *I chemistry*, referring to compounds of univalent gold.

au rum [L]. See *gold*

aus cul ta'tion [L. *auscultare*, to listen to]. The detection and study of sounds arising from various organs, chiefly the heart and lungs, to aid in the

determination of their physical condition. —**aus-cul'tatory** *adj* **auscult** **aus'cultate** *v.*

a. tube. *In otology* an instrument for listening to the forced passage of air into the middle ear of patient.

immediate a. The direct application of the examiner ear to the patient skin.

mediate a. Listening with the aid of stethoscope.

Austin and Van Slyke's method. See under *method.*

Aus tral'ian X dis ease An epidemic virus encephalitis, prevalent in children; first appeared in Australia in 1917 It resembles poliomyelitis, and can be transmitted to some animals.

Aus"tra lor'bis [L. *australis*, south; *orbis*, circle]. A genus of snails.

aut-. See *auto-*

au'ta-coid [G. *autos*, self; *akos*, remedy; *eidos*, form]. A chemical messenger released into the blood by the cells of one organ to stimulate or inhibit activity in remote organ (Schäfer) Thus hormones, for the most part, stimulate and chalones inhibit.

au t ecious, au tee cious (aw-tee shus) **au te cic, au tee cic** (w-tee sisk) [*autos*; G *oikos*, house]. Applied to parasitic fungi that pass through all the stages of their existence in the same host.

au te me si-a (w-ti-mee shuh, -see-zh, -shuh, -see-uh) [*autos*; G. *emesis*, disposition to vomit]. Idiopathic vomiting; vomiting at will by certain psychiatric patients.

au'tism [*autos*]. A tendency to morbid concentration on oneself; an interest in daydreaming and phantasy —**auti 'tic,** *adj*

infantile a. That bserved in young children. It often ppears as excessive shyness and fearfulness and later as withdrawal and introspection. It may be an early manifestation or part of the childhood type of schizophrenic reaction.

au tis tic ges'ture. A muscular automatism. See *tic.*

au tis'tic thi k'ing. A type of phantasy usually seen in schizophrenics.

au'to- aut [*autos*]. A combining form meaning *pertaining to by* or *for oneself or the same individual.*

au"to-ac"ti va'tion [*autos*; L. *actus*, from *agere*, to do]. Activation of gland by kinase or hormone present in its wn secretion.

au"to-ag glu"ti na'tion [*autos*; L. *agglutinare*, to glue]. 1 Agglutination which occurs without the addition of specific antiserum. 2. Agglutination of the blood cells of an individual by his own serum.

au"to-ag glu'ti nin [*autos*; *agglutinare*]. An agglutinin contained in the serum of an individual which causes an agglutination of his red cells.

au"to-al"ge-lag'ni a [*autos*, G *algos*, pain *lagneia*, coition]. Self-inflicted pain serving as source of sexual excitement.

au"to-a nal'y-sis [*autos*; G *analysis*, loosing]. Analysis by patient of his own mental disorder; employed as psychotherapeutic method.

au"to-an am ne sis [*autos*; G *anamnesis*, recalling]. A history related by the patient alone.

au"to-an"ti bi-o sis (aw to an ti-buy-o sis) [*autos*; G *anti*, against *bios*, lif -*osis*, condition]. The self-inhibition of culture medium as result of the previous growth of the organism i the medium.

au"to-an'ti bod"y 1 An antibody produced by host to his own tissues that ordinarily re not accessible to the blood stream, such as the lens of the eye. 2. *I hematology* an antibody contained in the serum of patient which causes agglutination or lysis of his erythrocytes seen in paroxysmal hemoglobinuria, and other forms of hemolytic anemias.

au"to au'di ble [*autos*; L. *audire*, to hear] Audible to the patient, pplied to heart sounds.

au'to blast [*autos*; G. *blastos*, germ]. An independent bioblast, as bacterium.

au"to-ca tal'y sis. Process by which chemical reaction is accelerated by one or more products of the reaction cting as catalysts. —**autocatalyt'ic,** *adj.*; utocat'alyst, *n.*

au"to-ca thar'sis [*autos*; G *katharsis*, cleansing]. Psychotherapy by having the patient describe his difficulties, thus gaining insight into his mental complexes and conflicts.

au"to-cho"le-cys"to-du"o-de-nos'to-my [*autos*; G. *cholē*, bile; *kystis*, bladder; L. *duodeni*, twelve each *stoma*, mouth]. The spontaneous formation of an opening between the gallbladder and duodenum, secondary to adhesions between the two organs; the opening permits the passage of gallstones into the duodenum.

au"to cho"le-cys"to-trans verse co-los'to my [*autos*; *cholē*; *kystis*; L. *transversus*, turned across G. *kolon*, colon; *stoma*, mouth]. The spontaneous formation of an opening between the gallbladder and the transverse colon, secondary to adhesions between the two organs; the opening permits the passage of gallstones into the transverse colon.

au toch'tho nous (w-tock'thon-us) [G *autochthonos*, from *autos*, *chthōn*, land]. 1. Formed in the place where found, as clot. 2. Native aboriginal.

au toc'la-sis [*autos*; G *klasis*, breaking]. A break ing up of part due to causes developed within itself.

au'to-clave [*autos*; L. *clavis*, key]. An apparatus for sterilizing objects by steam heat at high pressure. —**au'toclave** *v.*

au"to-con"den sa'tion [*autos*; L. *condensare*, to condense]. An electrotherapeutic method of applying high-frequency currents in which the patient or affected part constitutes one plate of capacitor

au"to-con-duc'tion [*autos*; L. *conducere*, to bring together]. An electrotherapeutic method of pplying high-frequency currents by induction. The patient or part is placed within large solenoid which cts as the secondary of transformer

au"t -cy"to tox'in [*autos*; G *kytos*, cell; *toxikon*, poison]. A cell toxin produced against the cells of one own body due to retained degenerated and dead cells acting as an antigen.

au"to-di ges'tion [*autos*; L. *digerere*, to digest]. Digestion of the stomach walls by gastric juice, in disease of the stomach, or after death; utolysis.

au to ech o l 'li a (w t -eck l y'l e-uh) [*autos*; G *ēchō*, echo *lalia*, talk]. Stereotypy in which the patient continually repeats some word or phrase of his own.

au"to-ech"o-prax'i (eck' praek'see-uh) [*autos*; *ēchō*; G *praxis* doing]. Stereotypy in which the patient continually repeats some action he has previously experienced.

au toe cic. See *autoecious*

au"to-ec"ze ma ti za tion. The condition or process of suddenly becoming generally eczematized, presumably due to breakdown products of autogenous epidermis clinically observed in individuals with chronic eczematous dermatoses, but not yet immunologically verified.

au"to-e mas"cu la'tion [*autos*; L. *emasculare*, to castrate] Self-inflicted amputation of the external genitalia, rare phenomenon confined to psychotic patients.

au"t -er' tism, au"to-e rot'i cism [*autos*; G *erōs*, love]. 1. A combination of sexual emotion

and self-admiration. 2. Self-gratification of sexual instinct. See masturbation. —autoerot'ic, adj.

au"to-fel-la'ti-o (-feh-lay'shee-o) [autos; L. *fellare*, to suck]. Fellatio practiced upon oneself.

au-tog'a-my [autos; G. *gamos*, marriage]. 1. *In botany*, self-fertilization. 2. A form of inbreeding marked by conjugation of closely related cells or nuclei. —autogamous, adj.

au-tog'e-nous (aw-todj'i-nus), **au"to-ge-net'ic**, **au"to-gen'ic** [autos; G. *genesthai*, from *gignesthai*, to be produced]. 1. Self-generated; endogenous. 2. Arising within the organism; applied to toxins, pathologic states, vaccines, and the like.

au'to-graft". Any tissue removed from one part of a person's body and applied to another part; commonly used contraction for autogenous graft. Also called *autoplastic graft*.

au'to-graph" [autos, graphein]. See radioautograph.

au"to-he-mol'y-sis, **au"to-hae-mol'y-sis** (aw"to-hee-mol'i-sis, -hem-ol'i-sis) [autos; G. *haima*, blood; *lysis*, a loosing]. Hemolysis of an individual's red blood cells by his own serum.

au"to-he-mo-ther'a-py, **au"to-hae-mo-ther'a-py** (aw"to-hee-mo-therr'uh-pee, aw"to-hem-o-) [autos; *haima*; G. *therapeia*, therapy]. Treatment of disease with the patient's own blood, withdrawn through a venipuncture and injected directly into his body, usually intramuscularly.

au"to-hy-drol'y-sis (aw"to-high-drol'i-sis) [autos; G. *hydōr*, water; *lysis*, a loosing]. Spontaneous hydrolysis.

au"to-hyp-no'sis, **au"to-hyp'no-sis** [autos; G. *hypnos*, sleep]. Self-induced hypnosis. —autohypnot'ic, adj., n.

au"to-im-mu"ni-za'tion [autos; L. *immunis*, free from]. Immunization obtained by natural processes within the body.

au"to-in-fec'tion [autos; L. *inficere*, to infect]. Infection by an organism existing within the body or transferred from one part of the body to another.

au"to-in-fu'sion [autos; L. *infundere*, to pour in]. Forcing of the blood toward the heart by applying firm bandages to the extremities distoproximally, compression of the abdominal aorta, etc., to raise blood pressure and get blood to the vital centers.

au"to-in-oc"u-la'tion [autos; L. *inoculare*, to ingraft an eye or bud of one tree into another]. Inoculation in one part of the body by an organism present in another part; self-inoculation.

au"to-in-tox'i-cant [autos; L. *in-*, in; G. *toxikon*, poison]. A poison originating within the system.

au"to-in-tox"i-ca'tion [autos; *in-*; *toxikon*]. Poisoning by faulty metabolic products elaborated within the body; generally synonymous with toxemia of morbid states. Formerly considered to occur in constipation.

au"to-i"so-ly'sin (aw"to-eye-so-lye'sin, -eye-sol'i-sin, -i-sol'i-sin) [autos; G. *isos*, equal; *lysis*, loosing]. An antibody which dissolves the corpuscles of the individual from which it was obtained, also the red cells of others of the same species.

au"to-ki-ne'sis. *In physiology*, movement as a result of internal stimuli; voluntary motion.

au-tol'o-gous [autos; G. *logos*, word]. Derived from, or part of, an organism; contrasted with *homologous* (same species) and *heterologous* (different species).

au-tol'y-sate [autos; G. *lysis*, loosing]. That which results from or is produced by autolysis.

au"to-ly'sin, **au-tol'y-sin** [autos; *lysis*]. A substance which produces autolysis, q.v.

au-tol'y-sis [autos; *lysis*]. 1. Self-digestion of tissues within the living body. 2. The chemical splitting-up of the tissue of an organ by the action of an enzyme peculiar to it. 3. The hemolytic action of the blood serum or plasma of an animal upon its own cells. —autolyt'ic, adj.; au'tolyze, v.

automat-. See automato-.

au"to-mat'ic [G. *automatos*, self-acting]. Performed without the influence of the will; spontaneous.

au-tom'a-tin [automatos]. 1. A theoretical substance present in the heart which normally initiates the contraction. 2. An extract of bovine heart muscle used therapeutically in various circulatory disorders.

au-tom'a-tin-o-gen, **au"to-mat'o-gen** [automatos; G. *genesthai*, from *gignesthai*, to be produced]. A substance said to occur in the heart and muscles which, through the action of potassium, is converted to automatin.

au-tom'a-tism [automatos]. 1. Performance of acts without apparent volition, as in somnambulism and in hysterical and epileptic states. 2. *In biology*, spontaneous activity of cells and tissues, as the spontaneous beating of a heart freed from its nervous connections.

ambulatory a. A condition in which the epileptic patient wanders around and functions effectively but is unaware of his normal personality.

epileptic a. See paroxysmal a.

ictal a. That occurring during an epileptic seizure.

paroxysmal a. Automatic performance of certain simple acts, despite unconsciousness, seen in certain types of epileptic seizures, associated with typical cerebral electrical discharge in the slow range, 6 to 8 cycles per second. It is likely to occur in persons whose resting electroencephalogram (EEG) shows spike foci in the prefrontal region. Syn., epileptic a.

postictal a. That during the postepileptic state.

au-tom"a-ti-za'tion [G. *automatizein*, to act of oneself]. Automatic obedience to infantile impulses.

au-tom'a-to-, **automat-** [G. *automatos*, self-acting]. A combining form meaning *self-moving* or *self-acting*; used to denote *automatic*.

au"to-mat'o-gen. See automatinogen.

au-tom'a-ton [automatos]. One who acts in an involuntary or mechanical manner.

au"to-my"so-pho'bi-a [G. *autos*, self; *mysos*, uncleanness; *phobos*, fear]. Morbid fear of personal uncleanliness.

au"to-ne-phrec'to-my. The loss of kidney substance secondary to ureteral obstruction, usually on the basis of chronic infection, as tuberculosis.

au"to-no-ma'si-a (aw"to-no-may'shuh, -see-uh) [autos; G. *onoma*, name]. Amnesic aphasia characterized by inability to recall substantives.

au"to-nom'ic [G. *autonomos*, from *autos*, *nomos*, law]. Autonomous; used specifically to designate the involuntary or sympathetic nervous system. See autonomic nervous system.

au-ton'o-mous. Independent in origin, action, or function; self-governing.

au"to-oph-thal'mo-scope, **au"toph-thal'mo-scope** [autos; G. *ophthalmos*, eye; *skopein*, to examine]. An ophthalmoscope for examining one's own eyes. —auto-ophthalmos'copy, autophthalmos'copy, n.

au'to-ox"i-da'tion. An oxidation reaction utilizing atmospheric oxygen without the aid of other oxidizing agents.

au-top'a-thy [autos; G. *pathos*, suffering]. Disease without apparent cause; idiopathy. —autopath'ic, adj.

au"to-pha'gi-a, **au-toph'a-gy** [autos; G. *phagein*, to eat]. 1. Self-consumption; emaciation. 2. Biting of one's own flesh, as in dementia.

au"to phil'i a [autos; G. philia, affection]. Morbid self-esteem.

au"to-pho'bi a [autos; G. phobos, fear]. A morbid dread of one self or of solitude.

au"to-pho"no-ma ni a [autos; G. phonos, murder; mania, madness]. Suicidal mania.

au toph o-ny au"to-pho ni-a [autos; G. phōnē, voice]. A condition in some middle-ear and auditory-tube diseases in which an individual's voice seems more resonant to himself.

au't plas ty [autos; G. plassein, to form]. Repair of defect by grafting tissue take from another area of the patient body. —**autoplas tic,** *adj.* **autoplast,** *n.*

au"t pneu"mo-nec'to-my The condition characterized by one lung being sequestrated by pathological process such that the bronchus is completely occluded, so that the lung becomes functionless with little or no blood circulating through it. This can be the result of inflammation or injury.

au to-pro tol'y-sis. Th process by which molecule transfers a proton (hydrogen ion) to another identical molecule, as in the ionization of water: $2H_2O \rightleftarrows H_3O^+ + OH^-$

au'top-sy [G. autopsia, seeing with one own eyes]. A post-mortem examinatio of the body.

au"to psy'che (aw to-sigh'kee) [autos; G. psychē, soul]. The mind of one self.

au to-psy'chic [autos; psychē]. Pertaining to self-consciousness or to ideas relating to the individual own personality.

au"to-psy cho'sis [autos; G. psychōsis, from psychē -ōsis, condition]. A mental derangement in which the patient ideas bout himself are distorted. —**autopsy'chic,** *adj.*

au"t ra'di gram. See *radioautograph.*

au"to ra di-og'ra phy The technique of locating and measuring the distribution of radioactive elements in test material, such as tissue, by means of photographic registration of the manations from the elements. —**autora diograph,** *n.*

au"to re-in fu'sion [autos; L. re- again, back; infundere, to pour into]. Intravenous infusion in patient of his own blood.

au"to-sen"si ti za'tion [autos; L. sentire, to feel]. Process of rendering an organism sensitive to its own tissues; has been demonstrated in humans, as for lens tissue. Also called *autoallergization.*

au"to-site [autos; G. sitos, food]. 1. A monster with organs sufficiently developed to carry on separate postnatal existence. 2. That member of an unequal twin monster which is capable of independent existence, and which ourishes the ther twin (the parasite). The latter may be complete fetus or accessory body part ttached to the utosite to the placenta. —**autosit'ic,** *adj.*

au'to-some [autos, G. sōma, body]. Any ordinary chromosome as distinguished from an allosome. —**autosomal,** *adj.*

au"to-sug ges'tion [autos; L. suggestio from suggerere, to suggest]. 1. The acceptance of thought or idea, predominantly from within one own mind, which induces some mental or physical action or change. 2. Self-suggestion. The persistence in consciousness of impressions gained while in hypnotic state. 3. The highly suggestible state of mind existing after accidents, where very slight injury may be the cause of hysterical pain, paralysis, and other disorders. Also called *traumatic suggestion.* —**autosuggestibil'ity**

au"t -syn de-sis [G. autos, same; syndesis bi ding together]. In polyploids, the pairing of chromosomes derived from the same parent.

au to-syn noi a [G. autos, self synnoia, meditation, from syn, with, noos, mind]. A state of introversion in which the subject is so concentrated in his thoughts or hallucinations that he loses all interest in the outside world.

Autotechnicon. An electrically timed machine for the utomatic fixation, dehydration, and impregnation of tissue specimens, invented by Harry Goldblatt and Louis Gross (1929). It is also used for staining sections.

au tot' my [autos; G. tomē, cutting]. 1. Mechanism by means of which many organisms are ble to cast off parts of their body. 2. Self-division; fission. 3. A surgical operation performed on one wn body. 4. I psychiatry the act of scratching way some part of the body occurs in catatonics and in patients with tics.

au"to top-ag no si a [autos; G. topos, place; a- not; gnōsis, knowledge]. Loss of ability to orient parts of one own body.

au"to trans form er [autos; L. transformare, to transform]. A step-down transformer used extensively in varying the voltage to the primary windings of high-voltage -ray transformer.

au"to-trans fu'sion [autos; L. transfusio, from transfundere, to pour off, transfer]. 1. Forcing of blood into vital regions after severe hemorrhage or to prevent shock, by elevation of, and application of Esmarch bandages to three of the extremities. See *autoinfusion.* 2. Intravenous injection of blood or serum lost during an operation or hemorrhage, especially when it occurs in the bdominal cavity. See *autoreinfusion.*

au"to-trans"plan ta'tion [autos; L. transplantare, to transplant]. The operation of transplanting to part of th body tissue taken from another area in the same body.

au"to-troph au"to trophe au'to-tro phant. A bacterium able to grow in an inorganic environment by using carbon dioxide as its sole source of carbon for anabolic metabolism. There are *chemosynthetic* and *photosynthetic autotrophs.* See *chemotroph, phototroph.* —**autotro phic,** *adj.*

au"to vac"ci na'tion [autos; L. vaccinus, from vacca, cow]. Revaccination of an individual using vaccine obtained from his own body.

au"to-vac'cine [autos; vaccinus]. Autogenous vaccine.

auxano- [G. auxanein, to increase]. A combining form denoting *growth.*

aux an o-dif"fer en"ti a'tion. See under *differentiation.*

aux n'o-gram [auxanein, G. gramma, letter]. A pure plate culture of microorganisms prepared by uxanography.

aux" nog'ra phy [auxanein, G. graphein, t write]. A method for ascertaining the utrient mediums most suited to the growth requirements of particular strain of microorganisms. —**auxanograph'ic,** *adj.*

aux-e si [G. auxēsis, increase]. 1. Increase in size or bulk, growth. 2. Growth in size by cell expansion without cell division hypertrophy. *Obs.*

aux et'ic [auxēsis]. A hypothetical substance which excites cell reproduction an agent which causes proliferation of human cells, especially leukocytes. —**aux-et'ic,** *adj.*

aux'in [G. auxein, to increase]. A plant hormone which governs cell extension or growth.

aux i-am e-ter See *auxometer.*

aux'o- [auxein]. 1. A combining form signifying *increase.* 2. In *biochemistry,* combining form denoting *accelerating* or *stimulating.* 3. I *biology,* combining form denoting *concerned with,* or *due to, growth.*

aux"o-bar'ic [auxein, G. baros, weight]. Increasing pressure; denoting the developing pressure in the

cardiac ventricles during the isometric and early ejection phases.

aux"o·car'di·a [auxein, G *kardia*, heart]. 1. Normal increase of the volume of the heart during diastole, as differentiated from miocardia, the diminution during systole. 2. Cardiac enlargement from hypertrophy or dilatation.

aux'o·chrome [auxein, G *chrōma*, color]. 1. That which increases color. 2. A chemical group which, added to a chromophore group, will produce a dye. 3. Increase or development of color. —**aux·o·chro'mous**, *adj.*

aux'o·cyte [auxein; G *kytos*, cell]. A spermatocyte, oocyte, or sporocyte during its early growth period.

aux'o·drome. A standard schedule of development.

aux·om'e·ter, aux·i·om'e·ter [auxein, G *metron*, measure]. A device for measuring the magnifying power of lenses.

A.V., AV Atrioventricular; auriculoventricular; arteriovenous.

AV block. See *atrioventricular block* under *heart block*.

Av Avoirdupois weight.

av"a·lanche. The phenomenon or process, encountered when ionizing emanations are being measured whereby an ion produces another ion by collision, and these ions in turn produce other ions by further collisions, until an avalanche of ions and accompanying electrons results.

a·val"vu·lar (ay·valv'yoo·lur, ·valv) [G a-, not; L. dim. of *valva*, folding-leaf of a door]. Lacking any structure for temporarily closing a passage or opening.

a·vas"cu·lar·i·za'tion (ay·vas"cue·lur·i·zay'shun, ·vas) [a-; L. *vasculum*, small vessel]. Act of rendering a part bloodless, as by compression or bandaging. —**avas'cular**, *adj.*; **avas'cularize**, *v.t.*

Avellis, Georg [*German laryngologist*, 1864–1916]. Remembered for his description of ambiguospinothalamic paralysis affecting the same side of the larynx, pharynx, and uvula, with contralateral loss of pain and temperature sense; called *Avellis paralysis*, *Avellis symptom complex* or *syndrome*.

A·ve'na [L., oats]. A genus of plants, the grain of *A. sativa*, one of the most important species, is the oat from which avenin is obtained.

a·ven"a·ce'in. An antibiotic substance produced by *Fusarium avenaceum*; it is a colorless compound, having the composition $C_{25}H_{43}N_3O_7$, and is active against a number of organisms.

a·ve'nin, av'e·nin. A nitrogenous principle obtained from oats; the glutelin of oats.

Avenzoar (Abumeron ibn Zohr) [*Arabic physician in Cordoba*, ca. 1091–ca. 1162]. Famous clinician. Noted the causal relationship of *Sarcoptes scabiei* (the itch mite) to scabies. Described gastric carcinoma, mediastinal abscess, and otitis media.

av'er·age [F *avarie*, damage to ship or cargo, from Ar.]. The medial sum; the figure arrived at by adding together several quantities and dividing by the number of quantities; arithmetic mean.

av'er·age. Usual; typical of a group; ordinary.

Averroes (Ibn Rushd) [*Arabian physician and philosopher*, Cordoba, 1126–98]. Last of the great Arabian physicians. Noted especially for his medical encyclopedia.

Avertin. Trade-mark for tribromoethanol.

A. with amylene hydrate. Trade-marked name for tribromoethanol solution used for basal anesthesia by rectal administration and for the control of certain convulsive conditions. See *tromethol*.

a'vi·an [L. *avis*, bird]. Pertaining to birds.

a'vi·an pseu"do·en·ceph"a·li'tis. Newcastle disease.

a'vi·an pseu'do·plague. Newcastle *disease*.

a"vi·a'tion med'i·cine. That branch of medicine concerned with the pathologic conditions and physiologic and emotional disturbances resulting from airplane flights.

a"vi·a'tor's ear. See *aerotitis media*.

Avicenna (Ibn Sīnā) [*Persian physician, philosopher, and writer*, 980–1037]. The most illustrious physician in Arabian medicine of his time. Author of the Canon, a huge storehouse of learning, in which he attempted to codify the whole medical knowledge of the time and to square the facts with the systems of Aristotle and Galen. His ranking of surgery as an inferior branch of medical science halted its progress for many centuries.

av'i·din. A biotin-inactivating protein in raw egg white. It causes the syndrome known as egg white injury in rats fed a diet containing raw egg white as the source of protein. Heat renders it inert. It inhibits the growth of species of bacteria which require biotin but has no effect on the growth of those which do not require it. It has been suggested that the avidin-biotin complex plays a part in the physiology of virus reproduction.

a·vid'i·ty [L. *avidus*, eager, greedy]. 1. Obsolete term for chemical affinity. 2. *In immunology* that characteristic of antitoxic serum which determines the rate of neutralization; it is distinct from the antitoxin content.

vir'u·lent (ay·virr'yoo·lunt, ·oo·lunt, virr') [G. a-, not; L. *virus*, poison]. Without virulence.

vi·tam'ic ac'id (ay·vye·tam'ik, ay·vi vye·vi) Ascorbic acid.

vi"ta·min·o'sis (ay·vy tuh·mi·no'sis, ·vy" ay"vi·tam"i·no sis) [a-; L. *vita* life; G *-ōsis*, condition]. Any disease resulting from a deficiency of one or more vitamins.

a·vo·ca'li·a (·vo·kay'lee·uh, ay·vo) [a-; L. *vocalis*, from *vox*, voice]. The inability to produce musical sounds, or sing in tune; motor amusia.

Avogadro, Amadeo [*Italian physicist*, 1776–1856]. Stated the physical law that equal volumes of all gases at the same temperature and pressure contain equal numbers of molecules (1811). **Avogadro's number** is the number of molecules of a substance in one gram-molecular weight. It is 6.06×10^{23}.

av"oir·du·pois' (ur·duh·poyz') [ME. *avoir de pois*, from OF *aveir*, goods, *pois*, weight]. The English system of weights and measures. See Tables of Weights and Measures in the Appendix. Abbreviated, Av.

Avosyl. A trade-mark for mephenesin.

a·vul'sion [L. *avellere*, to tear away]. A forcible tearing or wrenching away of a part, as a polyp or a limb.

a. of the bulb. Forcible separation of the eyeball by tearing the muscles, the tendons, and the optic nerve.

nerve a. Surgical tearing away of a nerve from its origin by traction, as a phrenic avulsion, for paralyzing one side of the diaphragm to obtain rest for a tuberculous lung.

ax. Axis.

ax-. See axo-.

ax"an·thop'si·a [G. a-, not; *xanthos*, yellow; *opsis*, vision]. Yellow blindness.

Axenfeld, Karl Theodor Paul Polykarpos [*German ophthalmologist*, 1867–1930]. Almost simultaneously with Morax, isolated *Hemophilus duplex* also called *Moraxella lacunata*, *Morax-Axenfeld bacillus* (1896). This causes chronic conjunctivitis, known as *Morax-Axenfeld conjunctivitis*. He also described an anomalous loop of the ciliary nerve in the sclera, known as *Axenfeld's intrascleral nerve loop*.

axerophthol. A trade name for vitamin A.

ax"i a tion [L. *axis*, axis]. The formation or development of axial structures, such as notochord and neural tube.

ax if'u gal [*axis*; L. *fugere*, to flee]. Centrifugal.

ax"i lem ma. See *axolemma*.

ax il'la [L.] The fossa between the arm and the thoracic wall, bounded anteriorly by the pectoralis major muscle, and posteriorly by the latissimus dorsi muscle: the armpit. See Plate 11. —**ax'illary** *adj*

ax'is (pl. axes) [L.]. 1. An imaginary line passing through the center of a body; also the line about which a rotating body turns. 2. The second cervical vertebra; the epistropheus [BNA]. See Table of Bones in the Appendix. 3. The spinal column. 4. The cerebrospinal nervous system. 5. The odontoid process of the epistropheus. 6. A very short artery which breaks up into several branches. Abbreviated, ax. —**axial** *adj*

a. uteri. (a) The long diameter of the uterus. (b) A line imagined to pass transversely through the uterus near its junction with the cervix, on which it is said to turn in retroversion.

basibregmatic a. The line connecting the basion and bregma.

basicranial a. A line connecting the basion to the midpoint of the sphenoethmoidal suture.

basifacial a. A line joining the subnasal point and the midpoint of the sphenoethmoidal suture.

biauricular a. In craniometry, the imaginary line joining the two auricular points.

bipolar a. In electrocardiography, that determined from standard limb leads.

brain a. The brain stem.

cardiac a. A line passing through the center of the base and apex of the heart.

celiac a. Celiac artery. See Plate 8.

cell a. An imaginary line passing through the nucleus and the central apparatus of a cell.

cerebrospinal a. The central nervous system.

conjugate a. The conjugate diameter of the pelvis.

cord a. See primitive *streak*.

cra niofacial a. Axis through the bones forming the base of the skull.

electric a. The average direction of the activation or regression wave through the heart muscle at any instant, or the mean of the instantaneous values over a specified period (mean electric axis).

embryonic a. An imaginary line passing through the future anteroposterior regions of an egg or embryo.

encephalomyeloni a. Cerebrospinal axis. Also called *encephalospinal a.*

facial a. See basifacial.

frontal a. 1. An imaginary transverse line passing through the center of both eyeballs. 2. In electrocardiography, an electric axis perpendicular to the ground when the patient is supine which is directed from the front of the thorax to the back.

hemal a. The aorta.

horizontal a. In electrocardiography, an electric axis parallel to the ground when the patient is supine which is directed from one side of the thorax to the other.

neural a. Cerebrospinal axis.

optic a. (1) An imaginary line on which the refracting surfaces of the eye are more or less centered. It passes from the midpoint (approximately) of the cornea (anterior pole) to the midpoint of the optic fundus (posterior pole); the principal axis of the eye.

pelvic a. An imaginary line passing through all the median anteroposterior diameters of the pelvic canal at their centers.

precordial a. In electrocardiography, an electric axis determined from precordial or chest leads.

principal a. In optics, the line which extends, through the center of a lens at a 90° angle to the surface of the lens. In ophthalmology, same as optic axis. Also called *optical center nodal point*.

pupillary a. An imaginary line through the center of the pupil of the eye and perpendicular to the cornea.

sagittal a. In electrocardiography, an electric axis parallel to the ground and directed from head to feet when the patient is supine.

sagittal a. of the eye. See visual a.

thoracic a. The thoracoacromial artery or vein.

unipolar a. In electrocardiography, that determined from the unipolar extremity leads.

vertical a. (a) The long axis of the body. (b) A vertical line passing through the center of the eyeball.

visual a. Line of vision; line connecting the fixation point and fovea and passing through the nodal point of the eye.

Y a. The line joining the sella turcica and the gnathion.

ax'is cyl'in der. The conducting or essential part of a nerve fiber.

ax'o-, ax- [axis]. A combining form meaning *axis* or denoting *the axis cylinder*.

ax"o-den-drit'ic. See under *synapse*.

ax"of'u gal, ax-of'u gal [axis; L. *fugere*, to flee]. Pertaining to nerve impulses transmitted from the cell body to the periphery. Also *axifugal*, *centrifugal*.

ax'oid, ax-oi'de an [*axis*; G. *eidos*, form]. 1. Pivot shaped. 2. Relating to the second cervical joint.

ax"o-lem'ma [axis; G. *lemma*, sheath]. The plasma membrane surrounding the axon of a neuron, and reaching deep to the myelin sheath; first described by *Ludwig Mauthner*. Also spelled *axilemma*.

ax"o-mat'ic. See under *synapse*.

ax-om'e-ter [axis; G. *metron*, a measure]. An instrument for adjusting spectacles to the axes of the eyes.

ax'on, ax'one [G. *axōn*, axis]. The efferent process of a nerve cell. Also called *neuraxon*, *neurit*, *axis cylinder process*. —**axonal** *adj*

ax'o-neme, ax"o-neme. The axial filament of the flagellum of a protozoan.

ax"o-nom'e-ter [axis; G. *metron*, a measure]. An instrument used for locating the axis of astigmatism, or for determining the axes of a cylindrical lens.

ax"on ot me'sis [axon; G. *tmēsis*, cutting]. The orderly and spontaneous regeneration of an axon, after a crushing injury which destroys the continuity of the axon, but not that of the supporting connective tissue.

ax-op'e tal [axon, L. *petere*, to seek]. Pertaining to nerve impulses transmitted along an axon toward the cell body. Also *axipetal*, *centripetal*.

ax'o plasm [axis; G. *plasma*, from *plassein*, to form]. Undifferentiated cytoplasm, neuroplasm, of the axon in which neurofibrils are embedded.

a ya huas ca (ah yah-wass'kah). A native name for *Banisteria caapi*, a Brazilian plant containing banisterine.

Ayala, A. G. [Italian neurologist, contemporary]. Described a congenital deformity due to the absence of the pectoral muscle, called *Ayala disease*. Also devised a test for determining cerebrospinal pressure, called *Ayala quotient*, *Ayala test*. See under *test*.

a ya pa na (ah yah pah nah), **a ya pa na** [Sp. and Pg., from Tupi *ayapana*]. The leaves of the

herb *Eupatorium triplinerve*, native to tropical America. It is rich in tannin and has been used as diaphoretic and diuretic.

a"ya-pan'in. 7-Methoxycoumarin. One of the active principles of *Eupatorium ayapana*, an aromatic herb whose leaves have been used as hemostatic agent.

a'ya-pin. 6,7-Methylenedioxycoumarin. One of the active principles of *Eupatorium ayapana*, an aromatic herb whose leaves have been used as hemostatic agent.

Ayerza, Abel [*Argentinian physician*, 1861–1918]. Remembered for his description of the syndrome of chronic cyanosis, dyspnea, and sclerosis of the pulmonary artery (1901) called *Ayerza disease*, *Ayerza syndrome*. This is now classified as syphilis of the pulmonary artery, dilatation of the pulmonary artery due to mitral stenosis, hypertension of lesser circulation due to disease of the lungs, or arteriosclerosis of the pulmonary vessels.

ay-f'vin. An impure polypeptide mixture, having antibiotic activity, obtained from cultures of *Bacillus licheniformis*; it yields the same amino acids as bacitracin.

a-yp'ni-a [G. *a-*, not; *hypnos*, sleep]. Insomnia.

az"a-gua'nine. 8-Azaguanine; guanine in which the —CH= group in position 8 is replaced by —N=. It interferes with the growth of certain mouse tumors, possibly because nucleic acid containing 8-azaguanine functions as an antimetabolite for corresponding nucleic acid containing guanine.

a-za'le-ine (a-zay'lee-een, -in). See *fuchsin*.

a"za-ser'ine. $N_2CH.CO.O.CH_2.CHNH_2.COOH$. O-diazoacetyl-L-serine; crystalline antibiotic substance isolated from broth cultures of *Streptomyces* species and also synthesized. It powerfully inhibits growth of certain transplantable neoplasms in animals, possibly through competition with serine.

a-zed'a-rach (a-zed'uh-rack) [Per. *azad dirakht*, free, or noble, tree]. Pride of China. The dried bark of the root of *Melia azedarach*, an Asiatic tree naturalized in the southern United States. It occurs in curved pieces or quills, having sweetish taste. Preparations of it have been used as an anthelmintic against nematodes.

az"e-la'ic ac'id. $COOH(CH_2)_7COOH$. solid acid produced by disruptive oxidation of oleic acid and certain other acids occurring in oils and fats. Syn. *lepargylic acid*.

a-ze'o-trope (ay-zee'o-trope, -see trope). The particular composition of mixture of two or more substances exhibiting minimum or maximum boiling point for all possible mixtures of the particular substances, and thereby having constant boiling point. Also called *az"e-o-trop'ic mixture*.

az'i- [G. *a-*, not; *zoē*, life]. A prefix denoting *the presence of the group N*.

az'ide (az'ide, -id, ay'zide). A compound containing the univalent —N_3 group.

az'ine (az een, -in, ay'zeen). Any of class of heterocyclic compounds containing six atoms in the ring, at least one of which is nitrogen. The number of nitrogen atoms is distinguished by prefixes, as *monoazine*, *diazine*, *triazine*.

az'o- (az'o-, ay'zo-), **az-** [*a-*, *azil*]. A combining form indicating *the presence of nitrogen* or *of the group* —N=N— within compound.

az"o-ben'zene. $C_6H_5N:NC_6H_5$. A compound prepared by the reduction of nitrobenzene. It forms orange-red leaflets readily soluble in alcohol and ether but sparingly soluble in water; used in organic synthesis.

az"o-car'mine G (az o-kahr min, -myne, ay zo-) (C.C.). A basic azine dye used in some methods for staining connective tissue.

azochloramid. Trade-mark for N,N'-dichloroazodicarbonamidine, $H_2N(ClN)CN.NC(NCl)NH$ or chloroazodin (*chloroazodinum*). The compound is germicide available in solutions of various strengths and in 1:1000 ointment.

az'o com'pound. In *chemistry*, a compound containing the group —N:N— united to two hydrocarbon groups.

az"o-der'mine. An acetylated derivative of aminoazotoluene used similarly.

az'o dyes (az'o, ay zo). A group of synthetic organic dyes derivable from azobenzene, containing the chromophore —N:N—.

az"o-lit'min. A dark-red coloring matter obtained from litmus and used as an indicator, especially in routine bacteriologic work with milk.

a-zo"o-sper'mi-a, a-zo"o-sper'ma-tism [*a-*, *zoo-*; G. *sperma*, seed]. Absence of spermatozoa in the semen.

az"o-pro'te-in. One of group of synthetic antigens formed by coupling proteins with diazonium compounds.

az"o-ru'bin S. A dark-red dye injected intravenously; the time required for the dye to appear in the duodenal drainage after excretion by the liver can be used as measure of liver function.

az"o-sul'fa-mide. See *neoprontosil*.

az"o-te'mi-a [*a-*, *azil*; G. *haima*, blood]. The presence of excessive amounts of nitrogenous compounds in the blood; uremia.

alimentary a. Elevation of the blood urea nitrogen (BUN) secondary to the presence of great amount of protein in the gastrointestinal tract, usually the result of hemorrhage.

a-zot'ic ac'id. Nitric acid.

az"o-ti-fi-ca'tion [*a-*, *azil*; L. *facere*, to make]. Fixation of atmospheric nitrogen.

az'o-tized. 1. Converted to an azo compound. 2. Nitrogenous, charged with nitrogen. —**azotize**, *v.t.*, *i.*

Az"o-to-bac'ter. Soil and water bacteria capable of fixing atmospheric nitrogen. See also *nitrogen fixers*.

az"o-tom'e-ter [*a-*; *azil*; G. *metron*, measure]. A device for gasometrically measuring the nitrogen content of compounds in solution. —**azotometry**, *n.*

az"o-tor-rhe'a, az"o-tor-rhoe'a [*a-*, *azil*; G. *rhoia*, flow]. Excess of nitrogenous matter in the urine or feces.

az"o-tu'ri-a [*a-*, *azil*; G. *ouron*, urine]. An increase of the nitrogenous substances in the urine. —**azoturic**, *adj.*

az'u-lene. $C_{10}H_8$; cyclopentacycloheptene, forming intensely blue leaflets or plates, insoluble in water; it occurs in certain volatile oils.

azulfidine. Trade-mark for *salicylazosulfapyridine*, sulfonamide derivative used in chronic ulcerative colitis.

az'ure (azh ur, ay zhur). A basic thiazine dye used in blood and connective-tissue stains.

a. A (C.C.). Asymmetrical dimethyl thionine; used in 0.1–1.5% aqueous solution as nuclear stain for sections of fixed tissue or in combination with other dyes.

a. B (C.C.). The trimethyl derivative of thionine.

a. C. A basic dye, monomethyl thionine.

a. I. Trade name for mixture of azure A and azure B. Syn., *methylene a.*

a. II. A mixture of equal parts of azure I and methylene blue.

methylene a. See *a. I.*

az'u-rin. Theobromine sodium acetate; used as diuretic. See *theobromine*.

a zu're·phile" (-aboor o·file fil az·yoor) a zu're·phil" [OF azure, blue G philein, to love]. Staining promptly with an azure dye. —azurophil'ia, adj.

az"y go·ag na thus, az y go·ag'na thus. A form of tocephaly in which there is no mandible and the zygomas are absent or vestigial.

az'y gos, a zy'gos [G a- not zygon, yoke]. An unpaired anatomic structure. —az'ygos, az' ygous, azy'gous, adj.

a. uvulae. Old name for the muscle of the uvula.

zy'mi·a, a zym'i a [a- G zyme, leaven]. The absence of an enzyme or ferment.

a zym'ic, zy'mic [a- zyme]. 1 Not rising from fermentation unfermented. 2. Not containing enzymes.

B

B Chemical symbol for boron

B. Abbreviation for Bacillus; formerly abbreviation for Bacterium.

Ba The chemical symbol for barium.

Bab'bitt met 1 [after Isaa Babbitt, American inventor 1799–1862]. I dentistry an alloy of tin, antimony and copper used in making dies and counterdies for swaging metallic artificial dentures

Babcock, Stephen Moulton [American agricultural chemist, 1843–1931]. Remembered for his invention of test for determining the percentage content of butterfat in milk by means of centrifuging mixture of equal quantities of the specimen and sulfuric acid (1890)

Babcock, Willi m Wayne [American surgeon, 1872–]. Known for his originality in devising number of surgical procedures, as proctosigmoidectomy by the combined method plastic operation for relief of exstrophy of the urinary bladder; an operation for prognathism method for submucous perineorraphy operations for aneurysm method of extirpating varicose veins. See also Jackson-Babcock operation under Chevalier Jackson

Babcock-Levy test. See under test.

Babes, Victor [Rumanian microbiologist, 1854–1926]. With Ernst, described the metachromatic granules found in bacteria. These granules, called Babes-Ernst bodies, are more refractive than the surrounding cytoplasm, and take up dyes more vidly developed the mallein test for glanders (1891) See under test.

Ba be si (ba bee shuh, -see·uh, ba bay' bay bee) [L., after Victor Babes]. A genus of intracellular nonpigmented sporozoa which invade the red blood cells of cattle, sheep, horses, rodents, dogs, and monkeys but not of man. Members of this genus are oval or pear-shaped

B. bigemina. The species which causes Texas fever or bovine piroplasmosis in the United States, commonly transmitted to cattle by the tick Boophilus annulatus.

B. bovis. A species found in European countries which is slightly smaller than the B bigemina and transmitted by the Ixodes ricinus and Haemaphysalis punctata, the disease is similar to Texas fever

B. canis. The species which causes an icterus gravis known as canine piroplasmosis

B. equi. The species which produces equine biliary fever in horses, mules, and donkeys.

B. ovis. The species which is the etiologic agent of piroplasmosis of sheep.

bab"e·si'a·sis (bab i·sigh uh·sis, -sigh uh·sis, bay" bi-) [Babesia, NL. -asis, condition]. Infestation of mammals other than man with species of Babesia. Also see piroplasmosis.

Babinski Joseph François Féli [French neurologist, 1857 1932]. Noted for his description of reflex (extension of the great toe with fanning of the other toes on exciting the sole) connected with lesion in the pyramidal tract and found in organic, but not in hysterical, hemiplegia called Babinsk sign. H also described sign in true sciatica, diminution of the Achilles reflex, and syndrome in which lightning pains, absent patellar reflex, Argyll Robertson pupil, and arterial disease indicate tabes. In association with Nageotte, he described syndrome marked by contralateral hemiplegia and hemianesthesia with hemiasynergia and hemiataxia, due to multiple lesions of the pyramidal tracts and cerebral peduncle known as the Babinski-Nageotte syndrome. H was the first to outlin the syndrome of adiposogenital dystrophy (1900) called Babinski-Frohlich disease.

ba'by [ME.]. An infant newborn child child up to the time he talks.

blue b. A newborn child suffering from cyanosis, transitory or permanent. The former is due to passing obstruction, irregular respiration, or may follow crying or exercise the latter occurs when venous blood is shunted to the arterial side because of cardiac anomaly as an open foramen ovale. See cyanosis.

Baccelli, Guido [Italian physician and politician, 1832–1916]. Regarded as leading figure in Italian medicine of his time remembered for his method of treating aneurysm by the insertion of watch spring into the vessel to f vor coagulation, and for his treatment of echinococcus cysts of the liver by aspiration and irrigation. See also Baccelli' sign.

Bac cha·ri (back uh ris) [G bakkaris, plant with fragrant root]. A genus of small trees or shrubs of the Carduaceae old classification Compositae.

B. halimifolia. The groundsel tree, shrub of North America. A decoction of the leaves and bark is popular demulcent and pectoral medicine.

B. pilularis. Kidneywort or kidney root, shrub of California formerly used in cystitis and as diuretic.

bac ci form (back si·form) [L. bacca, berry forma, form] Berry-shaped

Bachman test. See under test

ba·cil' (ba·sill') A short rodlike lozenge.

bac"il lar"y (bas' lerr ee) ba cil'lar [L. bacillus, dim. of baculus, stick]. 1 Relating to bacilli or to bacillus. 2 Consisting of or containing rods.

bac"il le mi·a bac"il lae mi·a (bas"i lee mee uh) [bacillus; G. haima, blood]. Presence of bacilli in the blood.

ba·cil'li form [bacillus; L. forma, form]. Having the shape or appearance of bacillus; rod-shaped.

ba·cil'lo- (ba·sil'o- bas lo-) ba·cil'li- (ba·sil'e-

bas'i lee-) [*bacillus*]. A combining form meaning *bacillus*.

ba-cil"lo-my'cin [*bacillus*; G. *mykēs*, fungus]. An antibiotic substance isolated from cultures of *Bacillus subtilis*; it is active against variety of fungi but has little effect against bacteria.

ba-cil"lo-pho'bi a [*bacillus*; G. *phobos*, fear]. Morbid fear of bacilli.

bac"il-lu'ri-a (bas"i-lew ree-uh) [*bacillus*; G. *ouron*, urine]. The presence of bacilli in the urine.

Ba-cil'lus (pl. *Bacilli*) [L.]. A genus of rod-shaped, nonflexuous forms of the family Bacillaceae, described by O. F. Müller before 1800; term first used by Cohn in 1872 with *Bacillus subtilis* as the type. They may occur as slender short, straight, or slightly bent rods. Abbreviated B.

B. acidophilus. Lactobacillus acidophilus.

B. aerogenes capsulatus. Synonym for *Clostridium welchii*.

B. aertrycke. See *Salmonella typhimurium*.

B. agni. The lamb dysentery bacillus, which has also been designated as *Clostridium welchii B*.

B. anthracis. A species pathogenic to man, although in nature it is primarily pathogen of cattle and horses. The *B. anthracis* is one of the largest of the pathogenic bacteria and is nonmotile. See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

B. bifidus. See *Lactobacillus bifidus*.

B. botulinus. Synonym for *Clostridium botulinum*.

B. bovisepticus. Synonym for *Pasteurella boviseptica*.

B. brevis. A group of bacilli, widely distributed in soil, from which gramicidin, gramicidin S, and tyrocidine, powerful broad-spectrum antibiotic agents, have been extracted.

B. coli. Old term for *Escherichia coli*.

B. diphtheriae. *Corynebacterium diphtheriae*.

B. dysenteriae. See *Shigella dysenteriae*.

B. enteritidis. See *Salmonella enteritidis*.

B. erysipelatos-suis. Synonym for *Erysipelothrix rhusiopathiae*.

B. faecalis alcaligenes. See *Alcaligenes faecalis*.

B. fusiformis. Synonym for *Fusobacterium plauti-vincenti*.

B. gastrophilus. See *Lactobacillus acidophilus*.

B. hofmanni. Misnomer for *Corynebacterium pseudodiphtheriticum*.

B. influenzae. See *Hemophilus influenzae*.

B. lactis aerogenes. See *Aerobacter aerogenes*.

B. lacunatus. Synonym for *Moraxella lacunata*.

B. leprae. See *Mycobacterium leprae*.

B. mallei. See *Malleomyces mallei*.

B. mucosus capsulatus. Old term for *Klebsiella pneumoniae*.

B. oedematiens. Synonym for *Clostridium novyi*.

B. oedematis maligni. Synonym for *Clostridium novyi*.

B. oviterdeus. Synonym for *Clostridium perfringens*.

B. paludis. Synonym for *Clostridium perfringens Type C*.

B. parabotulinus. Synonym for *Clostridium botulinum C*.

B. paratyphosus A. Synonym for *Salmonella paratyphi A*.

B. paratyphosus B. Synonym for *Salmonella paratyphi B*.

B. perfringens. Synonym for *Clostridium perfringens*.

B. pertussis. Synonym for *Hemophilus pertussis*.

B. pestis. See *Pasteurella pestis*.

B. phlegmonis emphysematosae. Synonym for *Clostridium perfringens*.

B. polymyxa. An aerobic, spore-forming, Gram-negative, sugar-fermenting rod, widely distributed in water, soil, milk, decaying vegetables, and the like the source of polymyxin.

B. proteus. See *Proteus vulgaris*.

B. pyocyaneus. Synonym for *Pseudomonas aeruginosa*.

B. subtilis. The type species of the genus *Bacillus*, which infects human beings only rarely. Its medical importance lies in the fact that the antibiotic substance, subtilin, is prepared from this species.

B. suisepticus. Synonym for *Pasteurella suiseptica*.

B. tetani. *Clostridium tetani*.

B. tuberculosis. See *Mycobacterium tuberculosis*.

B. vaginalis. A common organism found in the vagina, contributing to the acidity of the vaginal secretions. It is thought to be identical with the *Lactobacillus acidophilus*.

B. whitmori. *Malleomyces pseudomallei*.

B. xerosis. See *Corynebacterium xerose*.

ba cil'lus (pl. *bacilli*) [L.]. Loosely any member of the class Schizomycetes.

abortus b. *Brucella abortus*.

anthrax b. *Bacillus anthracis*.

Bairnsdale b. *Mycobacterium ulcerans*.

Bordet-Gengou b. *Hemophilus pertussis*.

colon b. *Escherichia coli*.

comma b. *Vibrio comma*.

diphtheria b. *Corynebacterium diphtheriae*.

diphtheroid bacilli. Bacilli similar to the diphtheria bacillus but which do not produce toxin.

Döderlein b. *Bacillus vaginalis*.

Ducrey' b. *Hemophilus ducreyi*.

Duval b. *Shigella sonnei*.

Flexner b. *Shigella paradysenteriae*.

Friedländer's b. *Klebsiella pneumoniae*.

Frisch's b. See *Klebsiella rhinoscleromatis*.

fusiform b. A common designation for bacteria of spindle-shaped or cigar-shaped morphology belonging to the genus *Fusobacterium*.

gas ga grene b. *Clostridium perfringens Type A*.

glanders b. *Malleomyces mallei*.

Hansen's b. *Mycobacterium leprae*.

hay b. *Bacillus subtilis*.

Hiss and Russell' Y b. *Shigella paradysenteriae*.

Hofmann b. *Corynebacterium pseudodiphtheriticum*.

hog holera b. See *Salmonella choleraesuis*.

J hne' b. See *Mycobacterium paratuberculosis* and *Johne disease*.

Klebs-Loeffler b. *Corynebacterium diphtheriae*.

Koch-Weeks b. *Hemophilus aegyptius*.

Morax-Axenfeld b. *Moraxella lacunata*.

Morgan's b. *Proteus morganii*.

Much's b. See Hans Christian R. *Much*.

Perez' b. *Salmonella foetida*.

Pfeiffer' b. *Hemophilus influenzae*.

pneumobacillus. *Klebsiella pneumoniae*.

pseudodysentery b. *Shigella paradysenteriae*.

Schmitz's b. *Shigella ambigua*.

Shiga b. *Shigella dysenteriae*.

streptobacilli. Those bacilli which remain attached end to end producing chainlike group.

tubercle b. *Mycobacterium tuberculosis*. Abbreviated, t. b.

typhoid b. Synonym for *Eberthella typhosa*.

vole b. A bacillus closely allied to *Mycobacterium tuberculosis* and causing disease in voles resembling tuberculosis and rat leprosy. It is highly pathogenic for rats. Syn., *Mycobacterium tuberculosis var. muris*.

zur Nedden's b. See Max Wilhelm zur *Nedden*.

ba ci tra cin [*bacillus*; *Tracy*]. An antibiotic obtained from *Bacillus subtilis* isolated from

(in th patient Margaret Tracy after whom it was named) It is active against many Gram-positive organisms, such as streptococci, staphylococci, and pneumococci, and certain Gram-negative cocci, such as gonococci and meningococci It is ineffective against most Gram-negative organisms.

back [AS. *baec*] L. *Dorsum; posterior aspect.* **1.** The posterior part of the trunk from the neck to the pelvis.

b. rest. Any device used to support the back in an upright or semireclining position.

bellow b. One with excessive lumbar lordosis.

humpback. One with an abnormal prominence in the dorsal region due to kyphosis or scoliosis. Also called *hunchback.*

poker b. A back stiffened by ankylosing spondylitis.

saddleback. Lordosis.

sway-b. In humans, increased lumbar lordosis with compensatory increased thoracic kyphosis In horses, sinking of the back or lordosis.

trench b. Dorsolumbar pain and rigidity experienced by troops engaged in trench warfare

back'ache [baec; AS. *acan*, to ache]. Pain in the lower lumbar or lumbosacral regions of the back. Also called *lumbago lumbosacral pain.*

back'bone [baec; AS. *bān*, bone]. The vertebral column.

primitive b. The notochord.

back'ward ness. *1 Retarded growth or mental* development due to any cause, as general illness or sense-deprivation, except mental deficiency **2.** Educational retardation due to extrinsic causes. **—backward,** *adj*

Bact. Abbreviation for *Bacterium*.

bac"te-re mi-a [G *baktērion*, dim. of *baktron*, staff *haima*, blood]. The presence of bacteria in the blood.

bac te'ri-a (sing. **bacterium**) [baktērion]. 1. Formerly the schizomycetes. **2.** Large groups of unicellular vegetable microorganisms existing morphologically as oval or spherical cells (cocci) rods (bacilli) spirals (spirilla) and smaller group of comma-shaped organisms (vibrios) The first two forms occur singly or are grouped in pairs (diplococci) or chains (streptococci) Some cocci also appear in clusters. Bacteria are aerobic, requiring free oxygen, or anaerobic, living without oxygen. Some can flourish under both conditions, being facultative aerobes or anaerobes. The cells are either motile or nonmotile and exist as parasites on living hosts, or as saprophytes on dead hosts, some being facultative parasites while others are true parasites. A relatively small group is pathogenic, causing disease, while most are nonpathogenic. The organisms react differently t Gram's stain, being Gram-positive when they retain the stain, and Gram-negative when they decolorize. A few are acid-fast, retaining stain even when subjected to acid-alcohol. Some bacteria cause fermentation (zymogenic) others produce pigment (chromogenic) while another group produces gas (aerogenic) See bacterial variation, colony See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix. See Plate 20. **—bacterial,** *adj.*

cold-growing b. Psychrophilic bacteria; they develop optimally t 15° 20° C.

Bac-te ri-a ce-ae (back teer ee-ay see ee, back teer-ee) [baktērion]. A family of Eubacteriales containing one genus *Bacterium*.

bac-te ri-cide (back-teer'i-side, -terr'i-side, -terr'i-sid) [baktērion; L. *caedere*, to kill]. An agent that destroys bacteria. **—bactericid'al** *adj*

bac"te ri-ci'din, bac"te-ri o-ci'din. An antibody that in the presence of complement kills bacteria.

bac'te-rid [baktērion]. A cutaneous hypersensitivity reaction, often limited to the hands and feet, due to absorption from focus of bacterial infection. The mechanism is believed to be of infectious-allergic nature.

pustular b. See *pustulosis palmaris et plantaris.*

bac te ri form. See *bacterioid.*

bac te ri-o-, bac te'ri- bac te-ri- [baktērion]. A combining form denoting *relation to bacteria, bacterial.*

bac ter"i-o-chlor' phyll. A pigment, similar in structure and function to green plant chlorophyll, found in the photosynthetic nonsulfur purple bacteria *Athiorhodaceae* and sulfur purple bacteria *Thiorhodaceae*.

bac te"ri-o-ci'din [baktērion, L. *caedere*, to kill]. See *bactericidin.*

bac-te ri-o-cla-sis [baktērion, G. *klasis*, breaking]. The destruction or fragmentation of bacteria, phenomenon similar to bacteriolysis by bacteriophage.

bac te ri-o-er'y-thrin [baktērion, G *erythros*, red]. A red pigment present in certain bacteria.

bac-te"ri-o-flu"o-res'cin [baktērion; L. *fluere*, to flow]. A fluorescent coloring matter produced by the action of certain bacteria.

bac te"ri-o-gen'ic, bac-te ri-og' nous (back teer"ee odj" -nus) [baktērion; G *gennethai*, from *gignesthai*, to be produced]. Caused by bacteria of bacterial origin.

bac-te"ri o-he mo-ly'sin, bac-te ri-o-hae"mo-ly'sin (hee mo lye sin, -hem o -hem-ol'i-sin) [baktērion, G *haima*, blood; *lysis*, loosing]. A very unstable substance which liberates hemoglobin from the red blood cells, and is formed in the body by bacterial action, as *streptolysins, staphylolysins, tetanolysins,* etc. A single bacterial strain may produce multiple hemolysins.

bac-te ri-oid [baktērion, G *eidos*, form]. A structure or organism resembling bacterium. **—bacter'ioid,** *adj*

bac te ri ol'o gist [baktērion, G *logos*, word; *-istes*, agent]. One versed i bacteriology One whose profession is the tudy and practice of bacteriology

bac te ri-ol'o-gy [baktērion, logos]. The science and study of bacteria. **—bacteriolog'ic,** *adj*

bac te"ri-o-ly'sin (back teer ee-o-lye sin, -ol'i sin, back"teer ee ol'i-sin) [baktērion, G *lysis*, loosing]. A specifi antibody which, in cooperation with other substances (complements) is capable of causing the dissolution of the homologous bacterium.

bac-te ri-ol'y sis [baktērion; *lysis*]. The intracellular or extracellular dissolution of bacteria. When mediated by specific antibody and complement, it is called *immune bacteriolysis.* **—bacteriolyt'ic,** *adj*

bac te'ri-o phage (back teer'ee-o fayd], -o-fahzh") [baktērion, G. *phagein*, to eat]. One of group of viruses infecting bacteria. In some cases the infection results in lysis of the bacterial cell. **—bacteriophag'ic,** *adj;* **bacterioph agy** n.

bac te ri-o-pha gol'o-gy [baktērion, *phagein*; G *logos*, word]. The study of bacteriophage in all its relations. Syn *protobiology*

bac-te ri-o pho'bi-a [baktērion; G *phobos*, fear]. A morbid dread of bacteria or other microorganisms.

bac te ri-o-pro'te-in [baktērion, G *prōtos*, first]. Any one of a number of protein substances contained in bacteria often the cause of fever inflammation, and suppuration.

bac-te"ri op so-nin [baktērion, G *opsōnia*, to buy victuals]. An opsonin which acts upon bacteria, as

distinguished from one affecting erythrocytes. —bacteriopsson'ic, *adj*

bac-te-ri-os'co-py [*baktērion*; G. *skopein*, to examine]. The microscopic study of bacteria. —bacterioscop'ic, *adj*

bac-te-ri-os-ta-sis (back-tee"ree-os-tuh-sis, -o-stay'sis) [*baktērion*; G. *stasis*, standing still]. Arrest or hindrance of the growth of bacteria. —bacteriostat'ic, *adj*.

bac-te-ri-o-stat" [*baktērion*, *stasis*]. Any agent which arrests or hinders the growth of bacteria.

bac-te"ri-o-ther'a-py [*baktērion*, G. *therapeia*, treatment]. The treatment of disease by the introduction of bacteria or their products into the system. —bacteriotherapeu'tic, *adj*

bac-te-ri-o-tox'in [*baktērion*, G. *toxikon*, poison]. 1. A toxin destructive to bacteria. 2. A toxin produced by bacteria. —bacteriotoxic, *adj*

bac-te"ri-o-trop'ic [*baktērion*, G. *tropē*, turning]. Denoting substances which render bacteria susceptible to phagocytosis.

bac-te"ri-ot'ro-pin [*baktērion*; *tropē*]. An immune opsonin, an antibody aiding the phagocytic action of certain cells, as leukocytes.

Bac-te'ri-um [*baktērion*]. A genus of the Bacteriaceae. Abbreviated, Bact.

Bact. aceti. Acetobacter aceti.

Bact. aerogenes. Synonym for *Aerobacter aerogenes*.

Bact. alkalescens. Synonym for *Shigella alkalescens*.

Bact. ambiguum. Synonym for *Shigella ambigua*.

Bact. avisepticum. Synonym for *Pasteurella avicida*.

Bact. bovisepticum. Synonym for *Pasteurella boviseptica*.

Bact. cholerae-suis. Synonym for *Salmonella choleraesuis*.

Bact. coli. Synonym for *Escherichia coli*.

Bact. dispar. Synonym for *Shigella madampensis*.

Bact. dysenteriae. Synonym for *Shigella dysenteriae*.

Bact. enteritidis. *Salmonella enteritidis*.

Bact. flexneri. Synonym for *Shigella paradysenteriae*.

Bact. friedländeri. Synonym for *Klebsiella pneumoniae*.

Bact. funduliformis. Synonym for *Fusobacterium plauti-vincenti*.

Bact. lactis aerogenes. Synonym for *Aerobacter aerogenes*.

Bact. monocytogenes. Synonym for *Listeria monocytogenes*.

Bact. paradysenteriae. Synonym for *Shigella paradysenteriae*.

Bact. paratyphosum A. Old term for *Salmonella paratyphi*.

Bact. paratyphosum B. Old term for *Salmonella schottmülleri*.

Bact. paratyphosum C. Old term for *Salmonella hirschfeldii*.

Bact. pneumoniae. Synonym for *Klebsiella pneumoniae*.

Bact. shigae. Synonym for *Shigella dysenteriae*.

Bact. sonnei. Synonym for *Shigella sonnei*.

Bact. suipestifer. Synonym for *Salmonella choleraesuis*.

Bact. suisepticum. Synonym for *Pasteurella suiseptica*.

Bact. tularense. Synonym for *Pasteurella tularensis*.

Bact. typhimurium. Synonym for *Salmonella typhimurium*.

Bact. typhosum. Synonym for *Eberthella typhosa*.

bac-te-ri-um (pl. *bacteria*). See *bacteria*.

bac-te-ri-u'ri-a [*baktērion*, G. *ouron*, urine]. The presence of bacteria in the urine.

bac-ter-oid [*baktērion*, G. *eidos*, form]. A bacterium modified in form or structure. —bac'ter-id, *adj*

Bac"ter-o'i-des. A genus of obligate anaerobic, nonsporogenous Gram-negative bacilli, with rounded ends, which may be normal inhabitants of the genital, intestinal, and respiratory tracts, but may also cause severe infections, as, for example, *B. funduliformis*.

B. fragilis. A species of *Bacteroides* found in some cases of appendicitis, lung gangrene, pelvic abscess, hepatic abscess, septicemia, and urinary-tract infection.

B. funduliformis. An exceedingly pleomorphic, filamentous, often spindle-shaped rod, found in association with septicemias, puerperal infection, liver abscess, etc.

B. melaninogenicus. A species of *Bacteroides* found in the mouth, urine, feces, abdominal wounds, puerperal sepsis, focal kidney infections. In culture melanin pigment is produced.

B. pneumosintes. A minute, anaerobic, Gram-negative rod, which passes through Berkefeld V and N candles and has been recovered from nasopharyngeal washings of man. Officially it is classed in the genus *Dialister* closely related to *Bacteroides*.

bacitracin. Trade-mark for an antibiotic ointment containing tyrothricin.

bael (bail, bay'el) [Hind.]. Bengal quince tree. See *bel*.

Baelz, Erwin von [*German physician*, 1849–1913]. Described the outbreak of beriberi (kakke) in Tokyo (1881) in one of the most important contributions to our early knowledge of the disease. His name is also associated with myxadenitis labialis, a disease marked by painless papules on the mucous membranes of the lips, also called *Baelz' disease*.

Baer, Karl Ernst von [*Estonian embryologist and anthropologist*, 1792–1876]. Celebrated as having promulgated, with Pander, the germ-layer theory (1817) and for his discovery of the mammalian ovum (1827). He is regarded as the father of modern embryology and, with Cuvier, is credited as the founder of modern morphology.

Baer's treatment. See under *treatment*; see also *maggot therapy*.

Baeyer, Johann Friedrich Wilhelm Adolf von [*German organic chemist*, 1835–1917]. Known for his discovery of a reaction for glucose, in which indigo is formed on boiling a glucose solution with orthonitrophenylpropiolic acid and sodium bicarbonate. If the glucose is in excess, the blue is converted into indigo white. He also discovered a reaction for indole, in which a red liquid is yielded when fuming nitric acid, followed by a potassium nitrite solution, is added to a watery solution of indole (1883). Nobel laureate (1905).

baf fle. A posterior bulge of the intervertebral disk which may simulate a defect radiographically but which in reality is only a structural variation.

bag [ME. *bagge*]. 1. Sac or pouch. 2. The scrotum. 3. A cow's udder.

b. of waters. The amniotic sac and fluid which serve during pregnancy to protect the fetus and during labor to dilate the cervix. See *amnion*.

caked b. In cows, an inflammation of the udder.

colostomy b. One of rubber worn as a belt, especially constructed to receive the intestinal excreta from a colostomy opening.

Douglas b. The collecting bag used in open-circuit technique of determining basal metabolic rate. See also Claude Gordon *Douglas*.

ice b. One of rubber to hold cracked ice used to reduce localized inflammation.

Lyster b. See water-sterilizing b.

Politzer b. A waterproof bag used to inflate the middle ear. One end is tightly fixed into one external naris while the other naris is held closed during the act of swallowing water or saying the letter *k*.

water-sterilizing b. *In military medicine*, a heavy canvas or rubberized-cloth bag for distributing disinfected water for use of troops, water bag; formerly called *Lyster b.*

bag-as-so-sis, bag"ass-oo-sis [F. *bagasse*; G. *-ōsis*, condition]. A disease of the lungs occurring in workmen who handle bagasse, the dry residue of sugar cane after the juice has been expressed. It is characterized by abrupt onset, dyspnea, cough, fever; there is fine mottling in the roentgenogram, and the presence of small fibrils of sugar cane in the lungs. Also called *bagasse disease*.

Bag'dad boil. See *oriental sore*.

Ba-hi'a ul'cer (buh-high'uh, bah-ee'ah). See *leishmaniasis americana*.

Baillarger, Jules Gabriel François [French neurologist, 1809–90]. His name is associated with the white bands in the layer of large pyramidal cells of the cortex cerebri; he is also known for his sign, difference in the size of the pupils noted in dementia paralytica. He pointed out that patients with aphasia who had lost the power of voluntary speech retained certain automatic expressions not always employed correctly; this is known as *Baillarger's principle*.

Baillou, Guillaume de (Ballonius) [French physician, 1538–1616]. Considered the first epidemiologist. In one posthumous publication (1640) he gave the first clear account of whooping cough, and in another (1642) apparently introduced the term rheumatism into the language. Advocated tracheotomy in diphtheria.

Bainbridge reflex. See under *reflex*.

Baker, William Morrant [English surgeon, 1839–96]. Described erythema serpens or erysipeloid (1873). His name is also associated with inflammation of the popliteal bursa, called *popliteal bursitis, Baker's cyst*.

bak'er [AS. *bacan*]. *In medicine*, heating chamber for applying dry heat to a part; used especially in joint diseases. —**bake**, *v.*

bak'ing so'da. Sodium bicarbonate.

BAL. $CH_2SH.CHSH.CH_2OH$. British anti-lewisite. 2,3-Dimercaptopropanol. Developed during World War II as an effective therapeutic agent against both the local and systemic actions of certain arsenic war gases; it is also effective as an antidote to arsenic poisoning following antisyphilitic therapy. It is useful as an antidote also to mercury and certain other metals. It is also used in the treatment of polyarteritis nodosa when it develops as a result of antisyphilitic treatment with organic arsenic drugs; it is administered intramuscularly as a 5–10% solution in peanut oil and benzyl benzoate. Syn., *dimercaprol, dithiopropanol 1*.

bal'ance [L. *bilanx*, having two scales]. 1. A device for weighing. 2. The normal, harmonious interaction between related parts and organs of the body; equilibrium.

acid-base b. The state of equilibrium of acids and bases maintained by physiologic processes, e.g., respiration, elimination and manufacture of buffers which *keep the pH of the body constant*; distinguished from the state of an excess of acid (acidosis) or an excess of alkali (alkalosis).

allergic b. A state of equilibrium between the patient and his environment, in which the amount of specific noxious allergen does not exceed the patient's threshold of allergic tolerance.

calcium b. A state of equilibrium in the body between the outgo and intake of calcium, maintained by physiologic processes.

electromagnetic b. Apparatus for measuring electromagnetic forces by balancing them against gravity.

energy b. The relation of the amount of utilizable energy taken into the body to that which is employed for internal work, external work, and the growth and repair of tissues.

fluid b. A state of equilibrium in the body between the outgo and intake of water. Optimum water content is maintained by a special physiologic water-regulating mechanism.

heat b. The relation of the amount of heat produced in the body to that which is lost.

hemogenic-hemolytic b. The balance in the body between the production of normal erythrocytes and their destruction, which maintains the count and the hemoglobin at the optimum level by physiologic processes.

mineral b. The state of equilibrium of the body maintained by physiologic processes, between the outgo and intake of any mineral or of any particular mineral constituent such as iron, calcium, or sodium.

nitrogen b. In a normal adult, the nitrogen excreted equals the nitrogen intake in the form of food. Syn., *nitrogen equilibrium*.

thermic b. See *bolometer*.

torsion b. Instrument which measures small torques by their torsional effect upon elastic fibers or wires.

vitamin b. The state of the body maintained by physiologic processes whereby there is an optimum content of the various vitamins in the body.

water b. See fluid *b*.

bal'a-nism [G. *balanos*, acorn, glans penis, suppository]. The application of a pessary or suppository. *Obs.*

bal"a-ni'tis [*balanos*; G. *-itis*, inflammation]. Inflammation of the glans penis, or glans clitoridis.

b. xerotica obliterans. A chronic, progressive, atrophic, sclerosing process of the penis which may eventuate in urethral stenosis or in epithelioma. The condition corresponds to kraurosis of the vulva in the female.

phagedenic b. A destructive balanitis leading to necrosis of the glans penis.

bal'a-no-, balan- [*balanos*]. A combining form meaning *relating to the glans penis* or *glans clitoridis*.

bal"a-no-chlam"y-di'tis [*balanos*; G. *chlamys*, cloak; *-itis*, inflammation]. Inflammation of the glans and prepuce of the clitoris; frequently called *balanitis*.

bal'a-no-plas"ty [*balanos*; G. *plassein*, to form]. Plastic surgery of the glans penis.

bal"a-no-pos-thi'tis [*balanos*; G. *posthē*, membrum virile; *-itis*]. Inflammation of the glans penis and of the prepuce.

bal"a-no-pre-pu'tial [*balanos*; L. *praeputium*, prepuce]. Relating to the glans penis and the prepuce.

bal"a-nor-rha'gi-a (bal"uh-no-ray'juh, -jee-uh, -radj'uh, -radj'ee-uh) [*balanos*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the glans penis.

bal"a-nor-rhe'a, bal"a-nor-rhoe'a [*balanos*; G. *rhoia*, flow]. Purulent balanitis.

bal"an-ti-di'a-sis. See balantidial *colitis*.

Bal"an-tid'i-um [G. *balantidion*, little bag]. A genus of ciliated, parasitic protozoans.

B. coli. A common parasite of the hog; occasionally infests man, causing severe dysentery

bal′ -nus [G. *balanos*, acorn]. The glans of the penis or of the clitoris.

Balard, Antoine Jérôme [French chemist, 1802–76]. Discoverer of amyl nitrite (1844) and also of bromine.

balarsen. Trade-mark for the arsenical compound *arsthinol*.

bal′sah. See *bejel*.

bald′ness [ME. *balled*]. Loss or absence of hair. Syn., *acomia*, *alopecia*, *calvities*. —**bald**, *adj.*

Baldwin, James Fairchild [American gynecologist, 1850–1936]. Remembered for his procedure for the formation of an artificial vagina by the transplantation of loop of intestine between the urinary bladder and rectum.

Baldy, John Montgomery [American gynecologist, 1860–1934]. Known for his description of uterine suspension operation in which the round ligaments are brought backward through an incision in the broad ligaments and plicated on the posterior aspect of the uterus; often referred to as *Baldy-Webster operation*. Said to have performed the first gastrectomy in America (1897).

Balfour, Andrew [Scottish physician in Egypt, 1873–1931]. Discoverer of small, highly refractive, granular body observed in the red corpuscles of diseased fowls; this has received his name. It is thought to be protozoan.

Balfour, Donald Church [American surgeon, 1882–]. Known for his association with the Mayo brothers and for his many contributions to the knowledge of surgery of the stomach and duodenum, including his technic of enteroenterostomy for the avoidance of the so-called vicious circle. Active in the development of educational features of the Mayo Foundation.

Balfour, Francis Maitland [English embryologist, 1851–82]. One of the greatest of comparative embryologists. His treatise on embryology (1880–81) contains the results of vast amount of investigation and is regarded as classic.

Bal′kan frame. An overhead quadrilateral supported by uprights fastened to the bedposts used to suspend immobilized fractured limbs and to apply continuous traction by weights and pulleys.

Ball, Charles Bent [Irish surgeon, 1851–1916]. Described many procedures, including technics for iliac colostomy, for inguinal hernia, and for the relief of pruritus ani by division of the nerve filaments which supply the affected skin.

ball [ME. *bal*]. 1. An object having globular or spherical shape. 2. *In anatomy*, any globular part. 3. *In veterinary medicine*, pill or bolus.

chondrin balls. Isogenous cell groups in cartilage and their surrounding basophil matrix.

Ballance, Charles Alfred [English surgeon, 1856–1936]. One of the leaders of surgery in Great Britain. Remembered for his treatise on the ligation of the great arteries (1891); for his operation for anastomosis of the hypoglossal with the facial nerve; and for his description of sign in rupture of the spleen. See Ballance's *sign*.

Ballet, Gilbert [French ophthalmologist, 1853–1916]. Remembered for his description of ophthalmoplegia externa. He also described sign observed in hysteria and exophthalmic goiter: the loss of voluntary movements of the eyeball with preservation of the automatic movements and pupillary reflexes.

Ballingall, George [English surgeon, 1780–1855]. Remembered for his description of madura foot, called *Ballingall's disease*.

bal′lism (bal′iz-um), **bal′lis·mus** (ba-liz′mus) [G. *ballismos*, jumping about]. 1. Chorea characterized by jerky swinging movements of arms and legs. 2. Paralysis agitans. *Obs.*

bal·lis″to-car′di·o·graph [L. *ballista*, military machine for projectiles; G. *kardia*, heart; *graphein*, to write]. An instrument which records the movements of the body caused by the impact and recoil of the blood after ejection from the ventricles; used in estimating the cardiac output. The record made by this instrument is called **ballistocardiogram.**

bal·lis″to·pho′bi·a [*ballista*; G. *phobos*, fear]. Morbid fear of projectiles or missiles.

ball mill. A grinding instrument used for breaking up cells, such as yeast cells.

Ballonia. See *Baillou*.

bal·lonne·ment (bal-awn-mahn. *See* Notes § 35) [F.]. Ballooning.

bal·loon′ing [F. *ballon*, from It. *balla*, *palla*, ball]. Surgical distention of any body cavity by air or other means for examination or therapeutic purposes.

bal·lotte·ment′ (bal-awt-mahn, ba-lot′munt. *See* Notes § 35) [F., shaking about]. A diagnostic sign of pregnancy. The sensation perceived by the finger inserted into the vagina when sudden pressure applied through the uterine wall to the fetus is followed by its rise and rebound through the amniotic fluid. —**ballot′table**, *adj.*

b. of patella. A tapping sensation elicited when the patella is depressed against the femur in the presence of knee-joint cavity distended with fluid.

cephalic b. The rebound of the fetal head against the hand when depressed through the abdominal wall; also called *abdominal b.*, *external b.*

indirect b. See cephalic *b.*

internal b. See vaginal *b.*

ocular b. The falling of opaque particles in vitreous body after the eye has moved.

renal b. The palpating of the kidney by pushing it suddenly forward with one hand against the other hand pressed into the abdominal wall.

vaginal b. The rebound of the fetus against finger inserted into the vagina; also called *internal b.*

balm (bahm) [G. *balsamon*, balsam tree]. A popular synonym of balsam.

Gilead b. An oleoresin from the *Commiphora opobalsamum*.

Balme, Paul Jean (Baime) [French physician, 1857–]. His name is preserved in connection with peculiar cough occurring in nasopharyngeal obstruction only when the patient is in the recumbent position.

bal″ne·ol′o·gy. The science of baths and their therapeutic uses. Also see *balneotherapy*, *bath*.

bal″ne·o·ther′a·py [L. *balneum*, bath; G. *therapeia*, treatment]. Therapeutic use of baths.

Baló, József [Hungarian physician, contemporary]. Described periaxial concentric encephalitis (1927) called *Baló's disease*.

balopticon. Trade-mark for projector designed to throw on screen magnified pictures of opaque objects.

bal′sam (bawl′sum) [G. *balsamon*, balsam tree]. 1. The resinous, aromatic, liquid, or semisolid substance obtained from certain trees by natural exudation or by artificial extraction and consisting chiefly of resins and volatile oils containing esters of cinnamic and benzoic acids. 2. The term is also applied to certain substances which are not true balsams in that they contain no cinnamic or benzoic acid, as copaiba balsam. —**bal·sam′ic**, *adj.*

b. apple. *Momordica balsamina*, and its warty gourdlike fruit. It is purgative owing to the pres-

ence of momordicin, probably identical with elaterin.

b. tree. The *Abies balsamea* which yields Canada balsam.

b. vine See *b.* apple

Brazilian b. An oleoresin from *Myroxylon peruiferum*; resembles Peruvian balsam.

Canada b. A turpentine gathered from the natural blisters of the bark of *Abies balsamea*, used as mounting medium by microscopists. Syn., *Canada turpentine*.

Cebur b. See Tagulaway *b*

copaiba b. See *copaiba*.

friar's b. Compound benzoin tincture. Also called *Turlington b.*

Gilead b. The resinous juice of *Commiphora opobalsam*, which grows on the shores of the Red Sea. Syn., *Gilead balm, Mecca b opobalsam.*

gurjun b. An oleoresin from the East Indian tree, *Dipterocarpus turbinatus*, and other species. formerly used in gonorrhea and coughs. Syn., *gurjun oil, wood oil.*

Mecca b. See Gilead *b.*

Peruvian b. (*balsamum peruvianum*) That obtained from *Myroxylon Pereirae*. It contains not less than 53% of balsamic esters. A stimulating and antiseptic dressing for indolent ulcers, local tuberculosis, wounds, etc. It has been used as stimulating expectorant in asthma and chronic bronchitis administered in emulsion. Also called *b. of Peru, Indian b.*

sulfur b. A mixture of eight parts of olive oil and one part of sublimed sulfur heated together Linseed oil may be substituted for olive oil.

Tagulaway b., Tagulavay b. A yellow oil prepared in the Philippines by boiling the bark and twigs of *Parameria vulneraria* in coconut oil used as vulnerary and in skin diseases. Syn., *Cebur b.*

tolu b. (*balsamum tolutanum*) One obtained from *Myroxylon balsamum*. It is feeble stimulant and expectorant. The syrup (*syrupus balsami tolutani*) is popular in cough mixtures because of its agreeable flavor

white b. A semifluid substance btained from the fruit of *Myroxylon Pereirae*, which also yields Peruvian balsam.

bal'sam-weed" The *Impatiens balsamina*, or touch-me-not.

Balser W [*German physician*, nineteenth century]. Described fat ecrosis in acute pancreatitis (1882) called *Balser' fat necrosis*

Bamberger Eugen [*Austrian physician*, 1858–1921]. Described hypertrophic pulmonary osteoarthropathy (1889) called *Marie-Bamberger disease.*

Bamberger Heinrich von [*Austria physician*, 1822–88]. Associated with pericardial pseudocirrhosis of the liver called *Bamberger disease, Pick disease.*

Bancke, Rycharde [*English physician*, sixteenth century]. Author of the earliest herbal printed in English (1525) called *Banckes Herbal*

Bancroft's filariasis. See *wuchereriasis.*

band [M.E. *band*]. 1 That which binds. 2. *I zoology* stripe. 3. *I anatomy* ligament or long slender muscle. Also disk of striated muscle fiber as seen in longitudinal section. 4 *I dentistry* strip of thin metal, formed into hoop, for encircling natural tooth or its root.

absorption bands. See under *absorption.*

adjustable b. *I dentistry*, one provided with an adjusting screw or similar mechanism t permit alteration in size

amniotic b. A fibrous band connecting amnion and fetus.

anchor b. That applied to one tooth as an anchor to aid in moving second tooth.

anogenital b. The perineal raphe.

astigmatic b. In refraction, an apparent band of light seen under retinoscopy when one of the chief meridians is neutralized.

atrioventricular b. The trioventricular bundle.

b. of Giacomini. See *frenulum* of Giacomini.

clamp b. A device made from flat piece of metal for encircling tooth; the ends are held in place by nut and screw

diagonal b. of Broca. See diagonal *gyrus*

fetoamni tic b. See amniotic *b*

furrowed b. A small band of gray matter uniting the vula cerebelli with the cerebellar tonsils.

iliotibial b. A thickened portion of the fascia lata extending from the lateral condyle of the tibia to the iliac crest. See Plate 4.

lilac b. A dark violaceous strip forming well-defined crescent behind the free border of the nail and parallel with it said to be due to syphilis.

lip furrow b. See vestibular *lamina.*

mesocolic b. A longitudinal muscle band corresponding to the insertion of the mesocolon. Syn., *mesocolic taenia.*

moderator b. A muscle band in the right ventricle of the heart, between the interventricular septum and the base of the right anterior papillary muscle, transporting fascicle of the atrioventricular bundle (of His) It was once thought to prevent overdistention of the right ventricle.

retention b. A thickening of the mesentery which fixes the cranial and the caudal end of the midgut to the dorsal abdominal wall, thus preventing herniation of the foregut and hindgut of the embryo.

seamless b. A nonadjustable ferrule stamped from a piece of metal, to be used as plain or anchor band.

sternal b. One of the paired mesenchymal anlages of the sternal bones.

suppressor b. Any area on the cerebral cortex which suppresses the motor or projection response to stimulation of any other part of the cortex and its after-discharge. Narrow areas of cortex have been discovered by local stimulation with strychnine near Brodmann's areas 4, 8, 24 2, and 19, and have been named areas 4s, 8s, 24s, 2s, and 19s. Also called *suppressor area.*

supraorbital bands. The embryonal thickenings above the eyes and to the outer side of them.

Z b. See *Z disk.*

band'age [F from *bande*, strip]. A strip of gauze, muslin, flannel, or other material, usually in the form of roll, of various widths and lengths, but sometimes triangular or tailed. The chief functions of bandage are to hold dressings in place, to pply pressure, to immobilize part, to support dependent or injured part, to obliterate tissue cavities, and to check hemorrhage. See Plates 33, 34.

adhesive b. One composed of adhesive plaster or moleskin for immobilization or support of part.

capeline b One resembling cap or hood, suitable for the head, shoulder or amputation stump.

circula b. One in which the bandage is wound about the limb or part.

cohesive b. One of number of bandages, sold under various trade names, which has the property of sticking to itself, but not to other substances.

compression b. One in which high degree of compression is exerted on the tissues in order to shrink part, as an amputation stump.

cravat b. A triangular bandage folded to form band and wound bout part.

demigauntlet b. A bandage covering the wrist and hand but not the fingers.
double-headed roller b. A strip of material rolled from both ends to meet in the middle.
elastic b. One of rubber or woven elastic material. Used to exert continuous pressure on swollen extremities or joints, fractured ribs, the chest, or varicose veins.
Esmarch's b. A live rubber compression bandage with tourniquet, used to render limb bloodless.
figure-of-eight b. One in which the successive turns cross like the figure eight. See Plates 33, 34.
four-tailed b. A strip of cloth with the ends split, used to cover prominent parts, as the elbow chin, nose, or knee. See Plate 34.
gauntlet b. One which covers the hands and fingers, like glove.
hammock b. One which retains scalp dressings. The dressings are covered by broad strip of gauze brought down over the ears and anchored by circular bandage around the head. The ends of the broad strip are then turned up over the circular bandage and secured by few more turns.
immovable b. A bandage for immobilizing any part.
impregnated b. A wide-meshed bandage impregnated with such substances as plaster of Paris, sodium silicate, starch, or dextrin, put up in rolls and used for stiffening, immobilizing, and making molds of various parts of the body
jelly b. A bandage used in treating varicose veins and ulcers. See *Unna's paste boot*.
many-tailed b. An irregular bandage having four or more cut or torn ends which are tied together to hold dressing.
oblique b. A bandage which covers the part by oblique turns.
plaster b. An impregnated bandage.
pressure b. One used to stop hemorrhage or support varicose veins.
quadrangular b. A towel or large handkerchief, folded variously and used as bandage.
recurrent b. One in which each turn comes back to the point of starting used in bandaging the head or an amputation stump. See Plate 34.
reversed b. An oblique bandage applied to limb; for each turn, the roll is given half twist to make snug fit over the expanded part of the limb.
roller b. A long strip of material from one-half to six inches in width, rolled on its short axis.
rubber b. An elastic bandage.
scultetus b. One used in compound fractures, usually of the lower extremity composed of short pieces which overlap each other thereby permitting their removal without movement of the limb. Also called *Scultet's b.*
silica b. A bandage impregnated with sodium silicate.
spica b. One with successive turns and crosses, as in modified figure-of-eight bandage; so called because it resembles the folded edges of the husk of an ear of corn. See Plate 34.
spiral b. An oblique bandage. See Plate 33.
spiral reverse b. One in which the oblique turns are reversed and folded back at each turn, to adapt the bandage to the part. See Plate 33.
suspensory b. One for supporting the scrotum.
T b. A bandage with three arms which form letter T; especially used about the waist and the perineum to hold dressing.
triangular b. One made from square of muslin cut diagonally to make two triangles, and used as sling, and for inclusive dressing of part, as whole hand.
Velpeau's b. One which completely fixes the arm against the side, with the forearm flexed at an angle of 45° the palm resting upon the midclavicular region opposite. By successive turns about the body the bandage envelops the shoulder arm, forearm, and hand. See Plate 34.

Bandl, Ludwig (1842–1892) German obstetrician who described contraction ring resulting from obstructed labor See retraction ring, 2.
bang, bangue. See *cannabis*.
Bang's disease. See under disease.
ban″i ster′ine (ban″i ster′een, -in, ba-nis tuh-reen, -rin) An alkaloid from yahuasca, or *Banisteria caapi*, which has been employed in lethargic encephalitis.
bank [It. *banca*, bench]. A reserve stock of body fluids and parts usually maintained at a hospital or Red Cross Center under suitable storage facilities. The stocks kept now are whole blood, plasma, blood vessels, arteries nerves, bones, cartilage, and corneas (for corneal grafts)
Bannister Henry Martyn [*American physician*, 1844–1920]. His name was once associated with angioneurotic edema.
banthine bromide. Trade-marked name for β-di thylami oethylxanth e-9-carboxylate methobromide, an anticholinergic drug. See *methantheline bromide*.
Banti, Guido [*Italian physician*, 1852–1925]. Universally remembered for his description of splenomegaly of undetermined origin, which still bears his name (1882) It is often referred to as syndrome, and is characterized by splenomegaly anemia, leukopenia, hemorrhage, and cirrhosis of the liver called *Banti' disease*. See chronic congestive *splenomegaly*
Banti g, Frederick Grant [*Canadian physician*, 1891–1941]. With C. H. Best, working in association with J J R. Macleod, discovered insulin (1922) and with Best, W R. Campbell, J B. Collip, and A. A. Fletcher first used it in the treatment of diabetes (1922) N bel laureate with Macleod (1923)
Banti g, William [*English undertaker and coffin maker* 1797–1878]. Celebrated for his advocacy of the withdrawal of sweets and carbohydrates in cases of obesity Wrote his famous letter on reducing corpulence in 1863. His name has remained in the language (*Bantingism*) as synonymous with dieting for obesity
bap tis′i a (bap-tish uh, -tis′ee-uh) [G *baptisis*, to dip]. Wild indigo. The dried root of *Baptisia tinctoria*, containing baptisin, cytisine, and blue dye. It was formerly used in the treatment of ulcers, as gargle, and in some tooth powders.
bap′ti sin (bap′ti-sin, -sin) 1. A concentrate prepared from *Baptisia tinctoria*, antiseptic, purgative, echolic, resolvent. 2. A bitter glycoside obtainable from the plant *Baptisia tinctoria*; it has little medicinal activity
bap″ti tox′ine (bap ti tock′sin, -seen) See *cytisine*.
bar [OF *barre*, from LL. *barra*]. 1. A band or stripe. 2. A fetal or visceral arch. 3. That part of the horse upper jaw which has no teeth. 4. That portion of the wall of horse hoof reflected sharply anteriorly onto the sole from each buttress. The two bars are separated by the frog. 5. A unit of tmospheric pressure representing one megadyne per square centimeter 6. *I prosthetic dentistry*, piece of metal connecting two parts of bridge or partial denture. 7 *I orthodontics*, wire or rod affixed to one or more teeth in the dental arch. The term has been applied to parts of various obsolete appliances; present use is limited to space maintainers.
arch b. *In orthodontics*, term used for wire extending from one side of the dental arch to the

other to which intervening teeth can be attached. **b. of bladder** The transverse ridge joining the openings of the ureters on the inner surface of the urinary bladder; it forms the posterior boundary of the trigone also called *Mercier b.*
episternal b. See episternal *cartilage*.
hyoid bars. The pair of cartilaginous plates forming the second visceral arch; the hyoid arch.
hypochordal b. Hyoid arch.
interureteric b. Bar of the bladder
lingual b. A metal bar on the lingual side of the mandibular arch, connecting the two saddles of mandibular partial denture.
Meckel's b. Old term for mandibular arch.
median b. Contracture of the vesical neck, or constriction of the prostatic urethra, caused by prostatic hyperplasia (*glandular bar*) or by overgrowth of connective tissue across the posterior lip of the vesical orifice or of the vesical trigone (*fibrous bar*). A muscular bar due to congenital hypertrophy of muscle at the vesical neck, and a fibrotic bar due to inflammatory changes associated with urethritis and prostatitis, have also been described.
Mercier's b. See *b.* of the bladder
palatal b. A piece of metal extended across a portion of the hard palate for the purpose of joining and strengthening the two sections of maxillary partial denture.
sternal b. One of the paired cartilaginous bars in the embryo that fuse to form the sternum.
terminal b. A thickening of the intercellular cement between the ends of epithelial cells.
bar"aes-the'si-a. See *baresthesia*.
bar"ag-no'si-s (bar"ag-no'sis) [G. *baros*, weight; a-, not; *gnōsis*, knowledge]. Loss of the perception of weight. loss of barognosis.
baralyme. Trade name for a mixture of barium and calcium hydroxide used to absorb CO_2 in closed inhalation anesthesia.
Bárány, Robert [*Austrian physician*, 1876–1936]. Noted for his studies of the pathology and physiology of the vestibular apparatus. Nobel laureate (1914). He introduced a number of ingenious tests, such as the caloric differential test for labyrinthine function and the pointing test for circumscribed cerebellar lesions. See caloric *test*, Bárány pointing *test*. His name is associated with a syndrome characterized by unilateral deafness, vertigo, and pain in the occipital region. A special chair for testing air pilots has received his name.
barb [L. *barba*, beard]. In *dentistry* one of the backward-projecting points on the side of a broach which opposes the withdrawal of the instrument, but does not interfere with its forward motion.
bar'ba [L.]. 1. The beard. 2. A hair of the beard. 3. The heavy beard which appears after puberty as a secondary male sex character [BNA].
bar bal'oin. The pentoside chiefly responsible for the purgative action of aloe. See *aloin*.
Barber's method. See under *method*.
Barberio' test. See under *test*.
bar'ber"ry. See *berberis*.
bar'bi tal (bahr'bi tol). Diethylmalonylurea $(C_2H_5)_2C.CO.NH.CO.NH.CO$. A white, crystalline powder soluble in 15 parts of alcohol or 130 parts of water; used as hypnotic with prolonged action. Dose, 0.3–0.6 Gm. (5–10 gr.). Psychic habituation may result from its use, and toxic effects are produced by overdosage. Also called *barbitone*, *diethylbarbituric acid*. Also see *veronal*.
b. sodium (*barbitalum sodicum*). The sodium salt of barbital. It is a white powder soluble in 5 parts of water; aqueous solutions undergo hydrolysis and must, therefore, be frequently prepared. Also called *soluble b.*, *sodium diethylbarbiturate*.
bar'bi tone. British name for barbital.
bar bit'u-rate, bar"bi tu'rate. A general term denoting a derivative of barbituric acid, $C_4H_4O_3N_2$ formed by the substitution of an aliphatic or aromatic group on a carbon or nitrogen atom in the acid. Barbiturates are used in medicine as hypnotic and sedative drugs, but are not analgesics unless administered in relatively large doses. Modifications in their structure influence the power and rapidity of their effects. The therapeutic effects of these drugs are exerted upon the higher centers of the brain, and they do not usually cause injury to the heart, circulation, or kidneys. They are common allergens.
bar"bi tu ric ac'id. $C_4H_4O_3N_2$. Malonylurea, the parent compound of the barbiturates.
bar"bi tu rism [from L. *Usnea barbata*, the beard lichen; G. *ouron*, urine]. An acute intoxication following an overdose of drugs of the barbiturate group often the result of attempted suicide. It is characterized by delirium, followed by coma and sometimes death. There are pathologic changes in the tissues; tremor, ataxia, and mental confusion are present, and cutaneous eruptions are sometimes observed.
bar bo tage (bahr-bo-tahzh', -tash') [F., from *barboter*, to dabble]. Method of spinal anesthesia: part of the anesthetic solution is injected into the subarachnoid space; spinal fluid is then aspirated into the syringe and reinjected. This may be repeated several times before the entire contents of the syringe is finally injected.
Barcroft, Joseph (1872–1947). English physiologist, known for his fundamental researches on the function of hemoglobin and the transport of respiratory gases in the blood, and for his important contributions to the knowledge of fetal circulation and human adaptation to high altitudes.
Bard, John [*American physician*, 1716–99]. Eminent practitioner remembered for his skill in directing the care of yellow fever. He performed the first successful operation for ectopic pregnancy in America (1759).
Bard, Louis [*Swiss physician*, 1857–1930]. Known for his sign, said to differentiate between organic and congenital nystagmus, the former displaying increased oscillations of the eyeball when the examiner's finger is moved before the eye from right to left and vice versa. In the congenital variety the oscillations cease under the same conditions. His name is associated also with progressive icterus and cachexia due to primary carcinoma of the head of the pancreas: called *Bard-Pic syndrome*.
Bard, Samuel [*American physician*, 1742–1821]. Son of John Bard. Remembered for his part in founding King's College (later Columbia University) Medical School and for his book on diphtheria, a medical classic (1771).
Bardeleben, Adolf von [*German physician and surgeon*, 1861–1914]. Remembered for his operation for bilateral harelip, with protruding maxilla, in which he divided the vomer subperiosteally before making forcible reduction of the deformity.
Bardeleben, Karl von [*German anatomist*, 1849–1918]. Celebrated for the monumental handbook of anatomy which he edited (1896–1915). Originator of the bandage dressing which incorporates starch and which is used for burns, called *Bardeleben bandage*.
Bardenheuer, Bernhard [*German surgeon*, 1839–1913]. Known for his numerous operative procedures, especially that for anchoring a floating

splen by making pocket in the parietal peritoneum (splenopexy)

Bärensprung, Friedrich Wilhelm Felix von [*German dermatologist*, 1822–64]. Described eczema marginatum (1855) called *Bärensprung disease*.

bar″es-the′si (bar″es-thee zhuh, -zee-uh) [G *baros*, weight *aisthēsis*, perception]. Perception of weight or pressure pressure sense.

bar es the″si-om e-ter (bar es-thee zee-om′i-tur) [baros; aisthēsis; G metron, measure]. An instrument for estimating the sensitivity of the weight or pressure sense.

Barfoed's test. See Barfoed's *reagent*, *test*.

Bargen, Jacob Arnold [*American physician*, 1894–]. Known for his work in diseases of the rectum and colon. Described diplostreptococcus as a cause of ulcerative colitis (1924)

bar″i-to sis [G. *barys*, weight; *-ōsis*, condition]. Chronic inflammation of the lungs due to the inhalation of barium. form of pneumonoconiosis.

ba′ri um, bar′i um [G *barys* heavy]. Ba = 137.36. A metal belonging to the alkaline earths and occurring in nature only in the form of divalent compounds. All of its soluble salts are poisonous.

b. chloride. $BaCl_2.2H_2O$; soluble salt, used as test for sulfates, which it precipitates as barium sulfate. A violent stimulant of all smooth muscles; occasionally used to increase the force of cardiac contraction in trioventricular dissociation (Adams-Stokes disease) Dose, usually 0.03 Gm. (½ gr.) three or four times daily

b. hydroxide. $Ba(OH)_2.8H_2O$ transparent crystals or masses, soluble in water used as chemical reagent.

b. sulfate (*barii sulfas*) $BaSO_4$, white odorless, tasteless powder insoluble in water employed as an opaque roentgenographic contrast medium.

b. sulfide. BaS soluble in water used in depilatories and in luminous paint.

bark [of Scand. origin]. 1 The covering of the wood of exogenous trees all tissues outside the cambium. 2. Cinchona.

Barker Arthur Edward James [*English surgeon*, 1850–1916]. Two operations have been described by him. In one, for excision of the talus, the incision runs from just above the tip of the lateral malleolus forward and little inward, curving toward the dorsum of the foot. The other for excision of the hip joint, is performed through an anterior incision commencing on the front of the thigh, one-half inch below the anterior superior iliac spine, and running downward and inward for three inches. Both are called *Barker operation*.

Barker's method. See under *method*.

bar′ley [AS. *baerlic*]. Any cereal grass of the genus *Hordeum*, order Graminales used as food, and also in the preparation of malt.

b. water (*decoctum hordei*) A decoction prepared from 2 ounces of pearl barley boiled in 1½ pints of water used as demulcent and food in children diarrhea. Dose, 30–120 cc. (1–4 oz.)

pearl b. Husked barley grains, rounded and polished.

Barlow Thomas [*English physician*, 1845–1945]. Known for his description of infantile scurvy called *Barlow' disease*, *Moeller-Barlow disease*

barn. A unit expressing the probability of specific nuclear reaction occurring, stated in terms of cross-sectional area. It is equivalent t 10^{-24} sq. cm.

Barnard, Harold Leslie [*English physiologist*, 1868–1908]. With L. E. Hill, introduced modification of the sphygmomanometer with pressure gauge (1897)

Barnes, Robert [*English obstetrician*, 1817 1907]. Remembered for his definition of the cervical zone as the lowest fourth of the internal surface of the uterus, and for his description of curve having for its center the sacral promontory Known especially for his device, series of graduated rubber bags for dilating the uterine cervix when labor is to be induced called *Barnes bags*.

bar′o- [G *baros*, weight]. A combining form implying *heaviness*.

bar″o-cep′tor bar″o-re-cep′tor See *pressoreceptor*

bar″o-don-tal′gi a. Dental pain occurring in individuals exposed to decreased barometric pressures such as occur in high-altitude flying also called *aerodontalgia*.

bar″og no′sis [baros; G *gnōsis*, knowledge]. The ability to estimate weight; the perception of weight.

bar′o-graph [baros; G *graphein*, to write]. A self registering barometer

bar″o-ma-crom e-ter [baros; G. *makros*, long *metron*, a measure]. An apparatus to measure the weight and length of infants.

ba rom e-ter [baros; metron]. An instrument which measures atmospheric pressure; it consists of capillary tube sealed at one end, filled with mercury and inverted in mercury reservoir At sea level the height of the mercury column normally stands at 760 mm. or 30 inches, rising or falling directly as the atmospheric pressure. —**baromet′ric**, *adj* **barom etry** n.

aneroid b. A barometer in which changes of pressure are indicated by the collapsing or bulging of thin, corrugated cover of partially evacuated metallic box.

bar″o-pho′bi a [baros; G. *phobos*, fear]. A morbid fear of gravity

bar′o-scope [baros; G *skopein*, to examine]. 1 A sensitive barometer which indicates variations in atmospheric pressure, without accurately weighing them. 2. An instrument for the quantitative determination of urea.

bar″o-si″nus i′tis. Aerosinusitis.

Ba ros ma (ba-ros muh, ros muh) [G. *barys* heavy; *osmē*, smell]. A genus of plants of the Rutaceae, native to the Cape of Good Hope and vicinity several species of which yield the buchu of commerce.

ba ros′min (ba-ros min, -ros min) 1. A glycoside obtained from buchu and other sources. Syn., *diosmin*. 2. A concentrate prepared from buchu.

bar″o-tal′gi a. Pain arising in th middle ear caused by an inequality of air pressure between the middle ear and the surrounding atmosphere.

bar″o-ti′tis. Inflammation of the ear or part thereof, caused by changes in atmospheric pressure.

b. externa. An acute or chronic, traumatic ear condition resulting in inflammation of the external auditory canal and tympanic membrane, caused by a pressure differential between the external auditory canal and the middle ear; it is usually associated with imperforate plugging of the external ear

b. media. Aerootitis media.

bar″o-trau′ma [G *baros*, weight; *trauma*, wound]. Injury of certain organs due to a change in atmospheric pressure or water pressure.

otic b. Term used in England for aerootitis media.

Barraquer Ignacio [*Spanish ophthalmologist*, 1884–]. Introduced cataract extraction operation (phacoerisis) in which the lens is removed by suction by means of special instrument called *Barraquer' operation*.

Barraquer Roviralta, José Antonio [S

physician, b. 1852]. Noted for his description of progressive lipodystrophy marked by the deposit of fat in the trunk and extremities, called *Barraquer disease, Barraquer-Simons disease.*

Barré, Jean Alexandre [*French neurologist*, 1880–]. Described a syndrome of diffuse, infectious disease of the nervous system: see Guillain-Barré syndrome. Also described a sign of disease of the corticospinal tract; see Barré's sign.

barrenness. Sterility in the female. Syn., *agenesia.*

bar'ri·er [F *barrière*, from *barre*, bar]. An obstacle, barricade, or impediment.

blood-aqueous b. A functional barrier between the blood and aqueous humor; a concept formed to account for the fact that many small molecular electrolytes and all proteins have concentrations in the aqueous humor which vary markedly from those in the blood.

blood-brain b. The functional barrier between the blood supplying the central nervous system and the interstitial spaces of the neural tissue. Its existence depends upon the general property of all capillary walls for selective permeability and results in physiologic obstruction to the free movement of various types of compounds. Syn., *hematoencephalic b., blood-cortical b.*

blood-cerebrospinal fluid barriers. The functional barriers between the blood supplying the central nervous system and the cerebrospinal fluid. Varying from region to region, the barriers consist of the endothelial lining of the capillaries related in the several instances to the pia-arachnoid membrane, the choroid plexuses invested by columnar epithelium, or the ependymal lining of the ventricular walls. Arachnoidal granulations also project into the dural sinuses. The selective permeability of the cells which make up the contiguous membranous surface of the barrier as well as the probable secretory activity of the choroidal and ependymal cells together comprise the physiologic obstruction to unimpeded entry of substances from the blood into the cerebrospinal fluid.

hematoencephalic b. Blood-brain b.

placental b. The tissues intervening between the maternal and the fetal blood of the placenta, which prevent or hinder certain substances or bacteria from passing from mother to fetus.

Barron, Moses [*American physician and pathologist*, 1883–]. Contributed important researches concerning the relation of the islets of the pancreas to diabetes (1920) leading to the discovery of insulin.

Barth, Jean Baptiste [*Alsatian physician*, 1806–84]. Remembered for his description of incarcerated loops of small intestine between the persistent vitelline duct and the abdominal wall, called *Barth's hernia.*

Barthez, Antoine Charles Ernest [*French physician*, 1811–91]. Noted as one of the earliest teachers of pediatrics in France. His treatise on diseases of children (1843) is important for its description of poliomyelitis.

Bartholin, Caspar [*Danish anatomist*, 1655–1738]. The son of the anatomist Thomas Bartholin (Bartholinus). His name is associated with the discovery of the major vestibular glands, *Bartholin's glands*, and with the major sublingual ducts.

Bartholin, Thomas (Bartholinus) [*Danish anatomist*, 1616–80]. Considered the greatest anatomist of his time. He discovered the thoracic duct (ca. 1651) and while his claim to have discovered the intestinal lymphatics was disputed by Rudbeck, he seems to have been the first to appreciate their significance. He published a well-known work on diseases mentioned in the Bible.

bar"tho·lin·i'tis (bahr·to·li·nigh'tis) [after Caspar *Bartholin*; G. *-itis*, inflammation]. Inflammation of the major vestibular glands.

Bartholow, Roberts (1831–1904). American physician, first to apply electrodes to the human cortex and to demonstrate that weak faradization of the cortex produced muscular contractions of the contralateral limbs and turning of the head to the same side (1874).

Bartisch, Georg [*German ophthalmologist*, 1535–1606]. Remembered for his famed Renaissance book on diseases of the eye, containing numerous anatomic plates illustrating operations and procedures. Includes meticulous details for enucleation of the eye and extraction of cataract. He is said to have been the first to describe excision of the eye in the living.

Barton, Clara [*American philanthropist and nurse*, 1821–1912]. Famed for her organization of nursing and medical aid during the American Civil War. First president of the American Red Cross Society (1881–1904).

Barton, John Rhea [*American surgeon*, 1794–1871]. Remembered for his skill and inventiveness in surgery. He devised a figure-of-eight bandage for fracture of the mandible, described a separation fracture of the lower articular surface of the radius, and is said to have been the originator of the operation of intertrochanteric osteotomy of the femur (1826). Inventor of a type of obstetric forceps called *Barton's forceps.*

Bar"to·nel'la [after Alberto L. *Barton*, Peruvian physician, contemporary]. A genus of microorganisms which multiply in fixed tissue cells and parasitize erythrocytes, consisting of minute, pleomorphic rods and cocci which invade erythrocytes and endothelium in man. They occur without an intermediate host in man and in arthropod vectors are found only . . . **B. bacilliformis**, the causative agent of bartonellosis (Carrión's disease) manifesting itself either as Oroya fever or verruga peruviana.

bar"to·nel·lo'sis. An infection caused by *Bartonella bacilliformis*, endemic in the Andes of South America, and unique in having two distinct clinical and pathologic but immunologically cross-reacting forms: Oroya fever and the more benign skin lesion, verruga peruviana. The two forms most probably represent successive immunologic states of the affected individual. Syn., *bartonelliasis, Carrión's disease.*

Baruch, Simon [*American physician*, 1840–1921]. Remembered for his interest in public bathing facilities and for his description of a sign observed in typhoid fever: that the fever as registered by a rectal thermometer persists after the patient has been subjected to a bath at 75° F for 15 minutes.

bar'y- [G. *barys*, heavy]. A combining form signifying *heavy.*

bar"y·la'li·a [*barys*; G. *lalia*, talk]. An indistinct, thick speech occurring in patients with organic brain disease; common in advanced general paresis.

bar"y·pho'ni·a [*barys*; G. *phōnē*, voice]. A heavy or deep quality of voice.

ba·ry'ta (ba·rye'tuh, bar'i·tuh) **ba·ry'tes** (ba·rye'teez, bar'i·teez). BaO; barium oxide.

b. water. An aqueous solution of barium hydroxide.

B. A. S. British Anatomical Society.

basaljel. A trade-mark for basic aluminum carbonate gel.

ba'sal met"a·bol'ic rate. The amount of energy expended per unit of time under basal conditions, usually expressed as large calories per square

meter of body surface (or Kg. of body weight) per hour

ba·sal″zell fūss′chen (bah-zahl tsel-fūs′chen. *See* Notes §10) [Ger. basal cell footlet]. See *root foot*.

Basch, Samuel Siegfried von [*German physician*, 1837–1905]. Pioneer in the science of recording blood pressure and first to make use of reliable clinical sphygmomanometer

bas″cu·la′tion [F *basculer* to seesaw]. Replacing retroverted uterus by pressing upward on the fundus and downward on the cervix. *Obs.*

bas′cule move·ment. The recoil of the heart in its systolic motion.

base [G *basis*, base]. 1. The lowest part of body or the foundation upon which anything rests. 2. The principal ingredient of substance or compound. 3. *In chemistry* compound which yields hydroxyl ions (OH^-) in aqueous solution and which reacts with an acid to produce salt and water A proton acceptor substance capable of taking up protons. A substance having an electron pair which may be shared by another substance which lacks such pair and is therefore called an acid, to form coordinate covalent bond between the two substances. 4. *In dentistry* the support for the teeth in an artificial denture a baseplate.—**ba′sal, ba′sic, bas′ilar** *adj*

Of these three adjectives **basal** is usually used to indicate the lowest or least, as basal metabolic rate; **basic** is used to mean fundamental, as basic food requirements; **basilar** is used to denote relationship to the base of the skull, as the basilar portion of the occipital bone.

Bolton cranial b. A triangular base formed by the Bolton nasion plane and lines joining the center of sella turcica with the Bolton point and nasion.

shoeplastic b. *In dentistry* the base of denture; produced by filling mold with metal in the molten state.

purine bases. The alkaloids derived from purine, as theobromine and caffeine.

bas′e·doid, bas′ -dow-oid [after Karl Adolph von Basedow; G *eidos*, form] Noting an atypical thyroid disease.

Basedow Karl Adolph von [*German physician*, 1799–1854]. Famed for his early description of exophthalmic goiter (1840) called *Basedow' disease*, *Flajani' disease*, *Graves' disease*, *Parry' disease*. Described his syndrome of the disease, tachycardia, heat flashes, and sweating episodes called *Basedow' syndrome*.

bas′e·dow oid. See *basedoid*.

Ba·sel′la [NL., prob. from native name in Malabar]. A genus of plants of the Basellaceae. **B. rubra**, Malabar nightshade is an esculent herb cultivated throughout India, where the juice of the leaves is used for respiratory diseases of infants.

base′ment [G. *basis*, base L. suffix -mentum]. Any base or fundamental part, as basement membrane. See basement membrane.

basergin. Trade-mark for ergonovine, $C_{19}H_{23}O_2N$ an alkaloid from ergot.

bas-fond. A fundus; specifically the depressed area in the posterior wall of the urinary bladder just behind and above the trigone It enlarges and deepens when there is obstruction to urination. In the male, it is also called *postprostatic pouch*.

Basham's mixture. See *iron* and ammonium acetate solution.

ba′si- (bay′see- bas′ee-) [G. *basis*, base]. A combining form meaning *basis*, *base forming* base, relating to the basion, or walking

ba″si·al·ve o·lar [*basis*; L. *alveolus*, small hollow]. Relating to the basion and the alveolar point.

ba si bran′chi·al (bay″si-brang′kee-al) [*basis*; G *branchia*, gill]. A copula or unpaired skeletal element uniting the bases of each branchial arch skeleton.

ba si·chro ma tin [*basis*; G *chrōma*, color] That portion of the nuclear reticulum stained by basic aniline dyes.

ba sic′i ty (bay-sis′i tee) [*basis*]. 1 The quality of being basic. 2. The number of replaceable hydrogens of an acid.

ba″si cra′ni al [*basis*; G *kranion*, skull]. Relating to the base of the skull.

ba sid″i-o-ge·net′ic [NL. *basidium*, G *genethai*, from *gignesthai*, to be produced]. *In biology* produced on basidium.

Ba·sid″i-o my ce tes (ba-sid″ee-o migh-see tees) [*basidium*; G. *mykēs*, fungus]. A large class of fungi comprising genera which produce spores upon basidia. It includes the smuts, rusts, mushrooms, puffballs, and their allies.

ba-sid′i-o-phore″ [*basidium*, G *phoros*, bearing]. A branch or portion of thallus bearing basidium.

ba sid′i-o-spore″ [*basidium*, G *spora*, seed]. A spore of the basidiomycetes, formed by basidium.

ba-sid′i um (pl. *basidia*) [NL., from G *basidion*, dim. of *basis*, base]. *In botany* the cell which produces basidiospores.

ba″si fa cial [*basis*; L. *facies*, face]. Pertaining to the lower portion of the face.

ba″si hy′al [*basis*; G *hyoeidēs*, shaped like the letter upsilon]. The ventral, unpaired bone of the hyoid arch, forming the copula or the body of the hyoid bone. Formerly called *copula*.

ba″si lat′er al [*basis*; L. *latus*, side]. Both basilar and lateral.

ba-sil′ic [G *basilikos*, royal]. Important; prominent said of drug or of structure, as the basilic vein. See Table of Veins in the Appendix.

ba-sil′i con oint′ment. Rosin cerate.

ba sil′ic vein. Large vein of the arm on the medial side of the biceps muscle.

ba-sil″o-breg mat′ic [G. *basis*, base *bregma*, front part of the head]. Pertaining to the base of the skull and the bregma.

ba-sil″o-men′tal [*basis*; L. *mens*, mind]. Pertaining to the base of the skull and to the chin.

ba-sil″o-pha ryn ge al [*basis*; G *pharynx*, throat]. Relating to the basilar process of the occipital bone and to the pharynx.

ba si na sal, bas″i-le-sub na′sal (-nay′zul) [*basis*; L. *nasus*, nose]. Relating to the basion and the nasion.

ba″si-o-al-ve o-lar [*basis*; L. *alveolus*, small hollow]. Relating to the basion and to the alveolar point.

ba si oc-cip′i tal (bay″see ok-sip′i tul, bas ee-) [*basis*; L. *occiput*, back part of the head]. Referring to the basilar process of the occipital bone.

ba″si oc-cip′i tal bone. In many of the lower vertebrate animals, the separate bone forming the central axis of the skull. In the human adult, the basilar process of the occipital bone.

ba si-on [*basis*]. The craniometric point on the anterior margin of the foramen magnum where the midsagittal plane of the skull intersects the plane of the foramen magnum. —**basial** *adj*

ba si-o-tribe″ (bay′see-o- bas ee-o-) [*basis*; G *tribein*, to crush]. Instrument used for basiotripsy

ba si-o-trip sy [*basis*; *tribein*]. The operation of crushing or perforating the fetal head to facilitate delivery *Obs.*

ba″si pho′bi-a [*basis*; G. *phobos*, fear]. A morbid fear of walking.

ba″si pre·sphen oid (bay″see-pree-sfee noyd, bas ee) [basis; L. prae, before; G. sphēn, wedge; eidos, form]. Relating to the basisphenoid and presphenoid bones.

ba″si·pre·sphen oid. The basipresphenoid bone.

ba″si rhi′nal, ba sir rhi′nal [basis; G. rhis, nose]. Designating cerebral fissure located at the base of the rhinencephalon.

ba sis [G.]. A base foundation, or fundame tal part; the part opposite the apex. —**bas′ilar** adj

b. cra ii externa [BNA]. External aspect of the base of the skull.

b. cranii interna [BNA]. Internal aspect of the base of the skull.

b. li guae. See root of the tongue under root.

b. pedunculi [BNA]. The crus of the cerebrum which contains fiber tracts descending from the cerebral cortex to the pons also called crus cerebri, cerebral peduncle.

ba si·sphe noid (bay″see-sfee noyd, bas ee) [basis; G. sphēn, wedge; eidos, form]. The lower part of the sphenoid bone, which embryonically developed as separate bone.

ba″si·syl vi [basis; Franciscus Sylvius]. The transverse basilar portion or stem of the lateral (Sylvian) fissure of the cerebral hemisphere.

ba″si tem po ral [basis; L. temporalis, from tempus, temple]. Relating to the lower part of the temporal bone.

ba si ver′te·bral [basis; L. vertebra, joint]. Relating to the centrum of vertebra.

bas′ket [ME.]. 1 The fibrillar network in which the Purkinje cell body rests, formed by large arborizations from the axis cylinder process of certain neurons. See basket cells. 2. A condensation of intracellular neurofibrils seen in senile dementia.

fiber baskets. The delicate fibrils extending from the outer limiting membrane of the retina to surround neighboring rods and cones.

Basle an terni·nol o gy nom en cla″ture. A list of anatomic terms (in Latin) adopted by the German Anatomical Societ in Basle, Switzerland, in 1895. Abbreviated, BNA (Basle Nomina Anatomica)

ba so·phil, ba so·phile [G basis, base; philein, to love]. 1 A substance, cell, or tissue element showing an affinity for basic dyes. See basophilia, basophil leukocyte See Plate 26 2. On of the beta cells found in the adenohypophysis. —**basophil,** adj

ba so·phil′i [basis; philein]. 1. Increased number of basophils in the circulating blood. 2 Stippling of the red cells with basic staining granules, representing degenerative condition as seen in severe anemia, leukemia, malaria, lead poisoning, and other toxic states. Syn., granular degeneration, basophilic degeneration stippling. Also called punctate b.

ba so·phil′ic, ba·soph′i lous. Susceptible to staining by basic rather than by acid dyes.

ba soph′i lism. Basophilia.

pit itary b. A condition described and ascribed by H Cushing to an excess of basophil cells (adenoma) of the anterior pituitary now called Cushing disease or syndrome

ba soph′i lous. See basophilic.

ba so pho′bi a (bay so-fo′bee-uh, bas o-) [basis; G. phobos, fear]. A morbid fear of walking or standing erect, without muscular impairment. —**basophobic,** adj **basophobiac,** n.

ba so·plasm [basis; G plasma, from plassein, to form]. The portion of the cytoplasm hich readily takes basic stain Obs

Bass, Charles Cassedy [American bacteriologist and parasitologist, 1875–]. Known for his investigations of ancylostomiasis, malaria, and pellagra. Devised macroscopic typhoid agglutination test performed at the bedside of the patient called Bass-Watkins agglutination test.

Basset, Antoine [French surgeon, 1882–]. Known for his advocacy of an operation he devised for the radical extirpation of carcinoma of the vulva. This includes the extirpation of the superficial and deep inguinal lymph odes.

Bassi, Agostino [Italian physician, 1773–1856]. Noted as microbiologist he demonstrated the parasitic nature of certain disease in silkworms, thus opening the way to acceptance of the doctrine of pathogenic microorganisms (1835)

bas″si net′ [F dim. of bassin, basin]. An infant crib or bed wicker basket with hood t one end, used as cradle.

Bassini, Edoardo [Italian surgeon, 1844–1924]. Famed for having devised in 1889 modern operation for the cure of inguinal hernia (hernioplasty) The technic includes ligation and excision of the sac and suturing of the conjoined tendon to the inguinal ligament under the spermatic cord. Called Bassini operation

bas so·ra gum. An inferior gum of uncertain origin; formerly used in adulterating tragacanth.

bas′so·rin. A tasteless, odorless, vegetable gum, insol ble in cold water but rendered sol ble by alkalies, found in gum tragacanth (of Bassora) and in cherry and plum gums.

Bastian, Henry Charlton [English neurologist, 1837 1915]. One of the founders of English neurology he contributed valuable studies on diseases of the brain, the paralyses, word blindness, and word deafness. Remembered especially for his law that transverse lesion of the spinal cord bove the lumbar enlargement causes complete loss of tendon reflexes of the lower extremities, called Bastian-Bruns law.

Bateman, Thomas [English physician, 1778–1821]. Regarded as one of the founders of modern dermatology continued the work of Willan in classifying skin diseases. Described urticaria papulosa (1816) and was the first to give clear picture of molluscum contagiosum.

bath [AS. bæth]. 1 A bathing place or room. 2 Any yielding medium such as air vapor sand, or water in which the body is wholly or partially immersed for therapeutic purposes. It may be designed to cleanse, to soothe, t stimulate to irritate, to heat, or to cool.

air b. The therapeutic exposure of the naked body to air

alcohol b. The sponging of the body with dilute alcohol for its soothing and cooling effect.

astringent b. One in which the body or part is immersed in solution of alum, tannic acid, or other astringent.

bed b. One given to patient in bed

bla d b. Immersion in bath containing bran or starch for relief of irritation, itching, or urticaria

bran b. See bland b.

brine b. Immersion of the body in strong solution of salt water

cabinet b. An air bath given by placing the patient in cabinet which is heated by means of numerous electric light bulbs.

cold b. One given in water of 50°–60° F

continuous b. One in which patient is restrained in tub and immersed in water from 90°–98° F for hours at time. It is used for its sedative effect on agitated or maniacal patients. Also called continuous tub.

contrast b The alternate immersion of the hands or feet in hot and cold water

cool b. One in water 60°–75° F.
effervescent b. Immersion of the patient in water in which carbon dioxide is released. This may be natural or introduced.
electric cabinet b. See cabinet *b.*
foot b. One restricted to the feet.
full b. One in which the entire body except the head is immersed.
graduated b. One in which the temperature is gradually lowered.
hafussi b. A form of Nauheim bath in which only the hands and feet of the patient are immersed.
half b. One restricted to the lower half of the body. Also called *hip b.*
hot air b. Exposure of the whole body to hot air circulating in a bath cabinet.
hot b. One in which the water has a temperature of 98°–108° F.
hydroelectric b. The application of faradic, galvanic, or sinusoidal currents to a patient through water.
medicated b. One to which a medicinal substance has been added.
mustard b. One in which powdered mustard has been included.
Nauheim b. An effervescent bath popularized at Nauheim, using naturally hot, carbonated water.
needle b. Shower bath which throws very fine jets of water under forceful pressure.
oxygen b. An effervescent bath employing oxygen instead of carbon dioxide.
paraffin b. Apparatus for the infiltration of pieces of tissues or organs with molten paraffin before imbedding them for cutting sections.
radioactive b. One which is given in water having radioactive properties.
Russian b. Hot vapor bath followed by a rubdown and a cold plunge.
sand b. Covering the body with warm, dry sand.
Scotch b. Usually called *Scotch douche.* One given to a patient in the erect position by playing a forceful stream of alternately hot and cold water on the patient's body.
sea b. A bath in sea water, usually heated. Also called *salt water b.*
sedative b. A prolonged, warm, full bath.
sheet b. A cooling bath given by sprinkling tepid water on a sheet which is spread over the patient.
shower b. One given by spraying the patient with water from an overhead fixture.
sitz b. One given in a specially built tub so that only the patient's lower back, hips, and upper thighs are immersed.
sponge b. One in which the body is sponged one part at a time without being immersed.
starch b. A bland bath using starch.
stimulating b. One containing tonic, astringent, or aromatic substances which increase the cutaneous effect and stimulate the body circulation.
sun b. The exposure of part or all the body to the sun for the actinic effect.
sweat b. One given by any of several methods of applying heat to the body to produce sweating.
tannic acid b. The immersion of all or part of the body in a solution of tannic acid for its astringent effect; formerly used in the treatment of extensive burns.
tepid b. One employing water at about 80°–92° F.
tub b. Any bath in which the body is immersed in a tub.
Turkish b. One in which the bather is placed in steam rooms of successively higher temperature, then is rubbed and massaged and finally stimulated by a cold shower.
vapor b. One in which the bather is exposed to vapors.
water b. In *chemistry,* an apparatus utilizing the heat of boiling water for drying solids containing moisture or for evaporating fluids without subjecting them to a heat that will cause disintegration or dissipation of the contained substance.
whirlpool b. One in which an arm, or leg, or the greater part of the body is immersed in hot water which is agitated by a whirling or churning current of equally hot water mixed with air.

bath"es·the'si·a. Deep sensation: muscle, tendon, and joint sensation and deep touch sensibility.

bath"o·pho'bi·a [G. *bathos,* depth; *phobos,* fear]. Morbid fear of depths.

bath"y·car'di·a [G. *bathys,* deep; *kardia,* heart]. A condition in which the heart is in a lower position than usual; the condition is an anatomic one, and is not the result of disease.

bath"y·chro·mic effect. The shift of an absorption band to a lower frequency caused by some external effect on the chromophore. See also *hypsochromic effect.*

bat"o·pho'bi·a [G. *batos,* passable; *phobos,* fear]. 1. Dread of passing high objects, as fear of passing near a high building or of going through a deep valley. 2. Morbid fear of being on something of great height.

bat·ta·ris'mus, bat·ta·ris'mus (bat·uh·riz'mus). See *stammering.*

bat'ter·y [F. *batterie,* from *battre,* to beat]. 1. A device which converts chemical to electrical energy. 2. A series of two or more pieces of apparatus connected so as to augment their effects, as a battery of boilers, prisms, or galvanic cells.
faradic b. A device which produces induced electricity.
galvanic b. A device which produces electricity from chemical energy.
storage b. A galvanic cell which can be charged and discharged. On charge electrical energy is converted into chemical energy and on discharge the process is reversed.

Battey, Robert [*American surgeon,* 1828–95]. Advocated ovariotomy as a therapy in various conditions, including dysmenorrhea and bleeding due to fibromyoma. Called *Battey's operation.*

Battle, William Henry [*English surgeon,* 1855–1936]. See *Kammerer-Battle incision,* under *Kammerer.* See also Battle's sign.

bat'yl al'co·hol. $CH_2OH.CHOH.CH_2O(CH_2)_{17}CH_3$; 3-(octadecyloxy)-1,2-propanediol; monooctadecyl ether of glycerin, a solid substance occurring in shark-liver oil.

Baudelocque, Jean Louis [*French obstetrician,* 1745–1810]. An illustrious figure in French medicine and obstetrics, he invented the pelvimeter and advanced the science of pelvimetry. Known for his description of the external conjugate diameter of the pelvis.

Bauer's test. See galactose tolerance *test.*

Bauhin, Gaspard (Caspar Bauhinus) [*Swiss anatomist,* 1560–1624]. Author of works on human anatomy (1597). Described the ileocecal valve, formerly called Bauhin's valve.

Baumann, Eugen [*German physician and biochemist,* 1846–96]. Demonstrated the presence of iodine (organic combination) in the thyroid gland (1895), thus leading to the experimental work resulting in the isolation of thyroxin.

Baumann and Goldmann's test. See under *test.*

Baumès, Jean Baptiste Timothée [*French physician,* 1756–1828]. Described retrosternal pain in angina pectoris; called *Baumès' sign.*

Baumès, Pierre Prosper François [*French physician*, 1791 1871]. Stated, shortly after Colles, the law that child with congenital syphilis, whose mother has no clinical evidence of the disease, will not infect the mother (1840); called *Baumès law Colles law, Colles-Baumès law.*

Baumgarten, Walter [*American physician*, 1873-1945]. Known for his description of syndrome of enlarged spleen, portal hypertension, and prominent umbilical circulation in the absence of hepatic enlargement (1908) Called *splenomegaly without enlargement of the liver Baumgarten syndrome.* Also described congenital cirrhosis of the liver called *Cruveilhier-Baumgarten cirrhosis*

Bau'ru ul'cer See *leishmaniasis americana.*

bay'ber"ry The wax myrtle *Myrica cerifera* or *M pensylvanica.* The dried bark of the root contains tannic myricinic acid, and volatile oil formerly used as an astringent.

b. wax. That obtained from the fruit used for making bayberry candles and in the manufacture of soap.

bay-cu ru (bay-kōō rōō) [Tupi]. The root of Brazilian plant, *Limonium brasiliensis*, used by the natives as discutient in glandular swellings and as an astringent gargle. It contains tannic acid.

Bayer 205. Trade name under which suramin was originally introduced.

Bayle Antoine Laurent Jessé [*French physician and pathologist*, 1799-1858] Gave the first classic description of dementia paralytica, long called *Bayle's disease.*

Bayle Gaspard Laurent [*French physician*, 1774-1816]. Remembered for his description of t bercle (1810) The first t use the term miliary he correlated tuberculosis of the lungs with that of other organs.

Bayliss, William Maddock [*English physician*, 1860-1924]. A general physiologist, he published work important from the physical chemical viewpoint. Remembered for his discovery with Starling, of secretin in the duodenal secretions (1902)

Barett' Index. See under *index*

Bazi Antoine Pierre Ernest [*French dermatologist* 1807 78]. Remembered for his description of psoriasis buccalis and erythema induratum (1861) The latter is also called *Bazin disease, tuberculosis indurativa.*

BCG Bacillus Calmette-Guérin, or the vaccine prepared from this organism. The vaccine is prepared from an virulent strain of the *Mycobacterium tuberculosis* bacillus ttenuated by ex tended cultivation medium containing bile, and is recommended for immunization against tuberculosis.

b.d. *Bis die* twice day; used in prescriptions.

B. D A. British Dental Association.

bdel'li-um (del'ee-um) [L.; G. *bdellion*, from the H brew *bdolhah*] A resinous gum exuding from various species of *Commiphora.* It resembles myrrh

bdel yg'mi (del ig'mee uh) [G nausea]. A morbid loathing of food.

B. D. J. British Dental Journal.

B.D.S. Bachelor of Dental Surgery

B.D.Sc. Bachelor of Dental Science.

Be Chemical symbol for beryllium.

bead'ed [M.E. *bede* prayer prayer bead] 1 Having, or formed into, beads. 2. *I bacteriology* the term is pplied to the nonuniform ppearance of certain organisms such as *Corynebacterium diphtheriae* when stained.

bead'ing of ribs. See *rachitic rosary* Also called *rachitic beads.*

beam. *I radiobiology* a directed stream of particles or photons.

bear'ber ry [AS. *bere, berie*]. Uva ursi.

Beard, George Miller [*American physician*, 1839-83]. First to describe neurasthenia (1869) called *Beard' disease.*

bear'ing down. Th feeling of weight or pressure in the pelvis in certain diseases.

b.-d. pains. Expulsive pains in labor

beat [AS. *bēatan*]. An impulse or throb, as of the heart and blood vessels.

anomalous b An bnormally distributed excitation wave in the ventricles.

apex b. See *point of maximal impulse.*

coupled b. See *bigeminy, 2.*

dropped b. Condition noted in extrasystoles, when an occasional ventricular beat is lost.

ectopic b. A beat or hythmic series of beats initiated by ectopic impulses.

forced b. An extrasystole initiated by artificial stimulation.

idioventricular b. One following long diastole originating in the atrioventricular node or below it.

interpolated b. An isolated ectopic beat occurring between two normal beats, without disturbing the basic rhythm.

premature b. An extrasystole

retrograde b. Excitation of the atrium by the ventricle the P wave following the R of the electrocardiogram

beat'ing. *I massage*, percussion movements in which the half-closed fists are brought down alternately in rapid succession of blows. Movement is largely from the wrist.

Beau Joseph Honoré Simon [*French physician*, 1806-65]. Described transverse rings seen on the fingernails after convalescence from exhausting diseases, called *Beau lines.*

Beaumont, William [*American Army surgeon*, 1785-1853]. Internationally famous for his observations and experiments on human digestion (1822-33) By means of his access to the gastric fistula suffered by Alexis St. Martin, he was the first to study the process of digestion in life, and his work on this subject was the most important in xistence, up to the tim of Pavlov

be bee rine (bi bee reen, -rin, beb'i-reen, -rin) [Sp. *bibiru*, tropical South American evergreen tree] An alkaloid, $C_{18}H_{21}O_3N$ from the root of *Cissampelos pareira* or from *Ocotea rodiaei* (*Nectandra*) Also called *chondodendrine.*

b. hydrochloride. A mixture of the hydrochlorides of the total alkaloids from the roots of the above; reddish brown scales, soluble in water or alcohol, and formerly used as antipyretic and bitter tonic.

b. sulfate. A mixture similar to the hydrochloride with like action.

be bee ru. See *Ocotea*

Becher Wolf [*German physician*, 1862 1906] First to demonstrate experimentally by roentgen rays the outline of an animal stomach. Utilized lead solution, thus assisting later studies leading to roentgenologic diagnosis of gastric lesions.

Bechterew V M See V M. *Bekhterev.*

Beck, Claude Schaeffer (1894-) American surgeon who, with Tichy performed grafting operations upon the heart for improving circulation to the heart muscle See *cardiomyopexy, cardiopericardiopexy. Beck I Operation* (for coronary rtery occlusion) consists of brasion of surface of the heart and lining of parietal pericardium, application of an inflammatory agent to these surfaces, and partial occlusion of the coronary sinus *Beck II Operation* (for coronary artery occlusion) consists in revascularization of

the heart by diverting arterial blood into the coronary sinus and its tributaries. H also described triad of low arterial pressure, high venous pressure, and quiet heart in acute cardiac compression, and another of ascites, high venous pressure, and quiet heart in chronic cardiac compression. These are called *Beck' triads.* He also developed an operation whereby free graft is placed between the aorta and coronary sinus. The latter is partially ligated. Arterial blood is directed into the myocardium for the relief of coronary artery disease. H developed and reported the first successful human defibrillation.

Beck, Emil G. [*American surgeon*, 1866–1932]. Remembered for his method of treating tuberculous sinuses and cavities by injecting bismuth paste, called *Beck's paste.*

Becker Heinrich Otto [*German ophthalmologist*, 1828–90]. Described sign in exophthalmic goiter of spontaneous pulsation of the retinal arteries. Invented test for astigmatism, consisting of parallel lines in triplets to be placed in various meridians.

Béclard, Pierre Augustin [*French anatomist*, 1785–1825]. Remembered for his description of femoral hernia, which for time bore his name. Credited with the first excision of the parotid gland (1823)

becltysyl. Trade-mark for solution containing thiamine hydrochloride, riboflavin, niacinamide, dextrose, and sodium chloride.

becotin. Trade-mark for preparation of B vitamins with liver and stomach concentrate

Becquerel, Antoine Henri [*French physicist*, 1852–1908]. Discovered radioactivity in uranium (1896) Invented disk or apparatus for estimating the difference in temperature between sound limb and paralysed one. The rays bearing his name are invisible radiations of electrically charged particles or electromagnetic waves of very short wavelength, projected from radioactive bodies such as uranium, radium, polonium, or other salts. Nobel laureate with Marie and Pierre Curie (1903)

bed [AS bed, bedd]. The couch or support on which the body may rest in sleep or in sickness.

air b. One with an inflatable rubber mattress.

b. rest. See under *rest.*

fracture b. One especially devised for patients with broken bones.

hydrostatic b. One with rubber mattress partially filled with water to prevent bedsores

inactive beds. *I U S. Army medicine,* those medical treatment facility bed spaces with beds, not necessarily set up, for which equipment and fixtures are on hand and installed, but for which operating staff is not provided.

metabolic b. One especially arranged to save fluid and solid waste of the patient.

mobilization b. capacity *I U S. Army medicine,* space for patients' beds measured in terms of the number of beds that can be set up in wards or rooms designed for patients beds, spacing beds 6 feet between centers (pproximately 72 sq ft. per bed)

rocking b. A type of bed with ttached motor which rocks the bed with set rhythm as means of artificial respiration used instead of respirator in some cases of respiratory paralysis. Also called *rapid-rocking b.*

surgical b. One equipped with double windlass which raises and lowers, independently the foot and the head of the bed.

vasoefficator b. One which may be tipped to provide postural vascular exercise. Also called *Sanders b.*

water b. Hydrostatic bed.

bed'bug" [*bedd;* ME. *bugge*]. A blood-sucking wingless bug of the genus *Cimex* which lives and lays its eggs in the crevices of bedsteads, upholstered furniture, and walls. It is apparently not vector of pathogenic organisms, although it has been suspected. *Cimex lectularius* is the most common species in the temperate zone *C hemipterus* is the most common in the tropics.

bed cred'it. *In U S. Army medicine,* the number of beds which hospital is directed to make vailable for the receipt, care, and treatment of patients from the hospital, organization, or agency for which th credit is established.

bed'fast" Bedridden.

Bednar's aphthae. See under *aphtha.*

bed net. A mosquito bar or netting suspended over the bed, its edges being tucked in about the mattress to prevent the entrance of insects.

bed'pan" [*bedd,* AS. *panne*]. A shallow suitably shaped receptacle for receiving solid and fluid waste from patients confined to bed.

bed'rid"den [AS. *bedreda,* from *bedd, rida,* rider]. Confined to bed. Syn., *bedfast.*

bed'sore" [*bedd;* AS. *sār*]. An ulceration caused by pressure against the bed, generally occurring in those confined to bed for long periods; decubitus ulcer

Beer Edwin [*American surgeon*, 1876–1938]. Noted for having performed transurethral fulguration of urinary bladder tumors (1910) This was the forerunner of transurethral prostatic surgery

Beer Georg Joseph (1763–1821) Austrian ophthalmologist, known for his textbook on ophthalmology and his description of glaucoma. H established the first eye hospital in Europe (1786) The triangular-bladed knif for corneal and cataract operations bears his name

bees wax. Yellow wax.

bleached b. White wax.

Beevor's sign. See under *sign.*

Beggiatoa, Francesco Secondo [*Italian botanist*, 1806–83]. Remembered for his studies of genus of bacteria bearing his name.

be hen'ic acid. $CH_3(CH_2)_{20}COOH$ docosanoic acid, waxy solid occurring as glyceryl ester in many fats and oils.

behepuron. Trade-mark for capsules containing liver concentrate, exsiccated ferrous sulfate, pyridoxine, and thiamine hydrochloride.

Behre's test. See under *test.*

Behring, Emil Adolf von [*German bacteriologist*, 1854–1917]. With Kitasato, produced antitoxins for tetanus and diphtheria (1890) His discovery of passive immunization was the starting point of modern serotherapy Nobel laureate (1901).

Beigel's disease. See under *piedra.*

bej'el [Colloq Ar. *bejlah*]. An endemic onvenereal spirochetal infection occurring in Arabs of the Near East. Thought to be identical with yaws.

Bekhterev Vladimir Mikhailovich [*Russian neurologist*, 1857–1927]. Widely known for his many contributions in the fields of neurology especially in cerebral localization and experimental psychology Described ankylosing spondylitis (1892) called *Bekhterev' disease, Strümpell-Marie disease, atrophic spinal arthritis, rheumatoid spinal arthritis.* It is now identified as chronic arthritis of unknown etiology but with progressive deformity stiffness, and bony fusion of vertebrae. Described layer of fibers parallel to the tangential fibers in the cerebral cortex; called *Bekhterev' fibers.* He described nucleus of the vestibular portion of the auditory nerve called *Bekhterev nucleus.* Described reaction in tetany; repetition of the minimum strength of electric current necessary to initiate muscular

contraction will cause tetanic contraction unless the strength is diminished at every interruption of current or change in density; called *Bekhterev's reaction*. See also Bekhterev's *reflex*.

bel [A. G. *Bell*, American inventor, 1847–1922]. A unit frequently used to measure the intensity of sound, commonly the intensity above the normal threshold of hearing. See *decibel*.

bel, bael (bell, bay el) [Hind.]. The dried, half-ripe fruit of *Aegle marmelos*, or baelfruit, of India. It has been used as a remedy for chronic diarrhea and dysentery. The ripe fruit is slightly laxative. Also called *belae fructus*, *Bengal quince*.

Bell, Charles [*Scottish physician*, 1774–1842]. Internationally known for his studies in anatomy, physiology, and neurology. His *System of Dissections* (1798–1803) was published while he was studying medicine. His experimental work on the motor functions of ventral spinal nerve roots is the earliest of its kind (1811). He demonstrated the sensory and motor functions of the fifth cranial nerve and the cause of facial palsy (1821); neuropathy of the facial nerve is also called *Bell's palsy*. His *System of Operative Surgery* (1807–09) revealed his qualities as a surgeon and anatomist and brought him fame as an artist. The posterior or the long thoracic nerve (external respiratory nerve) formerly was called *nerve of Bell*.

Bell, John [*Scottish surgeon and anatomist*, 1763–1820]. The brother of Charles Bell, he exercised great influence on the progress of surgery in England. Like his brother, he showed great talent as an illustrator. His name is associated with the short muscular ridge on the inner surface of the urinary bladder which passes forward from each ureteral opening.

Bell, William Blair [*English gynecologist*, 1871–1936]. Remembered for his treatment of epithelioma with colloidal lead. A founder of the Royal College of Obstetricians and Gynecologists. Described a method for determining the amount of calcium in blood; see Bell's *method*, *muscle of Bell*.

Bell's mania. Acute manic excitement.

bellabulgara. A proprietary tablet containing 0.4 mg. of total alkaloids from Bulgarian belladonna root.

belladenal. A proprietary combination of bellafoline and phenobarbital, available as tablets and suppositories.

bel"la-don'na [It., fine lady]. Deadly nightshade. A perennial plant, *Atropa belladonna*, of the order Solanaceae, indigenous to southern Europe and Asia and cultivated in the United States. Its properties are due chiefly to its content of *hyoscyamine*. This substance under certain conditions is racemized to atropine. Both leaves and root are employed. It is used as an antispasmodic, as cardiac and respiratory stimulant, to check secretions (as sweat and milk), and as an anodyne. See *atropine*.

b. extract (*extractum belladonnae*). One containing 1.15 to 1.35% of alkaloids, available in pilular or powdered form. Dose, 10–20 mg. (1/6–1/3 gr.). Also called *b.-leaf extract*.

b. leaf (*belladonnae folium*). The dried leaf and top, yielding not less than 0.35% of alkaloids. Dose, 0.03–0.12 Gm. (1/2–2 gr.).

b.-leaf fluidextract (*fluidextractum belladonnae fol.*). One containing from 0.27 to 0.33% of alkaloids. Dose, 0.06 cc. (1 min.).

b. liniment (*linimentum belladonnae*). 5 Gm. of camphor in belladonna-root fluidextract to make 100 cc.

b. ointment (*unguentum belladonnae*). One composed of pilular belladonna extract 10 Gm., diluted alcohol 5 cc., yellow ointment 85 Gm. Applied externally especially for hemorrhoids.

b. plaster (*emplastrum belladonnae*). One prepared from an extract of belladonna root and adhesive plaster mass; used as a local anodyne.

b. root (*belladonnae radix*). The root of *Atropa belladonna* containing not less than 0.45% of the alkaloids. Dose, 0.03–0.12 Gm. (1/2–2 gr.).

b.-root fluidextract (*fluidextractum belladonnae radicis*). The fluidextract contains from 0.405 to 0.495% of alkaloids. Dose, 0.06–0.12 cc. (1–2 min.).

b. tincture (*tinctura belladonnae*). It contains from 0.027 to 0.033% of alkaloids. Dose, 0.3–1.0 cc. (5–15 min.). Also called *b.-leaf tincture*.

bel"la-don'nine (bel uh-don een, -in) [*belladonna*]. $C_{17}H_{21}O_2N$. An alkaloid found in solanaceous plants as belladonna, hyoscyamus. It is isomeric with apoatropine from the same sources.

bellafoline. Trade-mark for a combination of the malic acid salts of the total levorotatory alkaloids of belladonna leaves.

bell'-crowned. Having a long, wide crown tapering sharply toward the neck; said of a tooth.

bellergal. Trade-mark for a proprietary sedative in tablet form containing bellafoline, gynergen, and phenobarbital.

Belle vue bridge. An adhesive dressing for the elevation of the scrotum in inflammatory lesions.

Belling stain. See *acetocarmine* under *stain*.

Bellini, Lorenzo [*Italian anatomist*, 1643–1704]. Known for his classic description of the gross anatomy of the kidney and his discovery of the renal excretory ducts (1662). Advocated the chemical examination of the urine as an aid in diagnosis. Noteworthy also, is his description of the organs of taste.

bel lones (bu lohns") *F. veterinary medicine*, partial nasal obstruction in horses; due to polyps in the posterior nares. Sometimes associated with roaring.

bel'ly [AS. *belg*]. The abdominal cavity or abdomen. See words beginning *celi-*.

b. button. Navel or umbilicus.

b. of a muscle. The most prominent, fleshy central portion of a muscle.

frog-b. The flaccid abdomen of children suffering from rickets.

bel'ly ache" [*belg*; AS. *acan*, to ache]. Pain in the abdomen; colic.

bel"o-ne-pho'bi-a [G. *belonē*, needle; *phobos*, fear]. A morbid dread of pins and needles, and of sharp-pointed objects in general.

bemax. A proprietary product prepared from wheat germ and intended as a food adjunct.

Be'lostoma [NL.]. A genus of water bugs.

B. griseum. A species known as giant water bug which inflicts painful, but not poisonous, bites.

benadryl hydrochloride. Trade-marked name for the antihistaminic substance diphenhydramine hydrochloride.

Bence Jones cylinders. See under *cylinder*.

Bence Jones protein. See under *protein*.

Bence Jones protein test. See under *test*.

Benda, Raymond [*French physician*, 1896–]. Pioneer in blood transfusion and in the study of blood types. Known for his contributions to the knowledge of pneumonia and pulmonary tuberculosis. Introduced a test for aplastic anemia, see Benda's *test*. Devised many stains and staining methods. See under *stain*.

bends. See *caisson disease*.

Beneden, Edouard van [*Belgian embryologist*, 1846–1910]. Discovered the centrosome independently of Flemming (1876). Gave first complete account of segmentation of mammalian ova.

Benedict's methods. See under *method.*

Benedict's quantitative test. See Benedict *method* for glucose.

Benedict's reagents. See under *reagent.*

Benedict's solution. See under *solution.*

Benedict's test. See under *test.*

Benedict and Franke's method. See under *method.*

Benedict and Hitchcock' uric acid reagent. See under *reagent.*

Benedict and Newton's method. See under *method.*

Benedict and Theis's method. See under *method.*

Benedikt, Moritz [*Austrian physician,* 1835–1920] Described tegmental mesencephalic paralysis, called *Benedikt syndrome.*

benemid. Trade-mark for *probenecid.*

be-nign be-nig'nant [L. *benignus,* kind]. Not endangering health or lif ; not malignant, innocent; applied to certain tumors.

Bennett, Edward Halloran [*Irish surgeon,* 1837–1907]. Described fracture of the thumb at the base of the first metacarpal (actually fracture dislocation into the carpometacarpal joint) which still bears his name.

Bennett, James Henry [*English obstetrician,* 1816–91]. The first to differentiate between benign and malignant tumors of the uterus (1845) His name was once associated with the large, fatty epithelial cells found in ovarian cysts which he described.

Bennhold's test. See Congo red *test.*

benodaine hydrochloride. Trade-marked name for *piperoxan hydrochloride.*

Bensaude, Raoul [*French physician,* 1866–1938]. With Achard, isolated the paratyphoid bacillus and first used the term paratyphoid fever Remembered as having used quinine urea anesthesia in the treatment of anal fissure.

Bensley's formalin. See Zenker's *fixing fluid.*

Benson, A. H. [*English ophthalmologist,* contemporary]. Known for his description of astral hyalitis, an inflammation of the ocular vitreous body marked by the presence of star-shaped bodies.

ben'ton-ite [from Fort *Benton,* Montana, after Thomas Hart *Benton,* American statesman] (bentonitum) A native, colloidal, hydrated aluminum silicate. It swells in water and is useful in the preparation of pastes and lotions and as suspending agent for insoluble medicaments in mixtures and emulsions.

b. magma (*magma bentoniti*) A 5% suspension of bentonite in distilled water used as suspending agent.

bentyl hydrochloride. Trade-marked name for dicyclomine hydrochloride, an antispasmodic for smooth muscle.

be [illegible] **m'n** (b [illegible] k [illegible] l) $C_{33}H_{45}O_{10}N$ An alkaloid from aconite. Also called *benzaconitine, picroaconitine*

benz-al'de-hyde [F *benjoin,* ult. from Ar *lubān jāwī,* frankincense of J va, *alcohol dehydrogenatum*] (*benzaldehydum*) C_6H_5CHO A colorless liquid, used as flavoring agent.

ben"zal dox'ime (ben zol dock seem, sim) $C_6H_5CH{:}NOH$; the oxime resulting from the interaction of benzaldehyde and hydroxylamine It exists in two isomeric forms, both of which are solids.

ben"zal ko'ni um chlo'ride (*benzalkonii chloridum*) A mixture of alkyl dimethyl-benzylammonium chlorides of the general formula, $C_6H_5CH_2N(CH_3)_2RCl$, in which R represents mixture of alkyl radicals from C_8H_{17} to $C_{18}H_{37}$. A white or yellowish white powder or in gelatinous pieces; soluble in water In solution of proper concentration it is an effective surface disinfectant which is germicidal for many pathogenic, nonsporulating bacteria and fungi after several minutes' exposure. See *zephiran chloride.*

ben zan'i lide. $C_6H_5CONHC_6H_5$ Benzoyl anilide, phenylbenzamide. White to pink crystals, insoluble in water formerly used as antipyretic.

ben zan'thra cenes. A group of hydrocarbons in which benzene and anthracene ring have double bond in common. Some of the benzanthracene compounds are estrogenic and many are carcinogenic.

benz'a thine pen"i-cil'lin G. Generic name for N,N'-dibenzylethylenediamine dipenicillin G an oral dosage form which yields higher blood levels of penicillin than are obtainable with equivalent amounts of other dosage forms of the antibiotic. See *benzethacil, bicillin, neolin, permapen.*

benz az' line hy"dro-chlor'ide. Generic name for 2-benzylimidazoline hydrochloride, vasodilator useful in treating peripheral vascular disorders supplied under the trade-marked name *priscoline.*

benzedrex. Trade-mark for 1-cyclohexyl-2-methylaminopropane, employed by inhalation to shrink the nasal mucosa.

benzedrine. A trade-mark for amphetamine.

ben'zene, ben zene A hydrocarbon, C_6H_6 obtained chiefly as by-product in the manufacture of coke formerly called *benzol.* An especially pure form is btained by the dry distillation of benzoic acid with lime. It is clear colorless, highly inflammable liquid of characteristic odor miscible with alcohol, chloroform, ether acetone, and other organic solvents. It is extensively used as solvent. Inhalation of its fumes may be toxic. It has been tried in the treatment of leukemia because of its action in depressing the hematopoietic system, but with inconstant success and with the grave danger of producing aplastic anemia. It is of chief importance in industrial toxicology Acute **benzene poisoning** produces restlessness, excitement, inebriation, hyperpyrexia, coma, and, by arresting respiration, death. Continued exposure, as in industries, results in leukopenia, anemia, and purpura.

b. carboxylic acid. See *benzoic acid.*

b. hexachloride. The designation commonly though incorrectly applied to commercial mixtures of stereoisomers of 1,2,3,4,5,6-hexachlorocyclohexane ($C_6H_6Cl_6$) employed as insecticides. The gamma isomer purified grade of which is called *lindane,* is of greatest entomological and medical interest. Abbreviated, BHC. See *gammexane.*

ben zes trol A synthetic estrogenic substance, 2,4-di(p-hydroxyphenyl)-3-ethyl hexane, originally marketed under the trade-mark *octofollin.*

benzethacil. A trade-mark, formerly also used as generic name, for N N'-dibenzylethylenediamine dipenicillin G. See *benzathine penicillin G*

ben"ze tho ni um chlo ride. Generic name for the detergent and antiseptic substance valiable under the trade-marked name *phemerol chloride.*

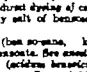
benz hex'ol. British generic name for the basic form of the synthetic antispasmodic supplied as the hydrochloride salt under the trade-marked name *artane* also known by the generic name (U S) *trihexyphenidyl.*

ben zi-dine (ben zi-deen, -din) Diaminodiphenyl, $NH_2C_6H_4C_6H_4NH_2$ A colorless crystalline compound; used in identification of occult blood. See under *test.*

benz"im-id' azole. $C_7H_6N_2$ dicyclic compound representing the fusion of benzene ring with an imidazole ring; also, any derivative of $C_7H_6N_2$

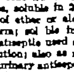
ben'zin, ben zine (ben zin, ben seen, ben-seen') A mixture of hydrocarbons obtained in the fractional distillation of petroleum.
purified b. (*benzinum purificatum*) A purified distillate consisting chiefly of hydrocarbons of the methane series, predominantly pentanes and hexanes. A clear colorless, volatile, and highly inflammable liquid practically insoluble in water; miscible with ether chloroform, benzene, volatil and fixed oils, except castor oil. It is valuable solvent. Also called *petroleum b.*

ben zo-, benz-. A combining form denoting *relation to benzene, presence of the benzene ring,* or *see colors used for direct dyeing of cotton.*



ben zo-ate. Any salt of benzoic acid, as sodium benzoate.

ben zo-caine (ben so-cane, kay-in, kah-een) Ethyl aminobenzoate. See *anesthesin.*



ben zo'ic ac'id (*acidum benzoicum*) C_6H_5COOH. White scales or needles, soluble in 275 parts of water in three parts of ether or alcohol, or in five parts of chloroform; sol ble in fixed and volatile oils. A mild antiseptic used as ointment or hydro-alcoholic solution; also as mouthwash. Occasionally used as a urinary antiseptic although its salts, being less irritant, are generally preferred. Dose, 0.6–2.0 Gm. (10–30 gr.)

ben zo'ic al'de-hyd See *benzaldehyde.*

ben zo-di-ox ane, ben"zo di-ox'ane. 1. Either of two isomeric substances 1,3-benzodioxane,

or 1,4-benzodioxane,

2. Generic term for any derivative of the preceding.

ben zo in (ben zo in, zo'in, ben-zo in) (*benzoinum*) A balsamic resin btained from *Styrax benzoin, S. tonkinensis,* nd other species of *Styrax.* It contains resins, free and combined cinnamic and benzoic acids, vanillin, and traces of other constituents, used as stimulating expectorant, as an inhalant in respiratory-tract inflammations, and as an external antiseptic and protective. Syn., *gum benjamin.* Also called *gum b.* —**benzo'inated** *adj.*
b. flowers. Benzoic acid, especially that obtained by sublimation from benzoin.
b. tincture (*tinctura benzoini*) 20% of benzoin i alcohol. Dose 1–2 cc. (15–30 min.)
compound b. tincture (*tinctura benzoini composita*) A tincture prepared from benzoin 10, aloe 2, storax 8, tolu balsam 4, alcohol to make 100: used as an inhalant in bronchitis, etc., by steam vaporization; as an antiseptic and protective application to chapped hands, minor wounds, etc.; and occasionally as stimulating expectorant in chronic bronchitis. Dose, 1–4 cc. (15–60 min.). Also called *friar s or Turlington balsam.*

benzoinol. A proprietary petroleum product containing benzoin and intended as a soothing application to mucous membranes or as vehicle for other ingredients.

ben zol, ben zole. See *benzene.*

ben zo lism. Benzene poisoning.

ben zo naph tha le (ben zo- af'th h leen) A mixture of naphthalene and benzoic acid.

ben zo naph'thol. Betanaphthyl benzoate.

ben zo ni trile (ben zo-nigh treel' -tril -nigh tryle -tril) C_6H_5CN phenyl cyanide. A colorless, inflammable liquid having an odor suggestive of bitter almond oil used in synthesis of certain drugs and dyes.

ben"zo phe-none' $(C_6H_5)_2CO$; diphenyl ketone, the stable form of which occurs in crystals, insol ble in water having geraniumlike odor: used as fixative for perfumes and in the manufacture of many medicinal agents.

1,2-ben"zo py'rone. $C_9H_6O_2$; the parent substance of many plant pigments. Syn., *1,2-chromone.*

ben"zo py rene $C_{20}H_{12}$. A carcinogenic substance obtained from tar.

ben"zo qui none a-ce tic ac'id. $O C_6H_3 O CH_2COOH$ an oxidation product of homogentisic acid; it occurs in urin in cases of scurvy and rheumatic fever.

ben"zo-qui non'i um chlo'ride. Generic name for 2,5-*bis*(3-diethylaminopropylamino)benzoquinone-*bis*-benzyl chloride, skeletal-muscle relaxant supplied under the trade-marked name *mytolon chloride.*

benzosalin. A trade-mark for methyl benzoylsalicylate, which has been used as an intestinal antiseptic and as an antirheumatic.

benzosol. Trade-mark for guaiacol benzoate.

ben"zo-sul'fi mide. Saccharin.

ben'zo-yl (ben zo il, -eel) The univalent radical C_6H_5CO— derived from benzoic acid.
b.-acetyl peroxide. Acetylbenzoyl peroxide, $C_6H_5CO\,O\,O\,CO\,CH_3$. A germicide. Also called *acetozone.*
b.-ecgonine See *benzoecgonine.*
b. anilide. See *benzanilide.*
b. chloride. C_6H_5COCl. A colorless liquid of penetrating odor; has been used subcutaneously in leprosy and as local application to ulcerating surfaces. Its chief use is in organic syntheses.
b. eugenol. A white, crystalline substance; insoluble in water but sol ble in alcohol formerly used in neuralgic headaches.
b.-glycocoll. Hippuric cid.
b.-glycolic acid. Mandelic acid.
b. green. Malachite green.
b.-guaiacol. Guaiacol benzoate.
b. peroxide. $(C_6H_5CO)_2O_2$. White crystals sparingly soluble in water or alcohol; used as dusting powder or in ointment or oily solution for pplication to skin diseases and burns.
b. salicin. Populin.

ben"zo yl ec'go nine. $C_{16}H_{19}NO_4$; an alkaloidal constituent of certain varieties of coca leaves also produced by boiling an queous solution of cocaine (benzoylmethylecgonine).

ben"zo-yl meth yl-ec'go nine. Cocaine.

3,4-benz py'rene. $C_{20}H_{12}$; pentacyclic hydrocarbon constituent of coal tar.

benz"py rin"i um bro mide. Generic name for 1 be yl-3-(dimethyl bamyloxy)pyridinium bromide, cholinergic agent vailable under the trade-marked name *stigmonene bromide.*

ben zyl (ben zil, -zeel) The univalent radical, $C_6H_5CH_2$—
b. alcohol. $C_6H_5CH_2OH$ Phenyl methyl alcohol, occurring as an ester in tolu and other balsams, but produced synthetically. It is colorless liquid, soluble 25 volumes of water; mployed as local anesthetic by injection or by pplication to mucous membranes and as bacteriostatic agent. Syn., *phenylcarbinol.*
b. benzoate (*benzylis benzoas*) $C_6H_5CO\,OCH_2C_6H_5$ Colorless crystals or oily liquid of faintly arom tic odor and pungent taste; insoluble in water or glycerin, sol ble i alcohol. It occurs in ertai balsamic resins or is prepared synthetically; formerly used as an antispasmodic. Dose,

0.2–0.4 cc. (3–6 min.). **Benzyl benzoate lotion** is used as remedy for scabies.
b. bromide. $C_6H_5CH_2Br$. A colorless liquid used as lacrimator in chemical warfare.
b. cinnamate. A constituent of cinnamein from Peruvian balsam.
b. fumarate. White, crystalline, odorless, nd tasteless powder which has been used as an antispasmodic.
b. succinate. The dibenzyl ester of succinic acid, which has been used as an antispasmodic.
benzylets. Trade-mark for soluble gelatin globule containing benzyl benzoate.
ben zyl'i-dene. The divalent radical, $C_6H_5CH=$.
2-ben zyl I m id az'o-line hy"dro chl r'ide. $NHCCC_6H_5CH_2)(N CH_2.CH_2.HCl$. Benzazoline hydrochloride, vasodilator available under the trade-marked name *priscoline*.
bepron. Trade-mark for capsule containing the water-soluble constituents of beef li er with ferrous iron.
ber'ber ine (bur'bur-een, -in) $C_{20}H_{19}NO_5$. An alkaloid found in *Berberis* and many other plants.
ber'ber is [L.]. Barberry; the dried rhizome and roots of various shrubs of the genus *Mahonia* formerly used as bitter tonic. The chief constituents are berberine and resin.
Berowitz, Zacharias Taylor [*American physiologist*, 1893–]. Devised test for pregnancy in which few drops of the patient citrated blood are instilled into one eye. If there is dilatation or contraction of the pupil, the test is regarded as positive; called *Berowitz test*.
Berengario da Carpi, Jacopo (Berengarius, Berenger) [*Italian anatomist*, d. 1530]. Said to have been the first to describe the sphenoid sinuses, the vermiform process, and the arytenoid cartilages (1521) Also described the thymus (1522) and gave the first authentic account of excision of the uterus for prolapse (1522)
ber'ga-mot oil (*oleum bergamottae*) A volatile oil obtained by expression from the rind of th fresh fruit of *Citrus bergamia*, and yielding not less than 36% of esters calculated as linalyl acetate used chiefly as perfume. It is said to be useful insecticide.
Bergenhem, Bengt Ludwig [*Swedish surgeon*, 1898–]. Known for his operation of implantation of the ureters into the rectum for the relief of extrophy of the urinary bladder
Berger Emil [*Austrian ophthalmologist*, 1855–1926]. Described an irregularity of the pupil in which it exhibits an elliptical shape, sign of early tabes dorsalis, called *Berger' sign*.
Berger Hans [*German neurologist* 1873–1941]. Remembered for his descriptions of the alpha rhythm and the waves recorded in encephalography and for his early studies of bodily manifestations of psychic states.
Berger Oskar [*German neurologist*, 1844–85]. Described paresthesia involving the lower extremities, without objective symptoms, and accompanied by weakness; seen usually in juveniles; called *Berger' paresthesia*.
Berger Paul [*French surgeon*, 1845–1908]. Remembered for his interthoracico-scapular amputation at the shoulder girdle, which is called *Berger operation*.
Bergeron, Étienne Jules [*French physician*, 1817 1900]. Described the myoclonic form of epidemic encephalitis; called *Bergeron disease* Author of classic description of ulcerative stomatitis (1855)
Bergey David Hendricks [*American bacteriologist*, 1860–1937]. Celebrated for his systematic arrangement or key for the identification of the class Schizomycetes in his *Manual of Determinative Bacteriology* (1923)
Bergh's test. See van den Bergh test.
Bergmann, Ernst von [*German surgeon*, 1836–1907]. Made important contributions to the development of brain surgery and of aseptic technic. *Von Bergmann incision* to expose the kidney begins at the outer border of the sacrospinalis at the level of the twelfth rib and extends obliquely toward the junction of the outer and middle thirds of the inguinal ligament.
Bergmann, Gottlieb Heinrich [*German physician*, 1781 1861]. Described the processes of certain superficial neuroglia cells of the cerebellum; called *Bergmann fibers*. Striae acusticae in the floor of the fourth ventricle are known as *Bergmann cords*, conductors. (Description of these structures sometimes is ascribed erroneously to Ernst von Bergmann.)
ber'i ber'i [Singhalese *beri*, weakness]. A disease due to deficiency of thiamine seen endemically in those living mainly on polished rice diet, and sporadically in other countries when the diet is similarly limited. Various manifestations occur depending upon the severity and duration of the vitamin lack. Multiple neuritis, general weakness, paralysis, progressive edema, mental deterioration, and finally heart failure make up the classic picture. Also called *athiaminosis*, *kakke disease*
Berkefeld, Wilhelm (1836–1897) German manufacturer who put on the market the Berkefeld filter candles, made of diatomaceous earth, designed for the separation of bacteria from viruses. The three grades were: V which is coarse, from German *viel*, coarse; N which is medium, from German *normal*, and W which is fine from German *wenig* fine.
Berkefeld filter See under *filter*
berke'li um [named *after Berkeley California*]. Chemical element No. 97 symbol Bk, produced artificially in minute amounts.
Berlin, David Daniel [*American physician*, 1901]. Associated with H. L. Blumgart and S. A. Levine in the treatment of angina pectoris by total thyroidectomy (1933)
Berlin, Rudolf [*German ophthalmologist*, 1833–97]. Known for his descriptions of word blindness, for which he chose the name dyslexia, and for his description of commotio retinae or traumatic edema of the retina.
Ber lin blue. See *aniline blue*.
Berman Samuel [*American electrical engineer* 1895–]. Invented an pparatus for locating metallic foreign particles, as in the eye.
Bernard, Claude [*French physiologist*, 1813–78]. One of the greatest figures in the history of physiology he introduced experimental methods (1855) Demonstrated nerve paralysis by the use of curare, showing the independent excitability of muscle. Discovered the vasoconstrictor and dilator nerves. Demonstrated the glycogenic function of the liver and the digestive action of pancreatic juice (1848) Showed that slight wound in the floor of the fourth ventricle rendered an animal temporarily diabetic. H is said to have coined the term internal secretions (1855) The syndrome following section or paralysis of the cervical sympathetic trunk is known as the *Bernard-Horner syndrome*, *Horner' syndrome*. See *mellitus inferior*
Bernhardt, Martin [*German neurologist*, 1844–1915]. Known for his description of meralgia paresthetica due to disease of the lateral cutaneous nerve of the thigh (1878); called *Bernhardt' disease Roth-Bernhardt disease*.

Bernheim, Hippolyte [*French physician*, 1840–1919]. Widely known for his practical application of hypnotism to the treatment of neuroses. Author of work on the subject of hypnotic suggestion (1891)

Bernreuter personality inventory See under *test*.

Bernstein Felix [*American biochemist of German birth*, 1878–]. Known for his theory regarding blood groups and heredity. This assumes three allelomorphic genes, A, B, and O (or R) one of which is present in each member of certain pair of chromosomes. Each somatic cell possesses two of these genes, one derived from either parent. A and B factors are dominant over O. Called *Bernstein theory*.

Berthelot, Pierre Eugene Marcellin [*French chemist*, 1827–1907]. Known for his investigation of the action of bacteria in soils, especially in reference to fixation of nitrogen. Remembered also for his test for phenol by treating an ammoniacal solution with sodium hypochlorite, which produces blue coloration.

Ber"ti-el'la [L. after Paul *Bert*, French physiologist, 1833–86]. A genus of tapeworm parasites.

B. mucronata. A species parasitic to man, found in the intestine.

B. studeri. A species found in primates.

Bertillon Alphonse [*French criminologist* 1853–1914]. Inventor of the system of identification which bears his name (1886) It consists of selected measurements of various parts of the body The *Bertillon system* has been largely superseded by the use of fingerprints.

ber-til lon age (bare til lon-ash') The Bertillon system.

Bertin, columns of. See renal *columns*.

be-ryl"li-o sis [G *beryllos*, beryl -*ōsis*, condition]. Pneumoconiosis due to inhalation of beryllium oxide dust.

acute b. Acute pneumonitis in beryllium workers.

chronic b. Chronic pulmonary granulomatosis in beryllium workers.

be-ryl'li um [*beryllos*] Be = 9.013 A divalent metallic element occurring chiefly as beryllium aluminum silicate or beryl. Formerly called *glucinum*.

Berzelius, Jons Jakob [*Swedish chemist*, 1779–1848]. Famous for his many scientific achievements, he discovered the elements selenium, thorium, and cerium, and introduced the modern system of writing chemical symbols and formulas.

bes"i-clom ter [F *besicles*, spectacles G *metron*, measure]. An instrument used by opticians for measuring the forehead to obtain the proper width for spectacle frames.

Besnier Ernest [*French dermatologist*, 1831–1909]. Described lupus pernio (1889) later classified by C. P. M. Boeck as benign sarcoid called *lupus pernio of Besnier Besnier-Boeck disease*. See *sarcoidosis*.

Besredka, Alexandre [*French physician*, 1870–1940]. Remembered for his work on anaphylaxis and antianaphylaxis (1907) Said to have introduced the term antivirus.

Best, Charles Herbert [*Canadian physician*, 1899–]. Famed for his part in the isolation of insulin (1922) with F G Banting, working in the laboratory of J J R. Macleod

Best's carmine. See under *stain*.

Best disease Congenital macular degeneration.

bes"ti-al'i ty [L. *bestialis*, from *bestia*, beast] 1. Behavior resembling that of an animal. 2. *In psychiatry* sexual relations between human beings and animals.

be ta (bee'tuh, bay tuh) The second letter of the Greek alphabet, β used in chemical nomenclature to indicate the second of two isomeric compounds. For many words beginning *beta-* see under the specific noun.

betabion. Trade-mark for synthetic thiamine hydrochloride.

be'ta-cism [*beta*]. Overuse of the b-sound in speech, or conversion of other sounds into it.

be"ta-eu'caine hy"dro-chlo ride. Eucaine hydrochloride.

be"ta-hy poph' amine (-high pof' meen, -min) The pressor principle of posterior pituitary

be'ta ine (bee tay-een, -in, bee'tuh-een, -in) $(CH_3)_3\overline{N\,CH_2\,COO}$ substance obtained from sugar-beet molasses or prepared synthetically. Colorless, deliquescent crystals of sweet taste, soluble in water or alcohol It is an active methyl donor in the synthesis of cholin and creatine, and is useful in preventing hepatic cirrhosis. Syn., *lycine*, *oxyneurine*, *trimethylglycine*.

b. hydrochloride. Colorless crystals, freely soluble in water into which it slowly liberates its hydrochloric acid. Used in gastric hypoacidity Dose, 0.5 Gm. (8 gr) See *acidol*.

be ta ines. A group of cyclic organic bases characterized by the group $(CH_3)_3N<$ They may be considered internal salts of quaternary ammonium bases, as trimethyl glycine betaine,

$$(CH_3)_3\overline{N\,CH_2\,COO}$$

croton betaine, $(CH_3)_3N\,CH_2\,CH{:}CH\,COO$ See *betaine*

be"ta ke't hy drox y bu tyr'i ac'id. Acetoacetic acid.

betalin S. Trade-mark for thiamine hydrochloride

be"ta naph thol. $C_{10}H_7OH$ White to pale buff-colored, shining, crystalline leaflets or powder with faint phenol-like odor Darkens on exposure to sunlight It is an effective intestinal antiseptic and is useful in the form of an ointment or alcoholic solution as parasiticide. It has been used as vermifuge but the doses required are dangerous to the patient Dose as an intestinal antiseptic, 0.13–0.33 Gm. (2–5 gr) Also called *naphthol*.

b. sodium. Grayish white powder soluble in three parts of water used as antiseptic in 0.5–1.0% aqueous solution. See *microcidin*.

be"ta naph thyl The radical $C_{10}H_7$—

b. benzoate $C_6H_5COO\,C_{10}H_7$ White, crystalline powder has been used as intestinal antiseptic and as parasiticide also called *benzonaphthol*, *betanaphthol benzoate*

b. salicylate. $C_6H_4(OH)\,COO.C_{10}H_7$ White, odorless, tasteless, crystalline powder; has been used as an intestinal antiseptic. Syn., *betol*.

be"ta-ox"y bu tyr'ic ac'id. Beta-hydroxybutyric acid

be ta par'ticle. See under *particle*.

betaplexin. Trade-mark for an elixir containing the vitamin-B complex

be"ta t pic. Of or pertaining to two atoms which differ by one in atomic number so that by expulsion of beta particle from the nucleus of the atom of an element of lower atomic number it is converted to an atom of the element having an atomic number greater by one unit.

be'ta tron (bay tuh tron, bee tuh tron) [*beta*; G. *ēlektron*, amber]. An instrument with which electrons are accelerated to millions of electron volts by magnetic induction.

betaxin. Trade-mark for thiamine hydrochloride.

be'tel [Pg. *betle* from Tamil *vettilai*]. A masticatory used in the East A few grains of the nut of the catechu palm, *Areca Catechu*, are rolled up with

small amount of quicklime in leaf of *Piper Betle*, and chewed.

be·thane·chol chlo·ride. The generic name for β-methylcholine carbamate chloride $C_7H_{17}ClN_2O_2$, parasympathomimetic agent not destroyed by cholinesterase. See *urecholine chloride*.

be'tol. Betanaphthyl salicylate.

Betz, Vladimir Aleksandrovich (Betz) [*Russian anatomist*, 1834–94]. Discovered the giant pyramidal cells of the cerebral cortex (1874) called *cells of Betz*.

Bettendorff' test. See under *test*.

Bettman, Adalbert G. [*American physician*, 18—]. Known for his introduction of oxyquinoline sulfate Scarlet R Gauze for healing wounds (1931) and his tannic acid–silver nitrate treatment of burns (1935).

bet'u·lin. $C_{30}H_{50}O_2$, diatomic alcohol contained in the bark of the white birch, *Betula alba*. Also called *betula camphor*.

be·tween'brain. See *diencephalon*.

Betz. See *Betz*.

Beurmann, Charles Lucien de [*French dermatologist*, 1851–1923]. With Gougerot, described sporotrichosis (1906) which also is called *de Beurmann-Gougerot disease, Schenck' disease*. *Sporotrichum beurmanni* is a species of the fungus which causes the disease.

bev Abbreviation for billion electron volts.

Bevan, Arthur Dean [*American surgeon*, 1861–1943]. Known for his inventiveness in the field of abdominal surgery. His operation for cholecystectomy through a vertical incision along the upper outer border of the rectus muscle still bears his name. Also devised a now superseded anchoring operation for undescended testis, and described a special operation for sliding hernia of the cecum.

bev'a·tron. A contemplated apparatus for accelerating protons in the billion electron volt range.

bev'el [prob. from OF *baer*, to gape]. A sloping edge.

cavosurface b. *In dentistry*, that portion of the enamel wall of a cavity which is cut back at an obtuse angle to the tooth surface in order to remove short and friable enamel rods at the cavity margin.

bewon. Trade-mark for a thiamine hydrochloride elixir.

Beyea, Henry Dorrance [*American surgeon*, 1867–1924]. Remembered for his suspension operation for gastroptosis, in which the gastrohepatic and gastrophrenic ligaments are plicated.

be'zoar (bee'zor, bee'zo·ar, bee'zo·ur) [F *bézoard*, through Ar. from Per. *pād-zahr*, protecting against poison]. A concretion found in the stomach or intestine of some animals (especially ruminants) most commonly composed of ingested hair; may form a cast of the stomach large enough to cause obstruction. Also found in some psychopathic patients. Formerly believed to have magic medicinal properties.

Bezold, Albert von [*German physiologist*, 1836–68]. Discovered the accelerator nerve fibers of the heart and their origin in the spinal cord (1863). See also under *reflex*.

Bezold, Friedrich [*German otologist*, 1842–1908]. Celebrated for his contributions in the field of otology. Gave the first clear description of mastoiditis (1877); introduced an important test for audition in his monumental textbook, and described an abscess deep in the muscle planes of the neck, arising from the extension of suppurative otitis media, sometimes with thrombosis of the transverse sinus. See Bezold's sign.

bhang. See *cannabis*.

BHC Abbreviation for the insecticide benzene hexachloride (hexachlorocyclohexane).

B–h fruc'to·si'dase. See *saccharase*.

Bi Chemical symbol for bismuth.

bi (buy) [L. *bis*, twice]. 1. A prefix meaning *two, twice, double*. 2. *In anatomy*, a prefix denoting *connection with* or *relation to each of two symmetrically paired parts*. 3. *In chemistry*, a prefix denoting *the presence of two atoms* or *equivalents* of the constituent to the name of which it is attached or *the presence of this constituent in double the usual proportion*, or *in double the proportion of the other component*.

Bial' reagent. See under *reagent*.

Bial' test. See under *test*.

Bianchi, Giovanni Battista [*Italian anatomist*, 1681–1761]. Described the valve at the lower end of the nasolacrimal duct called *Bianchi' valve*. The nodules of Arantius are sometimes known as *Bianchi' nodules*.

Bianchi Leonardo (1848–1927) Italian psychiatrist and neurologist known for his experimental work on the neural mechanisms of the brain and his demonstration in monkeys that bilateral destruction of the frontal cortex resulted in significant alterations of character.

bi'ased er'rors. Those which tend in one direction.

bi'ased sam·ple A sample which is not representative of its field.

bi''·stig'ma·tism [L. *bis*, twice; G. *a-*, not; *stigma*, point]. Condition of the eye in which both corneal and lenticular astigmatism exist.

bi·ax'i·al [*bis*; L. *axis*, axle]. Furnished with two axes.

bib'li·o·clast'' (G. *biblion*, book; *klān*, to break]. One who mutilates books.

bib''li·o·klep''to·ma'ni·a [*biblion*; G. *kleptein*, to steal; *mania*, madness]. Morbid desire to steal books.

bib''li·o·ma'ni·a [*biblion*, *mania*]. An abnormal or intense desire to collect rare or curious books.

bib''li·o·pho'bi·a [*biblion*, G. *phobos*, fear]. A morbid fear or hatred of books.

bib''li·o·ther'a·py Treatment of patients by advising reading of books.

bi·bo·rate. See *borate*.

bi·cap'i·tate [L. *bis*, twice; *caput*, head]. Having two heads; dicephalous.

bi·car'bon·ate. A salt of carbonic acid characterized by the radical —HCO_3, representing carbonic acid wherein one hydrogen has been replaced.

blood b. The amount of bicarbonate present in the blood indicating the alkali reserve. Also called *plasma b*.

bi·car''di·o·gram [*bis*; G. *kardia*, heart; *gramma*, letter]. The summated electrocardiogram yielded by the two ventricles beating normally.

bi·ceph'a·lous. See *dicephalous*.

bi'ceps [*bis*; *caput*]. A muscle having two heads, as the biceps brachii, the biceps femoris. See Table of Muscles in the Appendix. —**bicip'ital** *adj.*

Bichat, Marie François Xavier [*French anatomist and physiologist*, 1771–1802]. Renowned for his treatise on anatomy in many volumes which he left unfinished at his death, and for his *Anatomie Générale*, which revolutionized descriptive anatomy and marked him as the founder of modern histology and histopathology.

bi·chlo·ride. 1. Any compound containing two atoms of chlorine, especially a salt having two chloride atoms. 2. A careless designation of mercury bichloride.

bi·chro·mate. A dichromate.

bicillin. A trade-mark for N,N'-dibenzylethylenediamine dipenicillin G. See *benzathine penicillin G*.

bi'o-, bi- [G. *bios*, life]. A combining form denoting *relation to* or *connection with, life, vital phenomena,* or *living organisms.*

bi'o-as·say'. Biological assay.

bi'o·aut·og'ra·phy. A technique, similar to autoradiography, in which the growth response (instead of the radioactivity) of specific microorganisms is used for detection of a compound or compounds on a paper chromatogram. —**bio·autograph'ic,** *adj.*

bi'o·blast [*bios*; G. *blastos*, germ]. 1. Old term for mitochondria, thought by Altmann to be the vital unit of the cell. 2. Old term for any cell capable of living independently.

bi'o·cat'a·lyst [*bios*; G. *katalysis*, dissolution]. An enzyme; a biochemical catalyst.

bi'o·chem'is·try [*bios*; G. *chymeia*, perhaps mingling, from *chymos*, juice]. The chemistry of the living tissues or of life; physiological chemistry. —**biochemical,** *adj.*

bi'o·chem·or'phic [*bios*; *chymeia*; G. *morphē*, form]. Noting the relationship between chemical structure and biologic activity; relating to biochemorphology.

bi'o·chem·or·phol'o·gy [*bios*; *chymeia*; *morphē*; G. *logos*, word]. The science dealing with the chemical structure of foods and drugs and their reactions on living organisms.

bi'o·chrome [*bios*; G. *chrōma*, color]. Pigment synthesized in the metabolic processes of living organisms.

bi'o·cli'ma·tol'o·gy [*bios*; G. *klima*, slope; *logos*]. The study of the effect of climate on life. Also called *bioclimatics.*

bi'o·cy'tin. A complex of biotin occurring in yeast and possibly in other natural products.

bi'o·di·al'y·sate (buy"o-dye-al'i-sayt) [*bios*; G. *dialysis*, a separating]. The fluid bath after biodialysis, found to be inhibitory to gastric secretion upon intravenous or subcutaneous administration in dogs.

bi'o·di·al'y·sis (buy"o-dye-al'i-sis) [*bios*; *dialysis*]. In experimental physiology, the process of bathing the intestine for approximately one hour in Locke-Ringer solution at 37° C.; the fluid bath is then known as the biodialysate.

bi'o·e·lec'tric'i·ty. Electric phenomena occurring in living tissues; effects of electric currents upon living tissues.

bi'o·en'er·get'ics [*bios*; G. *energētikos*, acting upon]. The science of the transformation of energy in biologic functions.

bi'o·flav'o·noids. Flavone compounds or derivatives having biological or pharmacological activity, such as vitamin P.

bi'o·gen'e·sis [*bios*; G. *genesis*, production]. 1. The doctrine that living things are produced only from living things—the reverse of abiogenesis. 2. Loosely, both ontogeny and phylogeny. —**biogenet'ic, biog'enous,** *adj.*

bi·og'e·ny (buy-odj'i-nee) [*bios*; *genesis*]. Biogenesis.

bi'o·ki·net'ics (buy"o-ki-net'icks, kigh-net'icks) [*bios*; G. *kinētikos*, from *kinein*, to move]. The kinetics of life; the science of the movements of developing organisms. See *karyokinesis.*

bi'o·ki·net'ic tem·per·a·ture lim'its. The lowest and highest temperatures beyond which no form of life can be sustained, −273° C. to approximately 160° C.

Biol. Biology.

biolac. A proprietary homogenized, modified milk; used as infant food.

bi'o·log'i·cal as·say'. A method of determining the potency of a substance by comparing its effects on living material quantitatively with those of a standard substance. Syn., *bio-assay.*

bi'o·log'i·cal [*bios*; G. *logos*, word]. Medicinal preparations of complex biologic nature, their action depending on numerous phases of immunity. They include serums, vaccines, antitoxins, and antigens.

lyophilized b. Any biologic substance, such as blood plasma, antitoxins, toxins, serums, etc., which has been prepared in dry form by rapid freezing and dehydration, while in the frozen state, under high vacuum. Such a preparation is more stable than the product from which it is derived, does not require refrigeration, and is made ready for use by the addition of sterile, distilled water.

bi'o·log'i·cal war'fare. In military medicine, tactics and techniques of conducting warfare by use of biological agents.

bi·ol'o·gist [*bios*; *logos*]. One learned in biology.

bi·ol'o·gy [*bios*, *logos*]. The science of life. It includes botany, zoology, and all their branches. —**biolog'ic, biolog'ical,** *adj.*

bi'o·lu'mi·nes'cence [*bios*; L. *lumen*, light]. Luminescence caused by living organisms; phosphorescence.

bi'o·math'e·mat'ics [*bios*; G. *mathēmatikos*, from *mathēma*, that which is learned, lesson]. Mathematics applied to biologic phenomena.

bi'o·me·chan'ics [*bios*; G. *mēchanē*, machine]. The science dealing with the mechanics of the living organism, especially of the levers and arches of the skeleton, and the forces applied to them by the muscles and by gravity.

bi·om'e·ter [*bios*; G. *metron*, a measure]. An instrument for measuring the amount of carbon dioxide given off by a small organism or tissue, etc.

bi·om'e·try [*bios*; *metron*]. 1. The statistical study of biologic problems; biometrics. 2. Calculation of the expectancy of life, for life insurance purposes.

bi'o·mi·cros'co·py [*bios*; G. *mikros*, small; *skopein*, to examine]. Microscopic study of living cell structures. —**biomi'croscope,** *n.*

Biondi' stain. See under *stain.*

bi'o·phore [*bios*; G. *phoros*, bearing]. A hypothetical vital unit in Weismann's theory of the architecture of the germ plasm, varying in complexity from that of a molecule to that of a cell, and with manifold properties and functions depending upon biologists' conceptions. Syn., *micelle.* —**biophor'ic,** *adj.*

bi'o·pho·tom'e·ter [*bios*; G. *phōs*, light; *metron*, measure]. An instrument designed to measure the rate and degree of dark adaptation.

bi'o·phys'ics [*bios*; G. *physis*, nature]. The study of life processes by physical apparatus and methods; the physics of life processes.

bi·o·plas'i·a [*bios*; G. *plasis*, a form]. Anabolism. —**bioplas'tic,** *adj.*

bi'op·sy [*bios*; G. *opsis*, vision]. 1. Observation of the living subject, as opposed to necropsy. 2. The excision, during life, of tissue to establish a diagnosis by means of microscopic examination of the excised piece.

aspiration b. A method for the aspiration of small amounts of tissue for biopsy by the use of a trocar inserted into the desired tissue.

muscle b. The securing of biopsy material from muscle.

needle b. The securing of biopsy material by means of a hollow needle.

ring b. Surgical excision of the entire circumference of the squamocolumnar junction of the cervix; used in the diagnosis of cancer.

surface b. Scraping of cells from the surface of tissues, especially from the squamocolumnar junction of the uterine cervix for microscopic examination in cancer diagnosis; also called *surface-cell biopsy.*

bi"o-psy-chol'o gy Psychobiology —**biopsy' chic**, *adj*

bi'os I. Inositol.

bi'os II. Biotin.

bi'ose [L. *bis*, twice; -*ose*, chemical suffix]. 1 A disaccharide 2 A sugar containing two carbon toms.

bi"o-sta tis'tics [G *bios*, lif ML. *statisticus*]. The branch of biometry which deals with the laws and data of demography natality morbidity and mortality; vital statistics.

bi-os'ter-ol Old term for vitamin A.

bi"o-syn'the sis. 1 The synthesis of substance in living matter 2. The formative reactions which take place during metabolism, such as the synthesis of enzymes, amino acids, or vitamins.

Biot, Camille [*French physician*, nineteenth century]. Remembered for his description of type of shallow breathing interrupted by long pauses, seen in meningitis and sometimes in healthy persons.

bi 'ta. The flora and fauna, collectively of region.

bi ot'ic. 1 Pertaining to lif or living matter 2 Pertaining to biota.

bi-ot'ics. The science of vital activities.

bi'o-tin (buy tin, buy-ot'in) $C_{10}H_{16}O_3N_2S$. A member of the vitamin-B complex, widely distributed in plant and animal tissues from which it is isolated by autolysis, digestion, or hydrolysis; essential for growth of certain bacteria and yeasts and growth hormone for higher plants, of uncertain significance in animals and man Syn., *vitamin H coenzyme R*, *bios IIb*. See Table of Vitamins in Appendix.

bi' type [*bios*; G. *typos*, model]. 1 A group of individuals all of which have the same genotype. 2. Constitutional (body) type. —**biotyp'ic**, *adj*

bi"o-ty pol' gy (buy" tigh-pol jee) [*bios*; *typos*; G. *logos*, word]. The systematic study of body types correlated with physiologic and psychologic aspects, as constitutional variations and inadequacies.

B.I.P Bismuth iodoform paste.

bip' -ra [L. *bis* twice *parere*, to bring forth]. A woman who has borne two children at different labors.

bi par" -sit'ic [*bis*; G *parasitikos*, from *parasitein*, to board and lodge with]. Parasitic upon parasite.

bi"pa-ri' tal [*bis*; L. *paries*, wall]. Relating to both parietal bones.

bi"pa ri'e-tal di am e-ter The distance from one parietal eminence to the other

bip'a-rous [*bis*; L *parere*, to bring forth] Producing two t birth.

bi'ped [*bis*, L. *pes*, foot]. An animal ith two feet. —**bi'ped**, **bipedal**, *adj*

bi-pen'nal form (buy-pen'l form) **bi pen nate** (buy-pen ate) [*bis*; L. *penna*, feather]. Having the appearance of feather with barbs on both sides, as certain muscles.

bi"po-lar'i-ty [*bis*; L. *polus*, pole]. 1. Condition of having two processes from opposite poles, as nerve cell. 2. The use of the two electrodes in stimulation of muscle or nerve. —**bipo'la** *adj*

bi"po-ten"ti al'i ty [*bis*; L. *potentia*, power] The capacity of developing into two different types of tissue.

b. of gonad. Bisexual organization of the undifferent gonad the medullary part is capable of forming the testis, the cortex, of forming the ovary This bipotentiality forms the basis of sex reversal.

bips. Dressing for wounds, composed of bismuth subnitrate 1 part, iodoform 2 parts, petrolatum 1 part. Also called *B.I.P Bismuth iodoform paste*.

birch [AS. *beorc*, *birce*]. Any tree of the genus *Betula*. Birch tar or the tarry oil of *B pendula*, has been used in certain skin diseases. The bark of *B lenta* the sweet birch, yields fragrant volatile oil, which consists, like that of *Gaultheria procumbens*, almost entirely of methyl salicylate.

Birch-Hirschfeld, Felix Victor [*German pathologist* 1842–99]. Known for his method of demonstrating amyloid degeneration by means of Bismarck brown and gentian violet stain, the amyloid material retaining the color while the normal tissue decolorizes with acetic acid.

Bird Goldi g [*English physician*, 1814–54]. Said to have been the first to perform the operation for relief of obstruction of the small intestine. Oxaluria is still known as *Bird' disease*.

bi"re-frac'tive [L. *bis*, twice; *refractus*, from *refringere*, to break p]. Doubly refractive; anisotropic.

bi"re frin gence [*bis*; *refringere*]. Double refraction, in biologic objects three types occur: crystalline, form, and strain birefringence.

stream b. That occurring when solutions contain ing asymmetric particles are set into motion and the particles tend to orient as result of the flow When the flow stops, the solution becomes isotropic. The tobacco mosaic virus is such particle.

bi rhin'i-a bir-rhin'i a (buy-rin ee uh) See *dirrhinus*.

bi ri'mose (buy-rye mose, buy rye-moce) [*bis*; L. *rima*, cleft]. Having two clefts or slits.

birth [ME. *burth*, *birth*]. 1 The delivery of offspring; parturition. 2. That which is born. See *labor*

cross b. Transverse presentation.

multiple b. The occurrence of two or more off spring at birth.

partial b. In labor the incomplete expulsion of offspring, as the retention of portion of macerated fetus

plural b. See multiple b

premature b. See premature *labor*

stillbirth. The birth of dead offspring.

birth cer tif'i cate. A legal form on which the date and place of birth, name and sex of child, names of parents, and other pertinent information are recorded

birth con trol' The prevention or regulation of conception by whatever means contraception.

birth in'ju ry Any injury suffered by child during parturition, such as fracture of bone, subluxation of joint, injury to peripheral nerves, or intracranial hemorrhage.

birth mark" A nevus, either vascular nonvascular or pigmented.

birth rate. The proportion of births in given year to the total population, known as the crude birth rate. **Specific birth rates** are figured for the female population, for the females of certain age or race groups, or for other variables.

birth reg"i tra'tion a re-a. That territory from which the United States Bureau of the Census collects birth records Since 1933, this has been the entire United States.

bis- [L. *bis*, twice]. 1 A prefix meaning *twice*, *both*. 2. *I chemistry* a prefix denoting the *doubling of complex expressions*.

Bischoff's test. See under *test*.

bi sex'u al (buy seck shoo-ul) [*bis*; L. *sexus*, sex]. 1 Biparental. 2. Hermaphroditic. 3. Referring or pertaining to an individual of mixed homosexual and heterosexual behavior See also *gynandromorphy*.

bi fe'ri-ens (biss fear'i-ens, -ferr'i-ens) [*bis*; L. *ferire* to strike]. Having t peaks as bisferious pulse, in which the second peak is equal to, or often higher than, the first. See dicrotic *pulse*.

bis"hy drox"y-cou mar in. The official generic

name for 3,3'-methylenebis(4-hydroxycoumarin); $C_{19}H_{12}O_6$, originally isolated from spoiled sweet clover eating of which caused hemorrhagic disease in cattle. It occurs as a white crystalline powder practically insoluble in water; it is therapeutically useful as an anticoagulant. Dose, 100–300 mg. (1½–5 gr.) Syn., *dicoumarin, dicoumarol, melitoxin.* See *dicumarol.*

Bis'kra but'ton. See *oriental sore.*

Bis'marck brown Y (C.C.) An aniline dye of the azo series used in aqueous or saturated alcoholic solution as a contrast stain, as a mucus stain, for vital staining, and for staining in bulk. Also called *Vesuvin, phenylene brown, Manchester brown, Excelsior brown, leather brown; basic brown G, GX* or *GXP, aniline brown.*

bismarsen. Trade-mark for bismuth arsphenamine sulfonate; used as antisyphilitic by intramuscular injection. Dose, 0.1 Gm. initially followed by 0.2 Gm. weekly, later biweekly for a total of 20 or more doses. Syn., *sulfarsphenamine bismuth.*

bismo-cymol. Trade-mark for a basic bismuth camphocarboxylate; has been used as an antisyphilitic.

bismosol. Trade-mark for a suspension of finely divided bismuth intended for intramuscular use as an antisyphilitic.

bismosol. Trade-mark for a solution of potassium sodium bismuthotartrate, piperazine, and glucose intended for intramuscular use as an antisyphilitic.

bis'muth (biz'muth) [Ger. *Wismut*]. Bi = 209.00. A white crystalline metal with a reddish tint. Its insoluble salts are employed chiefly because of their protective action on mucous membranes; the salts are also feebly antiseptic. Various compounds of bismuth, soluble and insoluble, have been employed for the treatment of syphilis.

b. albuminate. A powder incompletely soluble in water containing about 22% bismuth; used in gastric or intestinal cramp. Dose, 0.3–1.0 Gm. (5–15 gr.)

b. and ammonium citrate. A water-soluble double salt. It is actively astringent and irritant, and is sometimes used in acute diarrhea. Dose, 0.06–0.2 Gm. (1–3 gr.)

b. and emetine iodide. A reddish orange salt, practically insoluble in water; used in the treatment of amebic colitis. Dose, 0.06–0.2 Gm. (1–3 gr.)

b. arsphenamine sulfonate. The sodium salt of a compound of bismuth and arsphenamine methylene sulfonic acid, containing about 13% arsenic and 24% bismuth. It is a brownish-yellow water-soluble powder and is employed in treating syphilis. Dose by intramuscular injection, 0.1–0.2 Gm. (1½–3 gr.) See *bismarsen.*

b. betanaphthol. A compound of somewhat variable composition, employed in the treatment of enteritis because it is believed to yield betanaphthol in the intestinal tract. Dose, 0.3–1.2 Gm. (5–20 gr.) Syn., *orphol.*

b. bitannate. A light yellow powder insoluble in water; believed to exercise astringent effect in the stomach. Dose, 0.3–2.0 Gm. (5–30 gr.) See *tannismut.*

b. bromide. $BiBr_3$. A yellow crystalline powder soluble in aqueous solutions of the potassium halides; used in veterinary medicine.

b. camphocarboxylate. A basic compound representing 37–40% bismuth. It is a white powder insoluble in water but soluble in fixed oils. An oil solution has been employed intramuscularly as an antisyphilitic. See *bismo-cymol.*

b. carbolate. $Bi(OH)_2(C_6H_5O)$. A gray powder insoluble in water; has been used as gastrointestinal antiseptic. Syn., *b. phenylate, phenol b.*

b. carbonate. The official British Pharmacopoeia name for bismuth subcarbonate.

b. citrate. Approximately $C_6H_5BiO_7$; a white powder insoluble in water; employed in the manufacture of bismuth and ammonium citrate but not used as such in medicine.

b. dimeperol. A trade-mark for a 2% colloidal solution of bismuth thyl-oordofani acid employed as an antisyphilitic.

b. ethylcamphorate. $(C_{12}H_{19}O_4)_3Bi$. A white amorphous compound, insoluble in water but soluble in vegetable oils; an oil suspension of it is employed for the systemic effects of bismuth in the treatment of syphilis.

b. glycolylarsanilate. $HOCH_2CO.HN.C_6H_4.AsO(OH)(OBiO)$. A yellowish white to flesh-colored powder very slightly soluble in water; it contains 15% arsenic (pentavalent) and 39% bismuth; used in the treatment of intestinal amebiasis. Syn., *glycobiarsol.* See *milibis.*

b. iodosubgallate. A basic compound of bismuth, iodine, and gallic acid; occurs as a grayish green powder decomposed by water. It is a local antiseptic, liberating iodine in contact with body fluids. Syn., *b. oxyiodogallate.* See *airol.*

b. lactate. Approximately $C_3H_5O_3BiC_3H_4O_3·7H_2O$. A white salt of varying composition, formerly used in treating diarrhea.

b. oleate. A yellowish, soft mass, insoluble in water; used as a dusting powder with zinc oxide and starch, or in ointment, for application to skin infections. A suspension in olive oil is injected intramuscularly in the treatment of syphilis.

b. oxide. Bi_2O_3. A yellowish powder insoluble in water; formerly used like other insoluble bismuth salts, especially in the treatment of enteritis.

b. oxybromide. Approximately BiOBr. A yellowish, water-insoluble powder; used in treating nervous dyspepsia.

b. oxychloride (*bismuthi oxychloridum*). A white, water-insoluble salt approximating the composition BiOCl; may be used internally for the same purposes as bismuth subcarbonate; has been used as an antisyphilitic by intramuscular injection. Dose, oral, 0.6–2.0 Gm. (10–30 gr.); intramuscular, 0.1–0.2 Gm. (1½–3 gr.)

b. oxyiodide. Approximately BiOI. A yellowish red powder insoluble in water; formerly used as a local antiseptic and substitute for iodoform.

b. oxyiodogallate. See *b. iodosubgallate.*

b. permanganate. Approximately $Bi(MnO_4)_3$. A black powder slightly soluble in water; has been employed as an antiseptic dusting powder for wounds and ulcers.

b. phenylate. See *b. carbolate.*

b. potassium tartrate. A water-soluble salt containing 60–64% bismuth. It is used principally as an antisyphilitic, an aqueous solution or oil suspension being injected intramuscularly.

b. quinine iodide. See *quinine bismuth iodide.*

b. salicylate. The name occasionally applied to bismuth subsalicylate, but used properly only for a mixture of salicylic acid and bismuth subsalicylate. The latter mixture is a white powder insoluble in water and acid in reaction; used as an intestinal astringent and antiseptic. Dose, 0.3–0.6 Gm. (5–10 gr.)

b. sodium iodide. See *sodium iodobismuthite.*

b. sodium tartrate. A water-soluble salt containing 35–42% bismuth (British Pharmacopoeia). A salt containing twice as much bismuth is also supplied under the same name in the United States. It is used principally as an antisyphilitic. Syn., *sodium bismuthyltartrate.*

b. sodium thioglycollate. See *thio-bismol.*

b. sodium triglycollamate. $C_{12}H_{12}BiN_2NaO_{12}$.

bite crystalline powder very soluble in water; effective orally in the management of certain forms of syphilis and also in some cases of lupus erythematosus, lichen planus, and scleroderma. See *bistrimate*.

b. subbenzoate. A white powder insoluble in water; used chiefly as wound antiseptic.

b. subcarbonate (*bismuthi subcarbonas*) Approximately $(BiO)_2CO_3.\frac{1}{2}H_2O$ white salt, insoluble in water: used as protective in gastrointestinal diseases as well as for local application. Dose, 0.6–2.0 Gm. (10–30 gr.)

b. subgallate (*bismuthi subgallas*) Approximately $C_6H_2(OH)_3COOBi(OH)_2$; bright yellow powder practically insoluble in water It is used externally as dusting powder sometimes internally in treating enteritis. Dose, 0.45–2 0 Gm. (7–30 gr.) Syn., *dermatol*.

b. subnitrate (*bismuthi subnitras*) Approximately $4BiNO_3(OH)_2.BiO(OH)$; white powder practically insoluble in water It is used like bismuth subcarbonate but yields some nitrite ions in the intestines. Dose, 0.3–2 0 Gm (5–30 gr)

b. subsalicylate (*bismuthi subsalicylas*) Approximately $C_6H_4(OH)COOBiO$; white powder practically insoluble in water. Its antiseptic action is superior to that of other basic bismuth salts. It is used in the treatment of enteritis, and has been used as an antisyphilitic. Dose, as gastrointestinal protective, 0.6–2.0 Gm. (10–30 gr); as an antisyphilitic, 0 06–0.12 Gm. (1 2 gr) by intramuscular injection.

b. tribromphenate. Approximately $BiOH.(C_6H_2Br_3O)_2.Bi_2O_3$; yellow powder practically insoluble in water It is used as an antiseptic, both internally and externally Dose, 1–3 Gm. (15–45 gr.) per day to adults. Also called *b. tribromphenol*. See *xeroform*.

b. valerate, b. valerianate. Approximately $C_4H_9COOBiO.H_2O$; white powder practically insoluble in water; used as sedative and antispasmodic. Dose, 0.03–0.2 Gm. (½–3 gr)

b. violet. A proprietary dye used externally as bactericide.

phenol b. See *b. carbolate*.

precipitated b. (*bismuthum praecipitatum*) A finely subdivided form of metallic bismuth, used as an injection (in 5% dextrose solution) in the treatment of syphilis.

bis·mu'thi·a. A blue discoloration of skin and mucous membranes resulting from administration of bismuth compounds.

bis"muth·o'sis (bis muth-o sis) [Ger *Wismut*; G -*osis*, condition]. Chronic bismuth poisoning.

bis"muth·o·tar'trate. A salt of tartaric acid in which bismuthyl (—BiO) radical replaces the hydroxyl hydrogen of one or both of the secondary alcohol groups in the tartaric acid component of the salt.

bis'muth·yl (bis muth-il, -eel) The univalent radical —BiO

bismutose. Trade-mark for bismuth-albumin combination in powder form; it is antacid and astringent.

bisodol. A proprietary antacid and digestant.

bis'sa [prob. of African origin]. Affection of man and sheep, common in Egypt; characterized by the production of edema.

bis'sa bol. A kind of myrrh from species of trees of East Africa, genus *Commiphora*, used largely in finer grades of myrrh. Said to stimulate powerfully the flow of milk in cows.

bis"sy·no'sis. A benign pneumonia believed to be caused by inhalation of *Aerobacter cloacae*, an organism often found in stained, old cotton The disease was formerly believed to be caused by inhalation of cotton fibers. Also called *gin fever Monday morning fever*

bis tort [L. *bis*, twice; *tortus*, from *torquere*, to twist] Snakeweed, adderwort; the rhizome of *Polygonum bistorta*. It contains about 20% tannin and is used as astringent.

bis'tou ry (bis'too-ree) [F *bistouri*]. A long, narrow knife, either straight, curved, sharp-pointed, or probe-pointed, used for cutting from within outward. Its use in surgery is confined to the incision of abscesses, the opening of sinuses or fistulas, or occasionally the cutting of the constriction in strangulated hernia.

bistrimate. Trade-mark for brand of *bismuth sodium triglycollamate*, substance effective orally in treatment of syphilis and certain diseases of the skin.

bistrium bromide. A trade-marked name for brand of hexamethonium bromide.

bi·sul'fide (buy-sul'fide, fid) A binary compound containing two atoms of sulfur Syn., *disulfide*.

bi sul'fite. Any compound containing the radical —HSO_3. An acid sulfite.

bit [AS *bita*]. *In dentistry*, rotary drill.

bi tar'trate. A salt of tartaric acid characterized by the radical —$HC_4H_4O_6$, representing tartaric acid wherein one hydrogen has been replaced.

bite [AS. *bitan*]. 1 The forcible closure of the lower against the upper teeth; the measure of force exerted by such closure as recorded in pounds by gnathodynamometer 2. A skin puncture produced by the teeth or mouth parts of an insect, snake, or other animal. 3. *In dental prosthetics*, plastic impression of the relationship of the upper and lower teeth in occlusion.

check b. A plastic impression of the teeth, serving as guide for alignment in an articulator used in orthodontics and dental prosthetics. It consists of bites taken in hard wax or soft modeling compound, which record centric, eccentric, and protrusive occlusion.

closed b. One in which the lower incisors and canines are posterior to the upper almost touching the gum line when the jaws are closed extreme overbite

edge-to-edge b. The meeting of the cutting edges of the upper and lower anterior teeth. Also called *end-to-end b.*

jumping the b. A forcible shifting forward of retruded lower jaw to obtain normal occlusion.

locked b. Interdigitation of the teeth in such manner that normal excursions of the mandible are restricted or prevented while the teeth are in occlusion.

mush b. An unfinished bite usually taken in beeswax showing the correct relationship of the cusps in general, but with little or no reproduction of the outline of the teeth.

open b. A condition in which the upper and lower incisors do not occlude.

opening the b. Elevation of the occlusal plane of some or all of the posterior teeth by orthodontic manipulation or prosthetic restorations.

bite. To seize or grasp with the teeth. 2. To corrode or eat into by chemical action.

bite gauge. An instrument which helps to establish correct bite.

bite wing [*bitan*, ME. *winge*]. A type of dental x-ray film having central fin or wing upon which the teeth can close to hold the film in place.

bi thi o·nol. $C_{12}H_6Cl_4O_2S$; 2,2'-thiobis(4,6-dichlorophenol); white or grayish-white crystalline powder insoluble in water bacteriostatic agent for use in soap formulations. See *actamer*

Bi thyn'i·a. A genus of snails whose species serve as intermediate hosts of the trematodes of man.

The species **B. tentaculata** of eastern Europe is the host of the cat liver fluke *Opisthorchis felineus*. **B. fuchsiana** and **B. longicornis** of China are hosts of *Clonorchis sinensis*.

Bi'tis [NL.]. A genus of Viperidae, venomous snakes.
B. gabonica. The Gaboon viper of equatorial Africa; possesses powerful neurotoxic venom.
B. lachesis. The large-headed puff adder; species found from South Africa to southern Arabia; possesses hemotoxic venom.
B. nasicornis. The rhinoceros viper, one of the true vipers found in equatorial Africa. This viper also has hemotoxic venom.

Bitot's spots. See under *spot*.

bit'ters [AS. *biter*]. 1. Medicines characterized by bitter taste. 2. An alcoholic drink, an appetizer.
angostura b. See *angostura*.
aromatic b. Medicines that unite the properties of aromatics with those of simple bitters.
astringent b. Medicines that add styptic and astringent properties to that of bitterness.
simple b. Medicines that stimulate the gastrointestinal tract without influencing the general system.

bit'ter sweet. See *dulcamara*.

Bitt ner milk fac'tor. See milk *factor*.

bi tu men (bi-tew'mun, bay bit yoo-mun, bit chew-mun). Any one of a group of native solid, or semisolid hydrocarbons.
sulfonated b. An unofficial synonym for ichthammol.

bi-u'rate. An acid salt of uric acid.

bi u ret (b y yoo ret, b y yoo ret). $NH(CO—NH_2)_2$. A compound obtained by heating urea. It is soluble in water and in alcohol, and crystallizes from water as monohydrate. The anhydrous form melts at 190° C with decomposition.

bi'u ret' re-ac tion. A blue or blue-violet color given by biuret on the addition of copper sulfate and strong alkali. The test is given by protein solutions without heating, and by urea after prolonged heating.

bi va'lent (buy-vay'lunt, biv'uh-lunt). 1. Denoting the ability to combine with or displace two atoms of hydrogen or their equivalent; having a valence of two. Syn., *divalent*. 2. *In biology*, see bivalent *chromosome*. 3. *In psychiatry*, see *ambivalence*. —**bivalence**, *n.*

bi valve [L. *bis*, twice; *valva*, leaf of a door]. A mollusk with double shells, as a clam or oyster. —**bi'valve**, **bi val'vu lar**, *adj.*

bi ven ter (buy-ven'tur) [*bis*; L. *venter*, belly]. Having two bellies, as a muscle.

bi ve ter A digastric muscle. See Table of Muscles in the Appendix. —**bi ven'tral**, *adj.*

Bizzozero nod les. See under *nodule*.

Bizzozero blood platelet. See *achromacyte*.

Bjerrum, J nik [*Danish ophthalmologist*, 1827–92]. Invented a black screen one meter square, to be used at a distance of one meter to plot accurately the central field of vision; called *Bjerrum screen*.

Bjerrum, J rik Petersen [*Danish ophthalmologist*, 1851–1920]. Remembered for his description of a sign in scotoma, an arcuate area extending from the blind spot around the representation of the macula, considered pathognomonic of simple glaucoma. Called *Bjerrum's sign*.

Bk Chemical symbol for berkelium.

Black, Greene Vardiman (1836–1915). American dentist, known for his system of classification of cavities, development of the principles of cavity preparation, and investigations in the field of dental histology and pathology.

Black, J A. [*English surgeon*, contemporary]. Adapted a formula or factor devised by Pignet, in which the figures are expressed in inches and pounds instead of centimeters and kilograms. F is the empirical factor and equals the weight in pounds (W) plus the chest measurement in inches at deep inspiration (C) minus the height in inches (H): $F = (W + C) - H$. If the result is over 120, the individual is rated very strong; between 100 and 110, good or average; between 90 and 100, only fair; under 80, very weak. The factor was designed originally (ca. 1905) for use in *examining recruits for the French Army* and is little used today. Called *Black's formula*.

Black, Joseph [*Scottish chemist*, 1728–99]. Remembered as the discoverer of carbon dioxide (1757).

Black test. See under *test*.

Blackall, John [*English physician*, 1771–1860]. Remembered as having preceded Bright in observing albuminuria in cases of renal dropsy (1813).

black'damp. Carbon dioxide gas which collects in mines and deep shafts; chokedamp.

Black Death. The plague which ravaged Europe and Asia in the fourteenth century. See *plague*.

black haw. *Viburnum prunifolium*.

black'head". An enlarged, chronically disordered, sebaceous gland; comedo.

black'leg". A febrile, generally fatal, infectious disease affects cattle and sheep and is characterized by diffuse, crepitating swelling in the muscles of the back and legs. *Clostridium feseri* is the principal causative organism, but *Clostridium septicum* or more rarely *Clostridium novyi* is sometimes found to be responsible.

black out". *In aviation*, temporary loss of vision with preservation of consciousness, due to cessation of blood flow to the cranial cavity caused by linear or centrifugal accelerations of considerable magnitudes. Syn., *amaurosis fugax*, *alognosi ezeris*.

black'tongue. A disease of dogs, due to a deficiency of niacin, similar to pellagra. Also see black, hairy *tongue*.

black'wa ter fe'ver. A severe, usually fatal, form of malaria associated with bloody urine. See *hemoglobinuria*.

Blackwell, Elizabeth [*American physician*, 1821–1910]. The first woman to receive a medical degree in America (1849).

blad'der [AS. *blǣdre*]. 1. A membranous sac serving for the reception of fluids or gases. 2. The hollow organ which serves as a reservoir for the urine. The only adjective to mean of, pertaining to, or affecting the bladder is *vesical*. See Plates 41, 44.
air b. See air *vesicle*.
allantoic b. A urinary bladder which develops as an evagination of the cloaca, homologous to the allantois evagination.
atonic b. A urinary bladder in which the tonus of the detrusor muscle is markedly diminished or absent, usually as a result of partial or complete interruption of the sensory limb of the reflex arc (**sensory paralytic bladder**) as in tabes dorsalis, but occasionally as a result of prolonged overdistension secondary to injury of the motor neurones or nerves of the reflex arc (**motor paralytic bladder**) as seen in poliomyelitis.
autonomous b. A urinary bladder functioning abnormally when both limbs of the reflex arc which controls it are destroyed by lesions of the sacral cord, conus medullaris or cauda equina. Rarely seen in its pure form, the autonomous bladder is found in patients with extensive destruction of the lumbosacral spinal cord or when there is de-

struction of both sensory and motor roots in the sacral plexus. The condition is marked by loss of voluntary and reflex micturition and by painless overflow incontinence.

bilocular b. A sacculated urinary bladder having two pouches.

b. bar See bar of the bladder.

cord b. Dysfunction of the urinary bladder due to a lesion in the spinal cord.

dwarf b. Hypoplasia of the urinary bladder.

encysted b. A urinary bladder with communicating cysts.

gallbladder See *gallbladder*.

hourglass b. A urinary bladder in which there is a horizontal midvesical constriction.

hypertonic b. A condition of increased muscular activity of the urinary bladder which appears after recovery from the shock following section of its voluntary innervation.

hypotonic b. A urinary bladder in which the tonus of the detrusor muscle is diminished or absent as a result of either prolonged overdistension secondary to obstruction or of interruption, partial or complete, of the sensory limb of the reflex arc controlling normal vesical emptying.

irritable b. See nervous *b.*

motor paralytic b. See atonic *b.*

multilocular b. A sacculated urinary bladder having many pouches.

nervous b. A condition in which there is a frequent desire to urinate, with inability to perform the act perfectly. Syn., *irritable b.*

neurogenic b. A urinary bladder in a state of dysfunction due to lesions of the central or peripheral nervous system.

reflex b. A urinary bladder whose activity or function is dependent solely upon the primary (simple) reflex arc through the sacral cord, as the result of removal of suprasegmental control secondary to complete transection of the spinal cord, or gross lesions which result in profound disturbance of suprasegmental pathways, comparable to complete transection of the cord. Such a reflex bladder may have relatively normal capacity and may empty itself automatically at relatively normal intervals (*normal reflex b.*); or it may be contracted and spastic, with limited capacity and empty itself automatically at frequent and irregular intervals (*spastic reflex b.*). Syn., *spinal reflex b., reflex neurogenic b.*

sacculated b. Condition due to overextension of the urinary bladder; pouches in which urine may be held are formed by the forcing out of the mucous coat between the muscular bundles.

sensory paralytic b. See atonic *b.*

spastic reflex b. See reflex *b.*

stammering b. Condition in which there is interruption of the urinary stream; may be nervous or pathologic in origin.

tabetic b. See atonic *b.*

uninhibited b. An abnormal urinary bladder which shows only a variable loss of cerebral inhibition over reflex bladder contractions, representing, of all neurogenic bladders, the least variance from normal. The vesical reflex is intact, and micturition can be initiated and interrupted voluntarily. It is seen normally in infants and abnormally in the adult enuretic, and in patients with subtotal destruction of the cerebral cortex or cortical regulatory system.

blad'der train'ing. Establishing the control of urination as a habit during infancy or early childhood.

blade [AS. *blæd*]. 1. The cutting portion of a surgical knife or of surgical scissors. 2. One of the two arms or limbs of forceps.

shoulder b. The scapula.

Blaes, Gérard (Blasius) [*Dutch anatomist*, 1625–92]. Celebrated comparative anatomist and author of the first comprehensive treatise on the subject (1681). His name was once associated with the parotid duct, discovered by his pupil Stensen.

Blainville, Henri Marie Ducrotay de [*French anthropologist and zoologist*, 1777–1850]. Described congenital asymmetry of the ears. Once called *Blainville's ears*.

Blair, Vilray Papin [*American plastic surgeon*, 1871–]. Introduced special operations for the correction of single harelip and for removal of the tongue and the floor of the mouth, this being preceded by tracheotomy. Devised procedures for skin grafting. Intermediate split graft is known as the *Blair-Brown graft*, for Blair and James Barrett Brown. The *Blair-Brown knife* is a special skin-grafting knife with a long, razorlike blade, detachable from the handle. It has gauges to regulate accurately the thickness of the graft.

Blakemore's operation. See arterial *bridge*.

Blalock, Alfred [*American surgeon*, 1899–]. Known for his work on traumatic shock and an operation for the relief of congenital obstruction at the origin of the pulmonary artery by the creation of an artificial ductus arteriosus. A surgical anastomosis is made of an artery arising from the aortic arch to the side of one of the pulmonary arteries, thus permitting a larger quantity of blood to reach the lungs. Called *Blalock-Taussig operation*.

Blancard. See *Blankaart*.

Blandin, Philippe Frédéric [*French surgeon*, 1798–1849]. His name is associated with the anterior lingual glands. Described an operation for double harelip in which he excised a triangular wedge of the vomer with reduction of the projecting maxillary process; also described an operation for deviated nasal septum, and one for excision of the maxilla.

Blane, Gilbert [*Scottish surgeon*, 1749–1834]. Physician to the British fleet. Improved living conditions among sailors, especially by adding fresh fruit to their diet and thus lessening the incidence of scurvy (1795). Assisted in bringing about the British Quarantine Act. Among the greatest names in the annals of naval medicine.

Blanfordia. Synonym for *Oncomelania*.

Blankaart, Stephen (Blancard) [*Dutch physician*, 1650–1702]. Remembered for his preparation of pills of ferrous iodide. Author of a medical dictionary which, translated into English, was the first to be printed in the British Isles (1684).

Blasius, Ernst [*German surgeon*, 1802–75]. Remembered for his operation of blepharoplasty in which a skin flap was taken from the nose and forehead to form a lower eyelid.

Blasius, Gerardus. See *Blaes*.

blast [AS. *blæst*]. The compression or suction wave which is set up by the detonation of high explosives.

-blast [G. *blastos*, germ]. Combining form denoting a *sprout, shoot* or *germ*, specifically *in biology*, denoting a *formative cell*, a *germ layer* or *formative constituent of living matter*.

blas·te'ma (pl. *blastemata*) [G., offspring, excrescence]. 1. The formative cellular matrix from which an organ or part is derived. 2. A small bud of competent cells from which begins the regeneration of an organ or appendage. 3. Budding or sprouting part of a plant. 4. The formative lymph or fluid from which cells or organs are formed. *Obs.* —**blastemal, blastemat'ic, blaste'mic,** *adj.*

metanephric b. The caudal end of the nephrogenic cord.

blas'tin [G. *blastos*, germ]. A substance which stimulates cell growth and activity. A nutriment for cells.

blast in'ju ry. Trauma resulting from short-range exposure to the detonation of high explosives.

atmospheric b. i. Trauma caused by pressure on the body resulting in capillary hemorrhages of the lungs with hemoptysis; dyspnea and cyanosis are constant, lobar pneumonia may develop, and shock is often pronounced. The eardrums may be ruptured.

immersion b. i. Trauma caused by underwater explosion of a depth charge in close proximity. The abdominal viscera are most often injured, the injuries being serious due to the greater force exerted on the body in water. Symptoms and prognosis vary.

blas'to-, blast- [*blastos*]. A combining form denoting *connection with, or relation to, a bud, budding germ*, and especially *the early stages of the embryo*.

blas to-cele. See *blastocoele*.

blas'to-chyle (blas'to-kile) [*blastos*; G. *chylos*, *juice*]. The fluid in the blastocoele.

blas'to coele, blas'to-coel (blas'to-seel), **blas'to-cele** [*blastos*; G. *koilia*, cavity]. The central cavity of the blastula or blastocyst.

blas'to-cyst [*blastos*; G. *kystis*, bladder]. 1. A blastula. 2. The modified mammalian blastula consisting of trophoblast, inner cell mass, and blastocoele. See *blastula*.

Blas"to-cys'tis ho mi nis. A nonpathogenic fungous organism inhabiting the intestine of man and other animals.

blas'to-derm [*blastos*; G. *derma*, skin]. *In embryology*: 1. The cellular disk of blastomeres derived from the blastodisk of meroblastic ova. 2. The primitive germ layer or epithelium of a blastula or blastocyst from which the primary germ layers are derived. 3. By extension, the germinal membrane after the formation of the several germ layers. —**blastoder'mal, blastoder'mic,** *adj.*

bilaminar b. See bilaminar *blastodisk*.

embryonic b. That part of a blastoderm forming the embryo proper. Syn., *embryonic disk, embryonic shield*.

extraembryonic b. That part of a blastoderm forming the extraembryonic membranes.

trilaminar b. See trilaminar *blastodisk*.

blas'to-disk, blas'to disc [*blastos*; G. *diskos*, disk]. 1. The uncleaved cytoplasmic disk capping the embryonic pole of meroblastic ova. 2. The embryonic or germinal disk of mammals.

bilaminar b. A two-layered embryonic disk before mesoderm formation. See *gastrula*.

trilaminar b. The early embryo at the time of the formation of the mesoderm and the head process.

blas"to-gen'e-sis [*blastos*; G. *genesis*, production]. 1. The early development of the embryo during cleavage and the formation of the germ layers. See *organogenesis*. 2. Weismann's theory of the origin and development of the germ plasm, in contradistinction to Darwin's theory of pangenesis. 3. Reproduction by budding. Syn., *blastogeny*. —**blastogenic, blas togenet'ic,** *adj.*

blas tog'e ny (blas todj'i nee) [*blastos*; G. *genesthai*, from *gignesthai*, to be produced]. 1. Blastogenesis. 2. The germ history of an organism (Haeckel); division of ontogeny.

blas"to ki-ne sis (blas to-ki nee sis, ki-nee sis) [*blastos*; G. *kinesis*, motion]. A process of cephalocaudal reversal in the egg of insects and certain cephalopods.

blas tok e lin. A substance isolated from the expressed juice of many fruits, including the apple, pear, quince, and fig, which retards the germination of various seeds. It has been shown to be a mixture of malic and citric acids.

blas tol'y sis [*blastos*; G. *lysis*, a loosing]. Destruction of a blastoderm or germ cell.

blas to ma [*blastos*; G. *-ōma*, tumor]. 1. A tumor which originates from embryonal cells, as fibroblastoma, chondroma. 2. A true tumor. —**blastom atous,** *adj.*

b., ependymal. See *ependymoma*.

lymphoepitheliomatous b. See *lymphoepithelioma*.

-blas to ma. Suffix used to indicate a tumor that originates from embryonal cells.

blas tom a to-gen'ic [*blastos*; *-ōma*; G. *genesthai*, from *gignesthai*, to be produced]. Pertaining to factors or agents which excite cellular multiplication resulting in neoplastic growth.

blas to mere [*blastos*; G. *meros*, part]. A cleavage or segmentation cell; any one of the cells into which the fertilized ovum divides.

formative b. One destined to form a part of the embryo, not its membranes.

Blas"to-my'ces (blas to-my sees) (pl. *Blastomycetes*) [*blastos*; G. *mykēs*, fungus]. A genus of fungi pathogenic to man. Syn., *Paracoccidioides, Zymonema*.

B. brasiliensis. A species which is the etiologic agent of South American blastomycosis. It reproduces in tissues and in culture at 37° C. by multiple-budding cells and thereby differs from the singly budding cells of the *B. dermatitidis*. Syn., *Paracoccidioides brasiliensis*.

B. dermatitidis. A fungus, the causative agent of North American blastomycosis, a cutaneous or systemic, suppurative granulomatous disease. The organism is spheroid and budding in tissues, it produces aerial hyphae in culture. See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

Blas"to my-ce'tes (blas to-migh-see tees). Plural of *Blastomyces*.

blas"to-my ce'ti [*blastos*; *mykēs*]. Pertaining to, or caused by, the budding fungi Blastomycetes.

Blas"to-my-coi'des (blas"to-migh-koy dees) [*blastos*; *mykēs*; G. *eidos*, form]. Name proposed by Castellani for a genus of fungi.

B. dermatitidis. Synonym for *Blastomyces dermatitidis*.

B. immitis. Synonym for *Coccidioides immitis*.

blas"to-my co sis [*blastos*, *mykēs*; G. *-ōsis*, condition]. Originally this term represented a more or less definite clinical syndrome, but it has come to mean all diseases produced by budding, yeastlike organisms. Diseases vary in different countries and have different causative agents, but are similar in that they are granulomatous and may involve not only the skin but the viscera and bony structures as well.

European b. See *cryptococcosis*.

Jorge Lobo's b. A very rare chronic dermatomycosis, reported only in Brazil, characterized clinically by pseudo-keloid conglomerate cutaneous nodules, variable in number and size, which may become fistulous and suppurative.

North American b. A generalized mycosis, usually with skin lesions, caused by the *Blastomyces dermatitidis*. Also called *Gilchrist's disease*.

South American b. See *paracoccidioidal granuloma* under *granuloma*.

blas"to neu'ro-pore [*blastos*; G. *neuron*, nerve; *poros*, passage]. The temporary aperture in certain embryos formed by the coalescence of the blastopore and neuropore.

blas to pore [*blastos*; *poros*]. External opening of

the archenteron in gastrula. The avian and mammalian primitive streaks have been regarded by some as closed blastopores hence the primitive pit, or the opening into the notochordal canal, may be considered a remnant of blastopore. Also called *archistome*, *gastropore*, *primitive mouth*.

blas'to-sphere. See *blastula*, *blastocyst*.

blas'to-spore [blastos G *spora*, seed]. A spore formed by budding in the asexual reproduction of fungi; type of thallospore. —**blastospor'ic**, *adj*

blas-tot'o-my [*blastos*; G *tomē*, a cutting]. The separation of blastomeres or groups of blastomeres, either naturally or artificially

blas'tu-la [L., dim. from G *blastos*]. A spherical mass consisting of central cavity surrounded by single layer of cells produced by the cleavage of the ovum; frequently modified by the presence of yolk. Syn., *blastodermic vesicle*, *germ* or *germinal vesicle*, *blastosphere*, *blastocyst*. Also called *vesicular morula*. —**blastular** *adj* **blastula'tion**, *n*.

Bla-tel'la [L. *blatta*, an insect that shuns the light]. A genus of cockroaches whose species are important as transmitters of human pathogens.

B. germanica. A species which can serve as the intermediate host of *Hymenolepis diminuta*. Syn., Croton bug

Blat'ta [L., an insect that shuns the light]. A genus of cockroaches of the Blattidae. The species **B. orientalis**, the oriental cockroach, has been incriminated as an intermediate host of *Hymenolepis diminuta*.

Blaud's pill. One containing ferrous carbonate, usually 60 mg.

bleach'ing pow der Chlorinated lime.

bleb [dialect E. from *blob*, suggesting bubbling sound]. A skin blister or vesicle filled with serum or blood; bulla.

bleed'er [AS. *blēdan*, to bleed]. One who is subject to frequent hemorrhages, as hemophiliacs.

bleed'ing [*blēdan*]. The escape of blood from the vessels; venesection.

bleed'ing time. The time required for bleeding to cease from puncture wound, usually of the ear lobe or ball of the finger. In the Ivy modification, the test is performed distal to an area compressed by blood-pressure cuff inflated to 40 mm. Hg pressure. The normal value varies with the method. Also see *clotting time*, *clot retraction time*, *prothrombin time*, *recalcified clotting time*.

Blégny, Nicolaus de [*French physician*, 1652–1722]. Published the first medical journal in Paris (1679). Remembered for his invention of the truss for inguinal hernia (1676). Was one of the first in France to contribute to the study of legal medicine (1684).

blen'nen-trope [G *blemma*, glance; *trepein*, to turn]. Apparatus for showing the various positions of the eye in its orbit.

blend'ing. The mutual solubilization of two normally immiscible solvents by the addition of colloidal electrolyte.

blen'no-, blenn- [G *blenna*, mucus]. A combining form denoting *presence of* or *relation to*, *mucus*.

blen"noph-thal'mi-a [*blenna*, G *ophthalmia*, ophthalmia]. Catarrhal conjunctivitis.

blen"nor-rha'gi a [*blenna*; G *rhēgnynai*, to burst] 1. An excessive mucous discharge. 2. Gonorrhea.

blen"nor-rhe'a [*blenna*; G *rhoia*, flow]. Blennorrhagia.

inclusion b. See inclusion *conjunctivitis*.

neonatal b. See inclusion *conjunctivitis*.

bleph'a-ra. Plural of blepharon.

bleph"ar-ad"e-ni'tis, bleph" -ro-ad"e-ni'tis [G *blepharon*, eyelid; *adēn*, gland -*itis*, inflammation]. Inflammation of the tarsal glands.

bleph ral [*blepharon*]. Relating to the eyelids.

bleph"a-rec'to-my [*blepharon*; G. *ektomē*, excision]. Excision of part or the whole of an eyelid.

bleph"ar-e-de'ma, bleph a-ro-e-de'ma [*blepharon*, G *oidēma*, swelling]. Swelling or edema of the eyelids.

bleph"ar-e-le sis. Entropion.

bleph rism [G *blepharizein*, to wink]. Rapid involuntary winking; spasmodic nictitation.

bleph" ri'tis [G. *blepharon*, eyelid; -*itis*, inflammation]. Inflammation of the eyelids.

b. angularis. That involving the medial commissure with blocking of puncta lacrimalia.

b. ciliaris. Inflammation of the hair follicles and sebaceous glands along the margins of the lids.

b. gangraenosa. Carbuncle of the lids.

b. marginalis. See b. ciliaris.

b. parasitica. Marginal blepharitis caused by lice and/or mites.

b. simplex. Mild inflammation of the borders of the eyelids with the formation of moist yellow crusts on the ciliary margins which glue the eyelids together

b. squamosa. Marginal blepharitis with the formation of branny scales.

b. ulcerosa. Marginal blepharitis with ulcer formation.

bleph ro-, blephar- [*blepharon*]. A combining form denoting *relating to the eyelid*.

bleph"a-ro-ad" ni'tis. See *blepharadenitis*.

bleph"a-ro ad"e-no ma [*blepharon*; G *adēn*, gland; -*ōma*, tumor]. Adenoma of the eyelid.

bleph"a ro-ath"er-o ma [*blepharon*; G *athērē*, porridge -*ōma*]. Sebaceous cyst of the eyelid.

bleph" ro-blen nor rhe a [*blepharon*, G *blenna*, mucus; *rhoia*, flow]. Conjunctivitis with purulent discharge.

bleph a ro lax'a sis (blef h kal h-sis) [*blepharon*, G *chalasis*, slackening]. A redundance of the skin of the eyelids which causes the skin to fold over and hang down. In some persons it hides the tarsal margin when the lids are open.

bleph -ro chrom"hi-dro'sis [*blepharon*, G *chrōma*, color; *hidrōsis*, sweating]. Colored sweat of the eyelids, usually of bluish tint.

bleph"a-ro-clei'sis (blef"uh-ro-kly sis) [*blepharon*, G *kleisis*, closing]. Ankyloblepharon; abnormal closure of the eyelids.

bleph"a-roc'lo-nus [*blepharon*, G *klonos*, agitation] Spasm of the orbicularis oculi muscle.

bleph" ro-col"o-bo ma. See *coloboma* palpebrae.

bleph ro-con junc"ti vi'tis [*blepharon*; L. *conjunctiva*; G -*itis*, inflammation] Inflammation of both the eyelids and the conjunctiva.

bleph ro di as ta sis (blef"uh-ro-dye-ass tuh-sis) [*blepharon*, G *diastasis*, separation]. Excessive separation of the eyelids Inability to close the eyelids completely

bleph"a-ro-dys-chroi'a [*blepharon*, G. *dys*- prefix meaning hard, bad, unlucky; *chroia*, skin]. Discoloration of the eyelid from nevus or from any other cause

bleph" -ro-e-de ma. See *blepharedema*.

bleph -ro-me las'ma [*blepharon*, NL., from G. *melasma*, black spot]. Seborrhea nigricans occurring on the eyelid.

bleph' ron (pl. **blephara**) [G.]. The eyelid; palpebra.

bleph a ron cus (blef"ah rong'kus) [*blepharon*; G *onkos*, mass]. A tumor or swelling of the eyelid. —**blepharoncosis**, *n*.

bleph ro pa-chyn si (blef" h ro-pa kin sis) [*blepharon*; G *pachynsis*, thickening]. thickening of the eyelid.

bleph"a·ro·phi·mo·sis (blef"uh·ro·figh·mo'sis, ·fi·mo·sis) [*blepharon*; G. *phimōsis*, muzzling]. Abnormal smallness of the palpebral aperture.

bleph"a·ro·phry·plas"ty [*blepharon*; G. *ophrys*, eyebrow; *plassein*, to form]. Plastic surgery of the eyebrow and eyelid. —**blepharophryplas'tic**, *adj.*

bleph"a·ro·phy'ma [*blepharon*; G. *phyma*, tumor]. A tumor of or outgrowth from, the eyelid.

bleph'a·ro·plast" [*blepharon*; *plassein*]. 1. A basal body from which a cilium or flagellum grows. 2. A centriole which forms such basal bodies.

bleph'a·ro·plas"ty [*blepharon*; *plassein*]. An operation for the restoration of any part of the eyelid. —**blepharoplas'tic**, *adj.*

bleph"a·ro·ple'gi·a [*blepharon*; G. *plēgē*, stroke]. Paralysis of an eyelid.

bleph"a·rop·to'sis [*blepharon*; G. *ptōsis*, falling]. Drooping of the upper eyelid.

bleph"a·ro·py"or·rhe'a [*blepharon*; G. *pyorroia*, discharge of matter]. A flow of pus from the eyelid.

bleph"a·ror'rha·phy [*blepharon*; G. *rhaphē*, suture]. Repair by suturing of a cut or lacerated eyelid.

bleph'a·ro·spasm" [*blepharon*; G. *spasmos*, spasm]. Spasm of the orbicularis oculi muscle; excessive winking.

bleph"a·ro·sphinc"ter·ec'to·my [*blepharon*; G. *sphinktēr*, binder; *ektomē*, excision]. An operation to lessen the pressure of the upper lid upon the cornea.

bleph'a·ro·stat" [*blepharon*; G. *statos*, standing]. An instrument for holding the eyelids apart during operations upon the eyes or lids.

bleph"a·ro·ste·no'sis [*blepharon*; G. *stenos*, narrow; *-ōsis*, condition]. Pathologic narrowing of the space between the eyelids, or palpebral aperture.

bleph"a·ro·sym'phy·sis [*blepharon*; G. *symphysis*, growing together]. The adhesion or growing together of the eyelids; blepharosynechia.

bleph"a·ro·syn"e·chi'a (blef"uh·ro·si·neck·ee·uh, ·sin·e·kigh·uh, ·si·nee'kee·uh) [*blepharon*; G. *synecheia*, holding together]. Adhesion or growing together of the eyelids.

bleph"a·rot'o·my [*blepharon*; G. *tomē*, cutting]. Incision into the eyelid.

blep·so·path'i·a, blep·sop'a·thy [G. *blepsis*, sight; *pathos*, suffering]. Eyestrain.

Blessig, Robert [*Russian physician*, 1830–78]. Remembered for his studies of the retina. Described grooves seen in the fundus of the optic cup and the tiny cystic spaces seen at the margin of the retina, which are called *Blessig-Iwanoff cystoid degeneration of retina*.

blight. A fungus disease of plants.

blind [AS.]. Without sight; deprived of sight.

blind gut. The cecum.

blind'ness [AS. *blind*]. Loss or absence of vision; inability to see. Also called *caecitas*, *typhlosis*. See also *amaurosis*.

amnesic color b. See under *colorblindness*.

central b. Blindness in the central area of the visual field, or involving the normal point of fixation caused by a lesion and dysfunction of the macular region of the eye.

cerebral b. See *psychic b.*

color b. See *colorblindness*.

cortical b. That resulting from a lesion of the cortical visual center.

day b. A type of eye defect in which there is no sense of color and which is accompanied by photophobia. See *hemeralopia*.

eclipse b. Blindness after looking directly at an eclipse of the sun, caused by a thermal lesion in the retina.

electric-light b. A condition similar to snow blindness, due to exposure of the eyes to intense and prolonged electric illumination.

green b. A variety of colorblindness in which green is not distinguished; aglaucopsia.

night b. See *night blindness*.

psychic b. Loss of conscious visual sensation from destruction of the cerebral visual center while pupillary reactions remain intact.

red b. Defective vision for red. Also called *green-sightedness*. See *protanopia*.

snow b. See *snowblindness*.

sun b. Blindness, either temporary or permanent, caused by retinal injury resulting from gazing at the sun without adequate protection; also called *photoretinitis*.

toxic b. See toxic *amaurosis*.

uremic b. See toxic *amaurosis*.

violet b. Amianthinopsy.

word b. See *aphasia*.

blind spot. That spot on the retina not affected by light; the place where the optic nerve leaves.

blink'ing [ME. *blenken*]. Involuntary winking.

blis'ter [ON. *blāstr*, swelling]. 1. A vesicle resulting from the exudation of serous fluid between the epidermis and true skin. 2. The agent by which the blister is produced.

ambulant b. One that is shifted to different places.

blood b. One that contains blood.

fever b. Herpes simplex of the lips.

fly b. A blister of cantharides.

flying b. One that remains long enough to produce redness of the skin but not vesication.

pus b. One containing purulent matter, usually from infection of the serum in a blister.

water b. One with watery contents.

blis'ter·ing [*blāstr*]. Forming a vesicle upon the skin. Syn., *epispastic*.

Blix, Magnus Gustav [*German physiologist*, 1849–1904]. Author of an important work on the physiology of the cutaneous nerves and muscular contractions (1884). Devised a method of centrifuging blood specimens, separating white from red cells.

bloat [perhaps from AS. *blātian*]. 1. Puffiness; distention; edema; turgidity from any cause. 2. *In veterinary medicine*, an abnormal accumulation of gas in the stomach or intestines, resulting in distention of the abdomen. Also called *wind colic*, *hoove*.

Bloch, Felix (1905–) American physicist who discovered a technique which simplified the analyses of the atomic nucleus. With Edward M. Purcell he received the Nobel prize for physics in 1952.

Bloch, Oscar Thorvald [*Swedish surgeon*, 1847–1926]. Widely known in his time for his bold work on colonic surgery. Devised a two-stage removal of the rectum for carcinoma (1892).

block [OF. *bloc*]. To obstruct the path of sensory impressions by the injection of an anesthetic agent into the region of the nerve trunks in the area of surgical operation.

block. 1. Any obstruction of a passage or opening. 2. Any form of interference with the propagation of an impulse, as in heart or nerve block, or regional anesthesia. 3. *In dentistry*, a set of two or more artificial teeth (block teeth) carved as one piece on a porcelain base to which the corresponding section of the gum (gum block) has been added. 4. *In dentistry*, a mass of gold foil for filling teeth, made by folding a tape of foil upon itself several times to secure a block of the thickness desired. 5. *In histology*, a paraffin or celloidin block in which a slice of tissue is embedded to facilitate

the cutting of thin sections by microtome. 6. *In psychiatry* see *blocking*. —block, *v*.

air b. An air leak from the lung alveoli into the pulmonary connective tissue and mediastinum, which obstructs the normal inflow and outflow of air and pulmonary blood.

arborization b. See heart block.

bite b. (a) *In dentistry* device for registering the proper interrelation of upper and lower jaws, with or without the presence of teeth. (b) Hard rubber device used in bronchoscopy.

bundle branch b. See *heart block*.

ear b. Trauma, inflammation and pain of the middle ear due to blocked auditory tube, observed in individuals subjected to sudden and extreme variations in barometric pressure.

field b. Regional anesthesia by surrounding an operative field with an anesthetic wall.

ganglionic b. That form of block anesthesia in which the anesthetic solution is infiltrated into the vicinity of sympathetic or dorsal root ganglion. The two ganglions most frequently blocked are the semilunar and stellate.

heart b. See *heart block*.

manometric b. An obstruction to the free flow of cerebrospinal fluid as measured by lumbar or cisternal puncture or both. The block may be partial or complete.

nerve b. See *nerve block*.

presacral b. See parasacral *anesthesia*.

sacral b. Anesthesia induced by injection of the anesthetic agent usually through the sacral hiatus.

saddle b. The appearance of saddle-shaped area of anesthesia or bilateral sensation loss, which occurs in caudal anesthesia.

segmental b. Anesthesia producing blockage of both sensory supply of visceral organ and somatic nerves of the region of approach.

sinoatrial b. See *heart block*.

spinal b. Obstruction to the flow of spinal fluid when the spinal canal is blocked.

subarachnoid b. A condition in which some obstructing mass prevents the normal flow of cerebrospinal fluid. Evidenced by failure of rise of pressure in the lumbar manometer during jugular compression, the Queckenstedt-Stookey test.

transsacral b. Anesthesia of the sacral nerves approached through the posterior sacral foramens.

tubal b. Obstruction of the lumen of tube. See ear b.

ventricular b. Block of the interventricular foramens, the cerebral aqueduct, or the lateral and medial apertures of the fourth ventricle; interfering with the flow of cerebrospinal fluid from the brain ventricles and causing internal hydrocephalus.

block'ing [*bloc*]. 1. Interference with the propagation of nerve currents in certain direction. 2. *In psychoanalysis*, sudden inhibition in both the progression and expression (speech, writing) of flow of thought, occurring at times normally as the result of some strong affect, as anger or surprise. In free association it is due to revival of painful complex. 3. *In psychiatry*, the process of sudden interruption of thought in schizophrenia, resulting in an abrupt change of subject, stopping or slowing down of speech or writing. 4. Fastening histologic specimen on microtome spool, in preparation for cutting.

Blocq, Paul Oscar [*French physician*, 1860–96]. His name is often associated with the ataxia condition astasia-abasia.

blood [AS. *blōd*]. The fluid tissue which circulates through the heart, arteries, capillaries, and veins, supplies oxygen and food to the other tissues of the body and removes from them carbon dioxide and waste products of metabolism. It is made up of plasma and cellular elements. The latter consists of erythrocytes, leukocytes, and blood platelets. One cu. mm. of normal blood contains about 6,000 white and 5,000,000 red cells. The bright red color of arterial blood is due to the oxyhemoglobin of the red cells, the darker red of venous blood to reduced hemoglobin or methemoglobin. The total amount of blood is equal to about 1/13 of the body weight. On removal from the body and under abnormal conditions in the body blood coagulates, forming red clot from which yellowish fluid, the serum, can be expressed. Healthy blood contains about 78% water and 22% solids. For normal values of blood constituents, see Table in the Appendix. Also see blood *island*, hematogenous *pigment*, *blood groups*, *serum*, *typing*. See Plate 5.

arterial b. The blood in the vascular system from the point of origin of the small venules in the lungs to the capillary beds in tissues where oxygen is released and carbon dioxide taken up. Normally the partial pressure of oxygen (pO_2) is higher and that of carbon dioxide (pCO_2) lower than in venous blood.

b. cell. See *erythrocyte*; *leukocyte*. See also Plate 26.

b. clot. A semisolid coagulum of blood.

b. corpuscle. See *erythrocyte*; *leukocyte*. See also Plate 26.

b. count. See *blood count*.

b. culture. Culture of blood on artificial media to determine the presence or absence of microorganisms.

b. groups. See *blood groups*.

b. platelets. Spheroidal or ovoid, light-gray bodies found in blood, about 1.0 to 3.5μ in diameter and numbering about 300,000 per cubic millimeter; an important factor in blood coagulation. Syn., *thrombocytes*, *thromboplastid*. See Plate 26.

b. vessel. An artery, vein, or capillary.

cord b. Blood obtained from the umbilical cord.

defibrinated b. That from which the fibrin is removed.

laked b. That in which the red blood cells are hemolyzed.

occult b. Small amounts of blood, as in gastric contents, which are not visible. Their presence is determined by chemical tests.

sludged b. A change in vivo in the fluidity of blood from normal. This change may be produced by one or more of the following: aggregates of erythrocytes, leukocytes, platelets, or change in the viscosity of the plasma.

venous b. The blood in the vascular system from the point of origin of the small venules in tissues to the capillary bed in the lungs where carbon dioxide is released and oxygen taken up. Normally the partial pressure of oxygen (pO_2) is lower and that of carbon dioxide (pCO_2) higher than in arterial blood.

blood bank. A reserve stock of whole blood or plasma, obtained from suitable donors, stored under refrigeration for use in emergencies when erythrocytes, serum proteins, or antibodies are needed. See bank.

blood-brain bar'ri·er. See under *barrier*.

blood-cer"e·bro·spi'nal-fluid bar'ri·er. See under *barrier*.

blood-cor'ti·cal bar'ri·er. See blood-brain *barrier*.

blood count. The determination of the number of red and white cells per cubic millimeter of blood. This is done with hemocytometer. The **differential blood count** is that made to estimate the percentage of each different type of

leukocyte per cubic millimeter of blood. The **absolute blood count** determines the total number of each different type of leukocyte; this is obtained by multiplying the total leukocyte count per cubic millimeter by the percentage of each type, as shown by the differential count.

Arneth's blood c. See Joseph *Arneth*.

Schilling b. c. See Victor *Schilling*.

blood do·nor cen'ter. A central establishment where facilities are provided for the collection, processing, storage, and distribution of blood and plasma. During World War II, such center was operated by the Red Cross in most large cities.

Bloodgood, Joseph Colt [*American surgeon*, 1867–1935]. Known for his operation for the radical cure of inguinal hernia by transplanting the rectus muscle and obliterating the conjoined tendon (1919). Remembered for his interest in chronic mastitis in connection with senile hypertrophy of the female breast and for his contributions to the knowledge of mammary cancer.

blood group'ing. Determination of an individual's blood group by laboratory tests; blood typing. Also see *cross-matching*, *antiglobulin* (*Coombs*) *test*.

blood groups. Immunologically distinct, genetically determined groups of human erythrocytes, depending on specific antigens (agglutinogens) in the erythrocytes for which the groups are named, and antibodies (agglutinins) in the serum. When incompatible bloods are mixed, agglutination results, which may be followed by hemolysis. Blood groups are of great importance in blood transfusions, hemolytic disease of the newborn (*erythroblastosis fetalis*) and in medicolegal problems.

In the **Standard** or **Universal grouping** (**Landsteiner's**) the agglutinogens, A and B, can be lacking, or one or both be present in given individual; the serum contains those isoagglutinins (anti-A or α, anti-B or β antibodies) which react upon the agglutinogens not present in the individual's erythrocytes. Thus

Antigens on cells	O	A	B	AB
Antibodies in serum	anti-A anti-B	anti-B	anti-A	

Group A has been split into various subgroups (A_1, A_2, etc.). Moss grouping IV, II, III, I, and Jansky I, II, III, IV are equivalent to the Standard grouping. Commonly involved in erythroblastosis fetalis and in transfusion reactions are the

Rh—H groups

d	postulated	Hr₀
e		hr"

Other groups are **Fyᵃ-Fyᵇ** (**Duffy**), **JKa-JKb** (**Kidd**), **K** (**Kell**)-**k** (**Cellano**), **Leᵃ-Le** (**Lewis**), **Luᵃ-Lu** (**Lutheran**), **M-N**, **S-s**, **P**, **U**, **Tjᵃ** (a tumor factor) and other rare groups. New groups are still being determined. Comparable, antigenically distinct blood groups are also found in certain species of animals.

b.g. in platelets. The presence of the A and B antigens in human blood platelets; from four to eight such antigens have been postulated.

Do b. group. A blood group in dogs, analogous to Rh in man. It may cause jaundice in the young because of incompatibility with the mother.

blood'less [AS *blōdlēas*]. Without blood; blanched; exsanguinate.

blood'let"ting. Venesection.

blood poi'son·ing. Septicemia.

blood pres'sure. The pressure exerted by the blood within the arteries, depending upon the force of the heart beat, elasticity of the vessel walls, resistance of the capillary bed, and volume and viscosity of the blood. The systolic pressure depends upon the ventricular systole, and the diastolic upon the diastole. The difference between the systolic and the diastolic is the pulse pressure. Abbreviated B.P.

negative b. p. Pressure which is less than that of the atmosphere. It exists in the large veins near the heart, owing to the aspirating action of the thorax.

blood'root". Sanguinaria.

blood sub'sti·tute. Some substance, or combination of substances, used in place of blood, such as dextran, polyvinylpyrrolidone, plasma, albumin, acacia, gelatin, or mineral salts.

blood typ'ing. Determination of an individual's blood group by laboratory tests. Also see *cross-matching*, *blood groups*, antiglobulin (Coombs) *test*.

blood urea ni'tro·gen. See under *nitrogen*.

Blot, Claude Philibert Hippolyte [*French obstetrician*, 1822–88]. Remembered for his invention of scissors designed for performing craniotomy in difficult labor; called *Blot's scissors*.

blow'fly". See *Calliphoridae*.

blue baby. See blue baby.

blue drum. A distinct blue appearance of the tympanic membrane. It may be due to congenital prominence of the jugular bulb or to disease of the middle ear which permits the jugular vein to be seen through the drum membrane.

blue mass. Massa hydrargyri, mercury mass. *Obs.*

Blumberg's sign. See under *sign*.

Blumenau, Leonid Vasilievich [*Russian neurologist*, 1862–1931]. Known for his description of the lateral part of the cuneate nucleus.

Blumenbach, Johann Friedrich [*German anthropologist*, 1752–1840]. Celebrated in the fields of medicine, physiology, and comparative anatomy. The founder of modern anthropology, his system of classification with few changes is still good after the lapse of a century. His studies of human craniums are especially noteworthy.

Blumer's shelf. A pathological finding observed on rectal examination, due to a thickening of the peritoneum of the rectouterine pouch which produces a shelflike projection into the rectum. The thickening may be due to an inflammatory or neoplastic process. Also called *rectal shelf*.

Blumgart, Herrman Ludwig [*American physician*, 1895–]. Known for his original work with D. D. Berlin and S. A. Levine in the treatment of angina pectoris by total thyroidectomy (1933); for his studies of circulation time, and of coronary artery disease.

blunt'-hook. An obstetric instrument, used mainly in embryotomy.

blutene chloride. Trade-marked name for the antiheparin-active dye tolonium chloride or toluidine blue O. It is useful in treatment of idiopathic functional uterine bleeding.

blu"ter·krank'heit [Ger., bleeder's disease]. See *hemophilia*.

Blyth's test. See under *test*.

B. M. A. British Medical Association.

B. M. R. Basal metabolic rate.

BNA Basle Nomina Anatomica. See *Basle anatomical nomenclature*.

board of health. An official board in a municipal-

ity, state, or province, responsible for maintaining public health through sanitation and preventive medicine.

Boari, Achille [*Italian surgeon*, nineteenth century]. Described transplantation of the ductus deferens into the urethra for the relief of male sterility (1896). Called *Boari' operation*.

Boas, Ismar Isidor [*German physician*, 1858–1938]. Internationally famed gastroenterologist. Performed aspiration of the duodenum (1889) and introduced, with Ewald, the test meal (1885). He invented an algesimeter or apparatus to determine the relative sensitiveness over the epigastrium compared to the normal tolerance; said to be of value in the diagnosis of gastric ulcer. Described tender point at the left of the twelfth thoracic vertebra, found in patients with gastric ulcer, known as *Boas' point*. Introduced tests for intestinal stasis and for hydrochloric acid in the gastric contents. See Boas *test*, Boas' *reagent*. Described sign of cholecystitis. See Boas *sign*. With Bruno Oppler he described Lactobacillus. See *Lactobacillus of Boas-Oppler*.

Boatia. See *Boatiea*.

Bobbs, John Stough [*American surgeon*, 1809–70]. The first to perform cholecystotomy for the removal of stones in the gallbladder (1868).

Bobroff, F. V. [*Russian surgeon*, 1858–]. Described osteoplastic closure of spina bifida, called *Bobroff' operation*.

Bochdalek, Victor [*Bohemian anatomist*, 1835–83]. Described the lumbocostal triangle, called *Bochdalek' triangle*.

Bochdalek, Vincent Alexander [*Bohemian anatomist*, 1801–83]. Described many anatomic structures which, for time, bore his name, as the submaxillary ganglion, muscle of the tongue, cavity of the thyroglossal duct, and fold of the lacrimal duct.

Bock'hart's im pe-ti'go. See *impetigo follicularis*.

Bodansky's method. See under *method*.

Bodian, David [*American neurologist*, 1910–]. Known for his silver impregnation method for the demonstration of nerve fibers, in which protargol activated by metallic copper is used.

Bo'do [L.]. A genus of flagellate protozoa. Found in feces, urine, and ulcerations, but thought to be of little or no pathologic importance.

bod'y [AS. *bodig*]. 1. The animal frame with its organs. 2. A cadaver or corpse. 3. The largest and primarily central part of an organ, as the body of the uterus. 4. A mass of matter. 5. A small organ, as the carotid body. Also see *corpus*, *corpuscle*.

amyloid bodies. Microscopic, concentrically laminated, hyaline bodies occurring in the acini of the prostate, in the meninges, in diseased lungs, occasionally in other sites, and staining like amyloid with metachromatic aniline dyes. Syn., *corpora amylacea*.

anococcygeal b. 1. The anococcygeal muscle. 2. The coccygeal body.

aortic bodies. Irregular epithelioid masses associated with the aortic arch and innervated by the cardiac branches of the vagus; chemoreceptive in function; stimulated most importantly by arterial hypoxemia, but also responsive to other chemical changes; also called *glomera aortica*.

apical b. Acrosome.

asbestos bodies. Long, slender cylinders with transparent capsule composed of protein and core of altered asbestos fiber. They are found in the lungs, air passages, sputum, and feces in asbestosis.

Aschoff's bodies. See *Aschoff's nodule*.

asteroid bodies. 1. Star-shaped inclusion bodies found in the cytoplasm of giant cells in granulomas, as in sarcoidosis and berylliosis. 2. Ray fungus in tissues. Also see *Actinomyces* and *Nocardia*.

Auer bodies. Large granules, globules, or slender rods of azurophilic substance, which are peroxidase-positive and give positive reactions for protein, found in the cytoplasm of myeloblasts, myelocytes, monoblasts, monocytes, and histiocytes in acute leukemia.

basal bodies. Minute granules at the bases of cilia or flagella, derived from the centriole and producing the cilia or flagella. Also called *blepharoplast*.

b. of Retzius. A condensed protoplasmic mass with pigment granules found at the lower end of the hair cells.

Bracht-Wächter b. A small perivascular lesion found most frequently in the myocardium. Similar to the Aschoff nodule, it is characterized by the many lymphocytes surrounding an area of necrosis, the presence of many fibroblasts, and the small number of polymorphonuclear leukocytes.

Call-Exner bodies. Small central cavities surrounded by granulosa cells, seen in certain feminizing tumors of the ovary.

carotid bodies. Epithelioid masses similar in structure and function to the aortic bodies; situated at or near the carotid bifurcation, and innervated by the intercarotid or sinus branch of the glossopharyngeal nerve; formerly called *glomera carotica*.

cavernous bodies. The corpora cavernosa. See under *corpus*.

central b. Centrosome: sometimes incorrectly applied to centriole.

chromaffin bodies. Small bodies on either side of the abdominal aorta, which give brown coloration with chromic acid or its salts. Also called *paraganglions*. Formerly called *Zuckerkandl' bodies*.

chromatin bodies. Chromosomes.

chromatoid bodies. Variously shaped dark bodies seen in the cystic stage of amebae when stained with hematoxylin.

ciliary b. The ciliary muscle and processes.

coccygeal b. A small, vascular nodule at the tip of the coccyx. Formerly called *glomus coccygeum*.

cytoid bodies. Knoblike swellings of nerve fibers visible on the retina, which may be degenerated masses isolated or continuous with neuroglial cells; also called *ganglioform swellings*.

Döhle bodies. Basophilic cytoplasmic bodies found in neutrophils, most often in scarlet fever and sometimes in other infections.

Donovan bodies. Short rod- or oval-shaped encapsulated organisms occurring in the cytoplasm of large mononuclear cells from ulcers of granuloma inguinale; better demonstrated by Wright than Giemsa's stain.

epithelial b. A parathyroid gland. *Obs.*

foreign b. A substance occurring in any organ or tissue where it is not normally found.

fuchsin bodies. Inclusion bodies of keratohyalin, sometimes seen in the cytoplasm of epithelial tumor cells.

Gamna-Favre bodies. Small cytoplasmic inclusions characteristic of venereal lymphogranuloma.

geniculate bodies. Four oval, flattened bodies on the posterior inferior aspect of the thalamus. The medial geniculate bodies receive auditory impulses by way of the brachia of the inferior colliculi and relay them to the temporal cortex via the auditory radiations. The lateral geniculate bodies receive optic impulses by way of the optic tracts and relay them to the occipital cortex via the geniculocalcarine tracts.

Guarnieri bodies. See Giuseppe *Guarnieri*.

Hassall's b. See thymic *corpuscle*.

Heinz-Ehrlich bodies. Highly refractile inclusion bodies in erythrocytes, found in association with hemolytic anemias due to oxidative toxic compounds. The inclusions do not stain with Wright's stain or the Romanovsky dyes, but are readily seen in wet preparations where they may exhibit Brownian motion.

Herring bodies. Granular bodies found in the neurohypophysis, thought to be terminal bulbs of fibers of the hypothalamo-hypophyseal tract, in which neurosecretory material has accumulated.

Howell-Jolly bodies. See William Henry *Howell*.

immune b. Old term for immune hemolysin. See *antibody*.

inclusion bodies. Those found in cells under special conditions.

inferior quadrigeminal b. Inferior colliculus.

intermediate b. of Flemming. In mitosis, a small, darkly staining, acidophilic body to which the two daughter cells are briefly attached during the telophase.

juxtarestiform b. The medial part of the inferior cerebellar peduncle which contains vestibulocerebellar and fastigiobulbar fibers; it is medial to the restiform body proper.

ketone b. A group name for any of the compounds, β-hydroxybutyric acid, acetoacetic acid, or acetone, which simultaneously increase in blood and urine in diabetic acidosis, starvation, pregnancy, after ether anesthesia, and in other conditions. See Table of Normal Values of Blood Constituents in the Appendix.

Kurlov b. See Mikhail Georgievich *Kurlov*.

L.C.L. bodies. Clusters of minute spherical or coccoid elementary inclusion bodies found within reticuloendothelial cells and in body fluids of birds and humans infected with psittacosis (ornithosis); so-called because described independently by Levinthal, Cole, and Lillie (1930).

Leishman-Donovan bodies. Small, parasite-like bodies in the liver and spleen of those suffering from kala-azar.

Lipschütz bodies. Eosinophilic intranuclear inclusions with margination of the nuclear chromatin commonly found in the vesicles of herpes; also called *Zoster bodies of Lipschütz*. Syn., *Type A inclusion bodies* (Cowdry).

lupus erythematosus (L.E.) b. See under *cell*.

Mallory bodies. Oval acidophilic hyalin inclusion bodies of cytoplasm of hepatic cells, observed in Laennec's cirrhosis.

Malpighian b. (a) A renal corpuscle. (b) A lymph nodule of the spleen. Also called *Malpighian corpuscle*.

mammillary bodies. Two small, spherical masses of gray matter in the interpeduncular space at the base of the brain. They receive olfactory impulses from the hippocampus by means of the fornix and relay them to the anterior nucleus of the thalamus via the mammillothalamic tract and to the tegmentum of the pons and medulla oblongata via the mammillotegmental bundle. Also called *corpora mammillaria*. See Plate 18.

Masson b. Granuloma in the alveolar ducts of the lungs usually associated with rheumatic pneumonia and considered equivalent to Aschoff nodules of the myocardium. It is considered nonspecific by other investigators and is observable in many pulmonary disorders. Nodules are budlike proliferations of pleomorphic cells in loose stroma.

melon-seed bodies. Bits of fibrin, cartilage, or of tuberculous or syphilitic granulation tissue found in enlarged bursae and ganglions.

metachromatic bodies. Granules in bacterial cells staining differently from the surrounding cytoplasm. Syn., *metachromatic granules*.

Michaelis-Gutmann bodies. Basophilic and often concentrically laminated bodies, which may contain iron and calcium, seen in malacoplakia.

molluscum bodies. The ovoid or spheroidal keratin bodies formed in the epithelium by the development of the inclusion bodies of molluscum contagiosum. They are much larger than the epithelial cells originally invaded by the virus of molluscum contagiosum.

Negri bodies. Inclusion bodies in the Purkinje cells and cells of the hippocampus of animals with rabies.

neutral red bodies. Bodies demonstrated in lymphocytes from peripheral blood supravitally stained with neutral red, closely associated with, if not identical to, the Golgi apparatus.

Nissl bodies. Chromophil substance of nerve cells.

olivary b. The inferior olive of the medulla oblongata.

Pacchionian bodies. See *arachnoidal granulations* under *granulation*.

Pappenheimer bodies. Iron-containing granules sometimes found in the cytoplasm of some normoblasts and red blood cells, particularly after splenectomy.

parabasal b. A kinetonucleus closely associated with the blepharoplast of hemoflagellates.

paraterminal b. The parolfactory area and subcallosal gyrus collectively; also called *precommissural area*, *septal area*.

Paschen bodies. See Enrique *Paschen*.

perineal b. The dense connective tissue between the vulva and the anus or between the scrotum and the anus.

pineal b. A small cone-shaped body attached to the roof of the third ventricle between the superior colliculi. It appears to be a rudimentary gland of unknown function; formerly called *conarium*, *pineal gland*. See Plate 18. Syn., *epiphysis cerebri*.

pituitary b. Pituitary gland. See Plates 17, 18, 45.

polar bodies. The minute, abortive cells extruded by the oocyte in the process of maturation. Also called *polocytes*.

postbranchial bodies. Ultimobranchial bodies.

primitive perineal b. The primitive perineum, the projecting wedge formed by the urorectal septum, which separates the anus and the orifice of the primitive urogenital sinus after the rupture of the cloacal membrane.

Prowazek-Halberstaedter bodies. Homogeneous irregular inclusion bodies near the nuclei of epithelial cells of the conjunctival sac, found in trachomatous patients. Also called *trachoma bodies*.

psammoma bodies. Sandlike, laminated, calcareous deposits seen typically in the psammoma, a type of meningeal fibroma. Similar deposits are found in chronic inflammation, in benign and malignant tumors, and, as brain sand, in the pineal body. Also called *corpora arenacea*.

purine bodies. Compounds that contain the purine ring; compounds derived from purine by the substitution of their hydrogen atoms.

restiform b. The inferior cerebellar peduncle.

rice bodies. Small free white bodies occurring in the synovial cavity of an arthritic joint (most commonly in tuberculous arthritis) composed of either compact masses of fibrin or necrotic villi.

ring bodies. Peculiar ring-shaped bodies found in the erythrocytes in pernicious anemia, leukemia, and lead poisoning; also called *Cabot's rings*, *Cabot's ring bodies*.

Russell bodies. See William *Russell*.
sand bodies. Corpora arenacea.
Schaumann bodies. Round or oval, doubly contoured and laminated, frequently calcified inclusion bodies seen in the giant cells of sarcoidosis, and occasionally in the granuloma of berylliosis; so-called because they were described by J. Schaumann (1941).
segmenting b. The sporulating malarial parasite, when the schizont breaks up into the merozoites.
spongy b. The *corpus cavernosum urethrae*.
superior quadrigeminal b. Superior colliculus.
threshold b. Any substance in the blood plasma which, above a certain concentration, is excreted by the kidneys. The critical concentration is called the excretion threshold.
thyroid bodies. Chromophil substance.
trachoma bodies. See *Prowazek-Halberstaedter bodies* under *body*.
trapezoid b. Transverse decussating fibers in the ventral tegmental part of the pons, which connect the ventral cochlear nucleus of one side with the lateral lemniscus of the other side.
type A inclusion bodies. See Lipschütz bodies.
ultimobranchial bodies. Those considered by some to be rudimentary fifth pharyngeal pouches, by others, to be lateral thyroid primordia and fourth pouch derivatives. Syn., *postbranchial bodies*. Also called *lateral thyroids*.
Unna bodies. See *Russell bodies* under William *Russell*.
Verocay bodies. Small whorls of fibrils, surrounded by radially arranged elongated cells, seen in neurofibromas.
vertebral b. A short column of bone forming the anterior weight-bearing segment of a vertebra.
vitreous b. The vitreous; the transparent, colorless, gelatinous body filling the space between the retina and the lens of the eye. See Plate 19.
Wolffian b. The mesonephros.
yellow b. The corpus luteum.
Zenker bodies. See Lipschütz bodies.
bod'y ar'mor. Clothing reinforced with armor; used by aviators as a protection against antiaircraft fire.
bod'y form. See *somatotype*.
bod'y snatch'ing. Unauthorized removal of a corpse from the grave.
Boë, de la. See Franciscus *Sylvius*.
Boeck, Caesar Peter Moeller [*Norwegian pathologist*, 1845–1917]. Described acne varioliformis (1889) and benign sarcoid (1899). The latter, previously called lupus pernio by Besnier, is now known as *sarcoidosis*.
Boeck, Carl Wilhelm [*Norwegian dermatologist*, 1808–75]. Described leprosy (1847) called *Danielssen-Boeck disease*. Described Norwegian scabies (1842) called *Boeck's scabies*, *scabies crustosa*. See under *scabies*.
Boerhaave, Hermann [*Dutch physician*, 1668–1738]. Celebrated as one of the greatest clinicians and the creator of modern clinical teaching. Published his greatest work, *Elementa Chemiae*, in 1732. Contributed greatly to knowledge of physiology and digestion (1708). Wrote his *Aphorisms* (1709). Described the sudoriparous or sweat glands, called *Boerhaave's glands*. Advocated discussion and consultations in the interest of the patient. Many of the greatest medical men of his time were his pupils.
Boerner, Jones, and Lukens test. A flocculation test for syphilis.
Boerner-Lukens test. A modification of the Wassermann test for syphilis.
Bogomolets, Aleksandr Aleksandrovich [*Russian physician and biochemist*, 1881–1946]. Introduced antireticular cytotoxic serum; see *ACS*.

Böhler, Lorenz [*Austrian surgeon*, 1885–]. Well known as a skillful and ingenious orthopedic surgeon. Devised special types of finger splints used with a plaster arm splint to permit traction of the phalanges in fracture. Introduced many new methods of treating fractures with special devices, including a walking iron for the ambulatory treatment of leg fractures.
Böhmer's hematoxylin. See under *stain*.
Bohr effect. The influence or effect exerted by carbon dioxide upon the dissociation of oxygen from hemoglobin and some related compounds.
boil [ME. *bilen*, to boil, or D. *buil*]. A furuncle; localized inflammation of the skin and subcutaneous connective tissue attended by suppuration; usually at the site of a hair follicle. It has but one opening for drainage in contrast to a carbuncle, which is larger and has several openings. See *furuncle*. Also see *sore*.
blind b. One not attended by the formation of pus; nonsuppurating.
Delhi b. See *oriental sore*.
Bolvin antigen. See under *antigen*.
bol'do [Sp. *boldo*]. The dried leaves of the boldo tree, *Peumus boldus*, formerly used as an aromatic stimulant and diuretic. Boldo contains a bitter alkaloid, boldine; a glycoside, boldoglucin; and volatile oil.
Bol'dus. Synonym for *Peumus*.
bole [G. *bōlos*, clod of earth]. A translucent, soft variety of clay formerly much used in medicine—internally as an astringent, externally as an absorbent. There are several varieties: the Armenian, the Lemnian, and the French bole.
Bo'ley gauge. In dentistry, a measuring instrument with a vernier scale.
Boll, Franz Christian [*German physiologist*, 1849–79]. Noted for his discovery of the coloring matter in the rods of the retina and for his description of visual purple.
Bollinger, Otto [*German pathologist*, 1843–1909]. Remembered as being the first to describe effectively actinomycosis (1877). Also described the yellowish-white granules in the granulation tissue of the lesions found in bovine mycosis; called *Bollinger's granules*.
Bollman, Jesse Louis [*American pathologist*, 1896–]. With Frank Charles Mann, introduced the Mann-Bollman *fistula*, used in animal experimentation.
bo·lom'e·ter [G. *bolē*, ray; *metron*, a measure]. A device for measuring minute differences in radiant heat. Syn., *thermic balance*.
Bolton point. See under *point*.
Bolt worth skate. A non-weight-bearing device mobile in all directions, with a wide base, usable when the leg is in plaster after such surgical procedures as arthroplasty of the hip joint, consisting of a wide-grooved board lined with Sorbo rubber and diffusely perforated to facilitate fixation with bandages.
bo'lus [L. *bolus*, choice bit, also morsel, possibly from G. *bōlos*]. 1. A large pill. 2. The rounded mass of food prepared by the mouth for swallowing, called an alimentary bolus. 3. Bole.
bonamine. Trade-mark for the dihydrochloride of p-chlorobenzhydryl-4-m-methylbenzylpiperazine, a compound effective in preventing motion sickness. See *meclizine hydrochloride*, *postafene*.
bond [ME., var. of *band*, a fastening]. The linkage between atoms, holding these together as in a compound, usually effected by the transfer of one or more electrons from one atom to another or by the sharing, equally or unequally, of one or more pairs of electrons by two atoms.
coordinate covalent b. A bond consisting of a

pair of lectrons shared by tw atoms and thus joining them, both electrons being contributed by one of the atoms. Syn., *dative bond*.

dative b. A coordinate covalent bond.

energy-rich phosphate b. A phosphate bond, as in denosinetriphosphate and phosphocreatine, which on cleavage by hydrolysis releases 11,000 calories per gram-molecule, as compared with the release of bout 3000 calories from ordinary phosphate ester bonds. The symbol for such bond is ~ The bond provides means of storing energy for subsequent use in muscular activity or biosynthesis.

hydrogen b. That formed between two molecules when the nucleus of hydrogen tom, originally ttached t fluorine nitrogen, or oxygen tom of molecule is attracted to the fluorine, nitrogen, or oxygen tom of second molecule of the same or different substance. Water molecules are joined to each other through hydrogen bond formation. Syn., *hydrogen bridge*.

ionic b. That formed between two atoms when one or more electrons are transferred from one atom to another thereby completing stable electron configuration for each.

normal covalent b. A bond consisting of pair of electrons shared by two toms and thus joining them, one electron being contributed by each tom.

peptide b. One joining two amino acids, in which the amino group of one acid is condensed with the carboxyl group of another with elimination of water and formation of —CO.NH— linkage The amino acids of proteins are joined in this manner

Bondt, de. See *Bontius*.

bon'duc [Ar bunduq, hazelnut]. The seeds of *Caesalpinia crista*, tropical plant. They have been used as bitter tonic and antiperiodic.

bone [AS. bān]. 1 Osseous tissue supportive, rigid connective tissue consisting of an abundant calcified matrix enclosing many much-branched cells, the osteocytes. The body of each osteocyte occupies an ovoid space, the lacuna; ts branches lie in minute, branching tubules, the canaliculi. Many varieties of osseous tissue are differentiated according to method of formation, relation to other tissues, and architecture. See also *endosteum*, *osteoid*, *ossification*, *osteogenesis*, *osteoid*, *periosteum*. 2. An element or individual member of the skeleton, as the femur the parietal bone. For bones listed by name, see T ble of Bones in the Appendix. See Plate 1. —**bony** *adj*

alveol b. The alveolar processes of the maxilla and the mandible. Within the alveolar bone, distinction should be made between the alveolar bone proper and the alveolar supporting bone because of their biologic and functional differences. The alveolar bone proper may be defined as that thin bony plat surrounding the root to which fibers of the periodontal membrane are attached. I radiography this bony plate is called *lamina dura* as t appears more radiopaque than the surrounding spongy bone The alveolar supporting bone consists of the compact alveolar plates and of the spongy bone of the alveolar processes, other than the alveolar bone proper

ankle b. The talus

articul b. See *articular*

b. bsorption. See *osteoclasis* 2.

b. of Bertin. The sphenoidal concha.

b. resorption. See *osteoclasis* 2

brittle bones. See *osteogenesis imperfecta*.

bundle-b. Bone traversed by coarse collagenous fibers (Sharpey perforating fibers) as where tendons or ligaments are affixed.

cancellous b. A form in which the matrix is arranged in network of rods, plates, or tubes (the trabeculae) between which are spaces filled with marrow Syn., *spongy b* *substantia spongiosa*.

cartilage b. (a) Bone (1) preceded during development by mass of hyalin cartilage which it largely replaces. (b) A bone (2) which has been preceded by cartilaginous primordium.

coffi b. The distal phalanx of horse foot.

compact b. Bone (1) in which marrow spaces are replaced by cylindrical, concentrically laminated Haversian systems, each with an axial vascular channel the Haversian canal. Syn., *substantia compacta*.

coronary b. The small pastern or second phalanx of horse foot.

cortical b. The compact bone next to the surface of bone

cotyloid b. See *os acetabuli*.

endochondral b. formation. See *cartilage bone*

flat b. A bon (2) more or less in the form of plate, as the parietal bone.

incisive b. The premaxilla or intermaxillary bone which bears the upper incisor teeth. Fused with the maxilla in man; separate bone in most mammals.

interparietal b. A supernumerary bone occurring in the interparietal suture.

intracartilaginous b. formation. See endochondral b formation.

intramembranous b. formation. The formation of bone by or within connective tissue without involvement of cartilage stage.

ivory bones. See *osteopetrosis*.

lamellar b. Bon (1) which exhibits microscopi laminations (lamellae) of its matrix.

long b. One in which the length markedly exceeds the width.

membrane b. Bone (1) formed by or within connective tissue, as by periosteum.

nonlamellar b. Bone in which the matrix is not layered.

omovertebral b. An aberrant bone extending from the upper medial angle of the scapula to the spines of the lower cervical vertebrae; it is sometimes present in congenital elevation of the scapula also called *suprascapula*.

pastern b. The first phalanx (great pastern bone) or second phalanx (small pastern bone) of horse foot.

periosteal b. Membrane bone formed by the periosteum. Syn., *subperiosteal b.*

pneumatic bones. Those containing air cells, as the temporal bones, or air sacs, as in flying birds.

primary b. The first bone formed in given location.

rider' b. Ossification occurring at or near the insertion of the adductor longus or magnus.

secondary b. Bone which replaces primary bone.

sesamoid b. A small bone developed in tendon subjected to much pressure.

short b. One having the three dimensions nearly equal.

spongy b. See cancellous b.

spotted bones. Osteopoikilosis.

subperiosteal b. See periosteal b.

suprasternal b. An ossified, suprasternal cartilage not attached to the manubrium; anomalous in man, normal in some mammals.

sutural b. Any supernumerary bone occurring in suture of the skull. Syn. *Wormian bone*.

tabular b. A flat bone composed of an outer and an inner table of compact bone with cancellous bone or diploë between them.

Wormian b. See sutural b.

bone on'lay A strip of transplanted bone laid

across fracture and held in position by wires, pins, screws, or other device.

bone set" An herb used in making therapeutic tea. See *Eupatorium*.

bone set"ter One who specializes in setting bones, especially an uneducated empiric, and often pretender to hereditary skill in the business.

Bonet, Juan Pablo [*Spanish physician, seventeenth century*]. Remembered for his work in teaching the deaf to speak and the mute to write (1620)

bone wax. A material used for packing bone, especially during skull operations, for the arrest of bone bleeding.

Bonfils, Emile Adolphe [*French physician, nineteenth century*]. Known for his description of Hodgkin's disease.

Bonifacio, Giovanni [*Italian physician, seventeenth century*]. Originated a sign language for deaf-mutes (1616)

Bonjean's ergotin. See under *ergotin*.

Bonnet, Amédée [*French surgeon, 1809–58*]. Remembered for his operation for enucleation of the eye, in which injury to the soft parts of the orbit is voided by the preservation of Tenon capsule called *Bonnet' operation*. Described phenomenon in sciatica in which it was noted that passive flexion of the affected leg at both knee and hip produces no pain, but adduction of the flexed knee and hip immediately elicits pain if sciatica is present, called *Bonnet's phenomenon*.

Bonnier Pierre [*French otolaryngologist* 1861 1918]. Known for his study of group of symptoms due to lesion of the lateral ventricular nucleus in the medulla, consisting of paroxysmal vertigo, glossopharyngeal paralysis, tachycardia, somnolence, and contralateral hemiplegia, called *Bonnier' syndrome*.

Bontius, Jacobus (Jakob de Bondt) [*Dutch physician and naturalist*, 1592–1631]. Probably the first to regard tropical medicine as an important branch of medical science. In *De Medicina Indorum*, published posthumously (1642) he described beriberi and cholera.

Boopers. See *Bohr*

boom'slang" [D boom, tree slang, snake]. *Dispholidus typus*, rear-fanged, venomous snake of Africa.

Bo-oph'i lus [G *bous*, ox *philein*, to love]. A genus of ticks.

B. annulatus. The cattle tick which carries the piroplasma responsible for Texas fever

boos'ter dose. See under *dose*.

Boothus, Arnoldus (Boate, Arnaud de Boot) [*English physician*, 1606–53]. Early investigator of rickets (1649)

bo rac'ic ac'id. Boric acid.

bor'age (bur'idj bor'idj boar idj) [OF from LL *borrago* from *borra*, rough hair]. The plant *Borago officinalis*, formerly used as demulcent, mild refrigerant, and diaphoretic.

bo'rate. Any salt of bori acid.

bo'rat-ed. Containing or combined with sodium borate or boric acid.

bo rax. Sodium borate

bor"bo-ryg'mus [G *borborygmos*, intestinal rumbling]. The rumbling noise caused by flatus in the intestines.

Bor"deaux' mix'ture (boar do') A fungicide containing copper sulfate 1.5, calcium oxide 1 0, water to make 100.

Bor"deaux' red. An acid monoazo dye, used as plasma stain. Also called *acid Bordeaux; archelline 2B* azo-*Bordeaux*: *cerasin R; fast red B BN* or *P*

bor'der [OF *bordure*, of Teut. origin]. I *anatomy* the boundary of an area or surface.

brush b. The brushlike modification of the surface of cells lining the proximal convoluted tubules of the kidney

striated b. The layer of modified cytoplasm, showing fine, perpendicular striations, found on the surface of the simple columnar intestinal epithelium.

vermilion b. Mucocutaneous junction of the lips.

Bordet, Jules Jean Baptiste Vincent [*Belgian bacteriologist and pathologist*, 1870–] Known for his classic work on the properties of the serums of immunized animals (1895); also discovered hemolytic sera. H discovered the complement-fixation reaction (1900) and applied this reaction, with Gengou, to the diagnosis of several diseases. Also with Gengou he discovered th causative agent of whooping cough, *Hemophilus pertussis*, called *Bordet-Gengou bacillus*. The *Bordet Gengou medium* is bacterial culture of blood, potato extract, glycerin, and agar used for the cultivation of the pertussis bacillus. He described serum test, called *Bordet' test*. Nobel laureate (1919)

Bordeu, Théophile de [*French physician*, 1722–76]. Proponent of the idea that every organ, tissue, and cell discharges into the blood products which influence other parts of the body Published his researches upon chronic disease and the medical analysis of blood (1775)

Borelli, Giovanni Alfonso [*Italian physiologist, physicist, and astronomer* 1608–79]. A pupil of Galileo and teacher of Malpighi. Originated the neurogenic theory of the action of the heart. As physiologist he was handicapped by the fact that he regarded physiology as branch of physics he considered the circulation matter of hydraulics.

bo ric ac'id (*acidum boricum*) H_3BO_3. Colorless scales, crystals, or white crystalline powder soluble in 18 parts of water 18 f alcohol, or 4 of glycerin. Used as mild antiseptic in saturated solution on mucous membranes, and as ointment on skin. Serious or fatal poisoning resulting from transcutaneous absorption may occur Syn., *boracic acid, orthoboric acid*.

b. a. ointment (*unguentum acidi borici*) A preparation containing 10% of boric acid in liquid petrolatum and white ointment.

b. a. solution (*liquor acidi borici*) An aqueous solution containing not less than 4.25% of bori acid.

Born, Gustav Jacob [*German embryologist*, 1851 1900]. Remembered for his invention of the wa plate reconstruction method used in embryology

bor'ne-ol. $C_{10}H_{17}OH$. A substance which occurs as concrete masses in fissures in trees of the genus *Dryobalanops*, growing in Borneo and Sumatra, and occurring also as constituent of certain volatile oils. used in the preparation of perfumes and incense. Syn., *Borneo camphor Sumatra camphor*

bor'nyl [*Borneo*; G *hylē*, material]. The univalent $—C_{10}H_{17}$ radical derived from borneol by removing the hydroxyl-group.

bo'ro-, bor [Ar *bauraq* from Per *būrah*, borax]. A combining form for *boron*.

bo re-cal'cite. N tive calcium borate.

bo"ro-cit ri ac'id. A combination of boric and citric acids which has been used as solvent for urates and phosphates in urinary calculi.

borofax. Trade-mark for an ointment of bori acid.

bo ro-glyc er ide (boar"o-gliss ur ide, -id) See *boroglycerin*.

bo ro-glyc'er in (boar o-gliss ur-in) A product formed by heating together boric acid and glycerin.

b. glycerite (*glyceritum boroglycerini*) A solution

of boroglycerin in glycerin. It is miscible with water. Also called *boric acid glycerin*.

bo'ron [Ar. *bauraq*]. B = 10.82. A nonmetallic element of the aluminum group. It is the characteristic element of boric acid, the borates, metaborates, and perborates.

bo'ro-sal"i-cyl'ic ac'id. A mixture of boric and salicylic acids which has been used externally like salicylic acid.

Bor-re'li-a, Bor-rel'i-a [NL., after Amédée *Borrel*, French bacteriologist, 1867-1936]. A genus of spirochetes, of many species, parasitic in man and other warm-blooded animals, and including the causative agents of relapsing fever.

B. buccalis. A species of *Borrelia* found in the normal mouth, of no proved pathogenicity.

B. duttonii. The causative agent of tick-borne relapsing fever.

B. novyi. A species of *Borrelia*, causative agent of the American form of relapsing fever.

B. recurrentis. The causative agent of louse-borne relapsing fever; old designation, *Spirochaeta obermeieri*.

B. refringens. Nonpathogenic species of *Borrelia*, occurring on the external genitalia of both sexes.

B. vincentii. An anaerobic *Borrelia* found in the normal oral cavity and in conjunction with a fusiform bacillus associated with Vincent's angina.

bor rel'i din. An antibiotic substance produced by *Streptomyces rochei*; it is active against species of *Borrelia* in experimental animals.

Borsook, Henry (1897-) American biochemist, known for his work on the synthesis of creatine, the dynamic state of proteins, the applications of thermodynamics in biochemistry and physiology, and for his writings on vitamins.

boss [F. *bosse*]. A rounded or knoblike protuberance, as on the side of a bone or tumor; may result from disease of the spine (kyphosis). —**bos'selated,** *adj.*; **bossela'tion,** *n.*

parietal b. See parietal *eminence*.

Bossi, Luigi Maria [*Italian obstetrician*, 1859-1919]. Known for his method of induction of labor by means of forced dilatation of the cervical canal (1895). Invented a steel instrument for the rapid dilatation of the cervix, called *Bossi's dilator*.

Boston's sign. See under *sign*.

bos"try coi'din. $C_{18}H_{16}O_7$. A brown or red, crystalline antibiotic substance, elaborated by *Fusarium bostrycoides*, active, in vitro, against the tubercle bacillus.

bot [perhaps from Irish *boiteog*, maggot]. The larva of the botfly, especially the species infesting the horse and related animals.

Botallo, Leonardo (Botallus) [*Italian anatomist in France*, b. ca. 1530]. Described the foramen ovale of the heart. He is sometimes erroneously credited with the discovery of the ductus arteriosus, called *Botallo's duct*.

bot'a ny [G. *botanē*, herb]. That branch of biology dealing with plants. —**botan'ic,** *adj.*

bot'fly". See *Oestridae, Gastrophilidae, Cuterebridae*.

Both respirator. See under *respirator*.

both rid'i-um. See *bothrium*.

both ri-o-, both ri- [G. *bothrion*, dim. of *bothros*, trench]. A combining form signifying *bothrium*.

Both ri o-ceph a lus. Synonym for *Diphyllobothrium*.

both ri-oid [*bothrion*; G. *eidos*, form]. Pitted; foveolated; covered with pitlike marks.

both ri um [*bothrion*]. A grooved sucker, such as is seen on the head of the tapeworm *Diphyllobothrium latum*. Syn., *bothrion*. Also called *bothridium*.

Bo'throps, Both'rops [G. *bothros*, trench]. A genus of pit vipers, Crotalidae, found chiefly in Central and South America.

B. alternata. Víbora de la cruz.

B. atrox. Fer-de-lance, having a powerful hemotoxic venom. This viper, the commonest cause of snakebite in Panama, may attain a length of eight feet. Also called *barba amarilla*.

B. jararaca. Jararaca.

B. neuwiedii. White-tailed jararaca.

B. nummifer. Jumping pit viper.

bot o-gen'in, bo to gen'in. A steroidal sapogenin obtained from the Mexican yam *Dioscorea mexicana*; a possible source for the synthesis of cortisone.

bot ry oid [G. *botrys*, bunch of grapes; *eidos*, form]. Resembling in shape a bunch of grapes, due to many rounded prominences.

bot ry-o my-co sis (bot"ree-o-migh-ko'sis) [*botrys*; G. *mykēs*, fungus; *-ōsis*, condition]. A chronic infectious disease of horses and, rarely, of cattle; characterized by localized fibromatous tumors with occasional metastasis caused by the *Micrococcus ascoformans* (*Staphylococcus aureus, Staphylococcus albus*). —**botryomycot'ic,** *adj.*

Bo-try'tis [*botrys*]. A genus of fungi, members of whose species may act as allergens.

bots [perhaps from Irish *boiteog*, maggot]. *In veterinary medicine*, infestation with botflies, which pass through one period of development in the bodies of animals, as larvae. They infest the cavities of the facial bones, the stomach and intestine, and the subcutaneous connective tissue, causing severe damage to the affected animals. Also called *bot-larvae infestation*.

Böttcher, Arthur [*German anatomist*, 1831-89]. Remembered for his investigation of the endolymphatic circulation of the internal ear. Described dark polyhedral cells between the basilar membrane and the cells of Claudius, called *Böttcher's cells*. Described spermin crystals, called *Böttcher's crystals*.

Bottini, Enrico [*Italian surgeon*, 1837-1903]. Known for his use of galvanocautery for prostatic obstruction (1874). The operation consisted of intraurethral division of the enlarged portion of the gland. It is now superseded.

bot'tle [OF. *bouteille*, from LL. *buticula*]. A vessel, usually of glass, with a narrow neck.

b. nose. Popular name for acne rosacea.

b. steep. *In pharmacy*, a grooved block which holds a wide-mouthed bottle obliquely while its powder content is being dispensed.

b. wax. A hard wax used to seal stoppers in bottles.

leather b. See under *stomach*.

Mariotte's b. A device that delivers liquid under constant hydrostatic pressure.

nursing b. A feeding bottle; a narrow- or wide-mouthed flask with a rubber nipple attached, used for feeding infants.

bot u lism [L. *botulus*, sausage]. Food poisoning due to the production of toxins by *Clostridium botulinum* in improperly canned foods; characterized by the abrupt onset of violent symptoms; often fatal. —**botulif'orm, botuliform,** *adj.*

bou gie (boo'zhee, boo zhee') [F., candle]. 1. A slender cylindrical instrument of rubber, waxed silk, or other material, for introduction into body passages, as the urethra, anus, or other canal. It may be plain or tipped, angled or straight, being intended for use in exploration, in dilatation of strictures, as a guide for the passage of other instruments, or for the induction of labor. 2. A suppository, particularly for insertion into the urethra.

armed b. One having a mastic attached to the tip.

b. à boule. A bulbous or bulb-tipped instrument.

caustic b. See armed *b*.

cylindrical b. One which is circular in cross section.

dilatable b. One which can be increased in diameter for dilating strictures. Also called *dilating b.*

elastic b. One made of some elastic material.

filiform b. One of very slender caliber and variously tipped.

fusiform b. One with a spindle-shaped shaft.

medicated b. One containing a medicinal agent. See *bougie*, 2.

olive-tipped b. A bulbous bougie with an olive- or acorn-shaped tip.

soluble b. One containing substances which dissolve at body temperature. See *bougie* 2.

wax b. One made of linen or gauze impregnated with melted wax.

whip b. A variety of filiform bougie.

Bouillaud, Jean Baptiste [*French physician*, 1796–1881]. Known for his identification of the anterior cerebral lobes as the speech center and his demonstration that the brain controls equilibration and progression (1827). Rheumatic fever is known as *Bouillaud's syndrome*.

bouil'lon' [F.]. Broth.

Bouin's fixing fluid. See under *fixing fluid*.

Bou·lan'ge·ri'na. A genus of aquatic cobras inhabiting the rain forests of tropical Africa, possessing predominantly neurotoxic venom.

bou lim'i (bōō lim'ee uh). See *bulimia*.

Bastian's solution. See phenolated sodium solution.

bour·donne·ment' (boor-dawn-mong' *See* NOTES § 35) [F. buzzing]. A buzzing or humming sound heard during auscultation, or heard subjectively from any cause. The former is thought to be due to the contraction of muscle fibrils.

Bourgery, Marc Jean [*French anatomist and surgeon*, 1797–1849]. The posterior ligament of the knee joint is known as *Bourgery's ligament*.

Bourneville, Désiré Magloire [*French neurologist*, 1840–1909]. His name is associated with tuberous sclerosis, called *Bourneville's disease*.

Bourquin-Sherman unit. See under unit.

Boussingault, Jean Baptiste Joseph Dieudonné [*French physiological chemist*, 1802–87]. Made the first analyses of foodstuffs and fertilizers (1836). Discovered the excretion of urea and the existence of hippuric acid.

bou'ton' ter'mi·nal (bōō'tawn' tur'mi·nal. *See* NOTES § 35) (pl. *boutons terminaux*) [F.]. See *end-foot*.

Bouveret, Leon [*French physician*, 1850–1929]. Described ventricular paroxysmal tachycardia, called *Bouveret's syndrome*.

Boveri, Piero [*Italian neurologist* 1879–1932]. Discovered a test for excess of globulin in cerebrospinal fluid, called *Boveri's test*.

Boveri, Theodor [*German zoologist* 1862–1915]. Remembered for his early research work on chromosomes. First to apply the term centrosome (1888) to the bodies discovered by Flemming and van Beneden (1876).

bo·vine [L. *bovinus*, of an ox]. 1. Cattlelike. 2. Relating to, or derived from, a cow or ox.

bow'el [OF. *boel* from L. *botellus*, sausage]. The intestine.

bow'el com·plaint'. Diarrhea.

bow'el train'ing. The establishing of regular habits of defecation during early childhood.

Bowen, John Templeton [*American dermatologist*, 1857–1941]. First to describe precancerous dermatosis, now considered within the realm of epidermoid carcinoma; called *Bowen's disease*, *Bowen epithelioma*.

Bowie's ethyl violet-Biebrich scarlet stain. See under *stain*.

bow'leg" [AS. *boga*; ON. *leggr*]. An arching outward of the lower limbs, usually rachitic. Syn., *genu varum*.

Bowman, Donald E. (1905–) American biochemist, known for his extensive research on vitamins, endocrine factors, and enzymes. With Frank Evert Visscher he developed the Visscher-Bowman test for pregnancy.

Bowman, William [*English anatomist and ophthalmologist*, 1816–92]. Celebrated internationally for his classic description of striated muscle (1841) and for his description of the structure of the renal corpuscle (1857–60). Devised an operation for the formation of an artificial pupil and one for cataract, by dilaceration, separating the points of two needles inserted into the cataracts through the cornea. His operation for obstruction of the lacrimal sac by slitting of the canaliculus is well known. His name is associated with the double-walled vesicle surrounding the renal glomerulus, known as *Bowman's capsule*. Described the membrane separating the corneal epithelium from the substantia propria of the eye, called *Bowman's membrane*. Said to have been responsible, more than any other person, for the advancement of ophthalmic surgery in England.

box er' ear. Lay term for an aural hematoma. Also see *cauliflower ear*.

Boyd's types of Shigella. See under *Shigella*.

Boyer, Alexis [*French surgeon*, 1757–1833]. Remembered for his operation for anal fissure by division of the external sphincter, called *Boyer's operation*.

Boyle, Henry Edmund Gaskin [*English surgeon*, 1875–1941]. Invented an anesthesia apparatus, standard in the British Isles, by which nitrous oxide gas, oxygen, chloroform, and ether may be administered. This has been adapted for use with cyclopropane also.

Boyle, Robert [*English physicist*, 1627–91]. Discovered the phenomenon, known as *Boyle's law*, that at any given temperature the volume of a given mass of gas varies in inverse proportion to the pressure exerted upon it. Studied the elasticity and compressibility of air. His demonstration that air is necessary for life (1660) was an important contribution to the knowledge of respiration.

Boylston, Zabdiel [*American physician*, 1679–1766]. Distinguished leader of New England medicine and founder of the lectureship and prizes bearing his name. Said to have been the first to inoculate for smallpox in America (1721).

Bozeman, Nathan [*American surgeon*, 1825–1905]. Remembered for his invention of a double-current catheter and for his operation for relief of vesicouterovaginal fistula (1887), called *Bozeman's operation*, *hysterocystocleisis*. His invention is still known as *Bozeman's catheter*. Devised a position in which the patient rests on knees and elbows and is secured to the table by supports, called *Bozeman's position*.

Bozzini, Philipp [*Austrian surgeon*, 1773–1809]. Introduced an aural speculum with illumination and mirror reflection (1807). Is credited also with attempts at endoscopy of the urinary tract (1807).

Bozzolo, Camillo [*Italian physician* 1845–1920]. Described lethargic encephalitis (1895–1900), called *Bozzolo's disease*. Was among the first to recognize the role of *Diplococcus pneumoniae* in meningitis and arthritis. Credited with the introduction of thymol as a vermifuge (1879).

B.P Blood pressure.

B.P., B. Ph. British Pharmacopoeia.

B. P. C. British Pharmaceutical Codex.

BR Abbreviation for British Revision of the BNA terminology.

Br Chemical symbol for bromine.

brace [OF *bracier* to embrace]. Apparatus which gives support to any movable part of the body intended for permanent use, in contradistinction to a splint; may assist in locomotion, and is frequently attached to clothing, as to shoes; sometimes jointed to permit flexion.

Brachet, Jean Louis [*Belgian physiologist*, 1789–1858]. Remembered for his description of the right leaf of the primitive ventral mesentery which passes to the dorsal aspect of the right hepatic lobe, the free edge bounding the epiploic foramen; called *mesolateral fold of Brachet*.

bra·chi·a (bray'kee-uh, brack'ee-uh) Plural of brachium.

bra·chi·al·ar·ter·y [*brachium*; G. *artēria*, artery]. *An artery which originates at the axillary and has* profunda brachii, nutrient, muscular, superior ulnar collateral, inferior ulnar collateral, radial, and ulnar branches. It distributes blood to the *deltoid*, triceps, brachioradialis, biceps brachii, brachialis, coracobrachialis, and anconeus muscles, the shaft of the humerus, the elbow joint, the forearm, and the hand.

bra·chi·al·gi·a (bray'kee-al'juh, -jee-uh, brack'ee-) [L. *brachium*, arm; G. *algos*, pain]. Severe pain in the arm or in the brachial plexus.

bra"chi·a'lis (bray"kee-ah'lis, -ay'lis, brack-ee-) [*brachium*]. A muscle lying under the biceps brachii and covering the front of the elbow joint. See Table of Muscles in the Appendix.

bra·chi·form [*brachium*; L. *forma*, form]. Arm-shaped.

bra·chi·o- (bray'kee-o-, brack'ee-o-), **bra·chi-** [*brachium*]. A combining form denoting *the arm* or *connection with the arm*.

bra·chi·o·cyl·lo·sis [*brachium*; NL., from G. *kyllōsis*, crooking]. Crookedness of the humerus.

brach"i·o·ra·di·al'is. Pertaining to the arm and radius, as the brachioradialis muscle. See Table of Muscles in the Appendix.

bra·chi·ot'o·my [*brachium*; G. *tomē*, cutting]. Surgical or obstetric cutting or removal of an arm.

bra·chi·um (bray'kee-um, brack'ee-um) (pl. *brachia*) [L., arm]. 1. The arm, especially the upper arm. 2. Any armlike structure. —**brachial,** *adj.*

brachia cerebelli. The cerebellar peduncles.

b. conjunctivum. The superior cerebellar peduncle.

b. of the inferior colliculus. A strand of fibers from the inferior colliculus together with fibers of the lateral lemniscus ending in the medial geniculate body. Syn., *inferior quadrigeminal b.*

b. of the superior colliculus. A strand of optic fibers which continue beyond the lateral geniculate body to end in the optic stratum of the superior colliculus and in the pretectal areas. Syn., *superior quadrigeminal b.*

b. pontis. The middle cerebellar peduncle.

inferior quadrigeminal b. See *b. of the inferior colliculus.*

superior quadrigeminal b. See *b. of the superior colliculus.*

Bracht, Erich Franz Eugen (1882–) German pathologist, known for his work on the pathology of rheumatic heart disease. See Bracht-Wächter body.

brach·y- (brack'i-) [G. *brachys*, short]. A combining form meaning *short*.

brach"y·car·di·a [*brachys*; G. *kardia*, heart]. Bradycardia.

brach"y·ceph'a·ly, brach"y·ceph'a·lism, brach"y·ceph'a·ly [*brachys*; G. *kephalē*, head]. Shortness of the head, the cephalic index being 81.0 to 85.4. —**brachycephal'ic, brachyceph'alous,** *adj.*

brach·y·chei'li·a (brack·i·kigh'lee-uh), **brach"y·chi'li·a** (brack"i-kigh'lee-uh, -kill'ee-uh), **bra·chych'i·ly** (bra-kick'i-lee) [*brachys*; G. *cheilos*, lip]. Abnormal shortness of the lip. Syn., *microcheilia*.

brach"y·chei'rous, brach"y·chi'rous (brack"i-kigh'rus) [*brachys*; G. *cheir*, hand]. Having short hands. —**brachycheiria, brachychirism,** *n.*

brach·y·dac·tyl'i·a, brach·y·dac'ty·ly [*brachys*; G. *daktylos*, finger]. Abnormal shortness of the fingers or toes. —**brachydac'tylous, brachydactyl'ic,** *adj.*

brach"y·glos'sal [*brachys*; G. *glōssa*, tongue]. Having a short tongue. —**brachyglossia,** *n.*

brach·yg·nath'ous (brack'ig-nath-us) [*brachys*; G. *gnathos*, jaw]. Having an abnormally short lower jaw. Syn., *micrognathus*. —**brachygna'thia, brachygnath'ism,** *n.*

brach"y·ker'kic [*brachys*; G. *kerkis*, shuttle]. Denoting a forearm disproportionately shorter than the upper arm.

brach·y·me·tap·o·dy [*brachys*; G. *meta*, behind; *pous*, foot]. A condition in which the metatarsals are shorter than the average.

brach·y·mei·o'sis. The third division, i.e., the second reduction division, in the ascus of Ascomycetes.

brach·y·mor·phy [*brachys*; G. *morphē*, form]. Short stature. —**brachymorphic,** *adj.*

brach·y·pel'lic. Denoting an oval type of pelvis in which the transverse diameter exceeds the anteroposterior diameter by not more than three centimeters.

brach·y·pel'vic [*brachys*; L. *pelvis*, basin]. See *brachypellic*.

bra·chy·pha·lan·gi·a, bra·chy·pha·lan·gy [*brachys*; G. *phalanx*, bone between two joints of the fingers and toes]. A condition in which the phalanges are abnormally short. —**brachyphalangous,** *adj.*

brach·y·po·dous [*brachys*; G. *pous*, foot]. *Biology*, possessing a short foot or stalk.

brach·y·pro·sop'ic (brack·i·pro·sop'ick, -so·pick) [*brachys*; G. *prosōpon*, face]. Having a short face.

brach·y·rhin'i·a [*brachys*; G. *rhis*, nose]. Abnormal shortness of the nose.

brach·y·rhyn·chus (brack·i·ring'kus) [*brachys*; G. *rhynchos*, snout]. Abnormal shortness of maxilla and nose; usually associated with cyclopia or cebocephaly, but occasionally occurring alone.

brach·y·skel'ic [*brachys*; G. *skelos*, leg]. Characterized by extreme shortness of the legs.

brach·y·staph·y·line [*brachys*; G. *staphylē*, uvula]. Having a short alveolar arch.

brach·y·sta·sis [*brachys*; G. *stasis*, a standing]. A process in which a muscle does not relax to its former length following a contraction and maintains its original degree of tension in its new state. Also called *brachystatic contraction*.

brach·y·u·ran'ic [*brachys*; G. *ouranos*, roof of the mouth]. Having a palatomaxillary index above 115.

Brackett, Elliott Gray [*American orthopedic surgeon*, 1860–1944]. Known for his operations in orthopedic surgery, especially for his method of fixing the fragments in fracture of the femoral neck. The head is retained and hollowed out to form a cup for the rounded-off end of the fractured femur; the greater trochanter is transplanted upward to the site of fracture. Called *Brackett's operation*.

Brade. See *Braid*.

Bradford, Edward Hickling [*American orthopedic surgeon*, 1848–1926]. Known for his invention of

orthopedic appliances and especially for his canvas-covered, gas-pipe frame made in various sizes. It was devised originally for handling children with tuberculous disease of the spine but was later extended to the care of joint disease and for immobilization after operations. Where young children are involved, restraint is imposed by webbing straps and a pelvic band.

brad'y- [G. *bradys*, slow]. A combining form meaning *slow*.

brad"y-ar'thri-a [*bradys*; G. *arthron*, joint]. Slow speech; due to organic disturbance of the speech apparatus.

brad"y-aux-e'sis [*bradys*; G. *auxēsis*, increase]. A type of relative growth in which a part grows at a slower rate than the whole organism or another part.

brad"y-car'di-a [*bradys*; G. *kardia*, heart]. Slowness of the heart manifested in a pulse rate usually less than 60 per minute. Syn. *brachycardia*. —**bradycar'dic**, *adj.*

sinus b. Sinus rhythm with slow heart rate.

brad"y-crot'ic [*bradys*; G. *krotos*, rattling noise]. Characterized by a slow pulse.

brad"y-di-as'to-le (brad"i-dye-ass'to-lee), **brad"y-di"as-to'li-a** (brad"i-dye"ass-to'lee-uh) [*bradys*; G. *diastolē*, a drawing asunder]. Prolongation of the diastolic interval; associated with myocardial lesions.

brad"y-glos'si-a [*bradys*; G. *glōssa*, tongue]. Slow speech due to difficulty in tongue movement.

brad"y-ki-ne'si-a (brad"i-ki-nee'shuh, -see-uh, -zhuh, -zee-uh, brad"i-kigh-nee'), **brad"y-ki-ne'sis** (-ki-nee'sis, -kigh-nee'sis) [*bradys*; G. *kinēsis*, motion]. Slow or retarded movement, as in melancholia or catatonia. —**bradykinet'ic**, *adj.*

brad"y-la'li-a [*bradys*; G. *lalia*, talk]. Slowness of utterance.

brad"y-lex'i-a [*bradys*; G. *lexis*, word]. Abnormal slowness in reading.

brad"y-pha'si-a (brad"i-fay'zhuh, -zee-uh) [*bradys*; G. *phasis*, utterance]. Slow speech.

brad"y-phre'ni-a [*bradys*; G. *phrēn*, mind]. Sluggish mental activity such as that following lethargic encephalitis.

brad"y-pne'a (brad"ip-nee'uh) [*bradys*; G. *pnoē*, breath]. A decreased breathing rate. It often follows the use of narcotics and sedatives or an increase in intracranial pressure.

brad"y-pra'gi-a [*bradys*; G. *prassein*, to do]. Abnormally slow action, usually applied to physical activity.

brad"y-prax'i-a [*bradys*; G. *praxis*, a doing, action]. Slow or retarded physical movement.

brad"y-rhyth'mi-a (brad"i-rith'mee-uh, -rith'mee-uh) [*bradys*; G. *rhythmos*, measured motion]. 1. Slowing of the heart or pulse rate; bradycardia. 2. In electroencephalography, slowing of the brain wave rate to one to six per second, the rate being normally about ten per second. See alpha rhythm.

brad"y-tel"e-o-ki-ne'sis (brad"i-tell"ee-o-ki-nee'sis, -kigh-nee'sis, -tee"lee-o-) [*bradys*; G. *teleos*, complete; *kinēsis*, movement]. The type of incoordination in which a movement is halted before completion, then completed slowly and irregularly.

Braid, James (Braide) [*Scottish physician in England*, 1795–1860]. Known as the inaugurator of hypnotism, a word he coined. Many of his theories concerning diseases of the mind were adopted by leaders in that field. The term *Braidism* was at one time used to indicate a person who used hypnotism.

Braille, Louis [*French teacher of the blind*, 1809–52]. Blinded by accident at the age of three, he invented (1837) the compact alphabet of raised dots in use for the blind today. This system had been suggested earlier by Charles Barbier but had not been perfected.

brain [AS. *brægen*]. The encephalon. That part of the central nervous system contained in the cranial cavity, consisting of the cerebrum, cerebellum, pons, and medulla oblongata. See Plates 17, 18.

afterbrain. Myelencephalon.

betweenbrain. Diencephalon; thalamus.

endbrain. Telencephalon.

forebrain. Prosencephalon.

hindbrain. Rhombencephalon.

midbrain. Mesencephalon.

smell b. Rhinencephalon.

walnut b. An atrophic lobar sclerosis.

wet b. Cerebral edema.

Brain reflex. See under *reflex*.

brain sand. Psammoma bodies in the pineal body; corpora arenacea.

brain stem. See under *stem*. See Plates 17, 18.

Bramwell, Byrom (1847–1931). English physician known for his studies of intracranial tumors, and his early recognition of the functional significance of the hypothalamus (1888).

bran'chi·a (pl. *branchiae*) [*branchia*]. See *gill*.

bran'chi·al (brang'kee-ul) [G. *branchia*, gills]. 1. Pertaining to the branchiae or gills. 2. By extension, pertaining to the embryonic visceral arches. See under *arch*, *cyst*, *cleft*. See also lateral *fistula* of the neck.

branch'ing. In *radiochemistry*, the occurrence of two or more processes by which atoms of a radioactive nuclide can undergo decay.

bran'chi·o- (brang'kee-o-), **bran'chi-** (brang'ki-) [*branchia*]. A combining form denoting *connection with or relation to branchiae or gills*.

bran"chi·og'e·nous (brang"kee-odj'i-nus), **bran"chi·o·gen'ic** [*branchia*; G. *genesthai*, from *gignesthai*, to be produced]. Produced or developed from a branchial cleft or arch.

bran"chi·o·ma. See branchiogenic carcinoma.

bran'chi·o·mere" [*branchia*; G. *meros*, part]. A segment of the visceral mesoderm which develops into a branchial or visceral arch.

bran"chi·om'er·ism [*branchia*; *meros*]. Serial arrangement of the visceral arches or branchiomeres.

bran'dy [Dutch *brandewijn*, from *branden*, to burn; *wijn*, wine] (*spiritus vini vitis*). 1. The product of the distillation of fermented grape juice. It contains from 48 to 54%, by volume, of C_2H_5OH, ethyl alcohol. 2. The product of the distillation of fermented fruit juice, as cherry, peach, and apricot brandies.

Branham, Harry H. [*American surgeon*, nineteenth century]. Remembered for his sign of bradycardia observed in certain cases of aneurysm.

Brasdor, Pierre [*French surgeon*, 1721–97]. Introduced his operation for aneurysm in which he ligated the vessel just distal to the dilatation.

bras'il·in. Brazilin.

brass [AS. *bræs*]. An alloy of copper with zinc.

brass chills. See metal fume *fever*.

brass found'er's a'gue (ay'gew). See metal fume *fever*; brass founders' *ague*.

brass poi'son·ing. Synonym for brass founders' ague. See metal fume *fever*; brass founder's *ague*.

Bratton, Andrew Calvin [*American biochemist and pharmacologist*, 1912–]. With E. K. Marshall, Jr., H. J. White, and J. T. Litchfield, introduced sulfaguanidine in the treatment of intestinal infections. With Marshall, L. B. Edwards, and E. Walker introduced this treatment for acute bacillary dysentery in children (1941). See also Bratton and Marshall's method for determin-

ing concentrations of sulfonamides in blood and urine.

Brauer, Ludolph [*German surgeon*, 1865–]. Devised an operation for adherent pericardium in which he advocated removal of ribs, cartilages, and part of the sternum ver the heart to relieve the condition described as angulation of the heart. Called *cardiolysis*, *Brauer operation*. His name is associated with the thoracoplasty described by Friedrich.

Braun, Christopher Heinrich [*German physician*, 1847–1911]. His name is associated with test for glucose by the use of sodium hydroxide and picric acid, which produce deep red color called *Braun test*.

Braun, Gustav August von [*Austrian obstetrician*, 1829–1911]. The inventor of decapitation hook used in difficult labor called *Braun hook*.

Braun, Maximilian Gustav Christian Carl [*German anatomist and parasitologist*, 1850–1930]. Known primarily for his work in parasitology. The neurenteric canal is sometimes known as *Braun canal*.

Braun's graft. Implant pinch graft.

Braune, Christian Wilhelm [*German anatomist*, 1831–92]. Known for his skill in preparing frozen sections for teaching purposes (1872) for his atlas of human anatomy (1884–86) and for his studies, with Otto Fischer, of the mechanics of body motion (1891) and human locomotion (1895). See retraction *ring* 1.

brawn'y [OF *braon*, fleshy part, muscle]. Fleshy; muscular.

Braxton Hicks's contractions. See under *contraction*.

Braxton Hicks sign. See Hicks *sign*.

Braxton Hicks version. See under *version*.

brax'y. See *water-braxy*.

bra ye ra (bra yair uh, bray-yair uh). The dried panicles of the pistillate flowers of *Hagenia abyssinica*, the kusso tree. It contains tannic acid, volatile oil, and kosotoxin, an ctive principle; has been used as an anthelmintic against tapeworms. I large doses t produces nausea and emesis. Also called *cusso*, *kousso*, *kusso*.

braz'i lin. $C_{16}H_{14}O_5$; an amber-yellow crystalline substance from *Caesalpinia echinata* (Brazilwood) or certain other redwood trees; used as dye.

break'bone fever. Dengue.

breast [AS *breost*] 1. The front of the chest. 2. One of the mammary glands.

caked b. Colloquial term for puerperal mastitis.

carinate b. See pigeon *b*.

chicken b. See pigeon *b*.

funnel b. A thoracic wall anomaly characterized by depression or groove involving the sternum and neighboring cartilages.

pigeon b. A chest with prominent sternum due to rickets or obstructed infantile respiration; also called *chicken b*.

breast'bone [*breost*; AS *ban*]. Sternum.

breath [AS. *brǣth*]. The air inhaled and exhaled during respiration.

pulse b. See *pulse breath*.

saturnine b. The peculiar sweet breath characteristic of lead poisoning.

breath al co-hol meth od. See under *method*.

breath'ing. See *respiration*.

breath'ing ma-chine. Respirator.

Breda, Achille [*Italian dermatologist*, 1850–1933]. Discovered Brazilian yaws (1895) called *Breda disease*.

breech [ME. *brech*]. The buttocks or nates.

b. presentation. See under *presentation*.

breg'ma (pl. *bregmata*) [G. front part of the head]. The junction of the coronal and sagittal sutures in infants, the anterior fontanel. —**bregmat'ic**, *adj*.

breg mat" dym'i [*bregma*; G. *didymos*, twin]. See *craniopagus parietalis*.

Breh and Gaehler's method. See under *method*.

brei (bry) [Ger. *brei*, mush]. Mush; soupy mixture; tissue ground to pulp.

Breisky, August [*German gynecologist*, 1832–89]. Described kraurosis of the vulva (1885). In *Breisky method* of determining the dimensions of the pelvis at its outlet, the distance between the ischial tuberosities, and that between the sacrococcygeal junction and the lower border of the pubis, are measured externally.

Bremer, Ludwig [*American physician*, 1844–1914]. Known for his test for diabetic blood, in which blood is prepared as in ordinary staining methods and, after drying in hot-air sterilizer, is stained with methylene blue and eosin; the red cells appear greenish yellow whereas in normal blood they appear brownish. Called *Bremer test*.

brems strahl-en. *In radiobiology*, the secondary photon radiation produced by the interaction of energized electrons and the atomic nuclei of the material through which they pass; also called *bremsstrahlung*.

Brenner, Fritz (1887–). German physician who described follicular ovarian tumor called *Brenner tumor* (1907).

bren ner o ma. See Brenner *tumor*.

Breschet, Gilbert [*French anatomist*, 1784–1845]. Described the veins and canals of the diploë, called *Breschet veins*, *canals*.

Bretonneau, Pierre Fidèle [*French pathologist*, 1778–1862]. Identifying membranous croup, malignant angina, and certain affections of the gums as the same disease, he recognized diphtheria as distinct disease entity (1826) and later coined the term. Said to have performed the first successful tracheotomy for diphtheria (1825).

Breuer, Josef [*Austrian psychiatrist*, 1842–1925]. With Sigmund Freud, he is credited with the theory of the unconscious mind. See also Hering-Breuer *reflex*.

Breus, Carl [*Austrian obstetrician*, 1852–1914]. Described tuberous mole (1892) called *Breus mole*.

brev"i col'lis [L. *brevis*, short; *collum*, neck]. Congenital short neck; deformity characterized by shortness or absence of the neck, limitation of head movements and sometimes of the facial muscles.

brev"i li neal [*brevis*; L. *linealis*, lineal]. Pertaining to body type which is shorter and broader than normal. Syn., *brachymorphic*.

brev"i ra di-ate. See breviradiate *cell*.

bribe [OF. lump of bread]. *In psychoanalysis*, compromise in which the ego accepts the symptoms of neurosis and, in turn, placates the superego by suffering.

bridge [AS. *brycg*]. 1. *In anatomy*, any ridge or spanlike structure. 2. *In dentistry*, partial denture supported by one or more teeth. See *bridgework*. 3. *In electricity*, an pparatus for measuring the resistance of conductor.

arterial b. A segment of vein, fresh or preserved by the rapid freeze technique, used to bridge gap in an injured artery. The anastomosis between artery and vein is carried out by nonsuture technique over two funnel-shaped vitallium tubes or one long vitallium tube through which the vein is threaded. Also called *Blakemore operation*.

b. of the nose. That formed by the union of the two nasal bones.

cantilever b. One fixed at one end and with either no support or with lug resting on the adjoining tooth at the other end.

intercellular bridges. Protoplasmic bridges which connect adjacent cells plasmodesma.

Wheatstone b. An electric circuit co taining four resistances in branches or arms. When the bridge is suitably adjusted or balanced, any one resistance can be calculated in terms of the other three.

bridge work *I dentistry* 1 An appliance made of artificial crowns of teeth to replace missing natural teeth. Such crowns are connected to natural teeth or roots for anchorage by means *I bridge*. *A fixed bridge* is one which is permanently fastened to its butments *removable bridge* one which, though held firmly in place, may be removed by the wearer *removabl fixed bridge* one which may be removed, without mutilation of any of its parts, by the dentist, but not by the patient. 2. The technique of making bridges.

Bridgman, Percy Williams (1882–) American physicist, noted investigator in the study of high-pressure physics and inventor of pparatus producing extremely high pressures. He made other studies on electrical conduction in metals, the properties of crystals, and the logic of modern physics. N bel laureate in physics (1946)

bri'dle [AS. *bridel*]. 1 A band or filament stretching across the lumen of passage, or from side to side of an ulcer scar becess, etc. 2. A frenum.

Briggs, James Emmons [*American surgeon*, 1869–1947]. Inventor of the distensible rubber bag for controlling bleeding after suprapubic prostatectomy (1906); called *Briggs bag*.

Bright, Richard [*English physician and clinician*, 1789–1858]. Known universally for his description of chronic nephritis, which received the name *Bright' disease* (1827) In his reports, he differ entiated renal from cardiac dropsy Described also status lymphaticus (1838) and pancreatic jaundice. Is said to have made the original description of acute yellow atrophy of the liver The partial or complete loss of sight occasioned in uremia was once known as *Bright' blindness*.

bright'ness. The ttribute of sensation by which an observer is ware of different luminances.

Brill, Nathan Edwin (1860–1925) American physician; first to describe (1910) recrudescence of epidemic typhus occurring in mild form years after initial infection among immigrants from eastern Europe called *Brill' disease*, *recrudescent or sporadic typhus*. H also described follicular lymphoma, called *Brill-Symmers disease*

bril'liance, *I color optics*, an old term for *brightness*

bril'liant cres'yl blue (krees il, kree sil) (C.C.) A basic dye, having highly metachromatic proper ties; chiefl used for staining blood to demonstrate the platelets and reticulated corpuscles. Also called *brilliant blue C cresyl blue 2RN* or *BBS*.

bril'liant green (C.C.) Tetraethyldiamino-triphenylcarbobydride sulfate; $C_{27}H_{34}N_2O_4S$; surgical antiseptic used in 1 1000 aqueous solution also called *ethyl green*, *malachite green G*

bril'liant vi'tal red. See *vital red*.

brim stone" See *sulfur*

Brinton, William [*English physician*, 1823–67]. Gave early account of peptic ulcer with review of many thousands of cases seen post mortem (1857) Described linitis plastica (1859) called *Brinton disease*.

Briquet, Paul [*French physician*, 1796–1881]. Described hysterical ataxia (1859) called *Briquet' ataxia*. Described syndrome of hysterical paralysis of the diaphragm with dyspnea and aphonia, called *Briquet' syndrome*.

Brissaud, Edouard [*French physician*, 1852–1909]. Remembered for having given the first clear description of dysthyroidal infantilism and for his description of syndrome of hysterical glossolabial hemispasm, called *Brissaud-Marie syndrome*. See also Brissaud' *reflex*.

Brit'ish an"ti-lew'is ite. BAL

broach [OF *broche*]. *I dentistry* delicate, tapered, flexible steel instrument having spring temper; used for removing the dental pulp and for opening, enlarging, and treating the root canals. Various forms are the **barbed broach, hooked broach, smooth broach,** and **spiral broach,** all of which are operated by removable handle. The **root canal broach** is used for root-canal surgery and the **watchmaker' broach,** four or five-sided, very gradually tapering, sharp-angled instrument, is used as reamer to enlarge the root canals.

Broadbent, William Henry [*English physician*, 1835–1907]. Author of *Heart Disease* with Sir J F H. Broadbent (1897) Celebrated for his contributions to clinical knowledge of the heart and pulse (1890–97) Described progressive cerebral hemorrhage, at first outside brain ventricle and gradually advancing until it breaks into the ventricle called *Broadbent' apoplexy*. Advanced his law that the pper motor neuron lesions produce a milder form of paralysis in those muscles generally concerned with bilateral contractions than in those muscles which act unilaterally called *Broadbent' law*.

Broadbent's sign. See under *sign*.

broad-spec'trum an"ti bi-ot'ic. An antibiotic effective in the treatment of various infections caused by different types of microorganisms.

Broca, Pierre Paul [*French surgeon and anthropologist*, 1824–80]. Known for his work in anatomy physiology and anthropology and in brain surgery H claimed discovery of the speech center in the third left frontal convolution. The dividing point of the Sylvian fissure, the parietal angl in craniotomy and the visual plane drawn through the axes of the two orbits have all been known by his name. He also described cortical motor aphasia, called *Broca aphasia*.

Brocq, Louis Anne Jean [*French dermatologist*, 1856–1928]. H proposed the term parapsoriasis to describe an exfoliative dermatitis not resulting from any known disease called *Brocq disease*. Also described an uncommon form of hyperpigmentation occurring bout the mouth, especially in women, called *Brocq syndrome*.

Broders, Albert Compton [*American pathologist*, 1885–] Known for his classification of tumors, especially the epitheliomas, in which division is made into four groups. The more nearly the cells approach the embryonic type the more malignant the growth. The epitheliomas are graded from one to four the latter being the most malignant.

Brodie, Benjamin Collins [*English surgeon*, 1783–1862]. Known for his descriptions of various pathologic conditions. *Brodie abscess* is chronic osteomyelitic focus, of tuberculous or other etiology H described chronic synovitis resulting in pulpy degeneration of the joint tissue in the knee pseudo-fracture of th spine; tumor of the breast, cystosarcoma phylloides, sometimes called *Brodie' serocystic disease of the breast*, *Brodie tumor* and type of hemorrhoid H also studied and made tests of the varicose eins, and is said to have been the first to describe intermittent claudication in man.

Brodmann, Korbinian (1868–1918) German neurologist; one of the founders of the modern science of comparative cytoarchitectonics of the mammalian cortex, nd uthor of map of the human cortex (1908) See *Brodmann' areas* under *area*.

Brodmann's map. The map of areas of the human cerebral cortex, differentiated by their cellular patterns, as drawn by Korbinian Brodmann. The numbers which he gave to these areas are still used for convenient reference.

brom- See *bromo-*.

bro mal. CBr CHO Tribromoacetaldehyde. The bromine analog of chloral but unsuccessful therapeutically.

b. hydrate. CBr CH(OH) Colorless, deliquescent crystals; has been used as sedative and antispasmodic.

brom-am'ide (bro-mam'id, -ide, bro mah-mide, -mid) $C_6H_2Br_3NH_2HBr$ Tribromoaniline hydrobromide. Has been used as an analgesic.

bro mate [G *brōmos*, stench]. A salt of bromic acid containing the univalent radical —BrO

bro mat-ed (bro may tid) Combined with or containing bromine; brominated.

bro ma tom e try [G *brōma* food; *metron*, measure]. The estimation of the amount of food required for an individual.

bro ma-t ther' py [*brōma*, G *therapeia*, treatment]. Dietotherapy

bro ma to tox'in [*brōma*, G *toxikon*, poison]. A poison generated in food by the growth of microorganisms.

bro"ma to-tox'ism [*brōma*, *toxikon*]. Poisoning with infected food

bro ma zine hy"dro-chlo ride. British generic name for the antihistaminic substance, bromodiphenhydramine hydrochloride. See *ambodryl hydrochloride*.

brom di-eth"yl ac"e tyl u re (brohm dye-eth il-ass -til yoo-ree uh) Carbromal.

bro me-li bro mel'in. A protein-digesting enzyme from the pineapple.

bro me thol. British Pharmacopoeia title for solution of tribromoethanol. See *avertin*.

bro me tone. Tribromotertiarybutyl alcohol. Br_3-C C(OH)(CH$_3$) A fine, white, crystalline powder with sedative action similar to that of the bromides. Also *acetone bromoform*.

brom"hi dro si ph 'bi (brohm"hi-dro si f bee uh, -dros fo'bee uh, brom"hi) [G *brōmos*, stench; *hidrōs*, sweat *phobos*, fear]. Morbid dread of offensive personal smells, with hallucinations as to the perception of them.

brom"hi dro sis (brohm"hi-dro sis, brom"hi) **bro"mi-dro sis** (bro mi-dro sis, brom"i) [*brōmos*; *hidrōs*]. Excretion of sweat with an unpleasant odor Various odors may occur usually disagreeable. Syn., *osmidrosis, fetid perspiration*

brom hy'dric ac'id. Hydrobromic acid.

bro mide, bro mid. Any binary salt in which univalent bromine is the anion, as sodium bromide NaBr The bromides are used medicinally for several purposes, to check the convulsions of epilepsy and tetanus as analgesics, particularly in combination with other drugs and as sedatives in nervous excitation

bro mide poi'son ing. See *bromine poisoning*

bro mi-dro sis. See *bromhidrosis*.

bro mine (bro meen, -min) [*brōmos*] Br = 79.916. A reddish-brown liquid which, at ordinary temperatures, gives off heavy suffocating vapor It is very active escharotic and disinfectant and, internally acts as violent poison —brominated, **brominated,** *adj*

bro mine poi son i g. A diseased state caused by the prolonged administration of bromides; characterized by headache sleepiness, apathy cold extremities, fetid breath, and typical acneform eruption. There may be loss of strength and sexual drive, associated with trophy of the testes or mammae

bro'min ism. See *bromine poisoning*.

bro mi pin. A liquid composed of bromine and sesame oil, containing 10% of bromine, formerly used as sedative in epilepsy A similar compound containing 33% of bromine was used as an -ray contrast medium, especially in bronchography

bro mism, bro min ism. Bromine poisoning.

brom"i so-val'um. Generic name for (α-bromoisovaleryl) urea, sedative and hypnotic. See *bromural*.

bro mite. 1 Native silver bromide. 2. A salt of bromous acid containing the radical —BrO_2.

bro mo-, brom- [*brōmos*]. 1 A combining form denoting *bad smell*. 2. I chemistry combining form denoting *the presence of bromine*.

bro mo-ac"et n'l lid (bro mo-ass"i-tan'i-lid) C_6H_4Br NH.CO CH White crystals, almost insoluble in water soluble in alcohol. Analgesic and antipyretic

bro"mo ben"zyl cy' nide. $C_6H_5CHBrCN$ A lacrimator used in chemical warfare. Sometimes written *brombenzylcyanide*. See war gas.

bro mo-cam phor See monobromated camphor

bro mo cre sol green. Tetrabromo-metacresolsulfonphthalein, an indicator used for determination of hydrogen-ion concentration. Its useful pH range is 3.6 to 5.4 the color varies from yellow at 3.6 to blue at 5 4. Sometimes written *bromcresol green*

bro mo cre sol pur'ple. Dibromo-orthocresolsulfonphthalein, an indicator used for determination of hydrogen-ion concentration. Its useful pH range is 5.2 to 6 8; the color varies from yellow at 5 2 to purple at 6.8. Sometimes written *bromcresol purple*.

bro mo-der'ma [*brōmos*; G *derma*, skin] A skin eruption due to ingestion of bromides.

b o"mo di"phen hy'dra mine hy"dro chlo ride. Generic name for derivative of diphenhydramine hydrochloride in which hydrogen atom of phenyl group, in para-position, is replaced by an atom of bromine. Th substance possesses higher antihistaminic potency and lower toxicity as compared with diphenhydramine hydrochloride. Syn., *bromazine hydrochloride* See *ambodryl hydrochloride*.

bro mo-form. CHBr Tribromomethane. A heavy colorless, mobile liquid of sweetish taste slightly soluble in water miscible with alcohol. It has been used as sedative in whooping cough and in seasickness but has prod ced dangerous effects.

bro mo-hy"per hi-dro si (hi dro sis, -high-dro sis) **bro"mo-hy"per i-dro si** [*brōmos*; G *hyper* over; *hidrōsis*, sweating]. The excessive secretion of malodorous sweat.

bro mo-ma ni-a [*brōmos*; G *mania*, madness]. Psychosis from the excessive use of bromides.

bro mo-men"or rhe bro"mo meno or-rhea [*brōmos*; G *mēn*, month; *rhoia*, flow]. Disordered menstruation marked by offensiveness of the flow

bro mo phe nol blue. Tetrabromophenolsulfonphthalein, an indicator used for determination of hydrogen-ion concentration. Its useful pH range is 3.0 t 4 6 the color varies from yellow t 3 0 to bluish violet t 4 6. Sometimes written *bromphenol blue*.

bro mop ne a, bro mop-noe a [*brōmos*; G *pnoia*, breath] Fetid breath.

bro mo pro pane. 1 Bromopropane, BrCH CH CH and 2-bromopropane, CH CHBr CH ; have been suggested as general inhalation anesthetics.

bro mo-pro pene. 1 Bromo-1-propene, BrC CH CH and 2-bromo-1-propene, CH CBr CH have been suggested as general inhalation anesthetics.

bromoseltzer A proprietary headache remedy in the form of granulated, effervescent salt.

bro"mo-thy'mol blue. Dibromothymolsulfonphthalein, an indicator used for determination of hydrogen-ion concentration. Its useful pH range is from 6.0 to 7.6; the color varies from yellow at 6.0 to blue at 7.6. Sometimes written *bromthymol blue*.

bromural. Trade-mark for the antispasmodic and local anesthetic substance monobromoisovaleryl alcohol.

bromsulphalein. Trade-mark for brand of sulfobromophthalein sodium the substance used for quantitative evaluation of liver function.

brom"te-trag'nost (brohm ti trag nobst, -nost) Sulfobromophthalein sodium diagnostic agent.

bromural. A trade-mark for bromisovalum sedative and hypnotic.

bro mu-ra ted [*bromos*]. Containing bromine or bromine salt.

bronch-ad"e-ni'tis (brong-kad -nigh tis, brong' kah di) [G *bronchos*, trachea *aden*, gland; *-itis*, inflammation]. Inflammation of the bronchial lymph nodes.

bron chi (brong'kigh) Plural of bronchus.

bron"chi ec'ta si (brong"kee-ock tah-sis) [G *bronchia*, bronchial tubes *ektasis*, extension]. Dilatation of bronchi due to an inflammatory or degenerative process, usually associated with chronic suppuration. —**bronchiectat'ic**, *adj*

cylindrical b. A uniform dilatation of tube.

sacculated b. Irregular dilatation in areas or pockets.

bron'chi-o- (brong'kee-o-) **bron chi-** (brong'ki-) [*bronchia*]. A combining form signifying *bronchial*.

bron"chi-o-gen'ic. Bronchogenic.

bron chi-ole (brong'kee ole) [dim. from *bronchia*]. One of the small (1 mm. or less in diameter) subdivisions of the bronchi. —**bron chi'o-lar** *adj.*

respiratory b. The last bronchiolar subdivision; one which has pulmonary alveoli in its wall.

terminal b. The next to the last bronchiolar subdivision; the last bronchiole without pulmonary alveoli in its wall.

bron"chi-o-lec'ta-si [*bronchia*; G *ektasis*, extension]. Dilatation of bronchioles. See *bronchiectasis*.

bron"chi-o-li'tis [*bronchia*, G. *-itis*, inflammation]. Inflammation of the bronchioles; capillary bronchitis.

acute obliterating b. Pulmonary cirrhosis affecting the smaller bronchioles, causing occlusion of the lumens by induration of the walls.

b. fibrosa obliterans. Bronchiolitis resulting in occlusion of the bronchioles by the growth of connective tissue from the terminal bronchi.

vesicular b. Bronchopneumonia.

bron-chi'tis (bron-kigh tis, brong-kigh tis) [*bronchia*; *-itis*]. Inflammation of the mucous membrane of the bronchial tubes. —**bronchit'ic**, *adj*

acute b. That due to extension of an acute nasopharyngitis, to the inhalation of irritant vapors, or to certain infectious agents. It is characterized by fever cough, substernal pain, and by dry rales in the early and moist rales in the later stages.

asthmatic b. (a) Asthmatic type of breathing, usually without acute dyspnea, associated with respiratory infections; believed to occur in individuals with an allergic constitution. (b) The syndrome of chronic bronchitis, emphysema, and secondary bronchiolar spasm, usually occurring in persons of middle age or older; an occasional use.

b. convulsiva. Whooping cough.

capillary b. An acute bronchitis of the bronchioles; bronchiolitis. Bronchopneumonia is common complication.

catarrhal b. A form attended with profuse, mucopurulent discharges.

chronic b. A form of bronchitis usually occurring in middle or advanced life characterized by cough and by dry and moist rales. It may be due to repeated attacks of acute bronchitis, to gout, rheumatism, or tuberculosis, or it may be secondary to cardiac and renal disease.

croupous b. A rare variety attended with the expectoration of casts of the bronchial tubes, containing Charcot-Leyden crystals and eosinophil cells, after paroxysm of dyspnea and violent coughing.

dry b. That unattended by expectoration.

fibrinous b. See croupous *b.*

fusospirochetal b. A type of chronic bronchitis caused by spirochete; it is amenable to treatment by neoarsphenamine.

mechanical b. A form caused by the inhalation of dust, etc.

phthisical b. A tuberculous form with purulent sputum.

plastic b. See croupous *b.*

putrid b. A variety of chronic bronchitis characterized by the discharge of copious, half-liquid, extremely offensive sputum.

secondary b. One which develops as complication of some preceding disease.

bron'cho- (brong'ko-) **bronch-** [G *bronchos*, trachea]. A combining form signifying *relating to bronchus* or *to the bronchi*.

bron'cho-cele" [*bronchos*; G *kēlē*, tumor]. A dilatation of bronchus.

bron cho-con stric'tor [*bronchos*; L. *constrictor*, from *constringere*, to draw together]. Any substance having the property of decreasing the caliber of the pulmonary air passages.

bron cho dil"a ta ti n (brong ko-dil uh tay' shun, -dye"luh-tay'shun) [*bronchos*; L. *dilatatio*, from *dilatare*, to dilate]. The widening of the caliber of th pulmonary air passages by the use of drugs or surgical instruments.

bron"cho di la tor (-dye lay'tor -di lay tor) [*bronchos*; *dilatare*]. L. Any drug which has the property of increasing the caliber of the pulmonary air passages. 2. An instrument used for this purpose.

bron"cho-e-de'ma [*bronchos*; G *oidēma*, swelling]. Swelling of the bronchial tubes which diminishes their lumens, hindering the passage of air through them, and causing dyspnea.

bron"cho-e-soph" ge'al. Pertaining to bronchus and the esophagus, as the bronchoesophageal muscle, which is a small bundle of smooth muscle connecting the esophagus and the left main bronchus.

bron cho-e-soph"a gol'o-gy [*bronchos*; *oisō*; *phagein*, G *logos*, word]. That field of medicine specializing in disorders of the esophagus and pulmonary respiratory tract, involving direct examination (bronchoesophagoscopy)

bron"cho-e-soph"a-gos'co-py [*bronchos*; perhaps G *oisō*, I shall carry; *phagein*, to eat; *skopein*, to examine]. Visual examination of the interior of the larger tracheobronchial tubes and the esophagus with the aid of an instrument.

bron"cho-gen'ic, bron"chi-o-gen'ic [*bronchos*; G *genesthai*, from *gignesthai*, to be produced]. 1 Arising in bronchus or in the bronchi. 2. *I embryology* capable of forming the bronchi.

bron'cho-gram [*bronchos*; G *gramma*, letter]. Radiograph of the bronchial tree made after the injection of radiopaque substance.

bron-chog'ra phy (brong-cog'ruh-fee) [*bronchos*; G *graphein*, to write]. Roentgenographic visualization of the bronchial tree after the introduction of an opaque contrast material, usually iodized oil.

ascending b. That of the pulmonary cavities.

bron'cho lith (brong'ko lith) [broncho- G. *lithos* stone]. A calculus or concretion in a pulmonary air passage. —**broncholithi'asis**, *n.*

bron chol'o gy That special branch of medicine dealing with the study and treatment of the bronchial tree by means of bronchoscopy

bron cho-my ni li'a sis. See *bronchomycosis.*

bron cho mo'tor [broncho-; L. *motor*, from *movere*, to move]. Pertaining to the neuromuscular mechanism which controls the caliber of the pulmonary air passages.

bron cho my-co sis (brong"ko-migh ko sis) [broncho-; G *mykēs*, fungus; *-ōsis*, condition]. Bronchitis caused by any species of *Candida*, usually Candida albicans. Syn., *bronchomoniliasis*.

bron-chop a thy [broncho-; G *pathos*, disease]. Any abnormality in bronchus.

bron-choph ny (brong kof' nee) [broncho-; G *phōnē*, voice]. An abnormal increase in the intensity of the voice sounds heard by auscultation over the chest wall when the density of the lung tissue has been increased by disease. Also see *pectoriloquy*.

bron cho plas"ty [broncho-; G. *plassein*, to form]. *In surgery* repair of bronchial defect.

bron"cho-pleu'ral (brong"ko-ploor al) [broncho-; G *pleura*, rib]. Pertaining to bronchus and the pleural cavity as bronchopleural fistula.

bron"cho pneu mo ni-a [broncho-; G *pneumonia*, disease of the lungs]. Inflammation of the lungs which has spread from infected bronchi. Includes all forms of pneumonitis which are not suppurative or with lobar distribution Common in the very young or very old, and may be due to variety of causative organisms.

bron cho-pneu mo ni'tis [broncho-; *pneumonia*; G *-itis*, inflammation]. Bronchopneumonia.

bron cho-pul'mo na ry [broncho-; L. *pulmonarius*, from *pulmo*, lung]. Relating to both the bronchi and the lungs.

bron-chor' rha phy (brong-kor'ah-fee) [broncho-; G. *rhaphē*, suture]. The suturing of bronchus.

bron chor rhe a, bron chor-rhoe' (brong"ko-ree ah) [broncho-; G *rhoia*, to flow] Excessive discharge from the bronchial mucous membranes. —**bronchorrheal**, *adj*

bron'cho-scope [broncho-; G *skopein*, to examine] Instrument for the visual examination of the interior of the bronchi also used for treatment and/or operation. —**bronchoscop'ic**, *adj.*; **bronchos copy** *n.*

bron cho spasm [broncho-; G *spasma*, spasm]. Temporary narrowing of the bronchi due to violent, involuntary contraction of the bronchial muscles.

bron cho spi"ro-che-to sis (brong"ko spy ro kee-to sis) [broncho-; G *speira* coil; *chaitē*, hair; *-ōsis*, condition]. Chronic bronchitis, usually complicated by bronchiectasis caused by infection with group of symbiotic anaerobic spirochetes and fusiform bacilli. Also called Castellani' *disease*.

bron cho spi rog ra phy (-spy rog rah fee) [broncho-; L. *spirare*, to breathe; G *graphein*, to write] The graphic recording of the functional capacity of the lungs.

bron"cho spi rom'e-ter (-spy-rom i-tur) [broncho-; *spirare* G *metron*, measure] A spirometer connected with special type of catheter designed for intrabronchial use.

bron"cho- spi rom e try [broncho-; *spirare*; *metron*]. The determination of various aspects of the functional capacity of single lung.

differential b. Such determinations made of both lungs simultaneously for comparison.

bron cho-ste no'sis [broncho-; G *stenōsis* being straitened]. Narrowing of the lumen of one or more bronchi.

bron-chos to my [broncho-; G *stoma*, mouth]. Fistulization of bronchus through the chest wall.

bron-chot my (brong-cot o-mee) [broncho-; G. *tomē*, cutting]. Incision into bronchus.

bron"cho ve-sic'u lar [broncho-; L. *vesicula*, vesicle]. Pertaining to an intermediate stage in the transition from normal vesicular to completely bronchial breath sounds, characterized by elevation of pitch and prolongation of the expiratory phase.

bron chus (brong'kus) (pl. **bronchi**) [broncho-]. One of the primary branches of the trachea or such of its branches within the lung as contain cartilage in their walls. See Plate 15. —**bronchial**, *adj*

eparterial b. The first branch of the right primary bronchus, situated above the right pulmonary artery

extrapulmonary b. One which is not surrounded by lung substance. Also called *primary b*

hyparterial b. Any one of the first collateral branches of the stem bronchi except the eparterial bronchus.

stem b. The continuation of the main, or primary bronchus which extends lengthwise in each lung, giving off anterior and posterior branches to the lobes.

Brönsted and Lowry substance. See *acid*, 2.

Brönsted theory See under *theory*

bron"to pho'bi [G *brontē*, thunder; *phobos*, fear]. Morbid fear of thunder

bronze di"a be'tes. Hemochromatosis.

brood cyst. A small papilla arising from the inner germinal layer of an *Echinococcus* cyst which in turn buds off 5 to 20 small oval buds or scolices from their inner layer These latter represent the mature larval parasite. Also called *brood capsule*.

Brooke, Henry Ambrose Grundy [*English dermatologist*, 1854–1919]. Described an adenoid cystic epithelioma of skin usually involving the scalp, called *Brooke' tumor* cancer

Brooks, Clyde (1881) American pharmacologist and physiologist, known for his discovery of the Brooks method for measuring blood sedimentation. A ¼ mm.-bore glass tube 100 mm. long, with needle attached to end is flushed with anticoagulant blood is drawn directly into the tube, which is set up in holder in the erect position, and sedimentation observed and curve plotted

Brophy Truman William [*American oral surgeon*, 1848–1928]. Remembered for his inventiveness in plastic oral surgery and, especially for his work in the repair of cleft palate which he closed by means of wire tension sutures reinforced by lead plates. Invented special periosteal elevator for palate surgery

broth [AS]. A liquid nutritive medium for the culture of microorganisms, prepared from finely chopped lean meat or dehydrated meat extract. Syn., *bouillon*.

Sabouraud's b. See *Sabouraud' agar* under Raymond Jacques Adrien *Sabouraud*.

Bro ti (bro shee-ah) Synonym for *Malaria*.

brow [AS. *brū*]. 1. The forehead; the upper anterior portion of the head. 2. The supraorbital ridge; the eyebrow

brow ague (ay'gyōō) Old term for neuralgia of the first division of the trigeminal nerve.

Brown, J mes Barrett (1899–) American plastic surgeon, known for his contributions to the study of skin grafting. He was associated with V P Blair in devising an intermediate split graft known as the *Blair-Brown graft*.

Brown, Robert [*Scottish botanist*, 1773–1858]. Discovered the cell nucleus (1831). Credited also with the discovery of generation in plants by means of pollen. The so-called *Brownian movement*, an oscillatory movement of microscopic particles suspended in liquids, of unknown cause, was first described by him; also known as *pedesis* *athletic movement*.

Brown, Sanger [*American psychiatrist*, 1852–1928]. Described hereditary spinocerebellar ataxia; called *Sanger Brown ataxia*.

Brown personality inventory See under *test*.

Brown's test. See cold pressor *test*.

Brown' test (*for arteriovenous fistula*) See under *test*.

Brown-Séquard, Charles Edouard [*British physiologist in France*, ca. 1817–94]. Widely known for his experimental work on internal secretions (1856) on the adrenal glands and testicular extracts (1889–90) on the functions of the sympathetic nerves (1852–54) and for his excellent exposition of the pathways of conduction in the spinal cord (1863) Described lesion of one lateral half of the spinal cord, causing paralysis of motion on one side and of sensation on the opposite (1851) called *Brown-Séquard paralysis, syndrome*. H has been regarded as successor of Claude Bernard and as one of the founders of modern endocrinology

Browne, Denovan Clarence [*American physician*, 1898–]. Invented, with Gordon McHardy an esophageal dilator (1939) called *Browne-McHardy' dilator*

brown mix'ture. Compound opium and glycyrrhiza mixture. See *opium*.

Bruce, David [*British pathologist and bacteriologist*, 1855–1931] Known internationally for his investigations of the causes of tropical diseases. Discovered the cause of nagana to be trypanosome carried by the tsetse fly Investigated, with Nabarro, the cause of sleeping sickness in Africa and showed the tsetse fly to be the vector

Bru-cel'la [L., after David *Bruce*]. A genus of small, Gram-negative, nonmotile, short bacilli or coccobacilli which are not acid-fast and do not form endospores; the cause of brucellosis (undulant fever in man and infectious abortion in cattle) There are three species recognized *B abortus*, the bovine strain, *Br melitensis*, the goat strain; *B suis*, the porcine strain. These three species are the causative agents of infectious abortion and undulant fever —brucellar *adj*

Br tularensis. See *Pasteurella tularensis*.

brucellergen. Trade-mark for suspension of *Brucella* nucleoproteins used in the intradermal test for the diagnosis of brucellosis; the preparation often causes general reactions.

bru"cel-li' -sis. See *brucellosis*.

bru cel'lin. A preparation from the combined cultures of the three species of *Brucella*, used in the diagnosis, prophylaxis, and treatment of brucellosis.

bru"cel-lo sis [*Brucella*; G. *-ōsis*, condition]. A remittent febrile disease caused by infection with bacteria of the genus *Brucella*. In humans, brucellosis may occur in acute or chronic form and leads to weakness, loss of weight, and anemia. The disease is rarely transmitted from person to person, but spreads readily from animal to animal and from animal to man. Cattle, goats and hogs are the chief sources of infection. Syn., *brucelliasis*, *Malta fever Mediterranean fever undulant fever*

Bruch's membrane. See basal *membrane* of Bruch.

bru'cine (broo seen, -sin) [David *Bruce*]. $C_{23}H_{26}O_4N_2 \cdot 4H_2O$ A poisonous alkaloid found in various species of *Strychnos*, including *S. nux-vomica*, *S. ignatia*, and others It occurs as white, crystalline powder with bitter taste. It is used chiefly as simple bitter some difference of opinion existing as to its physiologic action. It is less poisonous than strychnine and appears to be depressant to the peripheral motor and sensory nerves. It is used as an alcohol denaturant.

b. sulfat (*brucinae sulfas*) $(C_{23}H_{26}O_4N_2)_2 H_2SO_4 \cdot 7H_2O$ A white crystalline powder of bitter taste, soluble in 70 parts of water Dose, 2 mg. (1/30 gr.)

Bruck, Alfred [*German physician*, 1865–]. Described rare disease of the bones characterized by multiple fractures, ankylosis, and muscle atrophy (1897) called *Bruck disease*.

Brudzinski's reflex, signs. See *Brudzinski' signs* under *sign*.

bruise [AS. *brȳsan*, to break]. Contusion.

bruisse ment' (brweess-mong *See* Notes § 35) [F rustling noise] A purring sound heard on auscultation.

bruit (broo ee') [F]. Old term for an adventitious sound heard on auscultation. See *heart sound*, *heart murmur*

b. de diable. See hemic *murmur*

cephalic b. A loud, continuous heart sound with systolic accentuation heard on auscultation of the skull and face sign of fistulous carotid-cavernous aneurysm which is markedly diminished or abolished by digital compression of the appropriate carotid artery in the neck.

placental b. Old term for placental *murmur*

Brunfels, Otto [*German botanist* 1488–1534]. Greatest botanist of the sixteenth century. Set high standard of illustration in his work on plants (1530–34)

Brunn, Albert von [*German anatomist* 1849–95] Described the groups or nests of flat epithelial cells in the normal vesical mucosa, once called *Brunn nests*.

Bru Fritz [*Austrian surgeon*, contemporary]. I troduced, with Mandl, the method of treating angina pectoris by paravertebral injection of alcohol (1924)

Brunner J ha n Conrad [*Swiss anatomist* 1653–1727]. Remembered for his description of the duodenal glands, called *Brunner' glands*. He did pioneer work on internal secretions in the dog and observed thirst and polyuria following excision of the pancreas (1683)

Bruns, Ludwig von [*German neurologist*, 1858–1916]. Described syndrome of vertigo, vomiting, and falling upon the ground as indicative of tumor of the fourth ventricle, when elicited by sudden change in the position of the head called *Bruns syndrome*. See also *Bastian-Bruns law* under *Bastian*.

Brunschwig, Alexander (1901–) American surgeon who introduced the operation of duodenopancreatectomy sometimes known by his name (1937) H also introduced the operations of complete pelvic exenteration for advanced pelvic cancer (1946) and radical hysterectomy and pelvic lymph-node excision for cancer of the cervix (1947) and discovered gastric secretory depressant in the gastric juices of patients with pernicious anemia and gastric cancer.

Brunton Thomas Lauder [*Scottish physician and pharmacologist*, 1844–1916]. Eminent for his work on the action of drugs on the cardiovascular system. Introduced amyl nitrite in the treatment of angina pectoris (1867)

brux'ism [G *brychein*, to gnash the teeth]. Grinding of the teeth an unconscious habit often limited to the sleeping period but sometimes occurring during mental or physical concentration or strain.

brux"o ma ni a [brychein, G. mania, madness]. Grinding or pounding of the teeth as manifestation of neurosis, usually occurring during sleep.

Bryant, Thomas [*English surgeon*, 1828–1914]. Widely known as an operating surgeon, he is remembered for his lumbar colostomy made between the last rib and the iliac crest, with permanent fixation of the bowel. He described the iliofemoral triangle and the third or vertical line forming the triangle, both sometimes indicated by his name.

Bryant sign. See under *sign*.

bryg'mus [G. *brygmos*, biting]. Grinding of the teeth; odontoprisis.

bry-o ni a (brigh-o nee-uh) [G. bryony]. The root of *Bryonia alba* or *B. dioica*. Its properties are due to the glycosides bryonin and bryonidin. It is an irritant emetic, drastic cathartic, and vesicant. Has been used in pleurisy, pleuropneumonia, rheumatic fever, and colds.

bry on'i-din (brigh-on i din). A glycoside from *Bryonia alba* which causes paralysis of the central nervous system.

bry'o-nin. A glycoside from *Bryonia alba*.

bry'o-phyte [G. *bryon*, moss; *phyton*, grown]. A division of the plant kingdom, which includes liverworts and mosses.

BTPS *In respiratory physiology*, abbreviation for *body temperature, ambient pressure, saturated with water*.

BTU, B.T.U., Btu, B.Th.U. British thermal unit.

bu'bas (boo'babes). Brazilian name for yaws.

b. braziliensis. See *leishmaniasis americana*.

bu'bo (bew'bo, boob o, boo'bo) [G. *boubon*, groin]. Inflammation, swelling, and hypertrophy of one or more lymph nodes, often going on to suppuration, and usually located in the groin or axilla. It occurs commonly with chancroid, syphilis, and venereal lymphogranuloma. Syn., *sympathetic abscess*. Also called *inguinal adenitis*. —**bubon'ic,** *adj.*

climatic b. Venereal lymphogranuloma.

indolent b. One with enlargement and hyperplasia without the formation of pus or any tendency t break down.

parotid b. See *parotitis*.

pestilential b. One associated with the plague.

rheumatic b. A hard lump occurring most frequently on the back of the neck, as a sequel of acute articular rheumatism.

serpiginous b. An ulcerated bubo which changes its seat or in which the ulceration extends in one direction while healing in another.

strumous b. Hypertrophied lymph node forming large indolent swelling in tuberculous subject.

syphilitic b. That which ppears in syphilis few days after the primary lesion.

venereal b. That due to venereal disease.

bu"bon-ad" ni'tis [boubon, G. aden, gland; -itis, inflammation]. Inflammation of an inguinal lymph node.

bu"bon al gi a [boubon, G. algos, pai]. Pain in the inguinal region.

bu bon'ic plague. See under *plague*.

bu bon o cele [boubon, G. kele, hernia]. Inguinal hernia which is incomplete in that it does not extend beyond the inguinal canal.

bu-bon u lus [L. dim. from *boubon*]. Focal suppurative lymphangitis, especially on the dorsum of the penis complication of chancroid. *Rare.*

bu-car'di a (bew kahr'dee-uh, boo-kahr') [G. *bous* ox; *kardia*, heart]. Bovine heart; extrem hypertrophy of the heart.

buc'ca (pl. *buccae*) [L., heek]. The cheek; the hollow of the heek, or its inner surface. —**buccal,** *adj.*

buc'ci na tor (buck'si nay"tor) [L., trumpeter]. The muscular foundation of the cheek. See Table of Muscles and Nerves in the Appendix.

buc'co- [L. *bucca*, cheek]. A combining form denoting *of* or *pertaining to the cheeks*.

buc"co-ax'i al [bucca, L. *axis*, axle]. Pertaining to the buccal and axial walls of dental cavity.

buc"co-clu sal [bucca; L. *occludere*, to close]. Pertaining to the buccal and occlusal walls of dental cavity.

buc"co-cer'vi cal [bucca, L. *cervix*, neck]. Pertaining to the cheek and the neck; also, pertaining to the buccal surface and neck of tooth.

buc"co-dis tal [bucca; L. *distare*, to be distant]. Pertaining to the buccal and distal walls of dental cavity.

buc"co-fa cial ob tu ra"tor. Any mechanical device for closing an opening through the cheek into the mouth.

buc"co gin gi val (buck" jin"ji vul, -jin jy'vul) [bucca; L. *gingiva*, gum]. Pertaining to the cheek and the gums.

buc"co la'bi-al [bucca; L. *labium*, lip]. Pertaining to the cheek and the lip.

buc"co-lin gual [bucca, L. *lingua*, tongue]. Relating to the cheek and the tongue. —**buccolingually** *adv.*

buc"co me si al (book"o-mee see-ul, mess ee-ul, mee see ul) [bucca; G. *mesos* middle]. Pertaining to the buccal and mesial walls of dental cavity.

buc"co-na'sal (buck nay'zul) [bucca, L *nasus*, nose]. Pertaining to the cheek and nose.

buc"co-na so-pha ryn'ge al (-nay"zo-f -rin jul, -jee-ul, -far"in jee'ul) [bucca; *nasus*; G *pharynx* throat]. Pertaining to the cheek and upper part of th pharynx.

buc"co pha ryn ge al [bucca; *pharynx*]. Relating to the cheek and to the pharynx.

buc"co phar yn ge-us. A portion of the superior constrictor muscle of the pharynx.

buc"co pulp al [bucca, L. *pulpa*, fleshy part]. Pertaining to th buccal and pulpal walls of dental cavity.

buc"co-ver'sion [bucca, L. *versum*, from *vertere*, to turn]. Condition of tooth being out of the line of normal occlusion in the buccal direction.

buc cu la [L., little cheek]. The fleshy fold beneath the chin which forms what is called double chin. *Obs.*

Buchner, Eduard [*German chemist*, 1860–1917]. Known for his work in enzyme action. Introduced funnel with perforated porcelain plate on which the filter paper is placed called *Buchner filter funnel*. Was warded the N bel prize for chemistry (1907).

Buchner, Hans [*German bacteriologist* 1850–1902]. Demonstrated that bactericidal power of blood serums is lost when they are heated. Described the ymase expressed from dried yeast, called *yeast cell plasma, Buchner zymase*.

bu'chu (bew coo, boo'koo) [Zulu *buchu*, mixture of aromatic leaves]. The leaves of several species of *Barosma*, yielding not less than 1.25% of a volatile oil, to which its properties are probably due. Formerly used as diuretic in cystitis and other affections of the genitourinary mucous membrane.

bucillin. Trade-mark for flavored penicillin troche.

Buck, Gurdon [*American surgeon*, 1807–77]. Eminent for his skill and invention in the treatment of fractures. Ligated the iliac and femoral arteries for aneurysm (1858). I vented an extension pparatus (1860–62) consisting of weight and pulleys for the treatment of fractured femur which was long in use; known as *Buck' extension*.

Devised an operation for the correction of bony ankylosis of the knee by removal of wedge of bone including the patella and portions of the condyles (1845)

Bucky's diaphragm. See under *diaphragm*.

buc-ne-mi- [G *bous*, ox, *knēmē*, leg]. Phlegmasia alba dolens. *Obs.*

bud [ME. *budde*] 1. *I embryology* protuberance or outgrowth which is the primordium of an appendage or an organ. 2. *I anatomy* an organ or structure shaped like the bud of plant. 3. *In mycology* gemma.

bronchial b. One of the outgrowths of the embryonic bronchi responsible for the continued growth and branching of the respiratory tree.

end b. A mass of indifferent cells produced by the remnant of Hensen node; it develops into the caudal part of the trunk without forming distinctive germ layers.

gustatory b. A taste bud.

limb b. A lateral swelling of the embryonic trunk: the anlage of an ppendage.

lung b. One of the primary outgrowths of the embryonic trachea whose growth and subsequent division produce primary bronchus and all its branches.

periosteal b. Vascular osteogenic tissue from the cellular layer of the periosteum penetrating cartilage of growing bone to help form center of ossification.

tail b. (a) Anlage of the caudal appendage. (b) See end b.

taste b. End organ of the sense of taste one of the oval, flask-shaped bodies embedded, most commonly in the epithelium of the tongue. Also called *caliculus gustatorii*

ureteric b. Dorsomedial outgrowth of mesonephric duct the anlage of ureter renal pelvis and its calyxes, and the collecting tubules of kidney

Budd, George [*English physician*, 1808–82]. Described variety of hepati cirrhosis (1845) called *Budd's disease*.

Budd, William [*English physician*, 1811–80]. Known for his book on typhoid fever (1873) in which he insisted that the disease was spread by contagion. Established the fact that the disease is carried by contamination from the ejecta of individuals ill with typhoid and is probably water borne. His work has been reprinted by the American Public Health Association (1931)

bud'ding [ME. *budde*]. *I biology*, form of asexual reproduction occurring in the lower animals and plants, in which the parent organism develops projections which develop into new individuals.

Büdinger Konrad [*Swiss physician in Austria* 1867]. Described pathologic fracture of the cartilage of the patella, called *Büdinger Ludloff-Läwen disease*

Buerger Leo [*American physician*, 1879–1943]. Known for his observations on thromboangiitis obliterans, term he originated. His bservations furnished the first clear report of the clinical course and the pathology of the disease which is known as *Buerger' disease* (1908) Devised passive exercises as routine treatment of the condition.

Buergner Otto von [*German neurologist* 1858–1904]. Described cordlike tissues between the nerve fibers and associated structures, of the nature of connective tissue called *Buergner cords*. These have been identified as new cells of Schwann accompanying regeneration of an axon after an injury arranged in bands, thus forming tissue which acts as pathway for the outgrowing nerve.

bu'fa gins (bōō fa-gins) The cardioactive genins present in the skin secretions of toads as, f example, bufalin and bufotalin.

bu'fa lin (bōō fa lin) A cardioactive steroid aglycone, closely related to bufotalin, present in the skin secretions of toads.

buff'er [ME. *buffe*] 1. A substance which, when added to solution, causes resistance to any change of hydrogen-ion concentration when either acid or alkali is added. 2. Treat with buffer

buff'y coat. The white blood cells which separate and form layer on top of the erythrocytes when whole blood is centrifuged.

bu"fo tal'in. $C_{26}H_{36}O_6$ cardioactive steroid aglycone present in the skin secretions f toads.

bu"fo-ten'i-dine. The betaine form of bufotenin; component of the secretion of the skin glands of the toad, *Bufo vulgaris*.

bu fot e-nine, bu fo'te-nin. 5-Hydroxy-N N-dimethyltryptamine, component of the secretion of the skin glands of the toad, *Bufo vulgaris*. It causes hypertension and strong and lasting vasoconstriction.

bu"fo-tox'in [L. *bufo*, toad, G. *toxikon*, poison]. $C_{40}H_{60}N_4O_{10}$; suberylarginine ester of bufotalin; it is the principal toxin present in the skin secretions of toads and lizards.

bug [ME. *bugge*]. An insect of the order Hemiptera or suborder Heteroptera. See also *bedbug*.

assassin b. Any one of the Triatomidae. Syn., *conenose*. Also called *flying bedbug kissing b.*, *Mexican* or *Texas bedbug*.

Croton b. The cockroach. See *Blatella germanica*.

Miana b. Any tick of the genus *Argas*.

red b. Harvest mite; mite of the *Trombicula*.

wheat b. A mite of the *Pediculoides*.

bug'gery [F *bougre*, from ML. *Bulgarus*, heretic]. *In legal medicine*, sodomy

B ie Louis Arthur [*American surgeon*, 1890–] Known for devising an operation for the removal of hemorrhoids under caudal anesthesia with the patient in the prone position.

Buist' method. See under *artificial respiration*.

Bülau Gotthard [*German physician*, 1835–1900] Said to have originated the use f siphon drainage in treating empyema, called *Bülau drainage*.

bulb [L. *bulbus*, bulb] 1 An oval or circular expansion of cylinder or tube 2. Old term for the medulla oblongata. —**bulb ar** *adj*

aortic b. See *b.* of the heart.

arterial b See *b* of the heart.

brachial b. The expansion of the spinal cord at the place of distribution of the nerves forming the brachial plexus.

b. of the corpus cavernosum urethrae. See *b.* of the urethra.

b. of the eye. The eyeball.

b. of the heart (*bulbus cordis*) The anterior division of the embryonic heart within the pericardial cavity Its proximal part is incorporated into the right ventricle; its distal part forms the aortic and pulmonary valve region of the heart. Syn *aortic b arterial b. bulbus arteriosus, bulbus cordis*

b. of the penis. See *b.* of the urethra.

b. of the urethra. The expanded proximal portion of the corpus cavernosum urethrae Syn *b. of the penis*.

cerebral b. See *medulla* oblongata.

duodenal b., *I radiology* the first part of the duodenum, immediately beyond the pylorus. Also called *duodenal cap*.

gustatory b. Old term for taste bud.

hair b. The swelling of the root of hair at its deep end.

inferior b. of the internal jugular vein. An

enlargement of the jugular vein immediately above its union with the subclavian vein.

jugular b. See *inferior b.* of the internal jugular vein, *superior b.* of the internal jugular vein.

Krause's end-b. See Krause *corpuscle*.

nerve b. An eminence of protoplasm within the sarcolemma of muscular fiber representing the termination of motor nerve fiber.

olfactory b. The enlarged distal end of either olfactory tract situated on each side of the longitudinal fissure upon the undersurface of each anterior lobe of the cerebrum. See Plate 17.

sinovaginal b. One of the bilateral dorsal evaginations of the urogenital sinus forming the lower fifth of the vagina.

superior b. of the internal jugular vein. An enlargement of the internal jugular vein at the point of exit from the jugular foramen.

vaginal b. (a) One of the solid epithelial bulbs forming the lower part of the fetal vagina, regarded as of paramesonephric duct origin. (b) See *vestibular b.*

vestibular b. One of the paired masses of erectile tissue located on either side of the vestibule of the vagina, homologous to the bulb of the urethra and adjacent corpus cavernosum urethrae in the male.

bul'bo- [*bulbus*]. A combining form denoting bulb or *bulbar*.

bul"bo-cap'nine (bul"bo-cap'neen, -nin) $C_{19}H_{19}NO_4$. An alkaloid in the tubers of *Bulbocapnus cava*. The phosphate and the hydrochloride have been used in certain diseases of the nervous system, such as paralysis agitans, chorea, and ataxic conditions.

bul"bo-cav"er-no'sus [*bulbus*; L. *caverna*, cavern]. A muscle encircling the bulb and adjacent, proximal parts of the penis in the male and encircling the orifice of the vagina and covering the lateral parts of the vestibular bulbs in the female. See Table of Muscles in the Appendix.

bul"bo-nu'cle-ar [*bulbus*; L. *nucleus*, kernel]. Relating to the medulla oblongata and its nerve nuclei.

bul"bo-spon"gi-o'sus. The BR name for the *bulbocavernosus muscle*.

bul"bo-u-re'thral [*bulbus*; G. *ourēthra*, urethra]. Relating to the bulb of the urethra, as the bulbourethral glands.

bulb'ous [*bulbus*]. Having or containing bulbs; bulb-shaped; swollen; terminating in bulb.

bul"bo-ven-tric'u-lar [*bulbus*; L. *ventriculus*, belly]. Pertaining to the bulb and the ventricle of the heart.

bul'bus. See *bulb*.

bul'bus ar-te'ri-o'sus. See *bulb of the heart*.

bul'bus cor'dis. See *bulb of the heart*.

bu-le'sis [G. *boulēsis*, will]. The will, or an act of the will.

bu-lim'i-a (bew-lim'ee-uh, bōō-) **bou-lim'i-a** (bōō-lim'ee-uh) [G. *bous*, ox; *limos*, hunger]. Excessive insatiable appetite seen in psychotic states, symptoms of diabetes mellitus and of certain cerebral lesions. Syn., *adephagia*, *cynorexia*, *hyperphagia*. —**bu-lim'ic**, *adj.*

Bu-li'nus [L. *bulla*, bubble]. A genus of fresh-water snails, whose species serve as the intermediate hosts for *Schistosoma haematobium*.

bul'la (bōōl'uh, bul'uh) (pl. *bullae*) [L.]. A large bleb or blister forming either within or beneath the epidermis and filled with lymph.

auditory b. In certain mammals other than man, the bulbous accessory tympanic bone housing an expansion of the cavity of the middle ear. Syn., *tympanic b.*, *b. tympani*, *otic b.*

b. ethmoidalis. A rounded projection into the middle meatus of the nose, due to an enlarged ethmoid cell.

b. tympani. Auditory *b.*

otic b. Auditory *b.*

tympanic b. Auditory bulla.

bul'late (bōōl'ate, bul'ate) [*bulla*]. 1. Blistered; marked by bullae. 2. Inflated, bladderlike, vesiculate. —**bul-la'tion**, *n.*

Buller, Frank [*Canadian oculist*, 1844–1905]. Remembered for his invention of the eyeshield bearing his name and consisting of watch crystal in frame of adhesive plaster so worn as to protect the sound eye from discharges from the infected one.

BuMed. The Bureau of Medicine and Surgery, U. S. Navy.

Bumke, Oswald Conrad Edward [*German neurologist*, 1877–1950]. Author of works on neurology. Described peculiar dilatation of the pupil said to be caused by psychic stimuli; called *Bumke's pupil*.

BUN Blood urea nitrogen.

bun'dle [MD. *bondel*]. *In biology*, fascicular grouping of elementary tissues, as nerve fibers or muscle fibers. Old term for *nerve fiber tract*.

atrioventricular b. That part of the conduction system of the heart arising from the atrioventricular node and dividing into two branches which run down either side of the interventricular septum and ramify among the muscle bundles of the ventricle. Syn., *b. of His*.

b. of His. See *atrioventricular b.*

b. of Kent. A bridge of muscular tissue joining the atria and ventricles at the right margin of the septum. It is considered an anomalous or aberrant atrioventricular bundle which, in some cases, may conduct impulses.

ground b. See *fasciculus proprius*.

Helweg's b. Olivospinal tract.

hook b. See uncinate *fasciculus*.

Bun-ga'rus (bung-gah-rus) [Telegu *bangaru*, golden]. A genus of venomous snakes found in southern Asia, commonly known as the kraits.

B. candidus. The common krait; especially dangerous because of its extremely virulent venom.

B. fasciatus. The Indian krait, one of the most venomous snakes in the world.

bun'ion [OF. *bugne*, swelling]. A swelling of bursa of the foot, especially of the metatarsophalangeal joint of the great toe, associated with thickening of the adjacent skin and forcing of the great toe into adduction.

bun"ion-ec'to-my [*bugne*; G. *ektomē*, excision]. Excision of bunion; plastic repair of the first metatarsophalangeal joint.

Bunnell, Sterling [*American surgeon*, 1882–]. Known for his specialization in surgery of the hand for which he has devised many procedures.

Bunnell's test. See Paul-Bunnell *test*.

bu-no-dont [G. *bounos*, mound; *odous*, tooth]. Provided with rounded or conical cusps, applied to molar teeth as opposed to *lophodont*.

Bunsen, Robert Wilhelm [*German chemist and physicist*, 1811–99]. Celebrated for his invention of the gas burner which is provided with holes near the base permitting admixture of air so that the gas is completely oxidized, giving hot blue flame. His name is associated with one of the types of galvanic cell, consisting of carbon in dilute nitric acid and zinc in dilute sulfuric acid, the solutions being separated by porous partition, and also with coefficient of absorption, *Bunsen coefficient*. With Kirchhoff, discovered the elements cesium and rubidium (1860).

Bunyan, John (1907–). English naval surgeon; with William Stannard (1910) he evolved

method of irrigation with sodium hypochlorite through transparent envelopes in treatment of burns, wounds, and gross sepsis.

buph·thal'mi·a (bewf·thal'mee·uh, boof·thal) **buph thal'mos** [G. *bous*, ox; *ophthalmos*, eye]. A globular enlargement of the eye with protrusion of the cornea, a condition noted in infantile glaucoma. Syn., *keratoglobus*, *hydrophthalmos*.

bur burr [ME. *burre*]. 1 *I botany* rough, prickly shell or case. 2. The lobe of the ear 3. *I dentistry,* cutting instrument with rounded, pointed, cylindrical, or ovoid head having numerous blades used in the dental engine for excavating carious dentin and for other purposes. 4. *I surgery,* an instrument similar in form to dental bur but larger designed for surgical operations upon the bones.

bur'bot. Fresh-water fish of the genus *Lota*, allied to the cod, which serves as the intermediate host of the tapeworm, *Diphyllobothrium latum*. The American species, called *ling* or *eelpout*, is found in New England and the Great Lakes.

bur'bot-liv'er oil. The oil extracted from the liver of the burbot, *Lota maculosa*.

Burchard's test. See Liebermann-Burchard *test*.

Burdach, Karl Friedrich [*German anatomist and physiologist,* 1776–1847]. Described the cuneate fasciculus in the spinal cord, called *column of Burdach*. H also published an important textbook of physiology (1826–40)

Burdenko, Nicolai Nilovic [*Russian surgeon* 1876–1946]. Introduced treatment for purulent meningoencephalitis by injection of sulfonamides into the common carotid artery called *Burdenko method*.

Burdon-Sanderson, John Scott [*English physiologist,* 1828–1905]. With F J M Page, studied the action currents of the heart (1879) and observed electric phenomena in the heart beat (1883) Measured the speed of nervous impulses (1891) His work contributed to the development of modern methods of electrocardiography

Bu'reau of Med'i-cal Serv'ices. A division of the U S. Public Health Service charged with the administration of Public Health Service hospitals (formerly known as marine hospitals) the national narcotics hospitals and leprosarium, medical services in federal prisons, and other related functions.

Bu'reau of State Serv'ices. A division of the U S Public Health Service charged with th administration of grants-in-aid to the states and with cooperation with state and local health authorities upon official request through the state health officer

bu ret' bu-rette A graduated glass tube commonly having glass stopcock, used in volumetric analysis for measuring volumes of liquids.

Bur gun-dy pitch. See under *pitch*.

Bur'ma boil. See *oriental sor*

burn [AS. *baernan*]. The tissue reaction or injury resulting from application of heat, caustics, friction, or electricity and classified as simple hyperemic (*first degree*), vesicant (*second degree*) destructive of skin and underlying tissues (*third degree*)

atomic b. See radiation *b.*

brush b. Mechanical injury prod ced by friction

chemical b. That produced by caustics (acid or alkaline) irritant gases, etc.

electric b. One caused by high-frequency currents.

flash b. One produced by ignition of high explosives such as cordite especially in naval warfare. Also called *powder b.*

friction b. See brush *b.*

heat b. Thermal *b.*

inhalation b. A chemical or thermal burn of the respiratory tract due to inhalation.

radiation b. One resulting from exposure t radiant energy as -ray radium, sunlight, or other form. These may be severe, and x-ray and radium burns heal very slowly

sunburn. Injury to the skin of varying degrees of intensity produced by actinic rays of the sun or sun lamps. See *sunburn*.

thermal b. An injury resulting from an excessive rise in tissue temperature.

-ray b. See radiation *b*

burn. 1 T feel the sensation of heat. 2. T char or destroy by fire. 3. *I chemistry* to oxygenize.

B rnett William [*Scottish surgeon,* 1779–1861]. Remembered for his disinfectant, consisting of zinc chloride in strong solution with ferrous chloride added.

bur'nish er [OF *burnir* to polish]. *I dentistry* an instrument for condensing and smoothing and for polishing the surface of filling or inlay

Burns, Allan [*Scottish physician and anatomist,* 1781 1813]. Known for his early description of endocarditis (1809) for his recognition of mitral stenosis his description of the mechanism of cardiac murmurs his suggestion that angina pectoris is connected with coronary occlusion (1809) Described the falciform process of the fascia lata. The triangular space above the manubrium within the superficial layer of deep cervical fascia, transmitting the anterior jugular vein, bears his name (1811) Is said to have recorded the first case of chloroma (1811)

Burow Karl August [*German surgeon,* 1809–74] Remembered for his operation for closure of triangular defects of the lip by lateral incisions at the corners of the mouth, with flaps raised at each side and sutured in the midline. Also devised blepharoplastic operation for eyelid defect by sliding flap, in which triangular segment of skin is excised to secure mobility I troduced solution of alum and lead acetate for the treatment of ulcers.

burr See bur

Burri, Robert [*Swiss bacteriologist,* 1867–] Remembered for his method or procedure in the microscopical examination of microorganisms in which India ink is mixed with the material to be observed called *Burri' method*. This method replaces dark-field illumination.

bur'row *I dermatology* a cuniculus or tunnel in the skin, seen especially in scabies.

bur'sa (pl. *bursae*) [LL., from G *byrsa*, wineskin] A small sac filled with fluid interposed between parts that move upon one another See Plate 2.

accidental b. An inconstant one due to friction or pressure also called *adventitious b.*

Achilles b. The bursa lying between the Achilles tendon and the calcaneus. Also called *b tendinis calcanei*.

anserine b. One under the insertion of the gracilis and semitendinosus muscles.

b. of the omentum. The omental bursa.

cystic b. A bursa which has become cystic.

gastrocnemius b. A bursa lying beneath the origin of either head of the gastrocnemius muscle. The lateral one is situated between the lateral head and the lateral condyle of the femur the medial one lies between the medial head and medial condyle Each communicates with the cavity of the knee joint.

gluteal b. One or more lying under the gluteus maximus.

gluteof emoral b. One lying between the greater trochanter and the gluteus maximus. Also called *glutaeotrochanteric b.*

iliac subtendinous b. One lying between the tendon of the iliopsoas muscle and the lesser trochanter.
iliopectineal b. One separating the tendon of the iliopsoas muscle from the iliopectineal eminence and the capsule of the hip joint.
infracardiac b. The cephalic end of the embryonic mesenteri recess lying in the mesentery between esophagus and right lung bud, or small cyst in the right ligamentum pulmonale derived from it.
ischial b. One situated over the ischial tuberosity.
mucous b. A membranous sac filled with synovial fluid.
obturator b. One under the tendon of the obturator internus.
olecranon b. One lying between the olecranon process of the ulna and the skin.
omental b. The lesser peritoneal sac formed in the embryo by lateral outgrowth into the mesogastrium, dorsal to the stomach, and after rotation of the gut forming cavity back of the stomach and opening int the great omentum at the epiploic foramen.
ovarian b. A small pocket containing the ovary formed by fold of the broad ligament.
patellar b. One of several bursae behind the patella which may communicate with the knee joint. See prepatellar b.
pharyngeal b. A small pit caudal to the pharyngeal tonsil, resulting from the ingrowth of epithelium along the course of the degenerating tip of the notochord. Also called *Luschka's b.*
popliteal b. A bursa situated bet een the tendon of origin of the popliteus muscle and the lateral condyle of the tibia. It is t bular extension of the synovial membrane of the knee joint.
prepatellar b. A bursa situated over the patella and the pper part of the patellar ligament. See Plate 2.
radial b. The synovial bursa of the tendon of the flexor pollicis longus muscle.
rider's b. One resulting from inflammation; due to pressure on the adductor muscles of the thigh.
sacral b. One found in the ged, over the sacrococcygeal articulation or over the spine of the fourth or fifth sacral vertebra.
semimembranosus b. A bursa situated between the tendon of the semimembranosus muscle and the medial head of the gastrocnemius muscle and medial meniscus of the knee joint. It communicates w th the medial gastrocnemius bursa.
subacromial b. See subdeltoid b.
subcutaneous acromial b. One lying over the acromion, between it and the skin.
subdeltoid b. One lying beneath the deltoid muscl and extending beneath the acromion and coracoacromial ligament. It separates these structures from the capsule of the shoulder joint. It is frequently inflamed. Syn., *subacromial b* [BNA].
subhyoid b. One lying between the thyrohyoid membrane and hyoid bone and the conjoint insertion of the omohyoid and sternohyoid muscles.
subscapular b. One between the tendon of the subscapularis muscle and the capsule of the shoulder joint; it communicates with the shoulder joint cavity.
synovial b. One found between tendons and bony surfaces.
ulnar b. The synovial bursa of the tendons of the flexor digitorum sublimi and profundu muscles.

bur sat'tee (bur sat ee bur-sah'tee) [Hind. *barsati*, relating to rain]. A fungus disease of horses, occu ring in India and the southern United States, characterized by the formation of nodules underneath and in the skin, which eventually coalesce and form raw surface, simulating cancer.

bur sec'to-my [G. *byrsa*, wineskin; *ektomē*, excision]. The surgical removal of bursa.

bur-si'tis [*byrsa*, G -*itis*, inflammation]. Inflammation of bursa.
Achilles b. Inflammation of the Achilles bursa.
olecranon b. That of the olecranon bursa.
omental b. Inflammation of the omental bursa.
popliteal b. Inflammation of the popliteal bursa. Syn., *Baker' cyst.*
prepatellar b. Inflammation of the bursa in front of the patella. Syn., *housemaid' knee.*
radiohumeral b. Inflammation of the olecranon bursa. See *epicondylitis, tennis arm.*
subdeltoid b. Inflammation of the subdeltoid bursa.

bur'so lith [*byrsa*, G. *lithos*, stone]. A calculus formed within bursa.

Burt n, H nry [English physician, 1799–1849]. The first to note the blue lin in the gums as sign of chronic lead poisoning (1840); this sign once bore his name.

Bury J deon Sykes [English physician, 1852–1944]. Described erythema elevatum (1889) called *Bury' disease.*

Buschke Abraham [German physician, 1868–1943]. Known for his description of disease of the skin, European blastomycosis or cryptococcosis (1895). This was described in the same year by Busse; called *Busse-Buschke' disease.* Also described scleredema adultorum, called *Buschke scleredema.*

bush'mas"ter See *Lachesis muta.*

Busse, Otto [German physician, 1867–1922]. Known for his description of disease of the skin, cryptococcosis (1895) called *Busse-B schke disease.*

but [L. *butyrum*, butter from G *boutyron*]. *I chemistry* combining form denoting *the presence of grouping containing four carbon atoms.*

bu"ta bar'bi tal. Generic name for 5-ethyl-5-sec. butylbarbituric acid. See *butisol.*

bu-tabs. Trade-mark for vaginal tablets containing viable culture of *Lactobacillus bulgaricus* with nutrient media, for use as trichomonacide.

bu'ta-caine" sul'fat (bew'tuh cane bew tuhkay een, -in) γ-Di-n-butylaminopropyl-p-aminobenzoate sulfate, water-sol ble local anesthetic. See butyn.

bu"ta di'ene. 1,3-Butadiene. CH₂:CH.CH:CH A gaseous hydrocarbon derived from petroleum and used in the manufacture of synthetic rubber. In very high concentration, it has narcoti effect when inhaled.

but l lyl'o-nal. Generic name for 5-sec.-butyl 5-β-bromallylbarbituric acid. See *pernoston.*

bu tam'ben. Generic name for butyl aminobenzoate. See *butesin.*

butamin. See *tutocaine* hydrochloride.

bu'tane The gaseous hydrocarbon $CH_3CH_2CH_2CH_3$, colorless flammable gas occurring in natural gas and in solution in crude petroleum.

butanefrine. Trade-mark for the sympathomimetic amine *ethylnorepinephrine hydrochloride.*

butanefrine hydrochloride. Trade-marked name for ethylnorepinephrine hydrochloride or 1-(3,4-dihydroxyphenyl)-2-amino-1-butanol hydrochloride, sympathomimetic agent used as bronchial antispasmodic.

bu ta no'ic ac'id. Butyric acid.

bu'ta nol. Butyl alcohol.

bu tar'sen. p-Arsenosophenylbutyric acid tri-valent arsenical ha ing trypanocidal activity

bu·ta·zol'i·din. Trade-mark for phenylbutazone, substance employed in the treatment of arthritis and allied disorders.

Butcher's saw See under saw.

Butenandt, Adolf (1903–) German chemist noted for his work on sex hormones, their structure, and properties. Nobel laureate in chemistry (1939)

bu'tene. A four-carbon aliphatic hydrocarbon containing one double bond; two isomers are known: 1-butene or α-butylene, $CH_3CH_2CH.CH_2$; and 2-butene, or β-butylene, $CH_3CH:CHCH_3$ Both are gases occurring in oil or coal gas.

bu'ten yl. The unsaturated radical C_4H_7 of which there are three isomeric forms 1-butenyl is $CH_3CH_2CH:CH—$; 2-butenyl is $CH_3CH·CH CH_2—$ 3-butenyl is $CH_2:CHCH_2CH_2—$

butesin. Trade-mark for brand of butyl aminobenzoate. See butamben.

b. picrate. A trade-mark name for compound of one molecule of trinitrophenol and two molecules of butyl aminobenzoate used as 1% ointment in the treatment of burns and painful skin lesions, and in aqueous solution for anesthesia of the eye

bu'ta-thal. Generic name for 5-n-butyl-5-ethylbarbituric acid. See neonal.

bu-teth' amine. Generic name for 2-isobutylaminoethyl-p-aminobenzoate. See monocaine.

Bu'thus. A genus of scorpions.

B. occitanus. A poisonous species found in North Africa its bite is occasionally fatal.

B. martensi. A poisonous species of Manchuria.

butisol. A trade-mark for 5-ethyl-5-sec.-butylbarbituric acid, sedative and hypnotic. See butabarbital.

b. sodium. Trade-mark name for the sodium derivative of 5-ethyl-5-sec.-butyl barbituric acid.

Butler and Tuthill' method. See under method.

butoben. A trade-mark for butyl parahydroxybenzoate.

bu"to-pyr"o-nox'yl. Butyl mesityl oxide, yellowish liquid, insoluble in water used as an insect repellent and toxicant. Syn., indalone.

Bütschli Otto [German zoologist, 1848–1920]. Described the spindle-shaped figure observed in mitosis, called Bütschli' nuclear spindle

but'ter [L. butyrum, butter from G boutyron] 1. The fatty part of milk, obtained by rupturing the fat globules by churning or mechanical agitation. 2. Various vegetabl fats having the consistency of butter 3. Certain anhydrous chlorides having the appearance or consistency of butter old usage.

antimony b. Antimony chloride.

cacao b. See theobroma oil.

tin b. Stannic chloride.

zinc b. Zinc chloride.

but'ter yel'low $C_6H_5N:N.C_6H_4N(CH_3)_2$ p-Dimethylamino-azobenzene. A yellow crystalline powder insoluble in water and sparingly soluble in alcohol; used to color fats and in the preparation of Töpfer' reagent for the determination of free HCl in gastric juice.

but'tock [ME. but, end]. One of the two fleshy parts of the body posterior to the hip joints.

but'ton-hole" [OF boton, button; AS. hol hole]. In surgery, small, straight opening into an organ or part.

mitral b. An advanced case of mitral stenosis, usually of rheumatic origin.

but'tress [OF bouterez, from bouter to thrust]. 1. A support or prop. 2. A thickening of the sole of the equine hoof between the frog and the posterior end of the bar

bu'tyl. The univalent hydrocarbon radical, $C_4H_9—$. It occurs as normal-b., $CH_3CH_2CH_2CH_2—$, abbreviated n-butyl; iso-b., $(CH_3)_2CH CH_2—$ abbreviated i-butyl, secondary-b., $CH_3 CH (CH_3)CH—$ abbreviated sec.-butyl; and tertiary-b., $(CH_3)_3C—$ abbreviated tert.-butyl.

b. acetate. Normal butyl acetate, colorless liquid with fruity odor used in manufacture of perfumes and as solvent.

b. alcohol. $CH_3CH_2CH_2CH_2OH$. Normal butyl alcohol; used as solvent, as denaturant for ethyl alcohol, and in synthesis. Syn., butanol.

b. aminobenzoate (butylis aminobenzoas) Normal butyl aminobenzoate, $NH_2C_6H_4COO.C_4H_9$ An odorless and tasteless, white, crystalline powder almost insoluble in water; used as anesthetic dusting powder or in the form of troches, ointment, suppositories, or oil solution. See butesin.

b.-chloral hydrate. $CH_3CHCl.CCl_2CH(OH)_2$ Trichlorobutylidene glycol. White, lustrous scales with pungent odor soluble in 50 parts of water or 1 of alcohol. It is an analgesi and hypnotic similar to chloral hydrate, used in facial neuralgia, migraine, spasms, etc. Dose, 0.3–1.2 Gm. (5–20 gr) Syn., croton chloral hydrate.

b. parahydroxybenzoate $HO.C_6H_4COOC_4H_9$ White, crystalline powder with slight odor soluble in 6500 parts of water; used as preservative of medicinals, foods, etc. See butoben.

bu'tyl-ene. Butene.

bu tyl'i-dene. The radical $CH_3(CH_2)_2CH=$

butyn sulfate. Trade-marked name for butacaine sulfate.

bu ty'phosa. See rinderpest.

bu"tyr-a ceous (bew"ti ray'shus) [L. butyrum, butter]. Resembling butter; containing or yielding butterlike substances.

bu'tyr ate. A salt of butyric acid.

bu tyr'ic. Pertaining to, or derived from, butter

bu tyr'ic ac'id. $CH_3CH_2CH_2COOH$. Butanoic acid; viscid liquid having rancid smell. It occurs in butter as glycerid and is found also in various plant and animal tissues.

bu'tyr in. $(C_3H_7COO)_3C_3H_5$. Glyceryl tributyrate, constituent of butterfat. Also called tributyrin.

bu'tyr in-ase" An enzyme found in blood serum which hydrolyzes butyrin.

bu'tyr-o-, bu'tyr-. In chemistry, combining form for butyric.

bu'tyr-oid [butyrum, G. eidos, form]. Buttery; having the consistency of butter

bu'tyr yl. The radical $CH_3CH_2CH_2CO—$ of butyric acid.

bux'ine (buck seen, -sin) [L. buxus, box-tree]. An alkaloid from the leaves of Buxus sempervirens.

Buzzagli' stain. See under stain.

by'sin [G. bynē, malt]. A protein which is derived from malt.

Byrd, Harvey Leonidas [American physician, 1820–84]. With Harvie Dew described method of artificial respiration in asphyxia of the newborn; called Byrd-Dew method.

bys"si no'sis [G byssos, flax; -ōsis, condition]. Irritation of the pulmonary air passages caused by the inhalation of cotton dust, formerly thought to be form of pneumonoconiosis. Also called Monday morning fever gin fever

bys'soid [byssus; G. eidos, form]. Consisting of filamentous fringe of which the strands are of unequal length.

bys"so-phthi'sis (bis o-thigh sis, -tie sis) See byssinosis.

bys sus [byssos]. Charpie, lint, or cotton.

Bywaters, Eric George Lapthorne [English physician, 1910–]. With Desmond Beall, described crush syndrome with impairment of renal function (1941) See lower nephron nephrosis.

used in flatulent colic, hysteria, cutaneous disorders, and toothache.

caj"e·put·ol", **caj"u·put·ol"**. Cineol; eucalyptol.

caked [ON. *kaka*]. Compressed, tense, or hardened, due to engorgement or induration.

Cal. Large or great calorie; kilocalorie. See *kcal*.

cal. Small calorie.

Cal"a·bar bean. The poisonous seed of a leguminous vine (*Physostigma venenosum*) of Africa. See *Physostigma*.

Cal"a·bar swell"ings. Edematous, egg-shaped, distended areas occurring in different parts of the body of natives of Calabar and other parts of West Africa. It is thought to be produced by the action of *Filaria loa* in the subcutaneous tissues.

cal'a·mine (kal'uh·myne, ·min) [G. *kadmeia*, calamine]. Native zinc carbonate. Official calamine, also called prepared calamine, is zinc oxide with a small amount of ferric oxide; occurs as a pink powder insoluble in water. Used as a local application in the treatment of skin diseases. It is also used to impart a flesh color to ointments, washes, and powders.

c. liniment (*linimentum calaminae*). Contains calamine, 8 Gm.; zinc oxide, 8 Gm.; olive oil, 50 cc.; solution of calcium hydroxide, sufficient quantity to make 100 cc. Used as a protective in various forms of dermatitis.

c. lotion (*lotio calaminae*). Contains calamine, 8 Gm.; zinc oxide, 8 Gm.; sodium carboxymethylcellulose, 2 Gm.; dioctyl sodium sulfosuccinate, 65 mg.; glycerin, 2 cc.; water, sufficient quantity to make 100 cc.

c. ointment (*unguentum calaminae*). Contains calamine, 17 Gm.; yellow wax, 4 Gm.; wool fat, 4 Gm.; petrolatum, 75 Gm. Also called *Turner's cerate*.

phenolated c. lotion (*lotio calaminae phenolata*). Calamine lotion containing 1% of liquefied phenol. Also called *compound c. lotion*.

calamoin. Trade-mark for an antipruritic ointment containing calamine, zinc oxide, camphor, and phenol.

cal'a·mus [L., a reed]. Sweetflag. The rhizome of *Acorus calamus*. It contains a volatile oil and acorin, a bitter principle. The root is aromatic, stomachic, and tonic, and has been used as an ingredient of many popular bitters.

cal"a·mus scrip·to'ri·us. The inferior part of the rhomboid fossa; so named because it is shaped like a pen point.

calc-, calci-, calco-. Combining forms from Latin *calx*, *calcis*, lime; used to mean lime, calcium, or calcium salts.

cal·cae'mi·a. See *calcemia*.

cal·ca·ne·o- [L. *calcaneum*, heel]. A combining form signifying *pertaining to the calcaneus*.

cal·ca"ne·o·as·trag'a·lar [*calcaneum*; G. *astragalos*, ball of the ankle joint]. Old term for talocalcaneal.

cal·ca"ne·o·ca'vus [*calcaneum*; L. *cavus*, hollow]. A type of talipes.

cal·ca"ne·o·cu'boid [*calcaneum*; G. *kyboeidēs*, like a cube]. Pertaining to the calcaneus and the cuboid; applied to the joint between these two bones and the ligaments joining them. See Table of Joints and Ligaments in the Appendix.

cal·ca"ne·o·dyn'i·a, **cal"ca·ne·o·dyn'i·a** [*calcaneum*; G. *odynē*, pain]. Pain in the heel, or calcaneus, when walking or standing. Syn., *achillodynia*.

cal·ca"ne·o·na·vic'u·lar [*calcaneum*; L. *navicula*, small boat]. Pertaining to the calcaneus and the navicular, as calcaneonavicular joint and ligaments.

cal·ca"ne·o·val'gus [*calcaneum*; L. *valgus*, bowlegged]. A type of talipes.

cal·ca'ne·um [L., heel]. BR term and OT for calcaneus.

cal·ca'ne·us [L.]. 1. The heel bone. See Table of Bones in the Appendix. 2. Clubfoot in which the heel alone touches the ground; talipes calcaneus. —**calca'neal, calca'nean,** *adj.*

cal"ca·ne·o·dyn'i·a. See *calcaneodynia*.

cal'car (kal'kahr) (pl. *calcaria*) [L., spur]. Any spur or spurlike point. —**calcarate, calcarine,** *adj.*

c. avis. A ridge in the wall of the posterior horn of the lateral ventricle, caused by the inward bulging of the floor of the calcarine fissure.

c. femorale. A plate of compact bone projecting almost vertically from the femoral shaft upward into the neck toward the greater trochanter. It is best seen in x-rays.

cal·car'e·ous (kal·kair'ee·us) [L. *calcarius*, from *calx*, lime]. 1. Pertaining to or of the nature of limestone. 2. Having a chalky appearance or consistence. 3. Containing calcium.

cal·car"i·u'ri·a [*calcarius*; G. *ouron*, urine]. The presence of calcium salts in the urine.

cal·ce'mi·a, **cal·cae'mi·a** (kal·see'mee·uh) [L. *calx*, lime; G. *haima*, blood]. The occurrence of an excessive amount of calcium in the blood. Syn., *hypercalcemia*.

calci-. See *calc-, calci-, calco-*.

cal'ci·c [*calx*]. Of or pertaining to lime or calcium.

cal"ci·co'sis [*calx*; G. *-ōsis*, condition]. A form of pneumonoconiosis due to the inhalation of marble dust.

calcidin. Trade-mark for a compound containing 15% iodine in combination with lime and starch; used chiefly in the treatment of respiratory infections.

cal·cif'er·ol. Vitamin D_2, obtained by irradiation of ergosterol. One mg. represents 40,000 units of vitamin-D activity.

cal·cif'ic [*calx*; L. *facere*, to make]. Forming lime.

cal"ci·fi·ca'tion [*calx*; *facere*]. The deposit of calcareous matter within the tissues of the body.

disseminated c. A streaming of calcified strands from the sides of the femoral and tibial epiphyses early in their development. This phenomenon is found upon radiologic examination in all children.

metastatic c. See pathologic *c*.

medullary c. See *denticle*, 2.

pathologic c. Abnormal deposition of calcium salts, of three forms: (a) *dystrophic*, deposition in degenerated or necrotic tissues; (b) *metastatic*, deposition of calcium salts mobilized from a natural site into tissues not demonstrably injured; commonly associated with destructive lesions of bone or in the late stages of chronic renal insufficiency; (c) *reversible metastatic*, calcinosis associated with long-standing peptic ulcer, mild hypercalcemia, and renal insufficiency, apparently related to protracted and excessive ingestion of milk and alkali. Dietary restriction of calcium intake results in marked improvement, particularly in regression of ocular and subcutaneous lesions but not of the renal symptoms. Syn., *milk-drinker syndrome*.

cal·cig'er·ous (kal·sidj'ur·us) [*calx*; L. *gerere*, to bear]. Containing lime or a lime salt.

cal'ci·grade [L. *calx*, heel; *gradi*, to walk]. Walking on the heels. Obs.

cal·cim'e·ter [L. *calx*, lime; G. *metron*, a measure]. An apparatus for determining the amount of calcium in the blood.

cal"ci·na'tion [*calx*]. The process of driving off animal matter and volatile chemical constituents from inorganic compounds by heat. —**calcine**, *v.t.*

cal"ci·no sis [calx; G. -ōsis, condition]. The deposition of calcium salts in the skin and subcutaneous tissues presumed to be a disorder of hyperparathyroidism.

c. universalis. See diffuse c.

circumscribed c. Calcified nodules limited to the skin and subcutaneous tissues of the upper extremities, particularly the hands; frequently seen in scleroderma.

diffuse c. Widespread calcified nodules which tend to ulcerate and heal slowly and involve subcutaneous tissues, muscles, tendons, and nerve sheaths; seen especially in children. Also called *universal c.*

cal"ci pe ni [calx; G. penia, need]. Calcium deficiency

cal'cis. Old term for *calcareous*.

cal'ci um [calx]. Ca = 40.08 A brilliant, silver white metal, characterized by strong affinity for oxygen and isolated with great difficulty It is very abundant element in nature.

c. acetate. $Ca(C_2H_3O_2)_2$ A white amorphous powder soluble in water; formerly used in tuber culosis and psoriasis.

c. acetylsalicylate. $(CH_3CO\ OC_6H_4COO)_2Ca.2H_2O$ A white powder readily soluble in water; used as an antirheumatic and analgesic. Dose, 0 3–1 0 Gm. (5–15 gr.)

c. aminosalicylate. United States Pharmacopeia name for *calcium para-aminosalicylate*.

c. arsenate. $Ca_3(AsO_4)_2$ A white powder slightly soluble in water; used as an insecticide

c. benzoate. $Ca(C_7H_5O_2)_2$; $(C_6H_5COO)_2Ca.3H_2O$; white powder or crystals that have been used in nephritis and albuminuria of pregnancy

c. borate. $CaB_4O_7.6H_2O$ white powder that is antiseptic and has been used internally in children diarrhea and externally in bromhidrosis and weeping eczema

c. bromide (*calcii bromidum*) $CaBr_2$; white, granular salt, very deliquescent and very soluble in water; nerve sedative. Dose, 0.6–2 0 Gm. (10–30 gr) twice daily

c. cacodylate. $[(CH_3)_2AsO_2]_2Ca.H_2O$ A white, granular powder very soluble in water; used for the same purposes as sodium cacodylate. Dose, 0 03–0 06 Gm. (½–1 gr.)

c. carbide. CaC_2. A gray crystalline solid, decomposed by water to yield acetylene.

c. carbonate. Any of the forms of $CaCO_3$, including chalk, marble, whiting, etc See *precipitated calcium carbonate*.

c. caseinate. A pale-yellowish powder containing 1.4–2.1% of calcium; used as an accessory food in diarrheas of infancy See *casec*.

c. chloride (*calcii chloridum*) $CaCl_2.2H_2O$ occurs as white, deliquescent fragments or granules, soluble in water used therapeutically for the effects of calcium ion. Dose, 0.6–1.2 Gm (10–20 gr)

c. creosotate (*calcii creosotas*) A mixture of the calcium compounds of creosote, representing about 50% of creosote used as an expectorant and intestinal antiseptic. Dose 0.3–1 2 Gm. (5–20 gr) See *calcreose*.

c. cresylate. A syrupy fluid obtained by treating calcium hydroxide with cresol; used as disinfectant.

c. cyanamide. Ca N C N Gray lumps or powder Reacts with water to produce ammonia. Used in fertilizers. Syn., *cyanamide*.

c. dibromobehenate. $(C_{22}H_{41}O_2Br_2)_2Ca$. A yellowish powder insoluble in water It liberates bromide slowly in the system, for which effect it is used. Dose, 0.3–1.2 Gm. (5–20 gr.)

c. fluoride. CaF_2 A white powder insoluble in water; previously recommended for improving development of teeth, and in prevention of caries.

c. gluconate (*calcii gluconas*) $[CH_2OH(CHOH)_4COO]_2Ca.H_2O$ A white, crystalline or granular powder soluble in about 30 parts of water It is less irritating than other calcium salts and can be given in large doses orally or intravenously Dose (oral) 1–5 Gm. (15–75 gr); (intravenous) 0.6–1.0 Gm. (10–15 gr.)

c. glycerophosphate (*calcii glycerophosphas*) $CaC_3H_5(OH)_2PO_4$ A white, crystalline powder soluble in cold water; has been recommended as nerve tonic. Dose, 0 3–1.2 Gm (5–20 gr)

c. hippurate. $Ca(C_9H_8NO_3)_2$ A white, crystalline powder slightly soluble in hot water It has been employed in cystitis, phosphaturia, polyuria, etc.

c. hydrate. See c. hydroxide.

c. hydroxide (*calcii hydroxidum*) $Ca(OH)_2$ Slaked lime. It is the active ingredient of lime water Syn *c. hydrate*

c. hypochlorite. $Ca(ClO)_2$ White cubes decomposing readily It is antiseptic and is used as disinfectant and strong bleaching agent.

c. hypophosphite (*calcii hypophosphis*) $Ca(PH_2O_2)_2$ A white, crystalline powder lustrous scales, or transparent crystals, soluble in seven parts of water; has been used in tuberculosis, chlorosis, etc. Dose, 0 65–2.0 Gm. (10–30 gr)

c. hyposulfite. See c. thiosulfate.

c. iodate. $Ca(IO_3)_2.6H_2O$ A white, crystalline powder soluble in 400 parts of water insoluble in alcohol. It has been used internally to check fermentation and also as substitute for iodoform

c. iodide. $CaI_2.6H_2O$ A white powder or yellowish white hygroscopic mass, soluble in water and alcohol; used like potassium iodide Dose, 0.13–0 3 Gm. (2–5 gr)

c. iodobehenate (*calcii iodobehenas*) Contains principally $(C_{22}H_{42}O_2I)_2Ca$. It is white or yellowish powder insoluble in water In the body it slowly liberates iodide ions, for which effect it is used. Dose, 0.3–1.0 Gm. (5–15 gr) See *calioben*, *sajodin*.

c. iodoricinoleate. A compound containing approximately 30% iodine. It has been used in prophylaxis and treatment of goiter and in other conditions requiring iodine. See *iodicin*.

c. iodostearate. A cream-colored solid, insoluble in water containing approximately 27% iodine; used as prophylactic against goiter Dose, 0.01 Gm. (⅙ gr) weekly or biannual series of six weeks treatment in daily doses of 0 01 Gm. See *stearodine*.

c. lactate. $Ca(C_3H_5O_3)_2.5H_2O$ A white powder soluble in water; used in diseases requiring calcium therapy Dose, 1 2 Gm. (15–30 gr)

c. lactophosphate. A mixture of calcium lactate, calcium acid lactate, and calcium acid phosphate soluble in water Formerly used therapeutically as source of calcium. Dose, 0 3–0.6 Gm. (5–10 gr)

c. levulinate. $Ca(CH_3.CO\ CH_2.CH_2.COO)_2.2H_2O$. A very sol ble white powder mainly employed for intravenous administration of calcium. Dose, 0 5–1.0 Gm. (8–15 gr)

c. mandelate (*calcii mandelas*) $(C_6H_5\ CHOH.COO)_2Ca$. A white powder slightly soluble in cold water It is used for the effect of mandelic acid as urinary antiseptic and has the advantages of being comparatively tasteless and of not requiring an acidifier for the urine Dose, 2–4 Gm. (30–60 gr)

c. oxalate. $CaC_2O_4.H_2O$ crystalline powder practically insoluble in water It is constituent of normal urine but occurs in increased amounts in certain pathological conditions.

c. oxide. CaO Lime quicklime burnt lime. It is not used medicinally

c. pantothenate. [$CH_2OH.C(CH_3)_2.CH(OH)$ $CO.NH.CH_2.CH_2.COO]_2Ca$ white powder slightly hygroscopic, soluble in water employed for the effect of dextrorotatory pantothenic acid, one of the B-complex vitamins. It is supplied in dextrorotatory and racemic forms, the latter having half the activity of the former See also vitamin B.

c. para-aminosalicyl te. ($NH_2.C_6H_3.OH.COO)_2Ca$; white to cream-colored crystals or powder freely soluble in water used as tuberculostatic agent.

c. penicilli See under *penicillin*.

c. perborate. Approximately $Ca(BO_3)_2.7H_2O$ A water-soluble powder; used in dentifrices.

c. permanganate. $Ca(MnO_4)_2.4H_2O$ It occurs as violet crystals, readily soluble in water for merly used i gastroenteritis and diarrhea, and for purifying water

c. peroxide. CaO_2. A cream-colored powder practically insol ble in water; has been used as antacid and antisepti in gastri and intestinal disorders.

c. phenolsulfonate. $(C_6H_4.OH.SO_3)_2Ca.H_2O$ A water-sol ble powder used as an intestinal antisepti and astringent Dose 0.2–1.0 Gm. (5–15 gr.)

c. phosphate. See *monobasic c. phosphate, dibasic c. phosphate, tribasic c. phosphate* under *calcium*.

c. propionate. $Ca(C_3H_5O_2)_2$ A white powder soluble in water used to prevent molding of bread

c. saccharate. A water-sol ble powder has been used as an antacid and increases the sol bility f calcium gluconate, when the latter is to be used by i jection.

c. salicylate $(C_6H_4.OH.COO)_2Ca.2H_2O$ A white, crystalline powder sol ble with difficulty in water it has been used in intestinal diseases Dose 0.5–1.3 Gm. (8–20 gr.)

c. santonate. $Ca(C_{15}H_{19}O_4)_2$ A white, odorless, rumped powder insoluble in water or chloroform. It is anthelmintic. Dose, 0.03–0.1 Gm. (½–1½ gr.) Also called *santoninate*.

c. sulfate. This substance occurs in several forms (a) $CaSO_4.2H_2O$ Found naturally as the minerals alabaster gypsum, mineral white, satin spar and selenite. (b) $CaSO_4.\frac{1}{2}H_2O$ Plaster of Paris, made by heating gypsum t 120° to 130° C Plaster of Paris is used in making bandages and casts to provide mechanical support or t immobilize various parts of the body ( ) $CaSO_4$ completely dehydrated calcium sulfat prepared by heating gypsum or plaster of Paris above 200° C It also occurs naturally as the mineral nhydrite It has been recommended as absorbent pplication for wounds and ulcers.

c. sulfhydrate. A hydrate of $Ca(SH)_2$ used as depilatory

c. sulfide. When pure, it has the composition CaS, occurring as colorless crystals. Crude calcium sulfide was formerly offical It was prepared by igniting calcium sulfat with carbonaceous matter Medicinally it was used both externally and internally for the treatment of various skin diseases At present, it is used as depilatory Sulfurated lime and liver of lime are terms occasionally pplied to crude calcium sulfide. A calcium sulfide made by igniting mixture of calcium carbonate, sulfur and small quantities of various metallic salts, phosphorescent sed in making certai luminous paints. A solution of calcium sulfides (dipenta-) is official recognized by the name sulfur ted lime solution (Vleminckx's sol tion) and is used in treating various skin diseases.

c. sulfite. $CaSO_3$ A white powder slightly soluble in water antiseptic and has been used in flatulent diarrhea. It is sometimes used as preservative.

c. sulfocarbolate. See *c. phenolsulfonate*.

c. thiosulfate. $CaS_2O_3.6H_2O$ White crystals, soluble in water has been used as an internal antiseptic. Syn., *c. hyposulfite*.

c. tungstate. $CaWO_4$ It occurs naturally as the mineral scheelite, but is usually prepared by precipitation used in preparing screens of fluoroscopes and in manufacturing fluorescent paints

dibasic c. phosphate (*calcii phosphas dibasicus*) $CaHPO_4.2H_2O$ A white powder almost insoluble in water; used in rickets and other bone diseases sometimes called *dicalcium phosphate*. Dose, 0.5–5.0 Gm. (8–75 gr.)

liquid c. bisulfite. A solution of calcium sulfite ($CaSO_3$) in an aqueous solution of sulfurous acid; has been used, when diluted ith water as an antisepti gargle or wash.

monobasic c. phosphate $CaH_4(PO_4)_2.H_2O$ It occurs in granules or as powder partially soluble in water used as an ingredient of certain baking powders and is the calcium superphosphate used as fertilizer

precipitated c. carbonat (*calcii carbonas praecipitatus*) $CaCO_3$. A white powder without odor or taste, practically insoluble in water It is antacid and is used for acidity of the stomach, and in treating diarrhea accompanied by acidity Externally it is used as desiccant, dusting powder and as an application to burns and ulcers. Dose, 0.65–2.0 Gm. (10–30 gr.)

tribasi c. phosphate (*calcii phosphas tribasicus*) $Ca_3(PO_4)_2$ A white powder almost insoluble in water; used as an antacid in gastri hyperacidity Dose, 1–4 Gm. (15–60 gr.) Also called *precipitated c. phosphate*.

cal″ci u′ri a. Calcium in the urine often used to mean *hypercalciuria*.

calco- See *calc-, calci-, calco-*.

cal″co glob u lin [L. *calx*, lime; *globulus*, globule] A combination of calcium with protein such as is found in calcospherites, probably representing an early stage in the process of laying down calcium salts teeth and bone.

cal″co sphe rite, cal″co-sphae rite [*calx*; L. *sphaera*, sphere] One of the granules or globules formed in tissues like bone nd shell by loose combination of protein and blood-borne calcium salts

calcreose. *Trade-mark for calcium creosotate.*

cal-c-tose. A proprietary chocolate-flavored vitami nutritive in powder form.

cal″cu lo-gen sis. The origin or development of calculi.

cal″cu lo sis [L. *calculus*, small stone, dim. of *calx*; G -*osis*, condition]. The presence of calculus, or bnormal concretion

cal″cu lus (pl. *calculi*) [L., small stone, dim. of *calx*]. A solid concretion composed chiefly of mineral substances and salts found principally in ducts, passages, hollow organs, and cysts. Organic materials such as cells, m cus, etc may form centrum or nidus and may be dispersed as m trix for the mineral deposits, as salts of calcium, of uric acid, of bile acids, etc —**calculous,** *adj*

lternating c. One composed of alternating layers of its constituents.

arthritic c. A deposit near joint of salts of uric acid, as in gout.

rticular c. See arthritic c.

ural c. Inspissated and sometimes calcified cerumen in the external auditory canal.

bili ry c. One containing mineral material and originating in the biliary passages. If composed of

cholesterol or pigment, or both, without mineral constituents, it is a concretion rather than a calculus.

blood c. One situated in a blood vessel, derived from a thrombus and infiltrated with salts of calcium, a phlebolith, an arteriolith.

bronchial c. A concretion of mucus or exudate, infiltrated with mineral salts, situated in the bronchial tree.

c. fellens. A gallstone.

chalky c. One made up principally of salts of calcium.

coral c. One that is branched, as in the formation of staghorn coral.

cutaneous c. See milium.

cystic c. One found in either the urinary bladder or the gallbladder.

cystine c. A urinary calculus composed largely of cystine, an infrequent form of calculus.

dendritic c. A coral or staghorn calculus.

dental c. Calcareous deposits on the teeth, consisting of organic and mineral matter; formerly divided into *salivary c.* and *serumal* (sanguinary) *c.* Syn., *tartar.*

encysted c. One confined in a localized dilatation or diverticulum of the urinary bladder or gallbladder.

extragingival c. See supragingival c.

fibrinous c. A mass of fibrin infiltrated with mineral salts. If not so infiltrated, it is a concretion.

fusible c. A urinary calculus composed of phosphates of ammonium, calcium, and magnesium; high degrees of heat transform it into a black mass.

hepatic c. A biliary calculus situated in the intrahepatic biliary passages.

incarcerated c. See encysted c.

intestinal c. See enterolith.

kidney c. Renal c.

lacteal c. See mammary c.

laminated c. One made up of layers of different materials.

mammary c. A calcified mass of secretion or exudate in the ducts of the mammary gland.

mulberry c. A urinary calculus with a finely nodular outer surface resembling a mulberry and usually composed largely of calcium oxalate.

nasal c. One found in the nasal cavity.

pancreatic c. One situated in the pancreatic duct and composed largely of calcium phosphate.

pineal c. A small calcified nodule in the pineal body.

podagric c. See arthritic c.

prostatic c. Calcified nodules in prostatic acini, probably derived from corpora amylacea.

renal c. A concretion in the kidney. Syn., *kidney stone.*

salivary c. One situated in the duct of a salivary gland, or a deposit upon the surfaces of the teeth.

sanguinary c. See serumal.

serumal c. A dental calculus formerly believed to be a calcareous deposit formed about the teeth by exudation from diseased gums; also called *sanguinary c.*, *serumal c.*

spermatic c. One situated in the seminal vesicle, ductus deferens, or epididymis.

staghorn c. A large irregularly branched calculus in the renal pelvis.

subgingival c. One deposited on the surface of a tooth below the level of the gum margin.

supragingival c. One deposited on the surface of a tooth above the level of the gum margin; also called *extragingival c.*

tonsillar c. A calcified mass of detritus in a tonsillar crypt.

urinary c. One situated in any part of the urinary system.

vesical c. A stone in the urinary bladder.

xanthine calculi. Brown to red, hard and laminated calculi; rare and found in the urinary bladder.

Caldani, Leopoldo Marco Antonio [*Italian physician and anatomist,* 1725–1813]. Known for his work in comparative anatomy and his early experiments with animals. Succeeded Morgagni at Padua.

Caldwell, George Walter [*American surgeon,* 1866–1946]. Devised an operation for the relief of *severe* disease of the maxillary sinus (1893). In addition to the usual *nasomaxillary* opening, an opening is made in the anterior wall through the canine fossa. Called *Caldwell-Luc operation.*

Caldwell, William Edgar [*American obstetrician,* 1880–1943]. Known for his modern classification of the varieties in the measurements and form of the female pelvis (1933); called *Caldwell-Moloy classification.*

cal"e·fa·cient (kal"i·fay'shunt) [L. *calefacere,* from *calidus,* warm; *facere,* to make]. A medicine, externally applied, that causes a sensation of warmth. —**calefacient,** *adj.*

ca·len'du·la [NL., from L. *calendae,* first day of the month, when the plant was supposed to blossom]. 1. A plant of the genus *Calendula,* of the Compositae. 2. The dried ligulate floret of plants of this genus, especially *C. officinalis.*

ca"len·tu're [Sp., from L. *calere,* to be warm]. Term used in the Philippine Islands for an epidemic disease of horses, possibly of trypanosome origin.

calev·te. Trade-mark for a sterile aqueous solution of calcium levulinate, suitable for parenteral administration.

calf [ON. *kálfi*]. The thick, fleshy part of the back of the leg, formed by the gastrocnemius and soleus muscles and overlying tissues.

calf'-bone. The fibula.

calglucon. Trade-mark for a brand of calcium gluconate.

cal"i·bra'tion [F. *calibre,* from Ar. *qalib,* a form, mold]. 1. The specification and measurements of the properties or performance of a device, so that it may be used for subsequent measuring procedures. 2. The measurement of the caliber of a tube, or the determination or rectification of the graduations on a tube, pipet, or balance weights. —**cal'ibrator,** *n.*; **cal'ibrate,** *v.t.*

ca"li·ec'ta·sis, (kay"lee·eck'tuh·sis) Dilatation of a calyx of the renal pelvis.

cal"i·for'ni·um. The chemical element of atomic number 98, symbol Cf, an isotope of which was produced by bombarding curium of atomic weight 244 with helium ions. This isotope, probably of atomic weight 246, is radioactive, with a half-life of 45 minutes.

calioben. Trade-mark for calcium iodobehenate.

cal'i·pers (kal'i·purz) [corruption of *caliber*]. Curved and hinged V-shaped instrument for measuring the thickness and the outside or inside diameters of objects. There are also other types, e.g., micrometer calipers.

cal"i·sa'ya [Sp.]. Cinchona bark, especially that of *Cinchona calisaya.* See *cinchona.*

cal"is·then'ics [G. *kallos,* beauty; *sthenos,* strength]. The practice of light gymnastics by various rhythmical movements of the body, intended to develop the muscles and graceful carriage.

ca'lix. See *calyx.*

Calkins, Leroy Adelbert [*American obstetrician,* 1894–]. Introduced a method of placental expression in which expression is delayed until the

uterus assumes globular shape; known as *Calkins method*.

Call'-Ex ner bod'ies. See under *body*.

cal''li pe di a [G *kallos*, beauty; *pais*, child]. The desire to give birth to beautiful child.

Cal liph o-ra [*kallos*; G *pherein*, bearing]. A genus of flies which feed chiefly on animal refuse. The maggots of these flies cause myiasis.

C. vomitoria. The common bl wfly or bluebottle; may deposit ova in neglected wounds of man and other mammals.

Cal''li phor''i dae (kal i for'i dee) [*kallos*; *pherein*]. A family of the Diptera which includes many large blue, green, or copper-colored species, commonly called bluebottle, greenbottle, and blowflies. They normally deposit their eggs or larvae in the decaying flesh of dead animals but may be secondary invaders of neglected wounds and sores.

cal''lo-ma ni a [*kallos*; G *mania*, madness]. A mania characterized by delusions of beauty.

cal-lo sal [L. *callosus*, hard-skinned]. Pertaining to the corpus callosum.

cal los'i tas [L.]. A hard, thickened patch of skin with hypertrophy of the horny layer caused by irritation, friction, or pressure. Syn. *callus*, 1, *keratoma*, *tyloma*, *tylosis*.

cal los'i ty [*callositas*]. A circumscribed area of thickened skin due to friction or pressure.

cal lo so-mar gi al [L. *callosus*, hard-skinned; *margo*, margin]. Relating to the callosal and marginal gyri of the brain.

cal lo sum. See *corpus callosum*.

cal'lus [L.]. 1. A callosity; an area of hardened and thickened skin, seen usually in the palm or the sole; hypertrophic reaction of the epidermis to pressure and friction. 2. New growth of incompletely organized bony tissue surrounding the bone ends in fracture; part of the reparative process. Where repair is complete, the bony thickening is known as **permanent callus.** —**callous,** *adj.*

fibrous c. The connective tissue which precedes formation of cartilage or bone in *callus* 2.

C lmett Léon Ch rles Albert [*French bacteriologist*, 1863–1933]. Developed curative serum for the treatment of snakebite (1897). *Calmette's serum* is prepared from the blood of horses immunized against venom. With Camill Guérin, prepared preventive vaccine for tuberculosis (1927); see *BCG*. See also Calmette *test*.

calmitol. Proprietary topical anesthetic and antipruritic, vailable as liquid or an ointment.

cal o-mel [G *kalos* beautiful *melas*, black]. Hg_2Cl_2, mercurous chloride. A white tasteless powder formerly used popularly as purgative, also as an alterative and anthyphilitic.

colloidal c. A finely divided form of calomel, usually stabilized by the addition of gelatin.

cal or (kal or kay'lor) [L. heat]. 1. Heat one of the four classic signs of inflammation calor rubor tumor dolor. 2. Body heat or moderate fever heat. 3. Localized heat associated with inflammation.

cal'' ra di-ance [*calor*; L. *radius*, ray]. Emission of heat rays ranging from 250 t 55,000 mμ.

cal'' res cence [*calor*]. The conversion of i visible heat rays into luminous heat rays.

calori- [*calor*]. A combining form signifying *heat*.

ca lor'ic [*calor*]. Pertaining t calorie, calories, or t heat.

cal o-rie, cal'o-ry [F *calorie* from L. *calor*]. A heat unit; the amount of heat required to raise the temperature of 1 kg of water from 0° t 1 C. This is also known as **large calorie** or **kilocalorie**, and is the unit used in the study of metabolism. Abbrevi ted, Cal. The **small calori** is the mount of heat required to raise the temperature of 1 Gm. of water 1 C., and is one one-thousandth of the large calorie. Abbreviated, cal.

cal''o rif'ic [*calor*; L. *facere*, to make]. Heat-producing.

ca lor''i ge-net'ic. See *calorigenic*.

ca-lor''i gen'ic, ca lor''i ge-net'ic [*calor*; G. *gennethai*, from *gignesthai*, to be produced]. Heat-producing; applied to certain foods.

cal'' -rim ter [*calor*; G *metron*, measure]. Instrument for measuring the heat production of an individual or system.

bomb c. Apparatus for measuring the heat of combustion, as of foods and fuel.

respiration c. Apparatus which determines the heat production of an individual by measuring the gaseous exchange of the lungs.

cal'' ri-met ric quiv'a-lent. The amount of heat necessary to raise the temperature of the calorimeter 1 C.

cal''o-rim e-try [*calor*; *metron*]. The determination of the heat change in any individual or system by use of the calorimeter. —**calorimet'ric,** *adj.*

direct c. Actual measurement of the heat produced by an animal enclosed in box or suitable enclosure. Generally used experimentally.

indirect c. Measurement of heat produced by use of the respiration calorimeter.

calpurate. Trade-mark for compound of the calcium salt of theobromine and calcium gluconate; the compound is myocardial stimulant and diuretic.

calscorbate. Trade-mark for ampuls of calcium ascorbate with benzyl alcohol and dextrose.

ca lum'ba [Mozambican *Kalumb*]. Colombo, the dried root of *Jateorrhiza palmata*, native to East Africa and Madagascar. It is simple bitter; its chief constituents being several alkaloids and the bitter glycoside columbin.

cal va ri (pl. *calvariae*) [L., skull, from *calva*, the scalp]. The upper part of the skull; the skullcap; also *calvarium*. —**calvarial,** *adj.*

Calvé Jacques [*French surgeon*, 1875–]. Described osteochondritis deformans juvenilis and osteochondrosis involving primary growth centers of vertebral bodies.

cal vi'ti-es (kal vish ee eez) [L.]. Baldness. Loss of hair especially of the upper part of the head. Syn. *alopecia*.

c. frontalis adolescentium. The loss of hair in males during puberty in the frontal region in tw triangular areas on both sides of the midline giving rise to the M-shaped hairline seen in most adult males. This development requires presence of male sex hormones.

cal vous [L. *calvus*, bald]. Bald.

calx [L heel]. Old term for the heel.

calx [L lime]. Calx sodica, soda lime.

cal''y-can'thine. An alkaloid, $C_{11}H_{14}N$ found i several species of *Calycanthus* and elsewhere, having strychninelike action.

ca'lyx, ca'lix (kay'licks, kal'icks) (pl. *calyces*, *calices*, *calixes*) [G *kalyx* cup]. 1. A cup. 2. *I anatomy*, one of the cuplike divisions of the pelvis of the kidney into which the pyramids project. —**cal'ycine, calyc'inal, calyc'iform, cal'icine,** *adj.*

c. of ovum. Wall of the Graafian follicle from which the ovum has escaped.

major c. A primary subdivision of the renal pelvis derived from the embryonic pole t bules, usually two or three number.

minor c. One of the 4 t 13 cuplike divisions of the major calyces derived from t bules of the second, third, and fourth orders, each receiving one or more of the renal papillae.

cam'bi-um [LL.]. A layer of tissue formed between the wood and the bark of exogenous plants.

c. layer The cellular layer of the periosteum.

cam·bo'gi·a. See *gamboge*.

camdelate. Trade-mark for calcium mandelate

cam'er·a [L. from G. *kamara*, anything with an arched covering]. 1. Chamber or compartment. 2 Apparatus used for photography

c. lucida. An optical device used to project onto paper the image of an object so that an accurate drawing can be made. There are two main types: (a) that equipped with a Wollaston prism which projects an image in reduced, enlarged, or natural size, (b) that equipped with an Abbe prism, mirror and microscope, used where a magnified image is desired.

c. oculi. Chamber of the eye.

c. septi lucidi. The so-called fifth ventricle of the brain. *Obs.*

caminoids. Trade-marked name for a product conforming to the requirements established for aminopeptodrate.

cam'i·sole [F.]. A kind of straitjacket: a canvas shirt with very long sleeves; used to restrain violent psychotics.

Cammidge, Percy John [English physician, 1872–]. Known for his study of pancreatic disease, for which he described a test called the *Cammidge test*.

cam'o·mile. See *anthemis*, *matricaria*.

camoquin hydrochloride. Trade-marked name for the hydrochloride of the antimalarial drug known by the generic name *amodiaquin*.

Campbell, Alfred Walter (1868–1937) Australian neurologist and psychiatrist, known for his classic work, *Histological Studies on the Localisation of Cerebral Function* (1905) and his map of the human brain, which have made him one of the founders of modern neurology

Campbell, Willis Cohoon [*American orthopedic surgeon*, 1880–1941]. Introduced a method of bone grafting in which he used a massive onlay graft for nonunion in fractures. A section of endosteum bridges the bone defect, the cortical graft being placed on a prepared surface and held in place by bone pegs. Cancellous bone is placed about the site of the fracture. He perfected a method for the relief of recurrent dislocation of the patella by passing a flap of joint capsule through a tunnel in the quadriceps femoris above the patella.

Camper, Pieter [*Dutch anatomist*, 1722–89] Noted for his work and research in anthropology and craniology. Contributed to the knowledge of the anatomy of the eye and the peritoneum. Famed as a great anatomic artist, he is remembered for his description of the facial angle, a term he originated (1791) and for Camper's fascia. The facial line is also called *Camper's line*.

cam·pes'ter·ol. $C_{28}H_{48}O$; a sterol occurring in small amounts in the fixed oil from rape seed, soybean, and wheat germ.

cam'phene [Malay *kāpūr*, camphor] $C_{10}H_{16}$. A Terpene hydrocarbon occurring in several volatile oils and obtained as an intermediate product in the synthesis of camphor from pinene.

chlorinated c. Toxaphene.

cam'pho-, camph- [*kāpūr*]. A combining form denoting camphor

cam'phol. See *borneol*.

cam'phor (*camphora*) $C_{10}H_{16}O$. A ketone obtained from the volatile oil of *Cinnamomum camphora*, a tree indigenous to eastern Asia, or produced synthetically. It is a mild irritant and antiseptic and is used as a carminative and stimulant. Dose, 0.2 Gm. (3 gr.) —**camphorated,** **camphor'ic,** *adj.*

artificial c. Pinene hydrochloride or bornyl chloride. $C_{10}H_{16}\cdot HCl$. A terpene hydrochloride obtained from turpentine oil by action of hydrochloric acid. It is a solid similar to camphor

betula c. Betulin.

birch c. Birch resin. See *betulin*.

Borneo c. A camphor chiefly dextroborneol, deposited in the wood of *Dryobalanops aromatica*.

c. and soap liniment. Contains 6% hard soap, 4.5% (w/v) camphor, rosemary oil, alcohol, and water: a rubefacient embrocation. Syn., *soap liniment*.

c. flowers. Camphor obtained by sublimation.

c. ice. A cosmetic preparation of camphor, spermaceti, white beeswax, and a vegetable oil.

c. liniment (*linimentum camphorae*) Contains 20% (w/w) camphor in cottonseed oil; a counterirritant embrocation. Syn., *camphorated oil*.

c. ointment (*unguentum camphorae*) Contains 22% camphor in white wax and lard

c. spirit (*spiritus camphorae*) Contains 10% (w/v) camphor in alcohol. Dose, 1 cc. (15 min.)

c. water (*aqua camphorae*) A saturated solution of camphor in distilled water; used as a vehicle, an ingredient of eye washes, and sometimes for supposed euphoric effect.

carbolated c. A mixture of two parts of camphor with one of phenol in liquid petrolatum: has germicidal and local anesthetic properties. Syn., *camphorated phenol*.

cedrene c. $C_{15}H_{26}O$. A camphor that separates from red cedar oil.

chloral c. A fluid prepared by mixing equal parts of camphor and chloral. It has been used externally as a local anodyne.

Japan c. The commercial variety brought from Japan. Also called *tub c.*, *Dutch c.*

liquid c. Camphor oil.

monobromated c. $C_{10}H_{15}BrO$. Camphor in which one atom of hydrogen has been replaced by an atom of bromine. Formerly thought to be sedative. Dose, 0.13 Gm. (2 gr.)

pulsatilla c. See *anemonin*.

Sumatra c. See Borneo c.

cam"phor·a'ceous [*kāpūr*]. Resembling or containing camphor

cam'phor·ate. A salt of camphoric acid.

cam·phor'ic ac'id. $C_{10}H_{16}O_4$. A dibasic acid obtained by the oxidation of camphor; has been used in the night sweats of pulmonary tuberculosis.

cam'phor·ism [*kāpūr*]. Camphor poisoning: marked by gastritis, coma, and convulsions.

cam·phor·o·ma'ni·a [*kāpūr*; G. *mania*, madness]. The camphor habit; a morbid craving for camphor

cam·pim'e·ter [L. *campus*, field; G. *metron*, measure]. Instrument for measuring the field of vision. See *perimeter*. —**campimetry,** *n.*

stereoscopic c. See *stereocampimeter*.

camp"to·cor'mi·a [G. *kamptein*, to bend; *kormos*, trunk]. A special form of hysteria, seen most often in soldiers; characterized by extreme forward flexion of the spine, the eyes usually being focused on the ground. The person affected apparently walks with great difficulty and frequently has associated tremors. Also called *bent back*.

camp"to·dac'ty·ly [*kamptein*; G. *daktylos*, finger]. A condition in which one or more fingers are constantly flexed at one or both phalangeal joints.

Can'a·da bal'sam. See under *balsam*.

can'a·dine (kan'uh-deen, -din) *l*-Tetrahydroberberine. A colorless alkaloid from *Hydrastis canadensis*.

ca·nal' [L. *canalis*, channel]. Any tubular channel; duct.

adductor c. A triangular aponeurotic tunnel bounded by the sartorius, vastus medialis, and

adductor muscles; it extends from the femoral triangle to the hiatus adductorius and gives passage to the femoral artery and vein, the saphenous nerve, and the nerve to the vastus medialis. Also called *Hunter's c.*, *subsartorial c.*
Alcock's c. The pudendal c.
alimentary c. The whole digestive tube from the mouth to the anus; the gastrointestinal tract.
alveolar canals [BNA]. Those in the maxilla or mandible giving passage to vessels and nerves to the teeth. A **superior alveolar canal** is one located in the maxilla. The **inferior alveolar canal** is one located in the mandible. Syn., *dental canals*.
alveolodental c. Old term for any of the dental canals.
anal c. The terminal portion of the large intestine extending from the rectum to the anus.
atrioventricular c. The canal, originally unpaired, between atrium and ventricle in the embryo.
auditory c. Auditory meatus. The **external auditory canal** is that from the auricle to the tympanic membrane; the **internal auditory canal** is that beginning on the posterior surface of the petrous bone. It gives passage to the acoustic and facial nerves and the internal auditory artery.
auricular c. Old term for the external auditory canal.
basipharyngeal c. A small passage occasionally present on either side between the ala of the vomer and vaginal process of the sphenoid.
biliary intralobular c. A small intercellular bile canaliculus in a hepatic cord.
birth c. See parturient c.
blastoporic c. See neurenteric c.
c. of Corti. See *tunnel* of Corti.
c. of Nuck. A shallow peritoneal invagination in the female corresponding to the vaginal process of the peritoneum in the male; also called *Nuck's diverticulum*.
c. of Petit. See *zonular spaces* under *space*.
c. of the cervix of the uterus. That portion of the uterine canal that extends between the internal and external os. See Plate 41.
c. of the chorda tympani. A small canal in each temporal bone, between its squamous and petrous portions, terminating in the petrotympanic fissure. It gives passage to the chorda tympani nerve.
c. of the greater superficial petrosal nerve. One opening into the hiatus of the facial canal for the passage of the nerve of that name.
c. of the lesser superficial petrosal nerve. One in the petrous portion of the temporal bone for the passage of the nerve of that name.
canal of cartilage. The canals in ossifying cartilage during its vascularization. Intended to receive prolongations of the osteogenetic layer of the periosteum. They radiate in all directions from the center of ossification.
caroticotympanic canals. Two or three short canals extending from the carotid canal to the tympanic cavity; they give passage to branches of the carotid plexus.
carotid c. One in the petrous portion of the temporal bone; it gives passage to the internal carotid artery.
carpal c. The space beneath the flexor retinaculum of the wrist and above the volar aspect of the carpal bones. It transmits the tendons of the long flexor muscles and median nerve.
central c. of the spinal cord. The small canal that extends through the center of the spinal cord from the conus medullaris to the lower part of the fourth ventricle. It represents the embryonic neural tube.
cervical c. See c. of the cervix of the uterus.
cervico-axillary c. The region bounded anteriorly by the clavicle, posteriorly by the scapula, and medially by the thoracic brim, together with their attached muscles.
cervicouterine c. See uterine c.
chorda c. The canal in the head process or notochord of presomite embryos. Syn., *notochordal c.*, *neurenteric c.*
ciliary c. See *Fontana's spaces* under *space*.
cochlear c. (a) The osseous cochlear canal. (b) Cochlear duct.
condylar c. A small canal occasionally present in the floor of the condylar fossa for the passage of a vein from the transverse sinus. This canal is sometimes called the *posterior condylar canal*, and the hypoglossal canal the *anterior condylar canal*. Also called *condylar* or *condyloid foramen*.
craniopharyngeal c. A fetal canal in the sphenoid bone formed by the growth of the bone about the stalk of the craniobuccal (Rathke's) pouch.
craniovertebral c. See vertebral c.
crural c. See femoral c.
cystic c. The cystic duct.
deferent c. The ductus deferens.
dental canals [BR]. The alveolar canals.
dentinal canals. The dentinal tubules.
digestive c. The gastrointestinal tract.
Dorello's c. A small canal between the apex of the petrosal process, the posterior clinoid, and the petrosphenoid ligament of the dura. The abducens nerve passes through it.
ethmoid canals. Canals between the ethmoid bone and the orbital plate of the frontal bone. The **anterior ethmoid canal** is one giving passage to the nasociliary nerve and the anterior ethmoid vessels. The **posterior ethmoid canal** is one giving passage to the posterior ethmoid nerve and vessels.
Eustachian c. Old term for the bony or petrous portion of the Eustachian (auditory) tube.
facial c. A canal in the temporal bone for the passage of the facial nerve; formerly called *aqueduct of Fallopius*.
femoral c. The medial compartment of the femoral sheath behind the inguinal ligament. Also called *crural c.*
Fontana's c. See *Fontana's spaces* under *space*.
galactophorous canals. The lactiferous tubules of the mammary gland. *Obs.*
gastric c. A groove of the mucous membrane of the lesser curvature of the stomach extending from esophagus to pylorus.
genital c. *In comparative anatomy*, any canal designated for copulation or for the discharge of ova or offspring.
gynecophoric c. A canal located on the ventral surface of the male of certain species of *Schistosoma* in which the female lies during copulation.
hair c. A canal in the epidermis through which a new hair shaft erupts.
Haversian canals. The canals penetrating the compact substance of bone in a longitudinal direction and anastomosing with one another by transverse or oblique branches. They contain blood vessels and connective tissue.
hemal c. The ventral of two canals of which the vertebrate animal is composed. It contains the heart and the other viscera, while the neural canal encloses the central nervous system.
hernial c. A canal giving passage to a hernia.
Huguier's c. See *iter chordae anterius*. See also Pierre Charles *Huguier*.
hyaloid c. A canal running posteroanteriorly through the vitreous through which, in the fetus, the hyaloid artery passes to ramify on the pos-

terior surface of the crystalline lens. Formerly called *Cloquet's c.*

hypoglossal c. The anterior condyloid canal. See condylar c.

incisive c. The bifurcated bony passage from the floor of the nasal cavity to the incisive fossa. On each side, the branches open by median and lateral incisive foramen transmitting respectively the nasopalatine nerve and a branch of the greater palatine artery

infraorbital c. A canal running obliquely through the bony floor of the orbit; it gives passage to the infraorbital artery and nerve.

inguinal c. A canal about one and one-half inches long, running obliquely downward and medially from the abdominal to the subcutaneous inguinal ring: the channel through which an inguinal hernia descends; it gives passage to the ilioinguinal nerve and to the spermatic cord in the male and to the round ligament of the uterus in the *female*.

intestinal c. The portion of the gastrointestinal tract extending from the pylorus to the anus.

lacrimal c. The nasolacrimal canal.

mandibular c. See alveolar c.

maxillary c. See alveolar c.

medullary c. The cavity of long bone, containing the marrow

membraneous cochlear c. The cochlear duct.

membraneous semicircular canals. That portion of the membranous labyrinth of the ear consisting of three loop-shaped tubes lying at right angles to one another and communicating with the utricle. The **superior** (*frontal*) **semicircular canal** and the **posterior** (*sagittal*) **semicircular canal** lie in the vertical plane, making right angle which opens laterally. The **lateral** or **horizontal canal** lies in the horizontal plane. Syn., *semicircular ducts*.

musculotubal canals. The semicanals in the temporal bone which transmit the auditory tube and tensor tympani muscle considered together

nasal c. (a) See nasolacrimal c. (b) An occasional canal found in the posterior portion of the nasal bone. It gives passage to the nasal nerves.

nasolacrimal c. The bony canal that lodges the nasolacrimal duct.

nasopalatine c. One of pair of passages from the floor of the nasal cavities to the roof of the mouth, patent in most mammals but vestigial and normally occluded in man.

neural c. *In embryology* syn. for vertebral c.

neurenteric c. See notochordal c.

notochordal c. A canal formed by continuation of the primitive pit into the head process of mammals. It perforates the entoderm and opens into the yolk sac, thus forming temporary connection between yolk sac and amnion. Syn., *blastoporic c.*, *neurenteric c.*

nutritive canals. See *Haversian canals* under canal.

obstetric c. See parturient c.

obturator c. A gap in the obturator membrane which closes the obturator foramen in the hipbone; it gives passage to the obturator nerve and vessels

olfactory canals. In the embryo, the nasal cavities at an early period of development.

omphalomesenteric c. In the embryo, canal that connects the cavity of the intestine with the yolk sac.

optic c. In the embryo, the canal in the optic stalk.

orbital c. See ethmoid c.

osseous cochlear c. The bony canal in which the cochlear duct is housed.

osseous semicircular canals. That part of the bony labyrinth of the ear which houses the membranous semicircular canals: three loop-shaped canals in the petrous portion of the temporal bone, the **superior semicircular canal**, the **posterior semicircular canal** and the **lateral** or **horizontal semicircular canal**. They lie at right angles to one another and communicate with the osseous vestibule. See Plate 20.

palatine canals. Canals in the palate bone, giving passage to branches of the descending palatine nerve and artery. The **greater palatine canal** is a continuation of the pterygopalatine canal. The **smaller palatine canals** branch from the greater palatine canal and open separately

parturient c. The channel through which the fetus passes in parturition: the cavities of the uterus and vagina, considered as single canal. Also called *birth c.*

pelvic c. The cavity of the true pelvis from inlet to outlet.

peritoneal c. The vaginal process.

pharyngeal c. A passage between the vaginal process of the sphenoid bone and the sphenoidal process of the palatine bone for the transmission of pharyngeal branches from the sphenopalatine ganglion and artery

pharyngotracheal c. A narrow opening in the solid dorsal epithelium of the embryonic larynx which enlarges to form the cavity of the larynx.

pharyngotympanic c. The auditory tube.

pleural c. A narrow coelomic passage on either side of the mesentery dorsal to the transverse septum that connects pericardial and general coelom. It later develops into the pleural cavity

pleuroperitoneal c. A dorsomedian opening between embryonic pleural and peritoneal cavities before closure by the pleuroperitoneal membrane.

portal c. An interlobular artery, vein, bile duct, nerve and lymph vessel, and the interlobular connective tissue in which they lie, between the corners of the anatomic lobules of the liver

primitive c. The vertebral canal of the embryo.

pterygoid c. One in the sphenoid bone at the base of the medial pterygoid plate; it opens anteriorly into the pterygopalatine fossa. Also called *Vidian canal*.

pterygopalatine c. The connection between the pterygopalatine fossa and the mouth; it gives passage to the palatine nerves and vessels. Its inferior opening is the greater palatine foramen.

pudendal c. A passage within the inferior fascia of the obturator internus muscle for the transmission of the pudendal nerve and internal pudendal vessels also called *Alcock's c.*

pyloric c. See *pylorus*, 2.

root c. of teeth. The cavity within the root of tooth, occupied by pulp, nerves, and vessels.

sacculocochlear c. The ductus reuniens.

sacral c. The continuation of the vertebral canal in the sacrum.

Schlemm's c. An irregular space or plexiform series of spaces at the sclerocorneal junction in the eye. It drains the aqueous humor from the anterior chamber

semicircular canals. (a) The osseous semicircular canals. See Plate 20. (b) The membranous semicircular canals.

sheathing c. The upper end of the vaginal process; it normally closes, leaving the lower end closed sac, the tunica vaginalis.

spinal c. The vertebral canal.

spiral c. of the cochlea. (a) The osseous cochlear canal. (b) The cochlear duct. Also called *Rosenthal's canal*.

spiral c. of the modiolus. An irregular cavity of the bone extending along the line of attachment of the osseous spiral lamina to the modiolus. It lodges the spiral ganglion. Also called *canalis ganglionaris.*

suborbital c. The infraorbital canal.

subsartorial c. The adductor canal.

Sucquet Hoyer c. The afferent arteriole of glomus. It has thick wall and narrow lumen.

supraorbital c. One at the upper margin of the orbit, giving passage to the supraorbital nerve and vessels.

urogenital c. *In embryology* one formed by the union of the embryonic urogenital sinus and the penile portion of the urethra. Also called *phallic urethra.*

uterine c. Cavity of the terus, both of the body and cervix.

uterocervical c. Cavity of the cervix of the uterus.

uterovaginal c. (a) The common canal formed by the uterus and vagina. (b) *In embryology* the single cavity formed by fusion of the paramesonephric ducts.

vaginal c. Canal of the vagina.

vertebral c. One formed by the foramens of the vertebrae. It contains the spinal cord and its meninges. Also called *spinal c., neural* (in embryology)

vesicourethral c. That part of the primitive urogenital sinus, cranial to the openings of the mesonephric d cts, which develops into the bladder and primary urethra. Also called *vesicourethral anlage.*

Vidian c. The pterygoid canal.

Volkmann's canals. In compact bone, those vascular channels which lack the concentric lamellae of Haversian systems. The term is commonly erroneously applied to nutrient canals in compact bone, whether H versian or Volkmann s.

zygomaticoorbital c. A canal or canals in the orbital process of the zygomatic bone for the passage of the zygomaticofacial and zygomaticotemporal branches of the zygomatic nerve.

can lic u li (kan uh-lick yoo lye) Plural of canaliculus.

can-al ic u li -plas ty [L canaliculus, small channel; G plassein, to form]. Plastic repair of canaliculus, especially that leading from the punctum to the lacrimal sac.

can a-lic u lus (pl. canaliculi) [L., small channel] 1 A small canal; especially that leading from the punctum lacrimale to the lacrimal sac of the eye. 2 Any one of the minute canals opening into the lacunae of bone —**canalicular** *adj* **canaliculization** *n.*

accessory canaliculi. Inconstant canals at the outer edge of the anterior condyloid foramen giving passage to veins.

bile canaliculi. The intercellular channels in hepatic cords that convey bile toward the interlobular bile ducts.

canaliculi vasculosi. Old term for the H versian canals.

c. chordae tympani. One in the petrous portion of the temporal bone for the passage of the chord tympani.

innominate c. A small inconstant canal in the great wing of the sphenoid, which, when present, transmits the lesser superficial petrosal nerve also called *foramen innominatum.*

intracellular canaliculi. A system of fine canaliculi within certain gland cells which apparently drai their secretion as those of the parietal cells of the gastric glands.

lacrimal canaliculi. A superior and inferior one each extends from its lacrimal punctum to the sac to which it conveys tears also called *lacrimal duct.*

mastoid c. One opening just above the stylomastoid foramen, giving passage to the auricular branch of the vagus nerve.

secretory canaliculi. Fine, intercellular canaliculi formed by grooves in adjoining gland cells, draining the secretion of the cells, and opening into the lumen of the gland. Also called *secretory capillaries.*

tympanic c. One that opens on the lower surface of the petrous portion of the temporal bone between the carotid canal and the jugular fossa. It gives passage to the tympanic branch of the glossopharyngeal nerve.

ca na'lis (ka nay'lis, ka nal'is) See canal.

ca nal"i za tion (ka nal'l say shun, kan ul i say shun, kan ul-eye-zay shun) [L. canalis, channel] 1. The formation of new channels in tissues, as the formation of new blood vessels in thrombus 2. A system of wound drainage without tubes

can"al-og'ra phy Radiographic visualization f the spinal canal by epidural injection. A solution of contrast material containing water-soluble iodine is injected in the sacral hiatus and radiographs are made. The opaque material is bsorbed by the epidural venous plexus and is excreted by the kidneys.

Canano, Giovanni Battista [*Italian anatomist,* 1515–79]. A great figure in the history of anatomy Described the valves of the veins.

canary yellow Auramine O.

Can va'li [NL]. A genus of tropical herbs having long pods with seeds or beans, which are sed as source of urease. The plant or the seed thereof is known as jack bean

can" va'lin. A globulin found in jack beans, the seeds of *Canavalia.*

can-av' nine. $NH_2C(:NH)NH.O.CH_2.CH_2.CH(NH_2)COOH$ an amino acid from jack beans It is potent inhibitor of L-arginine, as tested on various bacteria.

can cel lat"ed. See cancellous.

can cel lous [L. cancelli, lattice]. Characterized by reticulated or latticed structure, as the spongy tissue of bones or in botany certain leaves consisting largely of veins. Syn., *cancellate, cancellated.* —**cancella tion** *n.*

can cer [L., crab]. Any malignant tumor including carcinoma and sarcoma formerly synonym of carcinoma.

alveolar (cell) c. See bronchiolar carcinoma.

black c. See melanoma.

Bowen' c. See Bowen disease.

c. en cuirasse. W dely infiltrating carcinoma of the skin of the thorax, usually arising in mammary carcinoma; also applied to widespread carcinoma of the pleura.

c. of the lung. Bronchogenic carcinoma.

c. milk. A milky fluid which can be expressed or scraped from cross section of certain carcinomas, especially those of the mammary gland.

c. nest. A small group of cells of carcinoma.

c. occultus. Carcinoma identified first by the ppearance of metastasis.

claypipe c. Carcinoma of the lip and tongue, presumably due to the stem of the clay pipe. See smoker'

conjugal c. Cancer in both husband and wife, occurring simultaneously or successively Almost certainly not due to conjugal transmission.

contact c. One occurring on surface, as the lip, which has been in contact with cancer of the

opposing surface. Rare and not proved to be due to direct implantation.

disseminated c. See under *carcinoma*.

dye workers' c. A carcinoma of the urinary bladder found among aniline-dye workers.

erysipeloid c. See *inflammatory carcinoma*.

"kangri basket" c. A nonmetastasizing squamous-cell carcinoma of the abdominal skin occurring in Kashmir and Tibet where people warm the belly by means of a basket of hot coals.

lobular c. See *lobular carcinoma*.

mule spinners' c. An epidermoid carcinoma of scrotum or vulva, occurring in textile workers and presumably due to exposure to machine oils.

osteolytic c. Metastasis of cancer in bone with destruction of bone.

osteoplastic c. Metastasis of cancer in bone which stimulates new production of bone in the immediate neighborhood.

Paget's c. See *Paget's disease*, (b)

primary c. An original malignant tumor as contrasted with a metastatic, or secondary cancer.

radiation, radiologist c. See under *carcinoma*.

smoker's c. Squamous-cell carcinoma of the lip, usually the lower lip, observed in habitual smokers.

tar c. An epidermoid carcinoma associated with prolonged exposure to tar.

can″cer-o-gen. Any substance (or ray) which, applied in adequate quantity to a disposed individual, is apt either to produce cancer or to speed up its appearance, or which, acting upon a group, changes the group's total cancer-frequency or at least the distribution of primary tumors by site and age. —**cancerogen′ic, cancerigen′ic,** *adj.*

can″cer-ol′o-gist [*cancer*; G. *logos*, word]. A cancer specialist.

can″cer-ol′o-gy [*cancer*; *logos*]. Study and science of cancer.

can″cer-o-pho′bi-a, can″cer-pho′bi-a [*cancer*; G. *phobos*, fear]. Morbid fear of acquiring a cancer.

can′croid [*cancer*; G. *eidos*, form]. An epidermoid carcinoma. —**can′croid,** *adj.*

can″crum o′ris. Canker of the mouth. Old term for gangrenous stomatitis.

can″di-ci′din. An antibiotic with antifungal properties in vitro.

Can′di-da [L. *candidus*, white]. A genus of yeastlike, pathogenic microorganisms.

C. albicans. A species of considerable importance which produces thrush and other types of moniliasis. Also called *Monilia albicans*.

can″di-did′. A secondary eruption characterized by sterile, grouped, vesicular lesions, a result of hypersensitivity and hematogenous spread from the primary focus which is caused by *Candida*. Also called *monilid*.

can-did″u-lin. An antibiotic substance, possibly $C_{11}H_{15}NO_4$, derived from *Aspergillus candidus*; it possesses some activity against many organisms but is inactivated by whole blood.

can′di-ru [Pg. from Tupi *candirú*]. Minute catfish of South America, which enters the urethra of unprotected bathers.

can′dle [L. *candela*, a light]. The unit of intensity of light, one-sixtieth of the intensity of 1 square centimeter of a perfect radiator.

ca-nel′la [ML., dim. of *canna*, a reed]. The bark of *Canella winterana*, native to the West Indies, dried and without the cork layer. It is called white cinnamon and is an aromatic tonic and bitter stomachic.

ca′nine [L. *canis*, dog]. 1. Relating to, resembling dogs. 2. Pertaining to the sharp tearing teeth of mammals, located between the incisors and the premolars.

ca nine. A canine tooth.

ca ni′nus. A muscle of facial expression arising above the canine tooth. See Table of Muscles in the Appendix.

ca ni″ti-es (ka-nish′ee-eez) [L.]. Poliosis; hoariness; grayness or whiteness of the hair.

c. unguium. White spots, streaks, or bands of the nails.

can′ker [L. *cancer*, crab]. 1. An ulceration, especially one of the mouth and lips; also a festering or gangrenous ulcer, as noma, gangrenous stomatitis. 2. Aphthous stomatitis; thrush. 3. *In veterinary medicine*, a disease of the horn-forming membrane of horses' hoofs, leading to destruction of the cells and loss of the horn-secreting function.

can′ker root. Coptis.

can″na-bid′i-ol [G. *kannabis*, hemp]. A constituent of cannabis which, on isomerization to a tetrahydrocannabinol, exhibits to a great degree the activity of cannabis.

can na-bin, can na bine (kan uh-been, bin) [*kannabis*]. A resinous substance from Indian hemp; it is hypnotic but is no longer used medicinally.

can nab′in ol [*kannabis*]. A substance resulting from the spontaneous dehydrogenation of tetrahydrocannabinol in cannabis. Though commonly considered physiologically inactive, cannabinol recently has been demonstrated to possess some of the characteristic activity of cannabis.

can-nab′i noon, can nab′i nene [*kannabis*]. An amorphous bitter resinoid from cannabis, formerly used as hypnotic.

can′na bis [*kannabis*]. Hemp. The flowering tops of the pistillate plants of *Cannabis sativa*, of which there are two varieties, Indian and American, the former being the more potent. The active constituents appear to be tetrahydrocannabinols. Cannabis is antispasmodic and narcotic. In large doses it produces mental exaltation, intoxication, and a sensation of double consciousness. It is important as an intoxicant, but has no rational therapeutic use. *Bang, bhang, gunjah, charas, charras, hashish,* and *marihuana* are among the various names by which the drug is known.

can na-bism [*kannabis*]. Poisoning resulting from excessive or habitual use of cannabis.

can na bol [*kannabis*]. A constituent of cannabis; it is believed to be an isomer of cannabidiol.

can″ni bal is′tic [Carib *caniba*]. Pertaining to the eating of human flesh, an impulse sometimes observed in psychotics.

Cannon, Walter Bradford (1871–1945). American physiologist, renowned as one of the great physiologists of his time. He demonstrated that hunger pains are due to cramplike contractions of the stomach (1912). With Binger and Fitz he showed that exophthalmic goiter could be produced artificially (1915). He was one of the first to produce evidence for the connection between bodily changes and emotional states as pain, hunger, fear, and rage (1915) and demonstrated that under certain conditions of physiological stress the sympathetic nervous system and the adrenal medulla produced visceral adjustments adapted to the preservation of the organism (fight-flight mechanism). This led to his concept of homeostasis, an extension of Claude Bernard's theory of the constancy of the *milieu interieur*. He pioneered in the field of chemical mediation of nerve impulses, and is credited with the discovery of sympathin (1931) and the establishment of the law of denervation. His book, *The Wisdom of the Body*, describing bodily mechanisms for homeostasis, is a classic in modern physiology.

can non bone. One of the functional and complete

metacarpal or metatarsal bones of hoofed quadruped, supporting the weight of the body pon the feet.

can nu la [L., dim. of *canna*, reed]. An artificial tube often fitted with trocar for insertion into tube or cavity of the body as an artery or the trachea. Clinically merous cannulas of various sizes and shapes have been devised for specific uses. —**cannular cannulate** *adj*

perfusion c. A double cannula, one tube of which is used for the inflow of fluid, the other for its escape used in irrigating cavity

Cantani, Arnoldo [*Italian physician*, 1837 93]. Introd ced an exclusive meat diet for diabetes, called *Cantani diet*. Proposed treatment for cholera consisting of injection into the rectum of large quantities of water containing tanni acid and opium called *Cantani treatment*

cantn ln. Trade-mark for brand of ascorbic acid

can"tha ri'a sis [G *kantharis*, kind of beetle—probably blister beetle; NL -*iasis*, condition]. The presence in the body of coleopterous insects or their larvae.

can thar'i date [*kantharis*] Any salt of cantharidi cid.

can thar'i des (kan thar'i deez) [*kantharis*]. The dried insects, *Cantharis vesicatoria*, yielding not less than 0.6% cantharidin. Locally pplied, cantharides is rubefacient and vesicant; internall it is irritant, causing pain and vomiting. In toxic doses it produces severe gastroenteritis, strangury and priapism. —**cantharidal cantharidic**, *adj*

c. cerat (*ceratum cantharidis*) An unction, containing 25% cantharides, used as vesicant.

c. plaster (*emplastrum cantharidis*) Cantharides cerate spread on plaster backing

can thar'i dic ac'id (kan-thar i-dik, kan th b-rid'ik) $C_{10}H_{14}O_5$ A cyclohexanedicarboxylic acid derivative the hydrated form of cantharidin.

can thar'i din, $C_{10}H_{12}O_4$ The crystallizable, active principle contained in cantharides and other insects. Chemically it is the anhydride of *cantharidic acid*

can thar'i dism [*kantharis*]. Cantharidal poisoning. When caused by absorption from canthar idal blister it is called *external cantharidism*

can tha ris, Singular of cantharides.

can thec'to my [G *kanthos*, corner of the eye *ektomē*, excision]. Excision of canthus.

can thi tis [*kanthos*; G -*itis*, inflammation]. Inflammation of canthus

can'tho-, canth- [*kanthos*]. A combining form denoting *canthal*.

can-thol'y-sis [*kanthos*; G *lysis*, loosing] Canthotomy with section of the lateral palpebra ligament

can tho plas"ty [*kanthos*; G *plassein*, to form] Increasing the length of the palpebral fissure by slitting the outer canthus. Also, any plasti restoration of canthal defect.

can thor rha phy [*kanthos*; G *rhaphē*, suture] *I plastic surgery* shortening of the palpebral fissure by suture of the canthus.

can thot my [*kanthos*, G *tomē*, cutting] Surgical division of canthus

ca thus [*kanthos*] Either of the two angles formed by the junction of the eyelids designated outer or lateral, and inner or medial palpebral angle —**canthal**, *adj*

CaOC Cathodal opening contraction

caout'chouc (kōō chook) [F from Tupi Indian *caá-ochú*] R bber The terpene hydrocarbon substance dispersed in the milky juice th exudes upon incision of number of tropical rees belonging t the families Euphorbiaceae Artocarpaceae, and Apocynaceae. When pure, caoutchouc is nearly white, soft, elastic, and glutinous It is sol ble in organic solvents.

cap [AS *caeppe*, from LL. *cappa*]. 1 A covering or coverlike organ tegmen. 2. *I dentistry*, substance or structure designed to cover an ex posed pulp.

abd ction c. An orthopedi appliance of canvas or leather t maintai bduction in cases of subdeltoid bursitis.

c. of Zinn, X-ray shadow caused by patent ductus arteriosus (dilatation of the pulmonary artery proximal to ductus and dilatation of the con arteriosus of the right ventricle)

cradle c. Seborrhea capitis seen in infants, per haps limited form of topic dermatitis.

duodenal c. The first part of the duodenum, immediately beyond the pylorus. From radiographic ppearance, it is called bishop cap Syn., *duodenal bulb*.

Dutch c. A contraceptive device to cover the cervix.

enamel c. The enamel covering the top of growing dental papilla

head c. The cap enclosing the sperm nucleus. It results from the fusion of the **anterior head cap** (the acrosome, especially the peripheral zone of the acrosome) and the **postnuclear head cap.**

knee c. Patella.

nuclea c. A small mass of chromophilic matter on one side of cell nucleus.

phrygian c. The -ray ppearance of the gallbladder where kinking exists between the fundus and the body

skull c. ( ) Cranium. (b) Calvaria.

cap. 1 *Capiat*, let him take 2. *Capsula*, capsule.

ca pac'i tance (ka-pas'i tunss) [L. *capax* capacious]. The quantity of electricity which condenser or other structure can hold per volt of electric pressure applied.

ca pa i tor (ka pas'i tur) [*capax*]. A instrument for holding or storing charges of electricity; condenser

ca pac'i ty [L. *capacitas*, capacity]. 1 *The power of* receiving, containing, holding, or bsorbing 2. Cubi volume. 3 Mental bility to acquire and hold knowledge, accomplish, or understand. 4. Physical bility to perform muscular work; maximum output —**capacitate** *t.*

cranial c. Volume of the cranial cavity

electric c. (a) The amount of electricity condenser can hold (b) *The amount of electricity* that can be delivered under specific conditions, as by battery or generator ( ) Maximum output of generator (d) Capacitance.

functional residual c. The amou t of air remaining in the lungs after in olu tary expiration t any level of activity It includes both the expiratory reserve volume and residual volume, and is important physiologically because it is the amount of air with which each tidal vol me must be mixed.

heat c. See thermal *c.*

inspiratory c. That mount of air which can be inhaled after normal expiration.

maximum breathi g c. The greatest amount of air which can be voluntarily breathed during 10–30-second period, and expressed as liters of air per minute It is test of many factors, including patient cooperation, his physical stat and muscular function Adequately performed it is reliable test of the entilatory capacity of the thoracic bellows. Abbreviated, MBC.

"neutralization" c. The capacity of the skin surface to neutralize acids or alkali with which it comes in contact, thought by some to be related

to sensitivity in contracting contact dermatitides.
pulmonary diffusing c. The number of milliliters of gas transferred across the alveolar capillary membrane per minute per millimeter difference in partial pressure of the gas in the alveolar air and capillary blood.
respiratory c. (a) Vital capacity. (b) The ability of the blood to combine with oxygen from the lungs, and with the carbon dioxide from the tissues.
testamentary c. In *medical jurisprudence*, the mental ability requisite to make a valid will.
thermal c. The amount of heat necessary to raise the temperature of a body from 15° to 16° C.
vital c. The volume of air that can be expelled from the lungs by the most forcible expiration after the deepest inspiration. It is the maximum stroke volume of the thoracic pump and is affected by any factor restricting either the amount of filling or emptying of the lungs. A **timed vital capacity** is a measure of rate of emptying of the lungs and aids greatly in determining the maximum ventilatory capacity. A normal individual can exhale three-fourths or more of his vital capacity in one second.
Capgras, Jean Marie Joseph (1873–1950) French psychiatrist, who with Paul Sérieux described a psychotic manifestation in which the subject fails to identify an individual but recognizes his appearance and behavior as familiar; called *Capgras syndrome*.
cap″il lar″ec ta′sia (kap″il lar ek tay′zhuh, zee uh, -shuh, -see uh) [L. *capillaris*, from *capillus*, hair; G. *ektasis*, stretching out]. Dilatation of the capillaries.
cap″il·la·rim′e·ter [*capillaris*; G. *metron*, measure]. A device for estimating the diameter of capillary tubes.
cap″il·lar′i·ty [*capillaris*]. Capillary attraction; elevation or depression of liquids in capillary tubes.
cap″il la ros′co·py, cap″il·lar″i os′co·py [*capillaris*; G. *skopein*, to examine]. Microscopic examination of the cutaneous capillaries for diagnosis.
cap′il·lar y (kap′il err ee) [*capillaris*]. Hairlike; relating to a hair, to a hairlike filament, or to tube with a minute bore.
cap′il lar y. A minute blood vessel connecting the smallest ramifications of the arteries with those of the veins or one of the smallest lymph vessels.
arterial c. See *precapillary*.
c. fragility. Weakness of the capillaries, as in purpura.
c. respirometry. Measurement or determination of changes in the volume of gases in a capillary tube which leads from a chamber filled with respiring sample to a chamber containing only media and reagents. The capillary tube contains an index droplet, the displacement of which serves to determine the change in gas volume.
venous c. The terminal part of a capillary network, opening into a venule; postcapillary.
cap″il·li′ti·um (kap″i-lish ee um) [L., the hair]. Protoplasmic threads forming a network in the spore capsule of *Myxomycetes*.
cap″il·lo·ve′nous [L. *capillus*, hair; *vena*, vein]. 1. Pertaining to a junctional vessel between capillary and venule. 2. Pertaining to the capillaries and first subpapillary venous plexus of the skin.
ca pil′lus [L.]. A hair; specifically, a hair of the head.
cap′i·tate [L. *capitatus*, from *caput*, head]. 1. In biology, having a head or headlike termination. head-shaped. 2. See Table of Bones, Appendix.

cap″i ta′tum [*capitatus*]. The large bone of the wrist; the os magnum.
cap″i t′l lum [L., dim. of *caput*]. A small head or rounded process of bone.
ca pit′u·l um [L., dim. of *caput*]. A small head or small, bony eminence. —**capitular**, *adj.*
c. costae [BNA]. Head of a rib.
c. fibulae [BNA]. Proximal end of the fibula, articulating with the tibial lateral condyle.
c. humeri [BNA]. Radial head of the humerus.
c. mandibulae [BNA]. Posterior or articulating process of the lower jaw.
c. ossis metacarpalis [BNA]. The head of any of the metacarpal bones.
c. ossis metatarsalis [BNA]. The head of any of the metatarsal bones.
c. radii [BNA]. Disklike proximal head of the radius.
c. Santorini [L.]. A small elevation at the apex of the arytenoid cartilage.
c. stapedis [BNA]. Articular head of the stapes.
c. ulnae [BNA]. Distal end or head of the ulna.
Capivaccio, Girolamo (Hieronymus Capivaccius) [*Italian surgeon*, d. 1589]. One of the first to describe gastric ulcer with malignant changes; called *Capivaccius ulcer*.
capped hock. In *veterinary medicine*, the formation of a hygroma at the point of the hock in the horse, the result of continued irritation.
Capps pleural reflex. See under *reflex*.
cap′rate. Any salt or ester of capric acid.
cap′re·o·late [L. *capreolus*, tendril]. Resembling tendrils, furnished with tendrils. Obs.
ca pri- [L. *caper*, goat]. A combining form meaning *goat*.
cap′ric ac′id. $CH_3(CH_2)_8COOH$. A solid fatty acid occurring as a glyceride in butter and other animal fats.
ca pril′o·quism, ca pri lo qui′um [*caper*; L. *loqui*, to speak]. Egophony.
ca pro′ic ac′id. $CH_3(CH_2)_4COOH$. A liquid fatty acid occurring as a glyceride in butter and other animal fats.
caprokol. Trade-mark for a brand of hexylresorcinol.
cap′ro·ate. Any salt or ester of caproic acid.
cap′ro·in. Any of the caproic acid esters of glycerin.
cap′ryl·ate. Any salt or ester of caprylic acid.
ca pryl′ic ac′id. $CH_3(CH_2)_6COOH$. A solid fatty acid occurring in butter, coconut oil, and other fats and oils. The sodium salt promises to be an effective agent for treating dermatomycosis of the feet.
cap·sa′i·cin. The vanillylamide of isodecenoic acid, the most important constituent of capsicum. See *capsicum*.
cap·san′thin [L. *capsa*, box]. A carotenoid pigment, $C_{40}H_{58}O_3$ in capsicum.
cap′si·cin [NL. *capsicum*, from *capsa*]. A resinous, fatty mixture, believed to be the active principle of capsicum.
cap′si·cum [*capsa*]. The dried fruit of *Capsicum frutescens* (bush red pepper) or of several other varieties (tabasco or Louisiana long or short peppers). Its characteristic pungent constituent is capsaicin, an extremely acrid substance; used internally as tonic and carminative, externally to produce counterirritation. Also called *Cayenne pepper*, *red pepper*.
c. ointment (*unguentum capsici*). It contains 5% of capsicum oleoresin; used as a counterirritant.
c. oleoresin (*oleoresina capsici*). An acetone or ether extract of the active principles of capsicum from which the solvent has been evaporated.
cap·su′la. See *capsule*.
cap′sule [L. *capsula*, small box]. 1. A membranous investment of a part. 2. An envelope surrounding

certain organisms. 3. A soluble shell for administering medicines. 4. *In physiology*, an instrument used for the optical recording of pressure changes or vibrations, as pressure pulses or heart sounds. It consists of a cylindrical chamber closed on one end by a thin membrane to which is glued a small mirror. Pressure changes cause movement of the membrane and deflections of a beam of light which is reflected to a photokymograph. —**capsular**, *adj.*

acoustic c. See otic c.

adipose c. See c. of the kidney.

articular c. See joint c.

auditory c. See otic c.

Bowman's c. See glomerular c.

brood capsules. Stalked vesicles which develop from the germinative epithelium of a hydatid cyst. These brood capsules may detach from the mother cyst, become enlarged and produce brood capsules and scolices within themselves to form daughter cysts.

c. of a nerve cell. That portion of the neurilemma which covers a ganglion cell.

c. of the eyeball. The fascial envelope of the eyeball.

c. of the kidney. The fat-containing connective tissue encircling the kidney. It consists of an inner fibrous capsule and an outer adipose capsule (the perirenal fat).

c. of the lens. A transparent, structureless membrane enclosing the lens of the eye.

cartilage c. The matrix next to or near a lacuna.

cell c. A thick or unusually strong cell wall.

crystalline c. See c. of the lens.

external c. A layer of white nerve fibers forming part of the external boundary of the lenticular nucleus.

extreme c. A layer of white matter separating the claustrum from the insula.

Glisson's c. The coarse stroma of the liver that accompanies the vessels and bile ducts.

glomerular c. The sac surrounding the glomerulus of the kidney; the first part of the uriniferous tubule. Also called *Bowman's c.*

glutoid capsules. Gelatin capsules treated with formaldehyde.

hyaloid c. Limiting membrane of the vitreous body.

internal c. A layer of nerve fibers on the outer side of the thalamus and caudate nucleus, which it separates from the lenticular nucleus; it is continuous with the cerebral peduncles and the corona radiata and consists of fibers to and from the cerebral cortex.

joint c. The fibrous sheet enclosing a diarthrodial joint. See capsular *ligament*. See Plate 2.

Malpighian c. The commencement of the uriniferous tubule. *Obs.* See glomerular c.

nasal c. The cartilage around the embryonic nasal cavity.

olfactory c. See nasal c.

optic c. The embryonic structure forming the sclera.

otic c. The cartilage capsule that surrounds the developing auditory vesicle and later fuses with the sphenoidal and occipital cartilages.

periotic c. The structure surrounding the internal ear.

renal c. The capsule of the kidney.

segment c. A capsule used for the optical recording of pressure changes or vibrations, the cylindrical chamber being flattened on one side with the mirror pivoting on the chord of the circular membrane-covered surface. Also called *Frank segment.*

seminal c. Old term for the ampulla of the ductus deferens.

sense c. One of the cartilage capsules developing about the sense organs that form a part of the embryonal chondrocranium.

synovial c. See synovial *membrane*.

Tenon's c. The fascia of the eyeball.

cap"su·lec'to·my [*capsula*; G. *ektomē*, excision]. Surgical excision of a capsule.

cap"su·li'tis [*capsula*; G. *-itis*, inflammation]. Inflammation of a capsule, as that of the lens, liver (perihepatitis) or the labyrinth (otosclerosis).

adhesive c. See frozen *shoulder*.

cap'su·lo-, capsul- [*capsula*]. A combining form meaning *capsule*.

cap'su·lo·plas"ty [*capsula*; G. *plassein*, to form]. Operation for plastic repair of a joint capsule.

cap"su·lor'rha·phy [*capsula*; G. *rhaphē*, suture]. Suture of a capsule; especially suture of a joint capsule to repair a rent or to prevent dislocation.

cap'su·lo·tome" [*capsula*; G. *tomos*, cutting]. 1. See *cystotome*. 2. Instrument used in capsulotomy of the crystalline lens.

cap"su·lot'o·my [*capsula*; G. *tomē*, a cutting]. The operation of incising the capsule of the crystalline lens in cataract operations, or a joint capsule.

renal c. Incision of the renal capsule.

cap·ta'tion [L. *captatio*, from *captare*, to seize]. The first or opening stage of hypnotism.

cap'ture. *In nuclear physics*, any process in which the nucleus of an atom acquires an additional elementary particle.

ca'put (kay'putt, kap'ut) [L.]. The head; also the chief part or beginning of an organ.

c. deformatum. See *osteochondritis deformans juvenilis*.

c. epididymidis. Head of the epididymis, the globus major.

c. galeatum. A child's head which emerges at birth covered with the caul, 1.

c. Medusae. The peculiar plexus of veins surrounding the umbilicus in portal obstruction of the liver. It represents collateral paths for the return of the venous blood from the abdominal viscera.

c. obstipum. Wryneck; torticollis.

c. quadratum. The rectangular head of rickets, flattened upon the top and at the sides, with projecting occiput and prominent frontal bosses.

c. succedaneum. A tumor composed of a serosanguineous infiltration of the connective tissue situated upon the presenting part of the fetus.

Carabelli, Georg [*Hungarian dentist*, 1787–1842]. Described a highly developed fifth cusp on the mesiolingual surface of upper molar teeth, always bilateral and usually hereditary; called *Carabelli cusp, tubercle*.

ca·ram'i·phen hy·dro·chlo'ride. Generic name for the hydrochloride of β-diethylaminoethyl-1-phenylcyclopentane-1-carboxylate, a drug possessing atropinelike action. See *panparnit*.

ca'ra·pace [F.]. A chitinous or bony shield covering the entire back or a portion of the back of certain lower animals.

ca·ra'te. See *pinta*.

car'a·way. See *carum*.

car'ba·chol (kahr'buh-coal, kol, kawl) (*carbacholum*). $NH_2COOCH_2CH_2N(CH_3)_3Cl$. Carbamylcholine chloride, or carbaminoylcholine chloride. A synthetic choline derivative which is a potent parasympathomimetic and is effective orally. Used in peripheral vascular diseases, in threatened gangrene, in acute urinary retention following anesthesia or surgery or due to spinal-cord lesions. Dose, orally 2 mg. ($\frac{1}{30}$ gr.) t.i.d. or t.i.d.; subcutaneously 0.25–0.5 mg. ($\frac{1}{250}$–$\frac{1}{120}$ gr.) See *carcholin*, *doryl*.

car″ba·cryl′a·mine res′ins. The generic name for combination of carbacrylic resin, potassium carbacrylate, and polyamine-methylene resin, the mixture being useful clinically for removal of sodium ion from intestinal fluid by processes of ion exchange with minimum or no disturbance of potassium-ion and hydrogen-ion equilibria. See *carbo-resin*.

car″ba·cryl′ic res′in. The generic name for the hydrogen form of cross-linked polyacrylic polycarboxylic cation exchange resins. Such resin is useful clinically for its ability to remove sodium from intestinal fluid by process of exchange with hydrogen in the resin; absorption of potassium by the resin is compensated for by inclusion of some potassium carbacrylate while the acidity resulting from liberation of hydrogen ion is neutralized with polyamine-methylene resin. See *carbacrylamine resins*.

car′ba·mate, car·bam′ate. A salt of carbamic acid. It contains the univalent radical, $NH_2COO—$. See *ethyl carbamate*.

car·bam′ic ac′id. NH_2COOH. The mono-amide of carbonic acid existing only in the form of salts and esters, the latter known as urethanes.

car·bam′ide, car′ba·mide. Urea.

car·bam′i·dine (kahr-bam′i-deen, -din). Guanidine.

car″ba·mi·no·he·mo·glo′bin. Hemoglobin united with carbon dioxide.

car·bam″i·no·yl·cho′line chlo′ride. Carbachol.

car″ba·moyl·cho′line chlo′ride. Carbachol.

car″bar·sone (carbarsonum). $NH_2CO.NH.C_6H_4AsO(OH)_2$. A white powder containing from 28.1 to 28.8% of pentavalent arsenic, only slightly soluble in water or alcohol; used in the treatment of intestinal amebiasis either orally or, in resistant cases, by means of retention enemas. Adult dose, 0.25 Gm. (4 gr.). As a retention enema, 2 Gm. (30 gr.) dissolved in 200 cc. of warm 2% sodium bicarbonate solution. Also used in treatment of *Trichomonas vaginalis vaginitis*.

car·ba′sus [L., from G. *karpasos*, flax]. Gauze; thin muslin used in surgery. O.T.

c. absorbens. Absorbent gauze.

c. absorbens adhaesivus. Adhesive absorbent gauze.

c. absorbens sterilis. Sterile absorbent gauze.

c. carbolata. Carbolized gauze.

c. iodoformata. Iodoform gauze.

car″ba·zo·ch·ro′mide. See *arsenocarbamide*.

car″ba·zot′ic ac′id. Trinitrophenol.

carb·he″mo·glo′bin, car″bo·he″mo·glo′bin (-hee mo-glo′bin, -hem o-glo′bin). Carbaminohemoglobin.

car′bi·nol. 1. Methyl alcohol. 2. The univalent radical, $—CH_2OH$, characteristic of primary alcohols. 3. A generic term for the primary alcohols; i.e., alcohols having the general formula RCH_2OH, where R represents an organic radical.

dimethyl c. Isopropyl alcohol.

carbitol. 1. Trade-mark for diethylene glycol monoethyl ether, $C_2H_5OCH_2CH_2OCH_2CH_2OH$, used principally as a solvent. It injures the liver and kidneys. 2. Trade-mark for various ethers of diethylene glycol, the specific ether being indicated by a qualifying adjective, such as methyl or butyl.

car′bo [L.]. See *charcoal; carbon*.

car′bo-, carb- [L. *carbo*, coal]. A combining form signifying *carbon*.

car″bo·cy′clic (kahr″bo-sigh′klick, -sick′lick). In chemistry, pertaining to compounds of the closed-chain type in which all the ring atoms are carbon. See *heterocyclic, homocyclic*.

car″bo·he″mo·glo′bin. See *carbhemoglobin*.

car″bo·hy′drase. An enzyme capable of converting the higher carbohydrates into simple sugars. See Table of Enzymes in the Appendix.

car″bo·hy′drate [*carbo*; G. *hydōr*, water]. An organic substance belonging to the class of compounds represented by the sugars, dextrins, starches, and celluloses. It contains carbon, hydrogen, and oxygen. Formerly it was believed that the hydrogen and oxygen were always present in the proportion found in water; but this is not always the case. The carbohydrates form a large class of organic compounds; they may be further classified into monosaccharides, disaccharides, trisaccharides, tetrasaccharides, and polysaccharides.

car″bo·hy″dra·tu′ri·a [*carbo*; *hydōr*; G. *ouron*, urine]. Presence of an abnormally large proportion of carbohydrates in the urine; glycosuria.

car′bo·late. Phenate.

car′bo·late. To impregnate with phenol.

car·bol′ic ac′id. Phenol.

camphorated c. a. A mixture of 3 parts of phenol, 6 parts of camphor, and liquid petrolatum to 10 parts. Used as antiseptic and local anesthetic.

iodized c. a. A solution of 20 parts of iodine in 76 parts of phenol and 4 parts of glycerin. Used as an antiseptic and escharotic.

car″bo·li′gase. An enzyme found in animal and plant tissue which converts pyruvic acid to acetylmethylcarbinol.

car′bo·lism. Phenol poisoning.

car′bo·lized oil. Phenolated oil.

car″bo·lu′ri·a [*carbo*; L. *oleum*, oil; G. *ouron*, urine]. Presence of carbolic acid (phenol) in the urine, producing a dark discoloration.

car″bol·xy′lene (kahr″bol-zy′leen). A mixture of phenol, one part, and xylene, three parts; used for clearing sections for microscopy.

car″bo·my′cin. Generic name for the antibiotic substance, available under the trade-mark magnamycin, produced by selected strains of *Streptomyces halstedii*. The antibiotic possesses inhibitory activity especially against Gram-positive bacteria, and is also active against certain rickettsiae and large viruses. It may be used to treat infections caused by sensitive bacteria in patients who have become resistant to penicillin and other antibiotics; it is readily absorbed from the gastrointestinal tract.

car′bon [*carbo*]. C = 12.011. A nonmetallic element widely distributed in nature. Its three allotropic forms are exemplified by the diamond, graphite, and charcoal. It occurs in all organic compounds; the ability of its atoms to link to each other affords an innumerable variety of combinations.

c. bisulfide. See *c. disulfide*.

c. black. Finely divided carbon obtained by the incomplete combustion of natural gas, animal tissues, oils, wood, or other organic substances.

c. dioxide (*carbonei dioxidum*). CO_2. An odorless, colorless gas which neither burns nor supports combustion. It is useful as a respiratory stimulant when there is an insufficiency of carbon dioxide in the system. *Carbon dioxide snow* or dry ice is solid carbon dioxide used medicinally as an escharotic and commercially as a refrigerant. Also called *carbonic acid gas*. See *carbonic acid*. Also see Table of Normal Values of Blood Constituents, Appendix.

c. disulfide. CS_2. A colorless or slightly yellow, highly inflammable liquid; has been used externally as a counterirritant. A solvent of wide application.

c. monoxide. CO. A colorless, odorless, poisonous gas resulting from the combustion of carbonaceous compounds in an insufficient supply of oxygen. It combines firmly with hemoglobin, preventing subsequent union with oxygen. See *carboxyhemoglobin*.

c. tetrachloride. CCl_4. Tetrachloromethane. A colorless, noninflammable liquid, useful as an anthelmintic, especially against the hookworm. Dose, 2–3 cc. (30–45 min.) followed by a saline cathartic. It is also used as a fire extinguisher, a solvent, and an insecticide. See also carbon tetrachloride *poisoning*.

car'bon·ate. The divalent radical $=CO_3$; any salt containing this radical, as salts of carbonic acid.

acid c. See *bicarbonate*.

car'bon·at"ed. Containing or charged with carbon dioxide.

car·bon'ic ac'id. H_2CO_3. When carbon dioxide dissolves in water, a portion of it forms this feebly ionizing acid. Its salts are carbonates. See *carbon dioxide*.

car·bon'ic an·hy'drase. An enzyme, found in the erythrocytes and in tissues, which catalyzes the reaction $H_2O + CO_2 \rightleftharpoons H_2CO_3$. In the transport of CO_2 in the body the reaction proceeds to the right in the tissues and to the left in the lungs, and in each instance is catalyzed by carbonic anhydrase.

car·bo·ni'um. A positively charged carbon radical; also called *carbonium ion*.

car"bon·i·za'tion [*carbo*]. 1. Decomposition of organic compounds by heat in the absence of air, driving off the volatile matter and leaving the carbon. 2. Charring. —**car'bonize,** *v.*

car"bon·om'e·ter [*carbo*; G. *metron*, measure]. Apparatus for measuring the amount of carbon dioxide in a room or in exhaled breath. —**carbonom'etry,** *n.*

car"bon·u'ri·a [*carbo*; G. *ouron*, urine]. Presence of carbon compounds in the urine, particularly carbon dioxide.

car'bon·yl. The divalent radical $=CO$.

c. chloride. $COCl_2$. Phosgene.

carbo-resin. A trade-mark for a combination of ion exchange resins referred to by the generic designation *carbacrylamine resins*.

carborundum. A registered trade-mark for silicon carbide, SiC, a substance of extreme hardness.

carbowax. The trade-mark for certain polyethylene glycols, of the general formula $HOCH_2(CH_2OCH_2)_nCH_2OH$, having a molecular weight above 1000. They are waxlike solids, are soluble in water and in many organic solvents; they are employed occasionally in preparing ointment bases.

carboxide. Trade-mark for a mixture of ethylene oxide and carbon dioxide used as a fumigant.

car·box"y·he"mo·glo'bin. See *carboxyhemoglobin*.

car·box"y·he"mo·glo'bin (kahr·bock"see·hee·mo·glo'bin, ·hem"o·glo'bin) [*carbo*; G. *oxys*, sharp; *haima*, blood; L. *globus*, globe]. The compound of carbon monoxide and hemoglobin formed when CO is present in the blood. The carbon monoxide displaces the oxygen and checks the respiratory function of erythrocytes.

car·box'yl. The group —COOH characteristic of organic acids. The hydrogen of this can be replaced by metals, forming salts.

car·box'yl·ase. 1. An enzyme, occurring in many plants and higher animals, also in bacteria, fungi, and yeast, capable of catalyzing decarboxylation of various α-keto acids, such as pyruvic and α-ketoglutaric. It is a complex of thiamine pyrophosphate (the coenzyme factor known as *cocarboxylase*), magnesium, and protein. Sometimes called *α-keto acid carboxylase* or *α-keto acid decarboxylase*. 2. Any of several enzymes, largely bacterial in origin, capable of catalyzing decarboxylation of various L-amino acids. Pyridoxal phosphate, known also as *codecarboxylase*, is the coenzyme or prosthetic component of these enzymes. Sometimes called *amino acid carboxylase* or *amino acid decarboxylase*.

carboxymethocel. Trade-mark for the sodium salt of carboxymethylcellulose.

car·box"y·meth"yl·cel'lu·lose. A substance obtained by the action of monochloroacetic acid on alkali cellulose; it is available as the sodium salt, a white, granular, odorless, and tasteless powder. It is dispersible in water to form viscous solutions useful for their thickening, suspending, and stabilizing properties. See *carboxymethocel*.

car·box"y·my"o·glo'bin. A compound of carbon monoxide and myoglobin.

car·box"y·pep'ti·dase. An enzyme, widely distributed but found especially in pancreatic juice, capable of catalyzing hydrolysis of polypeptides at the terminus having a free carboxyl group, producing an amino acid and a smaller peptide which may undergo further hydrolysis under the influence of the enzyme. Syn., *carboxypolypeptidase*.

car·box"y·pol"y·pep'ti·dase. Carboxypeptidase.

car·bro'mal (*carbromalum*). $(C_2H_5)_2CBr.CO.NH.CONH_2$. Bromodiethylacetylurea. A white, crystalline powder soluble in 18 parts of alcohol. A nerve sedative with marked analgesic power. Dose, 0.3–1.0 Gm. (5–15 gr.). See *adalin*.

car'bun·cle [L. *carbunculus*, dim. of *carbo*]. A hard, circumscribed, deep-seated, painful, suppurative inflammation of the subcutaneous tissue. It is larger than a boil, having a flat surface discharging pus from multiple points. There is usually fever with generalized constitutional reaction. Eventually the entire mass sloughs away, healing as a scarred excavation. —**carbun'cular,** *adj.*

car·bun"cu·lo'sis [*carbunculus*; G. *-ōsis*, condition]. Condition characterized by the formation of carbuncles in rapid succession or simultaneously.

car"byl·a·mine. An isocyanide.

carcholin. Trade-mark for carbachol supplied in powder form for preparing solutions and ointments for use in the treatment of simple glaucoma. The chemical reduces ocular tension, is a powerful miotic, and produces loss of accommodation through muscle spasm.

car'ci·no-, carcin- [G. *karkinos*, crab]. 1. In zoology, a combining form denoting a crab. 2. In medicine, a combining form denoting *cancer*.

car'ci·no·gen [*karkinos*; G. *gennaein*, from *gignesthai*, to be produced]. 1. A substance or agent causing development of a carcinoma or epithelioma. 2. Loosely, a substance or agent causing development of a malignancy of any sort; more properly called *cancerogen*. —**carcinogen'ic,** *adj.*; **carcinogenic'ity,** *n.*

car"ci·no·gen'e·sis [*karkinos*; G. *genesis*, production]. Origin or production of cancer. —**carcinogenet'ic,** *adj.*

car'ci·noid [*karkinos*; G. *eidos*, form]. A tumor derived from argentaffin (enterochromaffin) cells; it is usually benign, and commonly occurs in the appendix and ileum. Also called *argentaffin*, *argentaffinoma*, *argentaffin tumor*, *Kultschitzky* or *pheroidal-cell carcinoma*.

c. of bronchus. See *adenoma* of bronchus.

car"ci·no'ma [G. *karkinōma*, from *karkinos*; *-ōma*, tumor]. An epithelial tumor which is malignant. The two principal varieties are **epidermoid carcinoma** and **cylindrical-cell carcinoma**, both of which may show various degrees of differentiation and may be graded accordingly. The chief forms of epidermoid carcinoma are **squamous-cell carcinoma**, **basal-cell carcinoma**, and **intermediate-cell carcinoma**, all derived from surface or lining epithelium. The principal form

of cylindrical-cell carcinoma is the **adenocarcinoma**, derived from glandular epithelium. Completely undifferentiated carcinoma, or **carcinoma simplex**, is usually cylindrical-cell carcinoma but may also be form of epidermoid carcinoma. Metastasis is chiefly through lymphatics, either by embolism of cells or by permeation growth of the tumor through the vessels. Metastasis sometimes occurs through blood vessels spread may also occur by direct extension or by surface implantation. —**carcinomatoid**, **carcinomatous**, *adj*

actinic c. A basal-cell carcinoma of the face and other exposed surfaces of the body seen in persons *who spend prolonged periods of time in direct* sunlight.

acute c. See inflammatory *c.*

adrenal cortical c. See cortical *c.*

alveolar (cell) c. See bronchiolar

aniline c. Carcinoma of the urinary bladder frequent among workers in anilines

apocrine c. Extramammary Paget disease.

appendage-cell c. Carcinoma originating in cutaneous appendages. See also *adenocarcinoma*, epidermoid *c.*

argentaffin c. See *carcinoid*.

arsenical c. A carcinoma of the skin following prolonged ingestion or exposure to arsenical compounds.

basal-cell c. See basal-cell *epithelioma*.

basosquamous c. *A malignant growth of skin*, composed of both squamous and basal cells also called *basal squamous c.*, *mixed c.*

betel-nut c. A squamous-cell carcinoma on the inside of the cheek observed in peoples who chew betel Syn., *chili-chewer*

branchiogenic c., **branchial c.** An epidermoid carcinoma arising from the epithelium of branchial cyst or cysts. Numerous lymph nodules are characteristically present Also called *branchioma*, *gill cleft c.*

bronchiolar c. *A diffuse or locally distributed* acinar tumor situated within alveoli and located mainly at the lung periphery It is probably of multicentric origin, involving both lungs massively yet slow to metastasize Microscopically it shows peribronchiolar distribution, and often atypical, mucus-producing epithelium, and in the more benign forms, the characteristic cell is tall columnar variety with finely granular cytoplasm Also called *c. bronchiolarum*, *alveolar (cell) c.*; *alveolar (cell) cancer*; *diffuse lung* *diffuse*, *multiple*, *miliary*, *terminal bronchiolar* *cancerous pulmonary* *ilnomatosis*; *carcinomatoides alveogenica multicentrica*.

bronchogenic c. A malignant tumor derived from the surface epithelium of bronchi, usually centrally or segmentally located, and more commonly seen in men after middle age. Implicated as causative factors are excessive amounts of inhaled tobacco smoke, arsenic, asbestos, chromates, nickel, radioactive gases and dusts, and less certainly tar petroleum, and oil-shale distillates Histologically *bronchogenic carcinomas* may be classified as ( ) **epidermoid**, in hich the predominant cell type resembles stratified squamous epithelium in varying degrees of differentiation (b) **anaplastic**, includ ng the so-called *reserve cell* (oat-cell, *round-cell*, small-cell and spindle-cell) carcinomas ( ) **adenocarcinoma** in which there are mucus-producing cells and (d) mixed forms; also included may be bronchiolar carcinoma Syn. *bronchial* *bronchiogenic* *cancer of the lung*

c. in situ. A *neoplasm of the surface epithelium* and/or the underlying gland spaces, where component cells are morphologically identical with those in frank carcinoma also called *intraepidermal c.*, *intraepithelial c.*, *preinvasive*

c. mucocellulare ovarii. See Krukenberg *tumor*

c. occulta. Carcinoma which is unsuspected, or not subject to diagnosis.

c. of the corpus luteum. A malignant luteoma.

c. of the nipple. See Paget *disease*, (b)

c. of sebaceous glands. A rare malignant epithelial tumor of the sebaceous and meibomian glands, most frequently found on the eyelids but may occur wherever there are sebaceous glands.

c. of the uterine cervix. A common carcinoma, either squamous-cell one or less frequently adenocarcinoma, *usually appearing in middle-*aged women. On clinical basis it has been internationally classified into *Stage 0* carcinoma in situ, microscopical diagnosis *Stage I* carcinoma confined to cervix *Stage II* carcinoma spread beyond cervix but not to pelvic wall (carcinoma involves vagina but not the lower third); *Stage III* carcinoma has reached pelvic wall (on rectal examination no cancer-free space is found between tumor and pelvic wall carcinoma involves lower third of vagina); *Stage IV* carcinoma has involved urinary *bladder* rectum, or *both*, or has extended beyond limits previously described.

c. simplex. Carcinoma in which differentiation is bsent or poor Usually cylindrical-cell carcinoma but may be derived from epidermis or other lining epithelium. As rule, highly malignant.

c. substantiae corticalis suprarenalis. Cortical

chimney-sweeps' c. An epidermoid *carcinoma* of the scrotum, known also as *chimney-sweeps cancer* because of frequent association of this tumor with exposure to soot.

chorionic c. See *choriocarcinoma*.

clear-cell c. A carcinoma composed of large polyhedral, epithelial cells with clear cytoplasm. *It is most commonly seen in the renal parenchyma*, which tumor is also called *nephroma*, *solid-cell c.*, *Grawitz tumor* *hypernephroma* Other sites are the ovary adrenal, and thyroid

colloid c. A misnomer for carcinomas of glandular or undifferentiated forms in which the cells produce mucus either in acinic spaces or within the cells. See also gelatinous *c.*

columnar-cell c. See *adenocarcinoma*.

comedo c. See *comedo-carcinoma*

cortical c. A carcinoma composed mainly of cells *resembling those of the adrenal cortex also called carcinoma substantiae corticalis suprarenalis*, *adrenal hypernephroma malignum*

diffuse lung c. See bronchiolar

disseminated c. A carcinoma which has metastasized

ductal c. Generally malignant tumor of the mammary gland, arising from the cells lining the ducts also called *milk-duct* *ductal tumor*

ductal papillary c. A papillary carcinoma f the mammary ducts.

embryonal c. of testis. A *tumor of testis* composed of highly malignant, multipotential, anaplastic cells, which may be entirely undifferentiated or show slight differentiation toward somatic or trophoblastic cell forms also called *adenocarcinoma of testis*, *embryoma of testis*, *embryonic c.*, *teratocarcinoma of testis*, *teratoid c. of testis*

embryonic c. See malignant *teratoma*.

endometrial c. One of the endometrium, apparently related to genetic hormonal factors Histologically the tumor is usually an adenocarcinoma and occasionally an adenoacanthoma.

epidermoid c. A type derived from surfaces covered by stratified squamous *epithelium* or by metaplasia from other types of epithelium. Tends to reproduce basal, intermediate, and squamous cells, but may be undifferentiated. The squamous cells may be concentrated in balls with concentric laminae, the so-called epithelial pearls. The most highly differentiated form is often called *cancroid*. Another variety is the *basal-cell carcinoma*. Formerly called *epithelioma*.

erysipeloid c. See inflammatory

follicular c. of thyroid. A malignant tumor grossly resembling a benign follicular adenoma of the thyroid, but which microscopically shows evidence of invasion of blood or lymph vessels or of tumor capsule. Also called *benign metastasizing goiter, metastasizing struma, struma maligna*.

fungating c. Rapidly growing carcinoma in which there is extensive necrosis.

gelatinous c. One which, arising within mammary ducts, is grossly characterized by the presence of colloid material. Syn. *colloid c., goblet-cell c., mucoid c., signet-ring-cell c.*

giant-cell c. of thyroid. A rapidly growing, undifferentiated carcinoma of the thyroid with numerous tumor giant cells. Also called *spindle-cell carcinoma of thyroid, carcinosarcoma of thyroid*.

gill cleft c. See branchiogenic c.

glandular c. Adenocarcinoma.

goblet-cell c. See gelatinous c.

granular-cell c. A carcinoma of kidney parenchyma resembling the clear-cell carcinoma of the kidney except that the *cytoplasm is granular*.

granulosa-cell c. A malignant granulosa-cell tumor.

hidradenoid c. See sweat-gland *tumor*.

Hürthle cell c. See Hürthle cell *tumor*.

infiltrating lobular c. A malignant tumor of the breast that grossly resembles scirrhous carcinoma but is characterized microscopically by thread-like *strands* of tumor cells, which tend to be small and compressed by the surrounding dense fibrous tissue.

inflammatory c. Clinically, a fast-spreading carcinoma associated with inflammation. Also called *acute c., acute carcinosis, carcinomatous mastitis, erysipeloid cancer, erysipeloid c., telangiectatic c.*

intermediate-cell c. One derived from surface epithelium, but composed almost entirely of intermediate cells with intercellular bridges, the prickle cells. Also called *intermediary c.*

intracystic papillary c. of the breast. A malignant tumor of the breast, characterized by a cyst or cysts containing serous or sanguineous fluid and a papillary component.

intraepidermal c. See c. in situ.

intraepithelial c. of the nipple. See Paget *disease* (b).

islet-cell c. A malignant islet-cell tumor.

Kultschitzky's c. See *carcinoid*.

liver-cell c. Hepatoma.

lobular c. One of the mammary lobules, divided into the lobular mammary carcinoma in situ and the noninfiltrating and the infiltrating lobular carcinoma.

lobular mammary c. in situ. A form of noninfiltrating carcinoma of the mammary lobules.

medullary c. A form of cylindrical-cell carcinoma which is soft in consistency because it is made up principally of carcinoma cells with little supporting connective tissue. Usually grows rapidly and metastasizes early and widely.

milk-duct c. See ductal c.

mixed basosquamous c. See basosquamous c.

mixed c. See basosquamous c.

mucinous c. See pseudomucinous *cystadenocarcinoma*.

mucoid c. See gelatinous c.

noninfiltrating lobular c. Carcinoma of the breast. It is confined to the lobules.

oat-cell c. See reserve-cell c.

papillary c. A carcinoma with trabeculae resembling the stalks of a papilloma, and *usually grossly papillary* in structure; commonly seen in transitional-cell carcinoma of the urinary tract.

papillary c. of thyroid. A tumor grossly appearing to be a benign papillary adenoma of the thyroid, but microscopically malignant.

papillary serous c. See serous *cystadenocarcinoma*.

papilliferous c. An adenomatous or cystic *carcinoma in which the epithelium is arranged* in the form of papillae.

pleomorphic c. Any highly anaplastic carcinoma in which the cell type is highly undifferentiated and cannot be identified.

polypoid c. A carcinoma having a polypoid appearance on gross examination, seen commonly on mucous membranes of urinary and gastrointestinal *tracts*.

prickle-cell c. See intermediate-cell c.

pseudomucinous c. (*of ovary*) See pseudomucinous *cystadenocarcinoma*.

radiation c. An epidermoid carcinoma which is associated with overexposure to radiation.

reserve-cell c. A form of anaplastic bronchogenic carcinoma composed of undifferentiated small cells *of round, oval, or spindle form*. Also called *oat-cell c., round-cell c., small-cell c., spindle-cell c.*

round-cell c. See reserve-cell c.

scirrhous c. Cylindrical-cell carcinoma which is hard, because the connective-tissue component is large in amount and collagenous, while the epithelial component is small in amount. Usually grows slowly and metastasizes late; the metastases usually have the *same proportionate* amount of the components. Syn. *scirrhus*.

self-healing squamous-cell carcinomata. An often familial genodermatosis, characterized by onset of benign tumors of the skin after puberty or in adult life. New lesions keep appearing and enlarge, ulcerate centrally, and heal spontaneously with a depressed scar. Histologically the findings resemble well-differentiated keratinizing squamous-cell carcinoma. Syn., *self-healing prickle-cell epithelioma of the skin*.

seminal c. See *seminoma*.

signet-ring-cell c. See gelatinous c.

Shih-chewer's c. See betel-nut c.

small-cell c. of thyroid. Anaplastic carcinoma of thyroid composed of small epithelial cells, which may grow either diffusely or compactly, and show little follicle or colloid formation. Also called *solid c. of thyroid*.

solid c. of thyroid. See small-cell c. of thyroid.

solid-cell c. Clear-cell carcinoma of renal parenchyma.

spheroidal-cell c. of appendix. See *carcinoid*.

spindle-cell c. See reserve-cell c.

spindle-cell c. of thyroid. See giant-cell c. of thyroid.

spinous-cell c. Well-differentiated epidermoid c.

Spiroptera c. Carcinoma in the stomach of rats, associated with infestation by the nematode, *Spiroptera*. It was first demonstrated by J. F. Fibiger.

squamous-cell c. A form of epidermoid carcinoma.

syncytial c. See *chorioepithelioma*.

tar c. Carcinoma, usually epidermoid, produced experimentally by application of tar or its distillates

tion products, or other agents of the same order.

telangiectatic c. See inflammatory *c.*

teratoid c. See malignant *teratoma*.

teratoid c. of testis. See embryonal *c.* of testis.

thymic c. A thymoma made up of cells resembling epithelium which may be so arranged as to resemble squamous-cell carcinoma but with little keratinization.

transitional-cell c. Derived from and made up of transitional epithelial cells. Prevalent in the urinary tract, especially the urinary bladder.

verrucal c. An epidermoid *c.*

villous c. See papillary *c.*

car ci-nom a toid (kahr si-nom uh toyd, sc uck-toyd) [*karkinōma*, G *eidos*, form]. *1* experimental oncology, epithelial proliferation in induced papillomas without invasion of adjacent tissue.

car ci-nom" ta-l-des al"ve-o-gen'i-con muul" ti-cen tri-ca. See bronchiolar *carcinoma*.

car ci-no ma to sis [*karkinōma*; G *-ōsis*, condition]. A condition of widespread dissemination of cancer throughout the body.

car ci no-sar-co ma [G *karkinos*, crab *sarkōma*, fleshy excrescence]. A mixed tumor having the characteristics of carcinoma and sarcoma. Not to be confused with collision tumor in which carcinoma invades carcinoma or vice versa.

c. of thyroid. See giant-cell *c.* of thyroid.

car ci-no'sis. *Carcinomatosis.*

acute c. See inflammatory *carcinoma*.

car da-mom (kahr duh-mum, mom) The dried, ripe fruit or seed of *Elettaria cardamomum*, plant of the ginger family of China and the East Indies. The flavor and therapeutic effect are due to the presence of 3–8% of volatile oil. It is an aromatic carminative stomachic.

c. oil (*oleum cardamomi*) One used solely as flavoring agent.

compound c. elixir (*elixir cardamomi compositum*) A vehicle containing compound cardamom spirit.

compound c. spirit (*spiritus cardamomi compositus*) An alcoholic solution of the oils of cardamom, orange, cinnamon, caraway and clove, with anethole.

compound c. tincture (*tinctura cardamomi composita*) A tincture prepared from cardamom, cinnamon, caraway and cochineal vehicle, occasionally used as carminative.

Cardanus, Hieronymus (*Jerome Cardan*, *Girolamo Cardano*) [*Italian physician and mathematician*, 1501 76]. Remembered as great clinician. Author of remarkable work, with 800 illustrations, on the human face (1560).

Cardarelli, Antonio [*Italian physician*, 1831 1926]. Known for his important contributions t the knowledge of cardiology and remembered for his description of sign significant of aortic aneurysm tracheal tugging.

Carden, Henry Douglas [*English surgeon*, d. 1872]. Remembered for his single-flap operation through the condyles of the femur just above the articular surface (1864); called *Carden amputation*. Advocated single flaps for amputations i other sites.

car'di-a [G. *kardia*, heart]. 1 The esophageal orifice of the stomach. 2. The fundus ventriculi [BNA].

car di ac [*kardia*]. 1. Relating to the heart. 2. Pertaining to the cardia.

car di ac. 1. A person with heart lesion 2 A tonic acting especially on the heart.

black c. A person with Ayerza's syndrome also called *cardiacos negros*. See under Abel *Ayerza*.

car di-ac fail'ure. The syndrome resulting from failure of the heart as pump. The mechanism is varied, the symptoms depending on whether the left or right ventricle preponderantly fails. Dyspnea is most marked in left ventricular failure and engorgement of organs with venous blood, edema, and ascites, most marked in right ventricular failure. **Forward cardiac failure** and **backward** or **congestive cardiac failure** refer to the mechanism which produces symptoms. Forward failure is due to the inability of the heart to furnish sufficient blood flow to the body; backward or congestive failure is due to the inability of the heart to pump out the blood being returned to it by the veins. Cardiac failure as seen clinically may be entirely of the backward type but more commonly represents combination of these two. Also called *heart failure*. See *circulatory failure*.

car di-ac in suf fi'cien-cy. See *cardiac failure*.

car di-a co ne gros. Black cardiac. See under Abel *Ayerza*.

car di ac out'put. Blood volume in liters ejected per minut by the left ventricle.

car"di al'gi a [*kardia*; G *algos*, pain]. Pain in the region of the heart; heartburn.

car"di-am e-ter [*kardia*, G *metron*, measure]. An apparatus for determining the position of the cardiac orifice of the stomach.

car"di neu ri-a [*kardia*, G *a-* not *neuron*, nerve]. Lack of tone in the heart.

car"di-asth ma (kahr dee-as muh -az muh) [*kardia*, G *asthma*, asthma]. Asthmalike dyspnea from left ventricular failure. See cardiac *asthma*.

cardiazol. Trade-mark for pentamethylenetetrazol. See *metrazol*.

car di-cen te'sis. See *cardiocentesis*.

car di cin. An antibiotic substance produced mainly in th mycelium of species of the genus *Nocardia*. It has antimicrobial and antiviral properties.

car di-ec ta-sis [*kardia*; G *ektasis*, stretching out]. Dilatation of the heart.

car"di-ec to my [*kardia*, G *ektomē*, excision]. Excision of the cardiac end of the stomach.

cardigin. Trade-mark for digitoxin.

car di nal flow er A common name for several species of *Lobelia*, chiefly *Lobelia cardinalis*.

car'di-o-, cardi- [*kardia*]. A combining form denoting *of* or *pertaining to*, *the heart*; *cardiac*.

car di o-ac-cel'er-a tor [*kardia*; L. *accelerare*, to accelerate]. An agent which quickens the action of the heart. —**car dioaccel erator** *adj*

car"di-o-ac tive [*kardia*; L. *activus*, from *agere*, to act] Affecting the heart

car"di an gi ol gy (kahr dee-o an"jee-ol'o-jee) [*kardia*; G. *angeion*, vessel; *logos*, word] Branch of medicine dealing with the heart and blood vessels.

car di o-a-or tic (-ay-or tick) [*kardia*, G. *aortē* aorta] Relating to the heart and the aorta.

car"di-o ar te ri al [*kardia*; G. *artēria*, artery]. Pertaining to the heart and the arteries. See *interval*.

car di-o-cele [*kardia*; G *kēlē*, hernia]. Hernia of the heart.

car"di-o-cen te sis, car di-cen te sis [*kardia*; G *kentēsis*, pricking]. Puncture of one of the chambers of the heart to relieve engorgement.

car"di-o-ci net'ic (kahr dee-oel net'ick) See *cardiokinetic*.

car di-o-cir rho sis [*kardia*, G. *kirros*, orange-tawny -*osis*, condition] Cirrhosis of the liver due t chronic congestive heart failure.

car di-o-cla sis, car di-o-cla si-a (kahr dee-o-clay shuh, see uh) [*kardia*; G *klasis*, breaking]. Rupture of the heart.

car di o-di la tor (kahr dee o-dye lay tur -di-lay tur) [*kardia*; L. *dilatare* to expand]. Instrument for dilating the esophageal opening of the stomach.

car″di-o-di ·sis (kahr dee-o dee-o sis, -dye sis) [*kardia*; G *diōsis*, forcing open]. Dilatation of the cardiac end of the stomach by means of an instrument passed through the esophagus.

car″di o-dy n m′ics (kahr dee-o dye nam ks, -di-nam′iks) [*kardia*, G *dynamis*, power] Kinetic mechanisms by means of which the heartbeat insures the circulation of the blood from the heart to the periphery and back to the heart. —**cardiodynamic**, *adj*

ca di-o-dy″na m m et ry Plethysmographic measurement of cardiac flow in the upper extremities.

car″di o-dyn′i a [*kardia*; G *odynē*, pain]. Pain in or about the heart.

car″di-o-e-soph ge al. Pertaining to the cardia of the stomach and the esophagus, usually to their junction.

car″di o-gen′e-si [*kardia*, G *genesis*, production]. Development of the heart.

ca di o-gen′ic [*kardia*; G *gennaein*, from *gignesthai*, to be produced]. 1 Pertaining to the development of the heart. 2. Having an origin in th heart.

car′di-o gram″ [*kardia*, G *gramma*, drawing]. A record of the heart pulsation taken through the chest wall the tracing made by the cardiograph.

car di-o graph [*kardia*, G *graphein*, to write]. An instrument for registering graphically the cardiac cycle. —**cardiograph′ic**, *adj*

car″di-og′ra phy [*kardia*, *graphein*]. 1 Analysis of cardiac action by instrumental means, especially by tracings which record its movements. 2. A description of the heart

car″di-o he pat′i [*kardia*; G *hēpar* liver] Pertaining to the heart and the liver as the cardiohepatic angle.

car′di-oid [*kardia*; G *eidos* form]. Like heart.

car″di-o in hib′i to″ry (*kardia*, L. *inhibere*, to restrain] Diminishing, restraining, or suppressing the heart action, as the cardioinhibitory fibers which pass to the heart through the vagus nerves.

ca di-o-ki-net′ic (kahr dee o-ki-net′ick, kighnet ick) [*kardia*; G. *kinein*, to move] Exciting the heart action.

car″di o-ky mog′ra phy (kigh-mog ruh fee) [*kardia*, G. *kyma*, wave *graphein*, to write]. A method for recording changes in the size of the heart by kymographic means. See *kymography*, *radiokymography*.

ca di o-lip′in [*kardia*; G *lipos*, f t]. A class of phospholipids isolated from beef heart and consisting of phosphorylated polysaccharide esterified with fatty acids. Essential for the reactivity of beef heart antigens in the serologic test for yphilis, and may be the pure antigen

car′di o-lith [*kardia*; G *lithos*, stone] A cardiac concretion.

ca di ol′ gist [*kardia*, G *logos*, word]. A specialist the diagnosis and treatment of disorders of the heart.

car di-ol′ gy [*kardia*; *logos*]. The study of the heart.

car″di-ol′y-si [*kardia*; G *lysis*, loosing]. 1 Resection of the precordial ribs and sternum to free the heart and its adherent pericardium from the anterior chest wall, to which they are bound by adhesions, as in adhesive mediastinopericarditis. 2. Cardiac degeneration or destruction

ca di-o ma la i (kah dee ma lay shee-ah, see-uh) [*kardia*, G *malakia*, softness] Pathologic softening of the heart musculat re *Obs.*

car″di o-me-ga′li gly″co gen′i sis. See *glycogenosis*.

car″di o-meg′ ly Enlargement of the heart.

ca di-o-mel″ no si [*kardia*; G *melas* black -*osis*, condition] Deposition of pigment in the heart muscle.

car″di men su ra tor [*kardia*, L. *mensurator* from *mensurare*, to measure]. An instrument for the detection of cardiac enlargement by direct correlation of the transverse diameter of the heart with body weight and height.

car″di o-men to-pex″y [*kardia*, L. *omentum*, omentum G *pēxis*, fixing]. The operation of bringing vascular omentum through the diaphragm and attaching it to the heart for improving cardiac vascularization. Also called *O'Shaughnessy' operation*

car″di om e-ter [*kardia*; G *metron*, measure]. An experimental pparatus which envelops the ventricles of heart, recording their changes in volume during cardiac cycle.

car″di om e-try [*kardia*, *metron*]. The measurement of the size of the heart, or of the force exerted with each contraction.

car″di o my′ pex″y [*kardia*; G *mys*, muscle *pēxis*, fixing]. The operation of suturing living muscular tissue, generally from the pectoral region, to the abraded surface of the heart, to provide improved vascularization of the heart. Also called *Beck' operation*.

car di-o my-ot′o-my (kahr dee-o-migh ot′ mee) [*kardia*; *mys*; G *tomē*, cutting]. An operation for stenosis of the cardia sphincter; consists of freeing the esophagus from the diaphragm and pulling it into the abdominal cavity where the constricting muscle is divided anteriorly and posteriorly without dividing the mucous coat.

car″di-o nec′tor [*kardia*; L. *nectere*, to fasten together]. All of those structures within the heart which regulate the heart beat, consisting of the sinoatrial node, the trioventricular node, and the trioventricular bundle.

car″di neph ric [*kardia*; G *nephros*, kidney] Pertaining to the heart and the kidneys.

car″di neu′ral [*kardia*, G *neuron*, nerve]. Pertaining to the nervous control of the heart mechanism.

car″di-o-pal′u-dism [*kardia*, L. *palus*, swamp]. Disturbance of the heart due to malaria, characterized by gallop rhythm, dilatation of the right heart, and reduplication of the diastolic sound.

car′di-o path [*kardia*; G. *pathos*, disease]. A sufferer from heart disease; cardiac. —**cardiopath′ic**, *adj*

car″di-o pa thol o gy [*kardia*, *pathos*; G. *logos*, word] Study of the diseases of the heart.

car″di-op thy car″di o-path′i-a [*kardia*; *pathos*] Any disease of the heart. The various types are arteriosclerotic, hypertensive, inflammatory nephropathic, thyrotoxic, toxic, and valvular

car di-o per″i-car′di o-pex″y An operation t unite parietal pericardium to the surface of the heart for the purpose of improving the blood supply to the heart. See also Claude Schaeffer *Beck*.

car″di per″i ca -di′tis [*kardia*, *perikardios*; G -*itis*, inflammation]. Associated carditis and pericarditis: inflammation of the heart and pericardium.

car″di-o pho′bi [*kardia*; G *phobos*, fear]. Morbid fear of heart disease.

car′di o-phone [*kardia*; G *phōnē*, voice] An instrument which makes the heart sounds udible; useful when presenting cases t large group.

car′di-o-plas″ty [*kardia*; G *plassein*, to form] Plastic surgery of the cardiac sphincter of the stomach, as for cardiospasm

car″di o-ple gi [*kardia*, G *plēgē*, stroke]. Paralysis of the heart. *Obs.*

car″di o-pneu mat′i (kahr dee-o-new mat ick) [*kardia*, G *pneuma*, breath]. Pertaining t the

heart and respiration, as the cardiopneumatic movements of the air in the lungs, caused by the pulsations of the heart and great vessels.

car″di-o-pneu′mo-graph [*kardia*; *pneuma*; G. *graphein*, to write]. An instrument designed for graphically recording cardiopneumatic movements. —**cardiopneumog′raphy** *n.*

car″di-op-to′sis (kahr″dee-op-to′sis, kahr″dee-o-to′sis) **car″di-op-to′si-a** (kahr″dee-op-to′shuh, -see-uh, kahr″dee-o-) [*kardia*; G. *ptōsis*, a falling]. Downward displacement of the heart from excessive mobility; prolapse of the heart.

car″di-o-pul′mo-nar″y [*kardia*; L. *pulmonarius*, from *pulmo*, lung]. Relating to the heart and lungs. Also *cardiopulmonic*.

car″di-o-punc′ture [*kardia*; L. *punctura*, puncture]. 1. Cardiocentesis. 2. Any surgical or experimental puncture of the heart.

car″di-o-py-lor′ic (kahr″dee-o-pye-lor′ick, -pi-lor′ick) [*kardia*; G. *pylōros*, gatekeeper]. Referring to both the cardiac and the pyloric portions of the stomach.

car″di-o-re′nal [*kardia*; L. *renes*, kidneys]. Relating to the heart and kidneys.

car″di-o-re-spir′a-to″ry (kahr″dee-o-ri-spy′ruh-tor″ee, -res′pi-ruh-tor″ee) [*kardia*; L. *respirare*, to breathe out]. Of or pertaining to the heart and respiration.

car″di-o-roent′gen-o-gram (-rent′ghen-o-gram″) [*kardia*; *Röntgen*; G. *gramma*, letter]. Roentgenogram of the heart.

car″di-o-roent″gen-og′ra-phy [*kardia*; *Röntgen*; G. *graphein*, to write]. Roentgenographic examination of the heart.

car″di-or′rha-phy [*kardia*; G. *rhaphē*, suture]. Suturing of the heart.

car″di-or-rhex′is [*kardia*; G. *rhēxis*, breaking]. Rupture of the heart. *Rare.*

car″di-os-chi′sis (kahr″dee-os′ki-sis) [*kardia*; G. *schisis*, cleavage]. Tearing apart of adhesions between the heart and chest wall in adhesive pericarditis.

car′di-o-scope″ [*kardia*; G. *skopein*, to examine]. A big-screen belt electrocardiograph; the electrocardiogram can be visualized immediately for a few seconds' time on a rotating fluorescent belt.

car′di-o-spasm [*kardia*; G. *spasmos*, spasm]. Contraction of the cardiac sphincter usually associated with spasm of the cardiac end of the stomach and dilatation and hypertrophy of the esophagus above the sphincter.

car″di-o-spec′tro-gram [*kardia*; *spectrum*; *graphein*]. The graphic record made by a cardiospectrograph of the heart sounds.

car″di-o-spec′tro-graph [*kardia*; L. *spectrum*, appearance; G. *graphein*, to write]. An instrument which picks up heart sounds by a microphone and then converts them into visual patterns and tracings.

car″di-o-ste-no′sis [*kardia*; G. *stenōsis*, being straitened]. Constriction of the heart, especially of the conus arteriosus; the development of such constriction.

car″di-o-sym-phy′sis. See *mediastinopericarditis*.

car″di-o-ta-chom′e-ter (kahr″dee-o-ta-kom′i-tur) [*kardia*; G. *tachos*, speed; *metron*, measure]. Instrument that counts the total number of heartbeats over long periods of time.

car″di-o-ther′a-py [*kardia*; G. *therapeia*, treatment]. Treatment of heart disease.

car″di-ot′o-my [*kardia*; G. *tomē*, cutting]. Dissection or incision of the heart or the cardiac end of the stomach.

car″di-o-ton′ic [*kardia*; G. *tonos*, stretching]. Increasing the tonus of the cardiac muscle; generally applied to the effect of digitalis and related drugs. —**cardiotonic**, *n.*

car″di-o-tox′ic [*kardia*; G. *toxikon*, poison]. Poisonous to the heart.

car″di-o-vas′cu-lar [*kardia*; L. *vasculum*, small vessel]. Pertaining to the heart and the blood vessels.

car″di-o-vas′cu-lar-re′nal. Pertaining to the heart, blood vessels, and kidneys.

car″di-o-vec-tog′ra-phy [*kardia*; L. *vector*, from *vehere*, to carry; G. *graphein*, to write]. Technic of registering vectorcardiograms.

car″di-per″i-car-di′tis. See *cardiopericarditis*.

car-di′tis [*kardia*; G. *-itis*, inflammation]. Inflammation of the heart. —**cardit′ic**, *adj.*

internal c. Endocarditis.

car″di-val″vu-li′tis [*kardia*; NL. *valvula*, little valve; *-itis*]. Endocarditis confined to the valves.

car″e-bar′i-a [G. *karē*, head; *barys*, heavy]. Unpleasant head sensations, such as pressure or heaviness. *Rare.*

car′ene. A dicyclic liquid hydrocarbon, $C_{10}H_{16}$, classed as a terpene, found in turpentine obtained from several *Pinus* species. Several isomers, differing in the position of a double bond, exist.

Carey's method. See under *stain*.

Cargile, Charles H. [American surgeon, 1853–1930]. Remembered for his introduction into surgery of animal membrane from the peritoneum to prevent adhesions and encourage the formation of artificial peritoneum, called *Cargile membrane*. The procedure is now obsolete.

Car′i-ca [L., dry fig]. A genus of the Caricaceae.

C. papaya. The papaw tree of tropical America; contains in its leaves and fruit, besides the proteolytic enzyme papain (papayotin) and other enzymes, the alkaloid carpaine; the leaves also contain the glycoside carposide. The dried latex and leaves are used as a digestant.

ca′ri-es (kair′ee-eez, kair′eez) [L., decay]. A molecular death of bone or teeth, corresponding to ulceration in the soft tissues. —**car′ious**, *adj.*

c. of the spine. Tuberculous osteitis of the bodies of the vertebrae and intervertebral fibrocartilages, producing curvature of the spine. Also called *Pott's disease*, *tuberculosis of vertebra*.

c. of the teeth. See dental c.

c. sicca. A form of tuberculous caries characterized by absence of suppuration, obliteration of the cavity of a joint, and sclerosis and concentric atrophy of the articular extremities of the bones.

dental c. A localized, progressive, and molecular disintegration of the teeth, beginning with the solution of the enamel by lactic and pyruvic acids. The acids are the product of enzymic action of oral bacteria upon carbohydrates. [$C_6H_{12}O_6$ + bacterial enzymes = $2C_3H_6O_3$ (lactic acid).] The initial process is followed by bacterial invasion of the dentinal tubuli. The acids formed break down and remove the inorganic constituents of the enamel and dentin, and the unsupported organic matrix is gradually removed by proteolysis, leaving the so-called cavity of decay. Syn., *odontonecrosis*.

ca-ri′na [L., keel]. Any keel-like structure.

c. nasi. A narrow cleftlike space between the agger nasi and the inner surface of the dorsum nasi.

c. tracheae. A ridge across the bottom of the trachea between the origins of the two bronchi.

urethral c. A continuation of the anterior column of the vagina in the vestibule as far as the external orifice of the urethra. Also called *c. vaginae*.

car-in′a-mide. 4-Carboxyphenylmethanesulfonanilide, a white crystalline powder sparingly soluble in water; it inhibits tubular excretion of

penicillin, presumably by action on an enzyme system involved in transport of the antibiotic, and has been used in conjunction with penicillin to maintain therapeutic blood levels of the latter formerly spelled *caronamide*. See *staticin*.

car″i-o-gen′ic. Conducive to the development of dental caries.

Carle, Antonio [*Italian surgeon*, 1854–1927]. Noted for his studies of the surgery of the brain and of the gastrointestinal and biliary tracts. With Rattone, demonstrated the transmissibility of tetanus (1884).

Carleton, Bukk G. [*American physician*, 1856–1914]. Described areas of sclerotic tissue in long bones, which are due to gonococcal bone lesions.

Carl′sbad salt (karls′bad, karls′baht, karls′bahd). A mineral salt mixture from the Carlsbad springs, whose waters have been used for their supposed curative properties, or a similar synthetic salt.

Carlson, Anton Julius [*American physiologist*, 1875–]. Known for his contributions to the knowledge of the physiology of the stomach. Recorded stomach movements by means of a balloon inserted through a gastric fistula in experimental animals (1912). Studied control of hunger (1916).

carmacin. Trade name for a gastric antacid and carminative containing calcium carbonate, magnesium carbonate, sucrose, and peppermint oil.

car·mi·na·tiv (kahr-min′uh-ti, kahr′min·kahr·mi·nay·tiv) [L. *carminare*, to card; hence, to cleanse]. Having the power to relieve flatulence and colic. Carminatives are generally aromatics.

car′mine (kahr′min, -myne) (C.C.) [ML. *carminium*, carmine]. A bright red coloring matter prepared from cochineal, the active staining principle being carminic acid; of use in staining in toto, for staining tissues in bulk which are later sectioned; used as a specific stain for glycogen and for mucus and as a counterstain for blue vital dyes.

car″na·u′ba (kahr″nuh·oo′buh) [Pg., of Tupian origin]. The root of *Copernicia cerifera*, a wax-producing palm tree of tropical America; used in Brazil as an alterative.

c. wax. The wax obtained from the leaf buds of *Copernicia cerifera*.

car″ni·fi·ca′tion [L. *caro*, flesh; *facere*, to make]. Alteration of tissue so that it resembles skeletal muscle in color and consistency. It sometimes affects the lungs.

car·ni·tine. $(CH_3)_3N^+CH_2CHOHCH_2COO^-$ the betaine of β-hydroxy-γ-aminobutyric acid, a water-soluble constituent of extracts of muscle. It appears to be identical with vitamin B_T.

Carnochan, John Murray [*American surgeon*, 181 –87]. Remembered as the first to excise the maxillary nerve for the relief of facial neuralgia; he removed the second division of the fifth cranial nerve together with the sphenopalatine ganglion as far back as the foramen rotundum. His operation for elephantiasis consisted in ligating main artery of limb involved.

car′no·sine (kahr′no·seen, ·sin) $C_9H_{14}N_4O_3$. Alanyl histidine, a dipeptide said to occur in muscle tissue; crystals of it have been isolated from meat extracts.

Carnoy's fixing fluid. See under *fixing fluid*.

car′ob [Ar. *kharrubah*]. A tree of the Near East, *Ceratonia siliqua*, whose pods yield carob gum, used in cosmetic preparations and as a pill excipient.

ca·ron′a·mide. Former spelling of *caronamide*.

car″o·te·nae′mi·a. See *carotenemia*.

car′o·tene [L. *carota*, carrot]. Any of three isomeric hydrocarbons, of the formula $C_{40}H_{56}$, distinguished by the prefixes α-, β-, and γ-. All are synthesized by plants, the α- and β-isomers being the more abundant. When pure they are red or purple crystalline solids, the color being due to the presence of a series of conjugated ethylene linkages. The carotenes are precursors of vitamin A, β-carotene yielding two molecules of vitamin A, the others one molecule. Also spelled *carotin*.

car″o·te·ne′mi·a [*carota*; G. *haima*, blood]. Presence of carotene in the circulating blood. When excessive (*hypercarotenemia*) it may cause a yellowish pigmentation of the skin called pseudojaundice.

ca·rot′e·noid, ca·rot′i·noid (ka-rot′i-noyd, kar′o-ti-noyd) [*carota*; G. *eidos*, form]. One of a group of plant pigments occurring in carrots, tomatoes, and other vegetables, and in fruits and flowers. Chemically carotenoids are unsaturated hydrocarbons of high molecular weight containing a series of conjugated ethylenic linkages or derivatives of such hydrocarbons. —**carot′enoid, carot′inoid,** *adj.*

car″o·te·no′sis [*carota*; G. *-ōsis*, condition]. Pigmentation of the skin due to carotene and carotenoids in the tissues. Syn., *aurantiasis cutis*.

ca·rot′ic [G. *karōtikos*, stupefying]. Pertaining to stupor.

ca·rot″i·co·cli′noid [*karōtikos*; G. *klinē*, bed; *eidos*, form]. Relating to an internal carotid artery and clinoid process of the sphenoid bone.

ca·rot″i·co·tym·pan′ic [*karōtikos*; G. *tympanon*, drum]. Relating to the carotid canal and the tympanum. See Tables of Nerves and of Arteries in the Appendix.

ca·rot′id [G. *karōtides*, carotid arteries]. 1. The carotid artery, the principal large artery on each side of the neck. 2. A carotid nerve. —**carotid,** *adj.*

c. nerves. Sympathetic nerves, from the superior cervical ganglion, which innervate the smooth muscles and glands of the head. The **external carotid nerve** forms plexuses on the external carotid artery and its branches; the **internal carotid nerve** forms plexuses on the internal carotid artery and its branches.

common c. An artery which originates on the right from the innominate and on the left from the arch of the aorta, and has external and internal carotid, rarely superior thyroid, ascending pharyngeal, and even vertebral branches. It distributes blood to the region of the neck and head.

external c. An artery which originates at the common carotid and has superior thyroid, ascending pharyngeal, lingual, external maxillary (facial), sternocleidomastoid (occasionally), occipital, posterior auricular, superficial temporal, and internal maxillary branches. It distributes blood to the anterior portion of the neck, face, scalp, side of the head, ear, and dura mater.

internal c. An artery which originates at the common carotid and has three sets of branches: the *petrous portion* has a corticotympanic branch and the artery of the pterygoid canal (Vidian) (inconstant); the *cavernous portion* has cavernous, hypophyseal, semilunar, anterior meningeal, and ophthalmic branches; and the *cerebral portion* has anterior cerebral, middle cerebral, posterior communicating, and choroid branches. The artery distributes blood to the cerebrum, the eye and its appendages, the forehead, nose, internal ear, trigeminal nerve, dura mater, and hypophysis.

car″ot·i·dyn′i·a. See *carotodynia*.

ca·ro′tin. See *carotene*.

car″o·ti·ne′mi·a. Carotenemia.

ca·rot′i·noid. See *carotenoid*.

ca·rot′is [*karōtides*]. The carotid artery.

car″ot·o·dyn′i·a, car″ot·i·dyn′i·a (kar·rot″o·din′ee·uh, kar″rot·i·din′ee·uh). Pain in the malar

region, around the eye and back of neck, due to pressure on the common carotid artery

car'pa ine (kahr p y e l k h p h) $C_{14}H_{25}NO_2$. An alkaloid from the leaves of *Carica papaya*. It is said to slow the heart and depress the nervous system.

car'pal [G *karpos*, wrist]. Pertaining to the wrist or carpus.

car pec'to-my [*karpos*; G *ektomē*, excision]. Excision of carpal bone or bones.

car phol'o-gy car"pho-lo gi [G *karphos*, chips; *legein*, to collect]. Aimless picking and plucking t bedclothes, seen in delirious states, fevers, and exhaustion. Syn., *floccillation*.

Carpi, Berengario da. See *Berengario da Carpi*.

car'po-, carp- [G *karpos*, wrist]. A combining form meaning *carpus* or *wrist*.

car"po-met" car'pal [*karpos*; G *metakarpion*, from *meta*, beyond, *karpos*]. Pertaining to the carpal and the metacarpal bones; applied to the joints between them and to the ligaments joining them. See Table of Joints and Ligaments in the Appendix.

car"po-pe dal (kahr po-pee dal, -ped'ul) [*karpos*; L. *pes*, foot]. Affecting the wrists and feet, or the fingers and toes.

car"po-pha-lan'ge-al [*karpos*; G. *phalagx*, bone between the two joints of the fingers] Pertaining to the wrist and the phalanges.

car'po-side. A crystalline glycoside from *Carica papaya*.

Carpue, Joseph Constantine [*English surgeon*, 1764–1846]. Pioneer in electrotherapy (1803) Known for his operations for stone in the urinary bladder Popularized the so-called high operation which he described (1819) Revived the Hindu method of rhinoplasty in which he restored nose by taking heart-shaped flap from the forehead (1816)

carpule. Trade-mark for glass cartridge containing sterile solution of drug which is loaded into specially contrived syringe and is ready for hypodermic injection.

car'pus [G *karpos*, wrist]. The wrist, consisting of eight wrist bones. See Table of Bones in the Appendix. —*carpal*, *adj*

Carr Francis Howard (1874–) English chemist, known for his published work on th alkaloids, and for his introduction with E. A. Price of the antimony trichloride test for vitamin A, formerly used as standard and called *Carr Price test*.

car'ra-geen. Irish moss. See *Chondrus*

Carrel, Alexis [*French surgeon*, 1873–1944]. Introduced the extravital cultivation of tissues. Demonstrated that arteries can be transplanted after being stored for some time. Successfully transplanted kidney from one animal to another Developed method of suturing blood vessels end to end correct apposition is maintained by three traction sutures, the site of suture assuming triangular shape, called *Carrel method* or *suture*. With Dakin, developed method of treating wounds by irrigation with solution of chlorinated soda and sodium bicarbonate called *Carrel-Dakin treatment*. H also devised various culture flasks (*Carrel flasks*) with slanting or horizontal necks for maintaining stable tissue cultures over long periods of time, and with Lindbergh, devised perfusion apparatus with which organs can be kept alive outside the body called *Carrel-Lindbergh pump*. Nobel laureate (1912)

car ri-er [ONF *carier*]. 1. A normal person or one convalescing from an infectious disease who shows no signs or symptoms of the disease but who harbors and eliminates the microorganism, and so spreads the disease. 2. A quantity of naturally occurring element added to minute amount of pure isotope to facilitate the chemical handling of the isotope.

bacteria c. A vector

chronic c. One who eliminates the infectious element for an indefinite period.

temporary c. A convalescent who eliminates the infectious element for only a short time after recovery Also called *transitory c.*

car'ri er-free" *In radiochemistry*, of, pertaining to, or describing radioactive isotope to which non of the stable form of the isotope has been added as carrier

Carrión, Da iel Alcides (1859–1885) Peruvian medical student who inoculated himself with material from verruca peruviana and died 39 days later of Oroya fever an experiment which offered suggestive evidence of the etiologic unity of the two conditions (1885) later shown to be caused by *Bartonella bacilliformis* *Carrión disease* or *bartonellosis* includes both forms.

Carroll, James [*American Army medical officer* 1854–1907]. Served with Reed, Agramonte y Simonl, and Lazear on the United States Army Yellow Fever Commission which investigated the etiology of the disease and proved that it is transmitted to man by mosquitoes (1900–01)

car sick'ness. A form of motion sickness occurring as a result of movement of train or automobile. See *airsickness*, *motion sickness*.

Carswell, Robert [*English physician*, 1793–1857]. Noted as leading pathologist of his time and author of *Pathological Anatomy*, an atlas with 2000 hand-colored illustrations by himself, said to be unequaled in its excellence (1838) Gave one of the first comprehensive descriptions of disseminated sclerosis. Described pulmonary tubercles, called *Carswell' grapes*

Carter Henry Rose [*American public health officer* 1852–1925]. Remembered for his investigations of yellow fever epidemics (1898) contributed valuable facts concerning its incubation period, influencing the work of Walter Reed at later date.

Carter Henry Vandyke [*English physician in India*, 1831–97]. Gave the first adequate descriptions of mycetoma of the foot, called *madura foot* (1861 74) Described spirillum fever (relapsing fever) which he reproduced in monkeys (1882) Described minute organism, *Spirillum minus*, the cause of rat-bite fever (1887)

Carter William Wesley [*American rhinologist, otolaryngologist, and plastic surgeon*, 1869–1950]. Known for his operation of rhinoplasty in which he used portion of rib and rib cartilage to form new bridge for the nose, and for devising th submucous operation for the correction of deflections of the nasal septum.

Cartesius. See *Descartes*.

Car'tha mus [Ar *qirtim*]. A genus of Eurasian herbs of the Carduaceae.

C. tinctorius. Safflower American or bastard saffron. The dried flowers are used in making an infusion used popularly as diaphoretic.

car'ti lage (kahr'ti lidj) [L. *cartilago*, cartilage]. Gristle white, semiopaque, nonvascular connective tissue composed of matrix containing nucleated cells which lie in cavities or lacunae of the matrix. When boiled, cartilage yields substance called chondrin. —*cartilag'inous*, *adj*

lar cartilages. The major lar c. is the lower lateral cartilage of the nose, and the minor alar c., one of the lesser alar cartilages of the nose.

annular c. (a) Any ring-shaped cartilage. (b) The cricoid cartilage.

aortic c. The second costal cartilage on the right side.

arthrodial c. See articular c.

articular c. That covering the articular surfaces of bones. See Plate 2.

arytenoid c. One of two cartilages of the larynx regulating, by means of the attached muscles, the tension of the vocal folds.

auricular c. The cartilage of the pinna of the ear.

basilar c. The cartilage in the foramen lacerum.

bronchial c. Plates of cartilage in some instances very minute, found in the bronchial tubes.

calcified c. That in which calcareous deposit is contained in the matrix.

c. of Santorini. See corniculate c.

c. of Wrisberg. See cuneiform c.

circumferential c. The fibrocartilaginous rim about certain articulations.

corniculate cartilages. Cartilaginous nodules on the tips of the arytenoid cartilages. Also called *Santorini cartilages.*

costal c. That occupying the interval between the true ribs and the sternum or adjacent cartilages.

cricoid c. The ring-shaped cartilage of the larynx.

cuneiform cartilages. Two small, rod-shaped cartilages of the larynx, located in the aryepiglottic folds anterior to the corniculate cartilages. Formerly called *Wrisberg cartilages.*

diarthrodial c. See articular c.

ectethmoid c. See paranasal c.

elastic c. A type in which a feltwork of elastic fibers pervades the matrix.

embryonal c. Developing cartilage, usually cellular young cartilage.

ensiform c. Old term for xiphoid process.

epactal cartilages. Small cartilaginous nodules on the upper edge of the alar cartilages of the nose.

epiglottal c. The cartilage of the epiglottis.

epiphyseal c. The cartilage of an epiphysis; also called *growth cartilage.*

episternal c. One of a pair of small embryonic cartilages articulating with the clavicle and forming part of the manubrium; also called (especially in some reptiles) *episternal bar.*

Eustachian c. That of the auditory tube. See tubal c.

fetal c. See temporary c.

floating c. A detached segment of cartilage in a joint cavity.

Huschke's c. See vomeronasal c.

hyaline c. That in which the matrix is clear and homogeneous.

innominate c. The cricoid cartilage.

interarticular cartilages. Flat fibrocartilages situated between the articulating surfaces of some of the joints. Also called *interarticular fibrocartilages, articular disks.*

interarytenoid c. A inconstant cartilage found between the arytenoid cartilages.

interhemal cartilages. Nodules of cartilage which aid in the formation of the hemal arch of vertebra.

intermediary c. (a) Cartilage bone in process of transformation into true bone. (b) That interposed between the epiphysis and diaphysis of bone; epiphyseal c.

interneural cartilages. Nodules of cartilage which aid in the formation of the neural arch of vertebra.

intersphenoidal c. The cartilage between the basisphenoid and orbitosphenoid ossification centers in the fetus, which may persist until the thirteenth year.

intervertebral cartilages. See intervertebral disks.

investing c. See articular c.

Jacobson's c. See vomeronasal c.

laryngeal cartilages. The cartilages supporting the larynx.

lateral nasal cartilages. The upper lateral cartilage of the nose.

Luschka's c. An inconstant, small, cartilaginous nodule, enclosed in the front of the true vocal folds.

Luschka's subpharyngeal c. A small, inconstant body of hyaline cartilage, situated in the capsule or septum of the palatine tonsil.

mandibular c. See Meckel's c.

meatal c. The U-shaped cartilaginous part of the external canal which is deficient superiorly and is continuous with the auricular cartilage.

Meckel's c. The cartilage bar of the mandibular arch.

palpebral c. Incorrect term for the connective tissue forming the framework of the eyelids, the tarsal plate. It is not composed of cartilage.

parachordal c. See *parachordal.*

paranasal c. The embryonic cartilage which gives rise to the inferior nasal conchae and all the ethmoid bone except the perpendicular plate.

paraseptal cartilages. Embryonic cartilages on either side of the inferior border of the septal cartilage of the nose. The vomeronasal cartilages are the persistent remains. Also called subvomerine c.

precricoid c. The interarytenoid cartilage.

quadrate cartilages. Several small cartilages passing out from the alar cartilages in the external part of the nostril.

Reichert's c. The cartilage of the hyoid arch.

Santorini's c. The corniculate cartilage.

semilunar cartilages. Two interarticular cartilages of the knee.

septal c. of the nose. Cartilage of the nasal septum.

sesamoid cartilages. A pair of small cartilages lying along the lateral margins of the arytenoid cartilages; they are constant in some animals and are occasionally found in man.

sphenobasilar c. See spheno-occipital c.

spheno-occipital c. The cartilage between the sphenoid and basilar part of the occipital, permitting growth of basis cranii until the twentieth year. Syn., *sphenobasilar c.*

subvomerine c. See vomeronasal c.

synarthrodial c. That of any fixed or slightly movable articulation.

tarsal c. See palpebral c.

temporary c. That which is ultimately replaced by bone.

thyroid c. The largest of the laryngeal cartilages, consisting of two laminae united at an angle in front called the laryngeal prominence. See Plates 13, 45.

trabecular cartilages. The prechordal primordia of the sphenoid, usually single in man.

triradiate c. The Y-shaped cartilage in the acetabulum between the ilium, pubis, and ischium. It disappears when the three bones fuse to form the adult hipbone.

triticeous c. A small, oblong cartilaginous nodule often found in the lateral thyrohyoid membrane.

tubal c. A rolled triangular cartilage running from the *osseous part of the auditory* tube to the pharynx; also called *Eustachian c.*

vomeronasal c. A strip of hyaline cartilage extending from the anterior nasal spine upward and backward on either side of the septal cartilage of the nose and attached to the anterior margin of the vomer; also called *Jacobson's cartilage.*

Wrisberg's cartilages. The cuneiform cartilages.

xiphoid c. The lower cartilaginous tip of the sternum.

yellow c. Elastic cartilage.

car"ti-la-gin"i-fi-ca'tion [cartilage; L. *facere*, to make]. A change into cartilage; chondrification.

car'um [G. *karon*, caraway]. Caraway; the dried ripe fruit of *Carum carvi*. Its odor and taste are due to a volatile oil containing carvone and d-limonene; used chiefly as a flavor.

car'un-cle, ca-run'cle [L. *caruncula*, little piece of flesh]. A small, fleshy, red mass or nodule. —**carun'cular, carun'culate, carun'culated,** adj.

hymenal c. Any of the small irregular nodules which are the remains of the hymen.

lacrimal c. A small, reddish mass at the inner canthus. See Plate 19.

sublingual c. Any of the small papillae found along the sublingual fold where the ducts of the sublingual and the submaxillary glands empty.

urethral c. A small, benign, spherical or elliptical, strawberry-colored mass, sessile or pedunculated, situated on the posterior wall of the external urinary meatus of women, observed most frequently at the menopause, and a cause of pain and bleeding. Microscopically it is composed mainly of granulation-like tissue.

ca-run'cu-la [L.]. Caruncle.

Carus, Carl Gustav [German obstetrician, 1789–1869]. Remembered for his description of the longitudinal axis of the pelvis, or birth canal, which forms a curved line having as its center the symphysis pubis; called *curve of Carus*.

carvacrol. $C_{10}H_{14}O$. 2-Hydroxy-p-cymene, isomeric with thymol. It occurs in oils of marjoram and savory and is actively germicidal; has been proposed as an anthelmintic.

car'vone. $C_{10}H_{14}O$. A terpene ketone found in the volatile oils of caraway, dill, fennel, and spearmint.

car"y-on'chy-mo. See *karyenchyme*.

car'y-in [G. *karya*, nut-bearing tree]. A crystallizable principle from hickory bark.

car'y-o-, car'y- [G. *karyon*, nut]. A combining form signifying nut or kernel. Also see *kary-, karyo-*.

car"y-o-chrome'. See *karyochrome*.

car"y-o-clas'tic. Cell-nucleus splitting.

car"y-o-phyl'lin (kar"ee-o-fill'in, kar-ee-off'i-lin). A principle from cloves, identical with oleanolic acid.

car"y-o-phyl'lus (kar-ee-o-fill'us, -off'i-lus). See clove.

Casal, Gaspar [Spanish physician, ca. 1691–1759]. In his book on the natural and medical history of Spain, written in 1735 but published posthumously (1762), he gave the first clear description of pellagra, which he called *mal de la rosa*. The skin lesions which occur in pellagra on the back of the neck are called *Casal's collar* or *necklace*. At first they are hyperemic and edematous; later they scale and leave a rough, red area.

Casares Gil's stain. See under *stain*.

cas'ca bark. Sassy bark; the bark of *Erythrophloeum guineense*, an African tree. See *erythrophleine*.

cas-car'a (kas-kair'uh, kas-kar'uh) [Sp., bark]. Cascara sagrada.

aromatic c. sagrada fluidextract. One prepared from cascara sagrada debitterized with magnesium oxide, flavored and sweetened with saccharin; used as a cathartic. Dose, 2 cc. (30 min.)

c. amarga. Honduras bark. The bark of *Sweetia panamensis*, native to Mexico, which has been used as a bitter tonic.

c. sagrada. The bark of *Rhamnus Purshiana*, the chief constituents of which are anthraquinone derivatives. It is useful in chronic constipation. Also called *chittem bark*, *sacred bark*.

c. sagrada extract. A powdered extract representing 3 times its weight of cascara sagrada. Dose, 0.3 Gm. (5 gr.)

c. sagrada fluidextract. One prepared by extracting cascara sagrada with water; each cc. represents 1 Gm. of drug; used as a cathartic. Dose, 1 cc. (15 min.)

cas"ca-ril'la [Sp., dim. of *cáscara*]. The bark of *Croton eluteria*, native to the Bahama Islands; an aromatic bitter. Syn., *eleuthera bark*.

cas"ca-ril'lin. $C_{12}H_{18}O_4$. The bitter principle of cascarilla; white crystals, slightly soluble in water.

cas'ca-rin [*cascara*]. A glycosidal cathartic fraction isolated from the bark of *Rhamnus Purshiana* (cascara sagrada); it occurs in granular masses or prisms.

case [L. *casus*, from *cadere*, to fall, happen]. 1. A single instance or example of a disease. 2. A covering; a boxlike structure.

brain c. Portion of the skull containing the brain.

c. history. Anamnesis.

c. taking. The collection of memoranda and notes of an individual case for service in diagnosis or prognosis, or for use in a medicolegal inquiry.

missed c. *A mild or atypical case of a disease, which misses clinical recognition.*

trial c. In *ophthalmology*, a case containing various lenses for refracting the eye.

ca'se-ase [L. *caseus*, cheese]. An enzyme from bacterial cultures which digests albumin and casein.

ca'se-ate [*caseus*]. 1. A lactate. 2. Caseinate, casein compound.

ca'se-ate. To undergo caseous degeneration.

ca"se-a'tion [*caseus*]. 1. The precipitation of casein during the coagulation of milk. 2. A form of necrosis which changes tissue into a soft, cheeselike substance, characteristic of tuberculous infection.

casec. Trade-mark of a brand of calcium caseinate.

ca'se-ic ac'id (kay'see-ick, ka-see'ick). Lactic acid.

ca'se-i-form [*caseus*; L. *forma*, form]. Like cheese or casein.

ca'se-in [*caseus*]. A protein obtained from milk by the action of rennin or acids. Soluble in acids and alkalies.

c. iodine. A compound of milk casein with about 18% iodine in organic combination. Has been used in tertiary syphilis and for prophylaxis of goiter.

c. saccharide. A mixture of casein and sucrose used as an emulsifying agent.

c. sodium. A compound of casein and sodium hydroxide, used as a nutrient.

gluten c. Vegetable casein.

saliva c. Ptyalin.

vegetable c. A protein of plant origin resembling the casein of milk, as legumin, conglutin. Also called *gluten c.*

ca"se-in'o-gen [*caseus*; G. *genesthai*, from *gignesthai*, to be produced]. A compound protein of milk, yielding casein when acted upon by digestive enzymes; the precursor of casein, analogous to fibrinogen, myosinogen, etc.

ca"se-o-, ca'se- [*caseus*]. A combining form denoting casein.

ca"se-ose [*caseus*]. A product of the hydrolysis or gastric digestion of casein.

ca'se-ous [*caseus*]. Resembling, or having the nature or consistency of, cheese. See *caseation*, 2.

cas-evac. Trade-mark for a liquid laxative prepared from cascara sagrada.

case'worm" See *Echinococcus*.

Cas"i mi-ro a (kas"i mi ro uh, kas"i mirr o-uh) [after *Casimiro Gómez de Ortega*, Spanish botanist, 1740–1818]. A genus of plants belonging to the Rutaceae.

C. edulis. A species found in Mexico. The leaves have been used as an anthelmintic. Also called *white sapota*.

Casoni' test. See under *test*.

cas-sa va (ka sah vuh) [Taino *casavi*] 1. Any of several plants of the genus *Manihot*. 2. The starch obtained from rhizomes of *Manihot esculenta* and *M. aipi*, nutrient. Tapioca is prepared from it by heating while moist.

Casselberry William E ans [*American laryngologist*, 1858–1916]. Devised posture which the patient assumes after intubation. This prevents fluids from entering the tube during the taking of liquids known as *Casselberry position*.

Casserius Placentinus, J ilius (Giulio Casserio) [*Italian anatomist*, 1561–1616]. Outstanding leader in the field of comparative anatomy; teacher of Harvey. Described the structure and character of the auditory and vocal organs (1600–01). Noted the maxillary sinus, later described by Highmore. Described the posterior fontanel.

cas sette (kah set ka-set') [F little box]. A holder for roentgenographic film or plate.

Cas si (cash ee-uh, kas ee uh) [G *kasia*, cassia]. A genus of the Leguminosae, several species of which provide senna.

C. alata. The ringworm shrub widely diffused tropical shrub. The juice of the leaves mixed with lime juice has been used in the treatment of ringworm.

C. beareana. A species indigenous to East Africa. The root and powdered bark have been used in native medicine.

C. fistula. See purging cassia.

C. marilandica. A species found in North America. Its leaves, American senna, are less active as cathartic than the true senna.

cas sia (cash uh, cash ee uh) [*kasia*] An old name, still used commercially for the coarser varieties of cinnamon.

c. bark. Chinese cinnamon.

c. buds. The dried flowers of Chinese cinnamon; used chiefly as spice.

c. oil. The volatile cinnamon oil used in pharmacy and in perfumery; its chief constituent is cinnamic aldehyde.

purging c. *Cassia fistula*. The dried fruit of tree growing in tropical regions. The pulp is mild laxative, probably because of its high sugar content, although it contains small amount of anthraquinone derivatives. Dose, 0.5 Gm. (8 gr.)

cas si ac'id. An antibiotic substance derived from the leaves of *Cassia reticulata* active against number of bacteria.

cast [ON *kasta*] 1. A mass of fibrous material or exudate that has taken the form of some cavity in which it has been molded. From their source casts may be classified as bronchial, intestinal, nasal, esophageal, renal tracheal, urethral, vaginal, etc. Of these, the renal casts, by reason of their significance in diseases of the kidney are the most important. Classed according to their constitution, casts are blood, epithelial, fatty fibrinous, granular hyaline mucous, waxy etc. 2. An accurate reproduction in form of an object, structure or part in some plastic substance which has taken form in an impression or mold. 3. A lay term for strabismus.

plaster c. See plaster of Paris.

plaster of Paris c. A mixture of gypsum and water which becomes hard upon drying; when incorporated into gauze as bandage it may be used to immobilize fractured bones, arthritic joints, the spine, etc. Syn., *plaster c.*

waxy c. A tubal renal cast composed of translucent, usually amyloid, material.

Castaigne method. The Achard–Castaigne method for renal permeability. See methylene blue *test*.

Castañeda rat lung method. See under *method*.

Castañeda vaccine. See under *vaccine*.

Castellani, Aldo (1878–) Italian pathologist eminent authority in tropical medicine and microbiology; author of several books on tropical medicine. He discovered *Trypanosoma gambiense* in the spinal fluid of patients with Gambian trypanosomiasis or African sleeping sickness (1903) and was the first to establish spirochete, *Treponema pertenue*, as the etiological agent of yaws (1905). He reported bronchospirochetosis (1920) called *Castellani' disease*, and contributed extensively to medical mycology. He also developed techniques of agglutination absorption and the symbiotic fermentation phenomenon.

cast'i g [ON *kasta*]. 1. *In dentistry* the act of forcing molten metal into suitable mold. 2. *In veterinary medicine*, the act of throwing an animal on its side before administering an anesthetic.

Castle William Bosworth (1897) American physician, known for his experimental work and observations on human digestion, with special reference to the cause of pernicious anemia (1929). He also demonstrated the effectiveness of injectable liver extract in control of tropical sprue, and of iron in the treatment of anemia of hookworm disease without removal of parasites (1931).

cas'tor Castoreum

c. bean. The seed of *Ricinus communis*.

c. oil (*oleum ricini*) The fixed oil obtained from the seed of *Ricinus communis*; the oil contains glycerides of ricinoleic acid which impart its cathartic property. Dose, 15–60 cc. (½–2 fluidounces)

c. xylene A mixture composed of castor oil, one part, and xylene, three parts; used for clearing or clarifying collodion or celloidin of objects embedded in them.

cas to re-um [G *kastoreion*, from *kastōr* beaver]. Dried preputial glands and their secretion, obtained from the beaver *Castor fiber*. It is reddish brown substance with strong odor; formerly used in hysteria, its action resembling that of musk.

cas tra tion [L. *castrare*, to castrate]. Orchiectomy the excision of one or both testes or ovaries —**cas trated**, *adj.*; **cas'trate**, *n.*, *v.*

emotional c. See castration *anxiety* and castration *complex*.

female c. Removal of the ovaries; oophorectomy; spaying.

cas"tro-phre ni [castrare; G phrēn, mind]. A morbid fear or delusion, occasional in schizophrenic patients, that their thoughts are being sucked out of their brains by enemies. Syn., *noöklepia*.

Castroviejo, Ramón [*American ophthalmologist*, 1904–]. Known for his keratoplastic operation of transplantation of the cornea, in which special double knife is used to outline square on the cornea. A square plug is removed, after which the graft is similarly taken from the eye of the donor being held in place with cross stitch and conjunctival flap.

cas u al ty [L. *casus*, from *cadere*, to fall, happen] 1. An accident causing injury or death. 2. *In military medicine*, member of the armed forces who is lost to command, temporarily or permanently by death, wounds, injury sickness, internment, capture, missing in action.

cas u is tics (kazh ōō is ticks, kaz yōō) [casus]

Study of individual cases as means of arriving at the general history of disease.

cat'a-, cat-, cath- [G. *kata*, down]. A prefix denoting *downward*, *in accordance with*, *against*, *back*, *completely*. See also *kata-*.

cat"a-ba'si-al [*kata*; G. *basis*, base]. Noting skulls in which the basion is lower than the opisthion.

ca-tab'a-sis [G. *katabasis*, descent]. The decline of disease. —**catabat'ic**, *adj.*

cat" bi-o sis (cat uh-buy-o sis). See **catabolism**.

ca tab o-lin. Catabolite.

ca-tab'o-lism [*kata*; *ballein*]. Destructive phase of metabolism concerned with the breaking down by the body of complex compounds, often with the liberation of energy; the opposite of anabolism. —**catabol'ic**, *adj.*

ca tab'o-lite. Any product of catabolism. Syn., *catabolin*, *catastate*.

cat" clei'sis (cat uh kly sis) [G. *katakleisis*, closing]. Closure of the eyelids by adhesion or by spasm.

cat"a-clo'nus [G. *kata*, down; *klonos*, confused motion]. Rhythmic convulsive movements which are of functional or hysterical nature rather than expressions of true epilepsy. —**cataclon'ic**, *adj.*

cat"a-cous'tics (cat"uh koos ticks) [*kata*; G. *akousis*, to hear]. The science of reflected sound; echolocation.

cat"a-crot'ic [G. *katakrotos*, from *kata*; *krotos*, beat]. Designating the descending limb of the arterial pulse wave or any irregularities in it.

cat-ac ro-tism [*kata*; *krotos*]. A condition of the arterial pulse characterized by significant oscillations in its descending, or catacrotic, limb.

cat"a-did'y mus. See *katadidymus*.

cat"a-di-op'tric (cat uh-dye-op trick) [*kata*; G. *dioptrikos*, from *dia*, through, root of *opsomai*, I shall see]. Pertaining to both reflection and refraction of light rays.

cat" gel"o-pho'bi-a [G. *katagelos*, derision; *phobos*, fear]. Morbid fear of ridicule.

cat' lase (cat uh-lace, -laze) [cf. G. *katalusis*, to change]. 1. An enzyme found in tissues, capable of decomposing peroxides. 2. Any one of group of oxidizing enzymes.

cat'a-lep sy [G. *katalēpsis*, seizing]. A state of unconsciousness, usually trancelike, in which there is loss of voluntary motion and peculiar plastic rigidity of the muscles, by reason of which they retain for an indefinite time any position in which they are placed. The condition is associated with hysteria and the schizophrenic reactions, and is stage of hypnotic sleep. In local catalepsy single organ or group of muscles is affected. Also called *catalepsis*. —**catalep'tiform**, **catalep toid**, *adj.* **catalep'tic**, *adj.* / **catalep'tic**, *n.*

cat"a lep"to-le-thar'gic [*katalēpsis*; G. *lēthargos*, drowsiness]. Having the nature of catalepsy and lethargy

Ca-tal'pa [Creek *kutuhlpa*]. A genus of American and Asiatic trees of the Bignoniaceae. The seeds of C. **bignonioides** and C. **speciosa**, of North America, have been used in asthma.

ca tal'y-sis [G. *kata*, down *lysis*, loosing]. The process of change in the velocity of chemical reaction through the presence of substance which apparently remains chemically unaltered throughout the reaction. The velocity may be increased, in which case the process is described as *positive catalysis*, or it may be decreased, in which case the process is described as *negative catalysis*. —**catalyza'tion**, *n.*

cat'a lyst [*kata*; *lysis*]. 1 A substance having the power to produce catalysis. 2. A substance which increases the velocity of a chemical reaction. Its concentration at the beginning of the reaction is equal to its concentration at the end. Syn., *catalyzer*. See *biocatalyst*, *enzyme*. —**catalyt'ic**, *adj.*

cat a-ly"zer. Catalyst.

cat"a-me ni [G. *kata*, according to; *mēn*, month]. Menstruation. —**catamenial**, *adj.*

cat"am ne sis [G. *kata*, down from *mnēsis*, remembering]. The medical history of patient following an illness or behavior disorder. —**catamnes tic**, *adj.*

cat" mor'pho-sis [Gr. *kata*, down; G. *morphōsis*, shaping, development]. The irreversible degradation of mechanical, chemical, and light energy to heat and the continual disappearance of heat gradients characteristic of closed physical systems and necessary consequence of th second law of thermodynamics.

cat' pasm [G. *katapasma*, powder]. A dry powder to be sprinkled upon the skin or upon sore.

cat"a pha si-a (cat uh fay zhuh, -zee uh) [G. *kataphasis*, affirmation]. A speech disorder in which the patient keeps repeating the same word or series of words.

ca taph' ra [G. *kataphora*, lethargic attack, from *katapheresthai*, to be brought down]. Lethargy associated with periods of imperfect remission coma with intervals of imperfect consciousness.

cat" pho-re'sis (cat"uh-fo-ree'sis, -for -sis) [G. *kata*, down *phorēsis*, from *pherein*, to carry]. The migration of charged colloidal particles through the medium in which they are dispersed, when placed under the influence of an applied electric potential. Preferably called *electrophoresis*. The process of iontophoresis is sometimes erroneously called cataphoresis. —**cataphoret'ic**, *adj.*

cat"a-pho ri-a [*kata*; G. *phoros* tending]. A tendency of the visual axes of both eyes to incline below the horizontal plane.

cat" phor'ic [*kata*, *phoros*]. 1. Pertaining to cataphoresis. 2. Relating to cataphora.

cat" phy lax'i [*kata*; G. *phylaxis*, guarding]. Movement and transportation of phylactic agents (leukocytes, antibodies) to the site of an infection.

cat" pla si (cat uh-play zhuh, -zee-uh -shuh, -see-uh) **ca tap'la sis** [*kata*; G. *plasis*, to form]. 1. Stage of decline in life. 2. Degenerative changes affecting cells and tissues, especially reversion to an earlier or embryonic type of cell or tissue. 3. Application of plaster or coating. *Obs.*

cat' plasm [G. *kataplasma*, poultice]. A poultice, of various substances and usually applied when hot.

kaoli c. A mixture of kaolin, glycerin, and boric acid, with small amounts of thymol, methyl salicylate, and peppermint oil.

cat plex"y [G. *kataplēxis*, amazement, from *kataplēssein*, to strike down]. 1. A sudden and overwhelming emotion, fright, or shock causing muscular rigidity in some animals. 2. In man, the sudden loss of muscle tone provoked by exaggerated emotion, often associated with tendency to narcolepsy. 3. Prostration by the sudden onset of disease. 4. Hypnotic sleep. —**cataplec'tic**, *adj.*

cat' ract [G. *katarraktēs*, cataract]. Partial or complete opacity of the crystalline lens or its capsule. —**catarac'tous**, *adj.*

llergic c. A cataract ppearing in young persons who have had chronic and usually severe atopic dermatitis. Syn., *atopic c.*

aridosiliculose c. An overmature cataract with dry wrinkled capsule. Also called *aridosiliquate*

atomi c. See irradiation *c.*

black c. A nuclear cataract with dark opacity

blood c. A blood clot anterior to the lens and obstructing the pupil.

blue dot c. See cerulean c.
capsular c. Cataract due to opacity of the capsule.
capsulolenticular c. One involving both the capsule and the lens.
cerulean c. A cataract consisting of small, punctate opacities in the lens, which have blue tint best seen with slit lamp It is usually congenital and not progressive Also called *blue dot c.*
chalky c. See aridosiliculose c.
cholesterin c. One containing what are apparently crystals of cholesterin.
complicated c. Cataract secondary to intraocular disease.
concussion c. A soft cataract due to an explosion or some other concussion.
cortical c. One due to the loss of transparency of the outer layers of the lens.
cyclotron c. See irradiation c.
cystic c. See Morgagnian c.
di beti c. A form associated with diabetes.
fibrinous c. A false cataract consisting of an effusion on the capsule during severe iridocyclitis.
fl id c. The breaking-up of an overmature cataract into milky fluid.
glassblower's c. See irradiation c.
hard c. See senile c.
immature c. One in which only part of the lens substance is cataractous.
incipient c. Forked linear opacities i the equatorial region of the lens seen in middle-aged per sons and sometimes remaining unchanged for years.
int mescent c. An overmature cataract presenting white, swollen appearance from having undergone degeneration.
irradiation c. One caused by the use of radium and roentgen rays in large doses or by exposure to intense radiation also called *atomic cyclotron, c., radiation c.;* formerly called *glassblower c., puddler c.*
lacteal c. A cataract in which the lens is filled with fluid.
lamellar c. One due to opacity of certain layers between the cortex and nucleus, the remaining layers being transparent
lenticular c. One occurring in the lens proper
mature c. One in which the whole lens substance is cataractous.
membranous c. A fibrinous deposit from the iris upon the capsule, which becomes opaque
Morgagnian c. One in which an overmature cataract shrinks and leaves nucleus floating in the dissolved outer layers.
nuclear c. One of moderate extent beginning in the nucleus.
pigmented c. A spurious cataract due to an injury by which the pigment from the posterior surface of the iris has been detached. Also called *Vossius ring*
polar c. Either anterior or posterior form in which the opacity is confined t one pole of the lens.
pupillary c. Congenital closure of the pupil.
pyramidal c. One in which the opacity is t the anterior pole and is conoid, the pex extending forward.
radiation c. See irradiation c.
ripe c. See mature c.
secondary c. Capsular cataract ppearing after the extraction of the len
senile c. The cataract of old person the most frequent form, and that understood when not specified as congenital, juvenile, tra matic, soft, etc.
soft c. A form occurring especially in the young; the lens matter is of soft consistency and milky in appearance.
spi dle c. One characterized by spindle-shaped opacity extending from the posterior to the anterior portion of the lens capsule.
tetanic c. A cataract due to defect in calcium metabolism.
tremulous c. One associated with laceration of the ciliary zonule, causing trembling of the iris and of the cataract on movement of the eyeball.
true c. Lenticular cataract.
unripe c. See immature c.
zonular c. See lamellar c.

ca tarrh [G *katarrhoos*, from *katarrhein*, to flow down]. Old term once widely used for inflammation of mucous membranes, particularly those of the air passages of the nose and throat, with an exudation containing mucin and epithelial cells —**catarrhal,** *adj*
spring c. Vernal conjunctivitis.

cat" stal'si [G *katastaltikos*, from *katastellein*, to check]. The downward moving wave of contraction occurring in the stomach during digestion There is no preceding wave of inhibition.

cat state [*cata*, G. *histanai*, to stand]. Catabolite

cat"a thy'mi [G *katathymios*, from *kata*, down. *thymos*, mind]. The existence of complex in the unconscious mind which is heavily charged with affect or feeling so as to produce pronounced effect in consciousness.

cat" t ni a [*kata*, G *tonos*, tension]. A phase or type of schizophrenic reaction in which the patient seems to lack the will to talk move and stands or sits in one position, assumes fixed postures, and resists attempts to activate motion or speech. A benign stupor which frequently may be punctuated by violent outbursts, hallucinosis, and panic. —**catatoni'ic,** *adj* n.

cat" tro pi [*kata*, G *trope*, turn]. Turning of both eyes downward; cataphoria.

cat'e-chin (cat chin, -kin) $C_{15}H_{14}O_6$. An acid substance from gambir (pale catechu) and other sources. An amorphous yellow powder soluble in water alcohol, or alkalis; used for tanning and in calico printing. Syn., *catechuic acid.*

cat'e-chol (cat chole, -coal, kol, kawl) See *pyrocatechol.*

cat'e-chu (cat'i-choo, koo) [Malay *kachu*]. Extract prepared from the wood of *Acacia catechu*, native tree of the East Indies. It contains about 25% catechutannic acid and hence is powerful astringent. It was formerly used as remedy for diarrhea of children and as gargle and mouthwash. See *gambir*

cat" chu'ic ac'id (cat -choo'ick, -cue ick) Catechin.

cat" lec"trot' nus [G *kata*, down *elektron*, amber; *tonos*, tension]. Increased irritability of nerve or muscle near the cathode.

cat er pil"lar [L. *catta pilosa*, hairy cat]. The larval form of moth or butterfly Caterpillars of at least one family of butterflies and several families of moths have irritant hairs which produce caterpillar dermatitis.

cat gut" [ME. *cat*; AS pl. *guttas*]. A suture and ligature material made from the submucosa of sheep's intestine, cleansed, treated, and twisted. Put up aseptically in glass tubes, in sizes from 00000 to 8. Varieties are *plain* (untreated) *chromicized* (treated with chromic trioxide) and *iodized* (immersed i sol tion of iodine and potassium iodide)

ca thar' sis. See *catharsis.*

ca thar si [G *katharsis*, cleansing]. 1 Purgation. 2. I *psychoanalysis*, mental and emotional purge by abreaction.

ca thar'tic [G. *kathartikos*, from *katharsis*]. A medicine used to produce evacuations of the bowels purgative. —**cathar'tic,** *adj*

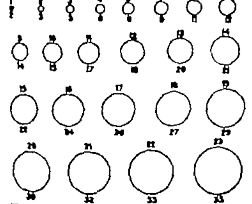
ca thar'tic ac'id. An active principle from several species of *Cassia*.

ca thect' ca thex'ti-cize [G *kathektikos*, capable of holding or retaining]. In *psychiatry*, to charge ideas with affect or feeling

ca-thep'sin [G *kathepsein*, to boil down]. Any one of several proteolytic enzymes present in tissues, catalyzing the hydrolysis of high molecular weight proteins to proteoses and peptones, and having an optimum pH between 4 and 5. It is believed that after death the tissues become acid, and cathepsin produces autolysis (proteolysis)

ca ther e-sis, ca thare'e-sis (ka-therr' sis, ka-therr'i sis, kath"i-ree sis) [G *kathairesis*, pulling down, reducing]. 1. Prostration or weakness induced by medication. 2. A feebly caustic action.

cath"e ret'ic [G *kathairetikos*, reducing]. 1. Reducing; weakening prostrating 2. Caustic. —**catheret'ic,** *n*.



cath ter [G *kathetēr* anything let down into]. A hollow tube of metal, glass, hard or soft rubber rubberized silk, etc., for introduction into a cavity through a narrow canal, for the purpose of discharging the fluid contents of a cavity or for establishing the patency of a canal. Specifically one intended to be passed into the bladder through the urethra for the relief of urinary retention.

angulated c. A catheter the leading end or beak of which is bent or angulated so as to facilitate its passage.

bicoudé c. An angulated catheter with the tip or leading end bent at two points to form a double elbow or bicoudé tip.

c. fever The rise in temperature ascribed to the passage of a catheter associated especially with cystitis.

c. gauge. A metal sheet having circular holes punched in it which fit exactly certain sized catheters or sounds. See following illustration

The upper number indicates the size of American catheters, the lower the French.

c. life. A term employed to indicate constant employment of catheterization on the part of persons who are unable to void urine naturally or who can evacuate only a portion of the bladder contents because of high residual urine.

c. specimen. Urine obtained under aseptic technic, to insure its being uncontaminated when examined for diagnostic purposes.

coudé c. An angulated catheter with the tip or leading end bent at one point only to form an elbow or coudé tip.

elbow c. One of metal or stiff, rubberized material with one or two 45° bends at or near the proximal end.

eustachian c. A small catheter having a bend at the leading end used for introduction into the auditory tube to relieve obstruction.

female c. A short catheter usually of glass, for catheterizing women.

filiform c. A catheter the leading end of which is molded into an extremely slender or thread-shaped form in order to facilitate passage of the larger following portion through a constricted or irregular passage also called *whip c.*

Foley balloon c. An indwelling or self-retaining catheter which has near its beak a thin, distensible rubber balloon. After entering the urinary bladder the balloon is inflated through a small side tube incorporated in the wall of the catheter thereby retaining the catheter in the bladder without use of other fixing devices.

heart c. One which is inserted in the right side of the heart to obtain blood for gas analysis from the vena cava, right atrium, right ventricle, and pulmonary artery

indwelling c. A catheter which, following its introduction, is held in position either by mechanisms incorporated in its own structure or by other fixing devices. It is used to establish constant drainage.

rat-tail c. A sharp, narrow-ended catheter shaped somewhat like a rat's tail and used in urethral strictures.

self-retaining c. A catheter so constructed that, following its introduction, it will be held in position by mechanisms incorporated in its particular structure.

sigmoid c. One shaped like an S, for passage into the female bladder

two-way c. A double-current uterine catheter Also called *Bozeman's catheter*

wax-bulb c. One having a waxed tip, which, on being passed into the ureter indicates the presence of nonopaque calculi by scratches on the wax.

whip c. See filiform c.

cath ter ism [*katheter*]. The habitual use of catheter

cath e ter ize [*katheter*]. 1 Insert a catheter 2. Withdraw urine by means of a ureteral catheter —**catheteriza tion,** *n*.

cath e-ter-o-stat" (kath ter stat kath-e-ter-o-stat) [*katheter* G *states*, placed]. Stand for holding and sterilizing catheters.

ca thex'is [G *kathexis*, retention]. In *psychoanalysis*, the investment of an object or idea with psychic energy that is, with feelings and meanings. It may be qualitatively defined by terms, such as *ego, object, libidinal, instinctual*, or *erotic*

cath ode [G *kathodos*, from *kata*, down *hodos*, way]. The negative electrode or pole of an electric circuit. Abbreviated, C., c., ca —**cathodal,** *adj*

ca thod'ic [*kathodos*]. 1 Relating to a cathode. 2. Proceeding downward; efferent or centrifugal (applied to nerve current or nerve impulse)

cat'i"on [G *kation*, descending, from *katienai*]. A positive ion moving toward, or being evolved at, the cathode in electrolytic cells or discharge tubes. —**cation'ic,** *adj*

ca ti' i (ka tee vee) See *pinta*.

cat'lin, cat'li ng [AS. *cat*, -*ling*, diminutive suffix]. A long, double-edged amputation knife especially adapted to the dividing of tissues between closelying bones.

cat o-dont [G *kata*, down; *odous*, tooth]. Possessing teeth only in the lower jaw

ca-top'trics [G. *katoptron*, mirror]. The branch of

physics dealing with the principles of reflected light.

ca·top'tro·scope [*katoptron*; G. *skopein*, to examine]. An instrument for examining objects by reflected light.

cat's-ear A deformity of the human ear causing it t resemble somewhat cat ear; bnormal enlargement and folding forward of the superior part of the helix.

cat's purr A peculiar purring sound heard on uscultation due t stenosis of the mitral valve.

Cattell infant intelligence scale See under *test*.

cau·da [L.]. A tail. —**caudal, ca·date** *adj.*; **cauda'tion** *n.*

c. cerebelli. Old *term for vermis*.

c. epididymidis. The inferior part of the epididymis.

c. equina A term pplied collectively to the roots of the sacral and coccygeal nerves, from their resemblance to horse tail.

c. helicis. An ppendage of the cartilage of the ear at the union of the helix and antihelix.

c. pancreatis. The tail of the pancreas, which has the largest amount of islet tissue and is most frequently the site of islet-cell tumors

c. striati. The narrow posterior portion of the caudat ucleus.

cau'dad [*cauda*, L. *ad*, toward]. Toward the tail or cauda; in man, downward; opposed to *cephalad*

cau·da·tum [NL., from L. *cauda*, tail]. The caudate nucleus.

cau·do-, caud- [*cauda*] A combining form denoting *caudal, connected with or related to the caudal vertebrae*.

cau·do·ceph·al·ad [*cauda*; G. *kephalē*, head L. *ad*, toward]. In the direction from the tail toward the head.

caul [F *cale*]. 1 A portion or all of the fetal membranes covering the head and carried out in advance of it in labor 2. The great omentum.

cau'li·flow"er ear Thickening and irregularity of the external ear following repeated blows; seen in pugilists.

cau'line (caw'lin, lyne) [G *kaulos*, stem]. *I biology* pertaining to the stem.

cau'lo-, caul- [*kaulos*] A combining form meaning *stem*.

cau"lo·phyl'line (caw"lo-fill'een, -in) [*kaulos*; G *phyllon*, leaf] The alkaloid of caulophyllum

cau"lo·phyl'lum [*kaulos*; *phyllon*]. The dried rhizome and roots of *Caulophyllum thalictroides* growing in Canada and the northern United States It contains the alkaloid caulophylline, several glycosides, and two crystallizable saponins. It produces intermittent contractions of the gravid uterus and is also said to possess diuretic and anthelmintic properties. Syn *blue cohosh, papoose root*. Also called *squaw root*

cau"lo·ple·gi [*kaulos*; G *plēgē*, stroke]. Paralysis affecting the penis.

cau·mes·the'si (caw·mess·thee·zhuh, ·zee·uh) [G *kauma*, burning heat; *aisthēsis* sensation] The experience of sense of heat, when the temperature is ot high

cau·sal'gi·a [G *kausos*, heat *algos*, pain] The burning pain that is sometimes prese t in injuries of the nerves, particularly those sensory nerves supplying the palms and soles. The disturbance ma be associated with many vasomotor trophic, and dermal changes the affected parts.

cause [L. *causa*, reason] The sources, conditions, and origins of result The preceding factors that unite to produce given condition

antecedent c. See predisposing *c.*

determining c. One that precipitates the action of another or other causes.

essential c. One that secures the effect independently of the action of other causes.

exciting c. The immediately preceding and conditioning factor

immediate c. See proximate *c.*

predisposing c. That which favors the development of condition.

proximate c. That one of several causes which is direct and effective.

secondary c. An ultimate cause.

ultimate c. On that ventually comes into play aided by proximate cause.

caus'tic [G *kaustikos*, from *kaiein*, to burn]. Very irritant burning capable of destroying tissue.

caus·tic. 1 A substance that destroys tissue. 2. *I optics*, curve to which the rays of light reflected or refracted by another curve are tangent It is called *catacaustic* or *catacaustic curve* when caused by reflection; and *diacaustic* or *diacaustic curve* when caused by refraction.

c. alcohol. Sodium ethylate.

c. alkali. The hydroxide of an alkali element.

c. potash. Potassium hydroxide.

c. soda. Sodium hydroxide.

lunar c. Toughened silver nitrate (*argenti nitras induratus*) See *silver* nitrate.

cau'ter·ant [G *kautēr* burner]. A caustic or escharotic substance.

cau"ter·i·za'tion [G *kautērion*, branding iron, from *kaiein*]. The application of cautery or caustic the effect of such an application. See *cautery* —**cau'terize**

cau'ter·y [*kautērion*]. 1 Destruction of tissue by the pplication of cauterizing agent. 2. A device to produce tissue coagulation by chemical or mechanical means. See also *electrocautery*.

actual c. A white-hot or red-hot iron used for cauterization.

chemical c. A caustic substance used to destroy tissue.

cold c. Cauterization by extrem cold, as by carbon dioxide snow

galvanocautery See *electrocautery*

linear streak c. A type used in an everted cervix uteri, in which the cautery strokes radiate lik spokes of wheel.

Paquelin c. A cauterizing pparatus consisting of hollow platinum body in the shape of knife, which is heated by forcing into it hydrocarbon vapor

solar c. A glass or lens for concentrating the sun's rays upon tissue to be cauterized.

cav·al·ry bone. A bony deposit in the adductor muscles of the thigh. Syn., *rider' bone*.

cav -scope. See *celoscope*.

Caventou Joseph Bienaimé [*French pharmacologist* 1795–1877] W th Pelletier isolated strychnine (1819) and quinine (1820)

cav·ern [L *caverna*, hollow]. A cavity in the lung due to necrosis of ts tissues also the cavity of dilated bronchus

cav"ern·i'tis [*caverna*, G *-itis*, inflammation]. Inflammation of the corpora cavernosa penis. See Peyronie *disease*.

cav·er·no·ma [*caverna*, G *-ōma*, tumor]. A cavernous tumor cavernous hemangioma.

cav"er·no·si'tis. See *cavernitis*.

cav·er·nos'to·my [*caverna*, G *stoma*, mouth] The drainage of pulmonary abscess or cavity through the chest wall by surgical or other means: also called *speleostomy*

cav·er·no·sum (pl *cavernosa*) [L. *cavernosus*, full of hollows] See *corpora cavernosa* under *corpus*.

cav·ern·ous [*cavernosus*]. H ving hollow spaces.

Ca·vi·a [F *cabiai*, of Cariban origi]. The genus of cavies, including the guinea pig.

cav'i·tas [L.]. A hollow cavity.
c. **pulpae.** The pulp cavity of tooth.
cav"i·ta'tion [L. cavus, hollow]. 1. The formation of cavity or cavities, as in tuberculosis of the lung. 2. The process of amnion formation in man and certain mammals. 3. Reduction of the hydrodynamic pressure within liquid, as by subjecting it to ultrasonic vibration, to value below the vapor pressure.
Ca vi'te fe'ver (ka-vee tay). See *dengue*.
cav'i ty [cavus]. 1. A hole or hollow space. 2. In *dentistry*, the lesion produced by dental caries.
abdominal c. The space within the body between the diaphragm and the pelvic floor containing the abdominal viscera.
amniotic c. The fluid-filled cavity of the amnion.
body c. The coelom; the peritoneal, pleural, and pericardial cavities, and that of the tunica vaginalis testis; any serous cavity.
brain c. The cavity of one of the embryonic brain vesicles.
c. of the septum pellucidum. A cavity in the septum pellucidum found occasionally between its two glial layers, extending from the genu of the corpus callosum anteriorly to the anterior limb and the pillars of the fornix posteriorly; misnamed *fifth ventricle*.
c. preparation. In *dentistry* (a) the removal of carious tooth substance and the proper shaping of cavity to receive and retain filling material. (b) The cavity so prepared.
cerebral cavities. The ventricles of the brain.
cleavage c. The blastocoele. Syn. *segmentation c.*
cotyloid c. The acetabulum.
cranial c. The hollow of the skull.
cutigeral c. The gutterlike cavity situated at the upper and inner portion of the hoof wall in the horse.
ectoplacental c. See false amniotic c.
epidural c. The space between the dura mater of the spinal cord and the wall of the vertebral canal; also called *extradural cavity*.
extradural c. See epidural c.
false amniotic c. A cavity present in the trophoblastic knob. Also called *ectoplacental c.*, *false amnion*.
glenoid c. The depression in the scapula for the reception of the head of the humerus.
head c. One of three specialized somites in the head region of lower vertebrate embryos that give rise to the somatic eye muscles; in man, represented only by mesenchymal blastema.
lesser peritoneal c. The peritoneal space posterior to the stomach, communicating with the greater peritoneal cavity through the epiploic foramen.
magma c. A cavity in the extraembryonic mesoderm of the blastocyst.
Meckel's c. That occupied by the semilunar ganglion in the dura mater covering the trigeminal impression near the apex of the petrous part of the temporal bone; also called *cave of Meckel*.
nasal c. One of the pair of cavities between the anterior nares and nasopharynx. In the embryo, the two primary nasal cavities are derived from the nasal pits; and the secondary nasal cavities, in turn from them and from part of the primary oral cavity by the formation of the maxillary part of the palate. OT nasal fossa. See Plate 12.
oral c. That of the mouth. The primary oral cavity is that derived from the stomodeum before it contributes to the nasal cavity; and the secondary oral cavity, the definitive oral cavity after the formation of the palate.
pelvic c. (a) The cavity within the bony pelvis, including both false and true pelves. (b) In *obstetrics*, the cavity of the true pelvis from inlet to outlet, containing the pelvic viscera.
pericardial c. A potential space within the pericardium between the serous layer of the pericardium and the epicardium of the heart and roots of the great vessels.
peritoneal c. A potential space between the visceral and parietal layers of the peritoneum.
pharyngotympanic c. The tubotympanic recess derived from the first and part of the second visceral pouches. The anlage of the middle ear and auditory tube.
pleural c. The potential space, included between the parietal and visceral layers of the pleura. Like the peritoneal and pericardial cavities, it is not an actual space unless opened.
pleuroperitoneal c. The coelom or body cavity.
pulp c. The space within the dentin of tooth; it consists of coronal portion, the pulp chamber, and root canal for each root and contains the dental pulp.
respiratory c. The thoracic cavity; used as general term to describe the air passages.
segmentation c. The blastocoele.
serous c. A potential space between two layers of serous membrane, as the pericardial, peritoneal, or pleural cavity or that of the tunica vaginalis testis.
somite c. The temporary lumen in the somite. Also called *myocoele*.
subgerminal c. The enlarged blastocoele of meroblastic ova lying between yolk and blastoderm.
thoracic c. The space within the walls of the thorax, between the base of the neck and the diaphragm, containing the thoracic viscera.
tympanic c. The cavity of the middle ear; an irregular air-containing, mucous-membrane-lined space in the temporal bone. The chain of auditory ossicles extends from its lateral wall, the tympanic membrane, to its medial wall, the bony labyrinth. It communicates anteriorly with the nasopharynx through the auditory tube and posterosuperiorly with the mastoid cells through the tympanic antrum. See Plate 20.
vitreal c. The large posterior portion of the cavity of the eye between the posterior surface of the lens, the ciliary body and the posterior wall of the eyeball. It is filled with the vitreous body.
ca vo-sur"face [cavus; F. surface, from L. superficies]. In *dentistry* the junction of the wall of cavity preparation with the surface of tooth.
ca vo val gus [cavus; L. valgus, bow-legged]. Cavus combined with valgus. See *talipes*.
ca vum [L.]. Cavity.
c. **articulare.** Joint cavity.
c. **conchae.** The inferior part of the concha of the ear.
c. **dentis.** The pulp cavity of tooth.
c. **hyaloideum.** The vitreous chamber of the eye.
c. **medullare.** The medullary canal of bones.
c. **Monroi.** The most rostral part of the third ventricle.
c. **pleuropericardiacoperitoneale.** The embryonic coelom.
c. **pleuropericardiale.** The pleural and pericardial part of the coelom.
c. **septi pellucidi.** See *cavity of septum pellucidum*.
c. **Vergae.** A caudal extension of the cavity of the septum pellucidum from the fornix to the splenium of the corpus callosum; misnamed *sixth ventricle*.
ca vus [L.]. 1. A hollow; cavity. 2. Talipes or pes cavus. See *talipes*.
ca'vy [*Cavia*, the generic name of Car"

Any of several short-tailed, rough-haired rodents from the family Caviidae; usually guinea pig.

Cazenave, Pierre Louis Alphée [*French dermatologist* 1795–1877]. Remembered for his description of pemphigus foliaceus (1844) called Cazenave's *disease*.

Cb Symbol for columbium.

C.C. Commission Certified; indicating that sample of the stain so marked has been submitted to the Biological Stain Commission and has been found by them to be true to type up to specification in respect to dye content, and satisfactory in the procedures listed on the label. Only one batch of dye may be sold under each certification number.

cc, c.c. Cubic centimeter.

CCC Cathodal closure contraction.

Cd Symbol for cadmium.

Ce Symbol for cerium.

ceanothyn. Trade-mark for hydroalcoholic extract of the alkaloids from the bark of the root of *Ceanothus americanus* used as hemostatic.

cebione. A trade-mark for ascorbic acid.

ce″bo ce pha′li a (see″bo si fay′lee uh) [G *kēbos*, monkey; *kephalē*, head]. A condition, related to incipient cyclopia, in which there is absence or marked defect of the nose, with, however two orbital cavities and two eyes, the region between the eyes being narrow and flat. Syn. *cebocephaly*.

ce″bo-ceph′a lus [*kēbos*; *kephalē*]. An individual showing cebocephalia. —**cebocephal′ic, cebocephalous,** *adj.*

ce″bo-ceph′a ly [*kēbos*; *kephalē*]. Cebocephalia.

ce-cec′to-my (see sek′to-mee) [L. *caecus*, blind; G *ektomē*, excision]. Excision of the cecum.

ce-ci′tis [*caecus*; G. *-itis*, inflammation]. Inflammation of the cecum. Syn. *typhlitis*.

ce ci ty [L. *caecitas*]. Blindness. *Rare.*

ce co-cele (see′ko seel) [L. *caecus*, blind G. *kēlē*, hernia]. Herniation of the cecum.

ce co-co-los′to-my [*caecus*, G *kolon*, colon *stoma*, mouth]. The formation of an anastomosis between the cecum and some part of the colon.

ce″co il″e-os′to-my [*caecus*; G *eileos*, to roll *stoma*, mouth]. The formation of an anastomosis between the cecum and the ileum.

cecon. Trade-mark for solution of ascorbic acid in propylene glycol.

ce′co pex y [*caecus*; G. *pēxis*, fixing, putting together]. Fixation of the cecum by surgical operation.

ce co-pli ca′tion [*caecus*; L. *plicare*, to fold]. Operation for the relief of dilated cecum, consisting in taking tucks or folds in the wall.

ce cop-to si [*caecus*; G *ptōsis* falling]. Downward displacement of the cecum.

ce-cor′rha phy [*caecus*; G *rhaphē*, suture]. Suture of the cecum.

ce co-sig″moid-os to my [*caecus*; G *sigmoeidēs*, of the shape of sigma; *stoma*, mouth]. Establishment of anastomosis between the cecum and sigmoid colon.

ce-cos′to-my [*caecus*; *stoma*]. In surgery the establishment of permanent artificial opening into the cecum.

ce-cot o-my [*caecus*; G *tomē*, cutting]. Incision into the cecum.

ce cum caecum (see′kum) [*caecus*]. 1. The large blind pouch or cul-de-sac which the large intestine begins. See Plate 13. 2. The blind end of tube. —**cecal,** *adj.*

c. cupulare. The blind end of the cochlear duct.

mobile c. Abnormal mobility of the cecum, so that it can be pushed up out of its normal situation.

vestibular c. A cecum formed at the beginning of the cochlear duct in the cochlear recess of the vestibule at the anterior end of the scala vestibuli.

ce dar [G *kedros*, cedar-tree]. A tree of the genus *Cedrus*.

c. oil. A transparent oil obtained from *Juniperus virginiana*; used as clearing agent in histology and for oil-immersion lenses.

cedilanid. Trade-mark for crystalline lanatoside C from *Digitalis lanata*. See *digoxin*.

ce′drene. $C_{15}H_{24}$. A volatile liquid hydrocarbon found in red cedar oil (*Juniperus virginiana*), clove oil, and cubeb oil.

ce drin. A toxic, bitter crystalline substance obtained from cedron.

ce dron [*kedros*]. The seeds of *Simba cedron*, formerly considered antimalarial.

ceepryn chloride. Trade-marked name for certain antiseptic and detergent preparations containing cetylpyridinium chloride, $C_5H_5N(C_{16}H_{33})Cl$.

cel′ n dine (sel′an-dyne). See *chelidonium*.

Ce-las trus [G. *kelastros*, holly]. A genus of trees and shrubs of the Celastraceae.

C. paniculata. A climbing shrub of India; the oil from the seeds (oleum nigrum) is reported to be powerful stimulant and diaphoretic in gout and fever.

C. scandens. American bittersweet of North America has been used as cathartic, diuretic, and alterative.

-cele (-seel) [G *kēlē*, tumor hernia]. A suffix denoting *tumor hernia*, *pathologic swelling* or *cavity*.

-cele See *-coele*.

cel′er y fruit. The dried, ripe fruit of *Apium graveolens*, containing volatile oil; used as stimulant and condiment.

celi- See *coelio-*.

ce′li ac (see′lee-ack) [G *koilia*, belly]. Abdominal; pertaining to the abdomen.

ce′li ac ar ter y See Table of Arteries in the Appendix.

ce″li -del′phus [*koilia*, G *adelphos*, brother]. Conjoined twins united at the abdomen. Syn., *omphalopagus*, *gastrodidymus*.

ce″li-ec ta si **coe″li ec ta si** (see″lee eck tay shuh, see uh, shuh, -see-uh) [*koilia*, G *ektasis*, stretching out]. Abnormal distention of the abdominal cavity.

ce′li-o-. See *coelio-*.

ce″li o-col pot my coe″li-o-col pot′o-my [*koilia*, G *kolpos*, vagina *tomē*, cutting]. The opening of the abdomen through the vagina, for the removal of tumor or other body. *Rare.*

ce″li o-e ″ter ot′o-my [*koilia*, G *enteron*, intestine; *tomē*]. The opening of the intestine through an incision in the abdominal wall. *Obs.*

ce″li gas trot o-my coe″li-o gas trot my [*koilia*, G. *gastēr* belly *tomē*]. The opening of the stomach through an abdominal incision. *Obs.*

ce″li hys″ter-ec t my coe″li hys″ter-ec′to-my [*koilia*, G *hystera*, womb *ektomē*, excision]. Removal of the uterus through an abdominal incision abdominal hysterectomy. *Obs.*

ce″li hys″ter ot o-my coe″li-o-hys″ter ot′o-my [*koilia*, *hystera*, *tomē*]. Incision of the uterus through an abdominal section. *Obs.*

ce″li ma. OT for *mesothelioma*.

ce″li-o-my″o-mec to my coe″li-o-my″o-mec′to-my [*koilia*, G *mys*, muscle *-ōma*, tumor *ektomē*, excision]. In surgery, the removal of myoma (of the uterus) through an abdominal incision. *Rare.*

ce″li-o-par -cen te sis, coe″li o-par″ cen t sis [*koilia*, G. *parakentēsis*, tapping]. Tapping, or paracentesis of the abdomen.

ce"li·o·ple'gi·a, cee"li·o·ple'gi·a [*koilia*; G. *plēgē*, stroke]. See *cholera*.

ce"li·or'rha·phy, cee"li·or'rha·phy [*koilia*; G. *rhaphē*, suture]. Suture of the abdominal wall. Rare.

ce'li·o·scope, cee'li·o·scope. See *celoscope*.

ce"li·os'co·py, cee"li·os'co·py [*koilia*; G. *skopein*, to examine]. Method of examining the peritoneal cavity by filling it with sterile filtered air through a hollow needle, plunging a trocar through the distended abdominal wall, and passing through the trocar a cystoscope by means of which the adjacent peritoneal surface may be inspected.

ce"li·ot'o·my [*koilia*; G. *tomē*, cutting]. *In surgery*, the opening of the abdominal cavity.

ce·li'tis, cee·li'tis (see·lye'tis) [*koilia*; G. *-itis*, inflammation]. Inflammation of the abdominal organs. Obs.

cell [L. *cella*, stall, chamber]. 1. A mass of protoplasm containing a nucleus. The protoplasm of the nucleus is the nucleoplasm; that of the remainder of the cell (cytosome) is the cytoplasm. The cell body or perikaryon, is the mass of cytoplasm exclusive of processes immediately surrounding the nucleus. 2. One of the units consisting of electrodes and an electrolyte in a voltaic battery. 3. A compartment, particularly a hollow space in bone. —**cell'ular**, *adj.*

acidophil c. One which stains with acid dyes.

acinar c. One of the cells lining a compound acinous gland. Also called *acinous c.*

adipose c. Lipoblast; fat cell.

adventitial c. A branched cell found in the perilymphatic and perivascular tissues generally regarded as belonging to the reticuloendothelial system.

air c. A compartment of one of the air sinuses of the skull.

alpha cells. (a) Certain granular cells in the islets of the pancreas. (b) Cells containing acidophil granules in the adenohypophysis.

amacrine c. A retinal cell which apparently lacks an axon; its body is in one of the lower rows of the inner nuclear layer and its dendritelike processes spread in the inner plexiform layer. Also called *inner horizontal c.*, *association c.*

ameboid c. One capable of changing its form and moving about like an ameba.

ancestral c. An indefinite term applied to any formative cell, as a myeloblast, lymphoblast, blastomere.

Anitschkow c. Cardiac histiocyte having a characteristic bar of chromatin with fibrils radiating toward the nuclear membrane, normally present in connective tissue of the heart and coronary vessels; it proliferates in rheumatic inflammation and is seen in Aschoff nodules. Also called *Anitschkow myocyte*.

anterior column cells. In general, all cells located in the anterior horn of the spinal cord; specifically, those in the anterior horn of the spinal cord whose axons extend to other parts and levels of the cord. See also *anterior horn*.

anterior horn c. A large multipolar nerve cell in the anterior horn of the spinal cord whose axon constitutes an efferent fiber innervating a muscle. These cells are the most likely to be affected by the virus causing anterior poliomyelitis. Also called *motor c.*, *motoneuron*, *root c.*

antipodal cells. A group of four cells formed in the lower end of the embryo sac of angiosperms, opposite to the cells constituting the ovum apparatus.

argentaffin c. A type of cell found in the intestinal and gastric glands which reduces silver salts in staining; enterochromaffin cell.

argyrophil c. Any cell which stains with reduced silver method.

Aschoff c. The characteristic cell of the Aschoff nodule in rheumatic fever; a large, elongated cell with one or more vesicular nuclei having a central mass of chromatin from which fibrils radiate toward the nuclear membrane.

band c. A developmental stage of a granular leukocyte intermediate between the metamyelocyte and the adult segmented form. The nucleus is bandlike and nonfilamented; the cytoplasm and granules are those of the corresponding adult cell. Also called *staff c.*, *stab c.*, *rod (nuclear) c.*, *stabkernige c.*, *nonsegmented polymorphonuclear rhabdocyte*.

basal c. One of the cells of the deepest layer of stratified epithelium.

basket cells. (a) Deep, stellate cells of the molecular layer of the cerebellar cortex. The terminal arborizations of their axons envelop Purkinje cells to form the baskets. (b) The myoepithelial cells of salivary, lacrimal, and sweat glands. (c) See *smudge c.*

basophil c. One in which basic dyes stain granules in the cytoplasm or all of the cytoplasm.

beta cells. (a) Cells in the pancreatic islets in which the cytoplasm contains alcohol-soluble granules. (b) Cells containing basophil granules in the adenohypophysis.

binucleated c. A cell, most commonly found in liver, whose nucleus has undergone mitosis without division of the cytoplasm.

bipolar cells of the retina. Bipolar cells of the inner nuclear layer of the retina, connected with the rods and cones of the retina externally and ramifying internally in the middle of the molecular layer.

bipolar nerve c. One having two prolongations of the cytoplasm, as in the vestibular ganglion of the eighth nerve.

blast c. The most undifferentiated cell of any of the blood cell series. It refers to the stage of development as a whole without identifying the specific series to which it belongs.

blood c. See under *blood*.

bone c. A cell in a lacuna of bone; osteocyte.

burr c. A poikilocyte, having one or more spiny projections along its periphery; found in the blood of patients with uremia, carcinoma of the stomach, and bleeding peptic ulcer.

capsule c. See *satellite c.*

carmine c. A modified alpha cell of the adenohypophysis which stains deep red with azocarmine; ordinary acidophils are stained orange.

castration cells. Enlarged beta cells of the pars distalis of the pituitary showing vacuolization and eccentric displacement of the nucleus following castration; sometimes called *signet-ring cells*.

c. of Cajal. See *astrocyte*.

c. of Meynert. See *solitary cells of Meynert* under *cell*.

c. of origin. A nerve cell body of the ganglion or nucleus from which a nerve fiber originates.

c. of termination. A nerve cell whose dendrites receive impulses from the axon of another cell or cells.

cells of Betz. Giant pyramidal cells of the fifth layer of the motor cortex.

cells of Böttcher. Dark polyhedral cells between the basilar membrane and the cells of Claudius.

cells of Claudius. Clear polygonal cells of varying heights, above the basilar membrane of the cochlear duct and beyond the cells of Hensen.

cells of Deiters. (a) The outer phalangeal cells of

the organ of Corti. (b) Large nerve cells in the lateral vestibular nucleus of the medulla.

cells of Hensen. Tall cells with a small base and an enlarged upper part outside the outer phalangeal cells of the organ of Corti.

cells of Kultschitzky. The argentaffin cells of the intestinal glands.

cells of Paneth. Coarsely granular cells found in the crypts of Lieberkühn in the small intestine.

cells of von Gehuchten. See Golgi *cells*, type II.

central c. See chief c.

centroacinar cells. Those of the intercalated ducts of the pancreas which, in certain planes of section, appear surrounded by the zymogenic cells of the pancreatic acini.

chief c. (a) One of the columnar granular cells of the fundic glands of the stomach; the source of pepsin. Also called *zymogenic c.*, *central c.*, *adelomorphous c.*, *peptic c.* (b) A chromophobe cell of the adenohypophysis. (c) The principal cell of the parathyroid, often divided into *dark chief cells* and *light chief cells*.

chromaffin cells. See *chromaffin*. Formerly called *pheochrome cells*.

chromophil cells. The alpha and beta cells of the adenohypophysis.

chromophobe cells. The faintly staining cells of the adenohypophysis, thought to give rise to alpha cells (a) and beta cells (b); also called *chief*, *principal*, *reserve*, or *mother cells*.

ciliated c. One provided with cilia.

clear c. (a) A nonstaining light chief cell of the parathyroid; also called *water-clear c.* (b) A cell considered to be of neural origin which has a small, darkly stained nucleus and clear slightly basophilic cytoplasm in sections stained with hematoxylin and eosin. Syn. *cellule claire*, *cellule claire*. See nevus c., *melanocyte*.

cleavage c. A blastomere.

columnar c. An epithelial cell in which the height is markedly greater than the width.

commissural c. A nerve cell of the gray matter of the spinal cord, the axon of which passes through one of the commissures and enters the white matter of the other side of the cord. Also called *heteromeric c.*

compound granule c. A rounded phagocytic microglia cell with cytoplasm distended with globules of lipid and other debris. Also called *gitter c.*, *scavenger c.*

cone c. See *cone*, 2.

constant c. The galvanic element of a constant battery.

Conway c. A standard microdiffusion vessel consisting of two concentric petri-dish-like containers having the same floor. The outer wall is higher than the inner, and it is sealed with a square glass plate. A standard absorbing fluid, placed in the inner chamber, absorbs by simple gaseous diffusion the volatile substance placed in the outer chamber. It is used clinically in the determination of gases in body fluids, as alcohol in blood.

Councilman c. A liver parenchymal cell characteristic of yellow fever, globular in shape, which has undergone necrosis, nuclear chromatolysis, and has a punched-out hyaline acidophil bodies in the cytoplasm.

counting c. A glass slide for counting, under the microscope, the cells in a blood dilution.

Crooke's c. Beta cells of the adenohypophysis exhibiting Crooke's change.

cuboidal c. An epithelial cell in which height and width are nearly equal.

cylindrical c. A columnar cell.

cytochrome c. See *cytochrome*, 1.

daughter c. A cell resulting from the division of a mother cell.

decidual c. One of the large, rounded, modified, connective-tissue cells characteristic of the deciduae in pregnancy and responsible for their hypertrophy.

Deiters' c. The outer phalangeal cells. See also *Deiters*.

delomorphous c. See parietal c.

delta c. 1. A possible third type of cell in the islets of the pancreas. 2. A second type of the beta cells (b) of the adenohypophysis.

demilune cells. Serous cells forming a cap at the end of a mucous tubule in mixed glands. Also called *cells of Gianuzzi*, *serous crescent*.

dendritic c. *In dermatology*, a melanocyte with many branched offshoots (as shown after impregnation with silver stains, provided a sufficient amount of melanin granules have migrated to the dendrites). Dendritic cells may be related to Langerhans cells.

dentinal c. See *odontoblast*.

disintegrated c. Any cell of any series in which the cytoplasmic outline has been disrupted or the nuclear chromatin is no longer surrounded by a membrane, excluding nuclear changes occurring during mitosis.

Dogiel's cells. Types of nerve cells found in the ganglions of the intramural plexuses of the gastrointestinal tract and in ganglions of the sympathetic chains. **Type I cells** are multipolar, have short branching dendrites synapsing with preganglionic parasympathetic fibers, and an axon terminating in a muscle or gland of the gastrointestinal tract. **Type II cells** are larger than type I, may be unipolar, bipolar, or multipolar, have long dendrites extending to the tunica submucosa, and an axon extending through several ganglions and terminating around a type I cell.

Dorothy Reed c. One of the extremely large cells observed in stained tissue specimens in Hodgkin's disease. See Reed-Sternberg c.

Downey cells. See atypical *lymphocytes*.

dust cells. Macrophages in the pulmonary alveoli.

elementary c. An embryonic cell.

embryonic c. An undifferentiated developmental cell. Also called *elementary c.*, *formative c.*, *primary c.*, *primitive c.*, *primordial c.* Also see *blastema*.

endothelial c. One of the thin, flat cells forming the lining (endothelium) of the heart and blood and lymph vessels.

endothelioid c. One resembling an endothelial cell; sometimes used improperly for epithelioid c.

enterochromaffin c. One of the chromaffin cells scattered throughout the epithelium of the glands of the small intestine and stomach; argentaffin cell.

ependymal c. (a) A cell of the ependymal zone in the developing neural tube. (b) A type of neuroglia cell lining the central canal of the spinal cord and brain.

epithelioid c. A large oval cell with a fairly large vesicular nucleus, resembling an epithelial cell, characteristic of the tubercles in tuberculosis and certain other granulomatous lesions, such as leprosy, tularemia, sarcoidosis; thought to be derived from the reticuloendothelial system (from the histiocyte) or from the lymphocyte or the plasma cell. Also called *alveolated cell*. Often also called *endothelioid*, a term more properly referring to *endothelial*.

ethmoid cells. The paranasal air sinuses which lie in the ethmoid bone; also called *ethmoid sinuses*. See Plate 12.

fat c. A connective-tissue cell in which fat is stored.

fixed c. A reticular cell attached to the reticular fibers in reticuloendothelium.

floor cells. Those found in the floor of the organ of Corti.

foam c. A macrophage (histiocyte) containing lipids in small vacuoles, as seen in leprosy xanthoma. Also called *xanthoma c.*

follicular cells. The epithelial cells of the ovarian follicle exclusive of the ovum.

foreign-body giant c. A multinucleated giant cell with centrally placed nuclei found in foreign-body reactions and in certain granulomatous lesions.

formative c. (a) An embryonic cell. (b) Any cell of the inner cell mass of the blastocyst concerned in the formation of the embryo proper.

free c. A reticular cell detached from the reticular mesh and indistinguishable from a free macrophage.

free rounded c. Myeloblast.

fusiform c. A spindle-shaped cell; spindle cell.

ganglion c. A nerve cell in a ganglion. Formerly any neuron of the central nervous system.

Gaucher c. A large cell characteristic of Gaucher disease and occurring in the bone marrow, spleen, or lymph nodes. The cytoplasm is abundant, fibrillar in appearance, and contains cerebroside. The nucleus is small, dense, frequently eccentric, and occasionally multiple.

genitaloid cells. Primary germ cells of the embryo.

germ c. A spermatozoon or an ovum, or a formative stage of either. Formerly called *gonoblast.*

germinal c. A cell from which other cells are derived, used specifically for dividing cells in the embryonic neural tube.

giant c. A large, multinucleate cell, as the megakaryocytes of bone marrow, the osteoclasts, and Langhans giant cells of tubercles.

giant stellate cells of Meynert. See *solitary cells of Meynert* under *cell.*

gitter c. See *compound granule c.*

glia cells. See *neuroglia.*

goblet c. One of the unicellular mucous glands found in the epithelium of certain mucous membranes, notably those of the respiratory passages and the intestine.

Golgi cells. Nerve cells of two types: **type I**, those with long axons; **type II**, those with short axons that branch repeatedly and terminate near the cell body.

granule c. 1. One of the small nerve cells of the cerebellar and cerebral cortex. 2. See *reticulocyte.*

gryochrome c. See *gryochrome.*

gustatory c. A taste cell.

hair c. An epithelial cell with delicate, hairlike processes, as that of the organ of Corti, which responds to the stimuli of sound waves.

heart-failure cells. Macrophages containing hemosiderin granules found in the pulmonary alveoli and stroma of the lung in certain cardiac diseases. Also found in the sputum of patients with pulmonary congestion.

hecatomeric c. See *hecatomeric.*

heteromeric c. See *heteromeric.*

hilus cells. Cells in the hilus of the ovary which may be functional, hormone-producing cells, related to, or identical with, the interstitial (Leydig) cells of the testis.

Hofbauer c. A large, sometimes binucleate, apparently phagocytic cell found in the connective tissue of the chorionic villi.

horizontal cells. Neurons of the outer nuclear layer of the retina, the axons of which run parallel to the retina.

Hortega c. See *microglia c.*

hyphal c. A cell of the hypha of a mold.

inflammatory c. Any cell appearing as an integral part of an inflammatory exudate; the term includes the neutrophil, eosinophil, lymphocyte, plasmacyte, and histiocyte.

interfollicular cells. (a) Tangential sections of acini of the thyroid gland simulating solid masses of cells between the acini. (b) See *parafollicular cells* under *cell.*

internuncial c. See *interneuron.*

interstitial c. (a) A cell which lies between the germ cells of a gonad. (b) A cell with short, branched processes in an enteric plexus, possibly of microglial nature.

juvenile c. A young metamyelocyte.

karyochrome c. See *karyochrome.*

Kupffer cells. Fixed macrophages lining the hepatic sinusoids.

Langerhans cells. Cells, demonstrable by gold impregnation, seen in the epidermis; they may be related to dendritic cells and cellules claires, or they may be worn out melanocytes.

Langhans c. One of the discrete cuboidal cells forming the cytotrophoblast layer of the chorionic villi during the first half of pregnancy.

Langhans giant c. A multinucleated giant cell with peripheral, radially arranged nuclei found in certain granulomatous lesions, as tuberculosis, leprosy, tularemia.

LE c. See *lupus erythematosus cell.*

lepra c. Large mononuclear cell associated with lepromatous lesions, which contains the acid-fast organisms of leprosy.

Leydig c. One of the interstitial cells of the testis, thought to be the source of male sex hormones.

littoral cells. The macrophages which line lymph sinuses in lymphatic tissue, or the sinusoids of bone marrow. Also called *lining cells.*

lupus erythematosus c. See under *lupus.*

lutein cells. Cells of the corpus luteum. **Follicular (granulosa) lutein cells** are derived from the follicular cells of the ovarian follicle; **paralutein (theca lutein) cells** are modified connective-tissue cells from the theca folliculi.

lymphoblastic plasma c. See *plasmablast, proplasmacyte.*

lymphoid c. A mononuclear cell resembling a lymphocyte.

lymphoid stem cells. Lymphoblasts; hemocytoblasts.

lymphoid wandering cells. Lymphocytes or monocytes in connective tissue.

malakoplakia c. See von *Hansemann cells* under *cell.*

Martinotti's c. See *G. Martinotti.*

mast c. One found in connective tissue characterized by large, basophil, metachromatic granules.

mastoid c. One of the compartments in the mastoid part of the temporal bone, connected with the mastoid antrum and lined by a thin mucous membrane. Also called *mastoid air c.*

mesameboid c. A primitive cell. See *stem c.*

mesenchymal c. One found in mesenchyme and capable of differentiating into any of the special types of connective tissue. Also called *fixed undifferentiated mesenchymal c.*

microglia c. A small glia cell which becomes phagocytic under pathologic conditions and acts to remove debris. Also called *Hortega c.*

Mikulicz c. A large round or oval phagocytic cell with vacuolated cytoplasm and a small pycnotic nucleus, characteristic of rhinoscleroma.

mitral c. A large nerve cell in the olfactory bulb.

mother c. (a) The cell from which daughter cells

are formed by cell division. (b) The chromophobe cells of the adenohypophysis.

motor c. An efferent neuron; specifically an anterior horn *c.*

mucin c. See mucous *c.*

mucoserous c. A cell intermediate in characteristics between mucous and serous cells. Also called *mucoalbuminous c.*

mucous c. One which secretes mucus.

mucous neck cells. Mucous cells in the necks of gastric glands.

multipolar c. One, usually a neuron, which has more than two processes.

myeloid c. See *osteoclast.*

myeloma c. See *plasmacyte; plasmablast.*

myoepithelial c. One of the smooth muscle cells of ectodermal origin in sweat, mammary, lacrimal, and salivary glands.

naked c. One which has no demonstrable cell membrane.

neuroglia cells. See *neuroglia.*

neutrophil c. See *neutrophil.*

nevus c. A cell, considered to be of neural origin, whose histologic appearance varies with location and stage of maturation. Transition appears to be from the clear cell (cell clairs) found in greater number in the junction nevus of childhood, to a fusiform cell, found principally in the adult, which in many instances resembles a tactile corpuscle and is associated with structures resembling neurofibrils.

nonsegmented polymorphonuclear c. See band *c.*

olfactory c. One of the sensory nerve cells in the olfactory epithelium.

"owl eye" cells. Cells appearing in pairs, with large nuclei and prominent nucleoli, which are diagnostic of developing lesions in rheumatic fever.

oxyntic c. See parietal *c.*

oxyphil c. 1. See parietal *c.* 2. Acidophil cell found in the parathyroid, especially in the periphery.

parafollicular cells. Argyrophil cells in the thyroid epithelium.

paralutein cells. See *lutein cells* under *cell.*

parent c. See mother *cell* (b).

parietal c. One of those found in the periphery of the fundic glands of the stomach, immediately beneath the basement membrane. Their function is supposedly the secretion of hydrochloric acid. Also called *acid c., delomorphous c., oxyntic c.*

perithelial c. See adventitial.

pessary c. An erythrocyte appearing in a stained smear as a pinkish halo with empty or pale centers; obsolete term.

phalangeal cells. Supporting cells in the organ of Corti. The **inner phalangeal cells** are arranged on the inner surface of the pillar cells; the **outer phalangeal cells,** called *Deiters' cells,* on the outer surface.

pheochrome c. See *chromaffin.*

photoelectric c. A cell or vacuum tube whose electrical properties can be modified by the intensity of light. Light can vary the resistance (photoconductive cell), cause the emission of electrons (photoemissive cell), or generate an internal emf (photovoltaic cell), depending on the structure of the cell.

physaliphora cells. Spheroidal nucleated cells, containing glycogen or mucin, characteristic of chordoma.

Pick c. See foam *c.*

pigmented c. One containing granules of pigment.

pillar c. One of those bounding the tunnel in the organ of Corti.

plasma cells. See *plasmacyte.*

polar cells. See *polar bodies* under *body.*

porous c. A porous jar containing an electrolyte in a galvanic battery.

pregnancy cells. Alpha cells of the adenohypophysis distinguished by their smaller size and finer granules seen during pregnancy.

prickle c. A cell possessing delicate rod-shaped processes by which it is connected with neighboring cells.

primary c. Embryonic or undifferentiated cell.

primary wandering c. A primitive cell. See stem *c.*

primordial germ c. One of the large spherical cells found in the germinal epithelium of the gonad, which are frequently considered to be primordia of the ova and spermatozoa.

principal cells. Chromophobe cells.

pro c. Any cell of the second stage of development of a blood cell, without identifying the specific series to which it belongs.

pseudoplasma cells. Old term for monocytes in the spleen.

pulp cells. Cells found in the pulp tissue of any organ.

Purkinje cells. (a) Cells of the cerebellar cortex with large, flask-shaped bodies forming a single cell layer between the molecular and granular layers. Their dendrites branch in the molecular layer in a plane at right angles to the long axis of the folia, and their axons run through the granular layer into the white substance to end in the central cerebellar nuclei. (b) See *Purkinje fibers* under *fiber.*

pus c. A degenerate or necrotic leukocyte; the characteristic cell of suppurative inflammation.

pyramidal c. A nerve cell of the cerebral cortex, usually somewhat triangular on longitudinal section, with one large apical dendrite and several smaller dendrites at the base. The axon is given off from the base of the cell or from one of the basal dendrites.

pyrrhol c. A mononuclear cell found in exudates, which stains supravitally with pyrrhol blue.

Rauber's c. One of the trophoblast cells overlying the inner cell mass in many mammals; they disappear, leaving the blastoderm superficial and continuous with the trophoblast.

red blood c. Erythrocyte. See Plate 26.

Reed-Sternberg c. The characteristic cell of Hodgkin's disease; a giant cell with homogeneous cytoplasm and one or more large oval vesicular nuclei; the nuclei in the multinuclear forms are overriding.

reserve cells. (a) Small undifferentiated epithelial cells at the base of the stratified columnar lining of the bronchial tree. (b) Chromophobe cells.

resting c. One in the interphase or vegetative stage of mitosis.

resting wandering c. Old term for *histiocyte.* See also fixed *macrophage.*

reticular c. (a) An undifferentiated cell of reticular tissue. (b) A reticulocyte or reticulated red blood cell of the bone marrow or peripheral blood.

reticuloendothelial c. See reticuloendothelial *system.* Also see *macrophage.*

Rieder's cells. Atypical, supposedly senile, lymphocytes. See Herman *Rieder.*

rod c. (a) An elongated microglia cell found in the cerebral cortex in various pathologic conditions, especially general paralysis of the insane. (b) Band *c.* (c) See *rods of the retina* under *rod.*

root c. See anterior horn *c.*

Rouget cells. Branched cells on the external wall of capillaries which are contractile in the frog, but probably not in the mammal.

round c. A mononuclear phagocytic cell in an inflammatory lesion; also called *polyblast*.

sarcogenic c. Myoblast.

satellite cells. The neurilemmal cells around nerve cells in ganglions; also called *capsule cells*. Syn., *amphicytes*.

scavenger c. See compound granule c.

Schwann cells. See *neurilemma*.

segmentation c. Blastomere.

segmented c. Any mature granulocyte (basophil, eosinophil, neutrophil) in which the lobes of the nucleus are connected by a filament; also called lobocyte.

sensory c. One of those adapted for the reception and transmission of sensory impressions.

sensory epithelial c. One of the modified epithelial cells in an organ of sense connected with the nerves of that organ.

sensory nerve c. A nerve cell which receives sensory impulses from a sense organ.

septal cells. Macrophages in the interalveolar septa of the lung. See *heart-failure cells*.

serous fat c. An atrophic fat cell found in serous atrophy of adipose tissue.

serozymogenic c. That type of serous cell resembling pancreatic acinous cells and gastric chief cells, found in the parotid gland of most mammals and the submaxillary gland of man.

Sertoli cells. The sustentacular cells of seminiferous tubules.

shadow c. A cell characteristic of calcifying epithelioma, whose well-outlined cytoplasm stains pink with hematoxylin and eosin, but which shows a central unstained "shadow" in place of the nucleus.

sickle c. A crescent-shaped erythrocyte found in a form of anemia occurring almost exclusively in Negroes.

signet-ring c. A fat cell with an eccentrically placed nucleus in a thin rim of cytoplasm surrounding a large fat globule. The term is sometimes used also to describe castration cells.

sister c. One formed simultaneously with another in the division of a mother cell.

skein c. Ehrlich's term for *reticulocyte*, 1.

smudge c. Degenerate leukocytes in blood smears.

solitary cells of Meynert. Giant pyramidal cells arranged in a single row in the visual area of the cerebral cortex; also called *cells of Meynert*, *giant solitary cells of Meynert*.

somatic cells. All the cells of the body except the germ cells.

somatochrome c. See *somatochrome*.

Sorby's c. A narrow-lumen glass receptacle used for the spectroscopic examination of blood, made of barometer tubing, both ends of which are accurately ground to parallel surfaces, one end being cemented to a small polished glass plate.

sperm c. Spermatozoon.

spider c. Astrocyte.

spindle c. (a) A fibroblast or smooth muscle cell which is spindle-shaped. (b) A fusiform or spindle-shaped cell, typical of a variety of sarcoma.

squamous c. A thin, flat epithelial cell.

stab c., stab-kernel c. See band

staff c. See band *c*.

standard c. An electrolytic cell having a definite voltage, as the Weston cell.

star cells. The phagocytic, fixed macrophages lining the hepatic sinusoids. Syn., *Kupffer cells*.

stellate c. Any cell with numerous processes making it appear star-shaped, as a Kupffer cell or astrocyte. Also called *star c*.

stem c. (a) A formative cell. (b) A totipotential cell derived from the primitive mesenchyme, considered by proponents of the unitarian theory of hematopoiesis to be the primitive blood cell, giving rise to all other blood cells. Syn., *hemoblast*, *hematogone*, *hemocytoblast*, *hemohistioblast*, *lymphoidocyte*, *mesamoeboid cell*, and *primary wandering cell*.

Sternberg c. See Reed-Sternberg *c*.

Sternheimer-Malbin cells. Leukocytes with cytoplasm containing granules agitated by brownian movement, seen in urinary sediments of patients with urological disorders, as in pyelonephritis.

stichochrome c. See *stichochrome*.

supporting c. See sustentacular c.

sustentacular c. One of the supporting cells of an epithelium as contrasted with other cells with special function, as the non-nervous cells of the olfactory epithelium or the Sertoli cells of the seminiferous tubules.

swarm cells. The motile reproductive cells of certain algae; swarm-spores; zoospores.

sympathetic c. A nerve cell of the sympathetic nervous system as contrasted with one of the central system.

sympathicotropic cells. Large, epithelioid, probably chromaffin cells associated with unmyelinated nerves in the hilus of the ovary.

sympathochromaffin c. One of the precursors of sympathetic and medullary cells in the adrenal medulla.

syncytial c. Any cell forming part of a syncytium, as cardiac and skeletal muscle cells, reticular connective-tissue cells, syncytiotrophoblast cells.

tactile c. An epithelial cell modified for reception of a tactile stimulus.

target c. An abnormal erythrocyte which, when stained, shows a central and peripheral zone of hemoglobin separated by an intermediate unstained area and thus resembles a "bull's" eye target. Found after splenectomy and in several types of anemia, etc. Also called *Mexican hat c*.

tart c. A polymorphonuclear leukocyte which has two nuclei, usually found in the bone marrow of patients with lymphoblastoma, pulmonary infections, or metastatic carcinoma.

taste c. An epithelial cell which receives a gustatory stimulus, as in the taste buds.

tautomeric c. See *tautomeral*.

trephocyte c. See mucocutaneous c.

Türk's irritation c. A lymphoid cell with eccentric, deeply staining nucleus related to the plasmacyte, but retaining the nuclear pattern of the myeloblast.

tympanic c. A mastoid air cell.

unipolar c. A nerve cell with one process only, as a cell of the dorsal root ganglions.

Unna cells. See *Russell bodies* under *Russell, William*.

von Hansemann's cells. Large multinuclear epithelioid cells with basophilic inclusions, seen in malakoplakia.

vasoformative c. A cell concerned in the development of blood vessels.

Virchow c. See lepra c.

visual c. One of the rods or cones of the retina.

wandering c. A leukocyte in connective tissue.

Warthin–Finkeldey giant cells. Multinucleated giant cells found in lymphoid tissue, particularly the tonsils and the appendix, in patients with measles. They contain many small, moderately vesicular nuclei closely clumped together and relatively scanty cytoplasm. The nuclei may number 100 in a cell and give the so-called mulberry outline.

wasserhelle c. [Ger., clear-as-water]. A clear cell.

whip c. A flagellated cell.

white blood c. Leukocyte.
xanthoma c. See foam c.
zinc-carbon c. A galvanic cell in which the electrodes are zinc and carbon.
zinc-copper c. A galvanic cell in which the electrodes are zinc and copper
zymogenic c. A cell which forms an enzyme, as that in pancreatic acinus.

cel'la [L.]. The central part of the lateral ventricle of the brain, extending from the interventricular foramen to the splenium of the corpus callosum.

celle claire cellule claire. See clear cell, (b)

cell mass. *In embryology* group of cells forming the primordium of an organ or of an organism.
inner c. m. That at the animal pole of the blastocyst, from which the embryo and certain adnexa are derived.
intermediate c. m. Nephrotome.

cel"lo- [*cella*] *In chemistry* combining form denoting *cellulose*

cel"lo bi'ose A disaccharide, $C_{12}H_{22}O_{11}$ formed by the partial hydrolysis of cellulose. On hydrolysis it yields two molecules of glucose.

cel"lo-dex'trin. Any of mixture of dextrinlike substances resulting from partial hydrolysis of cellulose by acids.

cel loi'din. One of many cellulose nitrates or cellulose acetates used for embedding tissues in histologic technic. Also called *soluble guncotton, pyroxylin*

cellophane Trade-mark for nonpermeable, transparent cellulose derivative used to maintain moisture in, or to protect, surgical dressing.

celloslik. See *cellophane*.

cel"lu lase Any of several enzymes, found in bacteria and other lower organisms, capable of catalyzing the hydrolysis of cellulose to cellobiose.

cel'lule [L. *cellula* dim. of *cella*]. A small cell *Rare*.
c. claire. See clear cell, (b)

cel"lu lif'u gal [*cellula*; L. *fugere*, to flee]. Pertaining to the transmission of impulses from nerve cell. *Rare*

cel"lu lin. Cellulose.

cel"lu-li'tis [*cellula*; G -*itis*, inflammation]. A diffuse inflammation of connective tissue.
ischiorectal c. Inflammation of the connective tissue in the ischiorectal fossa
orbital c. A condition, occurring with acute sinusitis, in which the eyelids are red and edematous The conjunctiva is very edematous, and proptosis, motion limitation, and diplopia eventually occur
pelvic c. Inflammation of the connective tissue of the true pelvic cavity
pneumococcus c. That due to the invasion of *Diplococcus pneumoniae*.

cel"lu-lo sa [*cellula*]. A cellular coat.
c. chori idea. The external layer of the choroid coat of the eye

cel'lu lose [*cellula*]. $(C_6H_{10}O_5)_n$. The principal carbohydrate constituent of the cell membranes of all plants. Absorbent cotton is one of the purest forms of cellulose commercially wood is the principal source of it. Pure cellulose is white, amorphous mass, insoluble in most of the common solvents.
absorbable c. Oxidized cellulose.
c. acetate phthalate. A substance prepared by heating together phthalic anhydride and cellulose acetate used for enteric coating of tablets and capsules. It is said to permit disintegration in the intestines within eight hours after ingestion
c. ether A product resulting from the reaction of caustic alkali derivative of cellulose and an alkyl ester of organic acid. An important compound of this type is methyl cellulose.
oxidized c. Cellulose, in the form of cotton or gauze, which has been oxidized by nitrogen dioxide so as to introduce carboxyl groups into the molecule, thereby imparting to the product hemostatic effect and also the property of being absorbed when buried in tissues. It is useful for surgical hemostasis. Syn., *absorbable cellulose, cellulosic acid*. See *oxycel*.

cel"lu lo sic ac'id. The form of cellulose, characterized by the presence of carboxyl groups, present in oxidized cellulose.

ce'lom. See *coelom*.

ce'lo-scope, coe'lo-scope [G *koilos*, hollow; *skopein*, to examine]. An instrument for illuminating and examining cavity of the body

ce"lo-so ma [G *kēlē*, hernia; *sōma*, body]. Congenital body cleft, with eventration; associated with various anomalies of the extremities, of the genitourinary apparatus, of the intestinal tract, and even of the whole trunk. Syn., *gastroschisis, abdominal fissure*.

ce"l -so mus [*kēlē*, *sōma*]. A monster with celosoma.

ce"l the"li-o ma [G *koilos*, hollow; *thēlē*, nipple; -*ōma*, tumor]. Old term for *mesothelioma*.

Cels. Celsius

Cel'si-us [after Anders *Celsius* Swedish astronomer 1701–44]. A centigrade thermometer or scale. Abbreviated, C., Cels.

Celsus, Aulus Cornelius [*Roman physician and writer* first century] The first medical historian of note. Author of *De Medicina*, the oldest of medical documents after those of Hippocrates. His manuscript was not discovered until 1443. This provided the greater part of our information of the medicine of the Hellenic period, and contained the first translation of Greek medical terms into Latin. His method of performing amputation was to divide the skin in a circular incision and retract it, the muscles and bone being cut on level with the retracted skin—an operation not unlike the modern circular amputation.

celti um. A supposed rare earth element which is probably identical with hafnium.

ce-ment' [L. *caementum*, rough stone]. 1. Any plastic material capable of becoming hard and of binding together the objects that are contiguous to it. 2. Filling material for the teeth. 3. The cementum of the teeth See *cementum*.
c. substance The substance holding together the endothelial cells of the intima of blood vessels.
intercellular c. The substance holding epithelial cells together
interprismatic c. The substance holding the enamel prisms together

ce ment'i cle [dim of *caementum*]. A calcified body found free in the connective tissue of the periodontal membrane, or fused with the cementum of tooth.

ce ment"i fi-ca'tion [*caementum*, L. *facere*, to make]. Formation of cementum about the dental root.

ce men to-blast [*caementum*, G *blastos*, germ] An osteoblast that takes part in the development of the dental cementum.

ce ment"o-blas to ma. A benign odontogenic tumor made up principally of cementum-forming cells and varying amounts of cementum.

ce men to-de 'ti nal [*caementum*, L. *dens*, tooth]. Relating to the cementum and dentin of tooth

ce-ment"t gen -al [*cement*; G *genesis*, production]. Formation of the cementum.

ce me t ma (see men to muh, sem en-) [*caementum*, G. -*ōma*, tumor]. A benign odontogenic tumor made up of cementum.

ce·men"to·pa'thi·a [*cementum*; G. *pathos*, disease]. See *pericementoris*.

ce·men"to·per"i·os·ti'tis [*cementum*; G. *periosteon*, around the bone; *-itis*, inflammation]. Pyorrhea alveolaris.

ce"men·to'sis (see men-to sis, sem en) [*cementum*; G. *-osis*, increase]. A thickening of the cementum on the root of tooth; sometimes associated with excess stresses, or may result from bacterial or other irritations. See *hypercementosis*.

ce·men'tum [*cementum*]. The bony tissue that covers chiefly the root of tooth, in man, and may cover parts of the crown of teeth in certain animals, such as the ungulates.

C. E. mix'ture. An inhalation anesthetic composed of mixture of chloroform and ether; now rarely used.

cen"o·del'phus. See *diplopagus*.

ce"nes·the'si·a, ce"naes·the'si·a, coe"nes·the si·a, coe nes the si a (see nes-thee zhuh, -zee uh, sen ess-) [G. *koinos*, common; *aisthēsis*, sensation]. The general sense of bodily existence, the irreducible level of consciousness. —cenesthet'ic, *adj*.

ce"nes·thop thy, cae"nes·thop thy, ce" nes·thop thy coe naes thop thy (see ness thop uth ee, sen ess-) [*koinos*; *aisthēsis*; G. *pathos*, disease]. The general feeling of discomfort or fatigue in illness; it may be accompanied by mild form of depersonalization.

ce"no·gen'e·sis, cae no·gen' sis (see no-jen'i-sis, sen) [G. *kainos*, new; *genesis*, production]. The development of structures during ontogeny in adaptive response to the embryonic, larval, or fetal mode of life; opposed to *palingenesis*. See recapitulation theory. —cenogenet'ic, *adj*.

cenolate. Trade-mark for the methylglucamine salt of ascorbic acid, administered intramuscularly or subcutaneously.

cenolate-C. Trade-mark for ampule of methyl glucamine ascorbate used, by intramuscular or subcutaneous injection, in vitamin-C deficiencies.

cen"o·pho'bi·a (sen f 'bee-uh, see no-) See *kenophobia*.

ce"no·site (see'no sight, sen o-) See *coinosite*.

cen'sor·ship [L. *censor* from *censere*, to value]. *I* *psychoanalysis*, the restrictions imposed upon pure instinctual impulse by counterforces in th unconscious and conscious levels of the mind before it discharges itself upon the environment.

cen'tau·ry [G. *kentaurion*, from the centaur Chiron]. 1. A popular name for various plants of the genus *Centaurium*. 2. The dried flowering plant of *Centaurium umbellatum*, small annual, native to Europe and cultivated in the United States. Centaury possesses the bitter properties of the gentians and has been used as stomachic.

cen'ter [G. *kentron*, sharp point, center of circle]. 1. The middle point of any surface or of body. 2. A nucleus or collection of nuclei in the brain or spinal cord regulating particular function. See also area, nucleus.

autonomic c. Any center of the brain or spinal cord regulating visceral functions by way of the parasympathetic and thoracolumbar outflows.

cardioaccelerator c. (a) See spinal cardioaccelerator c. (b) Any one of the three postulated higher centers. The precise locations of these centers are not known; they are thought to be in the floor of the fourth ventricle in the posterior hypothalamic region, and in the motor and premotor areas of the cerebral cortex.

cardioinhibitory c. The dorsal motor nucleus of the vagus from which arise inhibitory fibers t the heart.

c. of curvature. *In ophthalmology*, the center of the sphere of which lens curvature is the segment.

c. of ossification. A region at which bone first appears in cartilage or membrane.

c. of rotation. *In ophthalmology*, the point around which the eyeball rotates under the action of the extrinsic muscles.

chondrification c. A region at which cartilage is first formed.

ciliospinal c. The sympathetic nervous center in the eighth cervical and first three thoracic segments of the spinal cord the origin of cervical sympathetic nerves which innervate the dilator muscle of the pupil of the eye.

convergence c. The medial group of cells of the oculomotor nucleus.

defecation centers. Those controlling the def ecation reflex. The medullary defecation center is located in the floor of the fourth ventricle the subsidiary spinal defecation center in the second, third, and fourth sacral segments of the spinal cord.

division c. Centrosome. Also called *cell c.*

germinal c. The actively proliferating region of lymphatic nodule in which lymphocytes are being formed. Also called *germ c.*

glycogenic c. One supposedly in the tegmental region of the pons; lesions in this area cause hyperglycemia.

gustatory c. *The center for taste located in the* anterior end f the nucleus of the tractus solitarius.

heat-regulating centers. Centers in the hypothalamus for the control of heat production and heat elimination and for regulating the relation of these.

higher c. A center usually located in the cerebrum; associated on the sensory side with consciousness, on the motor side with regulation of primary efferent *nuclei*.

hypothalamic centers. Superior centers for the autonomic nervous system. Those for the sympathetic system are located in the posterior group of hypothalamic nuclei; those for th parasympathetic system, in the anterior and middle clei.

lower c. A center of the brain stem or spinal cord, one concerned with reflex pathway or one receiving impulses from higher center

median c. The centromedian ucleus of the thalamus. Also called *centrum medianum*.

medullary c. Centrum ovale.

micturition centers. Those governing the micturition reflex. Higher centers are located in the mesencephalon and in the medulla oblongata; the spinal micturition center is located in the second, third, and fourth sacral segments of the spinal cord.

optical c. The point where the secondary axes of refractive system meet and cross the principal axis. See *Gaussian points* under *point*.

organization c. See *organizer*

pneumotaxic c. A functional center which acts like the nucleus of the vagus in limiting inspiration and allowing expiration to begin.

projection c. Old term for projection area.

pupilloconstrictor c. Edinger Westphal nucleus. See under *nucleus*.

pupillodilator c. See ciliospinal c.

reaction c. The actively proliferating region of lymphatic nodule in which cells other than lymphocytes, e.g. macrophages, are being formed.

receptive centers. *I physiology* and in *psychophysics*, nerve centers which receive influences that may excite sensations or some kind of activity not associated with consciousness.

reflex c. Any nerve cell or group of nerve cells in

the central nervous system which transforms an afferent impulse int an efferent one.

respiratory c. A region at the calamus scriptorius, probably including the nucleus of the tractus solitarius and the dorsal sensory nuclei of the vagus, which regulates respiratory movements.

spinal cardioaccelerator c. That in the lateral column of the upper five thoracic segments of the spinal cord from which arise the preganglionic fibers of the accelerator nerves to the heart.

taste c. The gustatory nervous center located in the anterior end of the nucleus of the solitary fasciculus

trophic centers. Centers regulating the nutrition of nerves, or through them, of organs.

vasoconstrictor c. That located in the floor of the fourth ventricle at the apex of the ala cinerea, regulating constriction of the blood vessels.

vasodilator c. That located in the floor of the fourth ventricle just lateral to the obex, regulating dilation of the blood vessels.

vasomotor centers. The vasoconstrictor and vasodilator centers.

vomiting c. A region located dorsolaterally in the reticular formation of the medulla oblongata it includes the tractus solitarius and its nucleus of termination this region is also concerned in associated activities such as salivation and respiratory movements.

cen'ter ing, cen tri g [*kentron*]. 1. *I microscopy*, arrangement of an object or an accessory so that its center coincides with the optical axis of the microscope. 2. *I optics*, placing of the lens before the eye or in spectacle frame so that the visual axis passes through the optical center of the lens. The decentering of the lens produces prism effect.

cen te sis (G *kentēsis*, pricking). Puncture perforation.

cen'ti bar [L. *centum*, hundred G *baros*, weight]. A unit of atmospheric pressure it is one one-hundredth of bar 5.

cen'ti grade [*centum*; L. *gradus*, step]. Having 100 divisions or degrees Abbreviated, C

cen'ti gram, cen'ti gramme [F *centigramme*]. The hundredth part of gram, equal to 0 1543 grain. Abbreviated, cg, cg.

cen ti li"ter cen'ti li tre (sen ti lee tur) [F *centilitr*]. The hundredth part of liter equal to 0 6102 cubic inch. Abbreviated, cl, cl

cen'ti me"ter cen ti me'tre [L *centum*, hundred G *metron*, measure] The hundredth part of meter equal to 0 3937 (or about ⅖) inch Abbreviated, C C c. cm, cm.

cubic c. A unit of volume represented by cube one centimeter on edge for all practical purposes it is equivalent to milliliter Abbreviated, cc, cc

cen"ti nor'mal [*centum*, L *normalis*, made according to the square]. Having one one-hundredth of the normal strength, said of solution containing one one-hundredth of gram equivalent of the solute in 1 liter of solution.

cen ti pede [L. *centipeda*, from *centum*, *pes*, foot] Any myriapod of the class Chilopoda, with pair of legs on each segment of the body except the last two The claws of the first body segment have openings at the tips for expulsion of neurotoxic venom. Centipedes of temperate climates seldom produce more than mild, local symptoms in man. Tropical species cause necrotic local lesions as well as general symptoms of lymphangitis, vomiting, fever and headache.

cen'ti poise A unit of viscosity one one-hundredth of poise. It is the viscosity of water t 20° C.

centr-. See *centro-*

cen trad [G *kentron*, center of circle L. *ad*, to]. Toward the center or toward the median line.

cen'trad. An angular measure, one one-hundredth of radian bout 0.57°

cen'trage (sen trayd]) [G *kentron*, center of circle] Condition in which the centers of all the refracting surfaces of the eye are in one straight line.

cen tra phose (sen truh-foze) [G *kentron*, center of circle; a- not *phōs*, light]. A subjective sensation of darkness originating in the optic centers.

cen"trax ial al [*kentron*; G *axōn*, axis]. *I biology*, having central axial line.

cen tren ce phal'ic. A term introduced by W G. Penfield (1950) to describe the neuron systems which are symmetrically connected with both cerebral hemispheres and which serve to coordinate their functions. These circuits are located in the higher brain stem and include the thalamus with the diencephalon, the mesencephalon, and rhombencephalon.

cen tric'i put (sen tris'i putt) [*kentron*, L. *caput*, head]. The midhead; the second cranial segment situated between the sinciput and the occiput. O.T —**centricip'ital** *adj*

cen trif'u gal [*kentron*, L. *fugere*, to flee]. Proceeding from the center to the periphery

cen trif'u gal ma-chine A centrifuge.

cen'tri fuge [*kentron*, *fuger*]. An apparatus for separating substances of different densities by centrifugal force.

cen'tri fuge T submit (a substance) to the action of centrifuge. See *ultracentrifuge*. —**centrifugation centrif gallza tion**, *n*.

centrine. Trade-mark for α α-diphenyl-γ-dimethylaminovaleramide, an anticholinergic substance. See *aminopentamide*

cen tri ole [*kentron*, L. *-olus*, dim. suffix]. A minute body rod, or granule, usually found in the centrosome and frequently considered to be the active, self-perpetuating, division center of the cell. See *blepharoplast*, *diplosome*.

anterior c. That giving rise to th axial filament of the spermatozoon.

posterior c. That forming the annulus of the center piece of the spermatozoon.

cen-trip'e tal [*kentron*, L. *petere*, to seek]. Traveling toward the center from the periphery

cen tro-, centr- [*kentron*]. A combining form denoting *center* or *centrosome*.

cen'tro-cyt [*kentron*, G. *kytos*, cell]. A cell containing single and double granules of various sizes. Also called *Lipschütz cell*.

cen"tro des'mose (sen tro des mose, -des mose) **cen"tro-des mus** (-dos mus, -des mus) [*kentron*, G *desmos*, band]. The primary band which connects the centrosomes and gives rise to the central spindle in cell division

cen"tro-den tous [*kentron*; G *odous*, tooth]. Furnished with sharp-pointed teeth.

cen"tro lec'i thal (sen"tro les'i thul) [*kentron*, G *lekithos* yolk]. Having the yolk in the center as insect eggs.

cen'tro-mere [*kentron*, G *meros*, part]. A small body t the constriction in chromosome where t is ttached to spindle fiber

cen'tro phose (sen tro fose) [*kentron*, G. *phōs*, light]. A subjective sensation of light originating in the optic centers.

cen'tro-some [*kentron*; G *sōma*, body]. The centrosphere together ith the centriole or centrioles Also called *central body*

cen tro-sphere [*kentron*, G *sphaira*, sphere]. A hyaline body of differentiated cytoplasm found at the center of the astral rays in mitosis and miosis. Also called *astrosphere*.

cen"tro-the ca. See *idiosome*.

cen'trum [kentron]. The center or middle part; the body of a vertebra, exclusive of the bases of the neural arches.

c. medianum. The centromedian nucleus of the thalamus; it lies between the medial and lateral nuclei.

c. ovale. Medullary center; the central white matter seen on making a section of the brain at the level of the upper surface of the corpus callosum.

c. semiovale. See *c. ovale.*

c. tendineum. Central tendon of the diaphragm.

Cen"tru-roi'des (sen troo-roy'deez). A genus of Scorpionida, the true scorpions. Some species with seriously poisonous bites are the **C. suffusus** (the durango) and the **C. exilicauda**, found from the southern United States to Panama, and the **C. sculpturatus**, found in Arizona.

ce-phae'-line. $C_{28}H_{38}N_2O_4$; an alkaloid of ipecac which, with emetine, is chiefly responsible for its emetic activity.

ceph al-. See *cephalo-*.

ceph al ad [G. *kephalē*, head; L. *ad*, toward]. Toward the head.

ceph"a lal'gi-a, ceph"a lal gy, ceph"al gi-a [*kephalē*; G. *algos*, pain]. Headache. —**cephalalgic,** *adj.*

histaminic c. Intense headache with pain confined to the area of the external carotid artery (eye, temple, neck, and face), caused by histamine.

Ceph" -lan thus [*kephalē*; G. *anthos*, flower]. A genus of the Rubiaceae. **C. occidentalis** is the common buttonbush of North America; its bitter bark has been used as laxative and tonic and in periodic fevers and paralysis. The bark contains *cephalin*, a crystalline acid principle, *cephalatin*, a bitter principle, and a toxic glycoside, *cephalanthin*.

ceph" le [G. *kephalaia*, inveterate headache]. Headache; especially severe or chronic headache, with intolerance of light and sound.

ceph"al'gi-a. Cephalalgia.

ceph al he"ma to ma (-hee muh-to muh, hem uh-) [G. *kephalē*, head; *haima*, blood; *-ōma*, tumor]. 1. A collection of blood beneath the pericranium, forming a tumorlike swelling. 2. Caput succedaneum.

ceph al hy'dro-cele [*kephalē*; G. *hydōr*, water; *kēlē*, tumor]. Effusion of cerebrospinal fluid beneath the scalp in fractures of the skull.

ce-phal'ic [*kephalē*]. Pertaining to the head.

cephalic vein. A vein located on the lateral side of the arm which drains blood from the radial side of the hand and forearm into the axillary vein.

ceph'a-lin [*kephalē*]. 1. Any of the phospholipids, found in brain and spinal tissues of mammals, which upon hydrolysis yield either β-aminoethyl alcohol (choline) or serine, with glycerin, phosphoric acid, and a mixture of saturated and unsaturated fatty acids. 2. A crystalline acid principle from the bark of *Cephalanthus*.

ceph a-li'tis. See *encephalitis*.

ceph a-li-za'tion [*kephalē*]. *In biology*, concentration of important organs at the head region of the body.

ceph a-lo-, ceph'al- [*kephalē*]. A combining form denoting the *head*.

ceph"a-lo-cau'dal [*kephalē*; L. *cauda*, tail]. *In anatomy*, relating to the long axis of the body, head to tail.

ceph'a-lo-cele (sef'uh lo seel" al fal") [*kephalē*; G. *kēlē*, tumor]. Hernia of the brain; protrusion of a mass of the cranial contents. See *encephalocele*.

ceph"a-lo-cen te'sis [*kephalē*; G. *kentēsis*, pricking]. Surgical puncture of the cranium.

ceph" lo chord" [*kephalē*; G. *chordē*, string]. The cephalic portion of the notochord.

ceph" lo-di pro so-pus (-dye-pro so-pus, -dye" pro-so pus) [*kephalē*; G. *dis*, twice; *prosōpon*, face]. A monster having attached to its head a more or less incomplete parasitic head; a form of dicephalus parasiticus or diprosopus parasiticus.

ceph lo-dym'l [*kephalē*; G. *-dymos*, -fold]. See *craniopagus*.

ceph"a lo gen'e-sis [*kephalē*; G. *genesis*, production]. The origin and development of the primordia of the head.

ceph'a lo graph" [*kephalē*; G. *graphein*, to write]. An instrument for diagrammatically recording the size and form of the head.

ceph" log'ra phy [*kephalē*; *graphein*]. A method of diagrammatically recording the size and form of the head. Also see roentgenographic *cephalometer*.

ceph"a-lo-gy ric [*kephalē*; G. *gyros*, circle]. Pertaining to or causing rotation of the head.

ceph lo hem to-cele, ceph"a lo hae m a-to-cele [*kephalē*; G. *haima*, blood; *kēlē*, tumor]. A hematocele beneath the scalp communicating with a dural sinus.

ceph" lo he-mom e-ter, ceph"a lo-hae-mom' e-ter [*kephalē*; *haima*; G. *metron*, measure]. An instrument for noting changes in the intracranial blood pressure.

ceph' loid [*kephalē*; G. *eidos*, form]. Resembling the head; head-shaped.

ceph" lom' lus [*kephalē*; G. *melos*, limb]. A monster having a supernumerary limb attached to the head.

ceph a-lo-me ni a [*kephalē*; G. *mēn*, month]. Vicarious menstruation through the nose.

ceph lo-men in gi'tis [*kephalē*; G. *mēninx*, membrane; *-itis*, inflammation]. Inflammation of the meninges of the brain.

ceph lom'e-ter [*kephalē*; G. *metron*, measure]. *In craniometry*, an instrument for measuring the head.

roentgenographic c. One combined with roentgenographic equipment for the production of complementary lateral and frontal roentgenograms for measuring head growth; also called *Broadbent-Bolton*.

ceph a-lom e-try [*kephalē*; *metron*]. *In plastic surgery and orthodontics*, use of the cephalometer for comparison with casts in facial reconstruction. —**cephalomet ric,** *adj.*

roentgenographic c. Cephalometry utilizing a cephalometer which allows standardized x-rays to be made.

ceph" lo'ni-a [*kephalē*]. Macrocephaly with hypertrophy of the brain.

ceph" lo-or'bi tal [*kephalē*; L. *orbita*, track]. Relating to the cranium and orbits.

ceph lop' gus [*kephalē*; G. *pagos*, that which is fixed]. Craniopagus. —**cephalop agous,** *adj.*

c. parietalis. Craniopagus parietalis.

ceph" -lop gy [*kephalē*; *pagos*]. See *craniopagus*.

ceph a-lop thy [*kephalē*; G. *pathos*, disease]. Any disease of the head.

ceph lo-pel'vic [*kephalē*; L. *pelvis*, basin]. Relating to both the head of the fetus and the pelvis of the mother.

ceph a lo-pha-ryn ge-us. Of or pertaining to cranium and pharynx, as the cephalopharyngeus muscle, which is a portion of the superior constrictor muscle of the pharynx.

ceph lo-ple gi-a [*kephalē*; G. *plēgē*, stroke]. Paralysis of the muscles about the head and face.

ceph"a-los'co-py [*kephalē*; G. *skopein*, to examine]. Auscultation of the head.

ceph" lo-spo ri-o sis [*kephalē*; G. *sporos*, seed; *-osis*, condition]. An infection caused by a species of Cephalosporium, characterized by gummatous lesions.

Ceph″ lo·spo ri um [*kephalē*; *sporos*]. A genus of fungi which are similar to *Aspergillus* or *Penicillium* in spore formation and to *Sporotrichum* in appearance they are common allergens and contaminants.

ceph″ lo tho rac′ic (sef″uh lo thor·ass ik) [*kephalē*; G *thōrax*, thorax]. Pertaining to the head and thorax used to designate those arthropods having the head joined to the thorax.

ceph″a·lo tho ra cop gus [*kephalē*; *thōrax*; G *pagos*, that which is fixed]. Conjoined twins (diplopagi) united by their heads, necks, and thoraxes. Syn., *janus*, *janiceps*, *syncephalus*.

c. disymmetros. A form in which the single head exhibits opposite, laterally directed, equal faces.

c. monosymmetros. A form in which the single head has one more or less complete, laterally directed face, opposite which is either no face or merely vestiges of face.

ceph lo·tome [*kephalē*; G *tomos*, cutting]. An instrument for performing cephalotomy on the fetus.

ceph ·lot′ my [*kephalē*; G *tomē*, cutting]. The opening or division of the head of the fetus to facilitate delivery

ceph lo·trac′tor [*kephalē*; L. *tractum*, from *trahere*, t draw]. Obstetric forceps.

ceph lo tribe [*kephalē*; G *tribein*, to rub]. An instrument for crushing the fetal head.

ceph″a lo·trid y mus [*kephalē*; G *tridymos*, threefold]. A three-headed monster Syn., *tricephalus*.

ceph′a·lo·trip″sy [*kephalē*; G *tripsis*, rubbing]. The operation of crushing the fetal head when delivery is otherwise impossible. *Obs.*

ceph″ l trip tor See *cephalotribe*.

ceph lo try pe sis (sef″uh lo·trye pee sis, ·tri-pee sis) [*kephalē*; G. *trypēsis*, boring]. Trephining of th skull.

ceph″ lox′i·a. Torticollis.

ce′ra [L.]. Wax obtained from plants or made by insects; consists of esters of monohydric, high molecular-weight alcohols and/or alcohols, fatty acids, hydrocarbons, and possibly other substances, depending on the source. —**cera ceous,** *adj*

c. alba. White wax; prepared by bleaching yellow wax.

c. flava. Yellow wax; the purified wax from the honeycomb of the bee. Its chief constituent is myricyl palmitate.

cer′ ·sin [G *kerasos*, bird-cherry] 1 A resin from the bark of cherry peach, and plum trees. 2 A carbohydrate derived from cherry gum by hydrolysis. Cerasinose 3. Kerasin cerebroside associated with phrenosin and nervon in brain tissue.

cer′ si nose (serr uh·si·nohss, si rass′i nohss) A carbohydrate found in the gum of the cherry tree

ce rate [L. *cera*, wax]. *I* pharmacy, an unctuous preparation consisting of wax mixed with oils, fatty substances, or resins, and of such consistence that at ordinary temperatures t can be spread readily upon linen or muslin, and yet so firm that it will not melt or run when pplied to the skin. —**cerated,** *adj*

cantharides c. See under *cantharides*

lead subacetate c. See under *lead* subacetate solution.

resin c. See under *resin*.

cer′a·to-, cerat-. See *kerato*-

cer″a to·cri′coid. A variable slip of the posterior cricoarytenoid muscle, xtending from the cricoid cartilage to the inferior corn of the thyroid cartilage.

cer″ t hy′al. [G *keras*, horn *hyoeidēs*, shaped like the letter upsilon]. Old term for the lesser corn of the hyoid bone.

Cer″a to ni a [G *keratōnia* carob tree]. A genus of trees of the Leguminosae. The single species, **C. siliqua** the carob, is native of the regions about the Mediterranean. The falcate, fleshy beans, carob pods, of this tree are rich in sugar and have been used as demulcent.

cer″ to·phar yn geus. A portion of the superior constrictor muscle of the pharynx attached to the lesser cornu of the hyoid bone.

Cer″a toph yl lus [G *keras*, horn; *phyllon*, leaf]. A genus of fleas.

C. fasciatus. The common rat flea of the United States and Europe; vector of typhus fever and host of *Hymenolepis diminuta*.

ce ra tum. Cerate.

cer ca ri [G *kerkos*, tail]. Any trematode worm in its second stage of larval life. —**cerca rial,** *adj* **cerca rian,** *adj* n.

cer·clage (sair·klahzh′) [F encirclement]. *I orthopedics*, application of wire encircling bone; method of osteosynthesis in blique and certain comminuted fractures.

cer″co·mo nad (sur″ko·mo nad, sur·kom o nad, sur′ko mon ad) [*kerkos*, G *monas*, unit]. A member of the genus *Cercomonas*.

Cer″co·mo nas (sur″ko mo nas, sur·kom o·nas) [*kerkos*, *monas*]. A genus of coprozoic flagellates.

C. intestinalis. (a) Synonym for *Chilomastix mesnili*. (b) Synonym for *Giardia lamblia*.

ce ra flex″i bil′i tas [L.]. Muscular tension in the insane in which the limbs may be placed into any position. Typical of th catatonic type of schizophrenic reaction.

cer e·bel lif′u gal [L. *cerebellum*, small brain; *fugere*, to flee]. Tending from the cerebellum.

cer″e·bel lip tal [*cerebellum*; L. *petere*, to seek]. Tending toward the cerebellum.

cer″e bel li′tis [*cerebellum*, G -*itis*, inflammation]. Inflammation of the cerebellum.

cer″e·bel″lo·ru′bral [*cerebellum*, L. *ruber* red]. Pertaining to the tract of the brachium conjunctivum running from the dentate nucleus to the red nucleus.

cer″ bel″lo ru″bro·spi′nal [*cerebellum*, *ruber*; L. *spina*, spine]. Pertaining to the cerebellum, the red nucleus, and the spinal cord.

cer bel″lo·spi′nal [*cerebellum*, *spina*]. Relating to the cerebellum and the spinal cord, descending fiber tract.

cer″ bel′lum [L.]. *The inferior part of* the brain lying below the cerebrum and above the pons and medulla, consisting of two lateral lobes and middle lobe. See Plates 17 18. —**cerebellar** *adj*

cer′ bral (often pronounced cer ′bral) Pertaining to the cerebrum.

cer″e·bra′tion [L. *cerebrum*, brain]. Mental activity

cer′ bric ac′id (serr′i brick, si·reb rick) **cer″e-brin′ic** ′id. A fatty acid from brain tissue.

cer″ brif′u gal [*cerebrum*; L *fugere*, to flee]. Efferent transmitting or transmitted from the brain to the periphery; denoting nerve fibers or impulses.

cer e·brin. C H₄₀O N A nitrogenous glycoside btained from brain and similar tissue It is light, colorless, exceedingly hygroscopic powder As cerebrum—a trade name for cerebrin obtained from brain tissue of calves and sheep—it has been used in chorea and neurasthenia.

cer″ brin′ic ac′id. See *cerebric acid*.

cer″ brip e·tal [*cerebrum*, L. *petere*, t seek]. Afferent; transmitting or transmitted from the periphery to the brain; denoting nerve fibers or impulses.

cer"e-bri'tis [cerebrum, G -itis, inflammation]. Old term for encephalitis.

cer e-bro-, cerebr- [cerebrum]. A combining form denoting the cerebrum or the brain.

cer"e-bro ma-la ci a (serr i bro-ma lay shuh, -lay'see uh) See encephalomalacia.

cer' -broma. See astrocytoma.

cer"e-bro-med'ul lar"y (-med'yoo-lerr ee) [cerebrum, L. medulla, marrow]. Relating to the brain and spinal cord.

cer'e-bron. See phrenosin.

cer"e bron'ic ac'id. An acid obtained by hydrolysis of white brain substance.

cer"e-bro-phys"i-ol'o-gy [cerebrum; G physiologia, from physis, growth, logos, word]. The physiology of the brain.

cer" bro pon tine (serr i bro-pon tyne) [cerebrum; L. pons, bridge]. Relating to the cerebrum and the pons; formerly spelled cerebropontile.

cer"e-bro-scle-ro sis [cerebrum, G. sklērōsis, a hardening]. Sclerosis of cerebral tissue.

cer'e-brose. $C_6H_{12}O$ Galactose.

cer'e-bro-side [cerebrum]. Any galactolipid found in the brain and, under certain conditions, possibly in other tissues.

cer"e-bro-spi'nal [cerebrum; L. spina, spine]. Pertaining to the brain and spinal cord.

cer"e-bro to ni a [cerebrum, G tonos, tension] The behavioral counterpart of component III (ectomorphy) of the somatotype, manifested predominantly by extreme awareness of the external environment as well as of the internal self with tendencies towards inhibition of bodily enjoyment and activity (the viscerotonic and somatotonic expressions)

cer"e-bro-to nin. A pressor substance of cerebral origin, released by stimulation of afferent nerves

cer'e-brum [L]. Th largest portion of the brain, occupying the whole upper part of the cranium, and consisting of the right and left hemispheres; the endbrain telencephalon. See Plates 16, 17 18. —cerebral, adj

ce re-ous [L. cera, wax]. Made of wax.

cer'e-sin, cer'e-sine (seer sin, -seen) A naturally occurring solid mixture of hydrocarbons somewhat resembling white beeswax. It occurs most abundantly in the Carpathian Mountains native source is southern Utah. Its uses are widespread in the manufacture of candles, waxed paper bottles for hydrogen fluoride, and other articles, waterproofing; as modeling material, etc. Syn., ozokerite earth wax mineral wax.

cer'e sine. See cerasin.

ce rin. 1. $C_{30}H_{50}O_2$ A crystalline precipitate from an aqueous extract of cork by action of hot alcohol. 2. An ether of cerotic acid one of the substances found in wax.

ce ri-um [named from the asteroid Ceres in 1803 by Berzelius]. Ce = 140.13. One of the rarer metals. It forms two series of salts, cerous and ceric. c. nitrate, $Ce(NO_3)_3.6H_2O$ White crystals, soluble in water; has been used as nerve tonic in irritable dyspepsia and chronic vomiting Also called cerous nitrate.

c. oxalate (cerii oxalas) A mixture of the oxalates of cerium, neodymium, praseodymium, lanthanum, and other associated elements occurs as fine, white, or slightly pink powder and is insoluble in water; useful in treating vomiting of pregnancy Dose, 0.06–0.65 Gm. (1 10 gr)

ce'ro- (seer o-, serr o-) cer- [L. cera, wax]. A combining form denoting presence of or resemblance to wax.

cer-o-cillin. Trade-mark for penicillin O biosynthetic penicillin useful for patients sensitive to penicillin G.

ce roid [cera; G eidos, form]. A substance found in the fat in experimental liver cirrhosis brought bout by diet low in methionine. It gives the tinctorial reactions of lipid but is not soluble in any of the lipid solvents and is probably combination of lipid and protein. It has characteristic brown fluorescence when subjected to ultraviolet irradiation.

ce ro'le-in. A substance found in beeswax, soluble in alcohol; it is probably mixture of fatty acids.

cer're-sin. Cerosinyl cerosate. A waxlike substance forming a white or grayish green coating on some species of sugar cane.

ce-ro sis [cera; G -ōsis, condition]. Morbid condition of membrane in which it seems to consist of waxlike scales.

cer"ti fi"a-ble [L. certus, certain; facere, to make]. A term pplied to certain infectious diseases which should be reported to the health authorities. See notifiable.

cer-tif'i-cate of in'sa-ni-ty A legal document which may originate from medical or judiciary authority asserting that person is not legally sane.

ce ru'men [L. cera, wax]. Wax of th ear; combination of the secretion of the sweat glands and sebaceous gland of the external auditory (acustic) meatus. —ceru minous, adj

ce ru"mi no sis [cera; G. -ōsis, increase]. A excessive secretion of cerumen.

cer vi-cal'is as-cen'dens. Old term for iliocostalis cervicis muscle.

cer"vi-cec to-my [L. cervix, neck, G ektomē, excision]. Excision of the cervix of the uterus.

cer"vi ci'tis [cervix; G -itis, inflammation]. Inflammation of the cervix of the uterus.

cer'vi-co-, cervic- [cervix]. A combining form denoting relation to the neck or cervix of an organ.

cer"vi co-ax'i al [cervix; G axis, axis]. I dentistry, pertaining to the cervical and axial walls of cavity

cer"vi-co-brach"i-al'gi-a. A condition in which pain extends from the cervical region to the arms or fingers

cer"vi-co-buc'cal [cervix; L. bucca, cheek] Pertaining to the buccal surface of the neck of molar or premolar tooth.

cer"vi co-buc"co-ax'i al [cervix; bucca; G axis, axis] Pertaining to the cervical, buccal, and axial walls of cavity in tooth.

cer"vi-co-dyn'i a [cervix; G odynē, pain]. Cramp or neuralgia of the neck.

cer"vi-co fa cial [cervix; L. facies, face]. Pertaining to both the neck and the face.

cer"vi-co-la'bi al [cervix; L. labium, lip]. Pertaining to the cervical portion of the labial surface of an incisor or canine tooth.

cer"vi-co-lin gual [cervix; L. lingua, tongue]. Pertaining to the lingual surface of a tooth at or near the cervix.

cer"vi-co-pu'bic. Pertaining to the cervix of the uterus and the pubic bone, as cervicopubic muscle, few strands of smooth muscle found in the pelvic fascia extending between the two structures.

cer"vi-co-rec tal. Pertaining to the cervix of the uterus and the rectum, as cervicorectal muscle few strands of smooth muscle found in the pelvic fascia between these two structures.

cer"vi-co-u'ter-ine. Of or pertaining t the uterus and its cervix.

cer"vi co-vag'i-nal (sur"vi ko-vadj'i nal, -va jy' nl) [cervix; L. vagina, vagina]. Relating to the cervix of the uterus and to the vagina.

cer"vi-co-vag"i ni'tis (-vadj"i-nigh tis) [cervix; vagina; G. -itis, inflammation]. Inflammation involving the cervix of the uterus and the vagina.

cer"vi-co-ves'i-cal [*cervix*; L. *vesica*, bladder]. Pertaining to the cervix of the uterus and urinary bladder, as the cervicovesical muscle, a few strands of smooth muscle found in the pelvic fascia between these structures.

cer'vix [L.]. A constricted portion or neck. See Plate 41. —**cervical**, *adj.*

c. col'umnae posterioris griseae [BNA]. The constricted portion of the posterior column of gray matter in the spinal cord.

c. cornu. See c. columnae posterioris griseae.

c. obstipa. Torticollis.

c. of the uterus. The cylindrical lower portion of the uterus between the isthmus and internal os and the external os.

c. vesicae. The neck of the urinary bladder.

conoid c. Malformation of the cervix of the uterus marked by a conical shape and elongation, with constriction of the external os.

coring of c. Rotary coring of the cervix with electrocautery.

double c. A congenital malformation; usually associated with two uterine cavities.

erosion of the c. uteri. A reddened areola about the external cervical os; an extension of the columnar endocervical epithelium onto the vaginal portion of the cervix. It may be congenital or acquired.

eversion of c. A turning outward of the cervix of the uterus so that an excessive amount of endocervical tissue, which normally lies inside the external os, is visible. It usually follows unrepaired lacerations of the cervix at childbirth.

tapiroid c. A cervix of the uterus with a very elongated anterior lip.

ce'ryl. The univalent radical $C_{26}H_{53}$ of the alcohol component of certain waxes.

c.e.s. Central excitatory state.

Ce-sar'e-an sec'tion (si-zair'ee-un). Delivery of the fetus through an abdominal incision. Also spelled *Caesarian*.

low cervical C. s. Delivery by the supravesical extraperitoneal route in contradistinction to the median abdominal route.

post-mortem C. s. Delivery of the fetus by section after the mother's death.

radical C. s. Section followed by hysterectomy.

Cesaris-Demel, Antonio [*Italian pathologist*, 1866–1938]. Described certain bodies observed in the leukocytes in anemia, called *Cesaris-Demel bodies*.

ce'si-um (see'zee-um) [L. *caesius*, bluish gray]. Cs = 132.91. A member of the alkali group of elements, which includes also sodium, potassium, lithium, and rubidium. Cesium forms a number of salts in which its valence is one. The physiologic actions of cesium are similar to those of potassium. Several of its salts have been used medicinally, largely experimentally.

Cestan, Raymond [*French neurologist*, 1872–1934]. With Chenais, described a syndrome produced by a tumor of the medulla oblongata (1903). The symptoms vary with the extent of the tumor and the involvement of the brain, and may or may not include nuclei. Typically the symptoms are ipsilateral hemipalatolaryngoplegia with asynergy of the extremities and paralysis of the ocular sympathetic, plus crossed spastic paralysis of the extremities with hemianesthesia. Called *Cestan syndrome, Cestan-Chenais syndrome* or *paralysis*.

Ces to'da [G. *kestos*, girdle]. The tapeworms.

ces'tode, ces'toid [*kestos*]. A parasitic worm, one of the Cestoda. —**ces'tode**, *adj.*

ces"to-di'a-sis [*kestos*; NL. *-iasis*, condition]. Infestation with tapeworms.

ces'toid. Resembling a tapeworm; caused by or consisting of tapeworms.

ce-ta ce-um (see tay'shee-um, -see-um) [G. *kētos*, whale]. Spermaceti; a waxy substance obtained from the head of the sperm whale, *Physeter macrocephalus*. Its chief constituent is cetyl palmitate (cetin). It is soluble in ether, in chloroform, and in boiling alcohol, and is employed as a base for ointments and cerates.

cetavlon. Trade-mark for cetyltrimethylammonium bromide or cetrimide.

ce'tin. $C_{32}H_{64}O_2$. Cetyl palmitate, cetyl cetylate. The chief constituent of commercial, purified spermaceti. It is a fatty crystalline substance, soluble in alcohol and ether, insoluble in water, melting at 49° C., and volatilizing at 360° C. Also called *cetinum*. —**cetic, cetin'ic**, *adj.*

Ce-tra'ri-a [L. *cetra*, short Spanish shield]. 1. A genus of lichens. 2. Iceland moss—a lichen, **C. islandica**, found in Iceland and other northern countries. It contains a starchlike substance, lichenin, that gelatinizes when boiled with water. It has been used as a demulcent and nutrient in the form of a jelly or decoction.

ce-trar'in (see-trair'in, set'ruh-rin). $C_{30}H_{30}O_{12}$. The bitter principle of Iceland moss, crystallizing in fine needles and nearly insoluble in water. Also called *cetraric acid*.

cet'ri-mide. $C_{16}H_{33}N(CH_3)_3Br$. Cetyltrimethylammonium bromide, a synthetic detergent having antiseptic powers; useful for skin cleansing and washing of wounds. See *cetavlon, CTAB*.

ce'tyl (set'il, see'til, set'eel) [G. *kētos*, whale; *hylē*, material]. The univalent radical $C_{16}H_{33}$, compounds containing which are found in beeswax and spermaceti.

c. cetylate. Cetin.

c. palmitate. $CH_3(CH_2)_{14}COOCH_2(CH_2)_{14}CH_3$. A white, fatty crystalline substance; the chief constituent of spermaceti.

cet'yl al'co-hol. $C_{16}H_{33}OH$. A waxy solid, insoluble in water, soluble in alcohol; used as ingredient of many washable ointment bases. Also called *palmityl alcohol*.

ce'tyl pyr"i-din'i-um chlo'ride. $C_5H_5N(C_{16}H_{33})Cl$. A quaternary ammonium compound, soluble in water; used as a germicide and fungicide. See *ceepryn*.

ce'tyl-tri-meth"yl-am-mo'ni-um bro'mide. See *cetrimide*.

ce"va-dil'la [Sp.]. Sabadilla.

cev'a-dine (sev'uh-deen), **cev'a-din** (-din). $C_{32}H_{49}NO_9$. An alkaloid isolated from both sabadilla seed and veratrum viride; formerly considered to be tiglic acid ester of cevine, but now believed to be the same ester of veracevine. Syn., *veratrine*.

cev"a-gen'ine. A ketonic base, isomeric with cevine, produced when the latter is treated with alkali. See also *veracevine*.

cevalin. Trade-mark for ascorbic acid.

ce'vine (see'veen, -vin, sev'een, -in). An alkaloid, $C_{27}H_{43}NO_8$, found in sabadilla seed and veratrum. It is convulsant to mammals and causes reversible systolic stoppage of the isolated frog heart. Syn., *sabadinine*. See also *veracevine*.

ce"vi-tam'ic ac'id (see"vye-tam'ick, see"vi-). Ascorbic acid.

Cf Chemical symbol for californium.

cg, cg. Centigram.

C. G. S. Centimeter-gram-second—denoting that system of scientific measurements which takes the centimeter, the gram, and the second as the units, respectively, of distance, mass (or weight), and time.

Chaddock reflex. See under *reflex*.

Chadwick, Edwin (1800–1890). English sanitary reformer; pioneer in preventive medicine and public health legislation.

Chadwick, James Read [*American gynecologist*, 1844–1905]. Described a sign of pregnancy observed from about the sixth to the twelfth week, in which a blue coloration of the vaginal mucous membrane occurs; called *Chadwick's sign, Jacquemier's sign, Kluge's sign*.

chae·to'min (kee-to-min) A potent antibiotic active in vitro against a variety of microorganisms. It may be isolated from cultures of several species of the genus *Chaetomium*; sometimes written *chetomin*.

Chae·to·mi·um (kee-to-mee-um) A genus of fungi of which several species may act as allergens and are a source of a potent antibiotic called *chaetomin*.

chaf'ing [OF *chaufer* from L. *calefacere*, to make warm]. Irritation of the skin, usually due to rubbing.

Chagas, Carlos [*Brazilian physician*, 1879–1934]. Known for his discovery of the cause of American trypanosomiasis, *Trypanosoma cruzi* (1909). This disease has since been shown to occur from a number of reduviids which constitute host and vector. Called *Chagas' disease, Cruz' disease*.

Cha·gres fe'ver (shah-gres, chag-ruz, shag-ruz) A malignant form of malaria, endemic on the Isthmus of Panama.

Chain, Ernst Boris (1906–). English biochemist, known for his study of enzymes and his systematic investigations of antibiotics, leading to the reinvestigation of penicillin (1935). Nobel prize winner in physiology and medicine with Sir Alexander Fleming and Howard W. Florey for their discovery of penicillin and its therapeutic effects (1945).

chain of e·vac"u·a·tion. A term used in the U. S. Army to denote the various medical installations through which a sick or wounded soldier passes in evacuation from the front line to the rear, such as the aid station, the surgical hospital, the evacuation hospital, the general hospital, etc.

chain saw A surgeon's saw, the teeth of which are linked together like a chain.

cha·la'za (ka-lay'zah) [G., hail, small knot like hailstone]. 1. One of the two spiral opalescent cords formed as a prolongation of the dense albumen about the yolk toward the blunt and the narrow ends of the avian egg. 2. The place where the seed coats unite with the nucellus in the seed or ovule.

cha·la·zi·a (ka-lay'zee-uh) [G. *chalazion*, dim. of *chalaza*]. 1. Hailstone sputa. 2. A chalazion.

cha·la'zi·on (ka-lay'zee-on, kay-lay-) [G.]. A tumor of the eyelid from retained secretion of the tarsal glands; also called *Meibomian cyst*.

cha·la"zo·der'mi·a (ka-lay-zo-dur'mee-uh, kal-a-zo-) See *dermatolysis*.

chal·ci'tis (kal-sigh'tis) **chal·ki'tis** (kal-kigh'tis) See *chalcosis*.

chal'co- (kal'co-) [G. *chalkos*, copper]. A combining form denoting *copper, brass*.

chal·co'sis (kal-ko'sis) [*chalkos*; G. *-osis*, condition]. A deposit of copper particles in the tissues, especially in the cornea and the lens of the eye.

ocular c. A characteristic inflammation, due to the effects of copper in the eye; seen in brass and copper workers.

chal"i·co·sis (kal-i-ko'sis) [G. *chalix*, gravel; *-osis*]. A type of pneumoconiosis caused by inhalation of lime dust. Syn., *flint disease*.

chalk [AS. *cealc* from L. *calx*, lime]. $CaCO_3$. An impure, native form of calcium carbonate.

aromatic c. powder (*pulvis cretae aromaticus*). Contains cinnamon, 8 Gm.; nutmeg, 6 Gm.; cloves, 3 Gm.; cardamom seed, in fine powder, 3 Gm.; prepared chalk, 25 Gm.; sucrose, 55 Gm. Used as a warm stimulant and astringent, as well as an antacid and for diarrhea with acidity and without inflammation. Dose, 1–4 Gm. (15–60 gr.)

c. gout. Circumscribed calcinosis.

c. mixture (*mistura cretae*). Contains prepared chalk, 6 Gm.; saccharin sodium, 0.03 Gm.; bentonite magma, 50 cc.; cinnamon water, 40 cc.; purified water, a sufficient quantity to make 100 cc. Used for administering chalk in a palatable form. Dose, 15 cc. (4 fluidrachms).

compound c. powder (*pulvis cretae compositus*). Contains prepared chalk, 30 Gm.; acacia, 20 Gm.; sucrose, 50 Gm., to make 100 Gm. Used as an antacid for gastric and intestinal conditions and in diarrhea associated with intestinal acidity. Dose, 2–8 Gm. (½–2 dr.)

mercury with c. (*hydrargyrum cum creta*). Contains mercury, 38 Gm.; honey, 10 Gm.; prepared chalk, 57 Gm.; occurs as a light gray powder. Formerly used as a laxative and antisyphilitic. Syn., *gray powder*.

prepared c. (*creta praeparata*). A native form of calcium carbonate freed from most of its impurities by elutriation; occurs as a white to grayish white powder, often prepared in cones; insoluble in water. Used as an antacid and in diarrhea. Dose, 0.65–3.0 Gm. (10–45 gr.)

chalk stone [*cealc*; ME. *ston*]. A gouty deposit in the fingers; a tophus.

chal'one (kal'on) [G. *chalan*, to loosen]. An inhibitory autacoid; an internal secretion that depresses activity.

cha·lyb'e·ate (ka-lib'ee-ate) [G. *chalyps*, steel]. Containing iron; having the color or taste of iron.

cham·aer·rhine (kam-ah-ryne) See *platyrrhine*.

cham'ber [OF *chambre*, G. *kamara*, anything with an arched cover]. 1. A cavity or space. 2. An apparatus in which material to be investigated may be enclosed.

air c. A vessel or tank in which air pressure can be increased or decreased at will.

air-equivalent ionization c. See air-wall ionization c.

air-wall ionization c. One in which the materials of the wall and electrodes are so selected as to produce ionization essentially equivalent to that found in a free-air ionization c.; also called *air-equivalent ionization c.*

anterior c. The space between cornea and iris.

aqueous c. of the eye. That between the posterior surface of the cornea and the anterior surface of the lens, containing aqueous humor. It is divided by the iris into the anterior and posterior chambers. See Plate 19.

Barach c. A pressure chamber which induces a type of artificial respiration. Oxygen is absorbed and carbon dioxide is eliminated without the use of any of the respiratory muscles.

c. of the heart. An atrium or a ventricle of the heart.

cloud c. Apparatus for studying ionizing rays. When nuclear particles, such as alpha particles, are shot into a chamber containing supersaturated water vapor, the particle produces gas ions, each of which condenses a droplet of water, thus marking the path of the particle.

counting c. An apparatus with a ruled chamber of fixed depth used for counting cells in a fluid, especially that in which diluted blood is placed for counting the erythrocytes, leukocytes, and platelets.

decompression c. See *decompression chamber*.

extrapolation c. An ionization chamber for the measurement of roentgen-ray intensities arranged so that the enclosed volume of air may be altered and reduced almost to zero.

free-air ionization c. An ionization chamber in

which the beam of radiation passes between the electrodes without hitting them or other i ternal parts the basic tandard instrument for roentgen dosimetry in the range 5-400 kv

ionization c. An instrument for collecting and measuring ions produced in definite volume of air by beam of roentgen rays or rays emitted from radioactive substances.

moist c. A type of large culture plate made of heavy glass and having loosely fitting cover; used in bacteriologic work.

monitor ionization c. 1. An ionization chamber usually with large volume of air employed for checking the constancy of performance of roentgen-ray tube. 2 One which detects undesirable radiation used in health protection.

posterior c. The space between iris and lens

pulp c. The coronal portion of the central cavity in tooth.

resona ce c. One attached to tuning fork for acoustic investigation.

respiratory c. A respiratory cavity

thimble c. A small, thimble-sized, enclosed ionization chamber **An air wall thimble chamber** is one with walls of material having approximately the same effective tomic number as tmospheric air

tissue equivalent ionization c. An ionization chamber in which the materials of the walls and electrodes are so selected as to produce ionization essentially equivalent to that characteristic of the tissue under consideration.

transparent c. See under *method.*

vitreous c. The portion of the globe of the eye posterior to the crystalline lens.

Chamberlaine R. [*American surgeon*, nineteenth century] Remembered for his method of ligation of the first portion of the axillary artery through curved incision, its convexity downward across the supraclavicular fossa and extending just below the clavicle. Described ligation of the brachial artery through an incision along the lower margin of the clavicle joined near its middle by second incision over the deltoid and pectoral muscles. Called *Chamberlaine' operation.*

Chamberland, Charles Édouard [*French bacteriologist* 1851 1908] Known for his filter of unglazed porcelain, which allowed only ultramicroscopic organisms to pass through I association with Pasteur and Roux, he used ttenuated bacterial cultures for therapeutic purposes (1880) Demonstrated, with Pasteur and Roux, the presence of rabies virus in the blood (1884) See also Pasteur-Chamberland *filter*

Chamberlen, Peter [*English physician*, 1560–1631]. Famed in his time for his invention of practical obstetric forceps constructed in fenestrated form.

ham e-ceph lus (kam'i sef'uh-lus) [G *chamai*, on the ground; *kephalē*, head]. An individual with flat head.

cham ceph'a-ly ham ae-ceph ly (kam i-sef'uh-lee) [*chamai*, *kephalē*]. I *somatometry* that condition of the head in which the length-height index, or the ratio of the height of the head to its greatest length, is 57 6 or less. A condition in which the vault of the head is low and receding —**chamaecephal'ic, chamaecephalous,** *adj*

h m h , ch m ae con h (kam'i kongk) **cham"e con ha, ham"ae-con ha** (kam kong'kuh) [*chamai*, G. *konchē*, mussel shell-lik cavity] I *craniometry* designating orbits the index of which (the ratio of orbital height to orbital breadth) is 75 9 or less. Syn., *chamaeconchous.*

cham"e-cra ni al, cham ae-cra ni al (kam'i-kray'nee-ul) [*chamai*, G *kranion*, skull]. I *craniometry* designating skulls with length-height index of 69.9 or less.

cham" pro-sop'ic, cham ae pro-sop'ic (kam'i-pro sop'ick, -pro-so pick) [*chamai*, G. *prosōpon*, face]. I *craniometry* designating facial skeleton that is relatively low and broad, with total facial index of 74 9 or less. The index is the ratio of morphologic facial height, or distance from nasion to gnathion, to bizygomatic width.

cham' mile (kam'o-mile) See *anthemis, matricaria.*

cham'pa col (cham'puh-kol) A sesquiterpene alcohol from champaca wood, *Michelia champaca.* Also called *champaca camphor guaiol.*

Champetier de Ribes, Camille Louis Antoine [*French obstetrician*, 1848–1915]. Devised an obstetric dilating bag (1888); called the *de Ribes bag.*

Championnière. See *Lucas-Championnière.*

Champy' fixing fl id. See under *fixing fluid.*

Champy-Kull's method. See under *stain.*

chan cre (shang'kur) [F from L. *cancer* crab]. The lesion formed t the site of primary inoculation; usually an ulcer Generally refers to the initial lesion of syphilis, although the term may be used for the primary focus of such diseases as sporotrichosis and tularemia.

c. redux. A syphilitic lesion which is recurrent ulcer at the site of previous syphilitic chancre.

hard c. The primary lesion of syphilis. Also called *Hunterian c., true c.*

mi ed c. See *mixed chancre.*

soft c. Chancroid.

chan croid (shan'kroyd) [*cancer* G *eidos*, form]. A lesion produced by an infection with *Hemophilus ducreyi*, involving the genitalia, usually of venereal origin. The lesions are, as rule, multiple and painful, and cause local lymph-node involvement with the formation of buboes. See *chancre.* Syn., *soft chancre, ulcus molle.* —**chancroi'dal** *adj*

ch'ang han. A medicinal herb, probably originating from *Dichroa febrifuga* Lour long used in China as an antimalarial. The isomeric alkaloids α-dichroine, β-dichroine, and γ-dichroine, as well as the isomer alkaloids febrifugine and isofebrifugine have been reported as constituents β-dichroine and γ-dichroine may be crystalline modifications of f brifugine α-dichroine may be identical with isof brifugine.

chan nel [L. *canalis*, water pipe]. Canal.

intercellular hannels. Old term for irregular communicating, intercellular spaces of the prickle-cell layer of the skin.

Cha ing, Walter [*American obstetrician*, 1786–1876]. Vigorous advocate of the use of anesthesia in obstetrics (1848)

cha ot'ic heart ac tion. See under *heart.*

Chaoul tube. See under *tube.*

Chapin, Charles Willard (1877) American bacteriologist, who isolated the etiologic agent of tularemia, *Pasteurella tularensis*, with George W McCoy

Chapman, John [*English physicia and publisher* 1821–94] Remembered for his invention of an elongated ice bag for application to the spine, called *Chapman bag.*

chapped [ME. *chappen*]. Cracked or roughened by cold, as chapped hands. —**chap s.**

Chaput, Henri [*French surgeon*, 1857 1919]. Devised method for treating osteomyelitis by curetting the cavity and filling it with fatty tissue obtained from the abdomen or thigh called *Chaput method.*

har'ac ter [G., from *charassein*, to cut into furrows, to engrave]. I *biology*, any structural or functional property of an organism.

acquired c. A modification of the organism, caused by an environmental factor

dominant c. The member of pair of contrasted traits which manifests itself in the heterozygote.

primary sex characters. Those directly concerned with reproduction, as the gonads and genital apparatus.

recessive c. The member of pair of contrasted traits which fails to manifest itself in the heterozygote.

secondary sex characters. Differences between males and females not directly concerned with reproduction, as those of voice, distribution of hair of adipose tissue, and of muscularity

char'as. Cannabis resin, especially as used for smoking.

char'bon (shahr'bon, shahr-bon') See anthrax.

char coal" [possibly ME. char turning; AS. col]. The residue, largely amorphous carbon, obtained by incomplete combustion (destructive distillation) of animal or vegetable matter

activated c. Charcoal which has been treated, as with steam and carbon dioxide or with other substances, to increase its adsorptive power The medicinal grade is used to reduce hyperacidity to adsorb toxins, and as an antidote to arious poisons.

animal c. Charcoal derived from roasting animal bones and other tissue; largely used as decolorizing agent. Also called bone black.

wood c. Charcoal prepared by incomplete combustion of wood.

Charcot, Jean Martin [French neurologist and clinician, 1825–93]. One of the greatest of neurologists, he created at La Salpêtrière the most famous neurologic clinic of modern times. Gave one of the earliest descriptions of intermittent claudication (1858) and the first description, with Abel Bouchard, of lightning pains in tabes dorsalis (1866) Contributed to geriatrics (1868) and to the knowledge of amyotrophic lateral sclerosis, of the cortical motor centers, and of diseases of the liver bile ducts, and kidneys. Described neuropathic arthropathy (1868) also called tabetic arthropathy, Charcot' joint. With Joffroy was first to demonstrate atrophy of the anterior horns of the spinal cord in poliomyelitis, and described the lesions of the spinal cord in muscular atrophy (1869). With Marie, described the peroneal type of progressive neuropathic muscular trophy called Charcot-Marie-Tooth disease Angiospasm of the arteries of the leg and foot is known as Charcot' syndrome. Syphilitic spastic spinal paralysis is also called Erb-Charcot disease H is renowned also for his pioneering work in modern psychopathology particularly for his studies of hysteria and his scientific approach to hypnotism. See also Charcot-Leyden crystals under crystal.

charge [OF charger from L. carrus, wagon]. A quantity of electricity

electrostatic unit of c. Quantity of electricity which repels an equal and similar quantity at distance of 1 cm. with a force of one dyne.

char'la-tan (shahr'lah-tan) [It. ciarratano seller of papal indulgences]. One who claims to have more knowledge or skill than he really has; quack.

char'la tan-ism, shar'la tan-ry [ciarratano]. Unwarranted pretension to skill or knowledge; quackery

char'ley horse. A rupture or strain of muscle or tendon fibers generally resulting from athletic efforts.

Charlton blanching test. See Schultz-Charlton blanching test.

Charrière, Joseph François Benoît [French instrument maker 1803–76]. Remembered for his gallantry for scaling the tonsil, and for his French scale for measuring the size of urethral sounds and catheters, the consecutive numbers differing by ⅓ mm. in diameter See catheter gauge.

Charrin, Albert [French pathologist, 1857–1907]. Described infections caused by Pseudomonas pyocyanea (Ps. aeruginosa); called Charrin disease.

char'ta (kahr tah) [L., from G chartēs, papyrus]. I pharmacy strip of paper impregnated with a medicinal substance.

c. cantharidis. Blistering paper impregnated with preparation of cantharides also called c. epispastica.

c. sinapis. Mustard paper

char treus'in. An antibiotic substance, $C_{19}H_{18}O_{9}\cdot 2H_2O$ forming greenish-yellow crystals, isolated from cultures of Streptomyces chartreusis; it is active against certain Gram-positive organisms and mycobacteria.

char'tu la (kahr'tew-lah) [L., dim. of charta]. A small paper especially one containing a single dose of medicinal powder

Chassaignac, Édouard Pierre Marie [French surgeon, 1804–79]. Remembered for his introduction of rubber tube drains, said to have revolutionized surgical drainage (1859) Described the carotid tubercle on the transverse process of the sixth cervical vertebra, called Chassaignac's tubercle.

Chauffard, Anatole Marie Émile [French physician 1855–1932]. Known for his contributions to the knowledge of pigmentary cirrhosis of bronze diabetes. Described increased fragility of erythrocytes in the disease now called hereditary spherocytosis, sometimes also called Chauffard-Minkowski syndrome.

Chauliac, Guy de. See Guy de Chauliac.

chaulmestrol. A brand of ethyl chaulmoograte used in the treatment of leprosy

chaul moo'gra oil [Bengali calmugrā, from cal, rice, mugrā, fibrous plant]. A yellow oil expressed from the seeds of Taraktogenos Kurzii, Hydnocarpus Wightiana or Hydnocarpus anthelmintica, trees of Burma and India. It contains chaulmoogric, gynocardic, and hydnocarpic acids; used in the treatment of leprosy Dose, 1 cc. (15 min.) intramuscularly See hydnocarpus oil.

chaul moo grate. An ester of chaulmoogric acid.

haul moo gric ac'id. $\overline{CH}$ CH CH-CH $\overline{CH}$ $(CH_2)_{12}COOH$. 13-(2-Cyclopenten-1-yl)tridecanoic acid. An unsaturated crystalline acid obtained from chaulmoogra and hydnocarpus oils.

Chaussier François [F ench physician, 1746–1828]. Remembered for his description of the inflammatory areola about the anthrax pustule. He described also the raphe of the corpus callosum.

chav'i-sine. $C_{17}H_{19}NO_3$; yellowish, oily mass, one of the active constituents of black pepper; it ppears to be stereoisomer of piperine.

chav'i col. $CH_2{:}CHCH_2C_6H_4OH$; p-allylphenol, constituent of the volatile oil from leaves of Chavica betel.

chay (chay chye) chay' (chay'ah, chye ah) shay, shey' [Malayalam cāyavēr ch yroot]. 1 The East Indian plant Oldenlandia umbellata. 2. The root of the Oldenlandia umbellata, which yields madderlike dye.

Cheadle, Walter Butler [English physician, 1836–1910]. Remembered for his interest in the diagnosis of rickets and scurvy H made clear differentiation (1878) between these diseases. Scurvy is sometimes known as Cheadle' disease.

cheek [AS ceace]. The side of the face composed of skin, mucous membrane, and the fat, connective tissue and muscles intervening. Syn bucca, gena.

cheek'bone" [ceace; AS. bā]. The zygoma.

chees y [AS cīese]. Of the nature of cheese caseous.

chei lal'gi a (kigh-lal'juh, jee-uh) [G. *cheilos*, lip; *algos*, pain]. Neuralgia of the lips.

chei lec'to my (kigh-leck'to-mee) [*cheilos*; G. *ektomē*, excision]. Excision of a portion of the lip.

chei"lec tro pi-on (kigh"leck-tro'pee-on) [*cheilos*; G. *ektropion*, from *ektropos*, turning out of the way]. Eversion of the lips.

chei li'tis (kigh-ligh'tis) [*cheilos*; G. *-itis*, inflammation]. Inflammation of the lips. Also called *myxadenitis labialis*.

c. actinica. A form in which the lips are irritated by sunlight; usually seen in persons whose skin is sensitive to light.

c. exfoliativa. Persistent peeling of the lips.

c. glandularis. A chronic disorder of the lips; characterized by swelling due to hypertrophy of the labial glands and their ducts, with secondary inflammatory symptoms. Also called *c. glandularis apostematosa*, *myxadenitis labialis*.

c. venenata. A contact dermatitis of the lips, often caused by lipstick or cosmetics.

chei'lo- (kigh'lo-), **cheil-** (kyle-), **chi'lo-** (kigh'lo-), **chil-** (kyle-) [*cheilos*]. A combining form denoting *relation to the lips*.

chei"lo an"gi o-scope (kigh"lo-an'jee-o-scope") [*cheilos*; G. *angeion*, vessel; *skopein*, to examine]. Apparatus for observing the capillaries of the human lip.

chei log"na tho pal"a tos chi si s (kigh-log-na-tho-pal-uh-tos'ki-sis, kigh"lo-nay-tho-) [*cheilos*; G. *gnathos*, jaw; L. *palatum*, palate; G. *schisis*, cleaving]. Unilateral or bilateral cleft of the upper lip, alveolar process, and palate.

chei log"na th pros pos chi sis (kigh-log"nuth-pros-pos'ki-sis, kigh"lo-nayth" kigh-lo-nath"o-) [*cheilos*; *gnathos*; G. *prosōpon*, face; *schisis*]. Oblique facial cleft involving also the upper lip and upper jaw.

chei-log"na tho-u"ra nos chi-sis (kigh-log-nuth-o-yoor-uh-nos'ki-sis, kigh"lo-nayth-o-, kigh"lo-nath-o-) [*cheilos*; *gnathos*; G. *ouranos*, vault, palate; *schisis*]. A cleft which involves the upper lip, alveolar process, and palate.

chei'lo-plas"ty (kigh'lo-plas-tee) [*cheilos*; G. *plassein*, to form]. Any plastic operation upon the lip.

chei-lor'rha-phy (kigh-lor'uh-fee) [*cheilos*; G. *rhaphē*, suture]. Suture of a cut or lacerated lip.

chei los chi si s (kigh-los'ki-sis) [*cheilos*; G. *schisis*, cleaving]. Harelip.

chei lo sis (kigh-lo'sis) [*cheilos*; G. *-ōsis*, condition]. A disorder of the lips due to avitaminosis. There is pallor of the mucosa at the angles of the lips in the early stages, followed by maceration and piling up of tissue. Later fissures appear which may become deep and extend into the cheek. Also called *riboflavin deficiency*.

chei los"to mat o plas ty (kigh-los-to-mat-o-plas-tee, kigh"lo-sto-, kigh"lo-sto-mat-o-plas-tee) [*cheilos*; G. *stoma*, mouth; *plassein*, to form]. Plastic repair of the lips and mouth.

chei lot o my (kigh-lot'uh-mee) [*cheilos*; G. *tomē*, cutting]. Excision of a part of the lip.

chei mo pho bi a (kigh-mo-fo'bee-uh) [G. *cheima*, winter weather; *phobos*, fear]. Morbid fear of cold.

chei rag'ra (kigh-rag'ruh, -ray'gruh, kigh'rag-ruh). See *chiragra*.

chei-ran'thin (kigh-ran'thin). A glycoside from the leaves and seeds of *Cheiranthus cheiri*, with action similar to that of digitalis.

chei'ro- (kigh'ro-), **cheir-**. See *chiro-*.

chek an, chek en [Araucan *chequeñ*]. The leaves of *Eugenia chekan*, a South American shrub. It was formerly used in bronchitis.

che'late (kee'late). Pertaining to the ring-type structure or the compound formed in chelation.

che'lat ing (kee'lay-ting) **agent.** Any compound, usually organic, having two or more points of attachment at which an atom of a metal may be joined or coordinated in such a manner as to form a ring type of structure.

che la'tion (kee-lay'shun). 1. A type of interaction between an organic compound (having two or more points at which it may coordinate with a metal) and the metal so as to form a ring-type structure. 2. A type of interaction, shown by organic compounds having both a carbonyl (CO) group and a hydroxyl (OH) group, in which by hydrogen bond formation involving generally two such molecules, but sometimes only one, a ring-type structure is produced.

chel" ryth rine (kel"i-rith'reen, -rin, kel-err'ith-). See *sanguinarine*.

chel'i do nine (kel'i-do-neen, -nin, kel-id'o-, kel"i-do-). A crystalline alkaloid of celandine (*Chelidonium majus*) related to papaverine. It relaxes smooth muscle and depresses the central nervous system.

chel"i-do ni um (kel"i-do'nee-um) [G. *chelidonion*, celandine]. The leaves and stems of *C. majus*, with properties due to a number of alkaloids and acids. It is a drastic cathartic and, externally, irritant. Syn., *celandine*.

chel"i do-xan'thin (kel"i-do-zan'thin, kee"li-do-). One of the bitter crystalline constituents of celandine.

che'loid (kee'loid). See *keloid*.

chel'o-nin (kel'o-nin, ki-lo'nin). A bitter amorphous powder, the concentrated balmony extract, from *Chelone glabra*, formerly used as a tonic.

Chel'sea pen sion-er. Compound confection of guaiac; contains guaiac resin, rhubarb, acid potassium tartrate, nutmeg, sublimed sulfur, and clarified honey. It is a popular remedy in England for rheumatism and gout.

chem'i-cal [perhaps G. *chymeia*, a mingling, from *chymos*, juice]. Of or pertaining to chemistry. —**chem'i cal, n.**

chem'i cal agent de tec tor kit. *In military medicine*, a kit that reveals dangerous concentrations of certain war gases by color changes in tubes through which contaminated air is drawn and to which liquid reagents are added.

Chem'i cal Corps. A department of the U. S. Army responsible for the use and manufacture of toxic gases, incendiary materials, and chemicals used in warfare, and for defense apparatus used against such materials.

chem'i-cal war'fare. The use in war of toxic gases, incendiary mixtures, and other chemicals, for defensive or offensive purposes. See war gas.

chem'i-co- [*chymos*]. A combining form signifying *relation to, or connection with, chemistry*.

chem"i-co-cau'ter y [*chymos*; G. *kautērion*, branding iron]. Cauterization by means of chemical agents.

chem"i lu mi nes cence [*chymos*; L. *luminare*, to illuminate]. Light produced by means of a chemical reaction and entirely independent of any heat involved. The so-called cold light.

chem"i-o-tax'is. See *chemotaxis*.

chem'ist [*chymos*]. One skilled in chemistry.

chem'is try [*chymos*]. The science of the structure of matter and the composition of substances, their transformation, analysis, synthesis, and manufacture.

analytical c. That concerned with the detection (qualitative analysis) and determination (quantitative analysis) of substances.

applied c. Chemistry applied to some useful end, as in industry.

biological c. The chemistry of life or that which deals with the composition of animal and vegetable matter the changes occurring in living organisms, the transformation of food into living tissues, and the elimination of waste products. Syn., *physiological c.*

colloid c. Study of the properties developed by substances in the colloidal state of subdivision.

fermentation c. Study of the reactions produced by enzymes and ferments.

food c. That dealing with the composition and examination of foods.

forensic c. The application of chemical knowledge in the solution of legal problems, especially in the detection of crime.

histological c. Chemistry of the tissues of plants and animals. See *histochemistry*.

iatrochemistry See *medical c.*

immunochemistry Chemistry of the changes associated with the phenomena of immunity

industrial c. Chemistry applied to industry

inorganic c. That branch which treats of substances other than carbon compounds.

medical c. Chemistry applied to medicine.

nuclear c. That dealing with changes occurring in the nucleus of an atom.

organic c. Chemistry of carbon compounds.

pathological c. Chemistry of abnormal tissues and the changes caused by disease.

pharmaceutical c. Chemistry applied to the preparation, the testing, and the composition of drugs.

physical c. That dealing with the generalizations or laws and the theories of chemistry

physiological c. Study of the composition and chemical changes in plants and animals.

phytochemistry Chemistry of plants and plant functions.

sanitary c. Application of chemistry to various problems of sanitation.

synthetic c. That dealing with synthesis of substances, especially organic compounds.

toxicological c. A branch of forensic chemistry dealing with the detection and estimation of poisons.

chem o-, chemi- [*chymos*]. A combining form denoting relation to chemical action or to chemicals

chem"o-cep"tor, chem"o-re-cep"tor [*chymos*; L. *captum*, from *capere* to take] 1 One of the side chains or receptors in a living cell, having the power of fixing chemical substances in the same way that bacterial toxins are fixed. 2. A sensory end organ capable of reacting to chemical stimuli.

chem"o-co-ag"u la'tion [*chymos*; L. *coagulatio* from *coagulare*, to cause fluid to curdle] The precipitation of proteins or colloids in a jellylike, soft mass caused by chemical agents.

chem"o-dec to ma. See carotid body *tumor*

chem"o-pro"phy lax"is [*chymos*; G. *prophylaxis*, to guard against]. Prevention of disease by the administration of chemical drugs, as sulfanilamide.

chem" re-cep"tor Chemoceptor

chem" re flex [*chymos*; L. *reflexus*, from *reflectere*, to turn back]. Denoting a reflex act initiated by chemical stimulus.

che-mo sis (ki mo sis) [G *chēmōsis*, affection of the eyes, where the cornea swells like a cockleshell, *chēmē*]. Swelling of the conjunctiva —chemot'ic, *adj*

chem'o-stat (kem -o-stat) [*chymos*; G. *statos*, standing]. A device used for keeping a bacterial population growing at a reduced rate over an indefinite period by controlling the inflow of nutrients and the outflow of the bacterial suspension used in experimental bacteriology

chem" -sur'ger y [G. *chymos*, juice; *cheirourgia*, working by hand]. Removal of diseased or unwanted tissue by the application of chemicals.

chem"o-tax'is, chem tax"y [G *chymos*, juice *taxis*, arrangement]. Response of organisms to chemical stimuli; attraction toward a substance is positive while repulsion is negative chemotaxis; chemotropism. —chemotac'tic, *adj*

chem ther' py [*chymos*; G *therapeia*, treatment]. Prevention or treatment of infective diseases by chemicals which act as antiseptics within the body without producing serious toxic effects on the patient.

che mo-troph' An autotrophic bacterium able to oxidize an inorganic substrate (as iron, sulfur nitrate) specific to a particular species to secure energy for anabolic metabolism also called *chemosynthetic autotroph*. —chemotroph'ic, *adj*.

che-mot'ro-pism [*chymos*; G. *tropein*, to turn]. 1. Attraction of cells by chemical substances. 2. *In immunology* the positive attraction of phagocytes to microorganisms, cellular debris, and areas of inflammation. Syn., *chemotaxis*.

chem ur-gy Chemistry as applied specifically to the development of derivatives from raw materials, especially from agricultural products, for industry e.g. the manufacture of paints from soybean oil, fire extinguishers from licorice root, etc.

Chenais, Louis Jean [*French physician*, 1872-1950]. See Cestan-Chenais syndrome under Cestan.

Che no po di um (kee no-po dee-um, ken o-dee o-) [G *chēn*, goose *podion*, little foot]. A genus of herbs of the family Chenopodiaceae.

C. ambrosioides anthelminticum. The American wormseed yields a volatile oil, chenopodium oil, which is an efficient anthelmintic against the roundworm. Dose, 0.33-1.0 cc. (5-15 min.)

che plas ty (kee o-plas tee) [G *cheein*, to pour *plassein*, to mold]. *In dentistry*, the process of molding with low fusing metals or alloys. —cheoplas'tic, *adj*

chercosal. Trade-mark for a liquid preparation used as an expectorant.

cher o-ma ni a, cheer"o ma ni (kerr"o-may' nee-uh, kee ro) [G *chairein*, to rejoice; *mania*, madness]. Old term for amenomania.

cher"o-pho'bi (kerr" fo'bee-uh, keer) [*chairein*; G. *phobos*, fear]. A morbid fear of gaiety or happiness.

cher'ry [G *kerasos*, bird-cherry]. Any of a number of species of the genus *Prunus*, trees having typical globose drupes; family Rosaceae.

c. laurel. European evergreen cherry *P laurocerasus*. Water distilled from its leaves has been used in the same way as dilute hydrocyanic acid.

wild c. (*prunus virginiana*) The stem bark of *Prunus serotina*. It contains an enzyme emulsin, which acts upon a cyanogenetic glycoside forming hydrocyanic acid. It also contains tannin and a bitter principle. Wild cherry has been employed in the treatment of bronchitis of various types, but is of no remedial value. It is frequently used as a flavoring agent, especially for cough syrups. Also called *wild black c. bark*.

Cherry and Crandall' test. See under *test*.

cher'u-bism. The characteristic facies of familial fibrous dysplasia of the jaws: chubby features with upturned eyes.

Cheselden, William [*English surgeon*, 1688-1752]. Famous surgeon of the eighteenth century and the chief representative of his period. Known also as an accomplished anatomist and author of two books on anatomy. His operation of lithotomy received much attention. By his iridotomy for the relief of a certain type of blindness, he made

the most important contribution to ophthalmic surgery outside of the cataract operation.

chest [AS. cest, from G. kistē, basket]. The thorax.

emphysematous c. The altered contour caused by advanced pulmonary emphysema characterized by fixation of the chest in the position of deep inspiration; the so-called *barrel chest*.

fissured c. A rare deformity of congenital origin; exists in two forms, vertical fissure of the thoracic wall along the sternum, and lateral fissure. It may be associated with hernia of the lungs or with ectopia cordis.

flail c. A condition in which there are multiple rib fractures, with or without fracture of the sternum, allowing the occurrence of paradoxical motion of the chest wall and the attendant physiological disturbances. stove-in chest.

funnel c. The appearance produced by a deep funnel-like depression of the lower sternum, most commonly congenital, but sometimes the result of rickets in childhood.

phthisical c. A long, narrow flat chest with winged scapulas, formerly thought to be characteristic of pulmonary tuberculosis.

pigeon c. See pigeon breast.

che-t min. Chaetomin.

Chevreul, Michel Eugène [French chemist, 1786–1889]. Proved the sugar in diabetic urine to be glucose (1815). Discovered that fats consist of fatty acids and glyceryl (1823). Isolated creatine from muscle (1832).

Cheyne, John [Scottish physician in Ireland, 1777–1836]. Described type of irregular breathing (1818) called *Cheyne-Stokes respiration*. See under respiration. Gave first description of acute hydrocephalus (1808). Contributed to the knowledge of croup (1809).

Chiari, Hans [German pathologist, 1851–1916]. Widely known for his publication of one of the best works on the history of pathology (1903) and for his important study on gastric syphilis (1891); described obliterating endarteritis of the liver called *Chiari's disease*. Described downward elongation of the cerebellum and brain stem into the cervical portion of the spinal canal, associated with spina bifida. Called *Chiari's malformation* or *Arnold-Chiari syndrome*. Described fine fibers stretching across the right atrium of the heart, from the openings of the inferior vena cava and coronary sinus to the crista terminalis; these are thought to be inconstant remnants of embryonic valves. Called *Chiari's network*.

Chiarugi, Vincenzo [Italian physician, 1759–1820]. Known for his encouragement of fundamental reforms in the treatment of the insane. Said to have been the first in Europe to abandon the use of fetters in mental hospital (1793).

chi·as·ma (kigh-az'muh) (pl. chiasmata) [G. from chiazein, to mark with two lines crossing like an X]. 1. The optic commissure. Also called *chiasm*. See Plates 17, 18. 2. A crossing. Also called *chiasm*. 3. In genetics, the crossing of two chromatids at the prophase of the first maturation division of the germ cells, as result of crossing over.

chi·as'ma·ta. Plural of chiasma.

Chi·ca'go blue. An azo dye having strong anticoagulant action when injected into the blood stream.

chick'en·pox [AS. cicen, chicken; ME. pokkes]. An acute contagious disease of childhood, characterized by superficial eruption of macular transparent vesicles which appear in successive crops on different parts of the body. Varicella.

chig'ger [F. chique, of Caribbean origin]. A larval mite of the genus *Trombicula*, the bite of the common chigger causes severe inflammatory lesions in warm-blooded animals, including man.

chig'oe, chig'o. See *Tunga penetrans*.

chil'blain" [AS. cele; blegen]. Congestion and swelling of the skin, due to cold, and followed by severe itching or burning; vesicles and bullae may form, and these may lead to ulceration. Syn., *erythema pernio, pernio*.

child [AS. cild]. One who has not reached the age of puberty.

child'bed" [cild, AS. bed]. Condition of woman being in labor; parturition.

c. fever. Puerperal fever.

child'birth" [cild, ME. berth]. Parturition. See Plate 42.

natural c. A form of childbirth in which psychological and emotional aspects are emphasized in order to educate the patient for labor and, when possible, to reduce or eliminate the use of drugs; popular term. The expectant mother is prepared for natural childbirth by gaining an understanding of the labor process and sometimes by regimen of exercises.

child'crow"ing [cild, AS. crāwan]. The sound characteristic of the respiratory effort in laryngismus stridulus.

Chil'dren's Bu'reau. A division of the Social Security Administration of the United States concerned with the health and welfare of the whole child. It provides grants to the states for maternal and child health, and makes available to national, state, and local organizations its publications and information service.

chi li'tis (kigh-ligh'tis). See *cheilitis*.

chill [AS. cele]. A sensation of cold accompanied by shivering; frequently the initial symptom of acute infections, as pneumonia; prominent symptom of various forms of malarial fever. The subjective sensation of chilliness results from constriction of the blood vessels of the skin and is accompanied by rise of body temperature.

chi'lo- (kigh'lo-), **chil-** (kighl-). See *cheilo-*.

Chi"lo mas'tix (kigh"lo-mas'ticks) [G. cheilos, lip; mastix, scourge]. A genus of flagellates parasitic in man and other animals.

C. mesnili. The species found in the intestine of man.

chi·lop·a. See *cheilopalatal*.

Chi·lop'o·da [G. cheilos, lip; poda, feet]. The centipedes; division of the arthropod group Myriapoda.

chi·maph'i·la (kigh-maf'i-luh, ki-maf'i-luh) [G. cheima, winter; philein, to love]. A preparation of dried leaves of *Chimaphila umbellata*, has been used as diuretic, astringent, and urinary disinfectant.

chi·maph'i·lin (kigh-maf'i-leen, -lin, ki-maf'-). $C_{24}H_{22}O_4$. A crystalline neutral principle isolated from the leaves of *Chimaphila umbellata*.

chi·me'ra, chi·mae'ra (kigh-meer'uh, ki-meer'uh) [G. chimaira, she-goat]. 1. A plant composed of two genetically distinct types of tissue resulting from somatic mutation, segregation, or from artificial fusion, as in graft hybrids, mosaic. 2. A compound embryo produced by grafting approximately equal halves of two embryos, usually of different species.

chin [AS. cin]. The mentum; the lower part of the face, at or near the symphysis of the lower jaw.

c. reflex. See jaw-jerk reflex.

chi·nin·hydrochloride Trade name for quinacrine hydrochloride.

chin cough. See *whooping cough*.

chin'i·o·fon (kin'ee-o-fon, chin'ee-) (chiniofonum). A mixture of 7-iodo-8-hydroxyquinoline-5-sulfonic

acid, its sodium salt, and sodium bicarbonate, containing 26.5–28.0% iodine. It is a canary yellow powder soluble in 25 parts of water. It is employed as an amebicide in the treatment of dysentery; locally it finds some use as a surgical dusting powder.

chin o- (kin o-, kee'no-), **chin-** (kin-) [Sp. quina, from Quechua quinquina, cinchona bark]. A combining form denoting presence of or relation to quinine.

chi-noi'dine (ki-noy'deen, -din, chi-noy'-). Quinoidine. A mixture of amorphous alkaloids obtained in the manufacture of quinine. Occasionally employed as an inexpensive febrifuge, but has only slight antimalarial action.

chinosol. Trade name for 8-hydroxyquinoline sulfate (oxyquinoline sulfate), an active bactericide.

chin o vin (kin o-vin, ki-no'vin). $C_{30}H_{48}O_8$. Quinovin; a glycoside obtained from cinchona.

chi''o-na-blep si-a, chi''o-na blep sy (kigh o-nab-) [G. chiōn, snow; blepsis, blindness]. Loss of sensibility of the retina resulting from the exposure of the eyes to reflection of the sunlight upon snow; snowblindness.

chi''o-na blep sy. See chionablepsia.

chi''o-nan'thin (kigh o-nan'thin). $C_{22}H_{28}O_{10}$. A glycoside from the rootbark of Chionanthus virginicus, of the Oleaceae. See Chionanthus.

Chi''o-nan'thus (kigh o-nan'thus) [chiōn; G. anthos, flower]. 1. Fringe-tree bark. The dried bark of the root of Chionanthus virginicus. It has been used as a bitter tonic, diuretic, and aperient. 2. A genus of the Oleaceae.

chi''o no-pho'bi a (kigh o-no-fo'bee-uh) [chiōn; G. phobos, fear]. Morbid fear of snow.

chi rag'ra (kigh-rag'ruh, -ray'gruh, kigh rag ruh) [G. cheir, hand; agra, seizure]. Pain in the hand.

chi-ral'gi a (kigh-ral'juh, -jee uh) [cheir; G. algos, pain]. Neuralgic pain in the hand.

c. paresthetica. Numbness and spontaneous pain in that part of the hand supplied by the superficial branch of the radial nerve.

chi-rap si-a (kigh-rap see-uh) [cheir; G. hapsis, touching]. Friction with the hand; massage.

chi'rap-sy, chei'rap-sy [cheir; G. hapsis, touching]. The marking of a child in utero with the image of an object longed for and touched by the mother; an old belief.

chi''rar thri'tis (kigh rahr-thrigh'tis) [cheir; G. arthritis, from arthron, joint; -itis, inflammation]. Rheumatism or arthritis of the hand. Rare.

chi-ra'ta (kigh-ray'tuh, chi-rah tah, ki ray'tuh) [Hindi chirāitā]. The dried plant of Swertia chirayita; has been used as a bitter tonic.

chi-ra'tin (kigh ray'tin, ki rat in, kirr'uh tin), **chi-ret'tin** (kigh-ret'in). $C_{26}H_{48}O_{15}$. A light yellow crystalline, bitter glycoside, obtained from chirata.

chi-ris'mus (kigh-riz mus) [G. cheir, hand]. Spasm of the hand.

chi'ro- (kigh ro-), **chir-**, **chei'ro-** (kigh ro-) [cheir]. A combining form denoting pertaining to the hand.

chi''ro-kin''es thet'ic (kigh ro kin ess thet ick) [cheir; G. kinēsis, motion; aisthēsis, sensation]. Relating to the subjective perception of the motions of the hand, particularly in writing.

chi-rol'o-gy (kigh rol o jee) [cheir; G. logos, word]. 1. Method of communicating with deaf-mutes by means of the hands. Obs. 2. Study of the hand.

chi''ro-meg'a-ly (kigh ro-meg'uh lee) [cheir; G. megas, large]. Enlargement of one or both hands, but not of acromegalic nature. Also called pseudoacromegaly.

chi'ro plas''ty (kigh ro-plas tee) [cheir; G. plassein, to form]. Plastic operation on the hand.

chi rop''o-dist (kigh-rop o-dist, ki-rop) [cheir; G. pous, foot]. One who treats minor ailments of the feet. Syn., podiatrist.

chi rop o-dy (kigh-rop o dee, ki-rop) [cheir; pous]. The medical specialty dealing with diseases of the feet.

chi''ro-pom pho-lyx (kigh ro-pom'fo-licks, -pom-f 'licks) [cheir; G. pompholyx, bubble]. Dyshidrosis; pompholyx; an ill-defined, inflammatory pruritic skin disease confined to the hands and feet, characterized by vesicles or bullae, arranged in groups. Often dermatophytid associated with epidermophytosis of hands or feet.

chi''ro-prac'tic (kigh ro-prack'tick) [cheir; G. praktikos, from prassein, to do]. A system of therapeutics based upon the theory that disease is caused by abnormal function of the nervous system; attempts to restore normal function are made through manipulation and treatment of the structures of the body, especially those of the spinal column.

chi''ro-scope (kigh ro-scope) [cheir; G. skopein, to examine]. Device for correcting strabismus.

chi''ro-spasm (kigh ro spaz um) [cheir; G. spasmos, spasm]. Writer's cramp. Obs.

chi-rur'geon (kigh-rur'jun) [G. cheirourgos, working by hand]. A surgeon. Obs.

chi-rur'ger y (kigh-rur'juh ree). Surgery. Obs. —**chirurgic, chirurgical**, adj.

chi'tin (kigh'tin). The structural material of skeletons of arthropods, with few exceptions occurring only in invertebrates. It is a condensation product of acetylglucosamine molecules, as cellulose is a condensation product of glucose molecules. —**chitinous**, adj.

chi''to bi ose. A partial hydrolysis product of chitin; it contains two acetylglucosamine molecules linked in the same manner as the two glucose molecules of cellobiose.

Chittenden, Russell Henry [American physiological chemist, 1856–1943]. Remembered for his experimental work which advanced the knowledge of nutrition (1888). Founded the first laboratory of physiologic chemistry in the United States. Advocated a low protein diet as an aid to health (1904).

chlam''y-do-blas''to-my-co sis (klam''i-do-blas to-migh-ko sis) [G. chlamys, mantle; blastos, germ; mykēs, fungus; -ōsis, condition]. A form of chromoblastomycosis due to Phialophora verrucosa.

Chla myd'o-phrys. A genus of coprozoic flagellates.

C. stercorea. A species found in the feces of man and other animals.

chlam'y-do-spore [chlamys; G. spora, seed]. A thick-walled spore of certain fungi; it is not produced on a basidium but represents a transformed vegetative cell.

Chlam''y do zo''a ce-ae. Proposed name for the family of large viruses, which includes the genera Chlamydozoon and Miyagawanella, nonculturable and cultivatable in chick embryos, respectively. Susceptibility of some species to treatment by sulfonamides and antibiotics separates this group from other viruses.

Chlam''y do-zo on. A genus of viruses, family Chlamydozoaceae, with limited host range and attacking primarily ocular and genital tissues, which form characteristic inclusion bodies. It includes the causative agent of trachoma (C. trachomatis) and of inclusion conjunctivitis (C. oculogenitale), which may also cause inflammation of the lower genitourinary tract.

chlo-as'ma (klo az muh) [G. from chloazein, to be green]. Deposit of pigment in the skin, occurring in patches of various sizes and shapes, and of

yellow brown, or black color often associated with some endocrine derangement. Syn., *discolorations, melanoderma, melasma.*

c. gravidarum. See *c. uterinum.*

c. hepaticum. Liver spots, term used by the laity for any pigmentation of the face or chest.

c. phthisicorum. Brown patches upon the skin of the forehead or upper portions of the cheeks in tuberculous patients.

c. uterinum. Located chiefly on the forehead, temples, cheeks, nipples, and median line of abdomen. They may be marked during pregnancy menstruation, functional derangements of the uterus, or in ovarian disorders and tumors. Also called *c. gravidarum.*

chlor-. See *chloro-.*

chlor ac'ne [G. *chlōros*, pale green perhaps from G *achnē*, chaff]. An acneform eruption caused by chlorine or paraffin.

chlo ral. 1. Trichloroacetaldehyde, CCl_3CHO A colorless, caustic liquid of pungent odor 2. Chloral hydrate.

camphorated c. (*chloral camphoratum*) A liquid *prepared from equal parts of chloral hydrate and camphor* used as counterirritant and anodyne. Syn., *chloral camphor*

c. amylene hydrate. $CCl_3.CHOH.O.C(CH_3)_2$-C_2H_5 A hypnotic used in 50% solution Dose, 0 5–2.0 cc. (8–30 min.) Syn *amylene chloral.*

c. hydrat (*chloralis hydras*) $CCl_3.CH(OH)_2$ White crystals of penetrating odor and slightly bitter taste 1 Gm dissolves in 0 25 cc. of water or in 1.3 cc. of alcohol used as rapid somnifacient, anticonvulsant, and as ingredient of anodyne liniments. Dose, 0 6–2 0 Gm. (10–30 gr)

c. menthol. A liquid prepared from equal parts of chloral hydrate and menthol, has been used as counterirritant and local anesthetic.

chlo ral am'ide. See *chloralformamide.*

chlo ral form am'ide (klor al form am ide, -id, -form uh mide, -mid) A crystalline solid, CCl_3.CHOH.NH OC H used as hypnotic, somewhat slower-acting than chloral hydrate. Dose, 1 2 Gm. (15–30 gr)

chlo-ral'i mide. $CCl_3.CH.NH$. Colorless crystals soluble in alcohol has been used as hypnotic.

chl ral ize Put under the influence of chloral.

chl ral-ose (klor ul-ohse, ohs) $C_8H_{11}Cl_3O_6$ an interaction product of chloral (anhydrous) and glucose (dextrose) white, bitter crystals. An uncertain and sometimes dangerous hypnotic. Dose, 0.2–0.6 Gm. (3 10 gr) Syn., *glucochloral.*

chlor ra'ide chlor' mide. See *chloralformamide*

chlo ra mine Chloramine-T

chlo ra mine -B (klor uh meen -min klor am in) Sodium benzenesulfonchloramide. A white, crystalline powder used like chloramine-T

chlo ra mine T (*chloramine-T*) Sodium paratoluenesulfonchloramide. $CH_3.C_6H_4.SO_2.N(Na)$-$Cl.3H_2O$ A white or faintly yellow crystalline powder unstable in air A surgical disinfectant in 0 5–4 0% solution. Syn *chlorazene, tosylchloramide sod um*

chlor" m phen'i-col. D( )Threo-1-p-nitrophenyl-2-dichloroacetamido-1 3-propanediol; $NO_2.C_6H_4$ CH(OH) CH(CH_2OH) NH C(O) $CHCl_2$ an antibiotic substance produced by *Streptomyces venezuelae* Burkholder and also synthetically It is orally effective against Rickettsia and against certain Gram-negative organisms It may produce serious blood dyscrasias. See *chloromycetin.*

chl ra ne mi a chlo ra- mi-a, chlo ra-nae mi-a. Chlorosis

chlor-ar'se-nol. See *solarson.*

chlo rate. A salt of chloric acid; the radical ClO_3^-

chlo ra zene Chloramine-T

chlo ra zol. A highly toxic, oily liquid, obtained from proteins by action of strong acids.

chlo ra zol black E (C.C.) An acid poly-azo dye; used as a vital dy and as ucleer stain. Also called *Erie black G X 00, Pontamine black E.*

chlor bu'ta nol. Chlorobutanol.

chlor bu tol. Chlorobutanol.

chlorcosane. Trade name f chlorinated paraffin.

chlor cre sol. See *chlorocresol.*

chlor-cy'cli zine hy"dro-chl ride. Official name f 1-(p-chlorobenzhydryl)-4-methylpiperazine hydrochloride, $C_{18}H_{21}ClN_2$ HCl an antihistaminic drug. See *di-paralene hydrochloride, perazil hydrochloride.*

chlordan, chlordane. Trade name for 1,2,4,5,6,7 8,8-octachloro-2,3,3a,4,7 7a-hexahydro-4,7-methanoindene, an insecticide.

Chlor-el'la vul gar'is. An alga, the source of the antibiotic chlorellin.

chlo-rel'lin. A substance produced by certain algae, notably species of *Chlorella*, which inhibits *the growth of various Gram-positive and Gram-*negative bacteria.

chlor"eph i dro sis [G *chlōros*, pale green; *ephidrōsis*, superficial perspiration]. A condition characterized by greenish perspiration.

chloresium. Trade-mark for certain medicinal products containing chlorophyll.

chlor-ethamin. Trade-mark for urine acidifier chemically ethylenediamine dihydrochloride.

chlor-eth yl. See *ethyl* chloride.

chloretone. A trade-mark for chlorobutanol.

chlor gua nide hy"dro-chl ride. See *chloroguanide hydrochloride.*

chlor hem' tin, chlor haem tin (klor hem uh-tin hee m h tin) See *hemin.*

chlor hy'dri [*chlōros*; G *hydōr* water]. Excess of hydrochloric acid in the stomach.

chlo ric ac'id. $HClO_3$ An acid known only in solution and in the form of its salts (chlorates)

chlo ride. A salt of hydrochloric acid; binary compound containing Cl^-

lime c. Chlorinated lime.

chlo ride shift. The exchange of chloride ion for bicarbonate ion between intracellular and extracellular fluid without corresponding movement of cations

chl ri du'ri [*chlōros*; G *ouron*, urine]. Excess of chlorides in the urine.

chlo rin 'tion [*chlōros*] Act or process of treating or combining with chlorine, as for disinfecting sewage or drinking water

chlo rine (klo reen, rin) [*chlōros*]. Cl = 35.457 A greenish yellow gas of suffocating odor very irritant prepared by the electrolysis of sodium chloride sol tions A powerful germicide only in the presence of moisture with which it forms hypochlorous and hydrochloric acids, the former decomposing with the liberation of nascent oxygen. This fact ccounts for its germicidal as well as its bleaching and deodorant value. It has been used by inhalation in the treatment of acute coryza. —**chlorinated,** *adj*

c. water Saturated aqueous solution of chlorine.

chlo rite. A salt containing the radical ClO_2^- derived from chlorous acid.

chlor mer' drin. Generic name for [3-(chloromercuri 3 m h ypropyl rea NH CO NH. CH CH(OCH_3) CH HgCl an orally effective mercurial diuretic *See neohydrin*

chl ro-, chlor- [*chlōros*]. 1. A combining form meaning *pale green.* 2 *I chemistry* combining

form meaning *having chlorine as substitute for hydrogen*.

chlo"ro·ac"e·to·phe·none (klor o-ass"i to-fee·nohn) C_8H_7OCl. A white solid used as a lacrimator in chemical warfare. It has an odor resembling that of apple blossoms. See war gas.

chlo·ro·a·ne·mi·a. See *chloranemia*.

chlo·ro·az·o·din. Azochloramid.

c. solution (*liquor chlorazodini*) A solution of 2.6 Gm. of chloroazodin in sufficient glyceryl triacetate to make 1000 cc. Used as surgical antiseptic.

chlo·ro·bu·ta·nol. $Cl_3C.C.(CH_3)_2OH$. White crystals with characteristic odor and taste. 1 Gm. dissolves in 125 cc. of water, in 1 cc. of alcohol, or in 10 cc. of glycerin. Hypnotic, sedative, and anticonvulsant. Externally it is a local anesthetic and antiseptic. A preservative for injections and other pharmaceutical preparations. Syn., *chlorbutol*, *acetone-chloroform*.

chlo"ro·cre·sol. Parachlorometacresol, $CH_3.C_6H_3(Cl).OH$. Colorless, slightly soluble crystals used for the sterilization and preservation of injections and, to some extent, as a surgical antiseptic.

chlo·ro·cru·or'in. Any of several iron-porphyrin proteins of extremely high molecular weight and containing a corresponding large number of iron atoms found in some invertebrates. Dilute solutions of chlorocruorins are green; concentrated solutions are red.

chlo·ro·form. Trichloromethane, $CHCl_3$. A heavy colorless liquid having a characteristic ethereal odor. The commercial article contains up to 2% by volume of alcohol. Chloroform boils at about 61° C.; at 25° C. has a specific gravity of 1.476; dissolves in 210 volumes of water. It should be kept in tight, light-resistant containers at a temperature below 30° C. It is used as an organic solvent and, medicinally, as an anesthetic, anodyne, and antispasmodic. It is administered chiefly by inhalation as a general anesthetic and is more potent and more rapid than ether, although generally not used because of its hepatotoxic and cardiotoxic properties. Locally it is a penetrating and powerful irritant and, as such, is used in liniments. Administered orally, small doses are carminative and anodyne. Excessive oral doses produce unconsciousness and coma, results similar to those of inhalation. —**chloroform'ic**, *adj.*

acetone-c. Chlorobutanol.

alcoholized c. A mixture of chloroform and alcohol.

c. liniment (*linimentum chloroformi*) Chloroform, 300 cc., camphor and soap liniment, 700 cc.

c. spirit (*spiritus chloroformi*) Chloroform 6 cc., alcohol 94 cc. Dose, 0.6–4.0 cc. (10–60 min.)

c. water (*aqua chloroformi*) A saturated solution of chloroform in water. Dose, 15–60 cc. (½–2 oz.)

gelatinized c. Equal parts of chloroform and white of egg shaken together.

chlo·ro·form·ism [*chlōros*; L. *formica*, ant]. 1. Habitual use of chloroform for its narcotic effect. 2. Symptoms produced by this use of the drug.

chlo"ro·form"i·za·tion [*chlōros*; *formica*]. 1. The act of administering chloroform as an anesthetic. 2. Anesthetic results from the inhalation of chloroform.

chlor·gu·an·ide hy"dro·chlo·ride. Generic name for N^1-(p-chlorophenyl)-N^5-isopropylbiguanide hydrochloride $ClC_6H_4NHC(NH)NHC(NH)NHCH(CH_3)_2.HCl$, an odorless, colorless, crystalline powder soluble in alcohol, slightly soluble in water; useful for the prophylaxis, suppression, and treatment of malignant tertian (*Plasmodium falciparum*) malaria and for the suppression and treatment of tertian (*Plasmodium vivax*) malaria with strains so far studied. Dose, average, 0.3 Gm. (5 gr.) weekly to suppress falciparum and vivax malaria; 0.3 Gm. daily for 10 days to cure falciparum malaria. See *guanatol hydrochloride*, *paludrine hydrochloride*.

chlo·ro·lym·pho·ma. See *chloroma*.

chlo·ro·ma [*chlōros*; G. -*ōma*, tumor]. Multiple tumors of marrow of bones, and of soft tissues near bones, lymph nodes, and viscera. Grossly the nodules are green. Microscopically they resemble focal lesions of leukemia. Chloroma is usually accompanied by the blood picture of leukemia.

chloromycetin. Trade-mark for the antibiotic substance *chloramphenicol*.

chlo·ro·naph·tha·lene (klor"o-naf'thuh leen, nap thuh·leen) $C_{10}H_7Cl$. The α-variety is a colorless liquid; the β-variety occurs as white scales. Various chlorinated naphthalenes are used industrially and have been the cause of severe liver necrosis among exposed workers.

chlo·ro·per'cha [*chlōros*; Malay *percha*, tree producing gutta-percha]. Solution of gutta-percha in chloroform, used in dentistry as nonconducting cavity linings, pulp cappings, and for filling the roots of pulpless teeth.

chlo·ro·phane. A yellowish-green chromophane.

chlo"ro·phe·nol. Monochlorophenol, $C_6H_4Cl.OH$. The ortho variety is a colorless liquid; the meta and para isomers are crystalline. Antiseptic and caustic. *Trichlorophenol* occurs as white crystals; it is used as a 5–10% antiseptic ointment.

chlo·ro·phen'o·thane. United States Pharmacopeia name for the medicinal grade of DDT, chemically 1,1,1-trichloro-2,2-bis(p-chlorophenyl)-ethane, $Cl_3C.CH(C_6H_4Cl)_2$. The substance occurs as colorless to white crystals or as a white to slightly off-white powder insoluble in water. It is used medicinally as a pediculicide, commonly in 5 to 10% concentration in an inert base. Syn., *dicophane*.

chlo·ro·phyl'lase. An enzyme which splits or hydrolyzes chlorophyll.

chlo·ro·phyll [*chlōros*; G. *phyllon*, leaf]. The green coloring-matter responsible for photosynthesis in plants. It consists of chlorophyll-α $C_{55}H_{72}O_5N_4Mg$, which is bluish black in powder form, and chlorophyll-β $C_{55}H_{70}O_6N_4Mg$, which is dark green. It is soluble in alcohol, chloroform, ether and fixed and volatile oils, used as a coloring agent and, medicinally, in the treatment of various lesions, and as a deodorant. Also spelled *chlorophyl*.

crystalline c. Consists chiefly of ethyl chlorophyllide, a product of the extraction of green leaves with ethyl alcohol.

water-soluble c. A product of the hydrolysis of chlorophyll with sodium hydroxide; e.g. sodium magnesium chlorophyllin, $C_{34}H_{30}O_6N_4MgNa_3$. This substance has shown valuable anti-infective properties. Other water-soluble chlorophyllins containing iron or copper in place of magnesium have also been used medicinally. See *phaeophytin*.

chlo·ro·pi·a. Chloropsia.

chlo·ro·pic'rin. Trichloronitromethane, CCl_3NO_2. A colorless, odorous liquid used as an insecticide and as a lacrimatory and emetic chemical warfare agent. Also called *nitrochloroform*, *chlorpicrin*.

Chlo·rop'i·dae. Oscinidae.

chlo·ro·plast, chlo·ro·plas'tid [*chlōros*; G. *plassein*, to form]. An organelle bearing the chlorophyll of plant cells.

chlo·ro·plas'tin [*chlōros*; *plassein*]. The cytoplasm in chloroplasts.

chlo·ro·pro·pane. Both 1-chloropropane, $ClCH_2$-

$CH_3.CH_3$, and 2-chloropropane, $CH_3.CHCl.CH_3$, have been suggested as general inhalation anesthetics.

chlo re-pro pene. 1-Chloro-1-propene, $ClC:CH.CH_3$, and 2-chloro-1-propene, $CH_2:CCl.CH_3$, have been suggested as general inhalation anesthetics.

chlo-rop si a, chlo-ro pi-a [*chlōros*; G. *opsis*, vision, *ōps*, eye]. Defect of vision in which all objects appear green. It occurs occasionally in digitalis poisoning.

chl ro pu'rine. $C_5H_3ClN_4$; 6-chloropurine the chlorine analog of 6-aminopurine or adenine. It inhibits strain of mouse sarcoma, possibly through ability to block metabolic step in conversion of adenine to guanine, and is under investigation as possible chemotherapeutic agent in human neoplastic diseases.

chlo re-quine phos phate. Official title for 7-chloro-4-(4-diethylamino-1-methylbutylamino)-quinoline diphosphate, $C_{18}H_{26}ClN_3.2H_3PO_4$, white, crystalline powder freely soluble in water; produced by synthesis. It is effective in suppressive treatment of all types of malaria, also in hepatic amebiasis. Dose, as an antimalarial, 0.3–0.6 Gm. (5–10 gr.) as antiamebic, 0.5–1 Gm. (8–15 gr.) Chloroquine base was introduced as *SN 7618*. See *aralen diphosphate*.

chlo-ror'a phin. $C_{13}H_{11}N_3O$ an antibiotic substance produced by *Pseudomonas chlororaphis*.

hlo re-sar-co ma. See *chloroma*.

chlo-ro sis [*chlōros*, G. *-ōsis*, condition]. Greensickness form of hypochromic microcytic anemia, most common in young women, characterized by marked reduction of hemoglobin in the blood, with but slight diminution in number of red cells also called *chloranemia, achylic chloranemia*. —**chlorot'ic**, *adj*

c. rubra. Anemia without pallor due to dilatation of peripheral vessels.

Egyptian c. Incorrect term for ancylostomiasis.

chl ro-stig'ma [*chlōros*; G *stigma*, spot]. The *Chlorostigma stuckertianum* (Asclepiadaceae) South American plant, which contains an alkaloid, chlorostigmine, which has been used to stimulate the secretion of milk.

N-chlo ro-suc cin im'ide. Succinchlorimide.

chlor'o-then cit rate. $C_{14}H_{18}ClN_3S.C_6H_8O_7$ N,N-dimethyl-N'-(2-pyridyl)-N'-(5-chloro-2-thenyl)-ethylenediamine citrate an antihistaminic substance See *tagathen citrate*.

chlo ro thy'mol. Monochlorothymol, $CH_3C_6H_2(Cl)(OH)CH(CH_3)_2$ A white, crystalline powder with characteristic odor and pungent taste, almost insoluble in water very soluble in alcohol used as germicide. Also spelled *chlorthymol*.

chlo ro tri-an'i-sene. Generic name for tri-p-anisylchloroethylene, synthetic estrogen, introduced under the trade-mark tace employed in the treatment of prostatic carcinoma.

chlor'ou ac'id. $HClO_2$; an acid which has not been isolated, but salts of which, called *chlorites*, are known.

chlo"ro-vi"nyl di"chl ro-ar'sine. $CHCl:CH.AsCl_2$ Lewisite potent lacrimator lung irritant, and vesicant, developed for use as chemical warfare agent. It is systemically toxic because of its arsenic content. See war *gas*.

chloroxyl. Trade-mark for cinchophen hydrochloride.

chlo"ro xy'le-nol (klor y'le nole, nol, nawl) 2-Chloro-5-hydroxy 1,3-dimethylbenzene, $HOC_6H_2(CH_3)_2Cl$. Creamy-white, crystalline powder used as an antiseptic in ointment form or in oil solution. It has been used as urinary antiseptic, being administered by inunction.

chlor phen ir'amine ma-le ate. Official name for 2 [p-chloro-α (2 dimethylaminoethyl)benzyl] pyridine maleate $C_{16}H_{19}ClN_2.C_4H_4O_4$; an antihistaminic drug. Syn., *chlorprophenpyridamine maleate*. See *chlor-trimeton maleate*.

chlor phe nol See *chlorophenol*.

chlor pic rin. See *chloropicrin*.

chlor pro ma zine hy"dro-chlo ride. Generic name for 10-(dimethylaminopropyl)-2-chlorophenothiazine hydrochloride $C_{17}H_{19}ClN_2S.HCl$; drug effective in suppressing nausea and vomiting associated with various pathologic states. See *largactil, thorazine hydrochloride*.

chlor"pro phen pyr id'a mine ma-le'ate. Chlorpheniramine maleate.

chlor"tet ra-cy'cline hy"dro-chlo ride. Generic name for the antibiotic substance, supplied under the trade-marked name *aureomycin hydrochloride*, biosynthesized by the actinomycete *Streptomyces aureofaciens*, yellow crystalline powder. Its composition is represented by $C_{22}H_{23}N_2O_8Cl.HCl$. It is derivative of tetracycline in which chlorine atom replaces hydrogen atom in ring one of tetracycline. 1 Gm. dissolves in about 75 ml. of water. It is broad-spectrum antibiotic, acting against many Gram-positive and Gram-negative bacteria and also against rickettsiae and certain viruses. It is effective when given orally but may also be given intravenously.

chlor thy'mol. See *chlorothymol*.

chlor-trimeton maleate. Trade-marked name for chlorpheniramine maleate, an antihistaminic compound.

chloryl n. Trade-mark for trichloroethylene.

cho na (ko-ay nuh, ko-ah nuh) [G *choanē*, funnel]. 1 A funnel-like opening 2. Either of the posterior nasal orifices. Also called *internal naris*. —**cho nal**, *adj*

primary c. The embryonic opening between one of the olfactory sacs and the stomodeum; primitive choana.

primitive c. See primary *c*.

choke [ME. *choken*]. Suffocate prevent access of air to the lungs by compression or obstruction of the trachea or larynx.

choke damp A name given by miners to carbon dioxide gas, blackdamp.

choked disk. See *papilledema*.

chokes. A clinical manifestation of decompression sickness, characterized by nonproductive cough, deep, usually burning, substernal pain, and inability to take deep breath

chok'ing [*choken*] Partial or complete suffocation from mechanical obstruction by foreign body or external pressure, or from laryngeal spasm caused by an irritating gas or liquid.

chol-. See *chole-*.

chol' gogue, chol'a gog (kol'uh-gawg, -gog, ko luh) [G *cholē*, bile *agōgos*, drawing forth]. Any agent that promotes the flow of bile. —**chol' ag gue chol' gog**, *adj*

cho-lal'ic ac'id (ko lal'ick, ko lay'lick) See *cholic acid*, 1

chol' -mine. $CH_2OH.CH_2NH_2$; β-aminoethyl alcohol, colorless oily liquid, miscible with water In animals it may be formed by reduction of glycine or decarboxylation of serine; when methylated by methionine it forms choline. It is the basic component of certain cephalins. Syn., *β-aminoethanol, ethanolamine*

cholan-DH Trade-mark for dehydrocholic acid used as choleretic.

cho'lane (ko'lane, kol'ane) $C_{24}H_{42}$. A hydrocarbon which may be considered as the parent substance of sterols, hormones, bile acids, and digitalis aglycones

chol n"e-re sis (ko lan i-ree sis) [*chol*; G. *erēsis*,

removal]. An increase in the output or elimination of cholic acid, its conjugates and their salts, such as sodium taurocholate and sodium glycocholate.

cho-lan-gi-ec'ta-sis [*chol-*; G. *angeion*, vessel; *ektasis*, a stretching out]. A dilatation of extrahepatic or intrahepatic biliary passages.

cho-lan"gi-o-gas-tros'to-my (ko-lan-jee-o-gas-tros'to-mee) [*chol-*; *angeion*; G. *gastēr*, belly; *stoma*, mouth]. The formation of an anastomosis between a bile duct and the stomach.

cho-lan"gi-og'ra-phy (kol-an-jee-og'ruh-fee, ko-lan-) [*chol-*; *angeion*; G. *graphein*, to write]. Roentgenography of the bile ducts.

cho-lan-gi-o-li'tis (ko-lan-jee-o-lye'tis) [*chol-*; *angeion*; G. *-itis*, inflammation]. Inflammation of the bile ducts within the liver.

cho-lan"gi-o'ma. Adenocarcinoma of the bile ducts which characteristically has an abundant dense connective-tissue stroma.

cho-lan"gi-os'to-my (kol-an-jee-os-to-mee, ko-lan-) [*chol-*, *angeion*, G. *stoma*, mouth]. In *surgery*, the drainage of any of the bile ducts by means of abdominal incision and penetration into the hepatic, cystic, or common duct.

cho-lan"gi-ot'o-my (kol-an-jee-ot-o-mee, ko"lan-) [*chol-*; *angeion*; G. *tomē*, a cutting]. Incision into any of the bile ducts, usually for removal of calculus.

cho-lan"gi-i'tis (kol-an-jy'tis, ko"lan-) [*chol-*; *angeion*, G. *-itis*, inflammation]. Inflammation of the biliary ducts, especially the intrahepatic ducts in the portal canals. Syn., *angiocholitis*.

cho-lan'ic ac'id (ko-lan-ick). $C_{24}H_{40}O_2$. The hydroxyl-free, steroid parent substance of the unconjugated bile acids, the most important of which are *cholic acid*, 1, and *desoxycholic acid*.

cho-lan"o-poi-e'sis (ko-lan-o-poy-ee-sis) [*chol-*, G. *poiēsis*, production]. The synthesis of cholic acid, or of its conjugates, or of natural bile salts.

cho-lan"o-poi-et'ic (ko-lan-o-poy-et'ick) [*chol-*; G. *poiētikos*, productive]. Possessing the property of increasing the synthesis of cholic acid.

cho'late (ko'late). Any salt of cholic acid.

cho"le-bil"i-ru'bin (kol-bil'i-roo'bin, bye"li-roo'bin, ko"le-) [*chol-*, L. *bilis*, bile; *ruber*, red]. 1. Bilirubin after passage through the hepatic cells. 2. The form of bilirubin present in bile and blood in hepatic or obstructive jaundice, giving a positive direct van den Bergh test; determined quantitatively by the indirect reaction and not extracted by chloroform. It is not defined chemically. Also see *hemobilirubin*.

cho"le-cal-cif'er-ol. Recently adopted designation for vitamin D_3, prepared from cholesterol.

cho"le-chro-mo-ge-ne'sis (kol-i-kro-meh-res-sis, ko-le-) [*chol-*; G. *chrōma*, color; *eresis*, removal]. Increased output or elimination of bile pigment.

cho"le-chro"mo-poi-e'sis (kol-kro"mo-poy-ee'sis, ko"li-) [*chol-*, *chrōma*; G. *poiēsis*, production]. The synthesis of bile pigments.

cho"le-chry"a-sy-to-sis. A dissociation of the hepatic cords, accompanied by altered polarity and degenerative change of the hepatic cells.

cho"le-cy'a-nin (kol"i-sigh-uh-nin, ko"li-). Bilicyanin.

cho'le-cyst (kol'i-sist, ko'li-) **cho"le-cys'tis** [*chol-*; G. *kystis*, bladder]. The gallbladder. —**cholecys'tic**, *adj.*

cho"le-cyst'a-gogue (kol"i-sist'uh-gawg, -gog, ko-li-) [*chol-*; *kystis*; G. *agōgos*, leading]. An agent or agency which causes or promotes the evacuation of the gallbladder by inducing contraction of its musculature, or by relaxation of the sphincter of Oddi.

cho"le-cyst-al'gi-a (kol-sist-al'jah, -jee-uh, ko-li-) [*chol-*; *kystis*; G. *algos*, pain]. Biliary colic.

cho"le-cyst-ec-ta'si-a (-eck-tay'zhuh, -see-uh, -zhuh, -see-uh) [*chol-*; *kystis*; G. *ektasis*, stretching out]. Distention or dilatation of the gallbladder. Obs.

cho"le-cyst-ec'to-my [*chol-*; *kystis*; G. *ektomē*, excision]. Excision of the gallbladder and cystic duct.

cho"le-cyst-en"ter-or'rha-phy [*chol-*; *kystis*; G. *enteron*, intestine; *rhaphē*, suture]. In *surgery*, suturing the gallbladder to the small intestine.

cho"le-cyst-en"ter-os'to-my [*chol-*; *kystis*; *enteron*, G. *stoma*, mouth]. In *surgery*, the establishment of a communication between the gallbladder and the small intestine.

cho"le-cys-ti'tis [*chol-*; *kystis*; G. *-itis*, inflammation]. Inflammation of the gallbladder.

cho"le-cys"to-co-los'to-my [*chol-*; *kystis*; G. *kolon*, colon; *stoma*, mouth]. Formation by operation of an anastomosis between the gallbladder and some portion of the upper colon.

cho"le-cys"to-du"o-de'nal (kol-i-sis-to-dew"o-dee'nul, -dew-odd'i-nal, ko"li-) [*chol-*; *kystis*; L. *duodeni*, twelve each]. Pertaining to the gallbladder and duodenum.

cho"le-cys"to-du"o-de-nos'to-my [*chol-*; *kystis*; *duodeni*, G. *stoma*, mouth]. In *surgery*, the establishment of a communication between the gallbladder and the duodenum.

cho"le-cys"to-e-lec"tro-co"ag-u-lec'to-my [*chol-*; *kystis*; G. *elektron*, amber; L. *coagulare* to coagulate; G. *ektomē*, excision]. Electrosurgical obliteration of the gallbladder.

cho"le-cys"to-gas-tros'to-my [*chol-*; *kystis*; G. *gastēr* belly; *stoma*, mouth]. In *surgery*, formation of anastomosis between the gallbladder and the stomach.

cho"le-cys'to-gram [*chol-*; *kystis*; G. *gramma*, letter]. A roentgen-ray picture of the gallbladder.

cho"le-cys-tog'ra-phy [*chol-*; *kystis*, G. *graphein*, to write]. Roentgenography of the gallbladder after it has been visualized by ingestion or intravenous injection of radiopaque substances, which are excreted into it.

cho"le-cys"to-il-e-os'to-my [*chol-*; *kystis*; L. *ileum*, entrails; G. *stoma*, mouth]. In *surgery*, establishment of a communication between the gallbladder and the ileum.

cho"le-cys"to-je"ju-nos'to-my [*chol-*; *kystis*; L. *jejunum*, empty; *stoma*]. In *surgery*, the establishment of a communication between the gallbladder and the jejunum.

cho"le-cys"to-ki-net'ic (kol"i-sis"to-ki-net'ick, -kigh-net'ick, ko"li-) [*chol-*; *kystis*; G. *kinein*, to move]. Possessing the property of causing or promoting gallbladder contraction.

cho"le-cys"to-ki'nin (kol-i-sis-to-kigh-nin, kol-i-, -tok'-nin, ko"li-) [*chol-*; *kystis*; *kinein*]. A hormone produced by the upper intestinal mucosa. It causes the gallbladder to contract. See Table of Hormones in the Appendix.

cho"le-cys"to-li-thi'a-sis [*chol-*; *kystis*; G. *lithos*, stone; NL. *-iasis*, condition]. Presence of one or more gallstones in the gallbladder.

cho-le-cys"to-lith-ot'o-my. The surgical removal of stones from the gallbladder.

cho"le-cys'to-pex"y [*chol-*; *kystis*; G. *pēxis*, putting together]. Suture of the gallbladder to the abdominal wall. Obs.

cho"le-cys-tor'rha-phy [*chol-*; *kystis*; G. *rhaphē* suture]. Suture of the gallbladder, especially to the abdominal wall.

cho"le-cys-tos'to-my [*chol-*; *kystis*; G. *stoma*, mouth]. In *surgery*, establishment of an opening into the gallbladder, usually for drainage of its contents.

cho"le-cys-tot'o-my [*chol-*; *kystis*; G. *tomē*, cut-ting]

ting]. Incision into the gallbladder to remove gallstones, etc.

cho-led'o-chal cho le-doch al [*chole*; G. *dochos*, from *dechesthai*, to receive]. Pertaining to the common bile duct.

cho-led"o-chec ta si a (ko-led ... kek tay'zhuh, -see uh, -shuh, -see-uh) [*chole*; *dochos*; G. *ektasis*, stretching out]. Dilatation of the common bile d ct. *Rare*.

cho led"o ... ec'to my (ko-led o-kook to mee) [*chole*; *dochos*; G. *ektomē*, excision] Excision of part of the common bile duct.

cho-led"o-chi tis (ko led"o-kigh tis) [*chole*, *dochos*; G -*itis*, inflammation]. Inflammation of the common bile duct.

cho-led"o-cho-do-chor'rha phy (ko led o-ko-do-kor uh fee) [*chole*; *dochos*; *dochos*; G *rhaphē*, suture] The operation of uniting the ends of divided bile duct over an indwelling catheter

cho led"o-cho-du"o-de nos'to my [*chole*; *dochos*, L. *duodeni*, twelve each; G *stoma*, mouth] *In surgery* the establishment of a passage between the common bile duct and the duodenum.

cho-led"o-cho-en"ter os'to my [*chole*; *dochos*; G *enteron*, intestine *stoma*] *In surgery* establishment of a passage between the common bile duct and the small intestine.

cho led"o-cho gas tros'to-my [*chole*; *dochos*; G. *gaster* belly *stoma*] The formation of an anastomosis between the common bile duct and the stomach

cho-led"o-cho lith i' sis [*chole*; *dochos*; G. *lithos*, stone NL -*iasis*, condition]. Formation of calculus in the common bile duct.

cho-led"o-cho-li thot o-my [*chole*; *dochos*; *lithos*; G. *tomē*, cutting]. Surgical removal of a calculus by incision of the common bile duct.

transduodenal c. Removal of a biliary calculus in the common bile duct through an opening made into the duodenum.

cho led"o-cho lith trip sy (ko-led" ko lith o-trip see, li thot rip see) [*chole*; *dochos*; *lithos*; G *tripsis*, rubbing]. Crushing of a gallstone in the common bile duct without opening the duct. *Obs*

cho-led"o-cho-plas"ty [*chole*; *dochos*; G *plassein*, to form]. A plastic operation upon the common bile duct.

cho led"o chor'rha phy (ko-led ... ko ... uh fee) [*chole*; *dochos*; G *rhaphē*, suture]. Repair of the divided common bile duct.

cho l d ... cho s t my (k -led ... kos to mee) [*chole*; *dochos*; G *stoma*, mouth]. *In surgery* draining of the common bile duct through the abdominal wall.

cho-led"o-chot o-my (ko led o-kot o-mee) [*chole*; *dochos*, G. *tomē*, cutting] An incision into the common bile duct.

transduodenal c. Incision for the removal of gallstones from the ampulla of Vater

cho led'o- hus (ko led o-kus) [*chole*; *dochos*]. The ductus choledochus or common bile duct.

chol"e gl 'bin. Bile pigment-hemoglobin, combined native protein (globin) and open-ring iron-porphyrin; a precursor of biliverdin. Syn *verdoglobin*

chol"e-he ma tin (kol ... hee muh tin, hem h tin) [*chole*; G *haima*, blood]. Bilipurpurin. pigment found in the bile and biliary concretions of ruminants. It is identical with the pigment phylloerythrin, a porphyrin pigment obtained from the degradation of chlorophyll.

cho-le'ic (ko lee ick, kol'ee ick) **cho'lic** (ko'lick, kol'ick) [*chole*] Pertaining to the bile.

cho-le'ic ac'id Any one of the several stable molecular compounds formed by desoxycholic acid with other substances, especially fatty acids.

chol'e-lith (kol'l-lith, ko'li lith) [*chole*; G *lithos* stone]. A biliary calculus or gallstone.

chol"e-li thi'a-sis [*chole*; *lithos*, NL. -*iasis*, condition]. The presence of or condition associated with, calculi in the gallbladder or in a bile duct.

chol" li thot' my [*chole*; *lithos*; G *tomē*, cutting]. Incision for the removal of gallstones

chol" lith o-trip sy [*chole*; *lithos*; G *tripsis*, rubbing]. The crushing of a gallstone without opening the gallbladder *Obs.* Also called *cholelithotrity*.

cho-lem ... sis [*chole*; G *emesis*, vomiting]. Vomiting of bile.

cho le mi-a (ko-lee mee uh) [*chole*; G *haima*, blood]. 1 An ill-defined, usually fatal syndrome characterized by confusion, excitement, delirium, stupor and coma, and by protean neurologic abnormalities. No pathognomonic anatomic alterations have been described in the nervous system, and the symptom complex is usually ascribed to metabolic alterations resulting from the hepatic disease. 2. Presence of bile in the blood. *Obs.* —**cholemic,** *adj*

chol" poi sis (kol"l poy ee sis, ko"li ...) [*chole*; G. *poiēsis*, production]. The process of formation of bile by the liver

chol" poi et'ic [*chole*; G *poiētikos*, productive]. Possessing the property of stimulating the processes or a process concerned in the formation of bile —**chol" poi et'ic,**

chol"e-pra si (kol pray'sin, pray sin, ko"li) [*chole*; G *prasinos*, leek-green]. Biliprasin; a bile pigment

chol" pyr'rhin [*chole*; G *pyrros* yellowish red] Bilirubin.

chol'er [G cholera]. An acute, specific, infectious disease caused by *Vibrio comma*; characterized by profuse, effortless diarrhea, rice-water stools, vomiting, collapse, muscular cramps, and suppression of urine. Case fatality varies from 10 to over 50 per cent. The source is exclusively human. Food or water may be the vehicle. Epidemics are common in the tropical Orient, especially in India. A vaccine prepared from the causative organism killed by heat probably gives protection for several months. Also called *Asiatic c. indica*. —**cholera'ic,** *adj*

chicken c. A highly fatal epidemic disease of fowls, caused by *Pasteurella avicida*

c. indica. Old term for cholera

c. infantum. Old term applied indiscriminately to diarrheal conditions in infants and young children.

c. morbus. Old term applied to any inflammatory enteritis with pain and purging.

c. nostras. Old term for *salmonellosis*.

c. sicca. Fatal cholera without diarrhea. At autopsy the bowel is often found filled with rice-water material.

hog c. An infectious disease caused by a filtrable virus. *Salmonella choleraesuis* is a common secondary invader The disease is characterized by patchy redness of the skin with inflammation and ulceration of the intestines, abdominal lymphadenitis, and pulmonary congestion. Also called *swine fever*

chol er-e sis (kol-ur ee sis, ko-lur ee sis) [G. *cholē*, bile *eresis*, removal] Increased secretion of bile by the liver —**choleret'ic,** *adj*

chol'er i [*cholē*]. Easily angered irritable.

chol'er i form" (kol ur i form ko-lerr form) [G *cholera*, cholera; L. *forma*, form]. Resembling or appearing like cholera.

chol"er i za'tion (kol ur-eye-zay shun, kol ur i) [*cholera*] Inoculation with cholera vaccine as a measure of protection against the disease. *Rare*.

chol'er-oid [*cholera*; G *eidos*, form]. Resembling cholera; choleriform.

chol"er-o-ma'ni-a. See *cholerophobia.*

chol"er-o-pho'bi-a [*cholera*; G. *phobos*, fear]. Morbid fear of cholera.

chol"er-rha'gi-a (kol"uh-ray'jah, -jee-uh, -radj'ee-uh) [G. *cholē*, bile; *rhēgnynai*, to break]. A flow of bile.

cho"le-scin'ti-gram. A scintigram of the gallbladder.

chol'es-tane (kol'es-tane, ko'les-tane). $C_{27}H_{48}$. Fully saturated hydrocarbon derivative of cyclopentanophenanthrene containing in addition two methyl groups (at carbon atoms 10 and 13) and C_8H_{17} aliphatic group (at carbon atom 17). It may be considered parent hydrocarbon from which many sterols, including cholesterol, are derived.

cho-les'ta-nol (ko-les'tuh-nole, -nol, -nawl). 1. $C_{27}H_{47}OH$; 3β-cholestanol, cholestan-3β-ol, or 3β-hydroxycholestane, occurring in various tissues; it represents cholesterol in which the double bond is saturated and may be prepared by reducing cholesterol. Syn., *dihydrocholesterol.* 2. Any hydroxyl derivative of cholestane of the general formula $C_{27}H_{47}OH$.

cho-les"te-a-to'ma (ko-les"tee-uh-to'muh, ko"les-kol-er-) [*chol-*; G. *stear*, fat; *-oma*, tumor]. Pearly tumor; tumor derived from embryonal inclusions of ectoderm, lined by stratified squamous epithelium, and containing squames and mixture of lipids including cholesterol and, occasionally, other structures, such as sebaceous glands; it occurs in the middle ear and rarely in the brain, about the base, and in the spinal cord. —**cholesteatom'atous,** *adj.*

c. of ovary. A teratoma.

cho-les"te-a-to'sis [*chol-*; *stear*; G. *-ōsis*, condition]. The presence of an abundance of cholesterol or its esters in foci of degeneration or necrosis, usually the intima of the aorta.

chol'es-tene (kol'es-teen, ko'les-teen). Any of several hydrocarbons of the formula $C_{27}H_{46}$, resulting from introduction of a double bond in cholestane; the position of the double bond characterizes specific cholestenes. 5,6-Cholestene is the immediate parent hydrocarbon of cholesterol.

cho-les'te-nol. Any hydroxyl derivative of cholestene, having the general formula $C_{27}H_{45}OH$. An important cholestenol is cholesterol, which is 5,6-cholesten-3-ol.

chol-es'ter-ase. An enzyme, present in blood and other tissues, which hydrolyzes cholesterol esters to form cholesterol and fatty acids.

cho-les"ter-e'mi-a. See *cholesterolemia.*

cho-les'ter-in (ko-les'tur-in). Old term for cholesterol.

cho-les"ter-i-nu'ri-a [*chol-*; *stear*; G. *ouron*, urine]. The presence of cholesterol in the urine.

cho-les'ter-ol. $C_{27}H_{45}OH$; 5,6-cholesten-3-ol, an unsaturated monohydric alcohol of the class of sterols; constituent of all animal fats and oils, of bile, gallstones, nervous tissue, egg yolk, and blood, and sometimes found in foci of fatty degeneration. It is glistening, white, crystalline substance, soapy to the touch, crystallizing in fine needles and rhombic plates. It is insoluble in water, soluble in hot alcohol, ether, acetone, and chloroform. It is important in metabolism and can be activated to form vitamin D. See Table of Normal Values of Blood Constituents in the Appendix.

cho-les'ter-ol-ase. An enzyme found in the liver which catalyzes the hydrolysis of cholesterol esters. The same enzyme is found in serum, in which it catalyzes the esterification of cholesterol.

cho-les"ter-ol-e'mi-a. The presence of cholesterol in the blood. The term is sometimes incorrectly used for *hypercholesterolemia.*

cho-les"ter-ol-er'e-sis [*chol-*; G. *stereos*, stiff; *eresis*, removal]. An increased elimination of cholesterol in the bile.

cho-les"ter-ol-o-poi-e'sis [*chol-*; *stereos*; G. *poiēsis*, production]. The synthesis of cholesterol.

cho-les"ter-ol-o'sis. See *cholesterosis.*

cho-les-ter-o'sis [*chol-*; *stear*; G. *-ōsis*, condition]. A condition marked by an abnormal deposition of cholesterol in some region, as in the gallbladder.

extracellular c. A disturbance of lipoid metabolism, in which reddish blue nodules appear on the hands and other areas of the body. Lipoid deposits are seen about the vessels, and the tissue is vascular.

cho-les'ter-yl. $C_{27}H_{45}$. The radical of cholesterol.

cho-let'e-lin (ko-let'e-lin). $C_{16}H_{18}N_4O$. An amorphous, soluble, yellow pigment and oxidation product derived from biliverdin. It is readily soluble in alkalis, alcohol, and chloroform.

chol"e-ver'din (kol"i-vur'din, ko"li-). See *biliverdin.*

cho'lic (ko'lick, kol'ick). Cholaic.

cho'lic ac'id. 1. $C_{24}H_{40}O_5$. The 3,7,12-trihydroxycholanic acid, one of the unconjugated bile acids. In bile it occurs as the sodium salt of the conjugated taurocholic or glycocholic acid. Syn., *cholalic acid.* 2. Any one of the several unconjugated bile acids which are hydroxy derivatives of cholanic acid.

cho'line (ko'leen, -lin, kol'een, -in). $(CH_3)_3N(OH)CH_2CH_2OH$; (β-hydroxyethyl)trimethylammonium hydroxide, liquid base widely distributed in nature as component of lecithin and other phospholipids. Choline may be member of the vitamin-B complex, as an insufficient supply of this or other lipotropic factors in the diet results in accumulation of fat in the liver and other body dysfunctions. See Table of Vitamins in the Appendix. A derivative of choline, acetylcholine, plays an important role in the chemical transmission of nervous impulses. Used as a drug, choline has an effect similar to that of parasympathetic stimulation.

c. bitartrate. $[(CH_3)_3N^+CH_2CH_2OH][HC_4H_4O_6^-]$; white, crystalline powder freely soluble in water; used clinically as lipotropic agent.

c. chloride. $[(CH_3)_3N^+CH_2CH_2OH][Cl^-]$; white, deliquescent crystals, very soluble in water; used clinically as lipotropic agent.

c. dihydrogen citrate. $[(CH_3)_3N^+CH_2CH_2OH][H_2C_6H_5O_7^-]$; white, hygroscopic crystals, freely soluble in water; used clinically as lipotropic agent.

cho"line-a-cet'y-lase (-a-set'i-lace, -laze). An enzyme obtained from brain which catalyzes the synthesis of acetylcholine in the presence of adenosinetriphosphate as an energy source.

cho"lin-er'gic (ko"lin-ur'jick, kol"in-) [*chol-*; G. *ergon*, work]. Of, pertaining to, or designating the type of chemical activity characteristic of acetylcholine or agents which mimic the actions of acetylcholine; term introduced by H. H. Dale (1934). Cholinergic nerves are those nerves which, upon stimulation, release cholinergic substance (acetylcholine) at their terminations; this includes all autonomic preganglionic nerves (sympathetic and parasympathetic), postganglionic parasympathetic nerves, somatic motor nerves to skeletal muscles, and fibers to sweat glands, and certain blood vessels. Also see *parasympathomimetic.*

cho"lin-er'gic block'ing a'gent. Any agent which blocks the action of acetylcholine or acetylcholinelike substances, i.e., which blocks the action of cholinergic nerves. Also see *parasympatholytic.*

cho"lin-es'ter-ase (ko"li-nes'tur-ace, -aze). An enzyme found in blood and in various other tis-

ease, which catalyzes the hydrolysis of acetylcholine to acetic acid and choline. Cholinesterase prevents the accumulation of acetylcholine at nerve endings and thus plays an important role in the chemical transmission of nervous impulses. Most of the pharmacologic properties of eserine (physostigmine) are believed to be due to inhibition of cholinesterase by extremely small concentrations of the drug.

chol'o- (kol'o-, ko'lo-) **chol-** [*cholē*]. A combining form denoting *bile* or *gall*.

chol'o-chrome [*cholē*; G. *chrōma*, color]. Any bile pigment.

chol'o-gogue [*cholē*; G. *agōgos*, leading]. A substance which stimulates the flow of bile.

chol"o-i-din'ic ac'id. $C_{24}H_{38}O_4$. A decomposition product of cholic acid.

chol'o-lith [*cholē*; G. *lithos*, stone]. A gallstone. —**chololith'ic**, *adj.*

chol"o-li-thi'a-sis. See *cholelithiasis*.

chol-or-rhe'a [*cholē*; G. *rhoia*, flow]. Profuse secretion of bile.

cho-lu'ri-a (ko-lew'ree-uh) [*cholē*; G. *ouron*, urine]. The presence of bile in the urine.

Chon"de-den'dron. A genus of South American climbing plants of the Menispermaceae. *C. tomentosum* is the source of pareira.

chon'dral (kon'drul) [G. *chondros*, cartilage]. Cartilaginous; relating to cartilage.

chon-drec'to-my (kon-dreck'to-mee) [*chondros*; G. *ektomē*, excision]. In *surgery*, the excision of cartilage.

chon'dri-fy (kon'dri-fye) [*chondros*; L. *facere*, to make]. To convert into cartilage or to become cartilage or cartilaginous. —**chondrifica'tion**, *n.*

chon'dri-gen (kon'dri-jen) [*chondros*; G. *gennathai*, from *gignesthai*, to be produced]. The protein of cartilage which is converted by boiling into chondrin; similar to collagen.

chon'drin (kon'drin) [*chondros*]. A protein material obtained by boiling cartilage; primarily gelatin obtained from the collagen component of the cartilage.

chon'dri-o- (kon'dree-o-) [G. *chondrion*, dim. of *chondros*]. In *biology*, a combining form denoting *grit*, *grain*, *cartilage*, *chondriosome*, or *chondriosomal*.

chon"dri-o-cont" [*chondrion*; G. *kontos*, pole]. Mitochondria in the form of rods or fibrils.

chon"dri-o-gene" A hereditary factor thought to be present in mitochondria.

chon"dri-o-ki-ne'sis. The division of the chondriome.

chon'dri-ome [*chondrion*]. The total chondriosomal content of a cell.

chon'dri-o-mite. Old term for threadlike mitochondria.

chon'dri-o-some (kon'dree-o-sohm") [*chondrion*; G. *sōma*, body]. Old term for mitochondria. —**chondriosom'mal**, *adj.*

chon-dri'tis (kon-dry'tis) [G. *chondros*, cartilage; *-itis*, inflammation]. Inflammation of cartilage.

chon'dro- (kon'dro-) **chondr-** [*chondros*]. A combining form denoting *grain*, *cartilage*, *composed of cartilage*, or *connection with cartilage*.

chon"dro-al"bu'mi-noid. An insoluble protein component of cartilage matrix similar to elastin.

chon"dro-an"gi-o-path'i-a cal-car'e-a seu punc-ta'ta. See *dysplasia epiphysialis punctata*.

chon'dro-blast [*chondros*; G. *blastos*, germ]. A cartilage-forming cell.

chon"dro-blas-to'ma [*chondros*; *blastos*; G. *-ōma*, tumor]. A rare benign tumor derived from cartilage cells or cartilage-forming connective tissue occurring in the first two decades in life and more frequently in males. It is usually seen in the lower end of the femur and upper end of the tibia, microscopically composed of compact, round, or polyhedral cells of moderate size with relatively large nuclei. It may contain multinucleated cells. Also called *calcifying giant-cell tumor*, *epiphyseal chondromatous giant-cell tumor*, *Codman's tumor*.

chon"dro-car"ci-no'ma (salivary-gland type). See mixed *tumor* of salivary-gland type.

chon-dro-cla'sis (kon-dro-clay'sis) [*chondros*; G. *klasis*, fracture]. 1. Crushing of a cartilage. 2. Resorption of cartilage.

chon'dro-clast (kon'dro-klast) [*chondros*; G. *klastēs*, from *klan*, to break]. A cell concerned in the resorption of cartilage.

chon"dro-cos'tal [*chondros*; L. *costa*, rib]. Relating to the ribs and their cartilages.

chon"dro-cra'ni-um [*chondros*; G. *kranion*, skull]. The embryonic cartilaginous cranium.

chon'dro-cyte [*chondros*; G. *kytos*, cell]. A cartilage cell.

chon"dro-der"ma-ti'tis [*chondros*; G. *derma*, skin; *-itis*, inflammation]. Inflammation of cartilage and overlying skin.

c. nodularis helicis. Painful nodules of the ear usually seen in men on the rim of the ear. Frostbite has often preceded their occurrence.

chon"dro-dys-pla'si-a (kon"dro-dis-play'zhuh, -zee-uh, -shuh, -see-uh). See *dyschondroplasia*.

chon"dro-dys-tro'phi-a [*chondros*; G. *dys-*, bad; *trophē*, nutrition]. A defect in the formation of bone from cartilage, congenital in origin.

c. calcificans congenita. See *dysplasia epiphysialis punctata*.

c. fetalis calcarea or **hypoplastica.** See *dysplasia epiphysialis punctata*.

c. foetalis. Achondroplasia.

c. hyperplastica. Enlarged cartilage with possible formation of massive, nodular, irregularly ossified projections at the ends of poorly developed bones. Also called *multiple osteocartilaginous exostoses*.

c. hypoplastica. Undeveloped cartilage, showing little or no proliferation.

c. malacia. Cartilage like chondrodystrophia hypoplastica, except that the cartilage is soft.

chon"dro-dys'tro-phy. 1. Chondrodystrophia. 2. See *gargoylism*.

calcareous c. See *dysplasia epiphysialis punctata*.

chon"dro-ec"to-der'mal [*chondros*; G. *ektos*, outside; *derma*, skin]. Pertaining to cartilage developed from ectoderm, as certain branchial arch cartilages from the neural crest.

chon"dro-ep"i-tro-chle'a-ris. Pertaining to rib cartilages and the region above the trochlea of the humerus.

chon"dro-ep"i-tro-chle'a-ris mus'cle. An occasional slip of muscle found in the axillary fascia.

chon"dro-fi-bro'ma. A fibroma containing cartilaginous tissue.

chon"dro-fi"bro-sar-co'ma. A variant term for *chondrosarcoma*.

chon'dro-gen. See *chondrigen*.

chon"dro-gen'e-sis [*chondros*; G. *genesis*, production]. Formation of cartilage. —**chondrogenic**, *adj.*

chon-drog'e-nous (kon-drodj'i-nus) [*chondros*; G. *gennathai*, from *gignesthai*, to be produced]. Of the nature of chondrogen; producing cartilage.

chon"dro-glos'sus. Pertaining to the cartilaginous tip of the hyoid and the tongue.

chon"dro-glos'sus mus'cle. A variable portion of the hyoglossus muscle.

chon"dro-hu"mer-a'lis. Pertaining to the cartilages of the ribs and the humerus.

chon"dro-hu"mer-a'lis mus'cle. An occasional slip of muscle found in the axillary fascia.

chon'droid (kon'droyd) [*chondros*; G. *eidos*, form]. Resembling cartilage.

chon"dro-it'ic ac'id (kon"dro-it'ick). Chondroitinsulfuric acid.

chon-dro'i-tin (kon-dro'i-tin). A complex nitrogenous substance which, in the form of chondroitinsulfuric acid, occurs combined with protein as chondromucoid, a constituent of cartilage.

chon-dro"i-tin-sul-fu'ric ac'id. A compound which on hydrolysis yields sulfuric acid, acetic acid, chondrosamine and glucuronic acid. It is the prosthetic group of the glycoprotein, chondromucoid. Heparin, the anticoagulant, has a chemical structure similar to chondroitinsulfuric acid. *Syn.*, *chondroitic acid.*

chon"dro-lip-o-sar-co'ma. A variant term for chondrosarcoma.

chon-dro'ma (kon-dro'muh) [*chondros*; G. *-ōma*, tumor]. A benign tumor which in its growth simulates the structure of cartilage (either hyaline cartilage or fibrocartilage); may grow from bone, cartilage, or other tissue. Also see *ecchondroma*, *enchondroma*.

medullary c. See *enchondroma*.

chon"dro-ma-la'ci-a (kon"dro-muh-lay'shee-uh) [*chondros*; G. *malakia*, softness]. Softening of cartilage.

chon"dro-ma-to'sis. The presence of multiple chondromas.

synovial c. A chronic villous synovitis in which some of the synovial villi are converted into cartilage. They may break off and form loose bodies in the articular cavity.

chon-dro'ma-tous [*chondros*; *-ōma*, tumor]. Relating to or of the nature of cartilage.

chon'dro-mere [*chondros*; G. *meros*, part]. A cartilaginous segment of the embryonic vertebral column; cartilage vertebra.

chon"dro-mu'coid [*chondros*; L. *mucus*, mucus; G. *eidos*, form]. A mucoid found in cartilage; a glycoprotein in which chondroitinsulfuric acid is the prosthetic group.

chon"dro-myx-o-hem-an"gi-o-end"o-the"li-o-sar-co'ma. A malignant mesenchymoma.

chon"dro-myx-o'ma [*chondros*; G. *myxa*, mucus; *-ōma*, tumor]. A chondroma with myxomatous elements.

chon"dro-myx"o-sar-co'ma [*chondros*; *myxa*; G. *sarkōma*, fleshy excrescence]. See *myxochondrosarcoma*.

chon"dro-os"te-o-dys'tro-phy. A dwarfism of unknown cause, often familial, and usually not apparent until the child begins to walk or even later. It is characterized by flattening of the vertebrae, kyphosis, progressive changes in the head of the femur and the acetabulum, and, to variable extent, deformation of all bones except those of the skull and face. Intelligence is usually not affected. Also called *Morquio-Brailsford disease*, *familial osseous dystrophy*, *eccentro-osteochondrodysplasia*, *osteochondrodystrophia deformans*. Also see *gargoylism*.

chon"dro-os"te-o'ma. 1. Osteochondroma. 2. Exostosis.

chon"dro-os"te-o-sar-co'ma. See *osteosarcoma*.

chon-drop'a-thy (kon-drop'uth-ee) [*chondros*; G. *pathos*, disease]. Any disease involving cartilage only.

chon"dro-pha-ryn'ge-us. Pertaining to the cartilaginous tip of the hyoid bone and pharynx.

chon"dro-pha-ryn'ge-us mus'cle. A portion of the middle constrictor of the pharynx.

chon'dro-plast (kon'dro-plast). See *chondroblast*.

chon'dro-plas"ty [*chondros*; G. *plassein*, to form]. Plastic operation on cartilage.

chon"dro-po-ro'sis [*chondros*; G. *poros*, passage; *-ōsis*, condition]. Thinning of cartilage by the enlargement of its lacunae; occurs preceding the process of endochondral ossification.

chon"dro-pro'te-in [*chondros*; G. *prōteios*, of the first quality]. A protein occurring normally in cartilage.

chon-dros'a-mine. 2-Amino-d-galactose; CHO.HCNH$_2$.HOCH.HOCH.HCOH.CH$_2$OH, a structural unit of chondroitinsulfuric acid. *Syn.*, *galactosamine*.

chon"dro-sar-co'ma [*chondros*; G. *sarkōma*, fleshy excrescence]. A malignant tumor of cartilage; it may occur as a central or peripheral tumor of bone.

c. myxomatodes. See *myxochondrosarcoma*.

chon-dro'sin. A disaccharide, representing a molecule each of glucuronic acid and chondrosamine, produced by the hydrolysis of chondroitinsulfuric acid.

chon-dro'sis [*chondros*; G. *-ōsis*, condition]. Formation of cartilage.

chon'dro-some (kon'dro-sohm). See *mitochondria*.

chon"dro-ster'nal [*chondros*; G. *sternon*, breast]. Pertaining to the costal cartilages and to the sternum.

chon'dro-tome [*chondros*; G. *tomos*, cutting]. An instrument for cutting cartilage.

chon-drot'o-my (kon-drot'uh-mee) [*chondros*; G. *tomē*, a cutting]. In *surgery*, the division of a cartilage.

Chon'drus (kon'drus) [*chondros*]. Irish moss; small genus of red algae of the Gigartinaceae.

C. crispus. The dried, bleached plant of the algae; yields carrageenin, a mucilaginous principle, proteins, and salts of iodine, chlorine, and bromine. It is demulcent and somewhat nutrient; used as an emulsifying agent and as a vehicle in lotions and jellies.

Chopart, François [French surgeon, 1743-95]. Remembered for his amputation of the foot, consisting of a disarticulation of the tarsal bones, leaving only the talus and calcaneus (1792). The operation, now obsolete, still bears his name. The mediotarsal articulation has been called *Chopart's joint*.

Chopra's test. See *antimony test* for kala-azar.

chor'da (kor'duh) [L., from G. *chordē*, string]. 1. A cord, tendon, or nerve filament. 2. The notochord.

chorda dorsalis. —**chordal**, **chordate**, *adj.*

chordae Willisii. Fibrous bands crossing through the dural sinuses.

c. gubernaculum. That part of the genital ligament which develops in the inguinal crest and adjacent body wall. It forms a part of the gubernaculum testis in the male, and a part of the round ligament of the uterus in the female.

c. obliqua. The oblique ligament of the superior radioulnar articulation.

c. saliva. Saliva produced by stimulation of the chorda tympani nerve.

c. tendinea. Any one of the tendons of the papillary muscles of the ventricles of the heart, attached to the atrioventricular valves.

c. tympani. A nerve which originates from the facial, traverses the tympanic cavity and joins the lingual branch of the mandibular nerve. See Table of Nerves in the Appendix. See Plate 15.

chor"da-blas'to-pore [*chordē*; G. *blastos*, germ; *poros*, passage]. A term applied to the primitive pit to indicate its supposed homology to a blastopore.

chor"da-mes'o-blast (kor"duh-mes'o-blast, -mee'so-blast) [*chordē*; G. *mesos*, middle; *blastos*]. The middle germ layer before segregation into notochord and mesoblast.

chor"da-mes'o-derm (kor"duh-mes'o-durm, -mee'so-durm) [*chordē*; *mesos*; G. *derma*, skin]. The

embryonic area in blastula or early gastrula destined to form the notochord and mesoderm. It occupies the region of the dorsal blastoporic lip and is thus the organizer.

Chor·da·ta (kor-day'tuh, -dah'tuh) [*chorda*]. A phylum of the animal kingdom whose members are characterized by having at some stage in their development a notochord, a tubular central nervous system lying dorsal to the notochord, and lateral clefts in the walls of the pharynx. —**chor'date**, *n.*

chor'date [*chorda*]. Possessing a notochord; belonging or pertaining to the phylum, Chordata.

chor·dee (kor-dee') [*chorda*]. A curvature of the penis with concavity downward; an accompaniment of hypospadias, occasionally caused by inflammation and infection of the urethra.

chord"en·ceph'a·lon. The portion of the central nervous system of vertebrates whose development is induced by the notochord; the mesencephalon, rhombencephalon, and spinal cord; it is segmental and divided into alar and basal plates. Also see *archencephalon*.

chor·di'tis [*chorda*; G. *-itis*, inflammation]. 1. Inflammation of a spermatic cord. 2. Inflammation of a vocal fold. Also called *c. vocalis*.

c. fibrinosa. Old term for acute laryngitis with deposition of fibrin on the vocal folds.

c. nodosa. See singer's *node*.

c. tuberosa. See singer's *node*.

chor"do·car"ci·no'ma. See *chordoma*.

chor"do·ep"i·the"li·o'ma. See *chordoma*.

chor·do'ma [*chorda*; G. *-ōma*, tumor]. A tumor often invasive but only rarely metastasizing, derived from persistent remnants of notochord; may be situated at the sacrococcygeal region, at the base of the brain (sometimes in sella turcica) and, rarely, in the cervical vertebral canal. Microscopically it resembles hyaline cartilage but is alveolated; often has intercellular mucoid; and may contain the so-called physaliphora cells, large globular cells with vacuolar cytoplasm. Also called *ecchordoma*, *chordocarcinoma*, *chordoepithelioma*, *chordoid tumor*, *ecchondrosis physaliphora*.

chor·dot'o·my [*chorda*; G. *tomē*, a cutting]. Surgical division of certain tracts of the spinal cord, e.g. the lateral spinothalamic tract for relief of pain.

cho·re'a (ko-ree'uh) [G. *choreia*, dance]. A nervous disorder characterized by irregular and involuntary action of the muscles of the extremities and the face; seen in many conditions as part of a syndrome following an infection. It is also a disease entity and as such is identical with *Sydenham chorea*, *St. Vitus dance*, *choromania*, *dancing chorea*, or *chorea minor*. —**choreal**, **choreic**, **choreat'ic**, *adj.*

Bergeron's c. See Etienne Jules *Bergeron*.

c. gravidarum. Intractable chorea occurring during pregnancy toward its close sometimes aggravated and attended with fever.

c. insaniens. Maniacal chorea; a severe form usually seen in pregnant women. It is associated with mania and generally ends fatally.

c. minor. Chorea.

chronic progressive hereditary c. See George *Huntington*.

chronic progressive nonhereditary c. A form of chorea in which the symptoms become progressively more severe however the patient shows no hereditary traits. It may or may not be accompanied by mental deterioration.

congenital c. Chorea due to birth palsy.

dancing c. See *chorea*.

Dubini's c. See Angelo *Dubini*.

electric c. See Etienne Jules *Bergeron*, Angelo *Dubini*.

essential c. That occurring independently and not as a symptom of some other disease.

general c. A form of chorea in which all or almost all of the voluntary muscles are subject to irregular contractions.

hereditary c. See George *Huntington*.

Huntington c. See George *Huntington*.

imitative c. Choreic movements developed in children from association with choreic subjects.

posthemiplegic c. A form of involuntary movement seen in patients after an attack of hemiplegia. Also called *postparalytic c.*, *athetosis*.

senile c. That occurring in old age, due to vascular lesions of the corpus striatum.

Sydenham's c. See *chorea*.

cho·re'i·form [*chorea*; L. *forma*, form]. Resembling chorea.

cho·re·o·ath'e·toid (kor-ee'o-ath'i-toyd) [*chorea*; G. *athetos*, not fixed; *eidos*, form]. Referring to both chorea and athetosis, as in the involuntary movements seen in both chorea and athetosis.

cho·re·o·ath·e·to'sis [*chorea*; *athetos*; G. *-ōsis*, condition]. A condition characterized by both choreiform and athetoid movements.

cho·ri·o·ad"e·no'ma (kor"ee-o-ad"i-no'muh) [G. *chorion*, skin; *adēn*, gland; *-ōma*, tumor]. A tumor intermediate in malignancy between hydatidiform mole and choriocarcinoma; also called *malignant hydatidiform mole*, *destructive* or *invasive mole*, *c. destruens*, *deciduoma malignum*.

cho·ri·o·al"lan·to'ic [*chorion*; G. *allas*, sausage]. Pertaining to the chorion and to allantois or to the chorioallantois. See *placenta*.

cho·ri·o·al·lan·to·is (kor"ee-o-a-lan'to-iss, -a-lan'toyss) [*chorion*, *allas*]. The membrane formed by the union of chorion and allantois in birds and certain mammals and vascularized by the allantoic blood vessels. That of chicks is used for the culture of viruses in the preparation of vaccines.

cho·ri·o·an·gi·op'a·gus [*chorion*, G. *angeion*, vessel; *pagos*, that which is fixed]. One of identical (monochorionic) twins. Also called *uniovular twin*.

c. parasiticus. A placental parasitic twin, or omphalosite.

cho"ri·o·blas·to'sis [*chorion*, G. *blastos*, offspring; *-ōsis*, condition]. Abnormal proliferation of cells of the chorion.

cho"ri·o·cap"il·la'ris [*chorion*, L. *capillaris*, from *capillus*, hair]. Network of capillaries over the inner portion of the choroid coat of the eye.

cho·ri·o·car"ci·no'ma. A highly malignant tumor composed of cytotrophoblast and syncytial trophoblast partially in villuslike arrangement; it is found most commonly in the uterus and testis, and more rarely in an ovary. Also called *syncytial carcinoma*, *chorioma* (*ectodermalis*), *chorioepithelioma*, *chorionic carcinoma*, *trophoblastoma*, *epithelioma chorioepidermale*.

cho·ri·o·cele (kor'ee-o-seel) [*chorion*; G. *kēlē*, hernia]. A hernial protrusion of the choroid coat of the eye.

cho·ri·o·ep"i·the"li·o'ma. See *choriocarcinoma*.

cho·ri·o·gen'e·sis [*chorion*, G. *genesis*, production]. The development of the chorion.

cho·ri·oid-. For words beginning with *chorioid-* see words beginning *choroid-*.

cho·ri·o'ma [*chorion*, G. *-ōma*, tumor]. See *choriocarcinoma*, also see *chorioadenoma*, hydatidiform *mole*.

cho·ri·o·men"in·gi'tis [*chorion*, G. *mēninx*, membrane; *-itis*, inflammation]. A nonpurulent meningitis, characterized by involvement of arachnoid membrane and choroid plexus.

lymphocytic c. A rare form of acute virus meningitis, occurring in the absence of any evident focal or general cause of infection; characterized clinically by the rapid onset of symptoms of meningeal irritation, pleocytosis in the cerebrospinal fluid, and a short, benign course with recovery. Syn., *acute aseptic meningitis*. Also called *acute benign lymphocytic meningitis, acute lymphocytic c., benign lymphocytic c., epidemic serous meningitis.*

cho·ri·on (kor'ee-on) [G. skin, membrane that encloses the fetus]. The outermost of the fetal membranes, consisting of an outer trophoblastic epithelium lined internally by extraembryonic mesoderm. Its villous portion, vascularized by allantoic blood vessels, forms the fetal part of the placenta. Also called *serosa*. —**chorial, chorion'ic,** *adj.*

c. allantoideum. See *allantochorion*.

c. frondosum. (a) The villous part of the chorion which forms the fetal placenta. (b) The entire chorion until the third month of development, when the chorion laeve develops. Also called *c. villosum*.

c. laeve. The smooth membranous part of the chorion devoid of villi. Also called *c. avillosum*.

c. omphaloideum. See *omphalochorion*.

shaggy c. Old term for the chorion frondosum.

smooth c. Old term for the chorion laeve.

cho·ri·on·ep"i·the"li·o·ma. Choriocarcinoma.

cho·ri·o·ni'tis (kor"ee-o-nigh'tis) [*chorion*; G. *-itis*, inflammation]. Scleroderma.

cho·ri·o·ret'i·nal [*chorion*; ML. *retina*, from L. *rete*, net]. Pertaining to the choroid and retina.

cho·ri·o·ret"i·ni'tis [*chorion*, *retina*; G. *-itis*, inflammation]. Inflammation of the choroid and retina.

cho·ri·o·ret"i·nop'a·thy [*chorion*, L. *rete*, net; G. *pathos*, disease]. Disease involving both the choroid and retina.

chor'i·sis (kor'i-sis) [G., separation]. In *botany*, the splitting of an organ into parts, each of which forms a perfect organ.

cho·ris"to·blas·to'ma (ko-ris"to-blas-to'muh) [G. *choristos*, separable; *blastos*, germ; *-oma*, tumor]. A true tumor originating in a choristoma.

cho·ris·to'ma (kor"is-to'muh) [*choristos*; *-oma*]. An embryonal fault of development whereby cell groups of an organ are included in a neighboring organ, as the inclusion of adrenal cells in the renal cortex.

cho'roid (kor'oyd) [G. *chorion*, skin; *eidos*, form]. Vascular tunic of the eye, continuous with the iris in front, and lying between the sclera and the retina; the choroid membrane. See Plate 19.

cho'roid, cho·roi'dal. Related to or designating delicate vascular membranes or structures, as the choroid plexus.

cho"roid·e·re·mi'a [*chorion*, *eidos*; G. *erēmia*, absence]. Absence of the choroid.

cho"roid·i'tis [*chorion*; *eidos*; G. *-itis*, inflammation]. Inflammation of the choroid coat of the eye. It may be *anterior*, the foci of exudation being at the periphery of the choroid; *central*, the exudate being in the region of the macula lutea; *diffuse* or *disseminated*, characterized by numerous round or irregular spots scattered over the fundus; *exudative* or *nonsuppurative*, when there are isolated foci of inflammation scattered over the choroid; *metastatic*, when due to embolism; or *suppurative*, when proceeding to suppuration.

c. guttata. Familial degeneration of the macula combined with characteristically grouped hyaline bodies. Also called *Tay's c.*

cho·roi·do- (ko-roy'do-), **choroid-** [G. *choroeidēs*, choroid]. A combining form signifying *choroid*.

cho·roi"do·cy·cli'tis (ko-roy"do-sick-ligh'tis, -sigh-kligh'tis) [*choroeidēs*; G. *kyklos*, circle; *-itis*, inflammation]. Inflammation of the choroid and of the ciliary body.

cho·roi"do·i·ri'tis (ko-roy"do-eye-rye'tis, i-rye'tis) [*choroeidēs*; G. *iris*, rainbow; *-itis*]. Inflammation of the choroid and the iris. See *uveitis*.

cho·roi"do·ret"i·ni'tis [*choroeidēs*; L. *rete*, net; *-itis*]. Inflammation of the choroid and retina.

cho·re·ma·ni·a (kor"o-may'nee-uh). Old term for chorea.

chey, chey'a. See *chay*.

chre"ma·to·pho'bi·a [G. *chrēmata* (pl.), money; *phobos*, fear]. Morbid fear of money.

Christian, Henry Asbury (1876–1951). American clinician who described a rare disease of childhood (1919), noted earlier by Alfred Hand (1893) and Arthur Schüller (1915). See Hand-Schüller-Christian *disease*. He also described nodular nonsuppurative *panniculitis*, which is now named for him and Frederick P. Weber.

Chris'tian Sci'ence. A religious sect and system of healing through prayer and the triumph of mind over matter; founded by Mary Baker Eddy. Syn., *Eddyism*.

Christison, Robert [*Scottish physician and pharmacologist*, 1797–1882]. Remembered as a great toxicologist. Associated with the early study of leukemia (1845).

Christ'mas dis·ease', fac'tor. See under *disease* and *factor*.

chro·maf'fin (kro-maf'in, kro'muh-fin) [G. *chrōma*, color; L. *affinis*, having affinity for]. Staining deeply with chromium salts; used of cells of the adrenal medulla or paraganglions which have an affinity for chromium and its salts.

chro·maf'fin·o·blas·to'ma. See *pheochromoblastoma*.

chro"maf·fi·no'ma. See *pheochromocytoma*.

malignant c. See *pheochromoblastoma*.

chro·maf"fi·nop'a·thy (kro-maf"i-nop'ath-ee, kro"muh-fi-) [*chrōma*, *affinis*; G. *pathos*, disease]. Any diseased or pathologic condition in chromaffin tissue (in the adrenals or elsewhere).

chro·mal'um. Chrome alum.

chro'ma·phil [G. *chrōma*, color; and *philein*, to love]. A cell taking a deep stain; sometimes spelled *chromophil*.

chro'ma·phobe [G. *chrōma*, color; and *phobos*, fear]. A cell which does not easily stain; sometimes spelled *chromophobe*.

chro·ma'si·a (kro-may'zhuh, -zee-uh) [*chrōma*]. Color effect produced by chromatic aberration in the functioning of lenses.

-chro·ma·si·a [*chrōma*]. Combining form meaning *condition of pigmentation* or *of staining*.

chromat-. See *chromato-*.

chro'mate. Any salt of chromic acid.

chro·mat"el·op'si·a [*chrōma*; G. *atelēs*, imperfect; *opsis*, sight]. Color blindness. Syn., *chromatopseudopsis*.

chro·mat'ic [G. *chrōmatikos*, relating to color]. Relating to or possessing color.

chro·mat'ic·ness. A characteristic of color consisting of hue and saturation taken together; it refers to the quality of color rather than to its intensity.

chro'ma·tid [*chrōma*]. One of the two bodies, sister chromosomes, resulting from the longitudinal splitting of a chromosome, in preparation for mitosis; especially one of the four parts of a tetrad, formed by the longitudinal splitting of synaptic mates, in preparation for miosis.

chro'ma·tin [*chrōma*]. The protoplasmic substance in the nuclei of cells which is readily stainable, as contrasted with the achromatic constituents which include the nuclear membrane, linin net-

work, and nuclear sap. *Basichromatin* stains with basic dyes; *oxychromatin* with acid dyes. See Plate 23.

chro·ma·to- hromat [*chrōma*]. A combining form denoting *color*, *chromatin*, *pigment*, or *pigmentation*. Also see *chromo-*.

chro·ma·to·der″ma·to·sis [*chrōma*, G *derma*, skin; -*ōsis*, condition]. A skin disease characterized by discoloration of the surface.

chro·ma·to·dys·o·pi·a [*chrōma*, G *dys-*, bad; *opsis*, vision]. Color blindness.

chro·ma·to·gen·ous (kro·muh·to·dj′i·nus) [*chrōma*, G *gennethai*, from *gignesthai*, to be produced]. Producing color.

chro·mat′o·gram. 1. *chromatography*, the porous solid matrix (column, paper) after the separation procedure has been applied and the matrix treated with suitable developing agent or agents to indicate the location (s) of the separated components of the mixture submitted to chromatographic treatment.

chro″ma·tog′ra·phy [*chrōma*; G *graphein*, to write]. The procedure by which a mixture of substances is separated by fractional extraction or adsorption or ion exchange on a porous solid (as a column of aluminum oxide, or filter paper) by means of flowing solvents, especially by the process described under *partition chromatography*. *Liknisis* has been suggested as a more rational name for chromatography. —**chromat′o·graph,** *n.*; **chromatograph′ic,** *adj.*

paper c. Chromatography in which paper strips or sheets are employed as the porous solid supporting medium; commonly two immiscible solvents are used, as described under *partition chromatography*. Minute quantities of material may be separated by this process.

partition c. The separation of substances based on countercurrent partition between two immiscible solvents, one nonmoving solvent is held in the interstices of a column of inert matrix (starch, cellulose, silica) through which the other moving solvent passes down the column. Each substance moves with the second solvent at a unique rate (R_F) depending on its partition coefficient.

chro″ma·tol′o·gy [*chrōma*; G *logos*, word]. The science of colors.

chro·ma·tol′y·sis [*chrōma*, G *lysis*, loosing]. Disintegration and disappearance of the Nissl granules from nerve cells. —**chromatolyt′ic,** *adj.*

chro·mat′o·mere [*chrōma*, G *meros*, part]. The part or parts of a platelet colored brightly with stains of the Romanovsky type; also called *chromomere*.

chro·ma·tom′e·ter [*chrōma*; G *metron*, measure]. An instrument for measuring color perception or the intensity of colors.

chro·ma·tom′e·try, chro·mom′e·try [*chrōma*, *metron*]. The measurement of degree of color or of color perception.

chro·ma·top′a·thy, chro″ma·to·path′i·a [*chrōma*; G *pathos*, disease]. Any pigmentary skin disease.

chro·ma·to·phil [*chrōma*, G. *philein*, to love]. Chromophil.

chro·ma·to·pho′bi·a. See *chromophobia*.

chro·ma·to·phore (kro·muh·to·for, kro·mat′o·for) [*chrōma*, G *phoros*, bearing]. 1. In *botany*, a colored plastid. 2. In *zoology*, a cell containing pigment granules. Syn. *chromatoplast*.

chro·ma·to·phor′o·ma (kro·muh·to·fo·ro′muh, kro·mat′o-). See *melanoma*.

chro·ma·toph′o·rous [*chrōma*, *phoros*]. Containing pigment or pigment cells.

chro·ma·to·plasm (kro·muh·to·plaz·um, kro·mat′o-) [*chrōma*, G *plasma*, anything formed]. The substance of the chromatophores as distinguished from the other cell substances, such as nucleoplasm, cytoplasm, metaplasm.

chro·ma·to·plast (kro·muh·to·plast, kro·mat′o-) See *chromatophore*.

chro·ma·to·pseu·dop′si·a. See *chromatelopsia*.

chro·ma·top′si·a, chro·ma·top′sy [*chrōma*, G *opsis*, vision]. A disorder of vision in which color impressions arise subjectively. It may be due to disturbance of the optic centers, or to drugs, especially santonin. Also called *chromopsia*.

chro·ma·top·tom′e·try [*chrōma*, G. *optikos*, pertaining to sight; *metron*, measure]. Testing of the sensibility of the eye with respect to color perception.

chro·ma·to′sis [*chrōma*, G -*ōsis*, condition]. 1. Pigmentation. 2. A pathologic process or pigmentary disease consisting in a deposit of coloring matter in a locality where it is usually not present, or in excessive quantity in regions where pigment normally exists.

chrome. A name occasionally given to the element chromium or to one of its ores or compounds.

c. alum. $CrK(SO_4)_2 \cdot 12H_2O$. Chromium potassium sulfate.

c. al·um, ammonium. $CrNH_4(SO_4)_2 \cdot 12H_2O$. Chromium ammonium sulfate.

c. green. Cr_2O_3. Chromic oxide, a green pigment. A mixture of chrome yellow and Prussian blue is also known by this name.

c. red. $PbO \cdot PbCrO_4$. Basic lead chromate, used as a pigment.

c. yellow. $PbCrO_4$. Lead chromate, used as a pigment.

1,2-chro·mene. 1,2-Benzopyran, the parent substance of many plant pigments.

chrom″es·the′si·a, chrom·aes·the′si·a (krohm·es·thee′zhuh, -zee·uh) [*chrōma*, G *aisthēsis*, sensation]. The association of colors with words, letters, and sounds.

chrom·hi″dro′sis (krohm″hi·dro′sis, high·dro′sis) [*chrōma*, G *hidrōsis*, sweating]. A rare condition in which the sweat is colored.

chro′mic. See under *chromium*.

chro′mic ac′id. Chromium trioxide.

chro′mi·cize [*chrōma*]. Impregnate with chromic acid or a chromium salt.

chro·mid′i·um (pl. *chromidia*) [*chrōma*]. One of the chromatin granules of nuclear substance found in the cytoplasm.

chro′mi·um [*chrōma*]. Cr = 52.01. A hard, bright, silvery metal largely used as a protective plating for other metals and in the manufacture of alloys characterized by strength and resistance to corrosion. It forms *chromous* and *chromic* salts, wherein its valence is two and three respectively.

c. trioxide (*chromii trioxidum*). CrO_3. Dark, purplish red crystals, deliquescent, soluble in 0.6 part of water. In 5% solution it is astringent; in stronger solutions, caustic. It is used in dentistry in 2–5% solutions in the treatment of oral infections, especially Vincent's angina. Also called *chromic anhydride*. Syn. *chromic acid*.

chro·mo-, chrom- [*chrōma*]. A combining form denoting *color*, *pigment*, *pigmentation*, or *chromium*.

Chro·mo·bac·te′ri·um [*chrōma*; G *baktērion*, little staff]. A genus of nonpathogenic bacteria of the Rhizobiaceae including aerobic forms which produce a violet, chromoparic pigment, soluble in alcohol but not in chloroform. The antibiotic substance chlororaphin is also obtained from this genus.

C. iodi′num. The organism which elaborates the antibiotic iodinin.

C. violaceum. An organism which elaborates the antibiotic violacein.

chro'mo·blast [*chrōma*; G. *blastos*, germ]. Chromatophore.

chro"mo·blas"to·my·co'sis, chro"mo·my·co'sis (kro"mo·blas·to·migh·ko'sis) [*chrōma*, *blastos*; G. *mykēs*, fungus; -*ōsis*, condition]. A granulomatous skin disease, caused by one of several fungi, usually *Hormodendrum pedrosoi*, characterized by warty nodules which may ulcerate. The lesions are usually found on the lower extremities. A number of cases have been reported in this country but the disease occurs more frequently in South America. Syn., *dermatitis verrucosa*.

chro'mo·cen"ter [*chrōma*; L. *centrum*]. A structural peculiarity of the salivary gland chromosomes in *Drosophila*, the fused mass of heterochromatin of all the chromosomes with six armlike extensions of euchromatin.

chro"mo·crin'i·a [*chrōma*, G. *krinein*, to separate]. The secretion or excretion of colored material.

chro"mo·cys·tos'co·py [*chrōma*, G. *kystis*, bladder; *skopein*, to examine]. Cystoscopy and inspection of the orifices of the ureters after the administration of a substance that will stain the urine.

chro'mo·cyte [*chrōma*, G. *kytos*, cell]. Any colored cell.

chro"mo·dac"ry·or·rhe'a. The flow of colored tears from the Harderian glands in rats. This oily thick secretion contains large amounts of porphyrin resulting in blood-caked whiskers.

chro"mo·der"ma·to'sis. See *chromatodermatosis*.

chro'mo·gen [*chrōma*; G. *gennaein*, from *gignesthai*, to be produced]. Any substance which, under suitable conditions, is capable of producing color. See *chromophore*.

chro"mo·gen'e·sis [*chrōma*; G. *genesis*, production]. The production of pigments or coloring matter, as by bacterial action. —**chromogenic**, *adj*.

chro"mo·lip'oid. See *lipochrome*.

chro'mo·mere [*chrōma*; G. *meros*, part]. 1. One of the beadlike chromatin granules, arranged in linear series in a chromosome. 2. Chromatomere.

chro·mom'e·try. See *chromatometry*.

chro"mo·my·co'sis (kro"mo·migh·ko'sis). See *chromoblastomycosis*.

chro"mo·ne'ma (pl. *chromonemata*) [*chrōma*, G. *nēma*, thread]. The fine chromatin thread, consisting of chromomeres and connectives, which constitutes the prophase chromosome.

chro"mo·nu·cle'ic ac'id. See *desoxyribonucleic acid*.

chro"mo·par'ic, chro·mop'a·rous [*chrōma*, L. *parere*, to produce]. Concerning excretion of pigment formed within cells into the surrounding medium.

chro'mo·phane [*chrōma*, G. *phainein*, to appear]. The pigment of the inner segments of the retinal cones of certain animals. There are at least three varieties: chlorophane, rhodophane, xanthophane.

chro'mo·phil. See *chromophil*. —**chromophilous**, *adj*.

chro'mo·phobe. 1. See *chromophobia*. 2. A chromophobe cell of the adenohypophysis. See under *cell*.

chro"mo·pho'bi·a, chro"mo·pho'bi [*chrōma*, G. *phobos*, fear]. 1. Abnormal fear of colors. 2. Excessive dislike of certain colors. 3. *In histology*, staining little or not at all, said of intracellular granules or of certain cells, as the chromophobe cells of the adenohypophysis. —**chromophobic**, *adj*., *n*.

chro"mo·pho'bic (kro"mo·fo'bick, ·fob'ick) [*chrōma*; *phobos*]. Not stainable; not readily absorbing color.

chro'mo·phore [*chrōma*; G. *phoros*, bearing]. An atom or group of atoms or electrons in a molecule which is chiefly responsible for an absorption band.

chro"mo·phor'ic, chro·moph'o·rous [*chrōma*, *phoros*]. Bearing color: applied to cells, such as bacteria, which produce pigments and retain them within the cell. Also called *parachromophore*.

chro'mo·phose (kro'mo·foze) [*chrōma*, G. *phōs*, light]. A subjective sensation of color.

chro"mo·phy·to'sis (kro"mo·figh·to'sis). See *pityriasis versicolor*.

chro'mo·plasm [*chrōma*; G. *plasma*, anything formed]. The chromatin network of a nucleus.

chro'mo·plast, chro"mo·plas'tid [*chrōma*; G. *plassein*, to form]. Any pigment-producing plastid other than a chloroplast. See *chromatophore*.

chro"mo·pro'te·in [*chrōma*, G. *prōteios*, of the first quality]. Any protein containing a chromophoric group, such as hematin.

chro·mop'si·a. Chromatopsia.

chro"mop·tom'e·ter [*chrōma*; G. *optikos*, pertaining to sight; *metron*, a measure]. An instrument for determining the extent of development of color vision. —**chromoptometry**, *n*.

chro·mos'co·py [*chrōma*, G. *skopein*, to examine]. The determination of the color of objects.

chro'mo·some (kro'mo·sohm) [*chrōma*, G. *sōma*, body]. Any one of the separate, deeply staining bodies, commonly rod-, J- or V-shaped, which arise from the nuclear network during mitosis, and which split longitudinally in the course of that process. They carry the hereditary factors (genes) and are present in constant number in each species. In man, there are 48 in each cell, except in the mature ovum and sperm where the number is halved. A complete set of 24 is inherited from each parent. —**chromosom'mal**, *adj*.

accessory c. An X chromosome.

bivalent c. A pair of chromosomes, one maternal and the other paternal, temporarily united in the process of synapsis.

heterochromosome. An allosome.

homologous chromosomes. Chromosomes that have like gene loci in the same sequence. In man there are 23 pairs of homologous chromosomes; one member of each pair is derived from the mother and one from the father.

idiochromosome. A sex chromosome.

sex c. See *sex chromosome*.

X c. A sex-determining factor in both ovum and sperm. Ova fertilized by spermatozoa having the X chromosome give rise to female offspring.

Y c. A sex-determining factor in the sperm giving rise to male offspring.

chro"mo·trich"o·my·co'sis (·trick"o·migh·ko'sis, ·try"ko·). See *trichomycosis axillaris*.

chro"mo·tro'pic ac'id. $C_{10}H_6O_8S_2.2H_2O$; 4,5-dihydroxy-2,7-naphthalenedisulfonic acid, occurring as white needles, soluble in water: used as reagent for formaldehyde.

chro'mous. See under *chromium*.

chro'nax·ie, chro'nax·y [G. *chronos*, time; *axia*, value]. The duration of time that a current of twice the rheobasic (galvanic threshold) intensity must flow in order to excite the tissue being tested. Chronaxie is related to irritability and is used in testing for irritability changes in nerve and muscle.

chro"nax·im'e·ter [*chronos*; *axia*; G. *metron*, measure]. A device for measuring chronaxie.

chron'ic [*chronos*]. Long-continued; of long duration; opposed to *acute*. —**chronic'ity**, *n*.

chron·o-, chron- [*chronos*]. A combining form denoting *time*.

chron'o·graph [*chronos*; G. *graphein*, to write]. Instrument for recording small intervals of time in physiologic and psychophysical experiments.

chro nom'e-try [chronos; G. metron, a measure]. The measuring of time.

mental c. Study of mental processes in relation to time.

chron o-pho'bi- [chronos; G. phobos, fear]. A morbid fear of time.

chron o-scope [chronos; G. skopein, to examine] An instrument for measuring short intervals of time.

chron trop'i [chronos, G. tropos, turn]. Term used to describe the cardiac-slowing effect of impulses in certain fibers of the vagus nerve.

chrys' li [L. chrysallis, gold-colored pupa of butterflies]. The pupa of an insect, especially during the stage in which it is enclosed in cocoon.

chrys ro'bin [G. chrysos, gold Pg araroba, Goa powder] (chrysarobinum) A mixture of neutral principles obtained from Goa powder substance deposited in the wood of Andira A aroba Brazilian tree. It is brown to orange-yellow powder chemically it is largely complex mixture of reduction products of chrysophanic acid, emodin, and the methyl ether of the latter Locally it is useful in psoriasis, but stains the skin dark yellowish brown color

c. ointment (unguentum chrysarobini) Contains chrysarobin 6 Gm., chloroform 7 Gm., yellow ointment 87 Gm.

chry'sa zin. 1,8-Dihydroxyanthraquinone or danthron, laxative and cathartic.

chry'sene (cry'seen, kris een, kri seen') A carcinogenic compound obtained by dehydrogenation from cholesterol.

hry si sis [chrysos; NL. -iasis, condition]. A permanent pigmentation of the skin caused by the parenteral use of gold preparations may be reticular in type, but is usually patchy exaggerated by exposure to sunlight Syn., chrysoderma.

hrys o-, chrys- [chrysos] A combining form signifying gold, golden yellow or yellow.

chrys"o-cy"a no sis [chrysos; G. kyanos, blue; -osis, condition]. Pigmentation of the ki resulting from the injection or absorption of gold salt.

chrys" der'ma. Chrysiasis

chrys-oi'di Y $C_6H_5N.N C_6H_3(NH_2)$ HCl. 2,4-Diaminoazobenzene hydrochloride. A brown dye used in some procedures as substitute for Bismarck brown Y

Chrys" my i (kris o-m gh yuh, migh ee-uh) [chrysos; G myia, fly] A genus of blowflies.

C. bezziana. A species of flies which produces wound myiasis found in India, Africa, and the Philippines.

chrys'o-phan [chrysos; G phainein, to appear] A glycoside found in rhubarb.

chrys o-pha 'ic ac'id. See chrysophanol.

hrys" phan ol $C_{15}H_{10}O_4$ 1,8-Dihydro y-3-methylanthraquinone; constituent of rh barb, aloes, cascara, of species of Rhamnus, and of chrysarobin. Syn., chrysophanic acid

Chry sops [G. chrysōps, gold-colored]. A genus of small tabanid, biting flies, abundant in temperate and tropical America certain species transmit diseases to man and animals **C. discalis**, the western deer fly transfers Pasteurella tularensis, which causes tularemia **C. silace** and **C. dimidiata** are intermediate hosts of Loa loa.

chry"so-ther' py Therapy by the use of compounds of gold.

chrys"o-t 'i [G chrysos, gold toxikon, poison]. A constituent of ergot consisting of small mount of ergotoxine, with inactive, yellow coloring matter

chth pho gi (thon o-f y'juh, jee-uh)

hthe-noph a gy (tho-nof'uh jee) [G. chthōn, earth phagein, t eat]. Dirt eating; geophagy

CHU Centigrade heat unit.

chur'rus. See cannabis

Chutro Pedro [Argentinian surgeon, 1880–1937]. Renowned internationally for his contributions to surgery and orthopedic surgery including the development of an amputation stump and modification of Finochetto stirrup. Originated bone graft called Chutro bone graft.

Chvostek's sign. See under sign.

chy les mi (kigh lee mee uh) See chylemia.

chyl an gi oma (kigh lan"jee m h, kyle an) [G chylos, juice angeion, vessel -ōma, tumor] 1. Retention of chyle in lymphatic vessels with dilatation of the latter 2. A lymphangiom containing chyle.

chyl (kyle) [chylos]. A milk-white emulsion of fat globules in lymph formed in the small intestine during digestion. —**chy'lous**, adj

chy le mi [chylos; G haima, blood]. Presence of chyle in the blood.

chy"li dro sis (kigh"li-dro sis, kigh"ligh) [chylos G. hidrōsis, sweating]. Milkiness of the sweat.

chy'lo- (kigh'lo-) **hyl-** [chylos]. A combining form denoting connection with, or relation to chyle.

chy'l -cele [chylos; G kēlē, tumor]. Accumulation of fatty lymph in the tunica vaginalis of the testis; seen especially as result of rupture of lymphatics in elephantiasis.

chy"lo-der'ma [chylos; G. derma, skin] Cutaneous elephantiasis, with accumulation of lymph in the thickened skin and in the enlarged lymphatic vessels.

hy'loid (kigh'loyd) [chylos; G. eidos, form]. Resembling chyle.

hy"lo me di as ti num (kigh"lo-mee dee-as-tye um) See chylothorax.

chy"lo-mi crons [chylos; G mikros, small] Extremely small particles of f t (0.5–1.0 μ)

chy"lor rhe [chylos; G rhoia, flow]. 1 An excessive flow of chyle. 2 A diarrhea characterized by milky color of the feces.

chy"lo-tho rax [chylos; G thōrax, thorax]. An accumulation of chyle or milky fluid in the pleural cavity the turbid ppearance being due to fat droplets.

chy lu ri (kigh-lew ree uh) [chylos; G ouron, urine]. The presence of chyle or lymph in the urine, usually due to fistulous communication between the urinary and lymphatic tracts or to lymphati bstruction.

chyme (kime) [G chymos, juice]. Viscid, fluid contents f the stomach consisting of food which has undergone gastri digestion, and has not yet passed to the duodenum. —**chy mous**, adj

chy'me- in (kigh mo sin) [chymos]. Rennin the rennet enzyme.

chy"mo-sin' gen [chymos, G gennaein, from gignesthai, to be produced]. The precursor of chymosin or rennin.

chy"mo tryp sin (kigh mo trip sin) [chymos; G tripsis, to rub down, digest pepsis, cooking]. A proteolytic enzyme found in the intestine and formed from the chymotrypsinogen of the pancreatic juice by the action of trypsi It acts simultaneously with trypsin to hydrolyze proteins and protein digestion prod cts to polypeptides and amino acids.

hy"mo tryp-sin'o-gen [chymos; trypsis; pepsis; G. gennaein, from gignesthai, to be produced] An enzyme occurring in the pancreas and giving rise t chymotrypsin.

C. I Color index See under index

ci bis' tome (sigh-bis-e-tome, si-bis) [G kibisis, pouch tomos, cutti g]. An instrument for opening the capsule of the lens.

ci"bo pho'bi [L. cibus, food; G phobos, fear] Morbid version to food.

cic"a·tric'u·la [L. *cicatrix*, scar]. A little scar.

cic'a·trix, ci·ca'trix (pl. *cicatrices*) [L., scar]. A scar. The connective tissue which replaces a localized loss of substance. It is usually white and glistening when old, red or purple when newly developed. —**cicatri'cial** (sick"uh-trish'ul) *adj.*; **cicatriza'tion**, *n.*; **cic'atrize**, *v.*

hypertrophic c. See *keloid*.

ci·cat'ri·zant (si-kat'ri-zant) [*cicatrix*]. A medicine that aids the formation of a cicatrix. —**ci·cat'rizant**, *adj.*

cic'er·ism. An animal disease produced experimentally that corresponds to human lathyrism. It is due to toxic action of certain legumes.

Ci·cu'ta (si-koo'tuh, sigh-koo'tuh) [L., hemlock]. A genus of the Umbelliferae.

C. maculata. Water hemlock, a poisonous plant of North America.

C. virosa. A poisonous species of northern Europe; has been applied externally in rheumatism.

cic'u·tine (sick'yoo-teen, -tin) [L. *cicuta*, hemlock]. A liquid alkaloid from *Cicuta virosa*; has been stated to be identical with coniine.

cic'u·tism [*cicuta*]. Poisoning with water hemlock, *Cicuta virosa*. It is marked by epileptiform convulsions, dilatation of the pupils, cyanosis of the face, and coma.

cic"u·tox'in [*cicuta*; G. *toxikon*, poison]. The nonnitrogenous poisonous principle of *Cicuta virosa*. Its actions are similar to those of picrotoxin.

cignolin. A trade-mark for anthralin.

cili-. See *cilio-*.

cil'i·a [plural of L. *cilium*, eyelid]. 1. The eyelashes. 2. The threadlike cytoplasmic processes of cells which beat rhythmically, thereby causing the locomotion of certain aquatic organisms or propelling fluids over surfaces covered by ciliated cells. —**ciliary**, **ciliated**, *adj.*

cil"i·ar'i·scope (sil"ee-ar'i-scope, -sil'i-scope, sigh lee-) [L. *cilium*, eyelid; G. *skopein*, to examine]. An instrument (essentially a prism) for examining the ciliary region of the eye.

cil"i·ar·ot'o·my (sil"ee-ar-ot'o-mee, sigh"lee-) [*cilium*; G. *tomē*, a cutting]. Surgical section of the ciliary zone for glaucoma.

Cil"i·a'ta [*cilium*]. A class of Protozoa characterized by the presence of cilia. The only important human ciliate is the intestinal parasite *Balantidium coli*.

cil'i·ate. An organism possessing cilia.

cil'i·o-, cili- [*cilium*]. 1. In *zoology*, a combining form denoting *having* or *like cilia*. 2. In *anatomy*, a combining form signifying *ciliary*. 3. In *surgery*, a combining form denoting *the ciliary margin* or *border*.

cil"i·o·scle'ral [*cilium*; G. *sklēros*, hard]. Pertaining to the ciliary body and the sclera.

cil'i·um. Singular of *cilia*.

cil·lo'sis [*cilium*; G. *-ōsis*, condition]. A spasmodic trembling of the eyelid. —**cillot'ic**, *adj.*

Ci'mex [L., bug]. A genus of insects of the family Cimicidae; bedbug. It can be infected (a) with *Pasteurella tularensis* and can transmit the infection to mice, (b) with other bacteria, and (c) with *Trypanosoma cruzi*.

C. hemipterus. An important bloodsucking species parasitic to man; the Oriental bedbug.

C. lectularius. The common bedbug.

C. rotundatus. Synonym for *C. hemipterus*.

ci"mi·cif'u·ga (sim"i-sif'yoo-guh) [*cimex*; L. *fugare*, to drive away]. The dried rhizome and roots of *Cimicifuga racemosa*; cohosh bugbane. It contains 15–20% of cimicifugin, or macrotin, a resin. There is no evidence of therapeutic usefulness, but the drug is occasionally used in chronic rheumatism, chorea, and tinnitus. Also called *black cohosh*.

cim"i·cif'u·gin. The resin from cimicifuga.

cinaphyl. Trade-mark for *theophylline sodium glycinate*.

cin·cham"i·dine (sin-kam'i-deen, -din). An alkaloid found in various cinchona species. Also called *hydrocinchonidine*, *dihydrocinchonidine*.

cin"cho·caine hy"dro·chlo'ride. British Pharmacopoeia title for the local anesthetic substance *dibucaine hydrochloride*. See *nupercaine hydrochloride*.

cin·cho'na (sin-ko'nuh) [after Countess *Chinchon*, 17th century]. The dried bark of the stem or of the root of *Cinchona succirubra* or its hybrids, known in commerce as red cinchona, or of *Cinchona ledgeriana*, *Cinchona calisaya*, or hybrids of these with other species of *Cinchona*, known in commerce as calisaya bark or as yellow cinchona. The trees are natives of South America. Cinchona contains not less than 5% of alkaloids, of which there are more than 20, the most important being quinine, quinidine, cinchonine, and cinchonidine. Cinchona has the physiologic action and therapeutic uses of its chief alkaloid, quinine. It is also an astringent, bitter, and stomachic tonic. Dose, 0.6–4.0 Gm. (10–60 gr.). Also called *Peruvian bark*, *Jesuits' bark*. —**cinchon'ic**, *adj.*; **cinchoniza'tion**, *n.*; **cin'chonize**, *v.*

compound c. tincture (*tinctura cinchonae composita*). Cinchona 10, bitter orange peel 8, serpentaria 2, in 100 cc. A bitter tonic. Dose, 4–8 cc. (1–2 dr.).

cin"cho·nam'ine (sin"kon-am'een, -in, sin-kon'uh-meen, -min). An alkaloid of cuprea bark.

cin·cho'ni·cine (sin-kon'i-seen, -sin). $C_{19}H_{22}ON$. A rearrangement product derived from cinchonine.

cin·cho'ni·dine (sin-kon'i-deen, -din). $C_{19}H_{22}ON$. An alkaloid derived from cinchona. It is a crystalline substance resembling quinine in general properties.

c. bisulfate. $C_{19}H_{22}ON.H_2SO_4.5H_2O$. Prisms soluble in water and alcohol. Also called *c. disulfate*, *acid c. sulfate*.

c. salicylate. Used for rheumatism. Dose, 1.0–1.3 Gm. (15–20 gr.).

c. sulfate (*cinchonidinae sulfas*). $(C_{19}H_{22}ON)_2.H_2SO_4.3H_2O$. Less bitter than quinine, and valuable as an antipyretic. Dose, 0.065–1.3 Gm. (1–20 gr.) or more.

c. tannate. A tasteless, yellow amorphous powder soluble in alcohol; used in intermittent fevers.

cin'cho·nine (sin'ko-neen, -nin). $C_{19}H_{22}ON$. An alkaloid derived from cinchona. It is a colorless, crystalline body similar to quinine in therapeutic effects, but less active.

c. bisulfate. $C_{19}H_{22}ON.H_2SO_4.4H_2O$; a dosage form of cinchonine.

c. hydrochloride. $C_{19}H_{22}ON.HCl.2H_2O$; a dosage form of cinchonine.

c. iodosulfate. See *antiseptol*.

c. salicylate. Used in rheumatism in malarial regions. Dose, 0.33–1.3 Gm. (5–20 gr.).

c. sulfate (*cinchoninae sulfas*). $(C_{19}H_{22}ON)_2.H_2SO_4.2H_2O$; a dosage form of cinchonine.

c. tartrate. Yellow powder soluble in alcohol; dosage form of cinchonine.

cin'cho·nism (sin'ko-niz-um) [*Chinchon*]. The systemic effect of cinchona or its alkaloids when given in full doses. The symptoms produced are ringing in the ears, deafness, headache, giddiness, dimness of sight, and a weakening of the heart action.

cin·cho'phen (sin'ko-fen) [*cinchophenum*]. Phenylcinchoninic acid, or phenylquinol-

acid, $C_9H_6O.C_6H_4.COOH$; a white powder almost insoluble in cold water. It increases the elimination of uric acid and is used in treating rheumatism; it may produce toxic effects. Dose 0.3-0.6 Gm. (5-10 gr.) Repeated administration of cinchophen may produce acute hepatitis which is usually fatal.

c. hydrochloride. The salt obtained by the interaction of cinchophen and hydrochloric acid. See *chloroxyl*.

cin″cho·tan′nic ac′id (sin″ko-tan′ik). Cinchotannin.

cin·cho·tan·nin. The characteristic tannin of cinchona; it exists as a glycoside. Syn., *cinchotannic acid, quinotannic acid*.

cin·e- [G. *kinēma*, movement]. For words beginning with *cine-* not found here see words beginning with *kine-*.

cin″e·flu·o·rog′ra·phy. The motion-picture recording of fluoroscopic images. The camera shutter must be synchronized with the peak of the flash of the x-ray tube. Cerebral angiography by this method permits the recording of the flow of the contrast medium. Mechanisms of speech and swallowing have been studied by this method.

cin·e·ol. See *eucalyptol*.

ci·ne·re·a [L. *cinereus*, ash-colored]. Gray matter of the brain or spinal cord.

ala c. The area on the floor of the fourth ventricle overlying the dorsal sensory vagal nucleus.

lamina c. A thin layer of gray substance extending backward above the optic commissure from the termination of the corpus callosum to the tuber cinereum.

cin·e·roent″gen·og′ra·phy (sin″i-rent-ghin-og′rah-fee) [G. *kinēma*, movement; Wilhelm Konrad *Röntgen*; G. *graphein*, to write]. Motion-picture roentgenography of internal organs.

cin·gu·la. See *cingulum*.

cin″gu·lec′to·my [*cingulum*; G. *tomē*, a cutting]. Surgical removal of the cingulate gyrus. It is sometimes used in the control of psychotic reactions.

cin″gu·lo·trac′to·my. The surgical incision of the projections of the cingulate gyrus to the thalamus. It is used rarely in control of psychotic reactions.

cin′gu·lum [L., girdle]. 1. A girdle or zone; the waist. 2. Herpes zoster or shingles. 3. A bundle of association fibers running in the callosal gyrus of the brain from the anterior perforated substance to the hippocampal gyrus. 4. The lingual lobe of incisor teeth, notably of the superior laterals, and canines; a bandlike ridge rising crownwise from the cervix and often accentuated to a blunt point or rudimentary cusp.

c. extremitatis inferioris. The pelvic girdle.

c. extremitatis superioris. The shoulder girdle.

Ciniselli, Luigi [*Italian surgeon*, 1803-78]. Remembered for his treatment of aneurysm by galvanopuncture to secure clot formation; now obsolete.

cin·na·mal′de·hyde. Cinnamic aldehyde, C_6H_5-$CH:CH.CHO$, the chief constituent of cinnamon oil and prepared synthetically. A flavoring agent.

cin·nam·e·in, cin″na·me′in [G. *kinnamon*, prob. of Malay orig.; Benzyl cinnamate; a constituent of Peruvian and tolu balsams.

cin·na·mene (sin-uh-meen, sin-am-een). See *styrol*.

cin·nam′ic ac′id (si-nam′ik, sin-uh-mick). **cin″na·myl′ic ac′id.** $C_6H_5CH:CHCOOH$. An acid occurring in Peruvian and tolu balsams, in storax, and in some benzoin resins. It has been used in treating tuberculosis.

cin·nam′ic al′co·hol. $C_6H_5CH.CH.CH_2OH$. Yellowish needles or crystalline masses; soluble in alcohol, ether, water, glycerin, and benzin. Also called *cinnamylic alcohol, styrylic alcohol, styrone crystals*.

cin·nam′l al′de·hyde. Cinnamaldehyde.

cin·na·mon [G. *kinnamōmon*, cassia]. The dried bark of several species of *Cinnamomum*, native to Ceylon and China, the latter variety being known in commerce under the name of *cassia*. *C. loureirii*, Saigon cinnamon, and *C. zeylanicum*, Ceylon cinnamon, are commonly used. Its properties are due to a volatile oil. It is used as a carminative and aromatic stimulant, and as a spice. —**cinnam′ic,** *adj.*

c. oil. The volatile oil obtained from the leaves and twigs of *C. cassia*. Its chief constituent is cinnamic aldehyde.

c. tincture. 20% of powdered Saigon cinnamon in glycerin, alcohol, and water. Dose, 1 cc. (15 min.)

cin″na·myl′ic ac′id. See *cinnamic acid*.

Ciocalteu reagent. See Folin-Ciocalteu's *reagent*.

cir′ci·nate (sur′si-nayt) [L. *circinare*, to make round]. Having a circular outline or a ring formation.

cir′cle [L. *circulus*, circle]. 1. A ringlike line, every point on which is equidistant from a point called the center. 2. A ringlike anastomosis of arteries or veins.

c. of diffusion. The imperfect image formed by incomplete focalization, the position of the true focus not having been reached by some of the rays of light, or else having been passed.

c. of Willis. The arterial anastomosis at the base of the brain, formed in front by the anterior communicating artery joining together the anterior cerebral arteries; laterally by the internal carotids and the posterior communicating arteries joining them with the posterior cerebral arteries; behind, by the posterior cerebral arteries branching from the basilar.

greater arterial c. of the iris. One around the circumference of the iris.

lesser arterial c. of the iris. An arterial circle around the free margin of the iris.

vascular c. of the optic nerve. An arterial circle close to the exit of the optic nerve from the eyeball. Formerly called *c. of Haller*.

venous c. of the mammary gland. An anastomosis of veins around the nipple.

circoid. Misspelling for *cirsoid*.

cir·cuit [L. *circumire*, to go around]. 1. The course of an electric current. 2. The path of a circulating fluid in a system of tubes. 3. The path of nerve impulses in reflex arcs.

Geiger-Müller counting c. An amplifier and accessories which make visible or audible, or in other ways record, the pulses from a Geiger-Müller tube.

cir′cu·lar [L. *circularis*, from *circulus*, circle]. 1. Ring-shaped. 2. Pertaining to a circle. 3. Marked by alternations of despondency and exaltation, as circular insanity.

cir″cu·la′tion [L. *circulatio*, from *circulus*]. Passage in a circuit, as the circulation of the blood. See Plates 5, 6. —**cir′culatory,** *adj.*

allantoic c. See umbilical *c.*

chorionic c. See umbilical *c.*

collateral c. That established for an organ or part through anastomotic communicating channels, when the original direct blood supply is obstructed or abolished.

coronary c. The circulation of the blood through the muscular walls of the heart.

fetal c. That of the fetus, including the circulation through the placenta and the umbilical cord. See Plate 6.

greater c. See *systemic c.*
hypophysioportal c. The passage of blood from superior hypophyseal arteries through capillary clusters in the median eminence and the neural stalk through a second capillary bed in the adenohypophysis.
intervillous c. The circulation of maternal blood in the intervillous spaces of the placenta.
lesser c. See *pulmonary c.*
omphalomesenteric c. See *vitelline c.*
placental c. (a) The umbilical circulation. (b) The intervillous circulation.
portal c. The passage of blood by a vein from one capillary bed to a second independent set of capillaries; specifically, the passage of the blood from the capillaries of the gastrointestinal tract and red pulp of the spleen into the sinusoids of the liver.
pulmonary c. The circulation of blood through the lungs by means of the pulmonary artery and veins, for the purpose of oxygenation and purification. Also called *lesser c.*
systemic c. The general circulation, as distinct from the pulmonary circulation. See Plates 7, 9. Also called *greater c.*
umbilical c. The circulation in the umbilical vessels between fetus and placenta.
vitelline c. The circulation between embryo and yolk sac via the vitelline or omphalomesenteric vessels.

cir″cu·la′tion time. The rate of blood flow; the time required for blood to flow from arm to lung or arm to tongue, etc.

cir′cu·la·to·ry fail′ure. Failure of the circulatory system to deliver sufficient blood to the tissues for their metabolic needs, due either to cardiac failure or to peripheral circulatory failure.
peripheral c. f. See *shock*, 1.

cir′cu·lin. An antibiotic substance derived from cultures of *Bacillus circulans*, being a basic peptide. It is active, both in vitro and in experimental animals, against a number of bacteria.

cir′cu·lus [L.]. Circle.
c. arteriosus Willisii. Circle of Willis.

cir′cum- [L., around]. A prefix meaning *around, about, on all sides.*

cir″cum·a′nal [*circum*; L. *anus*, anus]. Periproctal; surrounding the anus.

cir″cum·ar·tic′u·lar [*circum*; L. *articulus*, joint]. Around a joint.

cir″cum·ci′sion (sur″kum·sizh′un) [L. *circumcisio*, from *circumcidere*, to cut around]. The removal of the foreskin; excision of the prepuce.
pharaonic c. See *infibulation*.

cir″cum·cor′ne·al [*circum*; L. *corneus*, horny]. Around or about the cornea.

cir″cum·duc′tion [L. *circumducere*, to lead around]. The movement of a limb in such a manner that its distal part describes a circle, the proximal end being fixed.

cir′cum·flex [L. *circumflectere*, to bend about]. Winding around; designating a number of arteries, veins, and nerves which have a winding course.

cir′cum·flex. The axillary nerve. See Table of Nerves in the Appendix.

cir″cum·in′su·lar [L. *circum*, around; *insula*, island]. Surrounding the insula of the cerebral cortex.

cir″cum·len′tal [*circum*; L. *lens*, lentil]. Surrounding a lens.

cir″cum·nu′cle·ar [*circum*; L. *nucleus*, kernel]. Surrounding a nucleus.

cir″cum·o′ral [*circum*; L. *os*, mouth]. Surrounding the mouth.

cir″cum·po″lar·i·za′tion [*circum*; L. *polus*, pole]. The rotation of a ray of polarized light.

cir″cum·scribed′. Enclosed within narrow limits by an encircling boundary.

cir″cum·stan″ti·al′i·ty [L. *circumstantia*, from *circum*, *stare*, to stand]. In psychiatry, indulging in many irrelevant and unnecessary details when answering a simple question; usually observed in mania.

cir″cum·val′late [L. *circumvallare*, to surround with a wall]. Surrounded by a trench, as the vallate papillae of the tongue.

cir″cum·vas′cu·lar [L. *circum*, around; *vasculum*, small vessel]. Surrounding a blood vessel, or other vessel; perivascular.

cir′cus move′ment. An excitation wave that reenters excitable tissues and continues to circulate; believed to be the mechanism responsible for the continuance of atrial and ventricular contraction.

cir·rho′sis (si·ro′sis) [G. *kirrhos*, orange-tawny; *-osis*, condition]. 1. A chronic, progressive disease of the liver, essentially inflammatory, characterized by proliferation of connective tissue, degeneration and death of parenchymal cells, regeneration of parenchymal cells, and distortion of architectural pattern. Liver may be enlarged or much reduced in size. 2. Sometimes used to mean interstitial inflammation of other organs, as pulmonary cirrhosis, interstitial pneumonia. —**cir·rhot′ic**, *adj.*
alcoholic c. See *Laennec's c.*
atrophic c. See *Laennec's c.*
biliary c. The result of extrahepatic or intrahepatic obstruction of biliary passages, the liver being stained by accumulated bile.
capsular pseudo-c. Fibrous thickening of capsule with extension into subjacent liver.
cardiac c. Progressive fibrosis of central lobular structures as well as of portal spaces, the result of prolonged passive hyperemia often of cardiac origin. Also called *congestive c.*
central c. Cardiac c.
cholangiolitic c. A form of biliary cirrhosis involving the smaller intrahepatic bile ducts, accompanied by fibrosis and inflammation; also called *Hanot's c.*
cholangitic c. A form of biliary cirrhosis involving the larger intrahepatic bile ducts, accompanied by fibrosis and inflammation.
cholestatic c. A form of biliary cirrhosis caused by extrahepatic bile-duct obstruction and not accompanied by secondary inflammation.
coarse nodular c. See *postnecrotic c.*
congestive c. Cardiac c.
diffuse nodular c. See *Laennec's c.*
extrahepatic obstructive c. Biliary c.
fatty c. Usually of Laennec's type accompanied by extensive infiltration of fat.
Hanot's c. See *cholangiolitic c.*
hypertrophic c. Enlargement with intralobular fibrosis, accompanied by icterus, but without ascites. Also called *Charcot's c.*, *Hanot's c.*
infectious c. Usually of Laennec's type in which bacteria are present; there is no conclusive proof that the bacteria cause the disease.
insular c. Laennec's c.
intrahepatic obstructive c. Biliary c.
juvenile c. Usually of Laennec's type due to congenital syphilis, congenital atresia or malformation of bile ducts (obstructive biliary); perhaps to erythroblastosis fetalis or to unknown cause.
Laennec's c. A type formerly thought to be due to excessive use of alcohol; now known to be due to the associated nutritional disturbances. The liver is slightly nodular with fibrosis especially in the portal spaces; characterized by degeneration and regeneration of the hepatic parenchymal cells, often accompanied by ascites, esophageal varices,

and ultimately icterus Syn., *alcoholic c.*, *atrophic c.*, *diffuse nodular c.*

monolobular c. Laennec cirrhosis in which single lobule is surrounded by fibrotic portal spaces.

multilobular c. A term used in contrast to *monolobular* Laennec cirrhosis in which several lobules are surrounded by fibroti portal spaces: the usual form of the disease.

pericholangiolitic c. Xanthomatous c.

pigmentary c. Morphologically like Laennec cirrhosis. M y be hemosiderotic with marked deposit of hemosiderin, or hemochromototic with marked deposit of hemosiderin and also of hemofuscin.

pipe-stem c. A zooparasitic cirrhosis caused by deposition of the va of *Schistosoma mansoni* in the portal spaces with reactive fibrosis and granulomtous inflammation.

portal c. Laennec c.

postnecrotic c. Cirrhosis, usually due to toxic agents or viral hepatitis, characterized by necrosis of liver cells, regenerating nodules of hepatic tissue, the presence of large bands of connective tissue which course irregularly through the liver and, in some areas, preservation of the normal hepatic architecture. Intermediat forms between postnecrotic cirrhosis and Laennec cirrhosis xist, and may be difficult to distinguish. Also called *subacute* or *acute yellow atrophy multiple nodular hyperplasia*, *coarse nodular cirrhosis*, *toxic nodular cirrhosis*, *postnecrotic scarring*

syphilitic c. (a) Syphiliti nodular cirrhosis (hepar lobatum) in which gummas or their scars lead to irregularly disposed retractions of outer surface (b) Packet liver in which the cross section shows interlaced thin bands of connective tissue with relatively normal lobular structures within the network.

toxic c. See postnecrotic c.

toxic nodular c. See postnecrotic c.

tuberculous c. Secondary to tuberculosis of liver or other viscera. *Rare*

xanthomatous c. A part of disseminated xanthomatosis; scarring of biliary passages leading to intrahepatic biliary cirrhosis. Syn., *pericholangiolitic c.*

zooparasitic c. The result of animal parasites or their ova, such as *Schistosoma* within the liver

cir rus [L., lock of hair]. *I zoology*, slender flexible ppendage, such as the hairlike ppendages on worms and insects, especially the protruding male genital organ of Cestodes

ci -sec'to-my (sur-seek'to-mee) [G *kirsos*, enlargement f vein *ektomē*, cision]. Excision of portion f varicose vein.

cir'soid (sur'soyd) [*kirsos*; G *eidos*, form] Resembling varix or dilated vein often misspelled *circoid*.

cir som phs los [*kirsos*; G *omphalos*, navel]. A varicose condition about the mbilicus

cir"soph thal'mi [*kirsos*; G *phthalmia*, ophthalmia] 1 Ophthalmia, with an pparent varicose condition of the conjunctival vessels. 2 Corneal staphyloma, with an ppearance of varicosity of the surface.

cir-sot' my [*kirsos*; G. *tomē*, cutti g]. Excision of varix.

c.i.s. Central inhibitory state.

cis- [L., on this side]. A prefix denoting *on this side*, *on the same side since following*.

1 sa [G. *kissa*, cravi g for trange food]. A craving for strange and natural articles of food *See pica*.

cis sam pe-line (s sam puh leen, lin) An alkaloid from pareira root. See *bebeerine*

Cis sam pe-los [G *kissos* ivy; *ampelos*, vine]. A genus of climbing plants of the Menispermaceae. **C. pareira** f tropical America, false pareira, has been used as tonic and diuretic.

cis tern [L. *cisterna*, cistern]. 1 A reservoir 2. A large, subarachnoid space.

basal c. The subarachnoid space t the base of the brain, divided by the opti chiasma into the cistern of the chiasma and the interpeduncular cistern.

cerebellomedullary c. The cisterna magna.

c. f corpus callosum. The subarachnoid space between the arachnoid, which is in contact with th inferior border of the falx cerebri, and the corpus callosum.

c. of Sylvian fissure. The subarachnoid space at the temporal pole, formed by the piarachnoid stretching across the stem of the Sylvian fissure to the orbital surface of the frontal lobe.

c. of the chiasma. That part of the basal cistern below and in front of the optic chiasma.

c. of the great cerebral vein. That containing the great cerebral vein, formed by the arachnoid stretching over the transverse cerebral fissure from the splenium of the corpus callosum to the superior surface of the cerebellum. Formerly called *superior c.*

c. of the lateral cerebral fossa. The subarachnoid space of the lateral fossa of the cerebrum, formed by the arachnoid stretching over the lateral cerebral fissure.

interpeduncular c. That part of the basal cistern in the interpeduncular fossa posterior to the optic chiasma.

pontine c. That ventral t the pons.

superior c. See c. of the great cerebral vein.

ci ter'na [L.]. 1 Cistern. 2 The cisterna chyli, the saclike beginning of the thoracic duct opposite the twelfth thoracic vertebra.

c. ambiens. Old term for cistern of the great cerebral vein.

c. magna. A large cistern formed by the arachnoid stretching across from the inferior surface of the cerebellum to the dorsal surface of the medulla oblongata. Syn., *cerebellomedullary cistern*.

c. perilymphatica. That portion of the vestibule of the ear lying just within the oval window and filled with perilymph which communicates with the subarachnoid spaces via the cochlear aqueduct.

cis-ves'ti tism [L. *cis*, on this side *vestire*, to clothe]. The act of dressing in clothes not suitable to the age, occupation, or position of the wearer but of his own sex.

cit ra con'ic ac'id. COOH.C.(CH) CH.COOH methylmaleic acid, crystalline acid obtained on heating citric acid. Syn., *pyrocitric acid*.

cit ral. An aldehyde, $C_9H_{15}CHO$ found in the oils of lemon, lemon grass, orange, and others It is yellow liquid of strong lemon odor used as flavor Syn *geranial*.

cit ra rain. See *hetralin*.

cit rate. Any salt of citri acid.

cit ric ac'id (*acidum citricum*) $H_3C_6H_5O_7.H_2O$ A tribasic acid occurring in the juices of many fruits. It is normal constituent of whole cow' milk. Commercially it is obtained from the lemon, lime, and bergamot or produced by the controlled fermentation of carbohydrates. Translucent crystals or white, crystalline odorless powder of acid taste sol ble in 0 5 part of water or in 2 parts of alcohol It is used in refrigerant and diuretic beverages and as an acid flavor It is idized in the body and eliminated as carbon dioxide.

cit rin. A crystalline substance, said to be mixture of hesperidin, quercitrin, and eriodictyol glycoside, isolated from lemon juice It combats the increased permeability of capillary walls, such as

occurs in scurvy and certain other diseases. Syn., *vitamin P*. See Table of Vitamins in the Appendix.

cit'rine oint'ment (sit'reen, -rin) Ointment of mercuric nitrate.

cit ri nin. A quinone of the formula $C_{13}H_{14}O_5$ isolated from *Penicillium citrinum* and *Aspergillus candidus*; an antibiotic of limited bacteriostatic action against Gram-positive bacteria. It occurs in lemon-yellow crystals, soluble in water and alcohol.

cit"ro-gen'ase. An enzyme, present in muscle, capable of catalyzing condensation of acetoacetic acid and higher β-ketoacids with oxaloacetic acid to form citric acid or other tricarboxylic acids, as cis-aconitic and isocitric acids.

cit'ron [L. *citrus*, from G. *kedros*, cedar]. The tree, *Citrus medica*, or its fruit. The fruit rind is used in conserves.

cit"ron-el'lal. $C_{10}H_{18}O$. An aldehyde occurring in many essential oils, including citronella oil.

cit"ron-el'la oil. A yellowish green liquid of characteristic odor and pungent taste obtained chiefly from the sweet-scented grass *Cymbopogon nardus* or citronella grass. It consists largely of geraniol and citronellal; its insect-repelling property has been attributed to methylheptenone.

ci trul'lin. A resinoid from *Citrullus colocynthis*. It is a cathartic used in veterinary practice.

ci-trul'line. $NH_2CONH(CH_2)_3CH(NH_2)COOH$; an amino acid, first isolated from watermelon, believed to be involved in the formation, in the liver of urea from ammonia and carbon dioxide. It is an intermediate between ornithine and arginine, two other amino acids involved in producing urea.

Cit'rus [L.]. A genus of trees of the Rutaceae. From this genus come the orange, lemon, citron, lime, and bergamot.

cit ta sis [G. *kitta*, craving for strange food; *-sis*, condition]. Pica; a longing for strange or improper food.

Civiale, Jean [*French surgeon*, 1792–1867]. Known in his time for his operation of internal urethrotomy by the use of a special urethrotome he devised. Described his operation of litholapaxy or crushing a stone within the urinary bladder (1826). Responsible for putting litholapaxy on a sound basis in Europe.

Civinini, Filippo [*Italian anatomist*, 1805–44]. Remembered for his anatomic and pathologic studies. He described a small process on the lateral pterygoid plate, called *Civinini's spine*.

Cl Chemical symbol for chlorine.

Cl. Abbreviation for *Clostridium*.

cl, cl. Centiliter

Clado, Spiro [*French gynecologist*, 1856–1905]. Described the suspensory ligament of the ovary called Clado's band.

Cla-do ni a (kla-do nee-ah, klay-do) [G. *klados*, branch]. A genus of lichens.

C. rangiferina. Reindeer moss used as food in famine seasons. When distilled, it affords an alcoholic spirit.

Clad" o-spor'i-um wer'neck-i. A pleomorphic yeastlike and filamentous dark-colored fungus colony which is the causative agent of tinea nigra.

clair-voy'ance [F *clair* clear; *voir* to see] The direct awareness, with no help from sense impressions, of events taking place in the outside world

clamp [LG or D *klamp*]. An instrument for holding and compressing vessels or hollow organs to prevent hemorrhage or the escape of contents during the progress of an operation, as a pedicle clamp for grasping and holding a pedicle during removal of an organ or a tumor or a stomach clamp for securing an entire segment of the stomach. Also see *clip, forceps*.

(Gaylor) cervical punch biopsy c. An instrument for the performance of biopsy of the cervix of the uterus

clang as-so ci a tion. A symptom observed in the manic phase of manic-depressive psychosis in which resonant sounds bring to mind certain words or ideas.

clap [OF *clapoir*]. Gonorrhea.

clap'ping. In massage percussion movements in which the cupped palms are brought down alternately in a rapid succession of blows. The movement of the hands is chiefly from the wrist.

cla rif'i-cant [L. *clarificare*, from *clarus*, clear; *facere*, to make]. An agent used to make a turbid liquid clear

clar"i fi-ca'tion [L. *clarificatio* from *clarus*, *facere*]. The operation of removing the turbidity of a liquid or a naturally transparent substance. It may be accomplished by allowing the suspended matter to subside; by the addition of a clarificant or substance that precipitates suspended matters or by moderate heating. —**clar'ify**ing, *adj* **clar'ify** *v.*

Clark, Alonzo [*American physician*, 1807–87]. Known for his sign obliteration of liver dullness, due to tympanites in beginning peritonitis.

Clark, Charles Patten [*American physician*, 1879–1961]. With F B. Kingsbury introduced permanent albumin standards, called *Kingsbury-Clark albumin standards*. See under *Kingsbury*

Clark, Leo Pierce [*American psychiatrist*, 1870–1933]. Described infantile cerebral paralysis, called *Clark's paralysis*.

Clark-Collip method. See Kramer Tisdall *method*.

Clarke, Jacob Augustus Lockhart (1817–1880) English physician, known for his studies of the spinal cord and the demonstration of the inter mediolateral cell column and of the dorsal nucleus, called *dorsal nucleus of Clarke* or *Clarke's column*. He gave the first complete description of *syringomyelia* (1868) and also introduced the method of mounting cleared sections in Canada balsam, which was a major advance in histological technique.

Clarke, John [*English physician*, 1761 1815] Remembered for his early account of infantile tetany and for his description of laryngismus stridulus (1815)

Clarke-Hadfield syndrome. Pancreatic infantilism. See *Hadfield*.

clas mat o-cyte (klas-mat'o-sight, klas-mat') [G *klasma*, fragment; *kytos*, cell]. 1 Old term for macrophage of connective tissue. 2. A monocyte.

clas mo-cy t oma. See reticulum-cell *sarcoma*.

clas'tic [G *klastos*, broken in pieces]. Breaking up into fragments causing division.

Claude, Henri Charles Jules (1869–1945) French psychiatrist who described a syndrome due to a lesion in the central portion of one red nucleus, characterized by contralateral cerebellar ataxia and hemichorea and ipsilateral paralysis of the area innervated by the third cranial nerve.

clau"di ca'tion [L. *claudicatio* from *claudicare*, to limp] Lameness.

intermittent c. Cramplike pains and weakness in the legs, particularly the calves; induced by walking and relieved by rest; associated with excessive smoking, vascular spasm, and arteriosclerosis. Syn., *angina cruris, dysbasia intermittens angiosclerotica*.

intermittent spinal c. Intermittent progressive weakness of the legs without pain, presumably caused by decreased circulation in the spinal cord.

venous c. Lameness due to venous stasis. Also called *angiosclerotic paroxysmal myasthenia*.

Claudius, Friedrich Matthias [*German anatomist*, 1822–69]. Remembered for his description of the polyhedral cells of the cochlear duct. Described the ovarian fossa.

claus"tro-phil'i-a [L. *claustrum*, confined place lock, bar; G. *philein*, to love]. A morbid desire to be shut up in confined space.

claus"tro pho'bi a [*claustrum*; G. *phobos*, fear]. Morbid fear of being in room or confined space.

claus'trum [L.]. A barrier as membrane partially closing an opening, or one bearing resemblance to barrier as the layer of gray matter between the insula of the cerebral cortex and the lentiular nucleus. —**claustral**, *adj.*

clau-su ra. Atresia.

cla va (pl. *clavae*) [L., cl b]. One of the two ovoid eminences in the caudal end of the fourth ventricle, representing continuations of the fasciculus gracilis. Subjacent to th clava is the gracilis nucleus. Th clava was formerly called *eminentia clavae*. —**claval**, *adj.*

clav' cin. An antibioti substance produced in cultures of several different fungi it is identical with *claviin*, *claviformin*, and *patulin*.

cla vate [*clava*]. Club-shaped.

clav' tin. Clavacin.

clav" li za tion (klav"uh li-say shun, -lye say' shun) [F. *clavelée*, sheep pox]. Inoculation with sheep-pox virus. Also called *ovination*.

Clav'i ceps [L. *clava*, club; *caput*, head]. A genus of fungi.

C. purpurea. The fungus producing the ergot of rye.

clav'i-cle (klav'i kul) [L. *clavicula*, small key]. A bone of the shoulder girdle articulating medially with the sternum and laterally with the acromion f the scapula; the collarbone. See Plates 1 13 See Tabl of Bones in the Appendix. —**clavic' ular** *adj.*

clav"i-cot'o my [*clavicula*; G. *tomē*, cutting]. Surgical section of the clavicle.

cla vic u lat [*clavicula*]. 1 Having clavicle. 2. Wrinkled; corrugated.

la-vic u lec to-my [*clavicula*; G. *ektomē*, excision]. Surgical removal of the clavicle. The operation is indicated in cases of thyroid cancer osteomyelitis of the clavicle, and limitation of arm motion where the shoulder joint has become fused.

clav"i for'min. Clavacin.

cla vine (clay veen, vin) Inactive mi ture of ergot constituents, consisting of nearly equal parts of leucine, isoleucine, and valine.

cla vus [L., nail, corn]. 1 A cone-shaped, circumscribed hyperplasia of the horny layer of the epidermis, in which there is an ingrowth as well as an outgrowth of horny substance forming epidermal thickenings, chiefly about the toes caused by friction or pressure. 2. I *psychiatry* severe pain in the head described as the sensation of nail being driven into the head.

hard c. A dense and callous hypertrophy at points of pressure on the toes.

soft c. That type which develops on opposing surfaces of the toes. It is soft as result of heat and moisture.

claw'foot [AS. *clawu*, *fōt*]. A foot having an abnormally high longitudinal arch, depression of the metatarsal arch, and dorsal contractures of the toes. It exists in two forms that in which the outstanding deformity is an exaggeration of the longitudinal arch, and that in which the ex ggera tion of the longitudinal arch is associated with contraction of the plantar fascia and limitation of dorsiflexion t the ankle Also called *hollow foot*, *contracted foot*, *pes cavus*, *nondeforming clubfoot*.

claw'hand" [*clawu*, AS. *hand*]. An acquired deformity of the hand. In the extreme type, due to paralysis of the ulnar and median nerves, it is characterized by extension of the thumb, hyper extension and bduction of the proximal phalanges of the fingers, and flexion of the other phalanges. Lesser degrees of the deformity result from paralysis of the ulnar or median nerve separately.

Claybrook sign. See under *sign*.

Clayton gas. See under *gas*.

clear' nce [ME. *cler* from L. *clarus*, clear]. 1 The complete removal of substance from the blood by the kidneys. 2. A test of renal function. See under *test*.

clear'ing of cas'u al ties. I *military medicine*, the process of disposing of casualties by sorting, returning to duty those who are fit and transferring all others to medical unit of higher echelon.

clear'ing sta'tion. A divisional medical unit oper ting in war set up with or without shelter for emergency treatment, including medical record. It is charged with rapid disposal of army casualties either by return to duty or by vacuation.

cleav'age [AS. *clēofan*]. 1 The linear clefts in the skin indicating the general direction of the fibers They govern to certain extent the arrangement of the lesions in skin diseases. The **lines of cleavage** run, for the most part, obliquely to the axis of the trunk, sloping from the spine downward and forward in the limbs, they are mostly transverse to the longitudinal axis. See also Carl von *Langer*. 2. Cell division, especially f the zygote and blastomeres. Syn., *segmentation*. 3. An early stage of th process of development between fertilization and the blastula, when the embryo consists of mass of dividing cells, the blastomeres.

adequal c. Cleavage producing almost equal blastomeres.

bilateral c. Cleavage in single plane producing equal halves.

determinate c. Cleavage producing blastomeres, each of which is destined to form some particular part or structure. Also called *mosaic c.*

discoidal c. Meroblastic cleavage limited to the germinal disk, as in telolecithal vian ova.

equal c. That producing blastomeres of equal size.

equatorial c. Cleavage at right angles to the ovum axis, frequently the third cleavage plane.

holoblastic c. Total cleavage of the ovum

indeterminate c. That prod cing blastomeres having similar developmental potencies, each of which can prod ce whole embryo. Also called *regulative c.*

meridional c. Vertical cleavage in plane through the egg axis.

meroblastic c. That restricted to the cytoplasmic part of yolk-laden ovum; also known as *partial c.*

superficial c. Meroblastic cleavage restricted to the peripheral cytoplasm, as in the centrolecithal insect ovum.

unequal c. That producing blastomeres of unequal size.

cleft [ME. *clift*]. A fissure.

branchial c. ( ) One of the slitlik openings between the gills, as i fishes (b) See visceral *c.*

c. hook. Transverse facial cleft. Syn., *macrostomia*.

c. foot. Division of the foot due to absence of one or more digits and the corresponding metatarsal( )

c. hand. Division of the hand due t absence of one or more digits and the corresponding metacarpal(s)

c. lip. See *harelip*.

c. of Schmidt-Lantermann. See *incisure of Schmidt-Lantermann*.

c. palate. A congenital defect, due to failure of fusion of embryonic facial processes resulting in fissure through the palate. This may be *complete*, extending through both hard and soft palates into the nose, or any degree of *incomplete*, or partial, cleft. Often associated with harelip.

coelomic c. The fissure in the lateral mesoderm which forms the coelomic cavity and divides the mesoderm into somatic and visceral layers.

facial c. An embryonic fissure between facial processes; the facial anomaly produced by failure of these processes to fuse. A **median facial cleft** (median harelip, median fissure) is one between the mandibular or the median nasal processes which may involve both mandible and maxilla or only one; an **oblique facial cleft**, one between the maxillary and frontonasal processes; a **transverse facial cleft**, a fissure at the angle of the mouth causing macrostomia.

genal c. Cleft cheek; transverse facial cleft; also called *genal fissure*, formerly called *genal coloboma*.

internatal c. That of the buttocks, in which is the anus.

Maurer's c. See under *dot*.

Stillman's c. A cleft in the gingival margin associated with periodontal disease.

visceral c. An embryonic fissure between the visceral arches, produced by rupture of the closing plate between a pharyngeal pouch and its corresponding external branchial groove.

cleft. Divided.

clei'do- (kly'do-), **cleid-** [G. *kleis*, clavicle]. A combining form denoting *the clavicle*, or *pertaining to the clavicle*.

clei"do-cos'tal [*kleis*; L. *costa*, rib]. Pertaining to the ribs and the clavicle.

clei"do-cra'ni-al. Referring to the clavicle and the cranium, as cleidocranial dysostosis.

clei"do-hu'mer-al. Relating to the clavicle and the humerus.

clei"do-hy'oid [*kleis*; G. *hyoeidēs*, shaped like the letter upsilon]. Relating to clavicle and hyoid.

clei'do-ic [G. *kleidoun*, to lock up, from *kleis*]. Isolated from the environment.

clei"do-mas'toid [*kleis*; G. *mastoeidēs*, like a breast]. Pertaining to the clavicle and to the mastoid process.

clei"do-oc-cip'i-tal (kly"do-ock-sip'i-tul). Relating to the clavicle and occiput.

c. muscle. A variable portion of the sternocleidomastoid extending from the occipital bone to the clavicle.

clei"do-scap'u-lar [*kleis*; L. *scapula*, shoulder blade]. Relating to the clavicle and the scapula.

clei"do-ster'nal [*kleis*; G. *sternon*, breast]. Pertaining to the clavicle and the sternum.

clei-dot'o-my [*kleis*; G. *tomē*, a cutting]. In obstetrics, section of the clavicles when the shoulders of the fetus are too broad to pass, an operation performed when the head is delivered, and the child dead.

clei"thro-pho'bi-a (kly"thro-fo'bee-uh) [G. *kleithron*, bar; *phobos*, fear]. Morbid fear of being locked in.

cle'oid [A.S. *clea*, claw; G. *eidos*, form]. A clawlike instrument used by dentists in excavating cavities in the teeth.

clep"to-ma'ni-a. See *kleptomania*.

clep"to-pho'bi-a. See *kleptophobia*.

Clérambault, Gatian de [French psychiatrist, 1872–1934]. Described a state in which the subject feels that his mind is being controlled by another person or an outside influence; called *Clérambault-Kandinsky complex*.

Clevenger, Shobal Vail [American neurologist, 1843–1920]. Remembered for his description of the inferior temporal sulcus of the cerebral hemisphere, which extends from the occipital pole almost to the temporal pole of the temporal lobe.

cli'ver, cly'er [D. *klier*, gland]. A scrofulous tumor in cattle, produced by tuberculous infection.

cli"ma-co-pho'bi-a [G. *klimax*, ladder, staircase; *phobos*, fear]. A morbid fear of staircases.

cli-mac'ter-ic (klye-mack'tur-ick, kly"mack-terr'ick) [G. *klimaktēr*, rung of a ladder]. A period of life at which the system was believed to undergo marked changes. These periods were thought to occur every seven years. The word is now generally applied to the menopause.

male c. A condition presumably due to loss of testicular function, associated with an elevated urinary excretion of gonadotropins and symptoms such as loss of sexual desire and potency, hot flashes, and vasomotor instability; rarely seen clinically.

cli'mate [G. *klima*, slope, region]. The sum of those conditions in any region or country that relate to the air, the temperature, moisture, sunshine, and winds, especially in so far as they concern the health or comfort of mankind. —**cli-mat'ic**, *adj.*

cli-mat'ic food and cloth'ing lab"o-ra-to"ry. A research and experimental development laboratory under the supervision of the Quartermaster General of the Army for the dual purpose of studying the physiologic effect of climatic variables (temperature and humidity) on military personnel and the development of food and clothing apposite to varied global climatic conditions.

cli"ma-to- [*klima*]. A combining form denoting *climate*.

cli"ma-tol'o-gy [*klima*; G. *logos*, word]. In medicine, the study of climate in relation to health and disease.

cli"ma-to-ther'a-py [*klima*; G. *therapeia*, treatment]. The treatment of disease by means of suitable climate.

cli'max [G. *klimax*, ladder]. 1. The height of a disease; period of greatest intensity. 2. The sexual orgasm.

clin-. See *clino-*.

clin'ic [G. *klinē*, bed]. 1. Medical instruction given at the bedside, or in the presence of the patient whose symptoms are studied and whose treatment is considered. 2. A place where such instruction is given. 3. A gathering of instructors, students, and patients for the study and treatment of disease. 4. A place where medical care is given to ambulant patients who live at home.

clin'i-cal [*klinē*]. 1. Relating to bedside treatment or to a clinic. 2. Pertaining to the symptoms and course of a disease as observed by the physician, in opposition to the anatomic changes found by the pathologist.

clin'i-cal rec'ord. A group of forms used by a hospital to record a patient's medical history. It covers the results of physical examination, laboratory findings (including x-ray interpretations), admission diagnosis, progress of the disease, medications used, consultations, operations performed, and final diagnosis and disposition.

cli-ni'cian [*klinē*]. 1. A physician whose opinions, teachings, and treatment are based upon experience at the bedside. 2. A clinical instructor. 3. One who practices medicine.

clin'i-co- [G. *klinikos*, of a bed]. In medicine, a combining form denoting *clinical*.

clin"i-co-hem"a-to-log'ic (klin"i-ko-hem"uh-to-lodj'ick, -hee"muh-to-lodj'ick) [*klinikos*; G. *haima*,

blood; *logos*, word]. Relating to both clinical and blood problems.

clin"i co-pa thol o-gy [*klinikos*; G. *pathos*, disease; *logos*]. The study of disease in the living patient applied particularly to the study of the blood, urine, feces, and other secretions and excretions and to parts of the body such as tumors, removed for examination.

clin"i-co ra di o-log'ic. See *clinicoroentgenologic*.

clin"i-co-roe t gen log'i (klin ko-rent ghin-lodj'ick) [*klinikos*; *Röntgen*; *logos*]. Pertaining to the correlation between clinical and roentgenologic subjects. Syn., *clinicoradiologic*.

cli"no-, clin- [G. *klinein*, to incline]. A combining form denoting *inclination* or *declination*.

cli"no-ceph lus [*klinein*, G. *kephalē*, head]. An individual having clinocephali skull.

cli"no-ceph a ly, cli no-ceph a lism [*klinein*, *kephalē*]. A congenital defect of the skull in which the upper surface is concave or saddle-shaped. —**clinocephal'ic, cli ocephalous,** *adj*.

cli"no-dac'ty ly, cli"no-dac'tyl ism [*klinein*, G. *daktylos*, finger]. A congenital defect consisting of abnormal deflection of fingers or toes. —**clinodactylous,** *adj*.

cli'noid [G. *klinē* bed *eidos* form]. Resembling bed, as the clinoid processes.

cli nom ter (klye-nom tur kli-nom) [G. *klinein*, to incline *metron*, measure] An apparatus for measuring the rotational capacity of the ocular muscles.

cli'no-scope [*klinein*, G. *skopein*, to examine]. An instrument for measuring the torsion of the eyes when gazing at fixed object with the axes of vision presumably parallel.

clip [AS. *clyppan*, to embrace]. *I surgery*, device or appliance that grips skin or other tissue to secure apposition or to control hemorrhage. Also see *clamp*, *forceps*.

dura c. A thin wire suture applied by special forceps to check hemorrhage in brain operations Also called *brain c.*

skin c. A band of malleable metal with pointed ends, held in magazine and applied by special forceps to the apposed edges of skin wound more rapid method of closure than the use of sutures. Also called *Michel wound*.

cli s-m'e-ter (klies so m tur kli ss) [G. *klisis*, inclination *metron*, measure]. An instrument for measuring the degree of inclination of the pelvic axis.

clit'i on [G. *klitys*, slope]. A point located where the median sagittal plane meets the center of the uppermost margin of the dorsum sellae.

clit" -ral'gi (klit o ral'juh, -jee uh, kly t) [G. *kleitoris*, clitoris *algos*, pain] Pain referred to the clitoris.

clit" ri-d r' (kl t o-ri dawk see kly t ri) [*kleitoris*; G. *auxē*, increase] Hypertrophy of the clitoris *Obs*.

clit" ri dec't my [*kleitoris*, G. *ektomē* excision]. Excision of the clitoris.

clit" ri-di'ti [*kleitoris*; G. *-itis*, inflammation]. Inflammation of the clitoris.

lit" ri-dot'o-my [*kleitoris*, G *tomē*, cutting]. Incision of the clitoris.

lit' -ri (klit o-ris, kly to ris) [*kleitoris*] In the female the homolog of the penis, attached to the ischiopubic rami by t crura, which meet in front of the pubic symphysis t form the body or corpus. It possesses erectility See Plate 41 —**clitorid'ean,** *adj*.

clit o-rism (klit o-riz m, kly to) [*kleitoris*]. 1. Enlargement or hypertrophy of the clitoris 2. Tribadism. 3. A condition of painful and persistent erection of the clitoris; analogous to priapism in the male.

clit ri'tis (klit o-rye tis, kly to-) [*kleitoris*; G. *-itis*, inflammation]. Inflammation of the clitoris.

clit" -ro-ma ni (klit o-ro m y nee-uh, kly"to-ro-) [*kleitoris*; G *mania*, madness]. Nymphomania.

clit" rot'o-my See *clitoridotomy*.

clit"or rha gi [*kleitoris*; G *rhēgnynai*, to burst forth]. Hemorrhage from the clitoris.

cli'vus [L., slope]. 1. A slope. 2. The slanting surface of the body of the sphenoid bone between the sella turcica and basilar process of occipital bone. **c. monticuli.** Old term for declivus cerebelli, the declive of the cerebellum.

clo. *I aviation medicine*, an arbitrary unit of thermal insulation, used in expressing the thermal insulation value of clothing A suit of clothing has thermal insulation value of one clo when it will maintain in comfort resting-sitting human adult male whose metabolic rate is approximately 50 kilogram calories per square meter of body surface per hour when the environmental temperature is 70° F In terms of absolute thermal insulation units, one clo is 0.18° C. per square meter kilogram calorie per hour.

clo- ca [L., sewer]. 1 In the early embryo, the entodermal chamber common to hindgut and allantois later to hindgut and urogenital duct or sinus 2 In Anamniota, Sauropsida, and aplacental mammals, common chamber for rectum and urogenital orifices. —**cloacal** *adj*.

congenital c. A malformation in which the rectum opens into the genitourinary tract.

ectodermal c. That part of the cloaca derived from the proctodeal invagination after rupture of the cloacal membrane.

entodermal c. That part of the cloaca derived from the caudal end of the hindgut.

external c. See ectodermal c.

persistent c. The result of failure of the urorectal septum to develop, leaving common chamber for rectum and urogenital system. See cloacal *duct*.

urogenital c. An abnormal common opening of the urethra and vagina due to defective urethrovaginal septum.

vesicorectovaginal c. A cavity in the pelvis into which rectum, urinary bladder and vagina all open t may be congenital or due to trauma, infections, tumors, or irradiation damage.

clo as'ma (klo-az'muh) See *chloasma*.

Cloetta, Max (1868–1940) Swiss pharmacologist, who isolated digalen, soluble preparation of digitalis suitable for injection.

clone [G. *klōn*, twig]. A group of individuals of like genetic constitution btained by asexual reproduction from single original individual. Reproduction may occur by continued fission, as in protozoa by continued budding, as in hydras, or by propagation from cuttings, as in plants. See *pur line*.

clon"i-co-ton'ic [G *klonos*, violent, confused motion G *tonikos*, from *tonos*, tension]. Clonic and tonic at the same time; said of certain muscular spasms.

clon'ism (klon'iz m klo niz um) **clo is mus** (klo niz mus, is mus) [*klonos*]. The condition of suffering from succession of clonic spasms. See *clonus*.

clon o-graph [*klonos*; G *graphein*, to write]. An apparatus for recording the spasmodic movements of the head, xtremities, lower j w trunk, and the tendon reflexes.

clo"nor hi s sis (klo nor kigh uh sis, klon or kee-y sis) **lo nor-chi i** (klo nor-kee sis, klon or-) [G *klōn*, branch *orchis*, testis; NL. *-iasis*; G *-iasis*, condition]. Condition due to the

presence of *Clonorchis sinensis* in the bile ducts, causing marked dilatation, proliferation of the biliary epithelium, and atrophy of the liver cells; characterized by edema, diarrhea, and hepatomegaly in moderate cases, and cirrhosis, anasarca, and cachexia in severe cases.

Clo nor'chis (klo-nor'kis, klon or'kis) [*klōn*, *orchis*]. A genus of flukes indigenous to the Orient.

C. sinensis. The most common of the liver flukes, having as definitive hosts man or other mammals.

clon'o-spasm [G. *klonos*, violent, confused motion; *spasmos*, spasm]. A clonic spasm.

clo'nus (klo'nus, klon us) [*klonos*]. A series of movements characterized by alternate contractions and relaxations; clonic spasm. Involuntary reflex, irregular contractions of muscles when put suddenly upon the stretch. According to the part affected, the phenomenon is spoken of as ankle clonus, wrist clonus, etc. —**clon'ic**, *adj.*; **clonic'ity**, *n.*

Cloquet, Jules Germain [French anatomist, 1790–1883]. Known for his research into the cause of ventral hernia (1819) and for his *Human Anatomy* in several volumes (1821–31). The hyaloid canal was formerly named for him.

clorarsen. Trade-mark for dichlorophenarsine hydrochloride.

Clos trid'i-um (klos-trid'ee-um, klo-strid') [dim. from G. *klōstēr*, spindle]. A genus of anaerobic spore-bearing bacteria of ovoid, spindle, or club shape, widely distributed in nature. See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix. —**clostridial**, *adj.*

Cl. botulinum. A species which produces a very powerful toxin in food. The disease is a toxemia; the organism is not invasive but produces its toxin outside the body.

Cl. botulinum A. A type species found predominantly in the Rocky Mountain and Pacific Coast states and in English soils; produces botulism in man and limberneck in chickens.

Cl. botulinum B. This type is found most commonly in the Mississippi Valley, Great Lakes region, and Atlantic Coast states. It produces botulism in man and limberneck in chickens.

Cl. botulinum Cα. A toxin-producing form which produces a paralytic condition in chickens and botulism in wild ducks.

Cl. botulinum Cβ. This type species produces forage poisoning of cattle in Australia.

Cl. botulinum D. A species producing lamziekte in African cattle.

Cl. botulinum E. A species which causes botulism; was isolated from fish.

Cl. chauvei. Synonym for *Cl. feseri*.

Cl. feseri. That species which is the principal cause of blackleg in cattle. It has not proved responsible for any human infection. Also called *Cl. chauvei*.

Cl. histolyticum. A species of *Clostridium*, Gram-positive, anaerobic, which is saccharolytic and proteolytic, and forms terminal oval spores.

Cl. novyi. This species is important in gas gangrene; also produces a strong soluble toxin.

Cl. oedematiens. Syn. for *Clostridium novyi*.

Cl. parabotulinum equi. Synonym for *Clostridium botulinum D*.

Cl. perfringens. A species of plump, nonmotile, Gram-positive rods of varying length, occurring in chains and singly. This organism produces a variety of toxins and is the most important cause of gas gangrene. It has also been found to be the cause of dysentery of sheep. It has been divided into types by Wilsdon as follows: Type A, the principal cause of gas gangrene in man; Type B, the lamb dysentery bacillus; Type C, the struck bacillus of sheep; Type D, the bacillus of enterotoxemia of sheep. Syn. *Cl. welchii*.

Cl. septicum. Species found in gas gangrene but not so frequently as some of the other anaerobic bacilli. It is also responsible for some cases of blackleg in cattle.

Cl. sporogenes. A species frequently found in deep wounds. It is generally agreed to be nonpathogenic but is the cause of the foul odor of such wounds.

Cl. tetani. The species which causes tetanus. It is characterized by spherical terminal spores and the production of tetanus toxin, a potent exotoxin.

Cl. welchii. See *Cl. perfringens*.

clo sure [L. *clausura*, a lock, from *claudere*, to close]. 1. The act of completing or closing an electric circuit. Abbreviated, C. 2. The closing of a wound by suture.

clot [AS. *clot*]. 1. A semisolid coagulum of blood or lymph. 2. Coagulate.

blood c. See under *blood*.

chicken-fat c. That type formed after death, consisting of a light yellow, edematous, and fibrinous clot in its upper portion, and an accumulation of erythrocytes in its dependent portion.

currant jelly c. A red, gelatinous blood clot formed quickly after death, which contains all of the elements of blood.

clot re trac'tion. The contraction or shrinkage of a blood clot resulting in the extrusion of serum. Clot retraction does not occur in severe thrombocytopenia or some cases of thrombasthenia.

c. r. time. The length of time required for the appearance or completion of clot retraction, as determined by one of numerous methods.

clot'ting time. The length of time required for shed blood to coagulate. For the accurate measurement of clotting time, the blood must be obtained with minimal contamination with tissue fluids, preferably by venipuncture. Clotting time must always be referred to a normal standard for the particular conditions under which the test is performed. Syn., *coagulation time*. Also see *bleeding time, clot retraction time, prothrombin time*.

clove [OF. *clou*, from L. *clavis*, nail]. The dried flower bud of *Eugenia caryophyllata*. It yields not less than 15 cc. of volatile oil from 100 Gm. of drug; it also contains caryophyllin, a lactone. Clove is stimulant. It is occasionally used in nausea and vomiting and to correct flatulence. Dose, 0.33–0.65 Gm. (5–10 gr.)

c. oil (*oleum caryophylli*). The volatile oil distilled with steam from clove. It contains not less than 82% by volume of eugenol. It is a local anesthetic, a powerful germicide, and a local irritant. It is occasionally used internally in treating flatulent colic; externally it is a favorite remedy for toothache. Dose, 0.13–0.4 cc. (2–6 min.)

clown'ism [akin to Icel. *klunni*, a clumsy fellow]. That stage of hysteroepilepsy in which there is an emotional display with a series of grotesque contortions.

CLSH Abbreviation for *corpus luteum-stimulating hormone*. See *luteinizing hormone*.

club'foot" [ON. *klubba*; AS. *fōt*]. A congenital malformation, either single or bilateral, in which the forefoot is inverted and rotated, accompanied by shortening of the Achilles tendon and contracture of the plantar fascia. Also see *talipes*.

club'hand. A congenital deformity of the hand characterized by one of the following distortions: (a) palmar displacement with or without radial or ulnar deviation; (b) dorsal displacement with or without radial or ulnar deviation. The deformity may be due to contracture of ligaments and muscles, or it may be caused by defective develop-

ment of the radius, ulna, or carpal bones. The most common form of clubhand is caused by defectiv development of the radius producing radial and palmar distortion.

clump'i g. See *agglutination*.

clu'n al [L. *clunis*, buttock]. Pertaining to the buttock.

clu pan don'ic ac'id. An unsaturated fatty cid occurring in certain fish oils the formula has been reported as C $H_{24}O_2$ and also as $C_{22}H_{34}O_2$.

clu'pe ine (klōō pee een, in) $C_{30}H_{57}N$ O + $4H_2O$. A protamine from the herring. Syn., *salmine*.

Clu si a (klōō shuh, -see-uh) [L., after Charles de *Lécluse* French botanist, 1526–1609]. A genus of plants f the Guttiferae many species of which yield gum resin called West Indian balsam. **C. rosea** yields cathartic gum resin similar to gamboge

Clute, Howard Merrill [*American surgeon*, 1890–1946] Known for his incision for repair of dia phragmatic hernia, extending from below the umbilicus upward to the left costal margin, thence deflected across the fused costal cartilages of the sixth, seventh, and eighth ribs. Th rectus muscle is cut across and cartilages are divided as necessary to give adequate access called *Clute incision*.

clut'ter ing. Confused speech containing jumbled word and meaningless sounds

Clutton, Henry Hugh [*English surgeon*, 1850–1909] Known for his description of symmetrical synovitis, associated with prenatal syphilis See syphilitic *arthritis*.

cly'ers. See *actinomycosis*

cly sis [G *klysis*, drenching by clyster]. Administration of an enema; cleansing by means of an enema.

Cm Symbol for curium.

cm, cm Centimeter

cne mis [G *knēmis*, tibia] The skin or tibia. —**cnemial,** *adj*

c i' in (nigh sin) $C_{42}H_{56}O$ A crystalline bitter substance found in *Cnicus benedictus*, blessed thistle

C.N.S. Central nervous system.

Co Symbol for cobalt.

co' cer'vate (ko sur'vayt, ko-ass'ur-vayt) [L. *coacervare* to heap together] The product formed when two hydrophilic colloids of opposite sign are mixed and form stable particle which may form separate phase. —**coacerva tion,** *n.*

co ad ap ta'tion [L. *cum*, together with *adaptare*, to dapt] The correlated variation i two mutually dependent organs

co- g'u la. Plural of coagulum

co ag'u lant [L. *coagulare* to cause fluid to curdle] Causing the formation of clot or coagulum —**coag'ulabl** *adj* **coag'ulant,** *n.*

co- g'u lase (k ag yoo lace, -laze) [*coagulare*] A enzyme, produced by certain of the micrococci, particularly *Micrococcus pyogenes* var *aureus*, which brings about the coagulation in human sera of fibrin, thus forming sort of capsule protecting them against phagocytosis There is definite correlation between the bility to produce this substance and pathogenicity

co ag'u late [*coagulare*] 1 Curdle clot 2. Cause to change from fluid state t compact, jellylike mass solidify

co- g'u la'tion [L. *coagulatio*, from *coagulare*]. 1 The form tion of coagulum or clot, in blood or in milk. 2. A clot. —**coag'ulated, coag ulative** *adj*

co-ag'u-la tion time. See *clotting time*

co-ag'u lin. See *precipitin*.

co-ag'u-lum (pl. *coagula*) [L.]. A clot curd coagulated mass.

Coakley Cornelius Godfrey [*American laryngologist* 1860–1934]. Remembered for his operation for the relief of frontal sinusitis, the anterior wall being removed and the sinus partially obliterated along with the nasofrontal duct by curettage, the cavity being allowed to heal by granulation.

co a les cence [L. *coalescere*, to grow together]. The union of two or more parts or things previously separate. —**coalescent,** *adj*

coal tar (*pix carbonis*) A by-product in th destructive distillation of coal; black, viscid fluid, of characteristic and disagreeable odor Its composition is extremely complex, and many constituents may be separated from it by fractional distillation. Among the products obtained from coal tar are anthracene, benzene naphtha, creosote, phenol, pitch, etc. From the basic oil of coal tar are manufactured the aniline or coal-tar colors or dyes. It is employed locally to relieve itching and in the treatment of certain skin diseases.

c. t. ointment (*unguentum picis carbonis*) One containing coal tar in base of zinc oxide paste.

c. t. remedies. Synthetic preparations from coal tar or its derivatives.

c. t. solution (*liquor picis carbonis*) Coal tar 20%, in alcohol, stabilized with polysorbate 80. It is used in treatment of skin diseases. A chloroformic solution of coal tar containing 5% of coal tar is sometimes employed.

co'ap-ta tion [L. *cum*, with *aptare*, to fit] The proper union or adjustment of the ends of fractured bone or the lips of wound —**co-apt** .

co arc tate [L. *coarctare*, to press together]. Crowded together

co arc-ta'tion [L. *coarctatio*, from *coarctare*]. A compression of the walls of vessel or canal, narrowing or closing the lumen reduction of the normal or previous volume, as of the aortal shriveling and consequent detachment, as of the retina. A stricture.

co arc tot' my [*coarctare*; G *tomē*, cutting]. The cutting of stricture.

co ar tic'u la'tion [L. *coarticulare*, to same to articulate]. A synarthrosis.

coat [OF *cote* of Teutonic origin]. A cover or membrane covering part or substance.

buffy c. The upper fibrinous layer of clot of coagulated blood characterized by pale color due to absence of erythrocytes.

internal elasti c. The internal elastic membrane of the tunica intima of an artery

middle c. The tunica media of vessel.

subendothelial c. The subendothelial layer of the tunica intima of the heart and vessels.

uveal c. The uvea

vaginal c. ( ) The fibrous capsule of the eyeball. (b) The vaginal coat of the testis.

coat'i g [*cote*] A covering or layer of substance, as of wound or the tongue.

c. of pills. A covering of various substances to conceal the taste in swallowing

c. f tongue A condition of the tongue indicative of abnormality of the digestive tract.

enteric c. A coating for pills or tablets or capsules, intended as protection against solutions found in the stomach, but dissolvi g in the intestines.

Coats, George [*English ophthalmologist* 1876–1915]. Remembered for his description (1908) of retinitis exudativa, called *Coats disease*

co-bal' min. 1 Generic name for members of the vitamin-B_{12} family; specific members are identified through the use of prefixes, as cyanocobalamin, hydroxocobalamin, et 2. That portion of the molecule of crystalline vitamin B (cyanocobalamin) exclusive of the cyano group, occurring in all vitamin B analogs.

co'balt (ko'bawlt) [Ger. *kobold*, goblin]. Co = 58.94. A hard, gray, ductile metal used in alloys. It is a component of cyanocobalamin; lack of the element may result in anemia. It appears that it effects more complete utilization of iron in hemoglobin synthesis. Polycythemia has been produced in animals by administration of cobalt. Larger doses of soluble salts are emetic, due to a local irritant effect.

c. chloride. $CoCl_2.6H_2O$; cobaltous chloride, dark-red crystals, freely soluble in water. Its administration to man has been reported to produce a favorable reticulocyte response, with rises in red-cell, hemoglobin, and hematocrit values, in some anemic patients.

co'balt-60. A radioactive isotope of cobalt, produced by irradiating cobalt in an atomic pile. The radiation is employed in the treatment of cancer. This isotope, of atomic weight 60, has a half-life of about 5 years and emits beta and gamma rays.

Cobbold, Thomas Spencer [English parasitologist, 1828-86]. Distinguished helminthologist. Said to have named *Filaria bancrofti* (1877), now classified as *Wuchereria bancrofti*, and a number of other intestinal parasites.

cobefrin hydrochloride. Trade-mark for 3,4-dihydroxyphenylpropanolamine hydrochloride, $(OH)_2C_6H_3CHOH.CH(NH_2)CH_3.HCl$, a vasoconstrictor.

cobione. Trade-mark for crystalline vitamin B_{12}.

Co'bra [Pg. serpent, from L. *colubra*, serpent]. Any one of a species of snakes of the genus *Naja*.

co'bra lec"i-thid (ko'brah less'i-thid). A combination of cobra venom and lecithin which is actively hemolytic. The hemolytic product is regarded by some as a venom-free lecithin derivative and termed *cobra lecithinase*.

co"bra-ly'sin (ko"brah-lye'sin, ko-bral'i-sin) [Pg. *cobra de capello*, serpent of the hood; G. *lysis*, loosing]. The hemolytic toxin of cobra venom. It is destroyed by heat and neutralized by antivenin.

co'ca [Sp., from Quechua *coca*]. The leaves of *Erythroxylon coca*, *E. truxillense*, or *E. novogranatense*, containing cocaine and other alkaloids.

co-caine' (ko-kayn', ko'kayn, ko'kuh-een, -in) (*cocaina*). $C_{17}H_{21}NO_4$; methylbenzoylecgonine, an alkaloid obtained from the leaves of *Erythroxylon coca* and other species of *Erythroxylon*; occurs as colorless to white crystals, or as a white, crystalline powder; 1 Gm. dissolves in about 600 cc. of water, in 7 cc. of alcohol, in 12 cc. of olive oil, and in from 80-100 cc. of liquid petrolatum. For most purposes the hydrochloride is preferred to the base. The base is used in ointments and oily solutions because of its greater solubility in fatty substances. —**cocainist**, *n.*, **cocainize**, *v.*

c. bug. Itching, crawling, and stocking skin sensations experienced in cocaine poisoning.

c. hydrochloride (*cocainae hydrochloridum*). $C_{17}H_{21}NO_4.HCl$. The hydrochloride of the alkaloid cocaine; occurs as colorless crystals, or as a white, crystalline powder. 1 Gm. dissolves in 0.5 cc. of water and in 3.5 cc. of alcohol. Locally cocaine is a paralyzant to the peripheral ends of the sensory nerves, to a lesser degree to the motor nerves, and stimulating to the muscular coats of the blood vessels. Systemically it is a stimulant to all parts of the central nervous system including the brain, spinal cord, and the medulla. The most important use of cocaine is as a local application to mucous membranes, either for the purpose of contracting blood vessels or of lessening sensation. Its continued use internally causes addiction.

c. nitrate. $C_{17}H_{21}NO_4.HNO_3$; a salt, similar to cocaine hydrochloride, useful in formulations in which chloride ion may provide chemical incompatibility (as with silver salts).

co-cain'ism (ko-kayn'iz-um, ko'kayn-iz-um, ko-kay'in-iz-um) [coca]. The cocaine habit.

co-cain"o-ma'ni-a (ko-kayn"o-may'nee-uh, ko-kayn-o-, ko-kay"in-o-) [coca; G. *mania*, madness]. The habit of using cocaine; properly, mental derangement due to the cocaine habit. —**cocainomaniac**, *n.*

co-car-box'yl-ase. Thiamine pyrophosphate, the coenzyme or prosthetic component of carboxylase, an enzyme catalyzing decarboxylation of various α-keto acids, as pyruvic and α-ketoglutaric.

co"car-cin'o-gen [L. *cum*, with; G. *karkinos*, crab; *gennaein*, from *gignesthai*, to be produced]. A noncarcinogenic agent which augments the carcinogenic process.

cocc-. See *cocco-*.

coc'ci (cock'sigh). Plural of coccus.

Coc-cid'i-a (cock-sid'ee-uh) [NL. *coccidium*, dim. from G. *kokkos*, berry]. An order or group of cell parasites of the class Sporozoa, found in vertebrates and invertebrates, common in lower animals, rare in man.

coc-cid'i-a. Plural of coccidium.

coc-cid'i-al [coccidium]. Relating to, or caused by, coccidia.

Coc-cid"i-oi'des (cock-sid"ee-oy'deez, -oi'deez) [coccidium; G. *eidos*, form]. A genus of parasitic yeastlike fungi.

C. immitis. The causative agent of coccidioidomycosis, an infectious, systemic, suppurative, and granulomatous disease. The organism is spheroid, nonbudding, and endosporulating in the tissues. It produces branching, septate, aerial hyphae and arthrospores in culture.

coc-cid"i-oi'din (cock-sid"ee-oy'din, cock"sid-) [coccidium; *eidos*]. An extract of *Coccidioides immitis* used in testing for infection by this parasite.

coc-cid"i-oi"do-my-co'sis (cock-sid"ee-oy"do-migh-ko'sis) [coccidium; *eidos*; G. *mykēs*, fungus; *-ōsis*, condition]. A disease caused by inhalation of spores of *Coccidioides immitis*, causing pulmonary symptoms and later cutaneous nodules. Syn., *desert fever, San Joaquin Valley fever.*

primary c. A benign, self-limited, acute, respiratory infection.

progressive c. A chronic, often severe and fatal infection involving viscera, bones, and skin. Syn., *coccidioidal granuloma.*

coc-cid"i-oi-do'sis. Coccidioidomycosis.

coc-cid"i-o'sis [coccidium; *-ōsis*]. Group of symptoms produced by the presence of coccidia in the body. The pathogenicity of coccidia in humans is questionable.

coc-cid'i-um (cock-sid'ee-um) (pl. *coccidia*) [NL., dim. from G. *kokkos*, berry]. Any one of the order Coccidia.

coc'co-, cocc- [*kokkos*]. A combining form meaning *grain, seed,* or *berry.*

coc"co-ba-cil'lus [*kokkos*; L. *bacillus*, small staff]. A short, thick, oval bacillus; in appearance midway between the coccus and the bacillus.

Coccobacillus foetidus ozaenae. Old term for *Salmonella foetida.*

coc-cog'e-nous (cock-odj'i-nus) [*kokkos*; G. *genesthai*, from *gignesthai*, to be produced]. Produced by cocci.

coc'cu-lin. Picrotoxin.

coc'cu-lus [L., dim. from G. *kokkos*, berry]. The dried fruit of *Anamirta cocculus*, fishberry; a convulsant poison which has been used externally against pediculi. See *picrotoxin.*

coc'cus (pl. *cocci*) [*kokkos*]. 1. A bacterium whose greatest diameter is not more than twice its

shortest. 2. Latin name for cochineal. —coccal, coccoid, *adj*

coc cy al'gi a (cock"see-al'juh, jee uh) See *coccygodynia*.

coc cy-ceph a lus [G *kokkyx*, cuckoo; *kephalē*, head]. A monster with beaked process for head. —coccycephalous, *adj*

coc"cy dyn'i a. See *coccygodynia*.

coc"cy ge al neu ral'gi a. See *coccygodynia*.

coc"cy gec to-my (cock sl jeck to mee) [*kokkyx*; G *ektomē*, excision]. Surgical excision of the coccyx.

coc"cy ge fem-o-ral'is. Pertaining to the coccyx and femur.

coc"cy ge o-f m-o ral'is mus cl A variant of the gl teus maximus muscle xtending from th coccyx to the linea aspera of the femur or from the sacrotuberous ligament to the fascia of the thigh.

coc-cyg'e-us (cock sidj ee-us) [*kokkyx*]. One of the pelvic muscles. See Tabl of Muscles in the Appendix. —coccygeal, *adj*

c. dorsalis muscle. The posterior sacrococcygeus muscle.

c. ventralis muscle. The anterior sacrococcygeus muscle.

coc cy go-dyn'i-a [*kokkyx*; G *odynē* pain]. Pain in th region of the coccyx. Syn., *coccygeal neuralgia*.

coc cyx (cock sicks) [*kokkyx*]. The last bone f the vertebral column, formed by the union of 4 rudimentary vertebrae. See Plates 1 14, 41. See T ble of Bones in the Appendix. —coccyg'eal, *adj*

coch"i neal' (kotch i-neel' kotch neel) [L. *coccinus*, scarlet] (*coccus*). The dried femal insects, *Coccus cacti*, enclosing the young larvae. Upon extracting the insects with an aqueous solution containing alum, dark purplish sol tion representing an aluminum lake of the coloring principle carminic acid is btained; the solution sometimes is used for color g medicinal preparations.

coch'le (cock'lee uh) [L snail, from G *kochlias*, shellfish]. *A cavity of the internal ear resembling a small shell* t contains the essential organs of hearing. It describes two and one-half turns about a central pillar called the modiolus or columella, forming the spiral canal, which is bout one and one-half inches in length. Also see *ear*. See Plate 20. —cochlear *adj*

membranous c. The cochlear duct.

osseous c. The osseous cochlear canal

coch'le- nerve. See under *nerve*.

coch"le ves tib u la (cock"lee) [*kochlea*; L. *vestibulum*, vestibule]. Pertaining to the cochlea and vestibule of the ear.

Coch"li-o my'ia (cock"lee o-my yuh) [*kochlea*; G *myia*, fly]. A genus of flies of the Calliphoridae.

C. americana. Synonym for *C hom nivorax*.

C. hominivorax. A obligate parasit of warm-blooded animals of tropical and subtropical regions of the Western Hemisphere. The ova are deposited on unbroken living tissue and the larvae, hatched in less than half day enter the skin and prod ce suppurat ve lesions Syn *C americana*.

C. macellaria. The American screwworm fly; species whose larvae feed on dead or moribund tissue of cattle horses, and sheep.

co cil la na (ko si lay uh, -lan'uh, ko see yah nah, lah uh) The bark of the tree *Guarea rusbyi*. A nauseati g expectorant.

Cock, Edward [*English surgeon*, 1805–92]. Devised his operation for xternal urethrotomy by opening the urethra, without guide, behind the stricture in the midline of the perineum.

Cockcroft, J hn D (1897) British physicist, known for his extensive research in nuclear physics. W th E. T S. Walton, h recei ed the N bel prize in physics in 1951 for his pioneer work in atom-smashing.

cock'roach" See *Blatella*, *Blatta*, *Periplaneta*.

co co. See *yaws*.

co coa, co'co. See *cacao*, *Theobroma*.

co-con scious. See *forconscious*.

coc to pre-cip'i tin [L. *coctum*, from *coquere*, to cook; *praecipitare*, to cast down]. A precipitin produced in an animal by immunization with boiled antigen, such as serum protein.

coc"to sta'bile (cock to stay'bil, -bile, -stab il)

coc"t sta'ble [*coctum*, L. *stabilis*, stable]. Able to withstand the temperature of boiling water without change.

cod. The common cod, *Gadus morrhua*, which furnishes cod-liver oil.

co de-car box'yl ase. Pyridoxal phosphate, the prosthetic component of the enzyme carboxylase which catalyzes decarboxylation of -amino acids, as well as of certain transaminating enzymes, in which latter case it is commonly referred to as *cotransaminase*.

co de hy drase. See *coenzyme I* and *II*.

co de hy dro gen ase. See *coenzyme I* and *II*.

co de'in. See *codeine*.

co de ine (ko dee een, in, ko deen ko-dee'in) [G. *kōdeia*, poppy head]. A white, crystalline alkaloid of opium, $C_{18}H_{21}O_3N.H_2O$ resembling morphine in action, but eaker an analgesic and respiratory sedative. Dose, 0.008–0.13 Gm. (⅛–2 gr.) Syn., *codeia*, *methylmorphine*.

c. phosphate (*codeinae phosphas*). $C_{18}H_{21}NO_3.H_3PO_4.1½H_2O$ the most soluble salt of codeine, 1 Gm dissolving in 2.5 cc. f water.

c. sulfate (*codeinae sulfas*). $(C_{18}H_{21}NO_3)_2.H_2SO_4.5H_2O$ 1 Gm. dissolves in 30 cc of water.

Codivilla, Alessandro [*Italia surgeon*, 1861–1912]. Known for his contributions to the knowledge of orthopedic surgery and for his development of technics for the transplantation of tendons in the treatment of infantile paralysis.

cod-liv'er oil (*oleum morrhuae*). *The partially* destearinated fixed oil obtained from fresh livers of *Gadus morrhua* and other species of the family Gadidae. Cod-liver oil is required to contain in each gram not less than 850 units of vitamin A and not less than 85 units of vitami D flavoring with not more than 1% of any one or any mixture f flavoring substances is permitted. The oil is useful in treating diseases of the bone, various forms of t berculosis, and many types of general malnutrition. Two different emulsions of the oil are recognized: *cod-liver oil emulsion* (50% oil); *cod-liver oil emulsion with malt* (30% oil, 85% malt extract). The U.S.P also recognizes *non-destearinated cod-liver oil* (*oleum morrhuae non-destearinatum*) of the same vitamin potency as cod-liv oil the former oil is used chiefly for administration t animals. Cod-liver oil is also used locally in the treatment of burns and wounds. Dose of the oil, 4–15 cc. (1–4 fluidrachms).

co dol. Retinol.

Codronchi Giov ni Battista [*Italian physician*, 1547–1628]. Author of the earliest important work on legal medicine (1597). Wrote in the same year treatise on diseases of the larynx, the earliest work extant devoted entirely to that field.

co ffi'cient [L *cum*, together; *facere* to accomplish]. Multiplier figure indicating the degree of physical or chemical alteration characteristic of given substance under stated conditions.

absorption c. In the law of absorption for homogeneous radiations, $I = I_0e^{-\mu d}$ where I_0 is the intensity of the radiation beam falling on an absorber of the thickness *d*, *e*, the base of the

natural system of logarithms; I_x the intensity of the beam after it emerges from the absorber; and μ, the **linear absorption coefficient.** μ divided by the density of the absorber is called the **mass absorption coefficient.**

activity c. *In physical chemistry*, the thermodynamic behavior of a substance. It is a measure of how the behavior of a given substance differs from its theoretical or ideal behavior.

Bunsen absorption c. Quantitative expression of gas solubility: ratio of the volume which would be occupied by the dissolved gas at standard conditions to the volume of the solvent under the experimental conditions.

Bunsen solubility c. The volume of a gas, measured at 0° C. and one atmosphere pressure, dissolved by a unit volume of liquid when the liquid is equilibrated with the gas under one atmosphere of pressure at a specified temperature.

c. of correlation. A measure of the degree of association between two characteristics in a series of observations. Its value ranges from −1, representing perfect negative correlation, to +1, representing perfect positive correlation.

c. of fecundity. The number of conceptions per 1000 women-years of exposure to risk of conception, both taken after two years of married life.

c. of light extinction. Amount of light of a specific wavelength absorbed by a 1.0% solution of a substance in a layer 1.0 cm. thick.

c. of solubility of a gas. The amount of a gas which is dissolved at a given temperature in 1 cc. of a liquid, when the pressure of gas on the liquid is 760 mm. Hg.

c. of variation. The standard deviation of a series of observations expressed as a per cent of the mean of the series.

frictional c. The frictional coefficient for a particle moving through a medium is an indication of the viscous force opposing the motion of the particle and is mathematically represented as the ratio of the opposing force to the velocity.

isotonic c. The lowest degree of concentration of a solution of a salt in which laking of blood does not occur.

olfactory c. The minimum number of cubic centimeters of air saturated with a given odor that must enter the nostrils for the odor to be perceived.

osmotic c. Osmotic coefficient (g) is the ratio of the observed osmotic pressure to that of the ideal osmotic pressure. It may also be obtained from freezing-point depression, boiling-point elevation, and vapor-pressure depression of solvents.

Ostwald solubility c. Ratio of the volume which would be occupied by the dissolved gas in the gaseous state at standard conditions to the volume of the solvent under the experimental conditions.

respiratory c. See *respiratory quotient.*

temperature c. A quantitative expression of the effect of an increase in temperature on any chemical or physical process or reaction.

urotoxic c. The number of urotoxic units per kilogram of body weight excreted in twenty-four hours.

-coele, -cele (-seel) [G. *koilia*, cavity]. A combining form denoting a chamber, ventricle, or normal cavity of the body.

coe·len'ter·on (see·len'tur·on) [G. *koilos*, hollow; *enteron*, intestine]. 1. The entodermal gut cavity in diploblastic animals. 2. An archenteron.

coe'li·o- (see'lee-o-), **coe'li-** (see'lee-), **ce'li·o-**, **ce'li-** [G. *koilia*, cavity]. A combining form denoting abdomen or belly.

coe'lom, ce'lom (see'l m), **coe·lo·ma** [G. *koilōma*, cavity]. The embryonic body cavity formed in the lateral mesoderm, which subsequently becomes divided into pericardial, pleural, and peritoneal cavities in developing mammals. —**coe·lom'ic,** *adj.*

extraembryonic c. The cavity in the extraembryonic mesoderm; between chorionic mesoderm on one hand and the mesoderm of the amnion and yolk sac on the other. It is continuous with the embryonic coelom in the region of the umbilicus, and is obliterated by the growth of the amnion.

coe·lo·chi·lo·sis, ce·lo·chi·lo·sis (see·lo·ki·lo'sis). See *gastroschisis.*

coe''nes·the'si·a (see''nes·thee'zhuh, -zee·uh, sen·ess-), **coe·nes·the'sis.** See *cenesthesia.*

coe'no·cyte, ce'no·cyte (see'no·sight, sen'o-) [G. *koinos*, common; *kytos*, cell]. A multinucleate mass of protoplasm which has arisen as a result of nuclear division but without cytoplasmic division; seen in the vegetative bodies of some algae and fungi, as the plasmodium of slime molds (Myxomycetes). —**coe·no·cyt'ic,** *adj.*

co·en'zyme [L. *cum*, with; G. *en*, in; *zymē*, leaven]. A substance associated with and activating an enzyme; prosthetic group of an enzyme. A coenzyme can be separated from an enzyme by dialysis.

c. A. A derivative of pantothenic acid which in the presence of a suitable enzyme can accept an acetyl group, as from pyruvic acid, and transfer it to other substances.

c. I. A nucleotide composed of two molecules each of D-ribose and phosphoric acid, and one molecule each of adenine and nicotinic acid amide. It is the coenzyme for many dehydrogenases, taking up two hydrogen atoms to form dihydrocoenzyme I. Occurs chiefly in yeast. Syn., *codehydrase I, codehydrogenase I, cozymase, diphosphopyridine nucleotide.*

c. II. A nucleotide composed of one molecule each of adenine and nicotinic acid amide, two molecules of D-ribose, and three molecules of phosphoric acid. It functions in a manner similar to coenzyme I. Syn., *codehydrase II, codehydrogenase II, triphosphopyridine nucleotide, Warburg's yellow enzyme coferment.*

c. R. Biotin.

coeur en sab·ot (kur an sab·o') [F., heart like a boot]. The boot-shaped radiologic shadow of the heart seen in the tetralogy of Fallot.

co'fac·tor *In bacteriology*, any amino acid which must be present in the medium to activate phage to adsorb to host bacteria.

co·fer'ment. Coenzyme.

cof'fee [Ar. *qahwah*, wine, coffee]. The dried and roasted ripe seeds of various species of *Coffea*, including *C. arabica, C. liberica,* and *C. robusta.* An infusion is stimulant due to its content of caffeine and, possibly, a volatile oil, caffeol. It is sometimes administered rectally in narcotic poisoning.

cof'fer dam. Rubber dam.

Coffey, Robert Calvin [*American surgeon*, 1869–1933]. Widely known for his operation of implantation of the ureters into the rectum, in which they are made to enter the lumen of the sigmoid flexure obliquely through the muscular and submucous layers, a valvelike action being obtained with minimal danger of infection. Called *ureterosigmoidostomy.*

cof'fin [OF. *cofin*, basket, from G. *kophinos*]. 1. A case for holding a dead body. 2. *In veterinary medicine*, the hollow portion of a horse's hoof.

cof'fin joint. Joint of the horse next above the coffin bone; the distal interphalangeal joint.

cofron. A trade-mark for hematinic preparations containing copper and iron and, in some, liver concentrate.

Coghill George Ellett (1872–1941) American anatomist, known for his extensive studies of the relationships between the progressive differentiation of bodily structure and the overt behavioral patterns of that structure; in his studies on the salamander he showed that efficient movement occurs prior to development of reflex mechanisms.

cog ni'tion. In *psychology* the conscious faculty or process of knowing, of becoming, or being aware of thoughts or perceptions, as contrasted with *feeling* and *conation*

cog'wheel" See cogwheel *rigidity*.

co-hab"i ta tion [L. *cum*, with; *habitare*, to dwell]. The living together of a man and woman as husband and wife with or without legal marriage.

co-her'ence [L. *cohaerentia*, from *cohaerere*, to stick together]. Reasonable connectedness of thought shown in speech or writing.

co he sion [L. *cohaesum*, from *cohaerere*] The attractive force between the same kind of molecules, that is, the force which holds the molecules of substance together —**cohesive** *adj*

Cohn Ferdinand Julius [*German bacteriologist*, 1828–98] Remembered for his discovery of the ability of bacteria to form spores and of their multiplication by fission. Classified bacteria morphologically (1876)

Cohn, Hermann Ludwig [*German ophthalmologist*, 1838–1906] Known for his promotion of hygiene in schools, especially for his advocacy of routine examination of the eyes of school children (1883) Developed a test for color perception by the use of colored skeins.

Cohn method. See Corper and Cohn *method*.

Cohnheim, Julius Friedrich [*German pathologist*, 1839–84]. Pupil of Virchow and leading experimental pathologist of his time. Revolutionized the teaching of pathology his textbook was standard in the nineteenth century Studied sugar-forming ferments (1863) Investigated inflammation and suppuration (1867 73) showing that inflammation is characterized by the accumulation of leukocytes, which migrate through the capillary walls. Produced experimental tuberculosis in rabbits (1877) The experimental salt frog, a living frog whose blood has been replaced with physiological salt solution, is called *Cohnheim frog* Among other things, certain cancer cells, the small polygonal areas in transverse sections of muscle fibers, the end arteries without branches, and the theory that all true tumors are due to faulty embryonal development have been known by Cohnheim's name See Cohnheim *theory*.

co'hosh, co-hosh [*Algonquian*]. An American Indian name for several medicinal plants.

blue c. Common name for *Caulophyllum thalictroides*.

c. bugbane. *Cimicifuga racemosa*.

coil [L. *colligere*, to gather] A spiral formed by winding

induction c. Rolls of wire used to transform current of low potential into current of high potential by electric induction.

primary c. The inner coil of an induction apparatus.

resistance c. A coil of wire of known electric resistance used for estimating resistance.

secondary c. The outer coil of fine insulated wire in an induction apparatus.

Coindet, Jean François [*French physician*, 1774–1834]. Remembered as probably the first to use iodine internally in the treatment of goiter (1820)

coi'no-site (koy no sight, ko-in o-) **coe'no-site** (see no-sight, see o-) [G *koinos*, common; *sitos*, food]. An animal parasite capable of separating itself from its host at will; free, commensal organism.

co i'tion (ko-ish un) [L. *coire*, to come together]. Coitus.

co"i to pho'bi a [L. *coitus*, coitus, G *phobos*, fear]. Morbid dread of coitus.

co'i tus [L., from *coire*, to come together]. The act of sexual connection; copulation.

c. interruptus. Sexual intercourse in which the penis is withdrawn and the semen discharged externally to the vagina. Also called *c. incompletus*, *c. reservatus*

co'ke. Infrequent spelling of coco. See *yaws*.

col-. See *colo-*.

co'la nut. See *kola*.

co-la'tion [L. *colare*, to strain]. The operation of straining.

col"a to'ri um (kol uh tor ee um, ko"luh) [*colare*]. In *pharmacy* a sieve, colander or strainer

col'a ture (kol'uh-choor ko'luh-) [L. *colatura*, that which has been strained]. 1 In *pharmacy*, liquid that has been subjected to colation. 2. Colation.

col"chi-ci'na (kol"chi-see nuh, -sigh nuh) [L. *colchicum*, a plant with poisonous root]. Colchicine.

col'chi-cine (kol'chi-seen, -sin, kol'ki) (*colchicina*) $C_{22}H_{25}O_6N$ An alkaloid of colchicum; pale, brownish yellow exceedingly bitter powder freely soluble in water Employed in the treatment of gout. It is a very active poison. Dose, 0.4–0 6 mg. ($\frac{1}{150}$–$\frac{1}{100}$ gr) It speeds up the evolutionary processes in plants by doubling chromosome numbers.

c. salicylate. A yellow amorphous powder soluble in water Dose, as for colchicine.

col"chi-cin"i za tion [L. *colchicum*, a plant with poisonous root]. Treatment with colchicine.

col' hi-cum (kol chi kum, kol'ki kum) [L from G *kolchikon*] Meadow crocus: the corm and seed of *Colchicum autumnale*, the properties of which are due to an alkaloid, colchicine. It is an emetic, diuretic, diaphoretic, and drastic cathartic It is valuable in acute gout and in some forms of rheumatism. Dose of the powdered corm (*colchici cormus*) 0.12–0.32 Gm (2–5 gr); of the powdered seeds (*colchici semen*) 0.065–0.33 Gm. (1–5 gr)

c. seed fluidextract (*fluidextractum colchici seminis*) Contains 0 4–0 5% (w/) of colchicine. Dose, 0.3 cc (5 min.)

c. seed tincture (*tinctura colchici seminis*) Contains 0 04–0.05% (w/) of colchicine. Dose, 2 cc. (30 min)

cold [AS *cald*]. 1 The comparative lack of heat. Cold in the form of baths or ice packs is used therapeutically to lower fever stop convulsions, or allay irritation and inflammation. 2. See *common cold*.

cold'-blood'ed. Poikilothermic without ability to regulate the body temperature; said of fishes, reptiles, and amphibians whose temperatures correspond to that of the environment.

cold cream. A type of cosmetic cream of varying composition sometimes, the official rose water ointment (U S P)

cold sore See *herpes facialis*.

Cole Warren Henry [*American surgeon*, 1898–]. Known for his part in the development of cholecystography (1924) called *Graham-Cole test*.

co-lec'to-my [G *kolon*, colon; *ektomē*, excision]. Excision of all or a portion of the colon.

co"le-i'tis (ko"lee-eye tis, kol ee-) [G. *koleos*, sheath -*itis*, inflammation]. Vaginitis. *Obs*.

Coleman diet. See Shaffer *diet*.

co'le-o- (ko'lee-o-, kal'ee-o-) **cole-** (ko'lee-kol ee-) [*koleos*]. A combining form denoting *sheath*.

co″le-o-cele″ (ko'lee oh seel, kol'ee o-) [*koleos*; G. *kēlē*, tumor]. Vaginal tumor or hernia.

co″le-o-cys-ti′tis [*koleos*; G. *kystis*, bladder; *-itis*, inflammation]. Inflammation of vagina and urinary bladder.

Co″le-op′ter-a (ko"lee op'tur-uh, kol"ee-) [G. *koleopteros*, sheath-winged]. An order of insects which includes species of carnivorous and herbivorous beetles. —**coleop′terous,** *adj.*

co″le-op-to′sis [G. *koleos*, sheath; *ptōsis*, a falling]. Prolapse of the vaginal wall.

co″le-ot′o-my [*koleos*; G. *tomē*, a cutting]. A cutting operation upon the vagina; colpotomy.

co′les (ko'leez) [L.]. The penis.

c. femininus. The clitoris.

Coley, William Bradley [*American surgeon*, 1862–1936]. Remembered especially for his use of erysipelas and prodigiosus toxins, *Coley's fluid*, in the treatment of sarcoma (1891).

co″li-bac″il-le′mi-a (ko"li-bas"i-lee'mee-uh) [G. *kolon*, colon; L. *bacillus*, small staff; G. *haima*, blood]. Presence of *Escherichia coli* in the blood.

co″li-bac″il-lo′sis (-bas"i-lo'sis) [*kolon*, *bacillus*; G. *-ōsis*, condition]. Infection with *Escherichia coli*.

co″li-bac″il-lu′ri-a (-bas"i-lew'ree-uh) [*kolon*, *bacillus*; G. *ouron*, urine]. Presence of *Escherichia coli* in the urine.

co″li-ba-cil′lus [*kolon*, *bacillus*]. The colon bacillus, *Escherichia coli*.

col′ic [G. *kōlikos*, suffering in the colon]. Pertaining to the colon.

col′ic. Paroxysmal abdominal pain due to smooth-muscle spasm. A symptom of many different conditions; inflammatory, as that associated with appendicitis; obstructive, as that due to calculi in biliary or urethral passages; toxic, as in lead poisoning; overdistention from overeating or air swallowing; or due to emotional factors such as those associated with nervous indigestion. —**col′icky,** *adj.*

co′li-ca [*kōlikos*]. Colic artery.

col′i-cine. An antibiotic substance isolated from cultures of a strain of *Escherichia coli*.

col′i-form (kol'i-form, ko'li-form) [L. *colum*, sieve; *forma*, form]. 1. Sievelike; ethmoid; cribriform. 2. Pertaining to or resembling the colon-aerogenes group, a group of nonspore-forming, Gram-negative, lactose-fermenting, aerobic bacilli, the demonstration of such organisms in water is accepted as presumptive evidence of fecal contamination. The coliform or colon-aerogenes group of bacteria includes members of the *Escherichia* and *Aerobacter* genera.

co′li group (ko'lye). Colon-aerogenes group. See *coliform*.

col′i-phage. A bacteriophage of *Escherichia coli*.

co″li-stat′in. An antibiotic substance, having bacteriostatic action against *Escherichia coli*, derived from an aerobic sporulating bacillus isolated from soil.

co-li′tis [G. *kolon*, colon; *-itis*, inflammation]. Inflammation of the colon.

acute c. That seen with acute infections or irritations; characterized by diarrhea. Also called *simple c.*

amebic c. An infectious disease due to infestation of the colon with *Endamoeba histolytica*.

balantidial c. That due to infestation by *Balantidium coli*, characterized by diarrhea and dysentery. Also called balantidiasis.

mucous c. A chronic affection of the mucous membrane of the colon; characterized by colicky pain, constipation, or diarrhea, and the passage of mucous or membranous threads or masses. Also called *chronic exudative enteritis*, *croupous c.*, *desquamative c.*, *diphtheritic c.*, *follicular c.*, *intestinal c.*, *membranous c.*, *mucomembranous c.*, *plastic c.*

c. polyposa. That in which the mucosa between the masses of ulcers becomes swollen, thus projecting from the surface in polyplike masses; frequently associated with ulcerative colitis.

spastic c. That associated with an increased tonus of the colon.

ulcerative c. An idiopathic, nonspecific, inflammatory disease of the colon; characterized by friability and ulceration of the mucosa. It is generally considered to be a psychophysiologic, autonomic, and visceral disorder.

co″li-u′ri-a [*kolon*; G. *ouron*, urine]. Colibacilluria.

col′la-cin [G. *kolla*, glue; *eidos*, form]. A substance found in colloid degeneration of the skin.

col′la-gen [*kolla*; G. *gennaein*, from *gignesthai*, to be produced]. The albuminoid substance of the white fibers of connective tissues, cartilage, and bone. It is converted into gelatin by boiling. —**collagen′ic, collag′enous,** *adj.*

col′la-ge-nase [*kolla*; *gennaein*]. A proteolytic enzyme which hydrolyzes collagen; one of the major exotoxins of *Clostridium perfringens type A*. It attacks the collagen of subcutaneous tissues and muscles and thus facilitates the spread of gas gangrene. Probably synonymous with *bursting factor*. Also called *kappa toxin*.

col″la-gen-o′sis. A disease of adults characterized by congestive heart failure associated with necrosis of endocardium, formation of mural thrombi, and fibrosis. No coronary artery disease or other change that explains the endocardial damage has been identified.

col-lapse′ [L. *collapsus*, from *collabi*, to fall together]. 1. Extreme depression, exhaustion, or prostration; from failure of circulation, as in shock, hemorrhage, or vasomotor disturbance. 2. An abnormal sagging of an organ or falling together of its walls.

lung c. Decreased volume of any portion of lung, with decrease or absence of its air content, due to any cause. See *atelectasis*.

massive c. The airless state of an entire lung, usually due to bronchial occlusion by accumulated secretions; often follows a surgical operation. Also called *massive atelectasis*.

col′lar bone [L. *collum*, neck; AS. *bān*]. The clavicle.

col-lar-ette′. A ring or collar of scales, a rudiment of blister.

col-lat′er-al [L. *cum*, together; *lateralis*, lateral]. Accessory or secondary; not direct or immediate.

col-lat′er-al. One of the first branches of an axon of a nerve cell passing at a right angle.

col-lec′tor [*In bronchoesophagology*, an instrument, variously modified, used to collect secretions for bacteriological and cytological examination.

Colles, Abraham [*Irish surgeon*, 1773–1843]. Celebrated for his elaboration of the law, a result of observation, that a child with congenital syphilis, whose mother has no clinical evidence of the disease, does not infect the mother (1837); called *Colles' law*, *Baumès' law*. Tied the subclavian artery (1811). Described the fracture at the carpal end of the radius with characteristic deformity (silver-fork), known as *Colles' fracture* (1814). See also under *fascia* and *ligament*.

Collet, Frédéric-Justin [*French otolaryngologist*, 1870–]. Known for his description of the syndrome following fracture of the floor of the posterior fossa of the skull; paralysis of the ninth, tenth, eleventh, and twelfth cranial nerves.

col-lic″u-li′tis [L. *colliculus*, little hill; G. *-itis*, inflammation]. Inflammation of the colliculus seminalis. Obs.

col·lic′u·lus [L.]. A small eminence.

c. abducentis. See facial c.

c. cartilaginis arytaenoideae. A small eminence found on the ventral (anterior) margin and ventrolateral surface of the arytenoid cartilage.

c. seminalis. An elevation of the posterior wall of the prostatic portion of the urethra; on it open the prostatic utricle, the ejaculatory ducts and numerous ducts of the prostate gland open on either side into the prostatic sinus. Formerly called *caput gallinaginis*, *verumontanum*.

c. urethralis. Colliculus seminalis. *Obs.*

facial c. One of a pair of rounded eminences in the floor of the fourth ventricle, caused by the genu of the facial nerve passing around the nucleus of the abducens nerve. Formerly called *eminentia facialis, eminentia teres*. Syn., *c. abducentis*.

inferior c. One of the posterior pair of rounded eminences arising from the dorsal portion of the mesencephalon. It contains centers for reflexes in response to sound. Also called *inferior quadrigeminal body*.

superior c. One of the anterior pair of rounded eminences arising from the dorsal portion of the mesencephalon. It contains centers for reflexes in response to visual stimuli. Also called *superior quadrigeminal body*.

col′li·dine (kol′i-deen, -din). Any of three derivatives of pyridine of the composition $C_8H_{11}N$. *alpha collidine* is 4-ethyl-2-methylpyridine; *beta collidine* is 3-ethyl-4-methylpyridine; *gamma collidine* is 2,4,6-trimethylpyridine. All are liquids obtained from coal tar.

Collier, James Stansfield (1870–1935). English physician who gave the first complete description of subacute combined degeneration of the spinal cord and its relation to pernicious anemia. See under *degeneration*.

col″li·ga′tive. In *physical chemistry*, referring to those properties of matter that depend on the number of molecules but do not depend on their chemical nature, as for example the pressure or volume of a (perfect) gas.

col″li·ma′tor [L. *collimare*, false reading for *collineare*, to aim]. 1. The diaphragm of a spectroscope, the purpose of which is to provide a beam of parallel rays of light by means of a small slit at the focus of its lens. 2. A fixed telescope for adjusting the optical axis of an instrument, as a photomicrographic camera.

col·lin′e·ar [L. *cum*, with; *linea*, line]. In *optics*, lying in the same straight line.

Col″lin·so′ni·a [L.; after Peter *Collinson*, English botanist, 1694–1768]. A genus of Lamiaceae, the mint family.

C. canadensis. Stoneroot; horsebalm; a coarse plant with a disagreeable smell; has been used as a tonic, diuretic, and diaphoretic.

Collip, James Bertram [Canadian physician and biochemist, 1892–   ]. With F. G. Banting, C. H. Best, W. R. Campbell, and A. A. Fletcher first used insulin in the treatment of diabetes (1922). Improved insulin (1923). Isolated parathormone, the active principle of the parathyroids (1925). Introduced a dosage unit of parathyroid extract; see Collip unit. Discovered the anterior pituitary-like factor (A.P.L. factor), which he showed to be an ovary-stimulating hormone of the placenta (1930). With E. P. Clark, modified the Kramer-Tisdall method for serum calcium; see under *method*.

col″li·qua′tion [L. *cum*, with; *liquare*, to melt]. The breakdown of tissue, usually necrotic, so that it becomes liquefied.

reticular c. One characteristic of cutaneous vesicles due to viruses. The cytoplasm of adjoining cells, after becoming edematous and granular, partially coalesces and disintegrates. The residual cytoplasm forms reticulated septa between intraepidermal collections of fluid or septa.

col·liq′ua·tive [*cum*; *liquare*]. Profuse or excessive; marked by excessive fluid discharges.

col·li′sion [L. *collisio*, from *collidere*, to strike together]. 1. A violent meeting. 2. A complication in twin pregnancy which occurs occasionally when the twins are small and when their presenting parts attempt to enter the superior strait at the same time.

Compton c. See scattering c.

photoelectric c. Impact of a photon with an electron in an atom, whereby the photon gives up all of its energy, removes the electron from its place, and imparts a high velocity to the electron.

scattering c. Impact of a photon with an electron in an atom, whereby the photon gives up only part of its energy to set the electron in motion and travels on in a different direction with reduced energy. Also called *Compton c.*

col·li′tis. See *trigonitis*.

col·lo′di·on [G. *kollōdēs*, glutinous] (*collodium*). A dressing for wounds made by dissolving pyroxylin in ether and alcohol. See *pyroxylin*.

flexible c. (*collodium flexile*). Collodion with the addition of castor oil and camphor.

salicylic c. (*collodium salicylatum*). Contains salicylic acid, 10 Gm.; flexible collodion, sufficient quantity to make 100 cc. Used as a means of applying salicylic acid for its keratolytic effect, especially in the treatment of corns.

styptic c. (*collodium stypticum*). Contains tannic acid, 15 Gm.; flexible collodion, sufficient quantity to make 100 cc. Intended as an application for wounds in order to stop the bleeding.

col·lo′di·um. See *collodion*.

col′loid [G. *kolla*, glue; *eidos*, form]. 1. A state of subdivision of matter in which the individual particles are of submicroscopic size and consist either of single large molecules, as of proteins, or aggregates of smaller molecules; such particles, collectively referred to as the disperse phase, occur more or less uniformly distributed in a dispersion medium. The dimension of a colloid particle, arbitrarily fixed, is between 1 and 100 millimicrons (mμ). 2. A substance in the colloid state. 3. The clear, gelatinous, eosinophilic stored secretion of the thyroid gland; also other collections of gelatinous material, as colloid carcinoma or the secretion of the intermediate lobe of the hypophysis. —**col·loi′dal**, *adj.*

hydrophilic c. One capable of combining with, or attracting to it, water to form a stable dispersion.

hydrophobic c. One incapable of combining with, or attracting to it, water.

irreversible c. One which, on being precipitated or otherwise separated from its dispersion medium, cannot be restored to its original state merely by adding the dispersion medium.

lyophilic c. One capable of combining with, or attracting to it, the dispersion medium.

lyophobic c. One incapable of combining with, or attracting to it, the dispersion medium.

protective c. A lyophilic colloid which, when added to a lyophobic colloid, confers upon the latter the stability of the former.

reversible c. One which, on being precipitated or otherwise separated from its dispersion medium, can be restored to its original state merely by adding the dispersion medium.

col·loi″do·cla′sis [*kolla*; *eidos*; G. *klasis*, a breaking]. A breaking up of the physical equilibrium of the colloids in the living body, producing anaphy-

lactoid shock. Attributed to entrance into the blood stream of unchanged (undigested) colloids. *Obs*

col·loi″do·pex′y The phagocytosis of colloidal particles.

col″loid·oph′agy Invasion and ingestion of colloid by macrophages, as in the thyroid gland.

col″lo·ne′ma (pl. *collonemata*) [*kolla*]. A lipoma with extensive mucoid degeneration.

col′lum [L]. Neck.

c. anatomicum humeri [BNA]. The anatomical neck of the humerus.

c. chirurgicum humeri [BNA]. The surgical neck of the humerus.

c. distortum. Torticollis.

c. femoris [BNA]. The neck of the femur.

c. vesicae felleae [BNA]. The neck of the gallbladder.

col″lu·na′ri·um. A solution intended to be used in the nose.

col″lu·to′ri·um. A solution intended to be used as mouthwash; also called *collutory*.

col·lyr′i·um (pl. *collyriums, collyria*) [G. *kollyrion*, poultice]. A preparation for local application to the eye, usually a wash or lotion.

col′mo·scope. An instrument for determining strains in optical lenses by the transmission of polarized light.

co′lo- (ko′lo-, kol′o-), **col-** [G. *kolon*, colon]. A combining form denoting *the colon*.

col″o·bo′ma [G. *kolobōma*, from *koloboun*, to mutilate]. Any congenital, pathologic, or operative defect, especially of the eye; it occurs most commonly in the iris, ciliary body, or choroid, usually as a cleft placed inferiorly. May be a congenital fissure of the eyelid, usually the upper.

atypical c. One located other than inferiorly in any part of the eye.

c. auris. A developmental malformation of the external ear caused by defect of the hyomandibular groove with resulting cleft between tragus and antitragus.

bridge c. A form affecting the iris, in which the cleft is separated from the pupil by a bridging strand of iris or by persistent pupillary membrane.

c. of the optic nerve. One caused by partial closure or nonclosure of the fetal fissure of the optic stalk.

c. of the retina. One caused by partial closure or nonclosure of the fetal fissure of the optic cup.

facial c. See facial *cleft*.

lobal c. Old term for transverse facial *cleft*.

macular c. See macular *dysplasia*.

co″lo·ce·cos′to·my. See *cecocolostomy*.

co″lo·co·los′to·my [G. *kolon*, colon; *kolon*, *stoma*, mouth]. An anastomosis between two noncontinuous segments of the colon in order to short-circuit the lumen around inoperable obstructing tumors or to prepare for later resection.

col″o·cynth [G. *kolokynthis*] (*colocynthis*). The dried pulp of the unripe but full-grown fruit of *Citrullus colocynthis*. Its cathartic action is due to an alkaloid and one or more other principles. The colocynthin of earlier investigators is a mixture of the alkaloid and an alcohol, citrullol. Colocynth is a powerful purgative. Dose, 0.005–0.33 Gm. (1–5 gr.)

c. extract (*extractum colocynthidis*). One part represents four parts of colocynth. Dose as laxative 0.065–0.13 Gm. (1–2 gr.); as purgative, 0.33–0.65 Gm. (5–10 gr.)

compound c. and jalap pill (*pilulae colocynthidis et jalapae*). Better known as vegetable cathartic pills; contain compound colocynth extract, hyoscyamus extract, jalap resin, leptandra extract, and podophyllum resin. The compound cathartic pills contain compound colocynth extract, mild mercurous chloride, jalap resin, and gamboge.

compound c. extract (*extractum colocynthidis compositum*). Colocynth extract 16, ipomea resin 14, aloe 65, cardamom seed 5. Is less drastic than colocynth. Dose, 0.065–0.13 Gm. (1–2 gr.)

col″o·cyn′thin. A mixture of certain active constituents of colocynth. See *colocynth*.

co·logne′ wa′ter. Perfumed spirit.

co″lo·hep′a·to·pex″y (ko″lo-hep″ah-to-peck″see, kol″o-) [G. *kolon*, colon; *hēpar*, liver; *pēxis*, fixing]. Fixation of the colon to the liver to form adhesions. *Obs.*

Colombo, Matteo Realdo (Realdus Columbus) [*Italian anatomist*, ca. 1516–ca. 1559]. Successor of Vesalius at Padua. Sometimes credited with the discovery of the pulmonary circulation, although it is probable that, in his excellent description (1559), he plagiarized the work of Servetus, whose book had been burned in 1553.

co′lon [G. *kolon*, colon]. The part of the large intestine beginning at the cecum and terminating at the end of the sigmoid flexure. In the various parts of its course it is known as **ascending c.**, **transverse c.**, **descending c.**, and **sigmoid c.** The last is sometimes divided into the **iliac c.** and the **pelvic c.** See Plates 8, 10, 13, 14. —**co·lon′ic, colon′ic,** *adj.*

giant c. See *megacolon*.

redundant c. One with congenitally increased length, causing looping or reduplication; commonly associated with constipation.

col′o·ny [L. *colonia*, colony]. *In bacteriology*, a group or mass of microorganisms in a culture, derived from a single cell. Variations in bacterial structure or antigenic composition are often expressed in colonial appearance (e.g. smooth, rough, dwarf).

dwarf (D) c. A bacterial colony whose organisms have poorly developed enzyme systems, grow slowly, have little or no virulence, and revert slowly to the original type; frequently isolated from bacterial populations exposed to antibiotics.

glossy c. Originally, a smooth colony of streptococci; now commonly a colony of streptococci devoid of M substance.

gonidial (G) c. Bacterial colony whose organisms are composed of minute coccoid and bacillary forms which pass through filters retaining ordinary bacteria. Syn. *Hadley type c.*

Hadley type c. Gonidial *c.*

intermediate c. A bacterial colony which is intermediate between the typical smooth (S) and rough (R) forms, and designated according to the resemblance to the S or R form, Sr, SR, or sR.

matt (M) c. As originally introduced, a rough colony of streptococci; now commonly a colony of streptococci rich in M substance.

mucoid (M) c. A glistening smooth colony with gummy or viscid consistency, often associated with the production of definite capsules or abundant slime-layer material.

rough (R) c. A flat nonglistening colony with irregular surfaces and edges.

smooth (S) c. A raised colony with regular edges and homogeneous-appearing surface.

col′o·ny coun′ter. A device for counting bacterial colonies, usually consists of an illuminated transparent plate, divided into spaces of known area, over which a Petri dish containing the colonies is placed.

col′o·pex″y (kol′o-peck″see, ko′lo-) [G. *kolon*, colon; *pēxis*, fixing]. Suturing of the sigmoid flexure to the abdominal wall. *Obs.*

co·loph′o·ny. Resin.

col″o·proc·tos′to·my [*kolon*; G. *prōktos*, anus;

stoma, mouth]. Formation of new passage between the colon and the rectum.

col″op to′sis (kol op-to′sis, ko″lop) **col″op to′si a** (kol op-to′shuh, -see-uh, -shuh, -zee-uh) [*kolon*, G *ptōsis*, falling]. Prolapse or displacement of the colon.

col′or [L.]. 1. A visual sensation due to radiated or reflected light. 2. Tint or hue; that quality of an bject perceptible to sight alone. 3. A pigment.

complementary colors. Two colors which, when combined, produce white.

confusion c. A color which ppears the same as another t colorblind person.

primary colors. (a) I *painting* those whose various combinations make all other colors red, yellow and blue or more loosely classification of distinct color sensations to which other shades or tints may be referred, as green, light or dark. (b) I *psychology*, red, yellow-green, and blue.

col′or blind″ness. Inability to perceive one or more, rarely all, colors achromatopsia. See Ishihara's *test* for colorblindness. Also spelled *color blindness*.

amnesic c. A form of aphasia in which colors are seen normally but the names cannot be recalled.

partial c. A form characterized by decrease or loss of perception of one of the three basic hues. Red-green colorblindness is the most common type. Forms of partial colorblindness are *protanopia*, *partial protanopia*, *deuteranopia*, *partial deuteranopia*, *tritanopia*.

total c. The complete inability to distinguish different hues and saturations. Brightness perception is normal; the world is seen as shades of gray. Syn., *monochromatism*.

col″ -rec-tos′to my (kol o-rek-tos to-mee, ko″lo-rek) [G. *kolon*, colon; L. *rectus*, straight; G *stoma*, mouth]. I *surgery*, the establishment of new passage between the colon and the rectum.

col′or gus-ta′tion. Pseudogeusesthesia.

col′or hear′ing. The excitation of the visual center for color through the uditory nerve.

col″or im′e-ter (kul rim′i-tur) [L. *color* color G *metron*, measure]. An instrument for determining color intensity as for measuring the proportion of hemoglobin in blood Also see *photoelectric colorimeter* —**color″imet′ric,** *adj.*

Dare c. An instrument used in hemoglobinometry A film of whole blood is arranged between two glass plates and compared with tinted wedge.

col″or im′e-try The science of determining colors specifically chemical analyses by the use of colorimeter

capillary tube c. Colorimetry employing capillary tubes in which reagents are placed, mixed, and read colorimetrically

col′or in′dex. See oder *index*.

co-lor′rha phy [G. *kolon*, colon; *rhaphē*, suture]. Suture of the colon.

co″lo-sig″moid os′to my [*kolon*; G. *sigmoeidēs*, shaped like the letter sigma *stoma*, mouth] Formation of an anastomosis between the sigmoid and some other part of the colon.

co-los′to-my [*kolon*; *stoma*]. The formation of an artificial anus in the anterior abdominal wall or loin. The opening into the colon may be anywhere depending on the location of the diseased condition, as cecostomy sigmoidostomy etc.

col″os tra′tion [L. *colostratio*, from *colostrum*, the first milk after delivery]. Diarrhea of infants caused by colostrum.

co-los tror rhe′ [*colostrum*, G *rhoia*, flow] Profuse discharge of colostrum.

co-los′trum [L.]. The first milk from the mother breasts after the birth of the child. It is laxative, and assists in the expulsion of the meconium. Contains greater quantities of lactalbumin and lactoprotein than later milk.

co lot′o-my [G. *kolon*, colon; *tomē*, cutting]. Incision of the colon may be abdominal, lateral, lumbar or iliac, according to the region of entrance.

colp-. See *colpo-*.

col pal′gi a (kol-pal′juh, -jee-uh) [G *kolpos*, vagina; *algos*, pain]. Vaginal pain or neuralgia.

col″pa tre′si a (kol pa tree zhuh, -see-uh, -zhuh, -see-uh) [*kolpos*; G *atrētos*, not perforated]. Occlusion or atresia of the vagina.

col″pec ta′si-a (kol peck-tay zhuh, -see-uh, -shuh, -see-uh) [*kolpos*; G. *ektasis*, stretching out]. Vaginal dilatation.

col pec′to-my [*kolpos*; G. *ektomē*, excision]. Excision of the vagina.

col″pe-de′ma [*kolpos*; G *oidēma*, swelling]. Edema of the vagina.

col″peu ryn′ter (kol pew-rin tur) [*kolpos*; G *eurynein*, to make wide]. An inflatable bag or sac used for dilating the vagina. *Rare.*

col″peu rys′is (kol pew-rie is, kol-pew′ris is) [*kolpos*, *eurynein*]. Dilatation of the vagina, especially that ffected by means of the colpeurynter *Rare*.

col pi′tis [*kolpos*; G *-itis*, inflammation]. Inflammation of the vagina.

emphysematous c. See emphysematous *vaginitis*.

col′po-, colp- [*kolpos*]. A combining form denoting *connection with* or *relation to the vagina*.

col′po-cele [*kolpos*; G *kēlē*, hernia]. Hernia or tumor in the vagina.

col″po-cl i′sis (kol po-kly′sis) [*kolpos*; G. *kleisis*, closure]. Closure of the vagina by suturing.

col″po-hy″per pla′si a ... See emphysematous *vaginitis*.

col″po-per″i ne o-plas ty [*kolpos*; G *perineos*, space between the anus and the scrotum; *plassein*, to form]. Plastic surgery of the perineum and vagina.

col″po per″i ne-or′rha phy [*kolpos*; *perineos*; G. *rhaphē*, suture]. Suture of cut or lacerated vagina and perineum.

col′po pex″y [*kolpos*; G *pēxis*, fixing]. Fixation of the vagina by suturing it to surrounding structures.

col′po-plas″ty [*kolpos*; G. *plassein*, to form]. Plastic repair of the vagina.

col por′rha-phy [*kolpos*; G. *rhaphē*, suture]. Suture of the vagina for repair

col″por-rhex′is (kol″po-reck′sis) [*kolpos*; G. *rhēxis*, breaking]. Traumatic separation of the cervix of the uterus from its vaginal ttachments. *Rare.*

col′po-scope [*kolpos*; G *skopein*, to examine]. An instrument for the visual examination of the vagina and cervix; vaginal speculum. —**colpo-scop′ic,** *adj.*; **col pos′copy** n.

col pot′o-my [*kolpos*; G. *tomē*, cutting]. Surgical incision of the vagina.

col-sul -ryde See *sulfanilamide*.

colts′foot″ [AS. *colt*; *fōt*]. An herb, *Tussilago farfara*, of the aster family Its leaves are used as demulcent and bitter and sometimes as domestic remedy for chronic cough.

co-lum′bin. A bitter principle found in calumba.

co lum′bi um [NL., from *Columbia*]. Cb = 92.91. Chemical element No. 41 now known as niobium.

Columbus, Realdus. See *Colombo*.

col″u mel′la [L., small column]. 1 The septum of the nasal vestibule, the medial boundary of the nostrils. 2. The modiolus or central axis of the cochlea of the human ear 3. A bone in birds which takes the place of the ossicles of the ear in man.

col′umn [L. *columna*, column]. A supporting pillar;

pillar-shaped structure. —colum nar adj
Clarke's c. See dorsal nucleus of Clarke.
c. of Burdach. Fasciculus cuneatus.
c. of the fornix. One of the two anterior arched pillars of the fornix, terminating in the mammillary bodies. Also called *columna fornicis*.
columns of the gray matter. Divisions of the longitudinal column of gray matter in the spinal cord usually classified as the **anterior column**, the **lateral column**, and the **posterior column**. Also called *cornua of the gray matter* or *horns*.
columns of the vagina. Two median, longitudinal ridges formed by the rugae of the vagina. That of the anterior wall is the **anterior column of the vagina**; that of the posterior wall, the **posterior column of the vagina**.
enamel c. See enamel *prism*.
fundamental c. See *fasciculus proprius*.
intermediolateral cell c. A division of the lateral gray column of the spinal cord, extending from the thoracic region to the upper lumbar segments, and composed of small neurons whose axons form preganglionic sympathetic fibers.
rectal c. One of the vertical folds of the mucous membrane of the upper part of the anal canal. Also called *anal c.*, *c. of Morgagni*.
renal c. That part of the cortical substance of the kidney between the sides of any two pyramids. Also called *c. of Bertin*, *interpyramidal cortex*.
spinal c. See vertebral c.
vertebral c. The flexible, supporting column of the body made up of vertebrae separated by intervertebral disks and bound together by ligaments. Syn., *spinal c.* Also called **backbone**.
co-lum na (pl. *columnae*) [L.]. Column.
columnae carneae. Trabeculae carneae.
columnae griseae. Columns of the gray matter See under *column*.
columnae rugarum. Columns of the vagina. See under *column*.
c. nasi. Columella.
col'umn-ing, col"um-ni-za tion [*columna*]. The placing of vaginal tampons to support prolapsed uterus.
co ma [G. *kōma*, deep sleep]. 1. Unconsciousness from which the patient cannot be aroused. It may be due to ingested poison such as opiates or alcohol; to poison developed in the body as in uremia or overwhelming toxemias; to profound disturbances of the acid-base balance, as in diabetic acidosis; or to brain injury trauma, apoplexy or tumor 2. I ophthalmology, spherical aberration in oblique incidence.
c. vigil. A comatose condition in which the patient lies with eyes open but is unconscious.
hepatic c. A state of unconsciousness seen in patients severely ill with hepatic disease. The term has been used loosely to include the precomatose state. See *cholemia*.
hypochloremic c. That due to reduced blood chloride.
com'a-tose (kom uh-toce, -tose, ko muh) [*kōma*]. In condition of coma.
Combe, James Scarth [*Scottish physician*, 1796–1883]. Gave first description of pernicious anemia (1822–24) antedating Thomas Addison.
combevita. Trade-mark for capsules containing B vitamins together with B-complex factors from liver
combex. Trade-mark for preparations containing B vitamins.
comb'ing. The radial arrangement of elongated cells around vessels or vascular spaces, seen particularly in spindle-cell sarcomas.
Comby Jules [*French pediatrist*, 1853–1947]. Remembered for the sign, stomatitis of the buccal mucous membrane, said to be diagnostic of measles; called *Comby sign*.
com do, co me do (pl *comedos, comedones*) [L., glutton]. A collection of sebaceous material and dead cells retained in the hair follicle and excretory duct of the sebaceous gland, the surface covered with dark crust due to hyperkeratosis at the follicular orifice. It is the primary lesion of acne vulgaris; usually found over the face, chest, and back, and more commonly during adolescence. Syn., **blackhead**.
com" do-car"ci no ma. A type of adenocarcinoma of the breast in which the ducts are filled with cells which, when expressed from the cut surface, resemble comedos. It may be slow to grow and noninfiltrating or, more rarely rapid in growth and infiltrating.
com"e-do nes (kom"i-do neez) Plural of comedo formerly used.
co mes (ko meez) [L., companion]. I anatomy, an artery which accompanies nerve, or vein which accompanies an artery See Table of Arteries in th Appendix.
com'frey (kum'free, kum free) [OF *confirie*]. A plant of the genus *Symphytum*, the root of the common comfrey *S. ficinale*, has been used as demulcent, slightly astringent, and bitter drug, and was common ingredient of domestic cough mixtures.
com men'sal ism [L. *com*, with *mensa*, table]. A more or less intimate association between organisms of different species, without injury to either organism and with some benefit, such as nourishment and protection, t one or both; as the association of the small crab and the oyster in whose shell it lives; symbiosis. —**commensal**, n.
com'mi nute [L. *comminuere*, to crumble to pieces] 1 I *chemistry* pulverize; divide into fine particles. 2. *In surgery* fracture bone so that it is shattered into several pieces. —**comminute, comminuted** adj **comminu tion**, n.
Com miph ra [G. *kommi*, gum; *pheros*, bearing]. A genus of shrubs and trees of the Burseraceae, found in Africa and the East Indies. Various species yield myrrh and bdellium. **C. meccanensis** yields Gilead or Mecca balsam.
com mis-su'ra (kom"i-shoor'uh) [L., joining together]. Commissure.
c. fornicis. See hippocampal *commissure*.
c. mollis. See *massa intermedia*.
com mis-sure [L. *commissura*, joining together]. 1. *Strands of nerve fibers uniting like structures in the two sides of the brain or spinal cord.* 2. The point of union of such structures as the lips eyelids, labia majora, or cardiac valves. —**commis sural**, adj
anterior c. A rounded cord of nerve fibers placed in front of the columns of the fornix, joining the olfactory bulbs and the pyriform areas of the two cerebral hemispheres. See Plate 18.
anterior white c. of the spinal cord. A layer of fibers separating the anterior gray commissure from the bottom of the anterior median fissure.
Ganser' c. See anterior hypothalamic *decussation*.
gray c. of the spinal cord. The transverse band of gray matter connecting the masses of gray matter of the two halves of the spinal cord. It is divided by the central canal into the **anterior gray commissure** and the **posterior gray commissure**.
Gudden c. One joining the two medial geniculate bodies; its fibers run with the optic tracts. Syn *ventral supraoptic decussation*.

habenular c. Fibers joining one habenular nucleus to the other. See Plate 18.

***hippocampal* c.** The transverse part of the fornix, uniting the crura; formerly called *psalterium*, *lyra Davidi*. Syn., *commissura fornicis*.

Meynert's c. A tract of nerve fibers crossing dorsally to the medial half of the chiasm from the tuber cinereum to the opposite side. It is probably connected with the subthalamus.

middle c. Old term for massa intermedia.

posterior c. A transverse band of nerve fibers crossing dorsal to the opening of the cerebral aqueduct into the third ventricle. See Plate 18.

posterior white c. of the spinal cord. A band of fibers separating the gray commissure from the bottom of the posterior median fissure.

com mis sur ot' my [*commissura*, *tomé*, cutting]. The surgical section of any commissure.

mitral c. An operation for the relief of mitral stenosis, commonly valvulotomy.

com mit'ment [L. *committere* to commit]. In *legal medicine*, an act consigning a patient to an institution.

com mon cold. A mild acute respiratory virus infection of short duration, characterized by chilly sensations, sneezing, watering of the eyes, nasal discharge, cough, and, occasionally, fever. It is endemic and contagious. Susceptibility is universal and immunity is only temporary. Very rarely the disease is followed by purulent sinusitis, pneumonia, or other complications due to such pathogenic bacteria as pneumococci, streptococci, *Micrococcus pyogenes*, or influenza bacilli. See also acute respiratory *disease*.

com mo ti (kuh mo shee-o) [L., commotion]. A concussion, commotion, or shock.

c. cerebri. Concussion of the brain.

c. retinae. Concussion or paralysis of the retina from a blow on or near the eye. It is characterized by sudden blindness, but there is little or no ophthalmoscopic evidence of any lesion. The sight is usually regained, and its loss is supposedly due to disturbance of the retinal elements.

c. spinalis. Railway spine.

com mu'ni ca ble [L. *communicare*, to divide something with one]. Transmissible from one person to another.

com mu'ni-cans (ko-mew ni kans) [*communicare*]. Communicating, connecting.

comp. *Compositus*; compound.

com pan'ion ate mar'riage. Form of marriage for sexual companionship without legal obligation, economic responsibility, or desire for children.

com pa ny aid man. A medical department soldier attached to a company of combat troops, whose principal duties are to administer emergency treatment to casualties, to examine and tag the dead, and to instruct the walking wounded as to location of the nearest aid station.

com-pa -scope [L. *comparare* to compare G. *skopein*, to examine]. An apparatus attached to two microscopes for the simultaneous comparison of two different specimens.

com pat"i bil'i ty [L. *compati*, to suffer with one]. 1. Congruity; the power of a medicine or substance in a medicine to mix with another without deleterious chemical change or loss of therapeutic power. 2. In *blood grouping*, (a) in vitro, no interaction between two bloods; (b) in vivo, no reaction whatsoever from the injection of blood found to be compatible by laboratory tests. —**compat'ible** *adj*

compenamine. Trade-mark for certain preparations of L-ephenamine penicillin G having long duration of action and reduced incidence of allergic reactions.

com"pen-sa'tion [L. *compensare*, to balance against]. 1. The act of making good a deficiency; the state of counterbalancing a functional or structural defect. 2. In *psychopathology* a psychic phenomenon in which strong feelings of guilt or inferiority prompt excessive defensive reactions. —**com pensati g**, **compen satory** *adj*

com pen'sa to ry pause. In *cardiology* any pause which, immediately following a premature beat, compensates by its length for the prematurity of the beat.

com pe tence [L. *competere*, to be qualified]. In *embryology*, the ability to react to a developmental stimulus; a state of reactivity or unstable equilibrium necessary for induction to occur. See *potency*, *determination*.

com plaint' [OF *complainte*]. Lay term for disease or ailment. See also *presenting complaints*.

com'ple ment [L. *complementum*, from *complere*, to complete]. A complex substance resembling a ferment formed in the blood, plasma, or serum of animals; has the capacity in cooperation with antibody and cellular elements, to destroy a variety of pathogenic organisms and other foreign substances. The common functions of complement are bacteriolysis, bactericidal action, hemolysis, and acceleration of opsonic actions. Complement (C') may be fractionated into four components, indicated by C'1, C'2, C'3, and C'4. Syn. *addiment*, *alexin*, *cytase*.

***fixation* of c.** See under *fixation*.

com"ple-men'tal, com ple-men'ta ry [*complementum*]. Supplying a deficiency.

com ple men ta-ry See *complemental*.

com ple-men'toid [*complementum*, G *eidos*, form]. A complement which through the agency of heat has lost its capacity for causing lysis but still retains its binding property with the amboceptor.

com"ple-men'to phil [*complementum*, G. *philein*, to love]. According to Ehrlich, the haptophore group of the intermediary body (amboceptor) by means of which it combines with the complement.

com plex [L. *complexus*, an encircling]. 1. In *psychoanalysis*, a group of ideas with strong emotional tone, which have been transferred by the conscious mind into the unconscious, and from there influence the personality. 2. A combination of symptoms or related factors, as a symptom complex or syndrome; complexus.

aberrant c. An electrocardiographic deflection of ventricular origin, which varies from the normal. Syn. *anomalous c.*

anomalous c. See aberrant c.

anxiety c. A symptom of a neurosis, marked by fear and apprehension, especially with regard to beginning any task, or to impending accident, castration, infection, and the like.

castration c. Castration anxiety occurring after childhood, associated primarily with fear of loss of the genital, especially the male, organ; by extension, the symptoms of the fear of the loss of any pleasure-giving body part (or excretion) or of even the fear that every pleasure will be followed by loss and pain.

caudal pharyngeal c. Ultimobranchial body.

Eisenmenger c. An anomaly of the heart consisting of a defect of the interventricular septum, dextroposition of the aorta, and hypertrophy of the right ventricle. Unlike the tetralogy of Fallot, the pulmonary artery has a normal or greater than normal diameter.

Electra c. The female analog of the Oedipus complex.

Lutembacher's c. A type of heart disease in which mitral stenosis is associated with patency of

the interatrial septum described by René Lutembacher (1916)

neuroleucular c. See *neurovascular complex.*

Oedipus c. A carry-over into adult life of an childhood sexual desire for his mother usually accompanied by hostility toward, or envy of, the position of his father. According to Freud, every male child experiences this Oedipus situation.

persecution c. See *paranoia.*

QRS c. of electrocardiography The depolarization complex of the ventricular musculature. It consists usually of a downward deflection (Q wave) an upward (R wave) and a downward (S wave) deflection.

triple symptom c. of Behçet. See Behçet's *syndrome.*

com plex'ion [L. *complexio* combination]. Color and appearance of the skin of the face.

com plex'us. Old term for the *semispinalis capitis* muscle.

com pli ca'tion [L. *complicare*, to fold together]. *In medicine* an accidental condition or second disease occurring in the course of a primary disease. —**com plicated**, *adj.*

com po'nent [L. *componere*, to put together]. Constituent part.

c. A. Factor in the prothrombin complex which is adsorbable by tricalcium phosphate and requires vitamin K for its synthesis; its lack causes a type of hypoprothrombinemia.

d c. See *dysplasia*, 2.

g c. See *gynandromorphy*.

nerve c. The group of fibers in a nerve having similar functions, as the sensory and motor components of a mixed nerve.

plasma thromboplastin c. See under *plasma*.

t c. In the *somatotype*, the textural quality of the body expressed numerically. Psychologically t is the esthetic impression made by the individual physique.

com'po si'tion [L. *compositio* a putting together]. 1. The constitution of a mixture. 2 The kind and number of atoms which are contained in the molecule of a compound.

com po si tus [L., from *componere*, to put together]. Compound.

com pos men'tis [L.]. Of sound mind.

com pound [L. *componere*, to put together] A substance composed of two or more elements chemically combined in definite proportion. Abbreviated, comp. —**compound'ing**, *n.*; **compound'** *v.t.*

carbamino c. A type of compound formed by the combination of carbon dioxide with a free amino group in an amino acid or a protein. Carbhemoglobin, which plays an important role in carbon dioxide transport by the blood, is a carbamino compound formed by the combination of hemoglobin and carbon dioxide.

carbocyclic c. One having a ring or closed chain structure in which the atoms that are linked are all carbon.

closed chain organic c. An organic compound in which the carbon atoms are arranged or linked so as to form a closed chain or ring

c. A (Kendall's) Dehydrocorticosterone

c. B (Kendall's) Corticosterone.

c. C (Kendall's) Allopregnane-3α,11β,17α,21-tetrol-20-one, a steroidal constituent of the adrenal cortex.

c. D (Kendall's). Allopregnane-3β,11β,17α,20β,21-pentol, a steroidal constituent of adrenal cortex.

c. E (Kendall's) Cortisone.

c. F (Kendall's). Hydrocortisone.

c. F (Wintersteiner's) Cortisone.

c. Fa (Reichstein's). Cortisone.

c. G-11. Hexachlorophene.

c. Q (Reichstein's) Deoxycorticosterone (11 deoxycorticosterone, cortexone)

c. S (Reichstein's) 11 Deoxy 17-hydroxycorticosterone.

c. 1080. See *sodium fluoroacetate.*

cyclic c. *In chemistry* an organic compound belonging to the closed chain series.

fatty c. Any aliphatic compound.

heterocyclic c. One having a ring or closed chain structure in which the atoms that are linked are of two or more different elements.

homocyclic c. One having a ring or closed chain structure in which the atoms that are linked are all the same, usually carbon.

open chain organic c. An organic compound in which the carbon atoms are arranged or linked to form an open chain.

organic c. Any chemical compound containing carbon.

quaternary ammonium compounds. Products wherein the hydrogen atoms of the ammonium radical, NH_4, have been replaced by organic groups. Certain of these compounds possess antibacterial and detergent properties; they are sometimes referred to as cationic detergents.

ring c. One in which the atoms form a ring or closed chain.

tagged compounds. Chemical elements, such as isotopes, which, bound in organic forms, can be traced in their transformation within the body.

com press [L. *compressus*, from *comprimere*, to press together]. A folded cloth or pad of other soft material, wet or dry, applied firmly to a part for the relief of inflammation or the prevention of hemorrhage.

cold c. One moistened with cold or ice water.

cribriform c. A compress with holes for drainage or a hole for observation of the skin beneath. Also called *fenestrated c.*

graduated c. A compress with folds of varying size, thick in the center and thinner toward the periphery.

hot c. One moistened with warm or hot water.

pressure c. One which is held in place with a bandage in order to produce pressure on the wound and prevent oozing.

com pressed'-air' ill'ness. See *caisson disease.*

com pres'sion [compressus] 1 The state of being compressed. 2. The act of pressing or squeezing together.

cerebral c. Compression of the brain by any space-taking, intracranial lesion such as tumors, hemorrhage, etc.

c. atelectasis. See *atelectasis*.

c. fracture. See under *fracture*.

digital c. Compression of an artery by the fingers.

com pres'sor [*compressus*]. 1 An instrument for compressing an artery or other part. 2. A muscle having a compressing function. See Table of Muscles in the Appendix.

c. bulbi proprius muscle. That portion of the bulbocavernosus muscle in the male which ensheathes the bulb of the corpus cavernosum urethrae.

c. hemisphericum bulbi muscle. A portion of the bulbocavernosus muscle in the male underlying the compressor bulbi proprius and ensheathing the bulb of the corpus cavernosum urethrae and proximal part of the penile urethra.

c. labii muscle. A portion of the orbicularis oris muscle.

c. naris. The nasalis muscle.

c. nasi. Old term for *nasalis muscle.*

c. radicis penis. A portion of the bulbocavernosus muscle in the male passing around the root of the penis.

c. urethrae. Old term for the sphincter of the membranous urethra.

c. vaginae. Old term for the sphincter of the vagina.

c. venae dorsalis. A variable portion of the bulbocavernosus muscle which unites with its fellow of the opposite side in tendon which passes over the dorsal vein of the penis.

Compton, Arthur Holly [*American physicist* 1892–1954]. Widely known for his investigations of the earth's rotation and his discovery of the change in wavelength of scattered rays; this latter phenomenon is known as the *Compton effect*. Also see scattering *collision*. Nobel laureate (1927)

com·pul'sion [L. *compulsio* from *compellere*, to compel]. An act performed on irresistible impulse. In *psychiatry* it is an act performed against the conscious will of the individual at the time it is performed, and usually stems from an obsession.

repetition c. A tendency in the unconscious part of the mind to recreate previously experienced state of affairs in actions or feelings or both. The individual may or may not be aware of the tendency.

com·pul·sive per''son·al'i·ty See under *personality*.

co·mus [G. *komē*, luminous tail of comet]. A crescentic patch of yellow near the optic disk; seen in high myopia.

con- [L., with]. 1. A prefix meaning *with, together*. 2. In *chemistry*, prefix denoting substance *found with* substance.

co·na·ri·um [G. *kōnos*, cone]. Old term for pineal body.

co·na·tion [L. *conari*, to try]. The exertive power of the mind, including will and desire; special act or exercise of the exertive power.

Concato, Luigi Maria [*Italian physician*, 1825–82]. Remembered for his excellent description of tuberculous inflammation of serous membranes, especially of polyserositis of the pericardium, pleura, and peritoneum in the absence of valvular disease (1881).

con'cave [L. *concavus*, hollow vaulted]. Possessing curved, depressed surface opposed to convex. —**concav'ity** *n.*

con·ceive [L. *concipere*, to take in]. Become pregnant.

con·cen·tra'tion [L. *con*, with; G. *kentron*, center]. A measure for the composition of solutions. Various systems of notation are in use. The most common are grams of solute per 100 grams of solution (weight per cent) or per 100 milliliters of solution (weight volume per cent) and mole of solute per liter of solution (molarity).

mean corpuscular hemoglobin c. An index obtained by dividing the hemoglobin in g. per cent by the volume in packed cells in ml per cent.

threshold c. The molecular concentration of substance which produces minimum response when an end organ is stimulated.

con·cen'tric [L. *con-* with; G. *kentron*, center]. Having common center.

con·cep'tion [L. *conceptus*, from *concipere*]. 1. The fecundation of the ovum by the spermatozoon, occurring in the human female usually about the twelfth to fifteenth day after the first day of menstrual flow. 2. The power or act of mentally forming ideas especially abstract ideas. —**conceptive** *adj*

imperative c. Old term for obsession.

con·cep·tus [*conceptus*]. That which is conceived; fetus.

con·cha (kong'kuh) (*pl conchae*) [G *konchē* mussel]. 1. A shell; shell-like organ, as the hollow part of the external ear. 2. Any one of the three nasal conchae; a medial projection of thin bone from the lateral wall of the nasal cavity covered by mucous membrane and designated by position as superior, middle, or inferior. Also called *turbinate bone*. See Plate 12. See Table of Bones in the Appendix. —**conchal** *adj*

c. sphenoidalis. A thin bony plate forming one lateral half of the anterior and inferior surface of the body of the sphenoid. Each originally forms as hollow ossicle containing the rudiment of sphenoidal sinus. In the adult skull the concha becomes fused with the remainder of the sphenoid and with the ethmoid and palatine bones. Also called *ossicle of Bertin*.

con·chi·nine (kong'ki·neen, ·nin) See *quinidine*.

con·chi·tis (kong·kigh'tis) [*konchē*; G *-itis*, inflammation]. Inflammation of concha.

con·cho·tome (kong'ko·tohm) [*konchē*; G *tomos*, cutting]. An instrument for the surgical removal of the turbinate bones.

con·com'i·tant [L. *concomitari*, to accompany]. Accompanying.

con·cre·ment [L. *concrementum*, from *concrescere*, to grow together]. Concretion.

con·cres'cence [*concrescere*]. 1. A growing together of the roots of two teeth. 2. A process by which the formative embryonic cells of the germ ring converge and fuse at the blastopore to form the axial part of the embryo during gastrulation. Syn *convergence*.

con·cre'tio cor'dis [*concrescere*; L. *cor* heart]. See adhesive *pericarditis*.

con·cre'tion [*concrescere*]. 1. A calculus. 2. Union of parts normally separate, as the fingers. 3. In *dentistry* deposit.

prostatic c. See *amyloid bodies* under *body*.

con·cus'sion [L. *concussio* concussion]. Shock; the state of being shaken; severe shaking or jarring of part; also, the morbid state resulting from such jarring.

air c. Aerial compression generated at the moment of detonation of high explosive. See *blast*.

c. of conjunctiva. Injury to the conjunctiva by blow.

c. of the brain A condition produced by fall or blow on the head, and marked by unconsciousness, feeble pulse, cold skin, pallor, at times the involuntary discharge of feces and urine. this is followed by partial stupor, vomiting, headache, and eventual recovery. In severe cases, inflammation of the brain or condition of feeblemindededness may follow.

c. of the labyrinth. Deafness and tinnitus from blow or an explosion.

c. of the spinal cord. A condition caused by severe shock of the spinal column, with or without appreciable lesion of the cord. It leads to functional disturbances analogous to railway spine.

con''den·sa'tion [L. *condensare*, to condense]. 1. Making more compact or dense. 2. The changing of gaseous substance to liquid, or liquid to solid. 3. In *chemistry* the union of two or more molecules by the linking of carbon atoms and the formation of more complex carbon chains. 4. The pathologic hardening, with or without contraction, of soft organ or tissue. 5. In *dentistry*, the compression of gold pellets in building gold-foil filling. 6. In *psychopathology*, psychic mechanism whereby one idea becomes the symbolic expression of many incompatible, repressed ideas; the meaning of this symbol may not be clear to the conscious mind or to others.

con·dens·er [*condensare*]. 1. A lens or combination

of lenses used in microscopy for gathering and concentrating rays of light. 2. An apparatus for condensing gases. 3. An apparatus for the accumulation of electricity. 4. In *dentistry*, one of a number of instruments with a blunt serrated end, used to compress and pack amalgam or gold-foil filling materials. Syn., *plugger*.

Abbe's c. See Ernst *Abbe*.

current c. An apparatus for collecting the extra currents generated by an induction machine in operation. It combines these currents to form one of opposite direction to that of the battery current, and this, upon being transmitted to the core, demagnetizes it and thus increases the rapidity of the interruption and the strength of the induced current.

dark-field c. An apparatus attached to a microscope which reflects light through the microscopic field illuminating the object only, the surrounding field remaining unilluminated.

con·di'tion·ing [L. *conditio*, condition]. 1. In *psychology*, the process of attaching a new stimulus to an old response or a new response to an old stimulus. 2. The development of better physiologic condition through physical exercise.

con'dom [perhaps from *Condom*, English physician, 18th century, said to be the inventor]. A sheath worn over the penis during copulation for preventing conception or infection.

con·duct"i·bil'i·ty [L. *conducere*, to conduct]. 1. Capacity for being conducted. 2. Conductivity; conducting power.

centrifugal c. The power of carrying centrifugal impulses from the nervous centers to the periphery.

centripetal c. The power of conducting centripetal impulses from the periphery to the nervous centers.

con·duc'tion [L. *conductio*, from *conducere*]. The passage or transfer of electrons, heat, or sound waves through suitable media, or of nerve and muscle impulses through those tissues. —**conductiv'ity**, *n.*

aerotympanal c. Passage of sound vibrations from the external auditory meatus to the internal ear by air of the middle ear and by the tympanic membrane and ossicles. Also called *air c.*

air c. (a) Transmission of sound stimuli to the eardrum through the external auditory canal. (b) A test for hearing, using a watch or tuning forks at various distances from the ear. Abbreviated, A. C.

antidromic c. A conduction in the reverse direction from the normal.

bone c. Transmission of sound vibrations to the internal ear via the bones of the skull.

decremental c. A conduction in which the intensity of the impulse decreases progressively.

reflex c. The passage of a nerve impulse from the afferent to the efferent components of the reflex arc.

saltatory c. The passage of the action potential along peripheral axons which involves the serial excitation of the nodes of Ranvier by local circuits without significant activation of internodal segments. In the central nervous system, structures similar to nodes of Ranvier may exist; if so, there is possibility that this type of conduction occurs there as well. Syn., *saltatory transmission*.

con·duc'tor [*conducere*]. 1. A body or substance that transmits energy by direct molecular transfer; applied to carriers of heat, electric currents, and sound. 2. An instrument serving as a guide for the surgeon's knife.

con"du·pli·ca'to cor'po·re (kon dew-pli-kay'to kor'po-ree) [L.]. With the body doubled on itself, said of a position of the fetus.

con"du·ran'gin (kon dew-ran'jin, -rang'ghin). A mixture of glycosides from condurango bark, occurring as amorphous yellow powder of an aromatic bitter taste, soluble in water, alcohol, and chloroform. Formerly used as a stomachic and astringent in chronic dyspepsia.

con"du·ran'go. The dried bark of *Marsdenia cundurango*. A bitter and astringent stomachic. Has been used in gastric carcinoma but has no specific effect.

con·dy·lar·thro'sis [G. *kondylos*, knuckle; *arthrosis*, from *arthron*, joint; *-osis*, condition]. Old term for condyloid articulation or ellipsoid joint.

con'dyle (kon'dyle, -dil) [*kondylos*]. Any rounded eminence such as occurs in the joints of many of the bones, especially the femur, humerus, and mandible. Deviations of the mandibular condyles forward, backward, upward, downward, and toward the right and left are referred to respectively as *procondylism*, *retrocondylism*, *supracondylism*, *infracondylism*, *dextrocondylism*, and *levocondylism*. —**condylar**, *adj.*

con·dy·lec'to·my [*kondylos*; G. *ektomē*, excision]. Excision of a condyle.

con·dyl'i·on [G. *kondylion*, dim. of *kondylos*]. A point either at the medial or the lateral tip of a condyle of the mandible.

con·dy·lo-, condyl- [*kondylos*]. A combining form denoting *knuckle*, *joint*, or *knob*.

con'dy·loid [*kondylos*; G. *eidos*, form]. Resembling or pertaining to a condyle.

con"dy·lo'ma (plural *condylomas*, *condylomata*) [G. *kondylōma*, knob]. A wartlike growth or tumor usually near the anus or pudendum. —**condylom'atous**, *adj.*

c. acuminatum. The pointed condyloma or wart of the genital organs of nonsyphilitic origin. Syn., *verruca acuminata*.

c. latum. A moist, syphilitic papule occurring where two surfaces of skin come in opposition, often warty and vegetative, very communicable and usually teeming with *Treponema pallidum*. Syn., *moist papule*.

syphilitic c. See *c. latum*.

con"dy·lot'o·my [*kondylos*; G. *tomē*, a cutting]. Osteotomy; division through the condyles of a bone.

cone [G. *kōnos*, cone]. 1. A solid body having a circle for its base and terminating in a point. 2. The mechanical element of the tooth crown. 3. One of the light-receptive, flask-shaped cells which, with the associated rods, forms an outer layer of the neuroepithelial layer of the retina. Also called *retinal c.* 4. Conus. —**con'ical, co'noid**, *adj.*

antipodal c. The cone of astral rays opposite the achromatic fibrils in mitosis.

cell c. See *pearl*.

c. of light. The triangular reflection from the normal tympanic membrane; also the bundle of light rays entering the pupil and forming the retinal image.

ectoplacental c. The thickened trophoblast of the early blastocyst of rodents, which forms the fetal placenta.

ether c. An apparatus used in the administration of ether.

graduated c. A cone-shaped body used for measuring the size of orifices of vessels, etc., especially in post-mortem examinations.

sarcoplasmic c. One of the conical masses of sarcoplasm at either end of the nucleus of a smooth muscle cell or of a cardiac muscle fiber.

vascular c. Lobule of the epididymis.

cone'nose" [*kōnos*; AS. *nosu*]. Any bloodsucking bug of the Triatomidae.

con·es·tron. Trade-mark for a preparation of naturally occurring, water-soluble, conjugated estrogens of equine origin.

con·fab·u·la·tion [L. *confabulatio*, discoursing together]. The fabrication of ready answers and fluent recitals of fictitious occurrences; generally a component of the amnestic syndrome.

con·fec'tion [L. *confectio*, a composing]. In pharmacy, a soft mass of sugar and water or of honey, used as an excipient with a prescribed medicinal substance. Syn., *electuary*. Also called *conserve*.

con·fer'tus [L., from *confercire*, to cram together]. Pressed together; dense; crowded; applied to cutaneous eruptions.

con·fine·ment [L. *confinium*, common boundary]. Lying-in; giving birth to a child; accouchement.

con'flict [L. *conflictus*, from *confligere*, to strike together]. In psychiatry, the clash of pure instinct with various psychic forces in its attempt to discharge its energies without modification, or between opposing forces within the psyche, as wishes.

con'flu·ence [L. *confluere*, to flow together]. A flowing together; a uniting, as of neighboring pustules.

con·flu·ens si·nu·um (kon·floo·enz sin·yoo·um) [BNA]. Confluence of the sinuses; the dilated junction of the superior sagittal, the straight, the occipital, and the transverse sinuses of the dura mater; formerly called *torcular Herophili*. See Plate 17.

con'flu·ent [*confluere*]. 1. Running together; the opposite of *discrete*. 2. In anatomy, coalesced or blended; applied to two or more bones originally separate, but subsequently formed into one.

con·fo·cal [L. *con-*, with; *focus*, hearth]. Having the same focus. See *parfocal*.

con"fron·ta'tion [*con-*; L. *frons*, face]. A method for measuring visual fields in which the patient sits on the same level three feet from the examiner and fixes with one eye on the examiner's corresponding eye. The examiner then raises his hands until he just sees them. Any movement at this point should be perceived readily by the patient.

con·fu·sion [L. *confusio*, from *confundere*, to mix together]. 1. State of mental bewilderment. 2. A mixing or confounding.

confusion colors. A set of colors so chosen that they cannot be distinguished by one who is color-blind.

confusion let'ters. Test type letters, such as C G O or F P T, liable to be mistaken for one another.

cong. *Congius*; a gallon.

con"ge·la'tion [L. *congelatio*, a congealing]. 1. Freezing; frostbite; intense cold or its effect on the animal economy or any organ or part. 2. Coagulation.

con·ge·ner [L., of the same race or kind]. 1. A person, animal, plant, part, or thing allied by origin, nature, or function to another. 2. A congenerous muscle. —**congener'ic, congen'erous,** *adj.*

con·gen'i·tal [L. *congenitus*, born together with]. Existing at birth.

con·ges'tion [L. *congestio*, from *congerere*, to heap up]. An abnormal collection of blood in a part or organ; hyperemia. —**congested, congestive,** *adj.*

passive c. Hyperemia of a part as the result of deficiency in the return of venous blood.

pleuropulmonary c. Congestion of the lungs marked by symptoms similar to those of pleurisy. Also called *pulmonary*, *Potain's type of* ...

con·gi·us [L., gallon]. A term frequently employed in the apothecaries' measure meaning a gallon. Abbreviated, C, C., c, c., cong.

con·glo'bate [L. *conglobare*, to gather into a ball]. Forming a rounded mass.

con·glom·er·ate [L. *conglomerare*, to crowd together]. Massed together; aggregated. —**conglomerate, conglomera'tion,** *n.*

con·glu'tin [L. *conglutinare*, to glue together]. A simple protein of the globulin type; found in lupines, almonds, beans, and seeds of various leguminous plants.

con·glu'ti·nant [*conglutinare*]. Adhesive; promoting union, as of the edges of a wound.

con·glu"ti·na'tion [*conglutinare*]. Abnormal union of two contiguous surfaces or bodies. See also *conglutinin*.

con·glu·ti·nin [L. *conglutinare*, to glue together]. A nonspecific substance in the serums of certain animal species; it causes or aids in the agglomeration or lysis of certain cells or particles previously sensitized with antiserum and complement. Commonly found in bovine serums.

Con'go red (C.C.). An acid aniline dye of the azo group used as a histologic stain and as an indicator, usually in 0.1% aqueous solution, for estimating free mineral acids, especially in the presence of organic acids. It is also used to test for amyloidosis, in the determination of plasma and blood volumes, and as a cytoplasmic stain. Also called *Congo; cotton red A, B, or C; direct red C, R, or Y.*

con'gress [L. *congressus*, a coming together]. 1. An assemblage for deliberative purpose. 2. A coming together.

sexual c. Coitus, or sexual intercourse.

con·hy·drine (kon·high·dreen, -drin). A crystalline alkaloid, $C_8H_{17}ON$, obtained from conium.

co·ni·ce·ine (ko·nis·ee·een, -in, kon·i·see·in, ko·ni·seen). A liquid alkaloid, $C_8H_{15}N$, in conium.

co·nid'i·o-, co·nid'i- [G. *konis*, dust]. A combining form denoting *conidium*.

co·nid'i·o·phore [*konis*; G. *phoros*, bearing]. The mycelial thread of a fungus which bears conidia.

co·nid'i·o·spore [*konis*; G. *sporos*, seed]. A conidium.

co·nid'i·um (pl. *conidia*) [*konis*]. An asexual spore cut from the end of a fungus filament. —**conid'ial,** *adj.*

co·ni·ine (ko·nee·een, -in, ko·neen). $C_8H_{17}N$. The most important of the five alkaloids of conium; it is a liquid but forms crystalline salts.

c. hydrobromide. $C_8H_{17}N.HBr$. Soluble in water; has been used in spasmodic disorders.

c. hydrochloride. $C_8H_{17}N.HCl$. Formerly employed like coniine hydrobromide.

co·ni·ism [G. *kōneion*, hemlock]. Poisoning by conium. It begins with paralysis of the legs and extends to the arms and respiratory muscles, leading to unconsciousness and death.

co·ni·o-, co·ni- [G. *konis*, dust]. A combining form signifying *dust*.

co·ni·om'e·ter. See *koniometer*.

co·ni·o·sis [*konis*; G. *-ōsis*, condition]. A disease or morbid condition due to inhalation of dust.

co·ni·o·spor"i·o·sis. Acute pneumonitis from inhalation of spores of the fungus *Coniosporium corticale*.

co·ni·um [G. *kōneion*, hemlock]. Poison hemlock, *Conium maculatum*, the fruit and leaves of which were formerly official. Both parts of the plant contain the alkaloids coniine, methyl-coniine, conhydrine, pseudoconhydrine, and coniceine, to which the activity of conium is due. Conium produces motor paralysis without loss of sensation or consciousness; toxic dose causes death by paralysis of the organs of respiration. It has been

used in the treatment of spasmodic disorders the fluidextract and the salt coniine hydrobromide were popular dosage forms.

co"ni za'tion [G. *kōnos*, cone]. Excision, or reaming out, as of a diseased endocervix by means of fine, high-frequency current.

con"ju ga'ta ve ra [L.]. The true conjugate. The distance from the middle of the sacral promontory to the upper margin of the symphysis pubis.

con'ju gate [L. *conjugare*, to yoke together]. 1. The anteroposterior diameter of the inlet of the pelvis, the plane of the inlet being regarded as an ellipse. 2. Any diameter of the pelvic inlet.

obstetric c. The minimum anteroposterior diameter of the pelvic inlet, usually a little shorter than conjugata vera.

true c. Conjugata vera.

con'ju gate. Yoked or coupled.

con"ju ga'tion [*conjugare*]. 1. The process in lower organisms, analogous to fertilization, involving the fusion of gametes or the temporary union of individuals with exchange of nuclear material. 2. In *biochemistry*, the reaction by which an organic compound foreign to the body combines with a substance naturally available in the body to produce the elimination form of the foreign compound.

con"junc ti'va [L. *conjunctivus*, serving to connect]. The mucous membrane covering the anterior portion of the globe of the eye, reflected upon the lids and extending to their free edges. Its parts are called palpebral and bulbar or ocular. —**conjunctival**, *adj.*

bulbar c. That covering the anterior third of the eyeball, from the retrotarsal fold to the margin of the cornea. Also called *ocular*.

palpebral c. The conjunctiva of the eyelid.

con junc"ti vi'tis [*conjunctiva*; G. *-itis*, inflammation]. Inflammation of the conjunctiva.

actinic c. A form caused by repeated flashes of bright light or ultraviolet radiation, characterized by erythema and edema of the conjunctivae; commonly seen in welders.

acute contagious c. Pinkeye.

allergic c. Characterized by mild irritation and more or less abundant mucus; accompanies other symptoms of hay fever, but frequently occurs without rhinitis.

catarrhal c. The most common form, usually mild, resulting from cold or irritation. Also called *acute catarrhal c.*

chronic c. Any conjunctivitis which has become chronic; specifically, chronic catarrhal conjunctivitis in which there is usually an infective element and also an irritative element.

c. atrophicans diffusa. A rare complication of poikiloderma vasculare atrophicans, in which the conjunctiva becomes milky and clouded.

c. catarrhalis aestiva. See vernal *c.*

c. granulosa. See *trachoma*.

c. medicamentosa. Conjunctivitis caused by drug, usually by direct contact.

diphtheritic c. A specific purulent inflammation of the conjunctiva due to the *Corynebacterium diphtheriae*.

divers' c. See inclusion *c.*

eczematous c. See phlyctenular *c.*

Egyptian c. See *trachoma*.

follicular c. A form characterized by numerous round, pinkish bodies found in the retrotarsal fold.

gonorrheal c. A severe form of purulent conjunctivitis caused by infection with gonococci.

hemorrhagic c. See *pinkeye*.

hypertrophic c. Chronic catarrhal conjunctivitis attended with enlargement of the conjunctival papillae.

inclusion c. An acute purulent conjunctivitis, caused by a virus of large particle size (*Chlamydozoon oculogenitale*) and having a different clinical appearance in the neonate than in the adult. It is transmitted to the infant from the mother genital tract during birth, and characterized by swelling and redness of the lids, purulent discharge, and chemosis, involving both eyes. In the adult the condition is often acquired in swimming pools; it is less severe, shows less discharge but larger papillae and preauricular adenopathy, frequently involving one eye only. Clinical diagnosis is confirmed in both instances by finding of epithelial-cell inclusion bodies in conjunctival scrapings. Also called *swimming-pool c.*, *swimmers' c.*, *divers' c.*, *inclusion blennorrhea*, *paratrachoma*.

infectious c. A conjunctivitis caused by bacteria, viruses, or fungi, which may or may not be contagious.

klieg c. A condition caused by ultraviolet rays from klieg lights used in motion-picture studios. Also called *klieg eyes*.

lithiasis c. Irritation of the conjunctiva due to deposition of calcareous matter in the tissue of the palpebral conjunctiva.

phlyctenular c. A nodular affection occurring, characteristically in children who show some metabolic defect or tuberculin sensitivity, as an allergic response by the conjunctiva or cornea to the endogenous toxin or allergen. Also called *eczematous c.*, *phlyctenular scrofulosa*, or *strumous ophthalmia*. Also see *phlyctenular keratitis*.

purulent c. Conjunctivitis characterized by thick, creamy discharge.

scrofulous c. See phlyctenular *c.*

spring c. See vernal *c.*

subacute c. Redness and thickening of the conjunctiva, largely confined to the conjunctiva of the lids and fornices, scanty secretion of mucus, with some pus corpuscles, due to the presence of bacillus.

swimmers' c. See inclusion *c.*

swimming-pool c. See inclusion *c.*

trachomatous c. Conjunctivitis associated with trachoma, characterized by subepithelial cellular infiltration with follicular distribution. See also *trachoma*.

vernal c. A form recurring each spring or summer and disappearing with frost. Syn., *c. catarrhalis aestiva*. Also called *spring catarrh*, *spring*

con junc"ti vo'ma [*conjunctiva*; G. *-ōma*, tumor]. A tumor consisting of conjunctival tissue; it occurs on the eyelid.

con junc ti'vo plas"ty [*conjunctiva*; G. *plassein*, to form]. Plastic surgery of the conjunctiva.

Conn' technic for soil bacteria. See under *stain*.

Connell, Frank Gregory [*American surgeon*, 1875–]. Introduced a type of suture in enterorrhaphy, using only one row of inverting through-and-through stitches.

co no-, **con-** [G. *kōnos*, cone]. A combining form denoting *cone*.

Conolly, John [*Irish physician in England*, 1794–1866]. Remembered for his championship of the no-restraint system for the humane treatment of the insane in England (1839).

co no my"oi'din (ko no-migh oy'din, -my'oy-din) [*kōnos*; G. *mys*, muscle; *eidos*, form]. A contractile protoplasmic material found in the cones of the retina.

Co no-rhi'nus [*kōnos*; G. *rhis*, nose]. Synonym for *Panstrongylus*.

con-qui'ni nine (kon-kwin uh-neen, -nin). An alkaloid of cuprea bark.

Conradi, Andrew Christian [*Norwegian physician*, 1809–69]. Remembered for his description of

line drawn from the base of the xiphoid process to the point of the apex beat of the heart, marking the upper limit of percussion dullness of the left lobe of the liver

con san guin'i ty [L. *consanguinitas*, blood relationship]. The relationship arising from common parentage blood relationship. —**consanguineous**, *adj*

con'scious-ness [L. *conscius*, knowing something in one self]. State of being ware of one's own existence, of one's own mental states, and of the impressions made upon one's senses bility to tak cognizance of sensations. —**conscious**, *adj*

double c. That morbid condition in which there are two separate and alternating states of mental consciousness, in either one of which the events that have occurred in the other state are not remembered by the patient.

con sen su l (kon sen shoo ul) [L. *consensus*, agreement]. Pertaining to in oluntary excitation by stimulation; especially the constriction of both pupils when the retina of one eye is stimulated.

con-sent' [L. *consentire*, to consent] *I legal medicine*, willing participation in unnatural or illegal i tercourse.

con serv' tive [L. *conservare*, to retain]. Aiming t the preservation and restoration of injured parts; as conservative surgery or dentistry

co sist ence [L. *consistere*, to stand still]. Degree of density or hardness.

con-sol'i-dant [L. *consolidare*, to make firm]. Tending to heal or promoting the healing of wounds or fractures favoring cicatrization. —**consol'idant**,

con sol'i da tion [*consolidare*]. Process of becoming firm or solid, as lung in pneumonia.

con sper'gent. A dusting powder such as starch or lycopodium, often used on pills or suppositories to prevent their sticking to each other

con stant [L. *constare*, to stand firm]. Fixed, not changing.

constant. 1 *I physics*, property which remains numerically the same, and which may serve as unit of measurement. 2. *I mathematics*, quantity having definite and fixed value in ertain stage of investigation an bsolute constant retains the same value under all circumstances.

decay c. of radioactive substances. The per entage of atoms of any radioactive substance that will disintegrate per unit of time In any measurable quantity of radon 16.6% of the toms present will change within 24 hours. Thus, when the decay rate (per hour per day or per year) of given radioactive substance is known, the amount that will be present t future time can be calculated from the amount on hand by means of the formula

$$Q = Q_0 e^{-kt}$$

where Q is the amount t the present time Q the amount t *t* tare time *t* days hence, *k* the decay constant per day and constant (the base of natural logarithms)

dielectric c. *I electricity*, inductivity; specific inductive capacity

disi tegration c. See decay *constant* of radioactive substances.

dissociation c. The equilibrium constant (K) pertaining to reversible reaction in which compound breaks up int two or more products.

quilibri m c. The constant, designated K. per taining to reversible chemical reaction the product of the concentrations or activities of the reaction products divided by the product of the concentrations or activities of the reactants, each concentration or activity term being raised to the power of the number of molecules (or ions) involved in the reaction.

Michaelis c. The substrate concentration, in moles per liter at which an enzymatic reaction proceeds at one-half the maximum rate. It is designated K_m and is measure of the affinity of an enzyme for its substrate.

quantum c. Symbol, *h*. Numerical value is 6.55×10^{-27} erg-sec. Also called *Planck c.*

Constantinus Africanus (Constantine) [*Carthaginian monk and physician in Italy* 1015–87]. Exercised profound influence on European medicine by his writings and translations of Greek, Arabic, and Jewish writers.

con stel la'tion [L. *constellatio* collection of stars] *In psychiatry*, group of allied thoughts held together by common emotional experience around nuclear idea.

con''sti pa'tion [L. *constipatio* from *constipare*, to press closely together]. A condition in which the bowels are evacuated at long intervals or with difficulty costiveness.

atonic c. That due to decreased tonus of the colon.

spastic c. That due to increased tonus of the colon.

con sti tu'tion [L. *constitutio* from *constituere*, to fix] 1. Genotype. 2. *I medicine*, the total individuality of the person, including his inherited qualities and the cumulative effects of his reactions to all the environmental factors which influenced his physical and emotional development.

allergic c. The inherited tendency to develop allergy

lymphati c. See *lymphatism*.

con-stric'tor [L. *constrictum*, from *constringere*, to bind together] Any muscle that contracts or tightens any part of the body See Table of Muscles in the Appendix.

c. muscles f pharynx. There are three of these the superior middle and inferior See Table of Muscles in th Appendix

c. radici penis. A portion of the bulbocavernosus muscle, few fibers encircling the root of the penis.

c. vaginae A portion of the deep transverse perineal muscle in the female.

con-sult nt [L. *consultare*, to take counsel]. A consulti g physician; one summoned by the physician in attendance to give counsel in case.

con sul ta tion [*consultare*]. A deliberation between two or more physicians concerning the diagnosis and the proper method of treatment in case.

con sump'tion [L. *consumptio*, from *consumere*, to consume]. An old term formerly used to designate progressive tuberculosis. —**consumptive**, *adj*

galloping c. Popular term for rapidly fatal form of pulmonary t berculosis. Also called *florid phthisis*.

potter' c. Silicosis.

con'tact [L. *contactus*, from *contingere*, to touch]. 1 Direct or indirect exposure to source of infection usually to person affected with contagious disease. 2. A person who has been exposed to contagious disease. —**contac tile, contac' tual**, *adj*

absence of c. *I dentistry* condition in which the proximal surfaces have been ground or worn way so that they do not touch; also occurs when tooth has become malposed or has erupted in malposition diastema.

adequate c. *I epidemiology* that degree of contact between one person and another such that if

the first person is infectious and the other is susceptible, the latter will become infected.
complete c. The touching of the entire proximal surfaces of two neighboring teeth. May be produced naturally through mastication or artificially by grinding.
proximal c. The touching of the adjacent surfaces of two teeth.
con tac'tant [contactum]. Any one of the thousands of substances (allergens) which produce manifestations of hypersensitivity by means of direct contact with the skin or the mucosa.
con'tact bed. A large open basin containing layer of coke or cinders, used for purifying sewage. The sewage is brought into contact with bacteria, which set up rapid decomposition and destruction of the organic matter. Also see *septic tank*.
con ta gion [L. *contagio*, from *contingere*, to touch]. 1. The process whereby disease spreads from one person to another by direct or indirect human contact or by an intermediate agency. 2. The germ or virus which causes communicable disease. —**contagious**, *adj.*; **contagiousness**, *n.*
con tam"i na'tion [L. *contaminare*, to bring into contact, defile]. 1. Soiling with bacteria. 2. *In psychology*, the fusion of words (Freud). 3. *In radiobiology*, the presence of radioactive material in an area where it is unwanted or harmful. —**contam'inating**, *adj.*, *n.*; **contam'inant**, *n.*; **contam'inate**, *v.t.*
contelsen. A trade-mark for antihistamine.
con"tem pla'ti-o (kon tem-play shee-o) [L., viewing]. Ecstasy.
con-tem'pla tive [L. *contemplari*, to contemplate]. *In psychopathology*, sexual pervert who induces an orgasm through phantasy.
con'tent [L. *contentum*, from *continere*, to contain]. That which is contained, especially in psychology. **latent content** refers to that part of dream which is symbolic, disguised, or hidden; **manifest content** refers to the form or outer appearance of dream.
con-tig'u-ous [L. *contiguus*, bordering upon]. In contact, or adjacent.
con'ti-nence [L. *continentia*, from *continere*, to hold back, refrain]. Self-restraint, especially in regard to sexual intercourse. —**continent**, *adj.*
con-tin'gen-cy ta'ble. A two-way frequency table showing the frequency of occurrence of classifications of one variable for specified classification of the other variable; cross-classification table.
con-tor'tion [L. *contortio*, from *contorquere*, to twist]. A twisting or writhing, as of the body.
con'tour [F. from L. *com*, with; *tornare*, to turn]. The line or contour that bounds, defines, or terminates figure.
con'tour *In operative dentistry*, to effect the restoration of lost parts of teeth by building them up with gold, etc.
con'toured [contour]. Having an irregular but smoothly undulating surface, like that of relief map; said of bacterial culture.
con'tra- [L., against]. A prefix meaning *against*, *contrary*, or *in opposition*.
con"tra-an'gles. Two or more bends in the shaft or shank of an instrument which place the distal or working end in line with the axis of the handle or proximal end.
con"tra-cep'tion [*contra*; L. *conceptio*, conception]. Prevention of conception.
con"tra-cep'tive [*contra*; *conceptio*]. An agent which prevents conception, such as medicated jelly in the vagina, the condom or thin rubber sheath for the penis, the cervical pessary or soft rubber diaphragm to cover the mouth of the uterus. —**contracep tive**, *adj.*
con tract' [L. *contractus*, from *contrahere*, to draw together]. 1. Draw the parts together; shrink. 2. Acquire by contagion or infection.
con trac'tile (kon-track tile, -til) [*contractus*]. Having the power or tendency to contract.
con"trac til'i ty [*contractus*]. The property of shortening upon the application of stimulus.
faradic c. Ability to contract in response to induction shocks.
galvanic c. Ability to contract in response to galvanic or direct currents.
idiomuscular c. Localized unpropagated contractions that are peculiar to degenerated muscles.
neuromuscular c. Normal contractility as distinguished from idiomuscular contractility.
con-trac'tion [*contractum*]. Shortening, especially of the fibers of muscle tissue. Abbreviated, C.
aerobic c. A phase of muscular contraction in which oxygen is utilized.
allassotonic c. Contraction of muscle against variable tension.
anaerobic c. A phase of muscular contraction utilizing no oxygen.
anodal closure c. The contraction resulting from excitation with galvanic current upon closing the circuit with the anode, the stigmatic testing electrode. Abbreviated, ACC, AnCC.
anodal opening c. The contraction resulting from excitation with galvanic current upon opening the circuit with the anode, the stigmatic testing electrode. Abbreviated, AOC, AnOC.
auxotonic c. Contraction of muscle against increasing tension.
Braxton Hicks c. A painless, intermittent uterine contraction occurring throughout pregnancy: valuable but not conclusive in diagnosing pregnancy.
cathodal closure c. The contraction resulting from excitation with galvanic current upon closing the circuit with the cathode, the stigmatic testing electrode. Abbreviated, CaCC, CCC.
cathodal opening c. The contraction resulting from excitation with galvanic current upon opening the circuit with the cathode, the stigmatic testing electrode. Abbreviated, CaOC.
clonic c. Alternate muscular contraction and relaxation.
c. remainder Residual contraction persisting in muscle after withdrawal of the stimulus.
fibrillary c. Incoordinate contraction of different muscle fibers in muscle.
fractionate c. Contraction of fractions of syncytial heart muscle.
front tap c. Contraction of the gastrocnemius muscle when the muscles of the front of the leg are tapped.
hourglass c. A contraction of an organ, as the stomach or uterus, at the middle.
hunger contractions. Peristaltic movements of the stomach caused by emptiness. They extend from the lower esophagus to the duodenum.
idiomuscular c. Maintained local shortening resulting from single direct stimulus more correctly called contracture.
isometric c. (a) One showing mainly the changes in tension in muscle, without any marked shortening. (b) Contraction of the heart, with all valves closed.
isotonic c. Contraction of muscle its tension remaining the same throughout the act.
myoclonic c. The convulsive spasmodic contraction of muscle.
premature c. Extrasystole.
tetanic c. *In obstetrics*, a state of

contraction of the uterine muscle; occurs in prolonged labors, usually in the second stage. Results from pathologic retraction ring. Abbreviated, Tc.

tonic c. See tonic *spasm*.

vermicula c. Peristaltic contraction.

con'tract prac tice. Partial or complete medical service furnished to an individual, or group of individuals, by physician, or a group of physicians, for compensation that has been mutually agreed upon.

con trac'ture [L. *contractura*, from *contrahere*, to draw together]. 1 Shortening, as of muscle or scar tissue producing distortion or deformity. 2. Retarded relaxation of muscle, as when it is injected ith veratrin.

congenital c. Deformity resulting from contractures originating in utero.

Dupuytren s c. A painless, chronic contracture of the hand, marked by thickening of the digital processes and of the palmar fascia, and flexion of the fingers, especially of the third and fourth, pon the palm. The disease is of uncertain etiology and affects chiefly adult males.

fatigue c. A form of myotatic contracture.

functional c. See hypertonic c.

hypertoni c. That due to continuous discharge of nervous impulses disappears during sleep or anesthesia. Seen in spastic paralysis.

idiomuscula c. Persistent local shortening due to mechanical blow on muscle.

ischemic c. Shortening of muscle due to interference with the blood supply. Also called *Volkmann c.*

myostati c. Assumption of shortened length after fixation in cast or tendon section with innervation intact.

myotatic c. That occurring in degenerating muscle when tapped or suddenly stretched may also occur when f tigued muscle is struck

organic c. One that persists even when the person is unconscious

Tiegel's c. One continuing after cessation of stimulation, observed in isolated muscle preparations to which supramaximal stimuli are pplied successively until th have has of the twitch is kept t steady level

con"tra fis-su'ra (kon trah fi shoor uh) [L. *contra*, opposite to *fissura*, fissure]. Cranial fissure or fracture produced by blow upon the skull at poi t distant from, or opposite to, the lesion.

con tra in di ca tion, con tra in di-cant [*contra*; L. *indicare* t indicat]. A symptom, indication, or condition in which remedy or method of treatment is inadvisable.

con"tra lat'er al [*contra*; L. *lateralis*, from *latus*, side]. Opposite acting in unison with similar part on the opposite side of the body

con"tra stim u lant [*contra*, L *stimulare* to goad]. Counteracting the effect of stimulus; depressing sedative. —**contrastim ulant, contrastimulus,** *n.*

con"tre-coup' (kawn trah koo *See* NOTES § 35) [F]. Counterstroke injury of part opposite to that struck, due to transmission of the shock, especially when the force is exerted against an organ or part containing fluid, as the kull, stomach, intestine, or urinary bladder See coup-contrecoup *injury*.

con"trec ta'tion [L. *contrectatio* from *contrectare*, to touch]. 1 The impulse to pproach and caress person of the opposite sex. 2. Foreplay preparatory to coition.

con trol' [F *contrôler* from *contre* con ter; *rôle* roll]. A standard by which to check observations, and insure the validity of their results. M y refer to control signal (one used experimentally) or to control experiment.

Diack c. A sterilization detector consisting of tablet of chemical materials contained in hermetically sealed glass tube when placed with load in steam sterilizer the detector indicates dequate conditions for sterilization by melting, fusing, and changing its shape.

con trol' ex per'i ment. One used to check or verify other experiments, using conditions identical except for one factor

con trude' [L. *contrudere*, to thrust, push, crowd]. Crowd together as to crowd the teeth into an bnormal lingual curve on any part of the line of the dental arch. *Obs.*

con tu'sion [L. *contusio*, from *contundere*, to crush]. A bruise; an injury in which the skin is not broken. —**contuse**

co nus (pl. *coni*) [G *kōnos*, cone]. 1. A cone. 2. A crescenti patch of atrophi choroid tissue near the optic papilla, most common in myopia.

c. arteriosus. The cone-shaped eminence of the right ventricle of the heart, from which the pulmonary artery arises. See Plate 5.

c. elasticus. The elastic upper part of the cricothyroid membrane.

c. medullaris. The conelike termination of the spinal cord, the pia mater of which continues as the filum terminale.

c. terminalis. See *c.* medullaris.

c. tubulosi. Old term for a renal pyramid.

con va les'cence [L. *convalescere*, to recover from disease]. 1. The restoration of health after disease. 2. The time spent in recovery —**convalescent,** *adj* *n.*

con val"la mar'in (kon-val uh-mair'in, kon vuh-lam ur in) 1 A glycoside btained from *Convallaria majalis* It is used as cardiac stimulant but is said to be of no great value. 2. A mixture of the glycosides of convallaria used as an uncertain cardiac stimulant.

con val la ri a [L. *convallis*, valley]. The dried hizome and roots of *Convallaria majalis*, the lily of the valley Its properties are due to convallarin, $C_{34}H_{62}O$ convallamarin, $C_{23}H_{44}O_{12}$, and convallatoxin, all glycosides which give an unreliable digitalislike action.

con"val lar'in (kon vuh lair'in, kon val'uh-rin). A crystalline purgative glycoside derived from *Convallaria majalis*

con val"la tox'in. A glycoside derived from *Convallaria majalis*.

con vec'tion [L *convectio* from *convehere*, to carry together]. A transmission or carrying, as of heat.

co ver'gence [L. *convergere* to incline together]. 1 Inclination or direction toward common point, ce ter or focus, as of the axes of vision pon the near point. 2. Concurrence. 3. Coming together of group of afferent nerves pon motoneuron of the ventral horn of the spinal cord. —**convergent,** *adj*

con ver'sion [L *conversio* from *convertere*, to turn around] 1 *I psychiatry* mental defense mechanism whereby unconscious emotional conflict is transformed into physical disability The affected part always has symbolic meaning pertinent to the nature of the conflict i contrast to the physiologic responses to strong emotion, which are without symbolic meaning. See conversion *reaction*. 2. *I obstetrics*, an alteration in the presentation of the fetus t facilitat delivery

con ver tin A highly stable blood factor required for the optimal conversion of prothrombin to thrombin by thromboplastin. It is believed variously to be activated by thromboplastin from precursor or t be combination of thrombo-

plastin with the precursor. Syn., *serum prothrombin conversion accelerator (SPCA), cothromboplastin, stable prothrombin conversion accelerator, stable component, proconvertin-convertin, factor VII*

con·vex' [L. *convexus*, convex]. Rounded, as a swelling of round or spherical form on the external surface; gibbous; opposed to concave. —**convex'ity**, *n.*

con·vex'o-con·cave'. Having one convex and one concave surface.

con·vex'o-con·vex. Having two convex surfaces; biconvex, as a lens.

con'vo·lu"ted [L. *convolutus*, from *convolvere*, to roll together]. Folded in curves or contorted windings; coiled, as tubules.

con"vo·lu'tion [*convolutus*]. A fold, twist, or coil of any organ, especially any one of the prominent convex parts of the brain, separated from each other by depressions or sulci. See *gyrus*.

con·vol'vu·lin. $C_{31}H_{50}O_{16}$. A glycosidal resin, one of the chief constituents of the roots of jalap (*Exogonium purga*).

con·vul'sant [L. *convulsus*, from *convellere*, to shake]. A medicine that causes convulsions.

con·vul'sion [L. *convulsio*, from *convellere*]. An involuntary general paroxysm of muscular contraction. It is either tonic (without relaxation) or clonic (having alternate contractions of opposite groups of muscles). —**convulsive**, *adj.* **convulsionary**, **convulsivant**, *n.*

audiogenic c. One induced by acoustic stimuli, such as the sound of a whistle. Also called *audioepileptic seizure*. See reflex *epilepsy*.

epileptiform c. One characterized by total loss of consciousness.

febrile c. A convulsion accompanying fever, usually in children, but not necessarily caused by fever.

hysterical c. One due to hysteria; consciousness is only apparently lost.

infantile c. One due to a number of causes, such as rickets, exhaustion, cerebral birth injury; sometimes called *screaming fits*.

local c. One affecting one muscle, member, or part of a member.

mimetic c. A facial convulsion.

oscillating c. One in which the separate fibers of a muscle are affected successively and not simultaneously. Also called *oscillatory*.

puerperal c. See *eclampsia*.

salaam c. Salaam spasm.

suffocative c. Laryngismus stridulus.

tetanic c. General tonic convulsions without loss of consciousness.

tonic c. See tonic *spasm*.

toxic c. One due to the action of some toxic agent upon the nervous system.

traumatic c. One due to brain injury.

uremic c. One that occurs in kidney disease due to retention in the blood of matter that should be eliminated by the kidney.

Cooke-Ponder method. See under *method*.

Cooley, Thomas Benton [*American physician*, 18?1–1945]. Known for his description, with E. R. Witwer and O. P. Lee, of familial erythroblastic anemia occurring in Mediterranean peoples (1927). Known as *Cooley's anemia*. See *thalassemia*.

Coolidge, William David [*American physical chemist*, 1873–]. Known for his many contributions to the knowledge of physical chemistry and electricity and his invention of a highly evacuated x-ray tube, equipped with a hot filament cathode and tungsten anode, called *Coolidge tube*.

Cooper, Astley Paston [*English surgeon and anatomist*, 1768–1841]. Made outstanding contributions to the knowledge of hernia. He ligated the carotid artery (1805) and the external iliac artery (1808) for aneurysm, and attempted ligation of the abdominal aorta (1817). Described deafness due to obstruction of the auditory tube (1801) and also the anatomy of the thymus (1832). Drew attention to a tumor of the breast (1829) called *Cooper's tumor*. His name has been given to an ointment containing arsenic, to the fascia transversalis, the cellular layer beneath the dartos, the fibrous processes in the mammary gland, an irritable testis, and numerous operations which he performed. For *Cooper's method* for the reduction of dislocated humerus, see *White's method* under Charles *White*.

Coopernail, George Peter [*American physician*, 1876–]. Described ecchymosis of the perineum and parts adjacent as indicative of fracture of the pelvis.

co·or"di·na'tion [L. *cum*, together with; *ordinare*, to regulate]. 1. The harmonious activity and proper sequence of those parts that cooperate in the performance of any function. 2. *In neurology*, the combination of nervous impulses in motor centers to insure cooperation of the appropriate muscles in a reaction.

coot'ie. The body louse; slang.

co"pa·hu'vic ac'id, co·pai'vic ac'id (ko-pay'vick, ko-py'vick). $C_{20}H_{30}O_2$. An almost colorless, crystalline substance obtained from copaiba. Sometimes called *copaibic acid*.

co·pai'ba (ko-pay'bah, ko-py'bah) [Sp. and Pg., of Tupian origin]. Balsam of copaiba. The oleoresin of *Copaifera* species (Leguminosae), native to South America. Has been used as stimulant, diuretic, diaphoretic, and expectorant; formerly was used in gonorrhea. See copaiba *mixture*.

co·pai'vic ac'id (ko-pay'vick, ko-py'vick). See *copahuvic acid*.

co'pal. Any of various resins obtained from certain trees of the Leguminosae, Dipterocarpaceae, and Coniferae, some of which may be used to prepare dental cavity varnishes.

coperin. Trade-mark for a capsule or tablet preparation containing codeine sulfate and papaverine hydrochloride.

co'pe·pod [G. *kōpē*, oar; *pous*, foot]. A small freshwater or salt-water crustacean. Some copepods are intermediate hosts to worms parasitic in man.

cop"i·o'pi·a (kop-ee-o-pee-ah, ko-pee-) [G. *kopos*, toil and trouble; *ōps*, eye]. Eyestrain; weariness of the eyes; asthenopia.

Cop'lin jar. A boxlike glass vessel with perpendicular grooves for holding microscopic slides apart during staining.

cop"o·dy·ski·ne'si·a (kop"o-dis-ki-nee'zhuh, -see-uh, -shuh, -zee-uh, kop"o-dis-kigh-nee', ko"po-) [*kopos*; G. *dys-*, hard; *kinēsis*, motion]. Occupational or occupation neurosis.

co"po·lym"er·i·za'tion. A polymerization which involves two or more distinct molecular species.

cop'per [AS. *coper*, ultimately from G. *Kypros*, Cyprus, famous in ancient times for its copper mines] (cuprum). Cu = 63.54. A reddish brown, malleable metal, various salts of which are used in medicine. In toxic doses they are gastrointestinal irritants. In therapeutic doses they are used as astringents in inflammation of mucous membranes. They are also employed as emetics, and, externally, as caustics. In certain nutritional anemias, particularly in infants, copper appears to enhance absorption of iron.

black c. oxide. CuO. A brownish black, amor-

phous powder. Formerly used as taeniafuge. Externally it was used as ointment in the treatment of chronic glandular induration. Syn., *c. monoxide*.

c. acetate. $Cu(C_2H_3O_2)_2$. Used in pulmonary diseases and locally as an astringent and fungicide.

c. acetoarsenite. Paris green, used as pigment and an insecticide.

c. amalgam. A metallic filling material composed of copper and mercury.

c. arsenite. Approximately $CuHAsO_3$; formerly used as an intestinal antiseptic; also recommended for anemia.

c. chloride. $CuCl_2.2H_2O$, green crystals, very *soluble in water*. Occasionally used in place of copper sulfate.

c. citrate. The cupric salt, containing 34–36% of copper; occurs as a green or bluish green, crystalline powder slightly soluble in water. It possesses the astringent and antiseptic properties of copper salts and has been used in the treatment of conjunctivitis and trachoma.

c. lactate. $Cu(C_3H_5O_3)_2.2H_2O$, greenish blue crystals, soluble in water. Employed as a tonic, also as an injection in strumous and other buboes.

c. monoxide. See black *c.* oxide.

c. nose. See *acne rosacea*.

c. nucleinate. A compound of nuclein and copper containing 5% of copper. It occurs as a fine powder and is used in chronic conjunctivitis. Also called *cuprol*.

c. oleate. $Cu(C_{18}H_{33}O_2)_2$, a compound of 10% copper oxide dissolved in oleic acid, forming a greenish blue, granular powder soluble in ether. Applied to indolent ulcers as a 10–20% ointment.

c. phenolsulfonate. $(C_6H_4OH.SO_3)_2Cu.6H_2O$, blue crystals, soluble in water. Has been used in the treatment of diarrhea, and locally as a styptic, hemostatic, and antiseptic. Syn., *sulfocarbolate*.

c. sulfate (*cupri sulfas*). $CuSO_4.5H_2O$, occurring as blue crystals or powder soluble in water; valuable as an emetic, tonic, and astringent. Dose, as an emetic, 0.13–0.32 Gm. (2–5 gr.); as a tonic 10–30 mg. (1/6–1/2 gr.).

c. sulfocarbolate. See *c.* phenolsulfonate.

c. undecylenate. $[CH_2:CH(CH_2)_8COO]_2Cu$. Used locally as a fungicide.

cop'per·as (cop'ur·us) [OF. *couperose*]. Ferrous sulfate.

cop·per·head". See *Agkistrodon mokasen*.

Coppet, Louis Cas de [French physicist, 1841–1911]. Stated the law that solutions with the same freezing point are equimolecular.

co·pre·cip"i·ta'tion [L. *cum*, with; *praecipitatio*, precipitation]. The precipitation of a contaminant with a desired precipitate even though the solubility constant of the contaminant has not been exceeded. This phenomenon is usually due to adsorption.

cop·rem'e·sis [G. *kopros*, excrement; *emesis*, vomiting]. Vomiting of fecal matter.

cop·ro-, copr- [*kopros*]. A combining form meaning *feces* or *dung*.

cop·ro·stic [*kopros*]. Relating to feces; fecal.

cop·ro·lag'ni·a [*kopros*; G. *lagneia*, coition]. Sexual perversion in which pleasure is obtained from the idea, sight, or handling of feces.

cop·ro·la'li·a [*kopros*; G. *lalia*, talk]. Repetitious reference to feces and fecal subjects.

cop·ro·lith [*kopros*; G. *lithos*, stone]. A hard mass of fecal matter in the bowels.

cop·roph'a·gy [*kopros*; G. *phagein*, to eat]. Eating of feces; a symptom occasionally seen in severe psychoses. —**coprophagous**, *adj.*

cop·ro·phe'mi·a [*kopros*; G. *phēmis*, speech]. Obscene speech.

cop·ro·phil'i·a [*kopros*; G. *philein*, to love]. An abnormal interest in fecal matter seen in certain mental patients.

cop·roph'i·lous [*kopros*; *philein*]. Growing upon fecal matter; said of certain bacteria.

cop·ro·pho'bi·a [*kopros*; G. *phobos*, fear]. A morbid fear of fecal matter.

cop·ro·phra'si·a (cop·ro·fray'zhuh, -zee·uh) [*kopros*; G. *phrasis*, speech]. The abnormal interjection of obscene words into speech.

cop·ro·por'phy·rin [*kopros*; G. *porphyra*, purple]. Any of four isomeric, metal-free porphyrins, characterized by having four methyl groups and four propionic acid residues ($-CH_2CH_2COOH$) as substituent groups; first isolated from feces in congenital porphyria. One or more coproporphyrins occur also in normal urine, and, in larger amounts, in urine in certain diseased states, and also following administration of certain drugs.

cop·ro·por"phy·ri·nu'ri·a. The excretion of an abnormal amount of coproporphyrin in urine.

cop·ro·stane. $C_{27}H_{48}$. A steroid hydrocarbon isomeric with cholestane, differing from the latter in the manner of juncture of two of the component rings (the A and B rings). Syn., *pseudocholestane*.

cop·ro·stan'ol. Coprosterol.

cop·ros'ter·ol [*kopros*; G. *stereos*, stiff]. $C_{27}H_{48}OH$. A sterol found in the lower intestine and excreted in feces; while it is apparently derived from cholesterol, it is structurally related to coprostane rather than to cholestane. Syn., *coprostanol*.

cop·ro·zo'ic [*kopros*; G. *zōon*, of animals]. Living in feces, as protozoans found in fecal matter outside the body but not in the intestine.

cop'tine (cop'teen, -tin). A colorless alkaloid of goldthread. See *Coptis groenlandica*.

Cop'tis [G. *koptein*, to cut]. A genus of herbs of the Ranunculaceae, the crowfoot family.

C. groenlandica. Goldthread; the plant is a simple bitter tonic containing coptine and berberine.

cop'u·la [L., band, tie]. 1. A median swelling of the pharyngeal floor uniting the hyoid arches in the embryo, the future root of the tongue. 2. Old term for body of the hyoid.

cop"u·la'tion [L. *copulare*, to bind together]. The sexual union of male and female.

co·quilles (ko·keel') [F. from G. *konchos*, shell]. A variety of dark eyeglasses curved like shells.

cor [L.]. The heart.

c. biatriatum. See *c.* triloculare biatrium.

c. biloculare. A malformation of the heart in which there is only one atrium and one ventricle.

c. biventriculare. See *c.* triloculare biventriculare.

c. bovinum [L., cow heart]. See bovine heart.

c. pseudotriloculare. A malformation of the heart in which there are three functioning chambers, the fourth being rudimentary or absent.

c. pulmonale. A state of hypertension in the pulmonary artery with right ventricular strain and eventual right ventricular hypertrophy. It may be due to any condition that obstructs the pulmonary circulation.

c. triloculare biatrium. A rare anomaly consisting of complete absence of the ventricular septum; there are two atria and one ventricle. Also called *c. biatriatum*.

c. triloculare biventriculare. A serious defect of the upper part of the septum occasionally seen in adults. There are two ventricles, but only one atrium. Also called *c. biventriculare*, *c. triloculare monoatriatum*.

c. villosum. Fibrinous pericarditis in which some of the fibrin projects from the surface in villous-like processes.

cor"a-cid'i-um [G. diminutive of *korax*, hooklet]. The ciliated larval stage of the fish tapeworm, *Diphyllobothrium latum*.

cor'a-co- [G. *korax*, crow]. A combining form denoting *pertaining to the coracoid process*.

cor" -co-a cro mi al [*korax*; G. *akron*, extremity; *ômos*, shoulder]. Relating to the coracoid and the acromion processes.

cor bra hi-a'lis (kor"ah ko-bray kee-ay' lis, brack ee-ay'lise) [*korax*; L. *brachialis*, from *brachium*, arm]. A muscle of the upper and medial part of the arm, arising from the coracoid process of the scapula. See Table of Muscles in the Appendix.

c. brevis. A variable part of the coracobrachialis muscle.

c. superior Same as *c. brevis*.

cor"a-co-cla-vic'u lar [*korax*; L. *clavicula*, small key]. Relating to the coracoid process of the scapula and the clavicle.

cor"a-co-hu'mer al [*korax*; L. *humerus* upper bone of the arm]. Relating to the coracoid process of the scapula and the humerus.

cor'a-coid [G *korakoeidês*, like crow]. Having the shape of crow' beak.

cor'a-coid. The coracoid process of the scapula. See Plate 1.

cor'al-lin. Rosolic acid.

coramine. A trade-mark for nikethamide, the product supplied as 25% solution.

cor-chor'go-sin. $C_{29}H_{42}O_{9}$, cardioactive aglycone isolated from seeds of *Corchorus olitorius*, from which jute is obtained and which is also used as potherb. In cats corchorgenin is more potent than either strophanthidin or corchortoxin, which are isomeric with it.

cor"chor tox'in. $C_{23}H_{32}O_{6}$, cardioactive aglycone isolated from seeds of *Corchorus capsularis*, from which jute is obtained; it is isomeric with cor chorgenin and strophanthidin.

cord [G. *chordê*, string]. 1 Any stringlike body 2. The long, cylindrical structure bearing the umbilical arteries and vein and connecting the placenta and the fetus. Also called *umbilical c.* See Plates 6, 41. 3. A column of cells.

cortical cords. The secondary cordlike invaginations of the germinal epithelium of the embryonic gonad that differentiate into primary follicles and oogonia. Also called *ovarian cords, ovigerous cords, secondary cords*.

enamel c. In developing enamel organs, transitory centrally placed column of cells extending from inner to outer enamel epithelium; it later becomes part of the stellate reticulum.

epithelial c. See epithelial *reel*.

false vocal c. Ventricular fold.

genital c. A mesenchymal shelf bridging the coelom, produced by fusion of the caudal part of the urogenital folds. It contains the vertical part of the Müllerian and the Wolffian ducts, fuses with the urinary bladder in the male, and is the primordium of the broad ligament and the uterine walls in the female.

hepatic cords. The anastomosing columns of liver cells separated by the hepatic sinusoids. Also called *liver cords*.

medullary cords. (a) The primary invaginations of the germinal epithelium of the embryonic gonad that differentiate into rete testis and seminiferous t bules or into rete ovarii. Also called *primary cords, testis cords*. (b) The cords of dense, lymphatic tissue separated by sinuses in the medulla of lymph node.

nephrogenic c. The longitudinal, cordlike mass of mesenchyme derived from the mesomere or nephrotomal plate of the mesoderm, from which develop the functional parts of the pronephros, mesonephros, and metanephros.

red pulp cords. The anastomosing, cordlike columns of reticular connective tissue separating the venous sinuses of the spleen; the splenic red pulp. Also called *Billroth cords*.

rete cords. The deep, anastomosing region of the medullary cords (a) that forms the rete testis or the rete ovarii.

sex cords. The cordlike epithelial masses that invaginate from the germinal epithelium of the gonad and form the seminiferous tubules and rete testis, or the primary follicles of the ovary and the rete ovarii.

spermatic c. That extending from the testis to the abdominal inguinal ring and consisting of the ductus deferens, the vessels and nerves of the testis and of the epididymis, and the accompanying connective tissue. See Plate 4.

spinal c. That part of the central nervous system contained within the vertebral canal and extending from the medulla oblongata at the level of the foramen magnum to the filum terminale at the level of the first or second lumbar vertebra. See Plate 18.

tendinous c. Chorda tendinea.

true vocal c. Vocal *fold*.

umbilical c. See *cord*, 2.

cor-dec'to-my [*chordê*; G. *ektomê*, excision]. Excision of cord, as removal of vocal fold. Also called *chordotomy*.

cor'dial. 1. A preparation which supposedly stimulates the heart and is invigorating. 2. A pleasantly flavored alcoholic liqueur which supposedly aids digestion.

cor'di form [L. *cor* heart; *forma*, shape]. Cordate; shaped like heart.

cor-di'tis [G *chordê*, cord; *-itis* inflammation]. Inflammation of the spermatic cord; funiculitis.

c. nodosa. A lesion in the larynx, particularly of the vocal cords, commonly found in singers, public speakers, and those working around irritating gases. The cords become covered with small grayish nodules. Also called *vocal nodes*.

cor'do pex"y [*chordê*; G. *pêxis*, fixing]. The operation of suturing vocal fold to new support to relieve the stenosis resulting from bilateral abductor paralysis.

cor-dot'o-my See *chordotomy*.

Cordus, Euricius [*German physician and botanist* 1486–1535]. Remembered f his important early account of sweating sickness or miliary fever (1529) The father of Valerius Cordus.

Cordus, V lerius [*German physician and pharmacologist*, 1515–44]. Published the earliest real pharmacopoeia (1535) Said to have been the discoverer of sulfuric ether (1540)

Cor"dy lo'bi [G *kordylê*, club; *lobos*, lobe]. A genus of African blowflies.

C. anthropophaga. The tumbu fly; species whose first-stage larvae penetrate the skin of mammals and produce boil-like lesions.

cor" -clei'sis [G. *korê*, pupil; *kleisis*, closing]. Pathologic closure or obliteration of the pupil.

cor-ec'ta-sis [*korê*; G *ektasis*, stretching]. Dilatation of the pupil.

cor-ec'tome [*korê*; G. *ektomê*, excision]. An instrument used in iridectomy

cor"ec t pi [*korê*; G. *ektopos*, way from place]. Anomalous position of the pupil; displacement of the pupil.

cor"e-di al'y-sis (kor"l-dye-al'i-sis) [*korê*; G. *dialysis*, separating]. Production of an artificial pupil at the ciliary border of the iris.

cor"e-di-as ta-sis (dye-ass tah-sis) [*korê*; G *diastasis*, separation, distention]. Dilatation of the pupil.

co re-duc'tase (ko ri duck tace, -taze) See *coenzyme I*

co rel'y si [*kor*; G *lysis*, loosing]. The detachment of iridic adhesions to the lens or cornea.

cor" mor pho si [*kor*, G *morphōsis*, bringing I t shape]. The operation for establishing an artificial pupil.

cor en cli' is [*kor*; G *eglisis*, inclination]. The formation of new pupil by displacement, the iris being drawn aside and in part excised.

cor"e- m e-ter [*kor*; G *metron*, measure]. An instrument for measuring the pupil of the eye. —**coreometry** n.

cor en cl en [*kor*; G. *agkos*, barb]. A double-hooked iris forceps.

cor pla "ty [*kor*; G *plassein*, to form]. Any operation for forming artificial pupil.

cor"e-ste-no ma [*kor*; G *stenōsa*, narrow place] A narrowing of the pupil.

r te m "di l y si (kor") to-mee dye-al'i-sis) Iridectomy

Cori Carl Ferdinand [*American physiologist pharmacologist and biochemist*, 1896-]. With G T Cori, studied carbohydrate metabolism of the animal body Their work resulted in the isolation of glucose-1-phosphate, which is known as the *Cori ester* They described the anaerobic enzymatic synthesis and breakdown of glycogen with intermediate phosphat esters and the final breakdown product, lactic acid; called the *Cori cycle*. Also known for his work on malignant tumors Nobel laureate with G T Cori and B. A. Houssay (1947)

Cori Gerty Theresa [*American biochemist* 1896-] Collaborated with C F Cori in the study of carbohydrate metabolism, including the isolation and mode of action of enzymes involved in intermediate phosphorylation in the *Cori cycle*. Also studied the effect of thyroid on temperature regulation and the mechanism of insulin and epinephrine action Nobel laureate with C. F Cori and B. A. Houssay (1947)

co ri a myr'tin [L corium, leather; myrtus, myrtle]. A convulsant glycoside obtained from the fruit of *Coriaria myrtifolia*.

co ri der [G *koriannon*, coriander] Coriander seed The dried ripe fruit of *Coriandrum sativum*, (Umbelliferae) An aromatic, carminative, and stimulant, used mainly to give flavor to other remedies and as corrective to griping purgatives.

c. oil. The volatile oil, containing chiefly *d*-linaloöl (coriandrol) Dose, 0 1 cc (1½ min)

co"ri n drol. $C_{10}H_{18}O$ The chief constituent of coriander oil *d*-linaloöl See under *linaloöl*.

Co"ri ri [L corium, leather]. A genus of poisonous shrubs of wide geographic distribution.

C. myrtifolia. Used in dyeing and ta ning has poisonous berries and shoots

C. ruscifolia. A variet found in New Zealand the seeds and shoots afford what is called toot poison, delirif cient.

co'ri-um [L] The deep layer of the skin Syn., *cutis vera*, *derma*.

corn [L. *cornu*, horn] A la term for clavus

cor'ne [L. *corneus*, horny] The transparent anterior portion of the eyeball, its area occupy g bout one-sixth the circumference of the gl be It is continuous with the sclera, and is nourished from the looped blood vessels t ts peripheral border See Plate 19 —**corneal**, *adj*

conical c. See *keratoconus*

transplantation of c. Operation of engrafting section of transparent cornea nto the space of an excised central portion of an opaque h man cornea.

Cornell, Ethel Letitia (1892-) American psychologist, who, with W W Coxe, developed nonverbal test of intelligence t be used as supplement to the Binet test or alone in cases with speech or language difficulty called *Cornell-Coxe Performance Ability Scale*.

Cornell unit of riboflavin. See under *unit*.

cor'ne-o- [L. *corneus* horny]. A combining form denoting cornea or corneal.

cor"ne-o-bleph ron [*corneus*; G *blepharon*, eyelid]. Adhesion of the surface of the eyelid to the cornea.

cor ne o-scle ra [*corneus*; G *sklēros*, hard]. The sclera and the cornea considered as forming one tunic. —**corneoscleral**, *adj*

cor ne-ous [*corneus*]. Horny or hornlike.

Corner George Washington (1889-) American anatomist, known for his discovery with W M Allen, of the corpus luteum hormone, progesterone (1928) and for his studies on the reproductive cycle of the rhesus monkey (1923-1945)

cor'ne um [L. *corneus*, horny]. The stratum corneum or horny layer of the epidermis.

cor nic u late [L. *corniculatus*, in the form of horn]. Furnished with horns or horn-shaped appendages.

cor nic'u lum [L., little horn]. A small cornu or hornlike process.

c. laryngis. Old term for corniculate cartilage.

cor"ni fi-ca tion [L. *cornu*, horn; *facere* to make]. The degenerative process by which the cells of stratified squamous epithelium are converted into dead, horny squames as in the epidermis and such epidermal derivatives as hair nails, feathers. Syn *keratinization*, *keratification*. —**cor'nified** *adj*

Corning, James Leonard [*American neurologist*, 1855-1923]. Remembered for his introduction of spinal anesthesia (1885)

cor'nu (pl. *cornua*) [L.]. A horn a horn-shaped process or excrescence. —**cornual** *adj*

c. Ammonis. Old term for hippocampus.

cornua of the falciform margin. Medial prolongations of the falciform margi of the fossa ovalis I the fascia lata. The **superior cornu of the falciform margin** is the upper one the **inferior cornu of the falciform margin**, the lower

cornua of the gray matter Columns of the gray matter See nder *column*

cornua f the hyoid bone. Segments of the hyoid bone The **greater cornu** projects backward from the lateral border of the body; the **lesser cornu** projects upward from the angle of junction of the body and the greater cornu.

cornua f the lateral ve tricle. Prolongations of the lateral ventricle of the cerebral hemisphere. The **anterior cornu** is that extending I to the frontal lobe the **inferior cornu**, that xtending int the temporal lobe; and the **posterior cornu** that extends g int the occipital lobe See Plate 17

cornua of the thyroid cartilage. Processes of the thyroid cartilage prolongations of its posterior border upward as the **superior cornu of the thyroid cartilage** nd down ard as the **inferior corn of the thyroid cartilage.**

c. cutaneum. A corneous excrescence varying in size and shape occurri g most frequently on the face and scalp and occasionally on the glans penis and scrotum. Considered precancerous lesion Syn *cutaneous horn*

c. of the coccyx. Either of the paired, large superior art cular processes of the first coccygeal vertebra, articulating th the cornu of the sacrum.

c. of the sacrum. Either of the paired inferior articular processes of the fifth sacral vertebra.

c. of the uterus. The lateral prolongation of the uterine cavity into which an oviduct opens.

dorsal c. The posterior column of gray matter of the spinal cord.

lateral c. The lateral column of gray matter of the spinal cord.

ventral c. The anterior column of gray matter of the spinal cord.

cor'nus [L.]. The bark of the root of *Cornus florida*, the flowering dogwood, containing bitter crystalline principles, cornin, tannin, etc.

cor nu'tine (korn-yōō'teen, -tin, korn yōō-) An alkaloidal degradation product of ergotinine.

cor" cil'sis, cor"e-clei'sis. See *coreclisis*.

co-rom'e-ter See *coremeter*

co-ro'na [L from G. *korōnē*, crown]. 1. A crown. 2 The corona radiata. —**coronal**, *adj*

c. capitis. The crown of the head; the top of the head.

c. ciliaris. Old term for the ciliary zonule.

c. dentis. The crown of tooth.

c. glandis. The posterior border of the glans penis.

c. radiata. (a) A radiating mass of white nerve fibers ascending from the internal capsule to the cerebral cortex. (b) A zone of follicular cells circumjacent to the zona pellucida of the ovum, which persists for some time after ovulation

c. seborrheica. A clinical entity occurring in dermatitis seborrheica marked by the formation of crusts at the hairline.

cor"o-na'le (kor o-nah'lee) [L. *coronalis*, pertaining to crown]. 1. The frontal bone. *Obs* 2 The point on the coronal suture intersected by the greatest frontal diameter

cor'o-nar"y (korr'o-nerr ee) [L. *coronarius*, of wreath]. A term applied to vessels, nerves, or attachments that encircle part or an organ.

co ro ne (ko ro nee) [L. *corona*, crown]. The coronoid process of the mandible.

cor'o-ner [*corona*]. An officer who inquires by authority of the law into the causes of sudden or violent deaths.

cor'o-net [OF *coronete*, dim. of *corone*, crown, from L. *corona*] 1 *In biology* crowning circle of hairs. 2. *In veterinary surgery* the lowest part of the pastern at its junction with the hoof. Also called *coronet*.

co ro ni-on [*corona*]. The point at the tip of the coronoid process of the mandible. If the tip is divided into two, the measuring point is to be located on the anterior division.

cor"o- i'tis [*corona*; G. *-itis*, inflammation] Inflammation f the coronet of the horse hoof.

co ro no-bas"i lar (ko ro no bas'i lur kor o-no-) [*corona*, G *basis*, base]. Relating to th coronal suture and the basilar aspect of the head.

co-ro"no-fa cial [*corona*, L. *facies*, face] Relating to the crown of the head and to the face

cor' noid [*corona*; G *eidos*, form] Shaped like crown, as the coronoid process of the ulna or of the mandible.

cor"e-pa rel'cy-sis (kor o-pa rel si sis) [G *korē*, pupil; *parelkysis*, from *parelkein*, to draw aside]. Displacing the pupil to remedy partial opacity of the cornea by bringing it opposite transparent part.

co-rep'thi-sis [*korē*; G *phthisis*, wasting way]. Habitual or permanent contraction of the pupil due to wasting disease of the eye *Rare*

co-ros co-py Retinoscopy

Corper and Cohn method. See under *method*.

cor'po-ra. Plural of corpus.

cor'po-rin. Progesterone.

corpse [L. *corpus*, body]. A cadaver

corps ronds (kor ronh. See Notes §35) The large round dyskeratotic cells in the upper epidermis, found in Darier's disease and familial benign chronic pemphigus originally called *psorosperms*.

cor'pu-lent [L. *corpulentus*, fat]. Excessively fat; obese. —**corpulence, corpulency** n.

cor pus (pl. *corpora*) [L.]. Body —**corporeal**, *adj*

corpora amylacea. See *amyloid bodies* under *body*

corpora arenacea. Psammoma bodies in the pineal body· brain sand.

corpora cavernosa. Cylindrical bodies of erectile tissue the basic structures of the penis and clitoris. The two **corpora cavernosa clitoridis** form the crura and body of the clitoris: they are analogous to the two **corpora cavernosa penis** which form the crura of the penis, nd, together with the **corpus cavernosum urethrae** which surrounds the male urethra, form the body of the penis. See Plate 44.

corpora quadrigemina. The inferior and superior colliculi collectively See Plate 18.

c. adiposum buccae. See *sucking pad*.

c. adiposum orbitae. The fat body of the orbital cavity· fatty connective tissue filling the space between the eyeball, opti nerve, ocular muscles, and lacrimal glands, and supporting the orbital vessels and nerves.

c. albicans. The white, fibrous scar in an ovary; it is produced by the degeneration of corpus luteum. Syn. *c. candicans*.

c. arantii. Fibrocartilaginous nodules in the center of the free edge of each of the cusps of the aortic and pulmonary semilunar valves.

c. callosum. The great transverse commissure connecting the cerebral hemispheres· broad, arched band of white matter at the bottom of the longitudinal fissure of the cerebrum. See Plate 18.

c. candicans. See *c. albicans*.

c. cerebelli. The cerebellum exclusive of the flocculonodular lobe.

c. ciliare. The ciliary body.

c. fibrosum. The scarlike structure in the ovary which represents the end result of an atretic follicle. It has small central cicatrix surrounded by narrow zone of hyalinized tissue, and is usually smaller than the *corpus albicans*.

c. geniculatum. See geniculate body.

c. hemorrhagicum. A collapsed Graafian follicle containing blood an early phase of corpus l teum.

c. luteum. The yellow endocrine body formed in the ovary in the site of ruptured Graafian follicle. The large **corpus luteum of pregnancy** is called true **corpus luteum**; the smaller **corpus luteum of menstruation** is called false **corpus luteum**. See Plat 41

c. Luysii. See *subthalamic nucleus*.

c. mammillare. See mammillary *body*.

c. pontobulbare. A uclear mass caudal to the dorsal cochlear nucleus, receiving fibers from the pons and sending fibers to the cerebellum.

c. spongiosum. The corpus cavernosum urethrae.

c. striatum. The caudate and lenticular nuclei together with the internal capsule which separates them.

c. uteri. The body of the uterus.

cor'pus-cle (kor pus'l, kor'pus sl) [L *corpusculum*, small body]. 1 A small rounded body 2. An encapsulated sensory nerve end-organ. 3. Old term for cell, especially blood cell. —**corpuscular** *adj*.

articular c. A tactile corpuscle in joint capsule.

blood corpuscles. See *erythrocyte, leukocyte*.

bone c. Old term for osteocyte.

cancroid c. An epithelial pearl of squamous-cell epithelioma or carcinoma.
cartilage c. Old term for chondrocyte.
chyle c. Any floating cell of the chyle.
colostrum c. One of the phagocytic cells of the mammary glands, found in the colostrum, containing fat globules. These corpuscles are present for the first two weeks after parturition and may again appear when the milk is diminishing. After the third day the globules are freed by the bursting of cells, to form the true milk. Also called *colostrum body*.
conjunctival c. An encapsulated tactile nerve ending in the conjunctiva.
corneal c. A fibroblast of the substantia propria of the cornea.
genital c. A complex form of Krause corpuscle in the skin of the external genitalia and of the nipple; also called *Dogiel's c.*, *genital c. of Dogiel*.
ghost c. A hemolyzed erythrocyte. Also called *phantom c.*
Golgi's c. One of the small fusiform bodies resembling Pacinian corpuscles, found in tendons at the junction with muscle. Also called *organ of Golgi*.
Golgi-Mazzoni's c. See Mazzoni c.
Grandry-Merkel's c. See tactile *disk*.
Hassall ___ c. See thymic c.
Krause's c. One of the spheroid nerve corpuscles resembling Pacinian corpuscles, but having a more delicate capsule; found especially in the conjunctiva, the mucosa of the tongue, and in the external genitalia, and believed to be cold receptors. Also called *Krause's end bulb*.
lamellar c. See Pacinian c.
lymph c. Old term for lymphocyte.
Malpighian c. (a) See renal c. (b) A lymph nodule of the spleen.
Mazzoni's c. A sensory nerve ending similar to Krause's corpuscle.
Meissner's c. A oval corpuscle connected with one or more myelinated nerve fibers which lose their sheaths as they enter the surrounding capsule, make several spiral turns, and break up into a complex network of branches. Found especially in the papillae of the volar surfaces of the fingers and toes.
Merkel's c. See tactile *disk*.
milk c. (a) The detached, fat-drop filled, distal portion of a glandular cell of the mammary gland, constricted off from the rest of the cell body in apocrine secretion. It breaks down, freeing milk globules. (b) See milk *globule*.
Pacinian c. A large elliptical corpuscle made up of many concentric lamellas of connective tissue around a core containing the termination of a nerve fiber. Found in the deeper layers of the skin, under mucous membranes, in association with tendons, intermuscular septums, periosteum, and serous membranes. Also called *lamellar c.*, *c. of Vater-Pacini*.
pessary c. See target *cell*.
red c. See *erythrocyte*.
renal c. The glomerulus together with its glomerular capsule in the cortex of the kidney; formerly called *Malpighian c.*, *Malpighian body*.
Ruffini's c. See under *Ruffini*.
salivary c. A leukocyte in the saliva.
splenic c. A lymph nodule of the spleen; formerly called *Malpighian c.*, *Malpighian body*.
tactile c. Any encapsulated nerve end-organ or end-bulb having to do with the sense of touch. Also called *touch c.*
taste c. See taste *bud*.
terminal c. An encapsulated sensory nerve ending.
thymic c. A characteristic, rounded, acidophil body in the medulla of the thymus composed of hyalinized cells concentrically arranged about a core which is occasionally calcified; also called *Hassall's body*, *Hassall's c.*
touch c. See tactile c.
Vater-Pacini c. See Pacinian c.
white c. See *leukocyte*.

cor·pus·cu·lum (pl. *corpuscula*) [L.]. A little body; corpuscle.
c. articulare mobile. See *arthrolith*.

corpus delicti. [L. the body of the crime]. The existing facts necessary to establish proof that a crime has been committed.

cor·rec'tion [L. *correctum*, from *corrigere*, to correct]. Rectification of any abnormality as a refractive or muscular defect, or of any undesirable quality as in medicine.

cor·rec'tive [*correction*]. 1. Modifying favorably. 2. A substance used to modify or make more pleasant the action of the principal ingredients of a prescription.

cor·re·la'tion [L. *cum*, with; *relatio*, bringing back]. 1. *In biometry*, the degree of association between two characteristics in a series of observations, usually expressed as the coefficient of correlation. 2. *In neurology*, the combination of nervous impulses in sensory centers resulting in adaptive reactions.
curvilinear c. A curvilinear relationship between two variables; a correlation in which the regression equation cannot be expressed by a straight line.

cor"re·spond'ence [F. *correspondre*]. The adaptation of things to each other.
abnormal retinal c. A condition found in concomitant strabismus, in which the retinal image formed at the macula of the fixing eye is associated with the image formed at the extramacular area of the retina of the squinting eye. Also called *binocular false projection*, *retinal incongruity*.
normal retinal c. The normal condition in which the retinal image formed at the macula of one eye is associated with that formed at the macula of the other eye.
retinal c. The relation in the two eyes of the retinal areas at which associated retinal images are formed.

Corrigan, Dominic John [*Irish physician*, 1802-80]. Eminent clinician of the Irish school of medicine who described aortic insufficiency, using the term water-hammer pulse; also called *Corrigan pulse*. Recognized that heart hypertrophy in aortic disease is a compensatory condition and not a disease in itself (1832). His name was formerly associated with other conditions connected with respiration and pulsation in aortic disease and also with a cautery iron called *Corrigan button*.

cor·ro'sion [L. *corrosum*, from *corrodere*, to gnaw to pieces]. Process of eating away or the resulting state. —**cor·ro'sive**, *adj.*
c. preparation. One in which the vessels, ducts, or cavities of organs are filled by a fluid that will harden and preserve the shape of the vessel or cavity after the organ itself is corroded, digested, or destroyed.

cor·ro'sive [*corrosion*]. A substance that destroys organic tissue either by direct chemical means or by causing inflammation and suppuration.

cor·ro'sive sub'li·mate. See mercury bichloride.

cor'ru·ga·tor [L. *corrugare*, to wrinkle]. That which wrinkles, as the corrugator supercilii muscle. See Table of Muscles in the Appendix.
c. cutis ani. That of the anal orifice.
c. supercilii. That of the eyebrows.

cor'set [OF. dim. of *cors*, body]. *In surgery*, a removable appliance embracing the trunk from pelvis to chest; used for correction of deformities, for support of injured bones and muscles of spine or thorax, or in control of ventral hernia, etc. Also called *surgical c.*

cortalex. Trade-mark for tablets containing adrenal cortex and ascorbic acid.

cortate. Trade-mark for *desoxycorticosterone acetate.*

cortef. A trade-mark for *hydrocortisone.*

cor'tex (pl. *cortices*) [L., bark]. 1. The bark of an exogenous plant. 2. The external gray layer of the brain; cerebral cortex. Areas of the cortex are differentiated histologically by cell patterns. 3. The peripheral portion of an organ, situated just beneath the capsule. —**cortical**, *adj.*

adrenal c. See *adrenal cortex.*

agranular c. Cortex of the cerebrum which lacks a definite fourth cell layer typical of areas in the frontal lobe.

c. cerebri. See *cortex*, 2.

eulaminate c. The typical six-layered cerebral cortex, distinguished from other areas of the isocortex, like the agranular cortex, which lacks a definite fourth layer, and the koniocortex, which has a dense inner granular layer and small granular cells throughout; also called *eulaminate area.*

fetal c. of the adrenals. See androgenic zone.

heterogenetic c. See *allocortex.*

heterotypical c. See *allocortex.*

homogenetic c. See *isocortex.*

homotypical c. See *isocortex.*

limitrophic c. Limitrophic zone.

lipo-adrenal c. A proprietary preparation of adrenal cortical hormones dissolved in cottonseed oil.

visuopsychic c. See visuopsychic area.

visuosensory c. See *visuosensory area.*

Corti, Alfonso [*Italian anatomist*, 1822–88]. Made important studies of the anatomy of the eye and ear, particularly of the retina and the cochlea. Described the sensory part of the cochlear duct, the end-organ of hearing or *organ of Corti.* The *rods of Corti* are the columnar cells lining the *tunnel of Corti.* See under *tunnel.*

cor'ti-cate [L. *corticatus*, covered with bark]. Having bark or cortex.

cor'ti-ces. Plural of *cortex.*

cor"ti-cif'u-gal [L. *cortex*, bark; *fugere*, to flee]. Conducting away from the cortex.

cor"ti-cip'e-tal [*cortex*; L. *petere*, to seek]. Conducting toward the cortex.

cor'ti-co- [*cortex*]. A combining form denoting cortex or *cortical.*

cor'ti-coid. See *corticosteroid.*

cor"ti-co-pon"to-cer-e-bel'lar [*cortex*; L. *pons*, bridge; *cerebellum*, small brain]. Connecting the cerebral cortex with the cerebellum by way of the pons, as the corticopontocerebellar pathway.

cor"ti-co-spi'nal [*cortex*; L. *spinalis*, belonging to the spine]. Pertaining to the brain cortex and the spinal cord.

cor"ti-cos'ter-oid. Any steroid which has certain chemical or biological properties characteristic of the hormones secreted by the adrenal cortex. Syn., *corticoid.*

urinary c. *Any corticosteroid found in the urine.*

cor"ti-cos'te-rone. $C_{21}H_{30}O_4$; Δ^4-pregnene-3,20-dione-11,21-diol, a steroid hormone occurring in the adrenal cortex. It influences carbohydrate and electrolyte metabolism and muscular efficiency and protects against stress. It is not as potent as desoxycorticosterone in maintaining life in adrenalectomized animals. Syn., *Kendall's compound B.* See Table of Hormones in the Appendix.

cor"ti-co-stri'ate [*cortex*; L. *striare*, to furnish with furrows or channels]. Pertaining to nerve fibers arising in the cerebral cortex and terminating in the corpus striatum.

cor"ti-co-tro'phin. World Health Organization designation for *corticotropin.*

cor"ti-co-tro'pin. The preferred generic name, as contrasted with *corticotrophin* (see definitions for *-tropic* and *-trophic* for difference in meaning) of a hormonal preparation having adrenocorticotropic activity derived from the adenohypophysis of certain domesticated animals. Also called *corticotropic hormone, pituitary adrenocorticotropic hormone, ACTH.* See *also adrenocorticotropin.* —**corticotro'pic**, *adj.*

cor"ti-lac'tin [*cortex*; L. *lac*, milk]. An extract of the adrenal cortex alleged to increase lactation.

cor'tin [*cortex*]. An extract of adrenal cortex; contains several hormones; is life-sustaining in bilaterally adrenalectomized animals; also of value in treating adrenal cortical hypofunction.

cortineral. Trade-mark for a lipid fraction of adrenal cortex extract offered in capsule form.

cor'ti-sol. See *hydrocortisone.*

cor'ti-sone. A constituent of adrenal cortical extract, 17-hydroxy-11-dehydrocorticosterone, $C_{21}H_{28}O_5$, produced commercially by one or another of several methods of synthesis. In the adrenalectomized animal, administration of cortisone maintains life and resistance to various forms of stress which otherwise would be lethal. Therapeutic doses produce in the normal human being a variety of physiological effects, including depression of the function of the adrenal cortex and inhibition of production of pituitary adrenocorticotropic hormone. Cortisone is indicated chiefly for substitution therapy in frank adrenal insufficiency and in certain acute conditions, notably in the so-called collagen *diseases*, in which the period of treatment is not long enough to incur the metabolic effects of protracted therapy. Syn., *Kendall's compound E, Wintersteiner compound F, Reichstein substance Fa.* See *cortogen, cortone.*

c. acetate. The monoacetate ester of cortisone, $C_{23}H_{30}O_6$; a crystalline substance, practically insoluble in water, the form in which cortisone is used therapeutically.

cortogen. A trade-mark for *cortisone.*

cortone. A trade-mark for *cortisone.*

cortril. A trade-mark for hydrocortisone or 17-hydroxycorticosterone, the substance being supplied in free alcohol and acetate forms.

cor"us-ca'tion [L. *coruscare*, to glitter]. The subjective sensation of light flashes.

Corvisart, Lucien [*French physician*, b. 1824]. Did research on pancreatic digestion (1857–63) and described infantile tetany (1852).

Corvisart des Marets, Jean Nicolas [*French clinician*, 1755–1821]. Eminent cardiologist, said to have founded cardiac symptomatology. Described the mechanics of heart failure and the dyspnea of effort (1806).

corvotone. Trade-mark for *allethamide.*

cor'vus [L., raven]. Fellator.

co-ryd'al-ine. An alkaloid from *Corydalis tuberosa.*

co-ryd'a-lis [G. *korydallis*, crested lark]. The tuber of *Dicentra canadensis*, squirrel corn, or of *D. cucullaria*, Dutchman's-breeches, containing several alkaloids, of which corydaline, isocorydine and protopine are the most important. Corydalis has been used as a tonic and alterative.

cor'y-dine (kor'i-deen, -din). An amorphous alkaloid from *Corydalis tuberosa.*

coryfin. Trade-mark for ethyl glycolic acid menthol, a local analgesic and astringent.

cor"y·loph'il·line (kor"i·lof'i·leen, -lin) An antibiotic identical with *Escherichia coli* factor myoxin, notatin, penatin, and penicillin-B.

cor·ym'bi·form [L. *corymbus*, cluster] *I syphilology*, form of syphilid in which large lenticular papule is in the center of an irregular group of papules.

Co·ry"ne·bac·te'ri·um [G *koryne*, club bakterion, little staff]. A genus of slender aerobic, nonmotile, nonsporeforming, Gram-positive bacteria of which **C. diphtheriae** is th type species; varying from slightly curved to cl b-shaped and branching forms showing irregular staining. This genus includes large group of diphtheroid bacilli, such as **C. acnes**, and **C. pyogenes**, mainly saprophytic and morphologically similar to *C diphtheriae*; found in normal tissues and secretions as well as in pathologic conditions; probably ot causative.

C. diphtheriae. Th causative organism of diphtheria; the varieties *gravis* and *mitis* have been described producing both an exotoxi and an endot xin formerly called *Bacillus diphtheriae*. See Plat 30

C. hofmannii. Syn. for *C pseudodiphtheriticum*.

C. pseudodiphtheriticum. A species with morphology similar to *C diphtheriae*, but onpathogenic, having its habitat in normal throats. Also called *Hofmann bacillus*

C. xerose A form found in chronic conjunctivitis and also in normal eyes.

co·ry'za. Inflammation of the mucous membranes of the nose, usually marked by sneezing, discharge of watery mucus, and also watering of the eyes sometimes used synonymously with *common cold*

allergic c. Coryza occurring in an allergic person and due to exposure to an agent to which he is hypersensitive

bacterial c. A cold in the head due to bacteria of which the patient is host.

pollen c. See *hay fever*

co·sa·yl. Trade-mark for compound syrup of scillans used as cough sedative.

cos·met'ic [G *kosmētikos*, skilled in ordering, from *kosmos*, order]. A preparation pplied to the kin or its ppendages to alter its ppearance, to protect it, to beautify or t promote ttractiveness

cos·met'ic. Pertaining to any plastic peration on the xternal surfaces or configuratio of part of the body to improve the ppearance of the patient, e g rhinoplasty

cos·mo·tron. An pparatus for accelerating protons i the billion electron volt range The accelerated protons are employed in studying the reactions of various atomic nuclei when bombarded with the particles

cos'ta (pl *costae*) [L.]. A rib —**costal**, *adj*

costae fluctuantes. Floating ribs.

costae spuriae. False ribs.

costae verae. True ribs

cos·tal'gi·a [*costa*, G *algos*, pain]. Intercostal neuralgia pain in the ribs

cos·tal'is. Of or pertaining to the ribs See Table of Muscles in the Appendix.

cos'tate [*costa*]. Ribbed; furnished with ribs or connecting structures

Coste, Jean Jacq es Marie Cyprien Victor [*French embryologist* 1807 73] Know for discovery of the germinal spot of the animal egg (1837)

cos·tec'to·my [L. *costa*, rib G *ektomē* excision]. Excision of rib or part of one

Costen, James Bray [*American otolaryngologist* 1895–]. Know for his description of group of pain symptoms asoci ted ith destruction of the temporomandibular joint, due to loss of molar support in occlusion of the j ws. Pain is referred to the occiput, eye, nasal sinuses, the tongue, d lateral pharyngeal wall There may be painful spasm of the muscles of mastication, interfering with normal opening of th mouth. Called *temporomandibular syndrome*, *Costen syndrome complex*.

cos"ti·car'ti·lage [L. *costa*, rib *cartilago* cartilage]. A costal cartilage.

cos'ti·form [*costa*, L. *forma*, shape]. Rib-shaped.

cos'tive [OF *costivé*, from L. *constipare*, to press together]. Constipated. —**costiveness**, *n*.

cos't- [L. *costa*, rib]. A combining form denoting rib or *costa*.

cos"to·car'ti·lage. A costal cartilage.

cos"to·cer"vi·cal'is. Of or pertaining to the ribs and neck. See Table of Muscles in the Appendix.

cos·to·chon'dral (kos to-kon dral) [*costa*; G *chondros*, cartilage]. Pertaining to the ribs and their cartilages.

cos·to·cla·vic'u·lar [*costa*, L. *clavicula*, small key]. Pertaining to the ribs and the clavicle.

cos"to·cor'a·coid [*costa*; G *korakoeidēs*, like crow]. Pertaining to the ribs and the coracoid process.

c. muscle. A variabl muscle arising from one or more ribs and inserted into the coracoid process.

cos"to·phren'ic [*costa*; phrēn, phrenos, the diaphragm] Pertaining to the ribs and the diaphragm.

cos·to·scap'u·lar Of or pertaining to the ribs and the scapula. Syn *scapulocostal*.

cos'to·tome [*costa*; G *tomos*, cutting]. Heavy curved shears or forceps with hooked limb against which the knife blade acts; used for rib resection.

guillotine c. One specially designed for removal of the first rib in thoracic surgery Also called *Lilienthal" c.*

cos·tot'o·my [*costa*; G *tomē*, cutting]. Division of rib.

cos"to·trans·verse' (kos to-trans vurs -transvurs') [*costa*, L *transversus*, transverse] Pertaining to rib and the transverse process of a vertebra; applied to the joint bet een them and to the ligaments joining them. See Table of Joints and Ligaments in the Appendix

cos"to·trans·ver·sec'to·my (-trans vur-sek'to-mee, -trans vur) [*costa*, *transversus*; G. *ektomē*, excision]. Excision of part of rib and transverse vertebral process.

cos"to·ver'te·bral [*costa*; L. *vertebra*, vertebra]. Pertaining t rib and the vertebral column; pplied t the joints between them

cos"to·xiph'oid (kos to-zif' oyd) [*costa*, G *xiphos*, sword *eidos*, form]. Relating to the ribs and the xiphoid cartilage.

cot [Hind. *khāt* from Skr *khatvā*]. A small bed.

cot [AS. *cot*] The finger of glove, or other covering to protect finger

co·tar'nine (ko-tah neen, -nin) [from *narcotine*, by transposition of letters]. $C_{12}H_{15}NO_4$ An xidation product of arecotine.

c. chloride. Small yellow crystals, soluble in water and alcohol has been used i terial hemorrhage and hemoptysis See *stypticin*.

co·throm"bo·plas'tin. See *convertin*

cotinazin. Trade-mark for brand of isoniazid, an antituberculosis drug h ving the composition of isonicotinic acid hydrazide

co't [T pi *coto-coto*] Cot bark the bark of tree ative to Bolivia, *A ibo coto*. It contains bitter principle cotoin, $C_{14}H_{12}O_4$ irritant to the skin and *mucous membranes It has been used in* treatment of diarrhea and for the night sweats of pulmonary t berculosis.

co'to·in, co·to'in. $C_{22}H_{18}O_6$. A crystalline principle from coto. Has been used in the same manner as coto.

co·trans·am'i·nase. Pyridoxal phosphate, the prosthetic component of certain transaminating enzymes, as well as of the enzyme carboxylase which catalyzes decarboxylation of L-amino acids, in which latter case it is commonly referred to as *codecarboxylase*.

Cotton, Frederick Jay [*American surgeon*, 1869–1938]. An authority on fractures, especially those of the forearm and wrist. He devised a position which received his name for treatment of fractures of the lower end of the radius, in which the wrist is immobilized in slight flexion with the hand everted on the forearm.

cot'ton [OF *coton*, from Ar. *qutun*, cotton]. The hairs of the seed of cultivated varieties of *Gossypium herbaceum* or of other species of *Gossypium*.

absorbent c. Cotton so prepared that it readily absorbs water.

c.-oil. See cottonseed *oil*.

c.-root bark. See under *Gossypium*.

cottonseed oil. See under *oil*.

c. wool. Raw cotton.

guncotton. See *pyroxylin*.

styptic c. Cotton saturated with a styptic substance.

Cotugno, Domenico (Cotunnius) [*Italian anatomist*, 1736–1822]. Widely known as the first to describe the cerebrospinal fluid (1764). Investigated the structure and function of the internal ear and discovered the aqueducts of the internal ear (1761). Described sciatica and nervous arthritis (1764), *Cotugno's disease*. The endolymphatic space of the internal ear has received his name.

Cotunnius. See *Cotugno*.

cot"y·le'don [G. *kotylēdōn*, any cup-shaped hollow]. 1. Any one of the groups of villi separated by smooth chorion characteristic of the ruminant semiplacenta. 2. Any one of the rounded lobules bounded by placental septums into which the uterine surface of a discoid placenta is divided. 3. Any plant of the genus *Cotyledon*. 4. The primary or seed leaf in the phanerogamic embryo.

cot'y·loid [G. *kotyloeidēs*, cup-shaped]. Cup-shaped.

cot'y·loid. The cotyloid bone. The center of ossification appearing in the triradiate cartilage of the acetabulum between the pubis and ilium; also called *acetabular bone*.

couch grass. See *Triticum*.

Coué, Émile [*French pharmacist*, 1857–1926]. Known in his day for his experiments with autosuggestion, also called *Coué treatment*. Said to have coined the term autosuggestion.

cough [ME. *coughen*]. A sudden, violent expulsion of air after deep inspiration and closure of the glottis.

chin c. Whooping cough.

dry c. That unattended by expectoration.

ear c. One excited reflexly from some irritation of the ear.

moist c. One with free expectoration.

pleuritic c. The dry, short, frequent cough of pleurisy, pneumonia, and pulmonary tuberculosis, which accompanies the pain and friction sounds of pleurisy and disappears with effusion or when bronchitis supervenes.

productive c. One in which mucus or exudate is raised by coughing.

reflex c. One produced by irritation of a remote organ.

stomach c. See reflex c.

teeth c. A reflex cough associated with difficult dentition.

uterine c. A reflex cough occurring in sufferers from genital disease, due to irritation of the uterovaginal fibers of the hypogastric plexus supplying the fornix vaginae and cervix uteri, and the nerves and ganglions supplying the fundus uteri and ovaries.

whooping c. See *whooping cough*.

winter c. A short troublesome cough of old people due to chronic bronchitis and recurring every winter.

cou·lomb (kōō lom, kōō'lom) [after Charles Augustin de *Coulomb*, French physicist, 1736–1806]. The unit of electric quantity; the quantity of electricity transferred by a current of 1 ampere in 1 second.

cou'ma·rin (kōō muh rin) [Tupi *cumarú*, tonka-bean tree]. $C_6H_4(CH)_2OCO$. The lactone of orthohydroxycinnamic acid found widely distributed in the vegetable kingdom, especially in tonka bean, and also prepared synthetically. It has been used for its odorous quality, as in imitation vanilla extracts, and for concealing odors. As continued ingestion may tend to produce hemorrhage, its use as a food flavor has been prohibited.

cou·min·gine (koo-min'jeen, -jin). An alkaloid, $C_{24}H_{43}NO_4$, having digitalislike action; obtained from *Erythrophleum couminga*.

Councilman, William Thomas [*American pathologist*, 1854–1933]. Known for his investigation, with Henry Amédée Lafleur, of amebic dysentery, a term they coined (1890). A genus of amebas is called *Councilmania*.

count [L. *computare*, to reckon]. The number obtained by reckoning the units of a series or collection, as blood count, the number of blood cells per unit volume of blood.

Addis c. The number of cells found in 10 cc. of 12 hr. specimen of urine.

differential white c. The number of each variety of leukocytes in a count of 100 leukocytes. Syn., *differential blood count*.

direct platelet c. Using the red cell pipet, platelet diluting fluid is drawn to the 1 mark, blood from a fresh puncture wound is quickly drawn to the 0.5 mark, and diluting fluid then drawn to the 101 mark. The pipet is shaken for two minutes and the platelets counted on the counting chamber by the method used for erythrocytes. Normal ranges are 250,000 to 350,000 per cubic millimeter.

parasite c. The number of parasites infecting a certain volume of blood. This has been used in trypanosomiasis and malaria. It is considered to be unreliable in the latter since there may be no organisms in the peripheral blood at certain times in the course of the disease. See parasite *index*.

total white c. The number of leukocytes in one cubic millimeter of blood.

count·er. See *Geiger-Müller counter; scintillation counter*.

coun"ter·ac'tion [L. *contra*, against; *actus*, from *agere*, to act]. Action of a drug or agent opposed to that of some other drug or agent.

coun'ter·die. See *die*.

coun"ter·ex·ten'sion [*contra*; L. *extensio*, from *extendere*, to extend]. Traction made in a direction opposite to that in which traction is made by another force.

coun"ter·fis·su'ra. Contrafissura.

coun"ter·in·di·ca'tion. Contraindication.

coun"ter·ir'ri·tant [*contra*; L. *irritare*, to irritate]. An agent which produces an inflammation of the skin for the relief of a more deep-seated inflammation. —**counterirrita'tion**, *n*.

coun"ter·o·pen·ing [*contra*; AS. *open*]. A second incision into an abscess or cavity made opposite to the first, for purposes of drainage.

coun'ter poi'son [*contra*, L. *potio*, drink]. A poison which counteracts another poison.

coun ter pres sure [*contra*; L. *pressura*, from *premere*, to press]. Manipulation to counterbalance pressure by exercising force in the opposite direction.

coun ter punc"ture. A counteropening

coun'ter-shock A phase of the alarm reaction or first phase of the general adaptation syndrome.

coun ter-stain [*contra*; abbre from *distain*, L. *dis-* way *tingere*, to color]. 1 A second stain used for contrast to color the parts of tissues not affected by the first stain. 2. Apply counterstain.

coun'ter-stroke. Contrecoup.

coun'ter trac"tion [*contra*; L. *tractum*, from *trahere* to pull]. *I surgery*, traction which off sets nother as in red cing fractures. See *counterextension*.

coun ter trans fer' nce. *I psychiatry* th unconscious ttitudes and primitive feelings f th analyst toward his patient in response to displacement of repressed inclinations from patient to analyst (*transference*) This may impair psychotherapy

cou ple [L. *copula*, band]. Among the lower animals, t copulate

Courvoisier Ludwig George [*French surgeon*, 1843–1918]. Remembered for his law: Malignant disease f the pancreas is to be suspected the great majority f cases when there is enlargement of the gallbladder without biliary colic, but with increasing j undice, in middle-aged person. In bstruction of the commo bile d ct by gallstones, the gallbladder usually is contracted In bstruction from other causes, it generally is dilated. W th von Hacker he devised an operation to relieve pyloric obstruction by posterior gastroenterostomy through an opening in the mesocolon.

Coutard, Henri [*French radiologist in the United States*, 1876–1950]. Known for his technic for the treatment of cancer of the larynx by radiotherapy (1921)

Couvelaire uterus. See under *uterus*.

co va'lence. A bond between two toms in which both of the atoms concerned contribute the electron or electrons normal covalence. —**cova'lent,** *adj.*

coordinat c. That type of bond between two atoms in which one of the two atoms concerned contributes both electrons dative covalence

cov er glass. *I microscopy* the thin slip of glass covering the object mounted on the slide

covermark. Trade name for pigmented cosmetic used to cover kin blemishes; various shades are used to match different skins.

Cowie's test. See guaiac *test*

Cowling's rule. T determine the dosage of medicines for children, the age of the child t the next birthday is used as the numerator and 24 as the denominator the result is the appropriate fraction of the dose for adults.

Cowper William [*English surgeon*, 1666–1709]. Remembered for his description of the bulbourethral glands (1697) also called *Cowper glands*, *Méry glands*. G ve classic description of aortic insufficiency (1706) That part of the fascia lata ttached to the pubic crest is known as *Cowper ligament*.

cow per i'tis [*Cowper*; G -*itis*, inflammation]. Inflammation of the bulbourethral glands (glands of Cowper) usually gonorrheal in origin

cow pox" Vaccini

Cox, Herald Rea [1907] American bacteriologist who developed the Cox yolk-sac method of cultivating Rickettsiae in high concentration, which is of great value in th preparation of vaccines against typhus fever Rocky Mountain spotted fever and other rickettsial diseases. H as the first to isolate Q fever organisms in the United States from infected wood ticks these organisms have been placed in new genus, *Coxiella burnetii*, of the family Rickettsiaceae.

cox'a (pl. *coxae*) [L.]. The hip or hip joint. See Table of Bones i th Appendix.

c. magna. Enlargement of the hip due to degener tive joint disease of the head and neck of the femur

c. plana. Osteochondritis deformans juvenilis.

c. valga. A condition, the reverse of coxa vara, in which the angle between the neck and the shaft of the femur is increased bove 140 degrees.

c. vara. A condition in which the neck of the femur is bent downward sufficiently to cause symptoms this bending may reach such an extent that the neck forms, with the shaft, right angle or less, instead of the normal angle of 120–140 degrees.

malum coxae senile. Degenerative joint disease of th hip

cox al'gi a, cox al"gy [*coxa*, G *algos*, pain]. Literally pain in the hip joint, but generally used synonymously with hip disease. —**coxalgic,** *adj*

cox'al"gy See *coxalgia*.

cox"ar thri'tis. See *coxitis*.

cox" thros a-ce (cocks ahr-throck'uh-see) [*coxa*, G *arthron*, joint, *kakē*, badness]. A fungoid inflammation of the hip joint.

Cox Warren Winfred [*American psychologist*, 1896–]. With E. L. Cornell, developed nonverbal test of intelligence to supplement the Binet test or to be used alone in cases with speech or language difficulty called the *Cornell-Coxe Performance Ability Scale*.

Cox"i-el'la bur net i A genus of the family Rickettsiaceae, which is the causative agent of Q fever so-called after Herald Rea Cox. On smear it ppears intracellularly and occasionally extracellularly The organism is filtrable and has no cross immunity with the other rickettsiae.

cox i'tis [L. *coxa*, hip G -*itis*, inflammation]. Inflamm tion of the hip joint.

c. cotyloidea. That confined principally to the acetabulum.

senile c. A rheumatoid disease of the hip joint occurring in old people; marked by pain, stiffness, and wasting, with no tendency to suppuration.

cox"o-dyn'i a. See *coxalgia*.

Co sa ck ie Irus. See under *virus*.

co-zy mase [L. *con-* together G. *zymē*, leaven; -*ase* enzyme]. Coenzyme I.

C.P Chemically pure.

cps, c.p.s. Cycles per second.

Cr Chemical symbol for chromium.

crab yaws. See under *yaws*.

cracked'-pot sou d. A peculiar sound, elicited by percussion over pulmonary cavity communicat ing with bronchus.

cra dle [AS. *cradel*]. A frame of wicker wood, or wire used to prevent the bedclothes from coming in contact with fractured or injured part.

Craig, Charles Franklin [*American pathologist* 1872–] Known for his researches in parasitology for his studies of the malarial plasmodium (1890–1907) for his investigation, with P M Ashburn, of the cause of dengue, proving the organism to be filtrable virus (1907) and for his complement-fixation method for the diagnosis of *Endamoeba histolytica* using suspension of artificially cultured endamebas as antigen.

cramp [OF *crampe* from MD *crampe*]. 1. Painful, involuntary contraction of muscle such as occurs in swimmers. 2. Any cramplike pain, as of

the intestine. 3. Spasm of certain muscles, which may be intermittent, as in tetany or occupational, resulting from their excessive use. 4. *In gynecology*, colloquial term for dysmenorrhea.

heat cramps. Pain in the muscles, with nausea and vomiting, occurring during hard work in hot environment, due to loss of salt through perspiration. Also called *miner's c., stoker's c.*

reader's c. A spasm of the ocular muscles following prolonged reading.

telegrapher's c. See *fatigue spasms* under *spasm*.

writer's c. An occupational neurosis occurring in those who write constantly with pen or pencil, characterized by painful spasm of the muscles of the forearm, hand, and fingers; now seen infrequently.

Crandall's test. See Cherry and Crandall's *test*.

cra"ni·ec'to·my [G. *kranion*, skull; G. *ektomē*, excision]. Surgical removal of strips or pieces of the cranial bones.

cra'ni·o- [*kranion*]. A combining form denoting *the cranium, the fetal head, cranial*.

cra·ni·o·cele. See *encephalocele*.

cra·ni·o·cer'vi·cal [*kranion*; L. *cervix*, neck]. Relating to the cranium and the neck.

cra"ni·o·cla'sis, cra"ni·o·clas"ty [*kranion*; G. *klasis*, breaking]. Operation of breaking the fetal cranium by means of the cranioclast.

cra'ni·o·clast [*kranion*; G. *klan*, to break]. Heavy forceps for crushing the fetal head.

cra"ni·o·clei"do·dys·os·to'sis (kray"nee·o·kly"do·dis·os·to'sis) [*kranion*; G. *kleis*, clavicle; *dys-*, bad; *osteon*, bone; *-ōsis*, condition]. Congenital defect of the clavicle associated with imperfect ossification of the bones of the cranium, and frequently with other anatomical errors.

cra·ni·o·did'y·mus. See *craniopagus*.

cra"ni·o·fa'cial [*kranion*; L. *facies*, face]. Relating to the cranium and the face.

cra"ni·o·fe·nes'tri·a [G. *kranion*, skull; L. *fenestra*, window]. Congenital bony defect involving the total thickness of the skull. See *lacuna skull*.

cra'ni·o·graph [*kranion*; G. *graphein*, to write]. Instrument for recording the outlines of the skull.

cra·ni·og'ra·phy [*kranion*; *graphein*]. That part of craniology which describes the skull and its parts.

cra"ni·o·la·cu'ni·a [*kranion*; L. *lacuna*, hole]. A rare condition of the vault of the fetal and infant skull, characterized by areas of secondary resorption of bone on the internal surface associated with spina bifida, meningocele, and intracranial pressure.

cra"ni·ol'o·gy [*kranion*; G. *logos*, word]. The scientific study of the cranium, comprising *craniography* and *craniometry*.

cra"ni·om'e·ter [*kranion*; G. *metron*, measure]. A caliper used for measuring the dimensions of the skull.

cra"ni·o·met'ric point. Any one of the points on the skull used in craniometry. For the main craniometric points, see *acanthion, alveolar point, asterion, auriculare, basion, Bolton point, bregma, glabella, condylion, coronion, crotaphion, dacryon, ectoconchion, fronto-temporale, gnathion, gonion, glabella, gnathion, gonion, hormion, infratemporale, inion, jugal point, lacrimale, lambda, maxillo-frontale, metopion, nasion, nasospinale, obelion, ophryon, opisthion, opisthocranion, orale, orbitale, porion, prosthion, pterion, rhinion, sphenion, staphylion, stenion, stephanion, symphysion, tylion, vertex, zygion, zygomaxillare*.

cra"ni·om'e·try [*kranion*; *metron*]. The science and technic of measuring the skull in order to establish exact, comparable, metric records for use in the comparative study of physical types, variation, and individual peculiarities in the skulls of man and the other primates. —**cra·ni·o·met'ric**, *adj.*

cra·ni·op'a·gus [*kranion*; G. *pagos*, fixation]. Conjoined twins united by their heads. Syn., *cephalopagus*. —**cra·ni·op'a·gous**, *adj.*; **cra·ni·op'a·gy**, *n.*

c. frontalis. Conjoined twins united at the foreheads. Syn., *metopagus*.

c. occipitalis. Conjoined twins united in the occipital region. See Plate 25.

c. parasiticus. A parasitic individual or its parts attached cranially.

c. parietalis. Conjoined twins united in the parietal region. Syn., *cephalopagus parietalis*.

cra·ni·op'a·thy [*kranion*; G. *pathos*, disease]. Any disease of the head.

metabolic c. A condition marked by hyperostosis frontalis interna, obesity and headache. Occurs most often in women past the menopause; may be hereditary. Also called *Stewart-Morel syndrome, Morgagni's syndrome*.

cra"ni·o·pha·ryn'ge·al (-fa·rin'jul, -jee·ul, -far·in·jee'ul) [*kranion*; G. *pharynx*, throat]. Relating to the cranium and the pharynx.

cra"ni·o·pha·ryn"gi·o'ma. A tumor usually occurring in children, derived from the epithelium of the embryonal craniopharyngeal canal. The **intrasellar type** arises from cells dispersed in the adenohypophysis; the **suprasellar type** from cells in the infundibulum above the sella turcica. There are benign and malignant forms, which may be solid, cystic, or papillomatous. The cystic forms are also called *Rathke's pouch cyst, hypophyseal cyst*.

adamantinomatoid c. Ameloblastoma found in the pituitary gland. It is probably derived from Rathke's pouch.

cra·ni·o·plas"ty [*kranion*; G. *plassein*, to form]. Surgical correction of defects in the cranial bones, usually by implants of metal, plastic material, or bone.

cra"ni·o·rha·chis'chi·sis, cra"ni·or·rha·chis'chi·sis (kray·nee·o·ra·kis'ki·sis) [*kranion*; G. *rhachis*, spine; *schisis*, cleavage]. Congenital fissure of the cranium and vertebral column.

cra·ni·o·sa·cral. Relating to cranium and sacrum, as the craniosacral autonomic nervous system. See *outflow*.

cra·ni·os'chi·sis (kray"nee·os'ki·sis) [*kranion*; *schisis*]. Congenital fissure of the cranium.

cra·ni·o·spi'nal [*kranion*, L. *spina*, spine]. Pertaining to the cranium and the vertebral column.

cra·ni·o·stat" [*kranion*; G. *statos*, standing still]. A device for holding the skull during craniometric study.

cra·ni·o·ste·no'sis [*kranion*; G. *stenōsis*, being straitened]. Premature closing of the cranial sutures, resulting in a small skull.

cra·ni·os"to·sis (kray"nee·os·to'sis, ·os·to·sis) [*kranion*; G. *osteon*, bone; *-ōsis*, condition]. Premature ossification of the cranial sutures.

cra"ni·o·syn"os·to'sis. Premature closure of the sutures of cranial bones.

cra"ni·o·ta'bes (kray·nee·o·tay'beez) [*kranion*; L. *tabes*, a wasting away]. A change of the cranial bones occurring in infancy with the formation of small, shallow, conical pits in the bone substance. It results from rickets, syphilis, or marasmus. —**cra·ni·o·ta·bet'ic**, *adj.*

cra·ni·o·tome [*kranion*; G. *tomos*, cutting]. Instrument used in craniotomy.

cra·ni·ot'o·my [*kranion*; G. *tomē*, cutting]. 1. Operation of reducing the size of the fetal head by cutting or breaking when delivery is otherwise impossible. 2. Excision of a part of the skull.

linear c. Craniectomy

cra"ni o-trac'ter [*kranion*, L. *tractum*, from *trahere*, to drag]. A cranioclast designed to be used as tractor

cra ni-o trip se tome [*kranion*, G *tripsis* rubbing; *tomos*, cutting]. Instrument for performing cranioclasis *Rare*.

cra ni tym pan'ic [*kranion*, G *tympanon*, drum]. Pertaining t the skull and the tympanum

cra i um [*kranion*]. The part of the skull that contains the brain, its membranes and vessels. See *skull*. See T ble of Bones in th Appendix. —**cra-nial** *adj* **cranied,** *adj*.

cerebral c. That portion of the kull containing the brain the brain case; neurocrani m.

c. bifidum A hernial protrusion of the meninges through cranial defect the hernial sac contains cerebrospinal fluid and often elements of nervous tissue.

visceral c. The bones of the face.

cras ter (pl. *crantera*) [G isdom tooth, from *kraino*, to complete]. A isdom tooth or third molar the eruption of which theoretically perfects the dental rch.

crap'u lent, crap u lous [L. *crapulentus*, very much intoxicated]. Marked by excess in eating and drinking.

cra-quel-é [F cracked]. *I dermatology* scaling, which is cracked in ppearance, as in craquelé glassware

cra ter i za tion (*of bone*) [L. *crater* bowl]. The removal of piece of bone, leaving crater as in operations for osteomyelitis.

cra at [F *cravate*, from *Cravate* Croatian] A bandage of triangular shape, used as temporary dressing for wound or fracture.

craw"-craw" Itching; any pruritic dermatitis in the tropics, often followed by pyoderma Th **craw-craw f O'Neil** is due to *Onchocerca volvulus*. Also spelled *kra-kra*.

cream [OF *cresme* from G *chrisma*, ointing]. The part of milk rich in butterf t

creamalin. Trade-mark for an aluminum hydroxide gel used in gastric hyperacidity and as an adjunct in the treatment of peptic ulcer

cream of tar tar Potass m bitartrate, $KHC_4H_4O_6$ It is diuretic and perient.

crease [E. *creast* variant of *crest*, from L. *crista*, crest]. An indentation made by folding

gluteofemoral c. One which bounds the buttock below corresponding nearly to the lower edge of the gluteus maximus muscle. Also called *Gluteal c*.

cre tine (kree h-teen, tin) [G *kreas*, flesh] $NH{:}C(NH_2)N(CH_3)CH_2COOH$ (α-methylguanido)acetic acid or N-methyl-N-guanylglycine, an amino acid present in animal tissues, particularly muscle Creatine reversibly combines with phosphat t form phosphocreatine, an mportant compou d in the anaerobic phase of muscular contraction. See Tabl of Normal Values of Blood Constituents in the Appendix

c. phosphate. Phosphocreatine.

dehydrated c. Creatinine

cre ti ne mi a [*kreas*, G *haima*, blood]. An ex cess of creatine in the blood

cre ti phos phor i 'id (kree h teen tin) See *phosphocreat ne*.

c ti nin (kree t -n) [k ea] $NH{:}C(NH)N(CH_3)CH_2CO$ normal const tuent

of blood and urine d wast product of creatine, excreted in the urine t const t rate. The normal da ly cretion of creatinine independent of diet bout 1 25 Gm per hours this value is the **cre tinine coefficient.** See T ble of Normal Values of Blood Constituents in the Appendix.

cre"a ti nu ri [*kreas*; G *ouron*, urine]. 1. The occurrence of creatine in the urine. 2. The occurrence of increased amounts of creatine in the urine.

cre a tor rhe [*kreas*; G. *rhoia*, flow]. Increased amounts of nitrogen in the stool, characteristic of pancreatic insufficiency but also occurring in excessive diarrhea, as in also ulcerative colitis It is usually manifested by undigested muscle fibers in the stool.

Credé, Carl Cecil Benno [*German surgeon*, 1847 1929] Remembered for his introduction of col loidal silver into surgery called *Credé treatment*, *Credé argentum*.

Credé Karl Siegmund Franz [*German gynecologist*, 1819–92]. Widely known for his description and development of manual expression of the placenta by grasping the uterus firmly through the abdominal walls, kneading it, and pressing downward to stimulate contraction (1854); called *Credé method*. Introduced prophylactic method against ophthalmia neonatorum, usi g 1% or 2% silver nitrate solution instilled into the eyes of newborn infants (1884) Devised an incubator for the prematurely born, called *Credé incubator*

creek dots. Small shining dots, of unknown nature and often hereditary occurri g at times in the retina anterior to the retinal vessels.

creep'i g rup tion. See *larva migrans*.

cre-mas'ter (kree-mass tur) [G suspender]. The muscle that draws p the testis See T ble of Muscles i th Appendix. —**cremasteric,** *adj*

cre-ma tion [L. *crematio* from *cremare* to burn]. Destruction of dead body by burning, as distinguished from interment. —**cre mate,**

cre ma to ry [*cremare*]. 1 Establishment for burni g the bodies of the dead. 2. Incinerator

crem no-pho'bi a [G *krēmnos*, crag; *phobos*, fear]. A morbid fear of precipices.

creme-carbonates. Trade-mark of product containing magnesi m carbonate bismuth subnitrate, calcium carbonate, and chloroform in aqueous dispersion medium

cre na [L., otch]. A otch, especially as seen on the sut ral margins f the cranial bones

cre nate cre nat ed (kree nay-tid) [L. *crena*, notch] 1 Notched or scalloped. 2. *I botany* having rounded scalloped edges, as certain leaves.

cre na tion (kree-nay shun) [*crena*]. A notched or cogwheel-like appearance of shrunken erythrocytes seen when they are exposed to the air or to stro g saline sol tions.

Cren thrix (kren thricks, kree no) [G. *krēnē*, spring; *thrix*, hair]. A genus of bacteria of the family Crenothrichaceae.

C. polyspora. A species of iron bacteria found growing in the conduits of public water supplies causing stoppage

creolin. A proprietary disinfectant of high germicidal strength combined with low toxicity distilled nd prepared from highly refined coal tar oils.

cre -sol. $C_8H_{10}O_2$ 4-Hydroxy-3-methoxy-methylbenzene, one of the principal phenols contained in creosote It i colorless, oily liquid of agreeable odor and burning taste boiling 220° C.

creosotal. A *trade-mark for creosote carbonate*

cre -sote [G *kreas* flesh *sōzein*, to save] (*creosotum*) A mixt re of phenols obtained by the distillation of wood tar preferably that from the beech, *Fagus sylvatica*, t is an i flamm ble, oily liquid. Creosot antiseptic stringent, styptic, anesthetic, and escharoti Used in pulmonary tuberculosis Dose 0.3–0.6 cc (5–10 min.)

beechwood c. That btained from beechwood.

c. carbonat (*creosoti carbonas*) A mixture of

the carbonates of various constituents of creosote. Dose, 0.3–2.0 cc. (5–30 min.) Syn., *creosotal*.

c. iodide. A brownish powder containing 25% iodine used as an expectorant and gastrointestinal antiseptic. Dose, 0.016–0.033 Gm. (¼–½ gr.)

c. phenylpropionate. An oily liquid containing 50% creosote; has the effects of creosote. Dose, 0.3–0.6 cc. (5–10 min.) See *proposote*.

c. valerate. A mixture of the valerates of various constituents of creosote. Dose, 0.3–0.6 cc. (5–10 min.)

cre″o-tox′in. See *kreotoxin*.

cre″o-tox′ism. See *kreotoxism*.

crep″i-ta′ti-o (krep″i-tay′shee-o) **crep″i-ta′tion, crep′i-tus** [L. *crepitare*, to creak, crackle, rattle]. 1. The grating of fractured bones. 2. The crackling of the joints. 3. The noise produced by pressure upon tissues containing an abnormal amount of air or gas, as in cellular emphysema. 4. The sound heard at the end of inspiration in the first stage of croupous pneumonia. It closely resembles the sound produced by rubbing the hair between the fingers held close to the ear. —**crep′itant,** *adj.*

cresatin. Trade-mark for m-cresylacetate, an antiseptic and analgesic compound useful in treating affections of the nose, throat, and ear.

cres′cent [L. *crescere*, to grow]. Sickle-shaped or shaped like the new moon.

cres′cent. A male or female gametocyte of the *Plasmodium falciparum* which is infectious for Anopheles mosquitoes. The most characteristic diagnostic form of malignant tertian parasites. —**crescen′tic,** *adj.*

crescents of the spinal cord. The lateral gray bands of the spinal cord as seen in transverse section.

gray c. One lateral half of the gray matter of the spinal cord.

myopic c. A yellowish white crescentic area about the optic disk due to atrophy or breaking away of the choroid and exposure of the sclerotic.

serous c. A group of serous cells arranged caplike at the distal end of mucous acinus in a mixed gland. Also called *c. of Gianuzzi, demilune of Heidenhain*.

cre′sol. $CH_3.C_6H_4.OH$. A mixture of isomeric cresols obtained from coal tar. A colorless, brownish, or pinkish liquid of phenol-like odor, soluble in 50 volumes of water and miscible with alcohol. It is used chiefly as a surgical disinfectant, usually in the form of **saponated cresol solution** (*liquor cresolis saponatus*) which contains 50% of cresol. It is superior to phenol both as an antiseptic and as a germicide. Syn., *cresylic acid*.

cresolin. A proprietary preparation used as a disinfectant.

cre″sol-sul″fu′ric ac′id. $C_7H_7O.SO_2.OH$. An acid occurring in urine in small amounts.

cre-sot′ic ac′id (kree-sot′ick, -so′tick) **cres″o-tin′ic ac′id.** $CH_3.C_6H_3.OH.COOH$. Hydroxytoluic acid, methylhydroxybenzoic acid. Any one of 10 isomers having this formula. Three of them, the methyl derivatives of ortho-hydroxybenzoic or salicylic acid, have been used medicinally in the form of sodium salts for the same purposes as the salicylates.

cres″o-tin′ic ac′id. See *cresotic acid*.

crest [L. *crista*]. A ridge or linear prominence, especially of bone. Also see *crista*.

alveolar c. The rim of a socket for the root of a tooth in the alveolar process. Syn., *limbus alveolaris*.

buccinator c. A ridge in the groove on the anterior surface of the coronoid process of the mandible, giving origin to fibers of the buccinator muscle.

bulboatrial c. A ridge on the internal surface of the embryonic heart corresponding to the external bulboatrial groove, earlier the bulboventricular crest.

bulboventricular c. A ridge on the internal surface of the embryonic ventricles corresponding to the external bulboventricular sulcus. It later becomes the bulboatrial crest. Also called *septum interventriculare primum*.

conchal c. That on the medial surface of the maxilla and the palate bone, for articulation with the inferior concha. Syn., *turbinal c.*

c. of the head of the rib. One separating the articular surfaces of the head of a rib into two parts. Also called *crista capituli costae* [BNA].

c. of the neck of the rib. That on the superior border of the neck of a rib. Also called *crista colli costae*. [BNA].

ethmoidal c. (a) An oblique ridge on the medial surface of the frontal process of the maxilla. Its posterior end articulates with the middle nasal concha; its anterior part is known as the agger nasi. (b) The superior ridge of the medial surface of the palatine bone, articulating with the middle nasal concha.

external occipital c. A vertical ridge on the outer surface of the occipital bone, extending from the occipital protuberance to the foramen magnum. Syn., *median nuchal line*.

frontal c. A vertical ridge along the middle line of the internal surface of the frontal bone.

ganglionic c. See neural c.

iliac c. The thickened and expanded upper border of the ilium. See Plate 13.

incisor c. The forward prolongation of the nasal crest of the maxilla, terminating in the anterior nasal spine; the cartilage of the nasal septum rests upon it.

infratemporal c. One on the outer aspect of the great wing of the sphenoid and separating the part of the bone which partly forms the temporal fossa from that which aids in forming the zygomatic fossa.

infundibuloventricular c. See supraventricular c.

inguinal c. A prominence on the ventrolateral abdominal wall in the embryo within which develops a part of the chorda gubernaculi. Its base marks the site of the internal opening of the inguinal canal.

internal occipital c. That on the inner surface of the occipital bone, from the internal occipital protuberance to the foramen magnum.

intertrochanteric c. That between the greater and lesser trochanters of the femur.

lacrimal c. A vertical ridge dividing the lateral surface of the lacrimal bone into two parts. O.T. Also called *posterior lacrimal c.* [BNA].

nasal c. (a) That on the medial border of the palatal process of the maxilla, articulating with the vomer. (b) That on the medial border of the palatine bone, articulating with the vomer. (c) That on the internal border of the nasal bone and forming part of the septum of the nose.

neural c. A band of ectodermal cells on either side of the neural tube which is the primordium of the cranial and spinal ganglions. Syn., *ganglionic c.*

obturator c. A bony ridge running from the pubic tubercle to the acetabular notch.

pubic c. A crest extending from the pubic tubercle to the medial extremity of the pubis.

sacral c. A series of eminences forming a median longitudinal ridge on the posterior surface of the sacrum.

sphenoid c. A thin ridge of bone in the median line of the anterior surface of the body of the sphenoid bone.

spiral c. A ridge on the upper border of the spiral lamina of the cochlea.

superficial epidermal crests. The external ridges of the epithelium of the skin.

supinator c. A bony ridge on the upper lateral margin of the shaft of the ulna for the origin of the supinator muscle.

supramastoid c. A bony ridge on the squamous part of the temporal bone behind the external auditory meatus.

supraventricular c. A ridge on the inner wall of the right ventricle delimiting the conus arteriosus, remnant of the bulbostrial crest. *Syn., infundibuloventricular c.*

terminal c. The crista terminalis.

tibial c. The prominent border or ridge on the front of the tibia: the shin.

turbinate c. The conchal crest.

urethral c. A longitudinal ridge of mucous membrane on the posterior wall of the prostatic portion of the male urethra.

zygomatic c. The anterior border of the great wing of the sphenoid: it articulates with the zygomatic bone and separates the orbital from the temporal surface.

m-cres"yl ac'e·tate. $CH_3C_6H_4O.OCH_3CO$; colorless, oily liquid, practically insoluble in water. It possesses antiseptic and analgesic properties useful in treating certain affections of the nose, throat, and ear. Sometimes written *metacresylacetate*. See *cresatin*.

cres'yl·ate. Any compound of cresol with a metallic radical.

cres'yl blue. See *brilliant cresyl blue*.

cre·syl'ic ...'ik. Cresol.

cres'yl vi'o·let (kress'il, kree'sil) (C.C.). A basic dye of the oxazine group, having strongly metachromatic properties: used for staining nervous tissue and fresh tumor tissue. Also called *cresylecht violet, cresyl fast violet*.

cre'ta [L., *Cretan earth*, chalk, white clay]. Chalk. Native calcium carbonate. —**creta·ceous**, *adj.*

cre'tin·ism [F. *crétin*, from L. *Christianus*, Christian]. A condition originating in fetal life or early infancy, due to severe thyroid deficiency; characterized by stunting of physical and mental development. Typically, the large tongue protrudes, the subcutaneous tissue is thickened, the skin is dry, the abdomen protrudes, the mentality is of idiot grade, and the stature is dwarfish. Commonest in regions where endemic goiter is severe; elsewhere it occurs sporadically. —**cretinous**, *adj.*; **cretinoid**, *adj.*; **cretin**, *n.*

acquired c. Myxedema. Also called *adult c.*

cre·vice [OF. *crevace*, from L. *crepare*, to crack]. A narrow opening in a tooth, due to a fissure or crack.

gingival c. Old term for gingival sulcus.

crib'bi·ting [AS. *cribb*]. 1. Air swallowing; aerophagia. 2. *In veterinary medicine*, the repeated biting of the crib or manger by horses, resulting in peculiar wearing of the incisor teeth.

crib'rate [L. *cribrum*, sieve]. Perforated, sievelike, cribriform.

crib'ri·form [*cribrum*; L. *forma*, shape]. Perforated like a sieve.

crib'rose [*cribrum*]. *In biology*, sievelike.

Cri·ce'tus [NL., Slavic in origin]. A genus of hamsters including the European variety *C. cricetus*, and the golden hamster *C. auratus*. See *hamster*.

Crichton-Browne sign. See under *sign*.

crick. Any painful spasmodic affection, as of the back or neck.

cri"co·ar"y·te'noid (cry"ko·ar"i·tee'noyd, ·ar·it'i·noyd) [G. *krikos*, ring; *arytaina*, pitcher; *eidos*, form]. One of two muscles attached to the cricoid and arytenoid cartilages. See Table of Muscles in the Appendix. —**cricoaryte·noid**, *adj.*

cri'coid [*krikos*; *eidos*]. Ring-shaped.

cri'coid. The signet-ring-shaped cartilage of the larynx.

cri"coid·ec'to·my [*krikos*; *eidos*; G. *ektomē*, excision]. The excision of the cricoid cartilage.

cri'co·pha·ryn'ge·al (cry"ko·fa·rin'jul, ·jee·ul, ·far"in·jee'ul) [*krikos*; G. *pharynx*, throat]. Relating to the cricoid cartilage and to the pharynx.

cri"co·pha·ryn'ge·us. A portion of the inferior constrictor muscle of the pharynx attached to the cricoid cartilage.

cri"co·thy'roid [*krikos*; *thyreoeidēs*, shield-shaped]. Pertaining to the cricoid and thyroid cartilages.

cri"co·thy'roid. The muscle, attached to the cricoid and thyroid cartilages, which tenses the vocal folds.

cri·cot'o·my (cry·kot'o·mee) [*krikos*; G. *tomē*, cutting]. Cutting of the cricoid cartilage.

cri"co·tra'che·al (cry"ko·tray'kee·ul) [*krikos*; G. *tracheia*, rough]. Relating to the cricoid cartilage and to the trachea.

cri"co·tra"che·ot'o·my (·tray"kee·ot'o·mee) [*krikos*; *tracheia*; G. *tomē*, cutting]. Tracheotomy through the cricoid cartilage. *Rare.*

Crile, George Washington [*American surgeon*, 1864–1943]. One of the illustrious surgeons of his time. Widely known for his many ingenious contributions to surgery. Made experimental study of surgical shock (1897). Studied blood pressure in surgery (1903) and transfusion in shock (1906). Reported theory of shock (1913) called *Crile's theory*. Also developed blocking of nerve trunks in operations, using local anesthesia (block anesthesia) (1901).

crim"i·nol'o·gy [L. *crimen*, crime; G. *logos*, word]. The study of crime and of criminals; criminal anthropology.

crimp'er [D. and LG. *krimpen*]. Instrument for making more or less permanent folds in some material, as **foil crimpers**, which fold foil for tooth fillings.

crin·o·gen'ic [G. *krinein*, to separate; *gennethai*, from *gignesthai*, to be produced]. Stimulating the production of secretions.

cri·nose (cry'nose, crin'ose) [L. *crinis*, hair]. Hairy. —**crinos'ity**, *n.*

crise de dé·glob·u·li·sa'tion. An episode of indefinite etiology occurring in hereditary spherocytosis, characterized by fever, lassitude, palpitation, and shortness of breath, violent abdominal pain, vomiting, and anorexia. The blood count shows pancytopenia and reduction in number of reticulocytes.

cri'sis [G. *krisis*, turning point, from *krinein*, to decide]. 1. A turning point, as that of a disease or fever; especially the sudden favorable termination of the acute symptoms of an infectious disease. 2. Paroxysmal disturbance of function accompanied with pain. —**crit'ical**, *adj.*

anaphylactoid c. Anaphylactoid shock.

anxiety c. Anxiety attack.

cardiac c. A paroxysm of cardiac distress or disordered action.

clitoris c. A paroxysm of sexual excitement occurring in women suffering from tabes dorsalis.

Dietl's c. Severe nephralgia, chills, nausea, vomiting, and collapse resulting from angulation of a ureter of a floating kidney.

enteralgic c. A paroxysm of pain in the lower part of the abdomen occurring in tabes dorsalis.

gastric crises. Attacks of intense, paroxysmal pain in the abdomen, often attended with vomiting. They occur in tabes dorsalis.

glaucomatocyclitic c. Recurrent self-limited, usually unilateral, attacks of ocular hypertension

with hyaline precipitates and moderate aqueous flare.

hemic c. The crisis in a fever marked by increase in the number of blood platelets.

hemoclastic c. A condition occurring during anaphylactic shock; characterized by temporary leukopenia, relative lymphocytosis, erythrocyte destruction, altered blood coagulability, and fall in blood pressure. Seen in those who have poor liver function.

hemolytic c. A sudden change in the patient's condition due to rapid erythrocyte destruction.

laryngeal c. See vagal c.

nephralgic c. A ureteral paroxysm of pain observed in tabes dorsalis.

oculogyric crises. Recurrent attacks of tonic conjugate deviation of the eyes, usually upward, lasting from a few seconds to an hour or more; a sequel of lethargic encephalitis.

rectal c. Paroxysmal rectalgia occurring in tabes dorsalis and in diabetes.

spastic vasoconstrictive c. One characterized by increased distress on lying down, pain, tympanites, and a marked and sudden increase of arterial hypertension.

tabetic c. Paroxysmal pain occurring in the course of tabes dorsalis.

vagal c. A paroxysmal alteration of pulse and respiration which may progress to apnea and syncope; due to spasm of the laryngeal muscles.

vesical c. Paroxysmal attack of bladder pain, with difficulty in urination, seen in tabes dorsalis.

Crisp's aneurysm. Aneurysm of the splenic artery.

cris·pa'tion [L. *crispare*, to put into a tremulous motion, brandish, wave]. 1. A puckering contracture. Syn., *crispatura*. 2. A slight involuntary quivering of the muscles, usually uncomfortable.

cris"pa·tu'ra [*crispare*]. A puckering; contracture.

c. tendinum. Dupuytren's contracture.

cris'ta [L., crest]. Crest. —**cristate,** *adj.*

c. ampullaris. An elevation projecting into the lumen of the ampulla of the ear containing the sensory end-organ. Also called *acusticus*.

c. cutis. See *superficial epidermal crests* under crest.

c. dividens. The upper margin of the fetal foramen ovale that separates the inferior caval stream of blood into two portions.

c. falciformis. A crest dividing the macula cribrosa into a smaller superior one and a larger inferior one.

c. galli. The superior triangular process of the ethmoid bone, so called because it is shaped like a cock's comb.

c. septo marginalis. The moderator band of the heart when it appears as a prominent ridge.

c. terminalis. A crest on the wall of the right atrium derived from the cephalic part of the right valve of the sinus venosus; a point of attachment for the pectinate muscles of the right atrium.

c. urethralis. The urethral crest.

crit. In nuclear technology, the mass of a fissionable material which, under a given set of conditions, is critical.

Critchett, George [English ophthalmologist, 1817-82]. Remembered for his improvements in the treatment of glaucoma. Devised an operation for the relief of strabismus. Introduced operations for enucleation of the eye, for keratoconus, for staphyloma, and for epiphora, all bearing his name.

Cri·thid'i·a [G. *krithidion*, dim. of *krithē*, barley]. A genus of protozoan parasites of the Trypanosomidae; occur only in invertebrate hosts.

crit'i·cal. In nuclear technology, of or pertaining to the state of a fissionable material in which it is capable of sustaining, at a constant level, a chain reaction.

cro'cus [G. *krokos*, saffron]. Saffron; the stigma of the flowers of *Crocus sativus*. It has been used as an aromatic stimulant, emmenagogue, and antispasmodic. Dose 0.3-1.3 Gm. (5-20 gr.)

Crohn, Burrill Bernard [American physician, 1884-]. Known for his description (with Leon Ginzburg and Gordon D. Oppenheimer) of regional ileitis (1932), called Crohn's disease.

crolaum. Trade name for an emulsified emollient base suitable for use as a vehicle for topical drugs.

Crooke's change. Hyalinization and degranulation of beta cells of the adenohypophysis in some cases of basophilic adenoma; so called after Arthur Carleton Crooke, English endocrinologist (1905-).

Crookes tube. See under *tube*.

cross [L. *crux*, cross]. 1. In biology, a crossbreed in plants, the result of cross-fertilization. 2. A structure in which parts cross each other.

occipital c. See internal occipital *protuberance*.

crossed [*crux*]. 1. Having the shape of a cross. 2. Affecting alternate sides of the body.

cross'ing over. An exchange of blocks of genes between homologous chromosomes during synapsis.

cross match'ing. A test to establish blood compatibility before transfusion, introduced by Ludvig Hektoen. In the major cross match, the prospective recipient's serum is mixed with the donor's cells. In the minor cross match, the donor's serum is mixed with the prospective recipient's cells. If agglutination (or hemolysis) does not occur in either test, the bloods are considered compatible, and the donor's blood may be used. Also see *blood groups*.

cross sec'tion. A slice of or cut through an object made in a plane perpendicular to its longest axis.

cross'way" [*crux*; AS. *weg*]. A term sometimes applied to the crossing of two nerve paths. See *chiasma*.

Cro·tal'i·dae (kro·tal'i·dee) [G. *krotalon*, rattle]. Pit vipers; a family of venomous snakes differing from Viperidae (true vipers) in possessing a sensory pit situated between the eye and nostril. Found commonly in the Americas, southeastern Asia, and the East Indies, but unknown in Australia, Africa, and western Europe.

crot'a·line (krot'uh·leen, ·lin, kro'tuh·) [*krotalon*]. 1. A protein found in the venom of rattlesnakes. 2. A preparation of venom from the rattlesnakes, *Crotalus horridus* and *C. adamanteus*, which has been used in subcutaneous injection for immunization against snake bites and for the treatment of epilepsy.

Crot'a·lus (krot'uh·lus, kro'tuh·lus) [*krotalon*]. A genus of the Crotalidae possessing neurotoxic venom; the rattlesnakes. Thirteen species are found in the United States, including **C. adamanteus**, the Florida diamondback rattlesnake found along the Gulf coastal regions; **C. atrox**, the Texas rattler or western diamondback; **C. confluentus**, the prairie rattlesnake; **C. exsul**, red rattler; **C. horridus**, timber rattler; **C. oreganus**, Pacific rattler; etc. **C. durissus durissus** is found in Central America and **C. durissus terrificus** in South America.

cro·tam'i·ton. Generic name for N-ethyl-o-crotonotoluidide, used as a scabicide and antipruritic. See *eurax*.

cro·taph'i·on [G. *krotaphos*, side of the forehead]. The point at the posterior extremity of the sphenoparietal suture.

crotch. The angle formed by the junction of the inner sides of the thighs and the trunk.

crotch'et [OF *crochet*, from *croc*, hook]. A hook used in extracting the fetus after craniotomy.

cro'tin. A mixture of toxic albuminoids contained in croton seeds. It is a protoplasmic poison.

Cro'ton [G. *krotōn*, tick]. A genus of plants of the Euphorbiaceae.

C. eleuteria. Yields cascarilla.

C. tiglium. Yields croton oil. See under *oil*.

cro"ton al'de hyde. $CH_3CH:CHCHO$. A colorless, pungent liquid used as a component of tear gas and as an intermediate in chemical syntheses.

cro ton chlo ral hy'drate. See *butyl*-chloral hydrate.

cro'ton ism [*krotōn*]. Poisoning by croton oil; a condition marked by hemorrhagic gastroenteritis.

cro-tox'in. A neurotoxin from the venom of the rattlesnake *Crotalus durissus terrificus*.

croup (krōōp) [probably imitative]. A condition of the larynx seen in children; characterized by harsh, brassy cough and crowing, difficult respiration. It may be due to edema, inflammation with or without exudate or membrane formation, or spasm. —**croup ous,** *adj.* **croup y,** *adj.*

artificial c. Posttraumatic membranous laryngitis.

catarrhal c. Usually occurs at night, during the course of an upper respiratory infection.

diphtheritic c. Laryngeal diphtheria.

false c. Laryngismus stridulus.

membranous c. Laryngeal diphtheria.

spasmodic c. Laryngismus stridulus.

true c. Laryngeal diphtheria.

uterine c. Inflammation of the endometrium with membrane formation. *Obs.*

croup'ine (krōōp een, -in) [*croup*]. Laryngismus stridulus.

croup ket'tle. A small boiler with an attached inhaling tube. Water or medicament is placed in the receptacle, heated, and the steam inhaled or allowed to escape to humidify the air in the room.

Crouzon, Octave [French *neurologist*, 1874–1938]. Known for his description of craniofacial dysostosis or hypertelorism (1912); also called *Crouzon disease*.

Crowe, Samuel J ames [*American physician*, 1883–]. Known for his important experimental work, with Harvey Cushing and John Homans, on the pituitary and its relation to the reproductive system (1910). See also Crowe *sign*.

crown [L. *corona*, crown]. Corona; the top part of anything; any structure like a crown.

anatomic c. That portion of a tooth covered with enamel.

artificial c. A metallic, porcelain, or plastic substitute which replaces all or part of the crown of a tooth.

clinical c. That portion of a tooth above the gingival attachment.

collar c. A collarlike device to hold an artificial tooth on a natural root.

c. of teeth. That part covered with enamel.

c.-setting. The operation of joining an artificial crown to the root of a natural tooth.

jacket c. An artificial restoration of the crown of a tooth consisting of a covering of metal, porcelain, or acrylic.

pivot c. In *dentistry*, a tooth crown of porcelain or other material, attached to the root by means of a pin or post.

crown'work" In *dentistry*, the adaptation of an artificial crown of gold, porcelain, or acrylic on the cervical portion of the natural root of a tooth.

Croce. See Della Croce.

cru cial [L. *crux*, cross]. Resembling or pertaining to a cross, as a crucial incision.

cru ci ate. Resembling a cross; cross-shaped.

cru ci ble [ML. *crucibulum*, earthen pot]. Vessel of clay or other suitable material used in melting substances which require a high degree of heat.

cru'ci form [L. *crux*, cross; *forma*, shape]. Crucial; shaped like a cross.

Cruikshank, William Cumberland [*English surgeon*, 1745–1800]. Remembered for his demonstration that carbon dioxide is given off by the skin (1779). Contributed to knowledge of the lymphatic system (1786). Made experimental study of impregnation in the rabbit (1797).

crup per [OF *cropiere*]. 1. The buttocks of a horse. 2. The sacrococcygeal region in the horse. 3. The base of the tail in mammals.

cru're us. The vastus intermedius muscle.

crus (pl. *crura*) [L., leg]. A term applied to certain parts of the body from their resemblance to legs or roots. —**cru ral,** *adj.*

crura of the incus. The two main processes of the incus. The short crus projects into the fossa of the incus; the long crus articulates with the head of the stapes.

crura of the stapes. Anterior and posterior processes which connect the base and head of the stapes.

c. commune. One common to two structures, as that between the superior and posterior semicircular canals.

c. of the antihelix. Either of the two limbs of the bifurcation of the anthelix.

c. of the cerebellum. Any one of the cerebellar peduncles.

c. of the cerebrum. Either of the two peduncles connecting the cerebrum with the pons; also called *crus cerebri*, *basis pedunculi*, *cerebral peduncle*.

c. of the clitoris. Homolog of the crus of the penis.

c. of the diaphragm. Either of the two fibromuscular bands arising in front of the vertebrae and inserted into the central tendon of the diaphragm.

c. of the fornix. See *column* of the fornix.

c. of the helix. The curved root of the helix above the external auditory meatus.

c. of the penis. The posterior part of either corpus cavernosum penis, attached to the pubic arch.

c. pedunculi. The basis pedunculi. See c. of the cerebrum.

crush [OF *cruisir*]. To press or squeeze between two unyielding bodies. —**crush,** *n.*

crust [L. *crusta*, crust]. A covering; especially dried exudate on the skin.

milk c. See under *milk*.

crus'ta [L.]. A thin layer; crust.

c. adamantina dentium. Dental enamel. *Obs.*

c. lactea. Seborrhea of the scalp in infants.

c. petrosa. Dental cementum.

Crus ta ce a [L. *crusta*, crust]. A class of arthropods including the lobsters, crabs, shrimps, barnacles, and sow bugs.

crutch [AS. *crycc*]. A staff used as a support in walking, having a concave padded crosspiece to fit the axilla, and a grip for the hand.

Canadian c. An adjustable hand crutch with tripod or quadripod base; also called *Toronto c.*

hand c. A crutchlike support in which the weight of the body is partially borne by the hand and arm instead of by the axilla. The device is used in training the individual to use an artificial leg or legs after the metal crutch stage of training is ended.

perineal c. A support or brace attached to an operating table to hold a patient in certain positions.

Toronto c. See Canadian c.

Crutchfield, William Gayle [*American neurosurgeon*, 1900–]. Invented traction tongs, called *Crutchfield tongs*, for use in the treatment of fracture dislocations of the cervical spine.

Cruveilhier, Jean [*French pathologist*, 1791–1874]. Internationally known for his *Human Pathological Anatomy* (1830–42), one of the greatest works of its kind. Described multiple sclerosis. Described progressive myelopathic muscular atrophy, called *Cruveilhier's disease*, *Duchenne-Aran muscular atrophy*. Gave early description of hypertrophic pyloric stenosis and ulcer of the stomach, to both of which his name was applied. Congenital cirrhosis of the liver is known as *Cruveilhier-Baumgarten cirrhosis*. See also Cruveilhier's sign.

Cruz, Oswaldo Gonçalves [*Brazilian bacteriologist*, 1872–1917]. Reformed the Brazilian public health service. American trypanosomiasis, caused by the *Trypanosoma cruzi*, is called *Cruz' disease*, *Chagas' disease*.

cry [OF. *crier*, from L. *quiritare*, to wail]. The utterance of an inarticulate vocal sound, or the sound so uttered; the sound of the voice in lamentation.

cry-. See *cryo-*.

cry"al·ge'si·a (cry"al-jee'see-uh, -see-uh) [G. *kryos*, icy cold; *algēsis*, sense of pain]. Pain from the application of cold.

cry·an"es·the'si·a (cry-an-ess-thee'zhuh, -zee-uh) [*kryos*; G. *anaisthēsia*, lack of sensation]. Loss of sensation or perception of cold.

cry"es·the'si·a (cry"ess-thee'zhuh, -zee-uh) [*kryos*; G. *aisthēsis*, sensation]. 1. Temperature sense for cold. 2. Sensitiveness to cold.

cry"mo·dyn'i·a (cry"mo-din'ee-uh, -dye'nee-uh) [G. *krymos*, frost; *odynē*, pain]. Cryalgesia; pain coming on in cold or damp weather.

cry"mo·phil'i·a [*krymos*; G. *philein*, to love]. Psychrophilia.

cry'o-, cry- [G. *kryos*, icy cold]. A combining form meaning *cold* or *freezing*.

cry"o·cau'ter·y [*kryos*; G. *kautērion*, branding iron]. The destruction of tissues by application of extreme cold which causes an obliterative thrombosis; used especially in removing moles.

cry'o·chem (cry'o-kem) [*kryos*; G. *chymos*, juice]. A desiccation procedure involving rapid freezing of the material to be dried followed by evaporation of the moisture from the frozen state with the aid of a regenerable desiccant.

cry"o·glob'u·lin. A globulin, abnormally present in blood serum, which coagulates on cooling.

cry"o·glob"u·li·ne'mi·a. An abnormal condition in which blood serum contains cold-coagulable globulin (cryoglobulin); observed in multiple myeloma and also in certain other pathological conditions.

cry·om'e·ter (crye-om'i-tur) [*kryos*; G. *metron*, measure]. Thermometer for measuring low temperatures.

cry"o·pro'te·in [*kryos*; G. *prōteios*, of first rank]. See *cryoglobulin*.

cry'o·scope [*kryos*; G. *skopein*, to examine]. Device for determining the freezing point of a liquid.

cry'o·stat [*kryos*; G. *statos*, standing]. Any device for maintaining very low temperatures; specifically, a refrigerator that operates by compressing, regeneratively cooling, and then expanding helium gas until part of the gas becomes liquid; it can cool contents to −450° F.

cry"o·ther'a·py [*kryos*; G. *therapeia*, treatment]. A form of therapy which consists of local or general refrigeration.

crypt [G. *kryptos*, hidden]. 1. A small sac or follicle. 2. A glandular cavity.

anal c. One of the small cul-de-sacs between the rectal columns. Syn., *rectal sinus*.

crypts of Lieberkühn. Simple tubular intestinal glands. Also called *Lieberkühn's glands*.

crypts of the tongue. Pits in the mucous membrane of the pharyngeal part of the tongue, surrounded by the lymphatic tissue of the lingual tonsils. They often serve also as excretory ducts of the mucous glands of this region.

dental c. The space filled by the dental sac and developing tooth.

enamel c. See enamel niche.

multilocular c. (a) A simple gland with pouched or sacculated walls. (b) The lobule of a racemose gland.

sebaceous crypts. The sebaceous glands.

synoviparous crypts. Extensions of the synovial membranes sometimes perforating an articular capsule and occasionally becoming shut off from its main sac.

tonsillar c. A deep epithelium-lined invagination in the palatine or lingual tonsils.

cryp"tag·glu'tin·oid. An antibody against erythrocytes which combines specifically with the cells but does not agglutinate them in saline and does not give a positive blocking test; sometimes called *third-order antibody*, *agglutinoid*.

cryp"tam·ne'si·a (krip-tam-nee'zhuh, -zee-uh). See *cryptomnesia*.

crypt·an·am·ne'si·a (kript-an-am-nee'zhuh, -zee-uh) [*kryptos*; G. *anamnēsis*, a calling to mind]. Subconscious memory.

cryp·ti'tis [*kryptos*; G. *-itis*, inflammation]. Inflammation of a crypt, or of crypts.

urethral c. Inflammation of the mucous glands of the urethra.

cryp'to-, crypt- [*kryptos*]. A combining form meaning *hidden*, *covered*, *secret*.

cryp"to·ceph'a·lus [*kryptos*; G. *kephalē*, head]. A parasitic conjoined twin with an imperfectly formed and concealed head.

cryp"to·coc·co'sis [*kryptos*; G. *kokkos*, grain; *-ōsis*, condition]. A subacute or chronic infection caused by the yeast *Cryptococcus histolyticus*. The infection may involve the lungs or skin, producing ulcers containing myxomatous exudates, but has a predilection for the meninges and the brain. Also called *torulosis*, *European blastomycosis*, *Busse-Buschke's disease*.

Cryp"to·coc'cus [*kryptos*; *kokkos*]. A genus of true yeast whose species are pathogenic.

C. histolyticus. The causative organism of cryptococcosis; also called *C. neoformans*, *Torula histolytica*, *Torulopsis neoformans*.

cryp"to·did'y·mus [*kryptos*; G. *didymos*, twin]. A form of duplicity in which a fetus (or fetal part) is included within the body of an individual. Syn., *fetus in fetu*.

cryp'to·gam [*kryptos*; G. *gamos*, marriage]. In botany, one of the Cryptogamia, a division of the vegetable kingdom comprising all plants without flowers or seeds, as the algae, fungi, mosses, and ferns. —**cryptog'amous**, *adj.*

cryp"to·gen'ic [*kryptos*; G. *genesthai*, from *gignesthai*, to be produced]. Of unknown or obscure cause; the opposite of *phanerogenic*.

cryp·to·grand'o·side. Either of two digitalislike glycosides, designated *cryptograndoside A* and *cryptograndoside B*, occurring in *Cryptostegia grandiflora*, commonly known as the rubber vine; the glycosides are cardioactive.

cryp'to·lith [*kryptos*; G. *lithos*, stone]. A concretion or calculus formed within a crypt, as in the tonsil.

cryp"to·men"or·rhe'a, cryp"to·men"or·rhoe'a (krip-to-men-o-ree'uh) [*kryptos*; G. *mēn*, month; *rhoia*, flow]. A condition in which there is men-

strual flow from the uterus, the external escape of which is prevented by an obstruction in the lower genital canal, usually an imperforate hymen.

cryp"to-mer"o-ra-chis"chi-sis (-ra-kiss'ki-sis) [*kryptos*; G. *meros*, part; *rhachis*, spine; *schisis*, cleavage]. Spina bifida occulta; variety with bony deficiency but no rachicele.

cryp"tom-ne'si-a (krip-tom-nee'zhuh, -nee'zee-uh) [*kryptos*; G. *amnēsia*, forgetfulness]. Subconscious memory; the recall to mind of forgotten episode which seems entirely new to the patient, and not part of his past experience.

cryp"to-phan'ic ac'id. $C_{30}H_{18}N_2O_{18}$. An acid said to exist in urine.

cryp"toph-thal'mos [*kryptos*; G. *ophthalmos*, eye]. 1. Congenital union of the eyelids, usually over imperfect eyes; also *cryptophthalmus*, *cryptophthalmia*. 2. A person who has congenital union of the eyelids.

cryp'to-pine (krip'to-peen, -pin). One of the minor alkaloids of opium; colorless and odorless.

cryp-top'or-ous [*kryptos*; G. *poros*, opening]. Having hidden or obscure pores.

crypt"or-chid-ec'to-my (krip-tor-kid-eck'to-mee) [*kryptos*; G. *orchis*, testis; *ektomē*, excision]. Removal of an undescended testis.

crypt-or'chid-ism. Cryptorchism.

crypt-or-chid"o-pex-y (krip-tor-kid'o-peck-see) [*kryptos*; *orchis*; G. *pēxis*, fixing]. Fixation, within the scrotum, of an undescended testis.

crypt-or'chism (kript-or'kiz-um) [*kryptos*; *orchis*]. A developmental defect in which the testes fail to descend, and remain within the abdomen or inguinal canal. —**cryptorchid, cryptorchis,** *n.*

cryp"to-xan'thin (krip-to-zan'thin). A yellow pigment of the carotenoid group of chemical compounds, which is found in yellow corn and certain other natural sources, and which acts like vitamin A in the body.

cryp-to-zo'ite [*kryptos*; G. *zōion*, living being]. The exoerythrocytic stage of malarial parasites which are found in the cells of the skin and viscera before gaining access to the erythrocytes.

cryp-toz'y-gous [*kryptos*; G. *zygon*, yoke]. Having a wide skull and a narrow face, so that the zygomatic arches are not visible when the skull is viewed from above.

crys'tal [G. *krystallos*, rock-crystal]. In *chemistry*, a substance that assumes a definite geometric form.

asthma crystals. Charcot-Leyden crystals.

bismuth suboxide crystals. Those commonly found in feces after the administration of bismuth.

Böttcher's crystals. Spermin crystals.

calcium bilirubinate crystals. Those found in feces occasionally, especially in cases of cholelithiasis.

Charcot-Leyden crystals. Colorless, pointed, often needlelike crystals occurring in the sputum in bronchial asthma and in the feces in amebic colitis and other ulcerative diseases of the colon. Also called *asthma crystals*.

cockle-burr crystals. Dark yellow or brown crystals of ammonium urate occurring in alkaline urine.

coffin-lid crystals. Those of ammonium magnesium phosphate, triple phosphate, occurring in alkaline urine.

dumbbell crystals. Those of calcium oxalate or uric acid occurring in acid urine or those of calcium carbonate in alkaline urine.

hematoidin crystals. Yellowish or brown, needlelike or rhombic crystals which may occur in the feces after hemorrhage in the gastrointestinal tract. Formerly called *Virchow crystals*.

hemin crystals. Reddish brown, microscopic, prismatic crystals of hemin obtained by heating blood with glacial acetic acid and salt. Formerly called *Teichmann crystals*.

osazone crystals. Yellow crystals of characteristic shape formed by the different sugars when they are combined with phenylhydrazine.

spermin crystals. A combination of phosphoric acid with a base, spermin ($C_5H_{14}N_2$), forming long, monoclinic, prismlike crystals with curved edges found in semen after drying it or allowing it to stand. A strong solution of iodine and potassium iodide stains them a deep brown or violet. Also called *Böttcher's crystals*.

Teichmann's crystals. See *hemin crystals* under *crystal*.

triple phosphate crystals. Coffin-lid or feathery crystals of ammonium magnesium phosphate occurring in alkaline urine.

Virchow's crystals. See *hematoidin crystals* under *crystal*.

whetstone c. One type of uric acid crystal found in acid urine.

crys"tal-bu'min. An albuminous substance found in the crystalline lens.

crys"tal-fi'brin. An albuminous body obtained by treating crystalline lens with hydrochloric acid.

crys'tal-lin. 1. The globulin of the crystalline lens. 2. A solution of pyroxylin in methanol and amyl acetate resembling collodion.

crys'tal-line (kris'tuh-lin, -lyne) [G. *krystallos*, rock-crystal]. Like a crystal.

crys"tal-li'tis [*krystallos*; G. -*itis*, inflammation]. Phacitis.

crys"tal-li-za'tion [*krystallos*]. The process by which the molecules of a substance arrange themselves in geometric forms when passing from a gaseous or a liquid state to a solid state.

crys"tal-log'ra-phy [*krystallos*; G. *graphein*, to write]. The science of crystals, their formation, structure and classification.

crys'tal-loid [*krystallos*; G. *eidos*, form]. Having a crystal-like nature, as distinguished from colloid.

crys"tal-lo-mag'net-ism [*krystallos*; G. *Magnētis lithos*, magnet]. The property common to certain crystals of orienting themselves in a magnetic field.

crys"tal-lo-pho'bi-a [*krystallos*; G. *phobos*, fear]. A morbid fear of glass.

crys'tal-lose. Sodium saccharinate.

crys"tal-lu'ri-a [*krystallos*; G. *ouron*, urine]. The presence of crystals in the urine; often a normal condition but of importance when the crystals are of the sulfa drugs since the crystals may form in the kidney tubules and cause blocking.

crys'tal vi'o-let (C.C.) A basic dye of the triphenylmethane group, hexamethyl pararosaniline. A constituent of all the bluer shades of methyl violet and gentian violet; may be used in nearly all procedures calling for gentian violet, being of more constant composition than gentian violet. Also called *hexamethyl violet*, *methyl violet 10B*, *gentian violet*.

crysticillin. A trade-mark for *penicillin G procaine*.

crystoids anthelmintic. Trade-mark for hexylresorcinol in pill form.

Cs Symbol for cesium.

c/s Cycles per second.

CSF Abbreviation for cerebrospinal fluid.

CTAB Trade-mark for cetyltrimethylammonium bromide or cetrimide.

Cten"o-ce-phal'i-des (ten"o-se-fal'i-deez, tee"no-) [G. *kteis*, comb; *kephalē*, head]. A genus of fleas which are cosmopolitan in distribution. The species **Ct. canis**, the dog flea, and **Ct. felis**, the cat flea, while they infest primarily dogs and cats, may attack man and other mammals. Members

of this genus also serve as intermediate hosts of the *Dipylidium caninum*.

Cten·op·syl·lus seg·nis (ten-op sil lus seg nis) [*Ctenopsyllus*; G. *psylla*, flea; L. *segnis*, lazy] The rodent flea.

C three, C₃. In the system of population classification in England, referring to that part of the population consisting of individuals exhibiting imperfect mental or physical development.

Cu Chemical symbol for copper

cu'beb [Ar. *kababah*]. The dried, unripe, nearly full-grown fruit of *Piper cubeba*, cultivated in Java and the West Indies. Its properties are due to volatile oil containing terpenes, sesquiterpene hydrate, $C_{15}H_{26}O$, and an organic acid. It has been used as diuretic, urinary antiseptic, and expectorant. Formerly used in cigarettes for respiratory catarrh.

c. oleoresin. Obtained by extraction of cubeb with alcohol, followed by evaporation of the solvent. It is dosage form of cubeb now little used.

cu·beb'ic ac'id. An acid substance of uncertain composition obtained from cubeb berries; formerly used as diuretic.

cu'be·bin. $C_{20}H_{20}O_6$. A bitter crystalline substance obtained from cubeb.

cu'beb·ism [*kababah*]. Poisoning by cubeb; marked by acute gastroenteritis.

cu'bi·form [G. *kybos*, cube; L. *forma*, shape]. Cuboid.

cu'bi·tus [L.]. The forearm; elbow old term for ulna. —**cubital**, *adj.*

c. valgus. A decrease in the normal carrying angle of the arm.

c. varus. An increase in the normal carrying angle of the arm.

cu'bo- [G. *kybos*, cube]. A combining form denoting cube or *cuboid*.

cu'boid [*kybos*; G. *eidos*, form]. Resembling cube.

cu'boid. That bone of the tarsus between the calcaneus and the fourth and fifth metatarsals. —**cuboid al**, *adj.*

cu boi'de·o-. See *cubo-*.

cu·boi''de·o·na·vic u·lar [BNA] [G. *kyboeidēs*, like cube L. *navicula*, small boat]. Pertaining to the cuboid and the navicular bones, as in cuboideonavicular joint and ligaments. See Table of Joints and Ligaments in the Appendix.

cu'cum ber shin. Curvature of the tibia with the convexity forward.

Cu'cu mis [L., cucumber]. A genus of plants of the Cucurbitaceae.

C. melo. Muskmelon.

C. myriocarpus. Yields cacur used by the Kaffirs as an emetic.

C. sativus. Cucumber the juice of the fruit has been used in skin diseases and as cosmetic.

Cu·cur'bi ta [L., gourd]. A genus of plants of the Cucurbitaceae. Several species, such as **C. pepo**, the pumpkin, yield seeds that have been used as anthelmintics.

cud'bear [after *Cuthbert Gordon*]. A powder prepared from species of *Roccella*, *Lecanora*, or other lichens it is used as red coloring agent for pharmaceutical preparations, generally in the form of 10% tincture.

Cuignet, Ferdinand Louis Joseph [*French ophthalmologist* b. 1823]. Introduced retinoscopy (1873), called *Cuignet' test*.

cui rass' (kwee rass' kwee rass) [F *cuirasse*, from L. *coriaceus*, made of leather]. A close-fitting or immovable bandage for the front of the chest.

c. cancer See *cancer en cuirasse*.

tabetic c. An anesthetic area encircling the chest in tabetic patients.

cul'-de-sac' (kul''-di-sack' -sahk' kŏŏl'-, hood-sahk' See Notes §§ 29 35) [F]. 1 A closed or blind pouch or sac. 2. The rectouterine pouch; the prolongation of the peritoneal cavity between the anterior surface of the rectum and the posterior surface of the uterus. Also called *pouch of Douglas*.

cul''de-cen t sis. Removal of intraperitoneal fluid material (transudate, exudate, or blood) via the vagina and the rectouterine pouch (cul-de-sac). This may be done by aspiration or incision.

cul'de-scope [perhaps from *cul-de-sac*; G. *skopein*, to examine]. An instrument for the visualization of the female internal genitalia and pelvic tissues, entering via the vagina and perforation into the cul-de-sac. —**culdos'copy** n.

cul''dot' omy [*cul-de-sac*; G *tomē*, cutting]. A surgical incision through the cul-de-sac.

Cu'lex [L., gnat]. A genus of mosquitoes which are vectors of disease.

C. fatigans. The most important intermediate host of *Wuchereria bancrofti*.

C. pipiens. This species is known as the common house mosquito and is found in temperate regions; of medical importance as vector of filariasis.

C. qui quefasciatus. A mosquito which is the most common vector of *Wuchereria bancrofti*. Also called *C fatigans*.

Cu li'ci dae (cue-lis'i-dee) [*culex*]. A family of insects belonging to the Diptera.

cu'li·cide [*culex*; L. *caedere*, to kill]. Any agent which destroys mosquitoes.

cu lic'i fuge [*culex*; L. *fugere*, to flee]. An agent to drive away mosquitoes.

Cu''li ci'nae (cue''li-sigh nee) [*culex*]. A subfamily of the Culicidae; contains all species of mosquitoes of medical significance, which are important as vectors f filariasis, malaria, hemoglobinuric fever dengue, and yellow fever

Cu''li coi'des (cue''li koy'deez) [*culex*; G *eidos*, form]. A genus of flies, several species of which serve as intermediate hosts of filarial parasites. **C. austeni** and **C. grahamii** are species which transmit the filarial worm, *Acanthocheilonema perstans*; **C. furens** has been found to transmit *Mansonella ozzardi*.

Cullen, Thomas Stephen [*American gynecologist* 1868–1953]. Known for his studies of hyperplasia of the endometrium and for his investigations of cancer of the uterus Remembered for his description of the sign of ruptured ectopic pregnancy bluish discoloration of the skin about the umbilicus; called *Cullen sign*.

Cullen, William [*Scottish physician*, 1710–90]. One of the great teachers of Edinburgh and Glasgow he was among the first in Great Britain to give clinical lectures. Wrote on fevers, neuroses, and cachexias. Therapeutics in the British Isles was established as medical science largely through his efforts.

cul'men [L., summit]. The superior portion of the monticulus of the vermis of the cerebellum.

cult [L. *cultus*, care]. Any spurious or unorthodox system of healing, usually based on the belief that all disease is due to single underlying cause and can be cured by some simple treatment.

cul''ti va tion [*cultus*]. Successive transferring of organisms to different mediums favorable to growth. See *culture*.

cul'ture [L. *cultura*, from *colere*, to till]. 1. Growth of microorganisms on artificial mediums. 2. Act of cultivating microorganisms on artificial mediums. 3. A group of microorganisms grown in an artificial medium.

blood c. See under *blood*.

c. medium. A substance used for cultivating bacteria. Culture mediums are either liquid or,

solid, bouillon and milk being the important liquid mediums, and gelatin, agar, blood serum, and potato the principal solid mediums.

hanging-drop c. A culture in which the microorganism is inoculated into a drop of fluid on a cover glass and the latter is inverted over a glass slide having a central concavity.

mixed c. A culture containing more than one defined species of microorganism.

needle c. See stab c.

plate c. A culture of bacteria on a medium spread upon a flat plate or in a Petri dish.

pure c. A culture of a single microorganism.

slant c. One made on the slanting surface of a medium, to get a greater surface for growth.

stab c. One in which the medium is inoculated by means of a needle bearing the microorganisms, which is inserted deeply into the medium.

thrust c. Stab culture.

tissue c. The growing of tissue cells in artificial mediums.

cu ma rin. See coumarin.

cu mene. C H. Cumol; isopropyl benzene. A hydrocarbon occurring in pine tar, petroleum, and some volatile oils.

cumertilin. Trade-mark for a mercurial diuretic preparation containing 8-(2'-methoxy-3'-hydroxymercuripropyl)coumarin-3-carboxylic acid (known as *mercumallylic acid*) and theophylline, the combination being designated by the generic name *mercumatilin*.

c. sodium. Trade-mark for a preparation containing the sodium salt of the mercurial compound described in the preceding and theophylline, the combination being designated by the generic name *mercumatilin sodium*.

cum'in, cu min [Ar. *kammūn*]. An umbelliferous plant, *Cuminum cyminum*, native in Egypt and Syria. The fruit has been used as a flavoring agent and carminative. Its active principle is a volatile oil containing cuminaldehyde (cuminal). —**cu minic,** *adj.*

cu mol. Cumene.

cumopyran. Trade-marked name for *cyclocumarol*.

cu mu la tive [L. *cumulare*, to heap up, increase]. Increasing; adding to.

cu'mu lus [L., pile]. A heap or mound.

c. oophorus. The mass of follicular cells surrounding the ovum and protruding into the liquid-filled cavity of a Graafian follicle. Syn., *discus proligerus*.

c. ovigerus. Cumulus oophorus. Obs.

c. proligerus. Old term for *cumulus oophorus*.

cu ne ate [L. *cuneus*, wedge]. Wedge-shaped, as cuneate fasciculus, a fiber tract in the posterior funiculus of the spinal cord.

cu-ne'i form, cu'ne i form [*cuneus*; L. *forma*, form]. Wedge-shaped; cuneate.

cu'ne-i form. 1. Any of three tarsal bones. See Table of Bones in the Appendix. 2. Old term for *triquetrum*.

cu'ne o- [*cuneus*]. A combining form meaning *wedge* and denoting *cuneiform*.

cu ne-o-cu'boid [*cuneus*; G. *kyboeidēs*, like a cube]. Pertaining to the cuneiform and cuboid bones, as the cuneocuboid joint and ligaments. See Table of Joints and Ligaments in the Appendix.

cu ne-o-na vic u-lar [*cuneus*; L. *navicula*, small boat]. Pertaining to the cuneiform and the navicular bones, as the cuneonavicular joints and ligaments. See Table of Joints and Ligaments in the Appendix.

cu ne o scaph oid [*cuneus*; G. *skaphē*, boat]. Old term for cuneonavicular.

cu'ne-us [L.]. A wedge-shaped convolution on the medial aspect of the occipital lobe between the parieto-occipital and calcarine fissures. Also called *cuneate lobule*, *gyrus*. —**cuneate**, *adj.*

cu-ni u lar [L. *cuniculum*, a passage under ground, canal, from *cuniculus*, rabbit]. Furrowed.

cu nic'u lus [L.]. The burrow of the itch mite.

cun'jah. See cannabis.

cun"ni lin gus [L. *cunnus*, vulva; *lingere*, to lick]. An abnormal sexual practice consisting of the licking of the vulva. —**cunnilinguist,** *n.*

cun nus [L.]. The vulva.

cu' rin. C H O NP. A phospholipid which has been isolated from heart muscle.

cup [AS. *cuppe*, from L. *cupa*, tub, cask]. A drinking vessel.

dry c. A cup for drawing the blood to the surface.

favus c. A depression in a favus scale surrounding a hair.

feeding c. A cup used for feeding anyone incapable of self-feeding.

glaucomatous c. A deep depression in the optic disk seen in cases of glaucoma.

optic c. The double-walled cup formed by invagination of the optic vesicle which differentiates into pigmented and sensory layers of the retina.

physiologic c. The normal concavity of the optic disk.

quassia c. One made of quassia wood, which is filled with water and allowed to stand, the water acquiring the bitter taste of the quassia.

retinal c. Excavation of the optic disk.

suction c. A cupping glass.

wet c. A cup for abstracting blood through incisions in the skin.

cup. To bleed. See *cupping*.

cu'po-la [L. *cupula*, little tub]. A dome-shaped structure. See *diaphragm*, 4.

cupped [L. *cupa*, tub, cask]. Having the upper surface depressed; applied to the coagulum of blood after phlebotomy.

cup ping [*cupa*]. 1. A method of bloodletting by means of the application of cupping glasses to the surface of the body. 2. Formation of a cuplike depression.

c. glass. A small bell-shaped glass capable of holding three to four ounces, in which the air is rarefied by heat or by exhaustion; the glass is applied to the skin, either with or without scarification of the latter.

dry c. A form of counterirritation in which the blood is drawn to the surface by means of a cup. This was used mainly in inflammatory affections of the lung.

wet c. The abstraction of blood after scarification.

cu"pram mo ni a. A solution of cupric hydroxide in ammonia water used as a solvent for cellulose.

cu'pre-a bark. The bark of certain species of *Remijia*. It was at one time used as a substitute for cinchona bark; contains homoquinine and certain related alkaloids.

cu pre-ine (cue'pree een, -in). An alkaloid, $C_{19}H_{22}O_2N_2.2H_2O$, derived from cuprea bark.

cuprex. A proprietary solution of a copper compound for use in treatment of pediculosis.

cu pric [L. *cuprum*, copper, from *Cyprus*, renowned for its copper mines]. Containing copper as a bivalent element. See *copper*.

cu'prous [*cuprum*]. Containing copper as a univalent element. See *copper*.

cu'prum. See *copper*.

cu'pu la [L., little tub]. 1. A cup-shaped structure. 2. A colorless substance on the crista ampullaris that coagulates and becomes visible upon applying fixing fluids.

c. of the cochlea. The apex of the osseous cochlea.

c. of the diaphragm. The right or left dome of the diaphragm.

c. of the pleura. That part of the pleura covering the apex of the lung in the root of the neck.

cu pu lom e-try The picking up of electrical potentials t the cupula (pez) of the cochlea caused by an auditory stimulus. It is used only in experimental acoustic physiology

cur'age (cure id] cue-rahzh') [F curer to cleanse]. 1. Curettage; cleansing of the eye or of an ulcerated or carious surface. 2. A term used by some authorities for clearing the uterine cavity by means of the finger as distinguished from the use of the curet. Obs.

cu-ran'gin (cue-ran'jin) $C_{48}H_{77}O_{18}$. A glycoside obtained from Curanga amara (Scrophulariaceae) It is used as febrifuge and vermifuge in India.

cu-ra re (cue-rah ree) [Tupian]. A drug of uncertain and variable composition prepared from several species of Strychnos and Chondodendron plants. Curare from Chondodendron tomentosum, currently of chief medical interest, owes its characteristic action to the quaternary base d-tubocurarine, which paralyzes the skeletal muscles by selective blocking of the neuromuscular junction and prevents response to nerve impulses and acetylcholine. Curare does not produce tissue injury except as result of anoxia due to unrelieved respiratory paralysis. Used to control convulsions and muscular spasms, particularly in the treatment of certain neurologic disorders; also used to relax the skeletal muscles during anesthesia. I South America and elsewhere it is used as an arrow poison. —cur' rarize, v.

cu ra ri mi met'ic. Referring, or pertaining to, the action, similar to that of curare, of an agent that inhibits, at the neuromuscular junction, transmission of an impulse from nerve to th skeletal muscle fibers that t innervates.

cu ra rine (cue-rah reen, -rin, cure uh) An alkaloid isolated from curare by Boehm (1898); now called d-tubocurarine.

cu"ra-ri za tion [curare]. The subjection to the full influence of curare. Voice and power of motion are generally abolished, but not sensibility to pain.

spontaneous c. Conditions of autointoxication occasioned by the paralyzing influence of toxic substances upon the circulation and upon the end-plates of the neuromuscular system; produced in the body by the tetanization of the muscles.

cu ra tive [L. curare, to heal]. Having healing tendency

cur'cu ma (NL., from Ar kurkum]. Turmeric The rhizome of Curcuma longa. of India, plant of the Zingiberaceae, with properties similar to ginger It contains yellow coloring matter curcumin, and is occasionally employed as yellow dye in pharmacy to color ointments and other preparations. I chemistry, its solution in alcohol is used as test for alkalies, which turn it brown. Paper treated with an alcoholic solution (turmeri paper) may be used instead. Curcuma contains about 5% volatile oil and is used also as condiment.

cur'cu-min. The crystalline coloring matter of curcuma, $C_{21}H_{20}O_6$ Used as an indicator and dye. Gives brownish red color with alkalies and light yellow color with acids.

curd [ME.]. The coagulum that separates from milk on the addition of rennin or acids.

cure [L. cura, care]. 1 The successful treatment of an illness or wound. 2. Special treatment for a disease or an invalid —cure, v.

cu ret [F from curer to cleanse]. An instrument, shaped like spoon or scoop, for scraping way exuberant or dead tissue —curet'

suction c. A small hollow tube with cutting window to which suction may be pplied used for obtaining endometrial biopsy

cu ret tage (cue ret'idj cure"i-tahzh') [F]. I surgery scraping of the interior of cavity with curet, or by the finger

Curie Marie Sklodowska [Polish-French chemist 1867 1934]. Internationally renowned for her discovery of radium (with her husband, Pierre Curie) and for her continued investigation of the nature of radium and radioactive substances. Received Nobel ward jointly with Pierre Curie and A. H. Becquerel (1903) and the undivided ward (1911)

Curie, Pierre [French chemist, 1859–1906]. Famed internationally (with Marie Curie) for his discovery and isolation of radium from pitchblende (1898) Received Nobel prize with Marie Curie and A. H. Becquerel (1903)

cu rie (cure ee, koor ee, cue-ree') [after Marie and Pierre Curie]. 1 Formerly the amount of radon in equilibrium with one gram of radium. 2. That quantity of any radioactive species (radioisotope) undergoing exactly 3.700×10^{10} disintegrations per second.

cu'rie-gram (cure ee-gram, koor ee-gram) [Curie; G gramma, letter]. A photographic print made by radium rays, similar to roentgenogram.

cu'rine (cure'een, -in) An alkaloid btained from kind of curare.

cu'ri-um [Curie]. Chemical element No. 96, symbol Cm, produced artificially

curled [ME. curlen]. Occurring in parallel chains of wavy strands, as the colonies of anthrax bacillus.

Curling, Thomas Blizard [English surgeon, 1811 88]. Known for his description of acute ulceration of the duodenum due to burns (1842) called Curling ulcer Was the first to note accurately the clinical aspect of cretinism, suggesting thyroid deficiency as th probable cause (1850)

cur'rent [L. currere, to run]. 1. The flow of electricity (electrons) through circuit also the rate of this flow 2. The movement or flow of liquid or gas, as of blood in vessels, or of air through the respiratory passages.

action c. The electric current accompanying activity of any reacting tissue.

alternating c. A current which changes its direction number of times per second. Abbreviated, A. C.

anelectrotonic c. That produced around the anode on passage of constant current through nerve.

angular c. One with its wave form inclined at some angle.

ascending c. The current formed by placing the positive electrode upon the periphery of nerve and the negative higher up on the trunk of the nerve, or on the surface over the nerve center in the spinal cord.

axial c. The column of erythrocytes which, by reason of the weight of the cells, occupies the center or axis of the blood stream. Also called axial stream.

battery c. See galvanic c.

branch c. See derived c.

catelectrotonic c. That produced around the cathode on passage of constant current through nerve.

continuous c. A current passing through circuit in one direction.

convection c. A current of liquid or gas heated to temperature above that of the surrounding medium It rises to the surface because of its lower density and thus the entire fluid or circulates until it acquires the same

c. of injury See injury potential.

D'Arsonval c. A high-frequency oscillating current used in electrotherapy; it is of low voltage and high amperage.
demarcation c. Electric current that flows toward the depolarized surface of injured tissue from the polarized surface of adjacent intact tissue.
derived c. A current drawn off by derivation wire from the main current.
descending c. One passing through nerve centrifugally the anode being placed proximally the cathode distally
direct c. An electric current which flows continuously in one direction, in contradistinction to an alternating current. Abbreviated D C.
eye c. The normal electric current that passes from the cornea to the optic nerve under the stimulus of light.
faradic c. A current produced by an induction coil.
galvanic c. A direct current from galvanic battery
high-frequency c. A rapidly alternating electric current. See D'Arsonval c., Oudin c., Tesla c.
induced c. See secondary c.
induction c. Current produced in coil of insulated wire by changing magnetic field of force surrounding the coil.
interaxonal c. The stimulation or modification of excitability produced in one group of nerve fibers by the action potential of another group.
interrupted c. A current that is alternately opened and closed.
ionization c. A current produced in an ionized gas by an electric field.
labile c. That applied with one or both electrodes moving over the surface.
magnetoelectric c. A faradic current generated by magnet.
monophasic action c. Action current derived from leads, one of which is on live active tissue and the other on killed portion; records the electric change accompanying response in one direction only
Oudin c. A high-frequency current from only one pole or terminal, used in electrotherapy
primary c. A current which, on opening and closing, produces an induced current in an adjacent coil.
reversed c. That produced by changing the poles.
secondary c. Momentary current produced in coil of insulated wire, introduced within the field of another coil, when the circuit is made or broken in the latter
sinusoidal c. One with curved wave form.
sinusoidal c. A symmetrical alternating current, the rise and fall of which describes sine curve
stabile c. A current applied with both electrodes in fixed position.
static c. Direct current from static machine.
Tesla c. A high-frequency oscillating current used in electrotherapy it is of medium voltage.
uniform c. An electric current which retains the same strength throughout its application.
voltaic c. See galvanic c.

Curschmann, Heinrich [*German physician*, 1846–1910]. Remembered for his description of the spiral threads of mucin contained in the small pellets expectorated in asthmatic paroxysms, called *Curschmann spirals*.

cur'va tor coc-cyg ns. Alternate term for the anterior sacrococcygeus muscle

cur'va-ture [L. *curvatura*, from *curvare*, to bend]. A bending or curving See *curve*.
angular c. The deformity resulting from tuberculosis of the vertebrae also called *Pott'* c.
anterior c. See *kyphosis*.
compensatory c. In spinal curvature, secondary curve, occurring as the result of the efforts of the trunk to maintain its upright position.
c. of the microscopic field. An aberration of the optical system which causes the image of plane object to be curved.
c. of the spine. Bending of the vertebral column. See *kyphosis*; *lordosis*; *scoliosis*.
gingival c. A curve of the line of attachment of the gingival tissue at th cervix of tooth.
lateral c. Scoliosis.

curve [L. *curvus*, curved]. 1 A bending or flexure; curvature. 2. *I biometry* line, usually curved which in graphic representation indicates the relationship between an independent and dependent variable.
absorption c. *I radiobiology* curve showing variation in absorption of radiation as function of wavelength.
alignment c. The line of the dental arch one following the mesiodistal diameters of the teeth in correct position.
audiometric c. An audiogram.
base c. *In optics*, the standard curve on the back of toric lens. The front surface is so ground that, in combination with the base curve, the desired optical strength is btained.
camel c. Humpback curve used frequently to designate te successive clinical ttacks of an acute infectious disease separated by relatively brief symptomless interval, as the viremia and the major phase of acute anterior poliomyelitis.
decay c. *I radiobiology* curve showing the percentage of radioactive substance remaining as function of time.
diphasic c. An electri curve consisting of two phases which are opposite in sign.
dose-effect c. *I radiology*, curve relating the radiation dosage to the biological effects produced.
electrocardiographic c. Electrocardiogram.
photopic dominator c. A curve plotted from determinations of the sensitivity of elements from the light-adapted eye of animals with cones and also from the dark-adapted eyes of animals having only cones with its maximum at 0.560μ.
pressure c. A recording of pressure variations; particularly that of pressure variations in given heart chamber or blood vessel during the cardiac cycle.
Price-Jones c. See *Price-Jones*.
saddleback temperature c. A temperature curve characterized by fever followed by remission and second bout of fever Occurs in seven-day fever dengue and Rift Valley fever
temperature c. A graphic curve showing variations in temperature for given period.
transmission c. *I radiology* curve showing variation in dosage rate as function of thickness of the absorbing material
volume c. A recording of volume variations particularly that of ventricular volume during the cardiac cycle.

curve fit'ting. *I biometry*, the process of determining the mathematical equation which best expresses the relationship between two variables. See *fit*.

cus-cam'i-dine (cuss-kam'i-deen, -din) An amorphous minor alkaloid found i cusco bark.

cus'ca mine (cuss'kuh-meen, -min, cuss kam'in). A crystalline minor alkaloid that is found in cusco bark.

cus'co bark. The bark of *Cinchona pelletierana* (R bloeme) yielding several minor alkaloids of the quinoline group.

cus-con'i-dine (cuss kon'i-deen, -din) An alkaloid found in cusco bark.

cus'co-nine (cus'ko-neen, -nin) $C_{23}H_{26}N_2O_4 \cdot 2H_2O$. A crystalline alkaloid found in cusco bark.

Cushing, Harvey Williams [*American surgeon*, 1869–1939]. The world's leading neurosurgeon of his time. *Introduced an operation of excision of* the semilunar ganglion, making the approach below the middle meningeal artery (1900). Operated successfully in intracranial hemorrhage of the newborn (1905). Established cerebral hernia as means of decompression in inaccessible brain tumors (1905). Investigated tumors of the pituitary (1906). With Crowe and Homans, studied the relationship between the pituitary and the reproductive system, performing experimental hypophysectomy (1910). Devised operative technics for intracranial tumors (1932). His operation of anastomosis of the spinal accessory and facial nerves was devised for the relief of facial paralysis. *Cushing's incision* in subtentorial craniotomy extends in a curve, convex toward the vertex, across the lower occiput from a point near the mastoid process to a corresponding point on the other side, this line being joined by an incision beginning over the seventh cervical vertebra and extending upward; also called *crossbow incision*. He described a clinical condition now called *Cushing's syndrome* and ascribed by him to pituitary basophilism, which is called *Cushing's disease*. *Cushing's law* states that an increase of intracranial tension causes an increase in blood pressure; the blood pressure remains somewhat higher than the intracranial pressure, thus ensuring continuous cerebral circulation. With Percival Bailey he put forth a scheme for the development of the cells of the nervous system in which the medullary epithelium gives rise to primitive spongioblasts, medulloblasts, and apolar neuroblasts from which all the cells of the nervous system arise.

Cushing, Hayward Warren [*American surgeon*, 1854–1934]. Remembered for his early successful work on the operative relief of hypospadias and epispadias. His suture is a right-angled continuous catgut stitch, the needle entering and leaving the tissues along a line parallel with the incision, each stitch crossing the line of incision to the other side. With each insertion of the needle, the new point of entrance is opposite the point of exit of the suture just completed. When drawn tight, the suture becomes nearly invisible. Adapted principally to intestinal and gastric surgery.

cush'ion [OF. *coissin*, from L. *culcita*, cushion]. In anatomy, an aggregate of adipose and fibrous tissue relieving pressure upon tissues lying beneath.

coronary c. The matrix of the upper edge of the hoofs in solipeds.

c. of the epiglottis. The tubercle of the epiglottis, a median elevation within the vestibule of the larynx.

endocardial c. Either of two masses of embryonic connective tissue concerned with the development of the atrioventricular canals and valves.

Passavant's c. The bulging of the posterior pharyngeal wall produced by the contraction of the overlapping superior and middle constrictors of the pharynx. Also called *Passavant's bar*.

plantar c. In solipeds, a cuneiform fibrous body lying between the plantar part of the hoof and the perforans tendon.

sucking c. *Fatty pads found on the buccinator* muscles in young infants.

Cushny, Arthur Robertson [*Scottish physician and pharmacologist*, 1866–1926]. With Edmunds, first recognized auricular fibrillation in man (1901). Investigated the pathology of heart disease and made important studies of digitalis. Developed Ludwig's filtration theory of urine formation.

cusp [L. *cuspis*, pointed end]. 1. A pointed or rounded eminence on or near the masticating surface of a tooth designed to occlude in the sulcus of a tooth or between two teeth of the opposite dental arch. 2. One of the pointed flaps or leaflets making up a heart valve. —**cus'pate**, **cus'pated**, *adj.*

cus'pid [*cuspis*]. A cuspid tooth; a canine tooth. *See under tooth.* —**cuspidal**, **cuspidate**, **cuspidated**, *adj.*

cus'so (kōōss'o, kuss'o). See *brayera*.

Custer's method. See under *stain*.

cu'ta-ne-o-mu'co-sal [L. *cutis*, skin; *mucosus*, mucous]. *Pertaining to the junction between skin* and mucous membrane, as a cutaneomucosal boundary. More properly called *mucocutaneous*.

cu-ta'ne-ous [*cutis*]. Pertaining to the skin.

cuts. See *plate*.

Cu"te-re'bra [*cutis*; L. *terebra*, borer]. A genus of botflies, which attack especially rabbits and other rodents, the rodent botfly.

Cu"te-re'bri-dae (cue"ti-ree'bri-dee) [*cutis*; *terebra*]. A family of the Diptera, related to the botfly group. The important genera are *Cuterebra* and *Dermatobia*.

cu'ti- [*cutis*]. A combining form meaning skin.

cu'ti-cle [L. *cuticula*, dim. of *cutis*]. 1. A horny or chitinous, sometimes calcified, layer formed by and covering an epithelium. 2. Popular term for epidermis. —**cutic'ular**, *adj.*; **cuticulariza'tion**, *n.*

enamel c. (a) The primary enamel cuticle is the transitory remnants of the enamel organ and oral epithelium covering the enamel of a tooth after eruption. Also called *Nasmyth's membrane*. (b) The secondary enamel cuticle is a keratinized pellicle found between the gingival epithelium and the surface of a tooth. Also called *Gottlieb's c.*

hair c. The outermost layer of cells of a hair shaft.

root sheath c. The layer of cells lining the inner (epithelial) root sheath of a hair follicle.

cu"ti-col'or [*cutis*; L. *color*, color]. Simulating the color of the skin; said of various ointments and powders used in the treatment of skin diseases.

cu-tic'u-la. Cuticle.

cu"ti-fi-ca'tion [*cutis*; L. *facere*, to make]. Formation of skin.

cu'tin [*cutis*]. A waxlike substance found over most of the aerial parts of vascular plants. It serves to protect the underlying cells from too rapid loss of moisture.

cu"ti-re-ac'tion [*cutis*; cf. F. *réaction*]. A local skin reaction following the inoculation with or the application of extracts of pathogenic organisms.

cu'tis [L.]. The skin.

aurantiasis c. A golden-yellow discoloration of the skin, caused by eating an excessive amount of certain yellow vegetables or fruits, such as carrots, oranges, squash. It disappears quickly with no aftereffects when these foods are avoided. Also called *carotenoid pigmentation*, *carotenosis cutis*.

c. anserina. See goose *flesh*.

c. hyperelastica. A rare disorder, usually congenital or familial, characterized by hyperelasticity of the skin, fragility of the skin and blood vessels, hyperlaxity of the joints, pseudotumors following trauma, and subcutaneous nodules. The skin can be stretched out like rubber and snaps back with equal resiliency. Also called *Danlos syndrome*, *India rubber skin*.

c. laxa. See *dermatolysis*.

c. marmorata. Blue or purple mottling of the skin seen in certain young persons on exposure of the skin to cold air. Also called *livedo reticularis*.

methylene (CH_2) groups; it occurs in some petroleums.

cy"clo hex'a nol. $C_6H_{11}OH$; hexahydrophenol, widely used solvent of narcoticlike action and capable of damaging the liver and kidney.

cy"clo-hex' none. $C_6H_{10}O$; the ketone resulting from oxidation of cyclohexanol; it is an oily liquid extensively used as solvent. Its vapor may be harmful.

cy'cloid [*kyklos*; G. *eidos*, form]. *In psychiatry* pertaining to type of personality characterized by alternating periods of well-being and mild depression.

cy clol [cyclization + enolization]. A hypothetical protein structure in which an open polypeptide chain undergoes cyclization and enolization at the peptide linkage.

cy"clo-mas top a thy See mammary *dysplasia*.

cy-clo ni um. Cy A name given to synthetic form of element 61 now called *promethium*. See also *florentium*, *illinium*.

cyclopal. A trade-mark for the sedative and hypnotic substance cyclopentenylallylbarbituric acid.

cyclopal sodium. Trade-mark for brand of the monosodium salt of cyclopentenylallylbarbituric acid, sedative and hypnotic.

cy"clo-pen tane. $CH_2.CH_2.CH_2.CH_2.CH_2$; liquid hydrocarbon found in petroleum. It represents one of the four structural units or rings of cyclopentanophenanthrene.

cy"clo-pen ta no-phen an'threne. $C_{17}H_{28}$. A hydrocarbon representing the fusion of three benzene rings and one cyclopentane ring which is considered the basic structure of sterols and steroids.

cy"cl pen ten'yl al lyl bar"bi tu ri ac'id. See *cyclopal*.

cy"clo-pher'ase. An enzyme catalyzing oxidation of members of the Krebs cycle.

cy"clo-pho ri [*kyklos*; G. *phoros*, bearing]. An insufficiency of the oblique muscles of the eye, giving the yes tendency to roll outward or inward, so that the naturally vertical meridians would diverge at either the upper or lower extremities.

cy-clo pi a (sigh klo pee-uh) [*kyklos*; G. *ōps*, eye]. A large group of terata characterized externally by fusion of the orbits and various degrees of fusion of the eyes internally by severe defects of the facial skeleton and brain. A proboscis may or may not be present. Syn., *synopsia*, *synophthalmia*.

cy cl ple'gi a [*kyklos*; G *plēgē*, stroke]. Paralysis of ciliary muscle of the eye. —**cycloplegic,** *adj*

cy"clo-pro pane. C_3H_6 A saturated cyclic hydrocarbon gas having an odor of petroleum benzin. Is potent but relatively nonirritating and nontoxic inhalation anesthetic which can be administered with high concentration of oxygen

cy"clo-pro pyl meth'yl ether $CH_2.CH.CH_2.CH_2.O.CH_3$ volatile liquid which has been used as general anesthetic and as an insecticide. Syn *cyprome ether*

Cy'clops [G *Kyklōps*, round-eyed] A genus of minute crustaceans having large median eye widely distributed throughout fresh and salt waters but found most commonly in still water Species of *Cyclops* have been found to be intermediate hosts of *Dracunculus medinensis*, *Diphyllobothrium latum*, *Drepanidotaenia lanceolata*, and *Gnathostoma spinigerum*.

cy'clops [*kyklōps*]. A monster with congenital fusion of the two eyes into one.

cy clo-scope [G *kyklos*, circle *skopein*, to examine]. 1 An instrument for determining the width of the field of vision. 2. A machine for measuring rotation velocity

cy"clo ser'ine. A broad-spectrum antibiotic substance, isolated from cultures of *Streptomyces* species, showing therapeutic promise in treatment of h man tuberculosis and genitourinary infections. See *seromycin*.

cy cl sis (sigh klo sis) [G *kyklōsis*, surrounding]. Streaming of protoplasm; occurs in certain plant cells.

cy'clo-stage [G *kyklos*, circle; L. *stare*, to stand]. A stage in the development of bacteria characterized by coccal and coccoid elements. It represents gonidial forms. If favorable growth conditions continue, these bodies may by division, return to the higher or original, stage.

cy"clo-thy'mic per-son al'i ty [*kyklos*; G *thymos*, mind]. *In psychiatry* disposition marked by alternations of mood between elation and depression stimulated apparently by internal factors rather than external events; it may be hypomanic, depressed, or alternating. Also called *cyclothymosis*. —**cyclothymic,** *adj* n **cyclothymiac, cy'clothyme cyclothy'mia**
